Pain at the injection site for 2 days.; This is a spontaneous report from a contactable consumer. A 23-year-old non- pregnant female patient received the first dose of the bnt162b2 (BNT162B2; also reported as COVID 19, brand=Pfizer-BioNTech; Lot Number: EH9899), via an unspecified route of administration in the left arm on 15Dec2020 at 08:30 at 23-years-old at a single dose for COVID-19 immunization. The vaccination facility was a hospital. It was also reported that there were no other vaccinations in four weeks, and there were no other medications in two weeks prior to the vaccination. The patient's medical history was reported as none. The patient did not have COVID-19 prior to the vaccination and was not tested for COVID-19 post vaccination. The patient has no known allergies (allergies to medications, food, or other products: no). Concomitant medications were not reported. On 15Dec2020 at 21:30, the patient experienced: pain at the injection site for 2 days. There was no treatment for the adverse event; nor did the event require hospitalization. The clinical outcome of the event, pain at the injection site for 2 days, was recovered on an unspecified date in Dec2020.

patient experience slight congestion; This is a spontaneous report from a contactable physician (patient) via Pfizer Sales Representative. A patient of unspecified age and gender received bnt162b2 via an unspecified route of administration on an unspecified date at single dose for administration of Covid-19 vaccine. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient experienced slight congestion on an unspecified date with outcome of unknown. Event took place after use of product. Information on the lot/batch number has been requested.

episodes of facial and head numbness and heaviness, lasting 15-30 min or so; isolated to the side of injection site; episodes of facial and head numbness and heaviness, lasting 15-30 min or so; isolated to the side of injection site; This is a spontaneous report from a contactable physician. A 41-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: 0E51685), intramuscularly in the left arm, on 17Dec2020 at 09:00 (at the age of 41-years-old) at a single dose for COVID-19 immunization. The patient had no medical history. Concomitant medications, taken within two weeks of vaccination, included zinc (MANUFACTURER UNKNOWN), quercetin (MANUFACTURER UNKNOWN), and multivitamins (MANUFACTURER UNKNOWN). The patient

was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient had no known allergies to medications, food, or other products. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced episodes of facial and head numbness and heaviness, lasting 15-30 minutes or so; isolated to the side of injection site on 17Dec2020 at 22:15. No therapeutic measures were taken as a result of the events. The clinical outcome of episodes of facial and head numbness and heaviness, lasting 15-30 minutes or so; isolated to the side of injection site was not recovered. It was also reported that since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are needed. No further information expected.

non-anaphylactic allergy reactions to the Pfizer BioNTech COVID-19 vaccine; Rash; Mild swelling of the throat; This is a spontaneous report from a non-contactable pharmacist. This pharmacist reported same events for 2 patients. This report is for 1st of 2 patient. A patient of unspecified age and gender received BNT162B2 via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization, propylene glycol via an unspecified route of administration from an unspecified date at unknown dose for an unspecified indication. The patient's medical history and concomitant medications were not reported. On 17Dec2020 at 2:50 pm, PharmD, Clinical Pharmacy Manager, shared with the reporter that two employees had non-anaphylactic allergy reactions to the Pfizer BioNTech COVID-19 vaccine, this patient is one of them. She reported rash and mild swelling of the throat. They suspect it was a reaction to propylene glycol and will be doing skin testing. The action taken in response to the event for propylene glycol was unknown. The outcome of events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020501257 same reporter/drug/event, different patient

Rash; mild swelling of the throat; non-anaphylactic allergy reactions; This is a spontaneous report from a non-contactable pharmacist. This pharmacist reported same events for two patients. This is 2nd of two reports. A patient of unspecified age and gender received BNT162B2 via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization, propylene glycol via an unspecified route of administration from an unspecified date at unknown dose for an unspecified indication. The patient's medical history and concomitant medications were not reported. Little pain at the injection site; Felt flush afterwards; This is a spontaneous report from a non-contactable nurse. This nurse reported similar events for two patients. This is the first of two reports. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EK5730), via an unspecified route of administration on 16Dec2020 at a single dose for

COVID-19 immunization. The patient's medical history and concomitant medications were not reported. In Dec2020, the patient experienced little pain at the injection site and felt flush afterwards. The outcome of the events was unknown. No follow-up attempts are possible. No further information is expected.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020501389 same reporter/drug/event, different patient.

Little pain at the injection site; Felt flush afterwards; This is a spontaneous report from a non-contactable nurse. This nurse reported similar events for two patients. This is the second of two reports. A patient of unspecified age and gender received the BNT162B2 (BNT162B2; also reported as PFIZER COVID-19 VACCINE; Lot number: EK5730), via an unspecified route of administration on 16Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On an unspecified date in Dec2020, the patient experienced little pain at the injection site and felt flush afterwards. The outcome of the events was unknown. No follow-up attempts are possible. No further information is expected. ; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020501372 same reporter/drug/event, different patient

Throat numbness; Lymph node swelling; Felt flush; This is a spontaneous report from a non-contactable consumer. A 28-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EK5730), via an unspecified route of administration in the right arm, on 17Dec2020 at 15:15 (at the age of 28-years-old) at a single dose for COVID-19 immunization. The patient had no medical history or concomitant medications. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient had no known allergies to medications, food, or other products. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced throat numbness, lymph node swelling, and felt flush on 17Dec2020 at 15:15. The events were reported as non-serious. Therapeutic measures were taken as a result of the events, which included treatment with diphenhydramine hydrochloride (BENADRYL). The clinical outcome of throat numbness, lymph node swelling, and felt flush was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible. No further information expected.

Sore injection site; This is a spontaneous report from a non-contactable healthcare professional. A 29-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot number EH9899), intramuscular into the left arm on 17Dec2020 at 06:15 as single dose for COVID-19 immunization. There was no medical history. The patient's concomitant medications were not reported. The patient experienced sore injection site on 17Dec2020, at 14:00. The event was reported as non-serious. The outcome of sore injection site was recovered in Dec2020.

Fatigue; nausea; stomach ache; malaise; post-nasal drip; This is a spontaneous report from a contactable healthcare professional. A 30-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), intramuscularly in the left arm on 17Dec2020 15:00 at a single dose for COVID-19 immunization. Medical history included COVID-19 (prior to vaccination). Concomitant medication included sulfamethoxazole, trimethoprim (BACTRIM) and escitalopram (MANUFACTURER UNKNOWN). The patient had no known allergies or other medical history. The patient did not receive

any other vaccines within 4 weeks prior to the COVID vaccine. On 18Dec2020 03:00, the patient experienced fatigue, nausea, stomach ache, malaise and post-nasal drip. No treatment was received for the events. The outcome of the events was recovering. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.

Strong medicine taste in the back of my mouth within 5 mins of injection. Over the next hour after the injection, the taste got stronger; Over the next hour after the injection, the taste got stronger and lead to a tingling sensation in the back of my throat and tongue; This is a spontaneous report from a contactable consumer (patient). A 47-year-old female patient received bnt162b2 (BNT162B2) Lot number: FH9899, via an unspecified route of administration on the right arm, first dose on 17Dec2020 08:15 at a single dose for immunization. Medical history included glucose-6-phosphate dehydrogenase deficiency (G6PD), gastrooesophageal reflux disease (GERD) and allergies to Sulfa which is contraindicated for G6PD. Concomitant medication included famotidine and cetirizine. The patient previously took methylcobalamin and quinine (which is contraindicated for G6PD), and experienced drug hypersensitivity on both. On 17Dec2020 at 08:30 AM, the patient experienced strong medicine taste in the back of her mouth within 5 mins of injection. Over the next hour after the injection, the taste got stronger and lead to a tingling sensation in the back of her throat and tongue. These 2 symptoms are still present 22 hrs after receiving the vaccination. The medicine taste and tingling has decreased from strong to mild over the 22 hours. She mentioned that she did not have Covid prior vaccination nor did she tested positive post vaccination. She did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The events were reported as non-serious. No treatment received and the patient was recovering from the 'Strong medicine taste' and 'Strong medicine taste'.

Patient c/o lightheadedness, dizziness & nausea about 4 hour after receiving vaccine.

having aches and a fever of 100.2 so far; having aches and a fever of 100.2 so far; This is a spontaneous report from a contactable consumer (patient's wife). A male patient of an unspecified age received the bnt162b2 (BNT162B2; Lot Number, Expiration Date, NDC and UPC: unknown), via an unspecified route of administration on 17Dec2020 at 11:30 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On 17Dec2020, the patient experienced: having aches and a fever of 100.2 so far. The patient underwent lab tests and procedures which included body temperature: 100.2 on 17Dec2020. The clinical outcome of the events was unknown. The batch/lot numbers for the vaccine, BNT162B2, were not provided and will be requested during follow up.

Fevers throughout the night of the date received, up to 101.5; This is a spontaneous report from a contactable healthcare professional. A 43-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), intramuscularly in the left arm, on 17Dec2020 at 20:00 (at the age of 43-years-old) at a single dose for COVID-19 immunization. Medical history included hypothyroidism and COVID-19. The patient was not pregnant at the time of vaccination. Concomitant medications, taken within two weeks of vaccination, included levothyroxine (MANUFACTURER UNKNOWN). The patient had no known allergies to medications, food, or other products. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced

fevers throughout the night of the date received, up to 101.5 on 17Dec2020. The event was reported as non-serious. The patient underwent lab tests and procedures, which included body temperature: 101.5 on 17Dec2020. No therapeutic measures were taken as a result of the event. The clinical outcome of fevers throughout the night of the date received, up to 101.5 was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19. The batch/lot number for the vaccine, BNT162B2, was not provided and has been requested during follow up.

About 20 minutes post vaccine, right sided chest pain, intercostal. Injection was in right arm; This is a spontaneous report from a contactable nurse and a non contactable physician. A 37-year-old female patient received bnt162b2 (reported as COVID-19 Vaccine, Pfizer, Solution for injection, lot no. and expiry date was unknown), via an unspecified route of administration (right arm) on 17Dec2020 13:30 at a single dose for COVID 19 immunization. The patient medical history was not reported. No allergies to medications, food, or other products. Prior to vaccination, patient was not diagnosed with COVID-19. Since the vaccination, patient has not been tested for COVID-19. Not pregnant at the time of vaccination. The hospital was where the most recent COVID-19 vaccine was administered. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Concomitant medication included sertraline, fish oil, colecalciferol (VITAMIN D), lactobacillus acidophilus (PROBIOTIC), and unspecified vitamin. About 20 minutes post vaccine, the patient experienced right sided chest pain, intercostal. The injection was in right arm on 17Dec2020 13:45 with outcome of recovered. There was no treatment received for the event. The event was considered as non-serious (did not result in death, was not life threatening, did not cause/prolong hospitalization, not disabling/incapacitating, congenital anomaly/birth defect. Information on the lot/batch number has been requested.

mild headache; This is a spontaneous report from a non-contactable nurse. A 25-year-old male patient received bnt162b2 (BNT162B2, Lot number: EH9899), via an unspecified route of administration on 18Dec2020 at single dose for immunization. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient's medical history and concomitant medications were not reported. The patient previously took amoxicillin and experienced allergies. The patient experienced sudden onset of mild headache approximately 10 minutes after receiving vaccine on 18Dec2020. The most recent COVID-19 vaccine was administered in the hospital. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. There was no treatment for the event. The outcome of the event was unknown.

Injection site reaction and vertigo.; Injection site reaction and vertigo.; This is a spontaneous report from a contactable pharmacist. A 63-year-old patient of an unspecified gender received first dose of bnt162b2 (Pfizer-BioNTech COVID-19 vaccine; lot EH9899), intramuscular on 17Dec2020 10:30 at single dose (left arm) for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient had no allergies to medications, food, or other products. On 17Dec2020, at 10:30, the patient experienced injection site reaction and vertigo. The patient was administered at the hospital. It was reported that the patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. There was no treatment received for the events. It was unknown if the patient was diagnosed with Covid-10 prior to vaccination and it was unknown if the patient had been tested for Covid-19 since the vaccination. Outcome of events was recovered on an unspecified date.

bleeding gums; This is a spontaneous report from a contactable nurse (patient). A 56-year-old non-pregnant female patient received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine), via an unspecified route of administration at left arm on 16Dec2020 at 02:00 at a single dose for COVID-19 immunization. The patient did not have covid prior vaccination, and no covid test done post vaccination. The patient has no known allergies to medications, food, or other products. The patient has no other medical history. The patient did not receive any other vaccine in four weeks. Concomitant medication included marijuana (MARIJUANA CANDY). The patient noted bleeding gums 2 days later on 18Dec2020 at 06:30. It was not usual for her. It was just blood streaked spit with brushing teeth. The patient did not receive treatment for the reported event. The outcome of the event was unknown. The event was not considered serious. No follow-up attempts are possible; information about lot/batch number has been requested. No further information is expected.

Pain, redness, swelling and hives at the site of injection (left arm). Pain spread out from the injection site to the left shoulder blade, side of arm, left ribcage, left side of neck, and left collar; Pain spread out from the injection site to the left shoulder blade, side of arm, left ribcage, left side of neck, and left collarbone; Pain spread out from the injection site to the left shoulder blade, side of arm, left ribcage, left side of neck, and left collarbone; Pain spread out from the injection site to the left shoulder blade, side of arm, left ribcage, left side of neck, and left collarbone; Pain spread out from the injection site to the left shoulder blade, side of arm, left ribcage, left side of neck, and left collarbone; Pain spread out from the injection site to the left shoulder blade, side of arm, left ribcage, left side of neck, and left collarbone; Pain, redness, swelling and hives at the site of injection (left arm); Pain, redness, swelling and hives at the site of injection (left arm); Pain, redness, swelling and hives at the site of injection (left arm); heart palpitations; weakness; dizziness; This is a spontaneous report from a contactable other healthcare professional. A 66-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot:EH9899) intramuscularly at the left arm on 16Dec2020 12:45 at a single dose for covid-19 immunisation. Medical history included migraine from an unknown date. The patient's concomitant medications were not reported. On 16Dec2020 15:45, the patient experienced Pain, redness, swelling and hives at the site of injection (left arm). It was further reported that the pain spread out from the injection site to the left shoulder blade, side of arm, left ribcage, left side of neck and left collarbone. The patient also experienced weakness, dizziness and heart palpitations on 16Dec2020 15:45. The events were reported as non-serious. The patient did not receive treatment for the reported events. Outcome of events was not recovered.

injection site pain 8 hours post injection. Fever 100.1 overnight with body aches and chills, headache; injection site pain 8 hours post injection. Fever 100.1 overnight with body aches and chills, headache; injection site pain 8 hours post injection. Fever 100.1 overnight with body aches and chills, headache; injection site pain 8 hours post injection. Fever 100.1 overnight with body aches and chills, headache; injection site pain 8 hours post injection. Fever 100.1 overnight with body aches and chills, headache; This is a spontaneous report from a contactable consumer. A 52-year-old female patient received the first dose of bnt162b2 (BNT162B2, lot number: EJ1685), via an unspecified route of administration in right arm on 17Dec2020 11:00 at a single dose for immunization, administered in the hospital. Medical history included allergies to Penicillin, crustaceans. Prior to vaccination, the patient was diagnosed with

COVID-19. Concomitant medication included herbal remedies: Guanyin Pearls, Shu Gan Tang. The patient experienced injection site pain 8 hours post injection, fever of 100.1 overnight with body aches, chills and headache on 17Dec2020 07:00. The outcome of the events was recovering. The events did not caused hospitalization. Since the vaccination, the patient has not been tested for COVID-19.

Left arm pain for 24 hours; This is a spontaneous report received from a non-contactable physician. A 39-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), intramuscular in left arm, on 17Dec2020 09:00, at single dose, for COVID-19 immunization. The patient has no medical history and has no known allergy. Concomitant medication included lansoprazole. The patient experienced left arm pain for 24 hours on 17Dec2020 12:00. The patient was not diagnosed with COVID-19 prior to vaccination. The patient had not been tested for COVID-19 since the vaccination. The event was reported as non-serious. The outcome of the event was recovered on 18Dec2020 12:00. No follow-up attempts are possible. No further information is expected.

waxing and waning redness and intense itching of both palms; waxing and waning redness and intense itching of both palms; This is a spontaneous report from a non-contactable consumer. A 63-year-old female patient received first dose of bnt162b2 (BNT162B2, lot number EH9899), via an unspecified route of administration in left arm on 15Dec2020 17:30 at a single dose for immunization, administered in the hospital. Medical history included seasonal allergies (dust, mold, juniper pollen), allergies to erythromycin, coconut, blueberries, banana, cocoamidopropyl betaine in anything (shampoo, toothpaste, soap). The patient was not diagnosed of COVID 19 prior to vaccination. Concomitant medication included multivitamins, ergocalciferol (VIT D), ascorbic acid (VIT C), and zn [zinc] (ZN [ZINC]). On 16Dec2020 11:30, about 18 hours after injection, developed waxing and waning redness and intense itching of both palms. This lasted for about 6 hours. The patient reported that she never had this before following a vaccine. Never had this before related to any food or seasonal allergy reaction. The patient was concerned about getting the second injection of the series. The patient's BMI was 30. The patient was not tested for covid 19 after the vaccination. The outcome of the events was recovered on 16Dec2020. The events was considered non-serious. There was no treatment for the reported events. No follow-up attempts are possible. No further information is expected.

Nausea; Vomiting; Fever; This is a spontaneous report from a contactable consumer. A 25-year-old female patient received bnt162b2 (BNT162B2), via an unspecified route of administration arm left on 16Dec2020 18:44, single for immunization. Medical history included Delta granule storage pool deficiency. Concomitant medication included fluoxetine. On 16Dec2020, received vaccine at 6:44pm; On 17Dec2020- woke up with nausea/ vomiting and a fever, had to call off work; 18Dec- continued to have nausea/vomiting and low grade fever, symptoms and fever resolved by 10 am. The outcome of the events was recovered. Information on the Batch/Lot number has been requested.

Sore throat; nausea; This is a spontaneous report from a contactable nurse. A 52-year-old female patient received bnt162b2 (BNT162B2, lot number: EK5730), intramuscular on the right arm on 15Dec2020 17:30 at a single dose for COVID-19 immunisation. Medical history and concomitant medications were none. On 15Dec2020 19:30, the patient experienced sore throat and nausea. No

therapeutic measure was taken as a result of the events. Clinical outcome of the events was recovered on an unspecified date.

right eye fullness; blurred vision; This is a spontaneous report from a contactable consumer. A 42-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EK5730, via an unspecified route of administration in the right arm on 17Dec2020 11:30 at single dose for immunization. Medical history was reported as none. The patient's concomitant medications include multivitamins within two weeks of vaccination. The patient experienced right eye fullness and blurred vision on 17Dec2020. The patient was vaccinated in the hospital and no other vaccine in four weeks was given. No treatment given for the events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. Patient had no known allergies. The events was considered non serious. The outcome of the events was unknown.

Tingling mouth; This is a spontaneous report from a contactable physician. A patient of unspecified age and gender received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced tingling mouth in Dec2020. The event happened during the observation period after the vaccine was administered. The reporter thinks that the patient just panicked and overreacted and doesn't think they had a reaction. The patient did go the emergency room (ER) and was discharged the same day. The outcome of tingling mouth was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.

chills; low-grade temperature; dizziness; This is a spontaneous report from a contactable consumer. A 25-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration in the left arm, on 17Dec2020 at 07:45 (at the age of 25-years-old) at a single dose for COVID-19 immunization. The patient had no medical history. It was unknown if prior to the vaccination, the patient was not diagnosed with COVID-19. The patient was not pregnant at the time of vaccination. Concomitant medications, taken within two weeks of vaccination, included cetirizine hydrochloride (ZYRTEC) and progesterone;estrogens (MANUFACTURER UNKNOWN) oral contraceptives. The patient had no known allergies to medications, food, or other products. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced chills, low-grade temperature, and dizziness on 17Dec2020 at 08:45. The events were reported as non-serious. The events were reported to have occurred within 90 minutes of vaccination. The patient underwent lab tests and procedures, which included temperature: low-grade on 17Dec2020. No therapeutic measures were taken as a result of the events. The clinical outcome of chills, low-grade temperature, and dizziness was recovered in Dec2020. It was also reported that since the vaccination, the patient had not been tested for COVID-19. The batch/lot number for the vaccine, BNT162B2, was not provided and has been requested during follow up.

Fever; Headache; Chills; This is a spontaneous report from a contactable other healthcare professional (patient). A 53-year-old female patient (not pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/lot number: unknown), intramuscular on right arm on 16Dec2020

(08:45 PM) at single dose for COVID-19 immunization. The patient's medical history included diabetes mellitus, hypertension, and COVID-19. Concomitant medications were not reported. It was reported that prior vaccination, patient diagnosed with COVID-19. No known allergies. Since the vaccination, the patient has not been tested for COVID-19. The patient experienced chills, fever, and headache on 17Dec2020 (09:00 AM). There was no treatment received for the reported adverse events. The outcome of events was recovering. This case is reported as non-serious. Information on the lot/batch number has been requested.

Tongue numbness and sensitive; Tongue numbness and sensitive; This is a spontaneous report from a contactable nurse (patient) and a physician. A 31-year-old female received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot EK5730) intramuscular on17Dec2020 13:30 at a single dose on right arm as COVID-19 vaccine. Medical history was not reported. The patient had no known allergies to medications, food, or other products. Concomitant medications were not reported. On 17Dec2020, she received the vaccine and an hour after getting it, her tongue went numb and became sensitive (tongue numbness and sensitive on 17Dec2020 14:00). Today, it was not as numb feeling but was still sensitive. The events were assessed as non-serious, did not result in death, not life threatening, did not cause/prolonged hospitalization, not disabling/incapacitating, did not cause congenital anomaly/birth defect. Treatment was not received for the adverse events. The patient was not pregnant at the time of vaccination. The facility where the most recent COVID-19 vaccine was administered was noted as other. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. There was no expiry date for the vaccine. The card she has, only has the received date: 17Dec2020 and when to return for the second dose: 07Jan2021. She had submitted a claim about the side effects experienced but it wasn't clear what would happen next. The patient inquired if someone would reach out to her and would there be a follow-up. She wanted to know what the process would be regarding reporting. The outcome of the event 'numbness of tongue' was recovering while 'sensitive tongue' was not recovered.

fever; Malaise; chills; muscle and joint aches; muscle and joint aches; extreme fatigue; nausea; headache; both arms started itching on lower arm, not at site/the face and scalp started itching; This is a spontaneous report from a contactable healthcare professional. A 36-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot number EH9899, expiration date unknown), dose number 1, intramuscularly on 16Dec2020 10:00 at a single dose for COVID-19 immunisation. Medical history included Hashimotos Thyroiditis, MDD (major depressive disorder), and acne. Concomitant medications included zinc, ergocalciferol (VIT D), venlafaxine, levothyroxine sodium (SYNTHROID), and spironolactone. The patient had vaccine at 10 AM. At 11 AM, both arms started itching on lower arm, not at site; injection arm was worse than non injection arm. At 11:45, the face and scalp started itching. By noon, all symptoms had resolved. The patient did not medicate. Two days post vaccine, on 18Dec2020, the patient had all symptoms on warning sheet: fever, malaise, chills, muscle and joint aches, extreme fatigue, nausea and headache. The outcome of the event was recovered for itching and not recovered for the other events.

Soon after the shot I had a big headache, almost like a migraine headache; I am having tough time right now; Soon after the shot I had a big headache, almost like a migraine headache; I am having tough time right now; I have slight fever 99.6; Muscle ache; This is a spontaneous report from a contactable healthcare professional, the patient. A 58-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EK55730), via an unspecified route of administration on 17Dec2020 at 13:00 (at the age of 58-years-old) as a single dose for COVID-19 immunization. Medical history included high blood pressure, lupus, stroke, and diabetes. Concomitant medications included lisinopril (MANUFACTURER UNKNOWN). On 17Dec2020, soon after receiving the vaccine, the patient experienced a big headache, almost like a migraine headache; slight fever of 99.6 (no units provided), and muscle ache. The clinical outcomes of slight fever of 99.6 and muscle ache were unknown; while that of the big headache, like a migraine was not recovered.

HCP caller is complaining of a fever after vaccine got wed; Chills; felt tired; This is a spontaneous report from a contactable nurse (patient). A 64-year-old female patient started to received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899, expiry date: 31Mar2021), via an unspecified route of administration on 16Dec2020 at a single dose for Covid-19 immunisation. Medical history was reported as none. There were no concomitant medications. The patient called to report on the COVID vaccine, and explains that she received the vaccine on Wednesday, 16Dec2020 around 2:30pm. She received the vaccine at work. It was administered in the left upper arm. The following morning (17Dec2020) around 2am she woke up with chills and a fever that lasted all day yesterday, so she didn't go to work. She was running a fever of about 99.7-100.0 on 17Dec2020 and that was with alternating Advil and Tylenol. She felt tired and so she rested the whole day. The patient explained that she thought it would go away after a day but today she woke up at 5am with chills. She didn't take her temperature at that time but took some medication. Then on 18Dec2020 at 9am, she woke up with chills again and she still was at 100.8. She called to see how long does the fever last after the vaccine. Outcome of the events fever and chills was not recovered and for fatigue was unknown.

Patient developed a delayed onset rash 12 hours after getting vaccine and has no resolved in 3 days; This is a spontaneous report from a contactable pharmacist. A female patient in their 40's received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at single dose on an unspecified date for immunisation. The patient medical history and concomitant medications were not reported. On an unspecified date, the patient developed a delayed onset rash 12 hours after getting vaccine and has no resolved in 3 days. The outcome of the events was not recovered. Information on the Batch/Lot number has been requested.

Scratchy Throat; tongue swelling; This is a spontaneous report from a contactable consumer (patient himself). A 36-year-old male patient received bnt162b2 (BNT162B2, lot no. and expiry date were not reported), via an unspecified route of administration on 18Dec2020 05:30 at single dose for Covid-19 immunisation. The patient had no known allergies. There were no medical history and concomitant medications. No other medications the patient received within 2 weeks of vaccination. The patient experienced scratchy throat and tongue swelling on 18Dec2020 (06:00 PM). The most recent COVID-19 vaccine was administered in the hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. Therapeutic measures were taken as a result of the events which included Benadryl. The outcome of the events was not recovered. Information about Lot/batch no has been requested.

Swelling at injection site; headache; slight nausea; pain at injection site; This is a spontaneous report from a contactable consumer. A 43-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EH9899, first dose via an unspecified route of administration on 17Dec2020 13:00, in left arm at single dose for immunization. The patient's medical history was not reported. Concomitant medication included emtricitabine, tenofovir disoproxil fumarate (TRUVADA). The patient was vaccinated in the hospital. No other vaccine was receive in four weeks. The patient experienced swelling at injection site, headache, slight nausea and pain at injection site on 17Dec2020 18:00. No treatment was given to the patient for the events. The patient had no COVID prior to vaccination and no COVID test post vaccination. The events was reported as non serious. The patient has no known allergies. The outcome of the events was recovering.

diaphoresis; rigors; chest pain; This is a spontaneous report from a contactable nurse. A 38-year-old female patient received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot number: elo140), via an unspecified route of administration at right arm on 18Dec2020 09:45 AM at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient has known allergies to flu vaccine. On 18Dec2020 at 10:15 AM, the patient experienced adverse events of diaphoresis, rigors, and slight chest pain. The adverse events resulted in emergency room/department or urgent care. It was unknown if treatment was received due to adverse events. The outcome of the events was unknown. The events were considered non-serious.

Slight headache; sore throat; This is a spontaneous report from a contactable consumer. A 61-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EK5730/expiration date unknown) dose number 1 via an unspecified route of administration on the left arm on 18Dec2020 11:15 for COVID-19 immunization. Medical history included polycythemia

vera, high BP, and GERD (gastrooesophageal reflux disease). Concomitant medications included omeprazole, aspirin [acetylsalicylic acid], hydroxyurea, tapentadol hydrochloride (NUCYNTA), and amlodipine besilate (NORVASC). The patient experienced slight headache and sore throat on 18Dec2020 12:15. The outcome of the events was not recovered.

Arm swelling; sore; swollen; This is a spontaneous report from a contactable other healthcare professional (patient herself). A 55-year-old female patient (no pregnancy) received first dose of bnt162b2, intramuscularly at site of left arm at 11:15 on 18Dec2020 at single dose for COVID-19 immunization. Medical history included atrophied kidney, high BP, high cholesterol and allergies to medications, food, or other products. Concomitant medication included atorvastatin calcium (LIPITOR) and benazepril hydrochloride (LOTENSIN). The patient experienced arm swelling, sore, and swollen at 18:00 on 18Dec2020. No treatment received for events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of events was not recovered. Information on the Batch/Lot number has been requested.

Foggy feeling; headache; body aches; low grade fever; This is a spontaneous report from a contactable consumer (patient herself). A 44-year-old female patient (no pregnancy) received bnt162b2, via an unspecified route of administration at site of right arm at 15:45 on 14Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced foggy feeling, headache, body aches and low grade fever at 12:00 on 18Dec2020. No treatment received for events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of events was unknown. Information on the lot/batch number has been requested.

Soreness at injection site; mild diffuse myalgias; fatigue the following day; This is a spontaneous report from a contactable physician. This 30-year-old male physician (patient) reported that he received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EJ1685), via intramuscular on 16Dec2020 15:30 in arm left at single dose for covid-19 immunization. Medical history included exercise-induced asthma and allergies: certain types of deodorant. The patient's concomitant medications were not reported. The patient had no covid prior vaccination and was not covid tested post vaccination. The patient experienced soreness at injection site, mild diffuse myalgias and fatigue the following day on 17Dec2020 07:00. All events were reported as non-serious. Outcome of events were recovered in Dec2020. The patient received the treatment-ibuprofen for events.

Flushed red skin upper torso and face; Flushed red skin upper torso and face; This is a spontaneous report from a contactable nurse (patient herself). A 55-year-old female patient (non-pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via intramuscular on 18Dec2020 08:00 am in left arm at single dose for covid-19 immunization. Medical history included chronic migraines and allergies: shellfish. Concomitant medication included famotidine, memantine and ascorbic acid, ergocalciferol, nicotinamide, retinol, riboflavin, thiamine hydrochloride (VITAMINS). The patent previously took pethidine hydrochloride (DEMEROL) and experienced allergies. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The

patient experienced flushed red skin upper torso and face on 18Dec2020 13:00 with outcome of recovering. No treatment was received for flushed red skin upper torso and face. Information on the lot/batch number has been requested.

Fever; body aches; nausea; vomiting; severe fatigue; headache; abdominal pain; site pain; This is a spontaneous report from a contactable consumer (patient herself). A 61-year-old female patient (non-pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# Ek5730), via an unspecified route of administration on 16Dec2020 16:15 in right arm at single dose for covid-19 immunization. Medical history included asthma, hypothyroidism, hyperlipidemia, allergies: codeine and sulfa. Prior to vaccination, the patient diagnosed with COVID-19. Concomitant medication included levothyroxine within 2 weeks of vaccination. Since the vaccination, the patient has not been tested for COVID-19. The patient experienced fever, body aches, nausea, vomiting, severe fatigue, headache, abdominal pain and site pain on 17Dec2020 04:00 with outcome of recovering. All events were reported as non-serious. The patient received the treatment ondansetron (ZOFRAN) for events.

sensation in throat/a menthol cough drop stuck in the throat; flushed; diaphoretic; burning into my chest; some random hives; This is a spontaneous report from a contactable consumer (patient herself). A 38-year-old female patient received first dose of bnt162b2 (lot number: EL0140), via an unspecified route of administration at site of left arm at 11:30 on 19Dec2020 at single dose for COVID-19 immunization. Medical history included Oral Allergy Syndrome, ADHD (attention deficit hyperactivity disorder), multiple food allergies, and allergies: PCN, Ceclor and Lovenox multiple. Concomitant medication included cetirizine hydrochloride (ZYRTEC), montelukast sodium (SINGULAIR), diphenhydramine hydrochloride (BENADRYL) and amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL). Within minutes after vaccination, the patient became flushed and diaphoretic followed by a sensation in her throat, it felt that she had a menthol cough drop stuck in the throat and the burning into her chest. Once the medics administered IV Benadryl, the sensation in her throat went away. She was in the emergency room for about 3 hours and had some random hives throughout the rest of the evening. treatment. The outcome of the events was unknown. Information on the Lot/Batch number has been requested.

Recently feeling chilly; I just feel very nauseous and weaken like my body some parts are hot and some parts are cold; I just feel very nauseous and weaken like my body some parts are hot and some parts are cold; weaken like my body some parts are hot and some parts are cold; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age and gender received BNT162B2 (reported as COVID Vaccine, lot number and expiration date not reported), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient received the COVID Vaccine and had been recently feeling chilly and also just really weak and nauseous and patient guessed just never felt this way before. The patient know that they were side effects but just felt very nauseous and weaken like the patient's body some parts were hot and some parts were cold. The outcome of events was unknown. Information regarding lot/batch has been requested.

light headed; tingling all over body; This is a spontaneous report from two contactable consumers. A 49-year-old female patient started to receive first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), intramuscular at left arm on 17Dec2020 at 14:00, single dose for COVID-19 immunization. Medical history included asthma and allergy to sulfa, both from an unknown date and unknown if ongoing. Concomitant medication included salbutamol (PROVENTIL), omeprazole and cetirizine hydrochloride (ZYRTEC). The patient previously took morphine and tramadol and for both experienced allergies on an unspecified date. On 17Dec2020 at 14:10, the patient experienced light headed and tingling all over the body. The patient outcome of the light headed was not recovered, the patient outcome of tingling all over the body was recovered within 30 minutes.

allergic reaction; This is a spontaneous report from a contactable physician. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced allergic reaction in Dec2020. No further details were provided. The outcome of allergic reaction was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event allergic reaction due to temporal association. However patient past medical history regarding allergy would have been helpful for a meaningful causality assessment. Case will be reevaluated upon further information

Swelling of Right arm below the elbow not at the injection site. Soreness and tightness of the right hand. After 72 hours these symptoms resolved however on 12/19/2020 developed burning and itchy hives over abdomen, back and trunk. On 12/21/2020 the hives developed on the scalp.

Low-grade temperature ranging from 99.8-100.3; chills; body aches; fatigue; This is a spontaneous report from a non-contactable nurse (patient). An adult female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date were not reported),

intramuscular on the right arm on 16Dec2020 18:00 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was not pregnant. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 17Dec2020 05:00, the patient experienced low-grade temperature ranging from 99.8-100.3, chills, body aches, and fatigue. No treatment was received for the adverse events. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient had not been tested for COVID-19. Outcome of the events was recovering. The events were considered non-serious. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

"bronchitis or pneumonia; pain down arm into fingers; injection site tingling; Chest felt heavy and difficulty breathing; Chest felt heavy and difficulty breathing; bronchitis or pneumonia; rash on both arms with bright purple skin; rash on both arms with bright purple skin; felt like everything was numb and like she was on drugs; felt like everything was numb and like she was on drugs; Severe headache; This is a spontaneous report from a contactable consumer (nurse) via a Pfizer sales representative. A female patient of an unspecified age received the first dose of the bnt162b2 (BNT162B2; also reported as COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On an unspecified date, the patient experienced: bronchitis or pneumonia (medically significant), pain down arm into fingers, injection site tingling, chest felt heavy and difficulty breathing, rash on both arms with bright purple skin, felt like everything was numb and like she was on drugs, and severe headache; all of which required hospitalization. The clinical course was reported as follows: The female patient (nurse) took the first dose of the vaccine and experienced pain down arm into fingers, injection site tingling. The patient's chest felt heavy and difficulty breathing; however, the ""tongue never swelled."" Rapid response was called, and the patient was taken to the hospital. The patient was given a ""cocktail"" to treat the reaction. The patient ""felt like everything was numb and like she was on drugs"" The patient also felt like she had bronchitis or pneumonia. The patient also experienced a ""rash on both arms with bright purple skin""; along with a severe headache. Therapeutic measures were taken as a result of pain down arm into fingers, injection site tingling, and chest felt heavy and difficulty breathing. The clinical outcome of the events was unknown. No follow-up attempt possible; information about batch/lot number cannot be obtained."

Chills, severe headache, joint pain, muscle aches; Chills, severe headache, joint pain, muscle aches; Chills, severe headache, joint pain, muscle aches; Chills, severe headache, joint pain, muscle aches; This is a spontaneous report from a contactable consumer. A 48-year-old female patient received bnt162b2 (BNT162B2, lot number: EH9899), via an unspecified route of administration on the left arm on 17Dec2020 10:45 at a single dose for COVID-19 immunisation. Medical history included asthma and COVID-19 (patient was diagnosed with COVID-19 prior to vaccination). Concomitant medications included ascorbic acid, biotin, calcium carbonate, calcium pantothenate, calcium phosphate dibasic, chromium picolinate, colecalciferol, copper sulfate, cyanocobalamin, ferrous fumarate, folic acid, magnesium borate, magnesium oxide, manganese sulfate, nickel sulfate, nicotinamide, panax ginseng root, phytomenadione, potassium chloride, potassium iodide, pyridoxine hydrochloride, retinol acetate, riboflavin, sodium metavanadate, sodium molybdate, sodium selenate, stannous chloride, thiamine

mononitrate, tocopheryl acetate, zinc oxide (CENTRUM ENERGY), and pantoprazole sodium sesquihydrate (PROTONIX [PANTOPRAZOLE SODIUM SESQUIHYDRATE]). On 17Dec2020 13:00, the patient experienced chills, severe headache, joint pain, muscle aches. Therapeutic measure was not given as a result of the events. Clinical outcome of the events was not recovered.

Injection site pain; Fatigue; This is a spontaneous report from a contactable healthcare professional. A 50-year-old female patient received bnt162b2 (BNT162B2, lot number: EK5730), intramuscular on the left arm on 17Dec2020 09:00 at a single dose for COVID-19 immunisation. Medical history and concomitant medications were not reported. On 18Dec2020, the patient experienced injection site pain and fatigue. Therapeutic measure was not given as a result of the events. Clinical outcome of the events was recovering.

Arm soreness; fatigue; This is a spontaneous report from a contactable consumer. A 23-year-old female patient received the 1st dose of bnt162b2 (BNT162B2) at single dose at right arm on 18Dec2020 08:00 for immunization, administered at hospital. The patient medical history was not reported. No known allergies. Concomitant medication included MultiVitamins and colecalciferol (VITAMIN D [COLECALCIFEROL]). The patient has not received any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced arm soreness and fatigue on 18Dec2020 11:00. The patient has received not treatment for the events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The action taken in response to the events for bnt162b2 was not applicable. The outcome of events was recovering. Information on the lot/batch number has been requested.

mild dry mouth; felt a little foggy; This is a spontaneous report from contactable consumer via a Pfizer Sales Representative. A 52-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration, on 18Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced mild dry mouth and felt a little foggy on 18Dec2020. The clinical outcome of mild dry mouth and felt a little foggy was recovered on 18Dec2020. No follow-up attempts are possible; information about batch/lot number cannot be obtained.

100.5 fever/chills, body aches. Treated with ibuprofen. Resolved within 24hrs of vaccine.

One day after vaccination, patient returned to the injection clinic and reported noticed shoulder and arm swelling with a patchy rash to her R shoulder. Symptoms resolved. She was advised to call the call center and f/u with PCP.

Urticaria, tachycardia at 10 minutes post injection in left arm and neck Treated with oral cetirizine and montelukast. Resolved within 15 minutes of treatment. Discharged in good condition with PO diphenhydramine as needed.

Headache, explosive diarrhea, nausea & vomiting, fever, slept for 18 hours, body aches

Patient recieved dose one of the Pfizer Covid 19 Vaccine. Within ten minutes scratchy throat started. Patient was monitored for 30 minutes and throat irritation became worse. Transferred to urgent care for follow up. Received a dose of diphenhyramine, symptoms lessened, and was able to leave urgent care for home.

Patient developed dizziness shortly after receiving Pfizer Covid-19 vaccine on 12/21/2020. Patient was brought to the Emergency Department. SBP initially in 70's, rapidly improved to 90's without intervention. Patient denied SOB. No e/o angioedema on exam. SBP improved to 110's after 500cc of NS.

Body aches, and fatigue started 6 hours after vaccine administered. The next day I had a moderate headache that I took ibuprofen, and Tylenol for. Body aches, and fatigue continued the next day. It was difficult for me to participate in ADL's. Headache, nausea, and fatigue continued to two days post vaccine.

Myalgia, Fever, Chills, swollen joints

Pfizer-BioNTech COVID-19 Vaccine EUA metallic taste immediately following 1st IM dose

While driving home after receiving the vaccine I was very close to losing consciousness. After laying down in my car for 20 minutes I was able to drive home. I developed a headache that did not subside fully until three days later. On Friday December 18th, I woke up with a very sore arm, from my shoulder to my wrist, I still had a headache, developed; fever, chills, body aches, and nausea.

Dizziness, headache, nausea started 12/19/20. Vomited on 12/20/20. Came in on 12/21/20 to be seen by provider.

Vaccine recipient received vaccine on 12/19/2020.On 12/20 experienced symptoms of headache, fatigue, chills, fever 101.8 F, lower back pain, and nausea. The vaccine recipient took acetaminophen and managed symptoms at home. Reported to have slept for most of the day. On 12/22, during a follow-up phone call reported that most of the symptoms have subsided and only nausea remained.

Approx 5 minutes after receipt of vaccine, patient reported experiencing palpitations. Vitals signs were checked and HR elevated to the 130s (regular rhythm) and systolic BP elevated to the 160-170s mmHg; pulse ox within normal limits. Some mild tremors noted in left > right hand. Patient placed in supine position and given 12.5mg IV benadryl and 4mg x2 doses =8mg total IV dexamethasone with symptomatic improvement and normalization of HR / BP. No hypotension or hypoxia throughout the event. No angioedema or urticaria.

Employee reported a bloody nose and blood in urine this morning (slight tinge) Has not exhibited any other side effects at the time of this report. Noted in afternoon on 12/18/2020 urinated and no blood present.

1. Day 1- (same day) didn't feel anything until later that night, I felt a lump at site with a quarter size area around the direct shot red and sore. 2. Day 2- Sore arm, felt a bit restricted to move arm around,

minor weakness, still red quarter size and lump at site. 3. Day 3- Arm same as day 2, but by the evening I was extremely tired. Joint pains, body aches, and random chills all severe. 4. Day 4- Arm issues gone but continued with the body aches, weakness, extremely tired, and chills. A bit cloudy, and a bit forgetful. 5. Day 5- Same as day 4, but worse. Completely unable to accomplish daily activities, had to call in to work, weakness at one point as bad as struggling to lift and open a water bottle. 6. Day 6- I am here, slightly better than the day before. Still severe joint pains, body aches, and body chills.

Pfizer-BioNTech COVID-19 Vaccine EUA immediately after 1st IM dose pt experienced itching at injection site, itching resolved with 10 minutes

anaphylaxis

"Employee stated she felt her heart racing and felt ""off."" Appeared to RN to be diaphoretic and pale but remained alert, oriented, speaking full sentences no shortness of breath, scratchy throat or rash. 50mg Benadryl PO at 06:25am. Highly encouraged patient to stay for additional 15 minutes. Patient refused to stay stating she didn't have childcare beyond 7am. Instructions given to patient re: symptoms to monitor for and to seek medical assistance if symptoms worsened or persisted. Additionallyasked patient to contact employee health."

injection site soreness and slight swelling. chills, fever 99 F

Extreme swelling of lymph nodes on left side of body (specifically armpit) Fever Muscle Pain Swelling Headache Nausea Vomiting

After the injection I stayed on a recliner for 15 min before returning to work, nothing happened, I felt good. After I arrived home, about 3 hours later when I was home I felt a mild headache. The next day I felt muscle pains/body aches, specially on the right side of my body, my right shoulder was hurting really bad. after 48 hours the symptoms went away.

12/21/2020- 1 called with increased BP 12 hours after vaccination. Was seen by MD and went to ER. Med for BP increased and modified until stable.

"Patient describes flushing, upon examination: ""heart was pounding in my head"". Patient felt like she was going to ""pass out"". and ""throat fullness"" Medical team reported patient was tachycardic . Administered 25mg (oral) benadryl X1 Alerted covering physician (per protocol)"

Approximately 20 minutes following COVID-19 vaccination the patient suddenly developed hives, itching - Hives around face and upper chest. Throat was red and slightly swollen. Was brought to the Emergency Department within out hospital for assessment and medical care. Acute treatment included methylprednisolone 125 mg IV x 1 dose, diphenhydramine 50 mg IV x 1 dose, epinephrine 0.3 mg IM x 1 dose, and famotidine 20 mg IV x 1 dose. The patient felt better following this treatment Upon reassessment oropharyngeal swelling had improved, the patient no longer had hives and the throat appeared clear. The patient stated he no longer feels itchy but does feel a little short of breath. Lungs were clear with pulse oximetry 97%.

"Felt lightheaded upon standing and stated "" my body felt whooshy ""; HR-52-- baseline and remained alert and oriented x3; Benadryl 25 mg given --observed patient for 30 minutes; ambulated patient and she stated she felt fine--funny feeling gone"

Fever, Fatigue, Weakness, Body Aches, Chills, Muscle Pains lasting until Monday 12/21/2020

Patient expereinced pain at vaccination site 2 hours after administration. in 20 hours it had become red and swollen. Swelling and redness have steadily decreased to time of individual reporting today at 13:00 (Jan 22, 2020 reported)

Ten minutes after vaccine was injected pt started having elevated heart rate and mild flushing.. She was sent to the emergency department for clinical evaluation and further observation. She refused medication while at the vaccination site.

Migraine headaches chills diarrhea

About 12 hours afterward the initial injection (0330) I began feeling very cold, started shivering violently to the point where I seemed to feel like I was a Parkinson's patient and nearly froze my jaw with severe muscle aches. Was able to calm the symptoms after standing by a hot oven. Only reason I'm fairly certain this was some kind of reaction as I had a similar event happen when when I last got a tetanus shot 14 years ago where I was in the ER overnight, staff at the vaccine clinic even held me for a longer period (30 minutes) then other due to that issue and were given full disclosure of prior events before receiving the injection . I was diagnosed with Covid 19 on 12/10/20 (They discussed giving the injection with a health dept worker before giving it to me and declared it ok) and troughout the entirety of my quarantine I have never experienced something like that.

Patient developed mild lightheadedness and tingling of the lips. No SOB, CP, swelling of the throat or lips, or rash. Patient was observed for one hour from vaccine administration. She was given water and crackers. Symptoms improved at 60 minute reevaluation. Vital signs stable. Discharged to home.

Employee reported continuous chills off and on for over 12-24 hours, and major-severe headache.

Chills and headache

Vaccine recipient reported symptoms of tingling in the tips of index and middle finger on left hand at the time of COVID-19 administration. Symptoms resolved 15 mins later and vaccine recipient continued on with their day with no further issues.

She was given the Pfizer vaccination in the left deltoid muscle. á During her 15 minute waiting period after the injection, the patient began to experience localized tingling at the injection site that radiated into her 4th and 5th digits and proximally along the sternomastoid muscle. She denied rash, hives, difficulty breathing, difficulty swallowing, wheezing, throat tightness, hoarseness, stridor, itching, dizziness, facial swelling, lip swelling and tongue swelling. á This provider was notified of patient reaction and she was then assessed in the emergency bay area. Monitored patient for severe reaction symptoms, including rapid progression of symptoms, vomiting, hypotension and chest pain. Patient was

observed for approximately 30 minutes post injection with no evolution of sx. Injection site tingling that extended along the ulnar nerve distribution was improving at the time of discharge.

Day 1-4 large raised bright red injection site warm to touch Day 3 Bright red raised rash all over face and scalp, going down neck

Mild shortness of breath, heartburn

Small raised bumps on bilateral posterior hands. Roughly 1/8 cm width and 1/8 cm high. Dispersed evenly in random patches. Not red. Flesh-toned color.

Patient received the covid vaccine on Sunday12/2020. He found out that his roommate tested positive for covid on 12/20/2020 when he got home. He started to have dry cough on 12/20 evening. Had HAs but resolved 12/22. Still coughing. No fever/chills/bodyaches.

Headache, muscle aches, joint aches, photophobia, pain at site (arm pain), and fatigue

Scratchy, irritated throat with metallic taste in mouth.

I have a swollen lymph node in arm pit, and elbow and injection site is swollen and hard. -

Severe abdominal cramping, diarrhea, rectal bleeding. Went to ED.

After I got the shot I could feel it going into my system (histamine). I had myalgia on my right shoulder and up into my neck, those I felt first. I felt like a histamine release. It is like I felt a drug being released in my body, a strange feel. Made me feel woozy. Not a major reaction, no airway constrictions, just felt uneasy. As I was walking to my vehicle to leave the hospital my arms started feeling tingly so I decided to walk to the ER and get checked. Vitals were taken and a shot of Benadryl - 50mg, sat around until it kicked in about 30/40 min and it made the symptoms subside. Next morning I felt fine , arm was sore from the injection but that was all.

Patient states that he went home was slightly fatigued. By 4am patient woke up and was severly fatigued. Patient states this moring it was difficult to wake up because how fatigued he was.

body aches, headache starting 24h after injection; lasting ~12 hours

Injection site pain, muscle aches , Headache , body ache , Muscle ached lasted through the rest of the week

Chills at 5-10 min after vaccination, with voice change and SOB 15-20 min after vaccination concerning for anaphylaxis. Epi given im x1. given immediately at voice change and immediately taken to ED.and currently receiving care

Patient reports 5 minutes after getting covid vaccine she became flushed, heart was pounding and felt dizzy. Patient denies hx of allergic reactions.

For first 5 minutes after injection i had taste in mouth of iodine and warm feeling in my chest - it felt almost like ct contrast does - went away after 5 minutes - felt fine after that - nurse wanted me to report side effect just in case

Hypotension and syncope without tachycardia, 15 minutes after injection. Patient was repositioned supine, which caused her to regain consciousness. Give 1 liter NS over 2 hours and discharged in good condition.

"From the patient (a employee) ""So, I think I am having a reaction to the vaccine. I did call my PCP to check in and they also said to notify you. I felt fine until last night about 8 PM. Then I got body aches, headache, nausea, tachycardia, no fever. During the night I had to use my nebulizer 3 times to keep sat > 86. As I did some research through the night, some Covid patients were found to have positive Epstein Barr. That is what I had in September (EBV) that put me down for 3 months. So I am wondering if it caused a relapse of that. Hope not."

Received COVID-19 vaccine on 12/18/2020 around 1225pm, ten minutes later while being monitored I started to feel hot flash, got dizzy like about to pass out, I asked to let me lay down, I felt the medication bitter taste in the back of my throat, I was clammy pale, I lay on a stretcher and put my feet up elevated, rapid response was called and BP was checked and Spo2, my hands were getting cold and tingling I was talking to RN, another RN, after laying down for ten minutes I sit up I was getting my BP back to normal, I sat down in the chair again for another 10 minutes, I was offered to go to the ER but I decline, I said I was getting better, after 15 minutes I left monitored by my supervisor I felt the medication in my stomach, after the tingling my fingers were numbed for the next days until present.

Following morning after getting vaccine woke up with chills headache and a fever of 100.8. I spoke with my PCP and she advised that I take some ibuprofen.

Increased heart rate and blood pressure. Rash on anterior right side of neck. She laid down and was given water. Blood pressure and heart rate monitored. She was also reassured by friends that she was okay. The patient said she was anxious and that's why she had a reaction.

Throat and chest tightening, as was all warm and flushed feeling in throat and chest

12/21: woke up with full body aches, pressure in ears bilaterally. Took 200mg motrin, body aches resolved by early evening. 12/22: Right tonsil inflamed/irritated, painful to swallow. Ear pain bilaterally. Went to clinic, temp 99.1, some fluid in ears; strep and influenza tests came back negative. Given zyrtec, flonase, and tylenol for symptom management and advised to get a covid test when possible.

Arm Soreness Started diarrhea on the 19 of Dec, went away on the 20th. Woke up on the 22nd around 1am with really bad abdominal pain and diarrhea.

Metallic taste in mouth. Progressed to numbness of throat and tongue. No swelling. No rash. No shortness of breath. Remained alert and oriented and speaking full sentences throughout. Benadryl 25mg PO. EMS in to assess. 186/98, HR 94, SpO2 100% Remained onsite for extra 30 minutes. Patient refused transport to BMC for monitoring. Patient refused to be driven home. Throat/tongue numbness

improved. BP before leaving 156/90, HR 82, SpO2 99%. Patient stated when she received Flu shot in early October this year, 2020, she had scratchy throat which resolved independently.

Pt states that she received her vaccination at 10:00am and felt chest tightness immediately. This resolved within minutes and pt left testing site. Pt states that around 11:00am she felt numbness and tingling in her bilateral forearms and fingers. By 11:45 when we spoke, the numbness and tingling had improved but was still present.

I had joint stiffness, my body ache, abdominal pain, diarrhea and headache.

Patient is describing feeling as if he took Niacin, he is flushed, red in the face but cool to the touch and itchy skin

rash and dizziness

Within 15 min. of vaccine,I had some brief mild shortness of breath,a stab of pain in the center of my left chest,I felt strange, had 3 stabs of pain in my right ear and 3 pressure type pains in my left ear.

HEADACHE, NAUSEA, BODY ACHES, INJECTION SITE PAIN, MALAISE

Chills, body aches, mild cough, headache

"Approximately 10 minutes after receiving the vaccination the patient began complaining of dizziness and ""not feeling right"". Vital signs indicated the patient to be hypertensive, vital signs otherwise within normal limits. Patient denies rash, itching, shortness of breath, chest. Patient transported to the ER for evaluation within 15 minutes."

Swelling and numbness of right side of the face.

"Patient was done receiving vaccine at 0921, approximately 5-10 minutes later reported feeling flush, metallic taste in mouth (first symptom), heart racing. VS taken: 152/93, HR 120. Pt seated, calm, given water to drink, speaking full sentences, NAD and no difficulty breathing or swallowing. At 0948 VS: 132/91, HR 96, SpO2 98% room air. At 0955, patient continued to feel waves of heart racing, HR on monitor 90-108, SpO2 98%. At 1002, notified ED charge nurse that patient will be escorted for further monitoring, work up if necessary. Still no respiratory or swallowing symptoms. At 1002, patient escorted to ED by RN, ambulated without difficulty. Upon ED arrival, patient reported feeling ""fine"" without symptoms."

Started having shortness of breath a couple hours after vaccine, then some fatigue and headache. Woke up next morning with sore arm, worsening headache and fatigue. Those side effects dissipated as the day went on, next day arm still a little sore, but by afternoon, felt back to normal.

Moderate pain and mild swelling at injection site occurring about 16 hours after injection. Swelling and pain resolved within 2 days after onset. No other adverse events or side effects to report to Pfizer COVID-19 vaccine. No flu like symptoms, no fatigue, no fever, no chills, no headache.

Headache , Fever , Diarrhea , Muscle Aches .

12/18/2020 in PM dry cough, body aches. Symptoms resolved on 12/19/2020

Dizziness, Flushed, Light headed, Near Syncopal Episode.

It started with a tingling in my tongue, my BP went super high and my face was all red and a headache afterwards. My BP went down about 25 min later. I was just monitored at the vaccination site, did not go to the ER.

Low grade fever 100.6, took Tylenol, fever decreased 99.3, took 2 more Tylenol at 3am 12/22/2020 and hasn?t had a fever since, was tested for Covid in the past with negative results, has not been around anyone with Covid that she is aware of, she has not traveled, however her son has traveled home from college but tested for Covid twice with negative results. Patient states that she is not experiencing any other symptoms.

12/19 - hour after the vaccine had diarrhea that lasted until about 11pm that night 12/20- 2pm started to have general malice. Took a nap and woke up at 6:10 pm with a fever of 99.5 orally. 12/21- Woke up to R armpit pain. Upon examination, R armpit was visibly swollen compared to left. No redness, tenderness, pain at the injection site. Could not feel swollen lymph nodes. Fever gone in AM.

Approximately , 11am started getting chills all over, temperature 101.6 around 1pm with headache. I would take Motrin/ Tylenol when I felt my fever go up . The fever, headache and chills lasted Friday ,Sat , Sunday. On 12/21/20 had no more fever, no headache or chills. I have a great appetite, have no other symptoms.

Woke up with elevated temperature of 102.0, Chills, elevated glucose level of 499, body aches, headache, Nausea

During 15 min observation, employee reported tingling in her lips. She is allergic to grass and has experienced this feeling when she is having an allergic reaction. Employee taken to gurny, VS taken. No hives noted. Reported her throat feels a little tight. 50 mg of Benadryl given. See attachment for VS record. 1:1 observation by RN. No further s/s. Employee states points to her flowers and says it could be the flowers my mom sent me for vaccination day. Monitored employee until 1950 when she was taken home by a co-worker. Employee states she has improved s/s and is now just drowsy. Informed to discuss reaction with PCP and/or EH. Instructed to call EMS or go to ED if symptoms come back.

HEADACHE, UPSET STOMACH, INJECTION SITE PAIN, GENERAL BODY ACHES, MALAISE

Injection was given low on upper arm, below deltoid. Became red, swollen, and painful in 12 hours, worsening over 3 days, resolved in 5 days.

I received the Covid 19 vaccination at 3:00 pm on 12/18 no trouble went home. Upon going to sleep the left arm was numb thought and got up to use the bathroom had diarrhea. While in the restroom hit face

had a Syncope episode regain conscience went to ER had 4 stitches in chin. Since 12/20 felt fine and was able to return to work.

12/17/20 Received Pfizer COVID vaccine 12/18/20 Sore arm, no other side effects 12/20 Headaches refractory to ibuprofen, and vertigo 12/21 Worsening HA and vertigo 12/22 Feels lightheaded. She has multiple sclerosis and has had vertigo as a part of her MS in the past. HA onset was about 72h after COVID vaccine. Currently been having HA, vertigo for about 2 days, seems to have peaked.

"Hard lump and redness at injection site on right deltoid almost immediately after injection. Patient describes a ""fireball"" in her throat. Denies swelling. No difficulty swallowing, maintaining airway independently. Headache. In E.D., patient received NS 1000 ml at 2000 ml/hr at 19:34, Diphenhydramine 25 mg IV x1 at 19:36, Methylprednisolone 125 mg IV at 19:38, Ketorolac 30 mg IV at 19:41, Famotidine 20 mg IV at 19:42. Forty minutes post injection, all symptoms gone. Discharged from E.D. at 20:52 with prescription for prednisone 50 mg po daily x4 days, diphenhydramine 25 mg po q6h prn, and famotidine 20 mg po nightly prn."

General Surgery/Trauma Cosign Needed Expand All Collapse All á COVID VACCINE CLINIC 12/22/2020 á Patient: DOB: Date: 12/22/2020 MRN: 5380787 á Subjective Patient is a 23 y.o. male who was seen at COVID Vaccine Clinic today for his first dose of the COVID 19 vaccination. á He denied any history of previous adverse reactions to vaccines. He does report recent hx of GI symptoms that he is currently being worked up for. He reports onset of similar sx around time of vaccine injection. á He was given the Pfizer vaccination in the deltoid muscle. á During his 15 minute waiting period after the injection, the patient began to experience dizziness, throat dryness, and nausea. He denied rash, hives, difficulty breathing, difficulty swallowing, throat tightness, hoarseness, stridor, itching, facial swelling, lip swelling and tongue swelling. á This provider was notified of patient reaction and he was then assessed in the emergency bay area. á Monitored patient for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with stridor, vomiting, abdominal pain and hypotension. á á á Review of Systems Otherwise negative, except for above á Objective á Vitals Vitals: á 12/22/20 1131 BP: 118/66 Pulse: 88 SpO2: 96% á á Physical Exam Constitutional: Appearance: Normal appearance. HENT: Head: Normocephalic. Nose: Nose normal. Mouth/Throat: Mouth: Mucous membranes are moist. Pharynx: Oropharynx is clear. Neck: Musculoskeletal: Normal range of motion and neck supple. Cardiovascular: Rate and Rhythm: Normal rate and regular rhythm. Pulses: Normal pulses. Heart sounds: Normal heart sounds. Pulmonary: Effort: Pulmonary effort is normal. Breath sounds: Normal breath sounds. Abdominal: General: Abdomen is flat. Palpations: Abdomen is soft. Neurological: Mental Status: He is alert. á á Assessment/Plan á Treatment included no therapy. Follow up response to treatment:no side effects. Patient discharge: Stable to go home and follow up with PCP. á Patient was monitored in the emergency bay without worsening or evolving sx. Orthostatic vitals signs were negative for hypotension or tachycardia. He was able to ambulate well without assistance and reported improvement of sx prior to discharge. Signs and symptoms of systemic hypersensitivity were reviewed and discussed with instructions to call 911 or report to the ED if SOB, throat/lip/tongue swelling, chest tightness, n/v, abdominal pain, or pruritic rash develop. á á PA-C Electronically Signed 12/22/2020 12:08 PM á á

45 minutes after vaccination felt faint, palpitations, nausea and tremor in hands followed by syncope, after awoke had ongoing muscle spasm/tremor in legs. Taken to ED and labs, IVF, CXR. Observed x 90 minutes and discharged- returned to work as scrub tech in OR. Left early, no further issues that day. Next am on arising had <30 seconds of postural imbalance which resolved spontaneously and no other symptoms since.

COMPLAINT OF REDNESS TO FACE

COMPLAINT OF REDNESS TO FACE

Dry mouth, lightheaded, dizziness, increased Hear Rate (89), normally in the 50s. Initial symptoms resolved within 90 minutes. Increased heart rate lasted longer than other symptoms. Reports additional metallic taste in mouth the following day.

Dry mouth, lightheaded, dizziness, increased Hear Rate (89), normally in the 50s. Initial symptoms resolved within 90 minutes. Increased heart rate lasted longer than other symptoms. Reports additional metallic taste in mouth the following day.

About 3 hours after vaccination, she began having hives and itching all over body. No difficulty breathinc etc. She went to ER that noted reaction to vaccine. She was Administered Benadryl 50mg PO X1 and Prednisone 60mg . She also received one dose of Pepcid 20mg PO. No signs of distress noted in ER.

Employee received vaccine and had no signs of adverse reaction after vaccination. Employee went to eat something and fainted. Shortly after employee had an emesis as well. Felt fine afterward and vitals were within normal limits.

bilateral rash/itching on ear lobes, rash/itching/swelling suborbital region, diffuse rash on forehead. bump on right side cervical region.

Nausea, deep harsh dry cough, HA, burning and tightness across shoulder blades. Arm very sore the next morning

Woke up at 12:30 am with severe body aches/feeling light-headed, had near-syncopal episode with large amount vomiting and diarrhea. Also had chills, unsure if febrile. Symptoms lasted for about 1 hour. Felt better the next morning but still with body aches

Diarrhea, hot flashes, chills all over body and in isolated areas, numbness/tingling in face/cheeks towards ears and neck.

Gave me shot did not feel anything. Probably 2-3 minutes later, it started to feel flush and chest tightening, and heart started racing. I did sit down, because they were monitoring us. Had my Apple watch on and heart was going up and down. They kept me monitored for about 30-45 minutes before I was hooked up to BP pressure machine. First reading was 180/110. At that point, they asked if I wanted to go to ER. I went to ER and they did an EKG which was normal. Heart rate came down with Benadryl. I was still feeling little tight in chest. Blood pressure 167/97 upon discharge. Sent home instructed to take

Benadryl. At home was relaxing, few hours later, heart rated spiked again and stayed for 15-20 minutes. Took Benadryl and heart rate came down. Did not take BP at home. Next day one other time where heart rate spiked again.

Severe muscle aches. Using local treatment to injection site and anti-inflammatories.

Patient had onset of a rash not abated with oral Benadryl. Sent to ED after 30 minutes of observation. In ED received IV Benadryl and symptoms resolved after appx 2 hours.(urticarial rash) resolved.

Pfizer-BioNTech COVID -19 Vaccine EAU increase muscle and joint ache.

Patient was pale and nauseous with abdomen pain. patient stated this may have been from her mensural but cycle. Patient put to lye down and left with her guardian to go home and seek medical attention.

Shortness of breath, heavy chest, heart racing, flushed, nausea

At the 10 minute mark patient reported not feeling well. She was noted to be pale. Then she reported having slight breathing problems along with her heart racing. Call for ER staff to report to vaccinating area. Patient's breathing concern resolved on its own by the time ER response team arrived within 2 minutes. Patient slowly gained her color back. Heart palpitations lessening but still reported by patient. Blood pressure / O2 Saturations / Respiratory rate monitored. No oxygen or treatment required at this time. Patient taken upstairs to be monitored by ER staff.

General malaise; body aches; chills; severe headache; low grade temperature (100.0F).

Dizziness for 48+ hours. Feeling of hypersensitive skin to touch

Tingling and numbing on the L arm where injected.

I developed a morbilliform, pustular rash 48 hours after the first injection of the Pfizer COVID-19 vaccine. The rash consists of pustules on an erythematous base on the ventral surface of both arms. It is mildly pruritic. It is not painful. I have no other associated symptoms and feel otherwise fine. I took ibuprofen 600 mg 24 hours ago. I have never had a vaccine reaction before. A dermatologist has seen pictures of the rash and thinks it is likely acute generalized Exanthemata's Pustulosis. Employee health has been notified.

Temp 100.8 next day, took Motrin and all issues resolved Outcome: Resolved and fine

"Employee complained of feeling hot, heart racing, stating ""I feel like I am going to pass out."" Vital signs taken, BP and HR WNL. Employee states she has not eaten since 0200, water and snack provided. Vitals retaken in 15 minutes WNL and employee states she is back to baseline following 30 minutes of monitoring. Dr. present at this time and assessed employee, occupational health to follow-up."

Started with Rash/Hives on Neck and upper chest and shoulder. Inside of nose rash and mouth itchiness. Progressed to arms and palms of hands. Started to get stomach upset. mouth got warm and throat warm. Breathing was OK but started to get tougher. Went to the ED Given Benadryl Pepcid and solumedrol Gave you prednisone 50mg for home 3 tablets once a day and OTC pepcid

Employee received COVID-19 vaccine on 1:45pm

Fever started at 8pm around 99.5F and then around 1:30am fever went to 101.5F, took 2 advils and fever went down in the 99s. Fever didnt break until after 4 pm next day after 2 advils were taken. Feeling tired/weak since had the shot.

Pt reported being dizzy and a headache

I was unsure whether to report this, and I will preface this by stating that as a child I got nosebleeds frequently. However, I had not gotten a nosebleed in 15+ years and on the day I received the first dose of the COVID-19 vaccine I got a nosebleed that lasted about 10-15 minutes.

Rash on neck, back, and chest

Metallic taste started several hours after injection and lasted several minutes

2 hours after vaccine started with itching face and body, eye swollen like my allergy symptoms 12 hours after vaccine got light headache, body aches, chill , throat hurt

2 hours after vaccine started with itching face and body, eye swollen like my allergy symptoms 12 hours after vaccine got light headache, body aches, chill , throat hurt

Pfizer-BioNTech COVID-19 Vaccine EUA: Systemic: Anaphylaxis, Fainting

On the first day shortly mild pain in left arm around 08:00pm exp brief pain in chest that occurred twice and went to bed. I woke up on 12/16 after resting on right side and tried to rollover upon waking up was in excruciating pain. arm around 5am woke up for work couldn't move my arm, barely could dress to put my shirt on on a scale 1-10 rate 7. As a result it was hard to due my daily activities or hygiene. The following day 12/17 pain felt mild and on 12/18 felt no more pain.

0835 the patient was given the vaccine in the right deltoid IM, at approximately 0838 the patient started feeling tingling and tightness in her upper chest and neck. She stated her throat was feeling funny and the back of her tongue felt like it was getting bigger and swelling. The patient did not have any difficulty breathing. At 0845 Benedryl 25mg IM was administered. Patient vital signs BP 156/88, HR 86, R 22, O2 Sat 98%. Respirations were even and unlabored. Patient was observed and within a few minutes stated that she felt better and was no longer feeling the tingling, tightness or tongue swelling. We continued to

observe the patient for 45 minutes after her initial reaction. 0855 Dr. assessed the patient and determined her to be stable. 0945 At time of dismissal, VS BP 125/82, 74, 18, 99%. Patient had no complaints other than drowsiness and respirations were even and unlabored. Patient left by ambulation in stable condition.

Body aches, fatigue and chills day after vaccine and following day, symptoms then resolved

Body aches, fatigue and chills day after vaccine and following day, symptoms then resolved

Pain local site, tenderness at local site, restriction of moving left arm, body ached, headache , Feeling feverish

Joint pain this morning- than itching in different places... some numbness all over my arm.. than at 1pm sudden onset of tachycardia, lip numbness and tongue numbness with nausea. I immediately took 10mg Benadryl. - but bc my tongue was feeling different I had to call 911. Upon arriving in the ER - they checked vitals and found tachycardia. They administered Benadryl 25mg.

Nausea and headache started approximately 21:00. Body aches and chills continued through until 12/22/2020 . On 12/22 I vomited at 7:00 and have continued to have low fever of 99.5-100.0 , chills, fatigue, body aches and headache all over.

Pt received vaccine on 12/17/20 and started experiencing side effects such a dizziness, body aches, nausea and vomiting, and body weakness shortly after. The symptoms got progressively worse as the days went by and pt came to the ED on Tuesday, 12/22/20, since symptoms were not improving and acetaminophen and ibuprofen did not help.

Chest pain, shortness of breath, tongue numbness and tingling

28 HOURS AFTER INJECTION, DEVELOPED BODY ACHES AND PAINS, 99.5 FEVER, CHILLS, SIGNIFICANT FATIGUE REQUIRING ME TO GO TO BED - SLEPT 12 HOURS

Woke up next morning around 6:30 AM the 18th with a few drops of blood on pillow. Nose was dripping blood. Was able to plug nose and stop bleeding within 15 minutes. No further issues that day, however did wake up with dried blood in nose on the 19th. No further issues after that.

"Patient received COVID-19 vaccine at 330pm. Approximately 15-20 minutes later the patient felt well, was released. At around 4:00pm patient then developed ""tongue fullness"" and felt flushed. She returned to vaccine clinic. No reported rash, voice changes, wheezing, shortness of breath at the time she presented back to the vaccine clinic. 153-173 sbp, HR 60; Doctor on call advised to give Benadryl 50mg IM and send to the ER for evaluation and monitoring for 4 hours. Benadryl was given to patient at around 4:15pm. Patient was taken to ED around 4:30pm. Patient requested early discharge from ED as she stated she "" Feels normal now. Requesting DC as she is a nurse and feels better and wants to be with her family."" Per ED note: patient discharged with antihistamines and epipen."

Employee complained of runny nose following receiving vaccination. Dr aware. Follow-up with employee done in the afternoon and employee advised symptom has resolved with no other issues.

significant headaches, nausea, fatigue and local redness/swelling/hard lump/itching.Outcome: Resolved and fine

Few hours post-vax developed headache. Took Tylenol. Went to bed, no symptoms. Woke up with cough and experienced headache and fatigue throughout the day. Seen by NP at Employee Health, below tests performed. Symptoms persisted through 12/18. By 12/19 symptoms resolved.

HPI: 56 y.o. male with no pmhx c/o generalized bruising for 2 days, noticed small blood tinged spots generalized. Gradual onset, severe on severity, no alleviating or aggravating factors. Patient denies fevers, chills, N/V/D, abdominal pain. In ER: Platelet <1. Platelet transfusion in ER. Admitted for Thrombocytopenia/ITP

Fever (102.5), Elevated Blood Pressure, Pulse resting 130 bpm, Red/swollen left arm, General body aches all lasting about 24 hours then all side effect subsided.

About 5 min after I got the vaccine I was on observation and I started getting a rapid, pounding, heartbeat, they waited about 5 min and it started getting faster and stronger, so they called paramedics to take me to the ER. It seemed it could be a severe reaction, I had fast rate for several hours and also broke up in hives while I was at the ER. They did a cardiac workup and noticed I had change on my heartrate according to the EKG they had previously done.

Local pain, heaviness in the arm, soreness for about an hour. Took 500 mg Tylenol. It kind of helped. Took Benadryl before she went to bed. Early this morning, everything felt heavy, felt nausea, mild palpitations, and dizziness. Took Famotidine this morning. Took Motrin and Benadryl this morning also. Having chills. Afterwards a couple hours was able to sleep a little bit. Pain in lymph nodes on the left side under arm by left breast area. Advil helped with the local pain. Having pain at the injection site.

Pfizer-BioNTech COVID-19 Vaccine EUA: Systemic: Rash (other than injection site), Nausea, Vomiting. Rash developed on the rash, per dr doctor, gave one dose of EPIPEN on the left upper leg. rash subsided.

Pt. (employee) reported prior to receiving vaccine that she had an allergic reaction to a measles vaccine as a child - classified as severe. Reaction thought to be related to egg. Vaccine ingredients reviewed with pt. & pt. indicated she did not recognize any ingredient with known intolerance & requested to proceed with vaccination. 20 minutes after vaccination pt. reported feeling like her throat was swelling, Vitals checked, WNL - no difficulty breathing. Continued monitoring for 15 minutes, continued feeling of swelling. 50 mg Benadryl PO given. Monitored for 20 minutes more with resolution of symptoms.

"Employee complained of a ""very mild headache,"" that she attributed to being a little dehydrated. Water given to employee. Symptoms resolved with no other issues."

1. Lip tingling started 20 minutes after injection, lasted about 30 minutes. 2. Mild chest tightness started 14 hours after injection and lasted about 30 mintues.

"Vaccinated 12/21 at 6:00 am. symptoms began roughly midnight. ""horrible headache"". notes that her left hurt badly and difficult to move. Reports she has taken advil and Tylenol and notes that these have been effective. reports still feeling fatigued, but isn't sure if that's related to lack of sleep from the headache or part of a reaction. Arm is still sore, but is not really painful the way it was last night. Still has a slight headache."

After the vaccine, patient said he felt hot. Later that day,he was starting to have muscle aches and then he noticed testicular and prostate swelling. He followed with his PCP and the PCP prescibed an antibiotic; however, patient did not recall the name of it. He is still being treated. He noticed an improvement. He started the antibiotic on 12/21/2020.

facial numbness to the left side with neck and shoulder pain. symptoms only started after 24 hrs

"At 10:30 pm felt sudden loss of feeling in right hand- unable to use right arm. ""Felt numbness on top of forearm-feels like muscles are no longer working."" Went to urgent care on 12/18/2020 (another clinic)- arrived at 0845."

After 24 hours felt tired, achy, arm hurt my head hurt for 48 hrs little longer. Upon waking up on Sat felt same symptoms. Due to patient exposure I contacted Covid hotline for that hospital employees. Then I was informed to go get tested ER for Covid results negative. I had to miss work on 12/21 due to taking Acetaminophen being a hospital criteria couldn't work while taking that medication.

Patient with a reported history of anaphylaxis to several things and carries her own EpiPen. She was brought to monitoring room at 1835 With complaints of cough and at that time had taken two puffs of albuterol inhaler. Patient also reports some medicating with 50 mg of Benadryl two hours prior to vaccine. O2 sats were 99% heart rate 69 and lungs CTA. At 1845 patient self dosed another 2puffs ofalbuterol. At 1845 HR 130 and sats 98%. At 1850, BP 173/139 HR 127. Patient continued to develop a progressive cough and SOB. Consulted Dr. by phone. We dosed with Zyrtec 10 mg po and assisted pt with administration of her own epi-pen. Followed up with ED next day. Pt had been escorted there from vaccine clinic after epi-pen administration and progressive SOB. ED reported pt remained hemodynamically stable and A&O x 4. Treatment consisted of Benadryl 50 mg IV, Pepcid 20mg,IV, solumedrol 125 mg IV, fluids 1L, and racemic epi. Discharged home after 3 hours.

15 mins after the vaccine I had a bad headache and very dizzy blood pressure 168/109 very hypertensive Possibly stoke after vaccine (No stoke) Took ibuprofen Had Tylenol before the vaccine 12/22/2020 slight high blood pressure still

funny taste in mouth, then 5 minutes later throat tingly. was given Benadryl x2 @ 14:35, at 15:04 patient reports no change. At 15:25 top of throat taste only, fullness in throat gone, at 15:35 patient normal and returned to work

Pt experienced headache and dizziness immediately after injection. Approximately 30 mins later the patient began experiencing chest tightness. The patient received 50mg Benadryl and was transferred to the emergency department within about 20 mins.

Fever of 100.2-101.1 (axillary), heart rate > 100 all day, palpitations, PVCs, ventricular bigeminy for 20-25 min (verified with ECG app on apple watch). Symptoms started at 4am (almost 12 hours after receiving vaccine) and lasted until I went to bed at 9pm. I took advil throughout the day and when I woke up at 5am Tuesday (36 hours later) I felt completely normal.

Patient presented for SARS-CoV2 Vaccination, about 15-20 minutes after vaccination patient complained of feeling a little altered but there was no swelling, rash, or any other indication of a reaction, about 5 minutes later the patient had a weird taste in her mouth and was observed to have a wheal forming on her R forehead. She was phonating ok with questionable swelling to her tongue, but airway intact with non-labored or constricted breathing. She was administered 50mg of Benadryl per pharmacist recommendation. She was monitored for an additional 15 minutes (total of 45-50 minutes after vaccination) with resolution of the wheal and no further symptoms. Patient was advised return/ED precautions and she checked in with vaccine clinic staff an hour later (via text) with no further symptoms.

12-18 vACCINATIJON 12-20 0100 LEFT EYE BEGAN TO SWELL, ALSO NOTICE 2 SMALL RAISED BUMPS, NOT FLUID FILLED. RINSED EYE WITH COOL WATER, THEN APPLIED WARM COMPRESS. 12-20 IN MORNING WHEN SHE GOT OUT OF BED BOTH EYES WERE SWOLLEN W/ DARK CIRCLE BELOW. 12-20 LATE MORNING, EDEMA SUBSIDED, EYES NORMAL. 12-20 LATER IN DAY, TOOK BENEDRYL FOR SEASONAL ALLERGIES. 12-21 NO ISSUES 12-22 1300 BOTH EYES BEGINNING TO SWELL AGAIN, L MORE THAN RIGHT.

"staff member/ pt. had vaccine at 1500, no prior allergies. after 15 min observation, staff felt ""weird"" but returned to work in building. approximately 5 minutes later felt lightheaded, dizzy & became flushed & diaphoretic. returned to vaccine clinic for observation. was found to have BP of 143/103 on a normally normotensive person.HR 70. Provided recliner, rest & monitoring. BP decreased to 128/85 after 1 hr. of monitoring. pt continued to monitor BP and self medicated at home with Benadryl & Ativan (unknown dose). Continued to feel disoriented and unwell X 48 hrs."

Speech difficulty and bilateral lower extremity tingling and numbness after COVID-19 vaccine administration. Symptoms improved at ED with IV Hydration

12/20/2020 Fatigued, brain fog, 12/21/2020 extreme fatigue and was sleeping more than normal, diarrhea, low grade fever 99.2, 12/22/2020 around 3am woke from sleep with a really bad headache, patient stated taking Tylenol to help with symptoms, never tested for Covid however she lives with her brother who had Covid in May, no travel history

"7min after vaccination ee developed ""dryness , heaviness and need to clear her throat""-- Just on the right side of throat"" 25 mg ofBenedryl given-- symptoms resolved."

Started feeling chills night of receiving vaccine, then dizzy 4 days later, with severe nausea. Still not feeling well, queasy, dizzy.

Reports within 15 min of covid vaccine she had facial pressure, throat tightening, headache, light headed, increase in BP-179/123

15 minutes after injection: headache, 10.minutes after injection: flushed skin, rapid heart rate - taken to the ER where she developed SOB, Chest heaviness, nausea, tingling in the hand- Treated with Benadryl, Pepcid, Solumedrol, Zofran, Elevated heartrate, BP stable, no O2,normal EKG 1445 client released from ER

tongue was tingly, woozy and nauseous 10 minutes after receiving injection. Drank Apple Juice and symptoms subsided about 10 minutes later. I also took Benadryl when I got home 20 minutes later. Also, left arm is sore.

flushed, tingling in face

"fatigue, light headedness, low grade fever of 99.0, nausea, ""foggy"" headed, dizzy"

Employee reports nausea, fatigue, muscle pain and feeling hot denies fever

Severe headache chills, body aches, arm pain, Nausea, fainted on standing, dizziness

Pfizer-BioNTech COVID-19 Vaccine EUA Within 5-10 minutes of vaccine, burning and tingling sensation started in chest, moving into throat, tongue, mouth, nose, and ears. Flushing sensation and red ears. Increased heart rate, resolved after a few minutes. Was treated in the ER and released from hospital. EKG and vitals were checked, no labs drawn. nausea, colic, diarrhea

Reports after covid vaccination while she was driving home she experienced swelling of the tongue, dry mouth, legs twitching, and diarrhea. Went to ER for treatment.

Patient started with tingling in hands/lip approximately 10 minutes after administration. Tingling in hands/lips worsened and pt started to c/o tongue swelling. Epi and IM benadryl were administered and a rapid response was initiated.

Had symptoms after shot of: electrical shooting pain down legs, chills, dizziness, fatigue, profuse sweating.

Really bad headache. She was fine when she was sleeping but when she was awake it was bad. Still has a small headache but not as bad as the first day.

Patient describes feeling hot, clammy and lightheaded about 5 minutes after vaccine administration. BP:109/69 P:72 O2Sa:100% Patient states that injection site feels ok. Got patient a juice and had her sit for another 15 minutes. BP: 118/63 P:74 O2Sa: 99% Patient has normal hand and arm strength bi -lat. After patient had cold juice and was able to breath without her mask on she felt much better. Patient

was able to stand and walk without dizziness. Patient stated the she did not feel she needed further treatment.

Patient felt lightheaded and dizzy. She was seen to by a nurse on staff and by Dr. After laying down for a while, patient felt better and wished to return to work. When contacted to following day, she said that she was feeling better, but felt a bit foggy the day before.

Tachycardia and poor taste in the mouth

Approximately 15-30 minutes after receiving the vaccine the patient reported numbness on the left side of her face. Also reported intermittent tingling in fingertips of both hands and feet. Prescribed a medrol dose pack that evening and had taken one dose. By 0630 today (12/22) reported that the numbness was 95% improved.

"A 36 year old FEMALE who received Covid 19 vaccine today at 1009, started c/o mild lightheaded and ""tingling throat"" at 1026 am, nurse notified this provider. NOTE: This is a late entry due to documented reaction was on paper and not available for documentation at the time of adverse reaction complaint. Oral hydration, patient stable, symptoms subsided at 1037. Employee discharged to work station."

Employee reported to the employee health clinic 3 days after receiving the Pfizer COVID vaccine and had complaints of a 30mm indurated area on her right arm. She states she vomited once that night and had a headache. Took Tylenol and seemed to help. Encouraged employee to apply cold compress to arm and notify if symptoms of arm swelling get worse or any new symptoms of a reaction arise.

complaints of general itching of arms - resolved in 5 minutes. HR 80 and regular, No rash. Treatment of clolse observation for further symptoms x 10 minutes. No medication treatment required.

Pt developed throat tightening, shortness of breath, hives on the anterior chest after receiving COVID-19 Pfizer vaccine. She received vaccine around 9:15 AM and symptoms began at 9:28 AM. Received epi pen by vaccination station staff. Reported to ED. Observed for 3 hours with no further adverse effects. Treated with steroids, Pepcid, Benadryl. Discharged home with epi pen, medrol dosepak, and allergy/immunology follow up.

Pain and numbness in the left arm From the shoulder to the fingers. Cannot raise arm, nor leave it down. Relief with a sling. Also, to manage pain, she is taking Tylenol every four hours. By medical order she started diclofenac potassium 50 mg tablet.

fatigue,fever 99.5F and cold sore

Metallic taste onset within 10 minutes of injection

About 5 minutes after the vaccine was given patient describes numbness and tingling from injection site to pinky and that lasted about 5 minutes. Patient started feeling a flush/warm feeling across chest about 15 minutes after vaccine. No dizziness or lightheadedness. Flushed feeling lasted about 30 seconds.

Patient feels much better after 25 minutes of waiting time. She states she does not require any further treatment.

Hot Flashes and headache, patient reports that she feels weird and not herself. No spike in actual temperature reported.

Received Covid Vaccine on 12/18/2020, 72 hours later on 12/21/2020 had left sided tongue numbness.

Chills, fatigue, left arm soreness, joint pain, temp 99.1

My throat was swollen and sore, a rash on face and neck, runny nose, lost voice, SOB

12-18-2020 SLEEPY FELL ASLEEP 3 HOURS POST VACCINE ADMINSTRATION, THAT EVENING HE WOKE UP WITH HEAD HURTING. SLEEP A LOT ALL WEEKEND . DEVELOPED COUGH 12-22-2020. RECIPIENT STATES HE HAD MIGRAINE TWO DAYS PRIOR TO VACCINE ADMINISTRATION. RECIPIENT REPORTS HE TAKES PERCOSET FOR BACK PAIN AND IT HELPS MIGRAINES. COUGH CONTINUES AT THIS TIME 12-22-2020.

0850 Client came in to receive COVID-19 Vaccine sent to observation for 30 minutes due to allergic to latex. At 0855 client started itching and breaking out in hives, complaining of shortness of breath and scratchy throat. Nurse escorted client to ER, where client received IV fluids, Benadryl, Solumedrol, Pepcid.

anaphylactic--started with mild itching, progressed to throat tightness--patient was given IV Benadryl, Pepcid, Solu-Cortef, Epi-pen x 2, oxygen

I was at the observation area and all of a sudden I started rapidly coughing and my throat felt itchy. I notified the nurse and she started observed me. The back of my tongue started feeling weird. She then hit me with an epi-pen as a precaution. Because of that I was moved to the ER for observation for 2 hours to make sure everything was ok. After the epi-pen all symptoms went away. Before I left they drew labs to check if I was having an allergic reaction. And the results came next day and it was 0.

pt had reaction of mouth and BIL cheek numbness, SOB, chest pain, sore throat irritated throat , chest pain approx 20 mins after vaccine was given. Pt was monitored and EMS called, pt was stable after 45 mins EMS directed her to return home.

Left facial numbness and tingling.

PT WAS OBSRVED IN HOLDING AREA LEANING FORWARD IN HER CHAIR ABOUT 7 MINUTES AFTER RECIEVING THE VACINE. RN ASSESSED AND NOTED: AUDIBLE WHEEZE, RESP 40/MIN, LIP SWELLING AND PT COMPLAINED OF NAUSEA. PT WAS ESCORTED TO ER IN WHEELCHAIR ACCOMPANIED BY 2 RN'S (2 MINUTE WALK) ONE HOUR LATER - AS REPORTED BY DR (ER) WORKING DIAGNOSIS - ANAPHYLAXIS / STATUS ASTHMATICUS MEDS RECIEVED: SOLUMEDROL 125, DIPHENHYDRAMINE 50MG, FAMOTIDINE 20MG --ALL IV EPINEPHERINE 0.3MG IM X1 FOLLOWED BY 0.3MG IV X 1 FOLLOWED BY 0.1MG IV X1 PT IS RECIEVING O2 - AND PROGRESSING TO BIPAP

soreness in L arm-2 days, back pain 1/2 day, chills 1/4 day

Lymph nodes are swollen on the left side It sore and tender on the left side

Patient reported becoming dizzy 12 minutes after receiving injection. Patient felt like she was going to faint. Patient was placed on floor with legs elevated and given a snack and a sugary drink. Felt better left facility and called in reporting when she got down to go inside her home she had a repeat episode of vertigo.

Fever to 100.2 with chills lasting all day very sore arm, fatigue

Complaints of dizziness with chest tightness.

Chills, body aches, diarrhea about 24 hours after vaccine. Cough, severe headache, temp of 100.0 started about 36 hours after vaccine and are still present

Patient refers to itching and rash. Refused treatment. The event occurred approximately 35 minutes after administration of vaccine.

Left arm NumbNess going from the forearm to the side of his Neck. Chills and slight HA. No fever Noted.

Per report from LPN monitoring patient--complaining of chest tightness and anxiety. 02 sat 99, Pulse 67, BP 114/83 and repeated at 126/94. Monitored for 30 minutes, patient continued to report symptoms. Monitored for additional 15 minutes. Patient left clinic with improvement in symptoms.

Vaccine administration site was above the deltoid.

mild swelling and tingeling sensation of the lips. No significant swelling.

Sore Arm

left leg feels heavy, headache, body ache, upper back pain.

Headache Sore arm

Day 5 started having hives on arms and inner thighs

pt after receiving vaccine, felt tight chest, difficulty breathing. 25mg Benadryl po. pt hypertensive 160/100. pt remained hypertensive and with chest tightness and CP. EMS called. EKG done. EMS found no need to go to ER at this time. Pt remained in observation then d/c home with friend.

I got very sweaty and hot feeling, nauseated and light headed, my BP and O2 were stable but got a little tachycardia, it passed after I laid down for a couple of minutes but once I stood up again the symptoms returned. That is why they sent me to the ER. Also had tingling in both hands. I recovered in about 2 hours (I had covid in early november)

@ apprx 1315 patient started feeling heartbeat beating fast, then racing. States she felt hot, dizzy, ears were ringing-the ringing resolved upon being seated. Patient was given 25 mg liquid diphenhydramine

(and seated with legs elevated- back of exam table elevated to an approx. 60 degree angle). HR 109, BP 144/87, afebrile, o2 sat 100% on room air.

A dry metal taste in mouth, Sore throat, Tired, Sore arm

Developed itching to lips and left arm 10 mins after injection. Benadryl 25mg oral given. Symptoms progressed to tongue and mouth itchiness. Pt transferred to ED for further eval and care. IV NS famotidine and methylprednisolone given. Discharged home.

1406, Monitored pt 1:1. She reported feeling fine for the first 15 minutes then reported itching involving her face but not forehead. Gave 25 mg IM diphenhydramine. pulse ox Reading was wnl. Within 5-10 min after diphenhydramine pt reported itching involving her arms, facial flushing but no shortness of breath. extra 25mg diphenhydramine IM given and Epinephrine IM administered. medical director notified. Dr. came and assessed and monitored patient. Symptoms resolved while on site. Pt escorted by medical colleagues to workplace ER where she agreed to stay for further monitoring. Dr followed up with pt later in the evening and she was doing. Patient updated progress December 20, 2020. I have had continued symptoms since Thursday though initially I felt that they were just typical post-reaction type symptoms. Thursday night I just had some itching and occasional hives. Friday I woke with a terrible headache and could not lift my left arm above by head due to pain but figured that these were vaccine effects. I had intermittent hives and itching that I was able to suppress by taking Allegra, Zyrtec and Claritin (each once) throughout the day. I was also taking Pepcid at night. Saturday, I tried to decrease my antihistamines to just Allegra BID, Pepcid once and Benadryl just last night. I woke with hives and worse itching again. I also appeared to have what looked like eczema on my hands that was new. So I took Pepcid and Allegra prior to going into my shift this morning. I took Zyrtec around 9 am as I had not yet had any improvement in my hives or itching. My co-attending noted that I was progressively becoming more flushed and around 11 am I started to experience an odd sensation in my throat with a persistent cough. My vitals were normal (HR 75, sat 98%, BP 113/78), so I talked the other attending out of more epinephrine and she prescribed me dexamethasone 16mg. I took the dex plus a Claritin at noon today and by 2 pm, had resolution of all of these symptoms. I also noted that my chest felt significantly less tight and retrospectively think I have been experiencing chest tightness and pressure since Friday but hadn't realized it because it occurred gradually. As of December 21, 2020, patient was to start prednisone 40 mg daily x 5 days.

Pain in arm of injection site including numbness and pins and needle tingling in the lower arm and hand, loss of feeling in hand and loss of sensation and strength; difficulty holding onto objects. Dizziness and weakness, severe joint pain. Throbbing Headache.

Felt sleepy, Took a nap woke up around 8:30 pm. Felt nausea. Drink 7-up Laid back down. Woke up still felt nausea. Drink another 7-up, felt sick to your stomach. No appetite. Felt really nausea. Still felling nausea.

Visible hives twice, and stinging eyes.

"Patient complained of ""racing heart beat, dizziness"" BP noted 141/92 P104 oxygen 99 repeat temp 97.6 BP 145/89 P96 repeat BP 145/95 Pulse 104 taken to ER for further evaluation and treatment. Temperature rose to 101 while in ER. Patient reports symptoms resolved approximately 1 1/2 hours after injection ""feels fine"" now Discharged home steady gait."

Dizziness

"Pt returned to her work area. At 1314 - Team member was taken to the ED. She reported feeling like her tongue was swelling, she attempted to each chips and felt like her throat was sore and needed to be cleared. Pt had a syncopal episode and c/o chest pressure, and difficulty swallowing (able to control secretions). Hives were noted to her face, neck & chest upon arrival to teh ED. At that time - pt reported feeling like her tongue started swelling 15 minutes after the vacciation. Pt was confused and ""extremely"" anxious. VS: 209/102, HR 125, RR 30 SaO2 96% r/a 1321 -diphenhydramine 25mg IV, pepcid 40mg IV and IV NS started VS: 159/105, HR 118, RR 31, SaO2 100% r/a 1322 - epinephrine 0.3mg SQ, Solumedrol 125mg IV 1332 - Zofran 4mg IV 1351 - Ativan 1mg IV 1359 - 128/91, HR 100, RR 22, SaO2 99% 1411 - pt calm- redness improved. still c/o of feeling something in her throat. 1441 - Calm, asking for a drink - tolerated well. BP 110/72, HR 82, RR 18, SaO2 98% 1635 - d/c orders written."

Dizziness and headache , Sore Arm

I had a headache, body ache, chills, fever, sore throat, cough, fatigue.

Anaphylaxis/Angioedema Patient was given EpiPen 0.3 mg IM; Methylprednisolone 125 mg once; Diphenhydramine 25 mg IV push once; Famotidine 20 mg IV push once; Dexamethasone 10 mg IV push once Patient was intubated and put on propofol and midazolam drips for sedation

PT REPORTS A FULL FEELING IN HER THROAT - PT IS AN MD AND DESCRIBES IT AS GLOBUS

Approximately 48 hours after the vaccination was received I developed moderate headache, body aches,chills, dizziness and nausea and was completely bed ridden.I was unable to complete any activities or work. On day two, the dizziness and nausea worsened and I began vomiting. On day 3 of symptoms, I was able eat, sit up and walk around, but still have moderate headache. I also developed diarrhea on day 3.

at about 3am (15 hours after vaccinated), I had the chill, I was freezing from the shoulder down. I had to put on 2 coats and 3 blankets because I was shaking/tremoring. also, headache and body ache. I whole body is hot and my back felt weak. the chill was more apparent toward the night.

High temperature up to 103.2F. Hypertensive episode 165/105 with temporary blurry vision. Three days of high fevers otherwise 101-102 despite alternating Tylenol and Ibuprofen every 3-4 hours and hydrating. Also had an additional episode of hypertension with blurry vision when I wasn't febrile.

continous nose bleed - unable to stop it.

Can't taste or smell is off

States had generalized itching and ask for benedryl. 50mg Benedryl Tablet given PO after 10 minutes ask for Pepcid. After 15 minutes states he feels better and issues resolved

PARASTHESIA IN LEFT ARM - ARM THAT INJECTION WAS ADMINISTERED IN - LASTING LESS THAN 1 MINUTE WITH SPONTANIOUS RESOLUTION - PT IS AN MD

Patient had a temperature of 100.2.

Sore arm last evening (no more than a flu shot), this morning I got tired around 11:30 after a full night of sleep and ended up taking a nap during lunch. I woke up feeling foggy and went back to sleep after finishing my work for the day and slept for over 3 hours, woke up and continue to feel very foggy

Shakes(chills)/ Tachycardia/altered mental status/sent to the hospital for evaluation

After injection had L arm pain, the following day (12/17) pain continued . 12/18 onset of fever max temp 38, chills, fatigue, muscle pain and nausea. Treated with Tylenol for symptom relief. Symptoms continue and worsened 12/19 and 12/20. 12/20 underwent video clinician visit for symptoms and inability to return to work for continued symptoms 4 days after vaccination, last day of fever. 12/21 covid and flu swab negative symptoms all continued fatigue very evident going to and from swab exam. 12/22 morning near syncope while getting ready for day, tachycardia, underwent ED eval was given fluids and labs drawn and discharged home with improvement in tachycardia and lightheaded/dizziness with fluids, another covid swab was negative along with negative RVP. Continued to have fatigue 12/22 evening.

Patient had a fever of 99.1.

Fever 100.6 24 hours after vaccination , Headache chills and body aches, muscle ache .

12-19 Received Vaccine @ 0930 12-20 Did not sleep well, woke up and was dizzy, nauseaous; this has been constant.

Received vaccine around 10:40 am, by 10:50 started to feel dizzy, eyes felt full, dry, tingly, swollen, voice became raspy and throat itched. Received 25 mg Benadryl PO at around 10:55. Face, arms, chest and abdomen developed a fine red itchy rash, tongue swollen and itchy, lips tingling, wheezing, blood pressure elevated, pulse thready given 25 mg PO Benadryl, taken to the Emergency Room, symptoms persisted, stomach hurt became nauseated, received IV solumedrol, Pepcid, IV fluids, nebulized albuterol. Sent home once stable after 3 hours, with instruction to take Benadryl every 4-6 hours fir the next 2 days, albuterol as needed, and prednisone for the next 5 days.

Swelling left deltoid and left neck followed by feeling of throat closing. began 14 min after administration; Code Assist called and taken downstairs to ED; received epinephrine, Solumedrol, Benedryl. Prescribed prednisone and Pepcid 40 mg bid .

Pfizer-BioNTech COVID-19 Vaccine EUA within 5-30 minutes: dizziness, weakness, palpitations, chest tightness, injection site pain, left arm numbness and weakness, headache, nape pain, drop in BP, high

BP, left shoulder and elbow joint feeling like to be detached. Sent to Hospital ER, was given Zofran and Ativan

During 15 observation period I developed tachycardia rate in the 140?s. Hypertension 180/100. Rapid response was called and sent to ER. I also became flushed, chest rash, chills low grade temp 99.4. I was given a 500cc bolus of Normal saline. Benadryl 25mg IVP and my morning dose of carvidelol 6.25mg. On discharge Bp was 102/ 74, Hr 76.

Pt hx of DM Type I, HTN, reported pruritic uritcarial rash 5AM 12/21/2020 inner wrists, anterior distal LE bil. Resolved aprox 30 mins later. Urticaria recurred mid day 12/21/2020, pt treated with Benadryl 25mg PO, resolved. Urticaria returned evening of 12/21/2020 wrists, axilla, nape of neck. Pt treated with Benadryl 25mg PO, resolved. Urticaria returned 5AM AM 12/22/2020 similar distribution as evening of 12/21/2020. No air way or facial involvement. Pt treated with Benadryl 25mg PO, urticaria resolved. Sought medical eval 12/22/2020 around 10AM: no sx nor urticaria present. 1:30PM 12/22/2020 after eating lunch pt called to report recurrence of urticaria now involving face, lips tingling, itchy back. Administered 50mg Benadrly IM, observed, urticaria/pruritis resolved x 45 mins. Urticarial sx and lip tingling returned in 2 hours, pt transferred to ED for treatment with epinephrine, steriods, observation.

Headache, stomach problems and body aches.

Chest pressure and headache followed by generalized itchiness and hives. Progressed to facial swelling and airway swelling. Treated with EpiPen x1 IM, 50 mg diphenhydramine PO, 20 mg famotidine, and 10 mg dexamethasone. Immediate reaction improved. Itchiness and intermittent hives continued. The headache continued along with other common/expected side effects of vaccine.

On 12/16 about 10pm I began having arm pains and took tylenol. 12/17 woke up feeling exhaused with severe body aches, headache and a 101 temp. I went to work but had to leave because I just wasnt feeling good. On 12/18 I went back to work but could not perform so I had to leave again and was still experiencing the severe body aches and headaches but no fever. I was suppose to work on both 12/19 and 12/20 but had to call in. On 12/19 still same symptoms with no fever but around 5pm I began to have palpations and heart racing which caused me to go to the ER. I was given fluid and labs was done and monitored for a few hours and was released after the fluid was given. On 12/20 felt pretty good still tired and exhaused feeling and on 12/21 I felt good but later that evening I noticed my forearms began to feel stiff, tingly and heavy. My hands began to feel stiff and is very sore. Continue to feel very tired with body aches and continued to take tylenol. This morning I felt ok but after fixing breakfast the symptoms came back and they feel like the same symptoms I had when I had the vasculitis in 2009-2010 and that concerned me so I discussed it with a Neurologist and Immunologist who I will reach out to after the holidays to schedule an appointment. I have an appointment scheduled with my PCP for additional labs on tomorrow 12/23 and I have not been able to work since getting the vaccine. My hands feels clumsy and I am constantly dropping things since yesterday

"Pt with dizziness and chest pain that started about 10 minutes after getting the Moderna Covid19 vacccine. No shortness of breath, no rash, no fever, no swelling, no weakness. Feels pain in center of chest and on L side. Pt also has been having stress with work. Pain started in the R side of the chest and

migrated to the L side. It improved with Nitro and Aspirin but pt states he still feels, ""fussy."" He has no symptoms of allergic reaction or anaphylaxis. Pt has no known hx of cardiac dz, nonmoker, nondrinker. His Mom has a cardiac murmur but no other known history of heart disease."

I have face numbness, a nose bleed

headache, injection site sorenesss, nausea (moderate), fatigue (moderate), body aches/chills (moderate), temp 99.4 deg, notified employee health, had a Covid test (came out Negative), sent home for the day.

30 mins later I became completely dizzy, flush and had hard time focusing. I was placed on a gurney and blood pressure was taken. 158/103. Usually runs 110/60. Was told to go to ER but I declined. They monitored BP for about 45minutes. I then went home and did same thing. BP stayed high for two days. With headache. I stayed on the couch for those days. Monday I went to work because blood pressure was down. But now my HR is up. Highest in 130?s I felt a little dizzy. I had stomach upset and nauseous with mild headache. Left arm pain Today Tuesday as soon as I exert myself my heart rate goes up. I have mild headache

Red hives under chin, on neck, and on chest beginning 30 minutes after dose and lasting approximately 1 hour.

This nurse was notified that the worker was having tachycardia post vaccination. The worker had a baseline HR of 75 while at rest, per wrist band monitor belonging to worker. Worker's HR steadily increased as high as 94 BPM. The worker was shaking and the worker complained of throat not feeling right and dizziness. Worker described their throat as feeling tight. This nurse brought the worker to the back area of the clinic, asked the observer to initiate a MET, and this nurse went to med room and took an EpiPen from the box. This nurse administered the EpiPen into the right thigh at 1600. by 1604 the MET team had arrived. The MET team spent 20 to 25 minutes with worker. The MET team included two PICU physicians, one being a fellow. This nurse was advised that the worker was asked if wanted to go to the ED (by the worker) and worker declined. This nurse agreed to observe the worker until the close of clinic at 1730. Vitals take at 1720 were as follows: 89 HR, 94% O2 sat, 124/66 BP (RUE), 16RR. Worker was no longer feeling dizzy, no throat symptoms, and refused ED observation and went home. Nothing further reported.

itchiness in throat, mild tongue swelling. Administered Benadryl 50 mg. sx resolved 5-6 minutes after medication administered

Vitals taken 1830: 142/84 P:94 SaO2: 100% Vitals taken 1850: BP:127/87 P:102 SaO2: 99% Patient did state that she has been under extreme stress with the death of her husband in November. And today was her first day back to work. Had patient stand and walk around a little, no dizziness noted. Gave her some pretzels to snack on and after 5 minutes she stated she was feeling almost back to normal. Patient's friend is an RN and was going to have patient spend the night at her home. Patient stated she did not feel she needed to see a provider and felt that she would be ok in her friends care.

Swelling and redness around the injection site immediately after injection at 10:50 AM, 12/22/20. Site was slightly raised with erythema, about size of a quarter (coin). Symptoms lasted >5 hours after vaccination; still ongoing at time of writing (3:18 PM). No other symptoms noted. Patient monitored for 30 minutes post-administration and line drawn around area with swelling to monitor for growth/worsening.

1000 came back to the clinic from her department states just feels fuzzy/dizzy taken to cot VS 109/77 72 100RA denies any other issues witnessed far away gaze when talking with her . She states got back to department and just didn't feel right and had a bit to eat and drink and told coworker and they brought her back down to the clinic. She was monitored as denied any pain 0/10 or any other symptoms. 1010 112/60 70 100 RA denies any pain A&O times three able to focus no more distant feeling 10/20 114/78 72 100 RA denies any pain A& O times three denies any pain, nausea SOB, chest discomfort at this time 1030 116/76 75 100 RA denies any pain states she is not fuzzy or disoriented at this tiem feels much better but just feels tired. instructed to monitor herself and if any issues to go to ER. states she will comply. 1833 spoke with pt states went home slept and is feeling much better just felt fuzzy and disoriented for that hour after the vaccination.

Flushing 3 minutes post injection. Did not report at center because I attributed it to it being very hot in the injecting center. 30 minutes post vaccine I began to have body flushing starting in my chest spreading to my face through my torso, down arms, and legs. , dizziness, clammy hands, nausea 1 hr post vaccine with facial tingling, jaw constriction, and palpitations. Pulse was not elevated, but never had difficulty breathing, wheezing, swelling, or rash. Flushing continued, Benadryl taken 1.5 hours after vaccine with relief of symptoms. Symptoms returned around 7pm which was approximately 9 hours post vaccination. Benadryl taken again.

began to have a burning sensation inside body & felt light headed

Fever to 101F, which resolved with acetaminophen 625mg PO and did not recur. Flare of existing hidradenitis lesion in left armpit, resulting in 24 hours of pain and drainage. Within 24 hours returned to baseline condition.

At the time of the injection, I felt dizzy about 5 minutes afterward but I went away rather quickly. I also started coughing, but as I have asthma and I was rather anxious, I used my inhaler. I did mention I had felt a little dizzy at the appointment but it was going away. Then, around little that same night /the next morning (12/20), I got a little short of breath and chest tighteness, but nothing major. Around 2pm that day, the tightness got worse and my inhaler stopped helping as much and I got a cough. Then, around 3 am today (12/22), I woke up with chills but no fever and nausea and threw up several times and then it went away. Around 6pm tonight, I was taking a nap and woke up with what I think was sleep apnea. I felt like I wasn't breathing quite right, and like it almost hurt to breathe because my chest was so tight. I checked my oxygen levels while sitting quietly, but not laying down like I was before and they were 95-97%. Chest tightness remains and is worse than before, breathing is ok. I have a lot of muscle pains and body aches, some cough, and very mild phlegm. No fever. I did not go to see a doctor because I don't have health insurance right now and I don't want to pay for the bill.

Vaccine received 12/18/20. Experienced fatigue, chills, body aches, fever on 12/19/20 ~3pm. Temperature ranged 101.3-102.6 deg F. Reduced with Tylonel. Temperature 12/20/20 ranged 100.5 deg F down to 99.5 deg F by end of day with no antipyretic medication taken on 12/20/20.

BEGAN TO HAVE ITCHING ON TOP OF HEAD APROX 20 MIN AFTER INJECTION - TOOK BENADRYL 25MG PO

Tachycardia 124- 132 started 10 minutes after vaccine. Resolved spontaneously about 2 minutes later

Joint ache Chills

Patient received Moderna COVID vaccine at 1926. She completed standard 15 min observation time and was dismissed from clinic. Patient returned to clinic at 2000 with redness at injection site, itching, chills. BP 126/90 and pulse 86, patient able to speak comfortably. Diphenhydramine 25 mg given orally. Patient observed for 36 minutes. All symptoms resolved and observed redness to left deltoid completeely resolved. No complaints of shortness of breath or difficulty breathing. Patient discharged from clinic to another facility with appropriate follow up instructions. Patient texted ahead to her preceptor that she is en route.

Severe pain at injection site Left upper molar tooth broke off

patient felt slightly nauseated at 10 minutes after injection, then developed slight sweating; BP 160/81; 83 at 5:45 and then 158/87 with HR 82 at 5: 52 pm. Her lungs were clear, she was speaking in full sentences and was denying any chest pressure, her usual sense of asthma exacerbation. At 6:05 it was 164/83 with HR 79 and patient developed a dry cough; we decided to have her wait just a bit longer, then cough worsened, so at 6:25, decision was made to have patient seen in ER for further assessment, and en route in wheelchair to ER the dry cough became persistent, spasmodic and patient was unable to

speak. Epi-Pen was injected in right mid thigh, and patient transported to ED urgent eval. She noted immediate palpitations, and slight improvement of breahting, was able to speak in four word sentences. On arrival to the ED, patient was administered Duonebs, Albuterol neb, IV Benedryl, IV Solumedrol; CXR was obtained, with results pending. Patient was sent to observation for ongoing monitoring and assessment of breathing. at 6:30 PM in the ER, she

Noticed a full trunk , neck and back red raised rash Tuesday night

Developed a cellulitis in the abdomen around umbilical area that has pain,itching,redness around it , seek dr.attention and put on doxycycline

Dizziness/wooziness, shortness of breath, muscle aches, high BP and heart rate

Itchy rashy hives all over. Swollen itch burning eyes. Throat inner ears tingly itchy

itching and rash - no tongue swelling, sob or throat closing stable vitals treated with benadryl 25, solumedrol 125 and pecid 20 mg IV She had gradual improvement and resolution

approximately at 3;32pm felt heart racing, then 2-3 minutes later tongue tingling, few minutes later felt a lump on throat. 25mg benadryl taken, hoarse voice and anxious, then another 25mg benadryl taken. I was then taken to ER for observation. I was given pepcid and prednisone in ER. Continued to feel lump in throat but no shortness of breath or difficulty breathing. Felt calmer and normal heart rate. Discharged approximately at 5:30 pm

Right side facial swelling and right eye twitching sensation. Given Benadryl 50mg.

numbness lower chin,

Patient felt lightheaded and dizzy. B/P 74/34 HR 92 RR 20 Water provide Legs elevated. B/P after 5 min 138/86 Feeling better

patient had immediate onset of metallic taste in her mouth and felt a slight tingling in mouth and slight need to focus on swallowing without any difficulty with breathing; no sense of doom, no lightheadedness, no palpitations, no problems breathing. blood pressure was 196/112 with HR of 110 at 4:20 pm, then was 204/112 at 4:28 with pulse of 90; her heart and lung exams were normal without any wheezing; speaking in full sentences; she sat and rested for the 30 minutes and her blood pressure returned to 142/97 with pulse of 68. injection site looked fine and patient was comfortable to go home.

Tachycardia, hypertension, flushing and tingling around mouth within minutes after injection. Lasted about an hour

c/o pain and erythema at the base of posterior scalp. no tenderness with palpation. full rom of neck, recommend ibuprofen

Dizzy, heart palpitations. Was taken to the ED for evaluation

1 cm area of induration following vaccine, no erythema, no pain

"dry mouth, feels ""different"", no dizziness, no headache"

I received an IM injection at 4:40 pm at my place of work. I sat down as per our protocol after the injection. Within 5 minutes, I felt a flushing effect start from my head and travel down my body to my toes. I became light-headed and felt like I was floating in my chair. My legs, from my knees to my toes, felt very warm, numb and tingling. After the 15 minute period of monitoring ended, I walked back to my unit. While walking, I felt light on my feet and as if I were walking on a bunch of thick blankets. There was a numbness sensation to the soles of my feet. I informed the doctors and nurses that I work alongside with once in my unit. The light-headedness dissipated within approximately 30 minutes. The numbness, tingling and warm feeling from my knees to my toes lasted approximately for 2 hours (until 6:30 pm). I had no issues after that point.

40 minutes after vaccination, developed hives, chest tightness, lip/cheek/tongue numbness/tingling, nausea Took Benadryl 50 mg and Pepcid 40 mg at 7:15pm. Continued with Zofran every 8 hours

acute onset parasthesias in left arm and bilateral lower extremity weakness within 15min of injection. Unable to stand without assist. no radicular symptoms

13:40 dizziness/vertigo feeling. 14:25 nausea, headache, dizziness. Went to Emergency room in our hospital to get checked out. My blood pressure was severely elevated, felt unwell, headache increased in intensity, nausea worsened & dizziness.

noted immediate development of swelling right at the site of the injection on right deltoid - slightly warm, 3 cm in diameter, non fluctulant, no streaking; no respiratoyr distress, no hives, no systemic symptoms. drew a line around the redness and asked patient to put cool compresses on it, monitor for worsening or genrealization, other skin findings. no change after 30 minutes.

Within minutes of admin of Pfizer vaccine, developed dry mouth, peculiar sensation through extremities/trunk/abdomen (akin to being injected with contrast), elevated BP, tachycardia, flushing, lowerabdominal cramping. Symptoms lasted app 30 minutes. Eval by RNs at the vaccine site. Eval by MD at facility. Discharged after improvement in symptoms.

"patient was very anxious and nervous prior to the vaccine, and felt fine at the time of the shot, but became slightly nauseated and felt ""nerves"" and ""like I was a nervous wreck"" - she felt overheated and was speaking calmly, in full sentences. her HR and BP were normal at 76 bpm and 129/70. her lungs were clear, heart was regular (known heart murmur), no skin changes, not sweating. she rested and upon further evaluation was feeling fine."

Arm soreness at site of injection., sore throat, tactile fever (did not measure temp), mild malaise. Not severe enough to impact daily activity meaningfully.

Headache, nausea, dizziness, lightheadedness, lack of concentration and memory issues

On the initial day about 5 minutes getting the shot I had right eye cramping lasted 25 minutes 12/18 neck stiffness worst on 12/19 On 12/19 I had extreme fatigue and headaches also on 12/20, and 12/21. Felt very dehydrated as well.

About 10-15 minutes after receiving vaccine patient reported that her heart began to race and throat began to swell.

The patient experienced a headache, nausea, metallic taste and BP was 140 and it is usaully 120. Pulse and O2 was within normal limits. Patient received water and cold compress and she felt safe to drive home.

6:45 pm asthma attack requiring albuterol inhaler. Attack was not triggered by any particular event. I was at rest when it started.

Redness, swelling and tenderness at the injection site Rash appeared at the injection site after 8 hours of administration. Chills and low grade fever

Shooting pain down my left arm about 3-5minutes after the shot was given.

headache, soreness on injection site, hives on the day of injection until current day.

About 30 minutes after vaccination while driving home, tingling was noted in injection arm, traveling up the left arm into the left neck and around the lips. Tingling resolved but the next day tingling was noted to be diffuse, light and scattered through arms, hands, fingers, and legs equally and bilaterally. No dermatomal or distinct nerve distribution. Tingling worsened by sitting on legs, became dense tingling in the anterior shins upon standing, but then resolved a few minutes later to the more diffuse light tingling. No notable difference in strength (able to hike and cook). No notable numbness. No rashes, no shortness of breath, no changes in heart rate.

(I'm a physician who received the vaccine at my medical clinic). 5 minutes after receiving the vaccine, I felt very dizzy and faint. We checked my BP (which is usually 120/70; I do not have hypertension), and it was 190/120, HR 120-130 bpm. We rechecked it several times and it stayed there. After 5 minutes, I suddenly felt better and my BP had dropped to 140/70, HR 70. I felt exhausted. No other problems. They watched me for 30 minutes and I felt fine. I had my husband drive me home. As we were driving home (now one hour after the vaccine), I realized that my throat was closing up. I was breathing fine but I realized I was having an anaphylactic reaction from the vaccine. I have never had any allergic reactions before to vaccines, etc. He drove me back to the emergency room of my hospital, where they diagnosed me with an allergic reaction/anaphylaxis to the vaccine. They gave me emergently IV solumedrol (steroids), pepcid, and benadryl, which fortunately worked immediately. They observed me for several hours and I was fine. They sent me home. The next morning, I felt exhausted and my throat was hoarse and sore, but that went away several hours later. It was a terrifying, terrible experience. I thought I was going to die. I had to pay $1000 out of pocket for the ER deductible.

Pfizer-BioNTech COVID-19 Vaccine EUA Hives/Rash on the right side of the body, Itching, Arm Pain (1 day after vaccine) Benadryl was taken and reduced the hives and itching

HIVES starting 32 Horus vaccines, unclear if related, took Benadryl,

Fever 100.4¦ F , headache; body aches , trouble focusing

Vaccine at 10 am 12/18/2020 That same day: Feet numbness at 10:45 am - resolved at 4 pm L hand numbness around 11 am - quickly resolved lower face numbness around 11 am - intermittent throughout the day all symptoms resolved by evening/overnight 12/19/2020 mild facial numbness about 4-5 hours during the day fully resolved by 12/19/2020 evening, without any further symptom recurrence at any site

48hr following dose 1: mild nausea, dizziness, foggy brain.

Numbness and tingling on left hand and left arm. Lasted a few hours. Started in fingers of left hand, progressing up to left arm.

Anaphylaxis reaction with hives, stridor/airway edema, wheezing

Congenital anomaly or birth defect; This is a spontaneous report from a contactable consumer (patient). A 57-year-old female non-pregnant patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for covid-19 immunization. Medical history included high blood pressure and hypertension and more epileptic seizures. Concomitant medication included unspecified pneumococcal vaccine on 12Dec2020 for immunization. The patient previously received flu shot (Influenza virus vaccine) and pneumonia shot (Pneumonia vaccine) both on 20Oct2020 for immunization. The patient experienced congenital anomaly or birth defect (as reported) on an unspecified date with outcome of unknown. Information on the lot/batch number has been requested.; Sender's Comments: The reported information is unclear. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Pfizer-BioNTech Covid-19 Vaccine EUA Nausea, vomiting, body aches, fever 100.6

developed swelling of tongue; dyspnea; skin rash; This is a spontaneous report from a non-contactable consumer. A 35-year-old male patient received BNT162B2, via an unspecified route of administration on an unspecified date in 2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. This is a call from CDC this morning regarding a new case, the patient was administered vaccine and developed swelling of tongue, dyspnea, skin rash on an unspecified date in 2020, then treated with dexamethasone, diphenhydramine hydrochloride (BENADRYL), via intramuscular (IM) epinephrine in emergency room (ER). The outcome of events was unknown. She will alert him each time there is a report of severe hypersensitivity for his awareness. Further, the CDC is in the process of appointing a contact who will be able to meet with us regularly on this topic. Their conversation was amicable and demonstrated a willingness to work closely with us as we navigate the issue of hypersensitivity. No follow-up attempts are possible; Information about

lot/batch number cannot be obtained.; Sender's Comments: The reported information is limited. Based on the temporal relationship and the description of the events, swelling of tongue, dyspnea, skin rash, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

extreme arm soreness, fever of 101.4, chills, body ache

erythematous papular rash scattered throughout abdomen, torso, neck with areas Onset of symptoms noticed 6hrs from vaccine, rash has continued to spread 4 days from time of vaccination sparing most of the extremities.

itchy throat; itchy throat/back of the tongue reaction; This is a spontaneous report from a contactable physician. This physician reported similar events for two patients. This is the first report. A female patient of an unspecified age (reported as 50, unit unknown) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date were not provided), via an unspecified route of administration on 17Dec2020 22:00 at a single dose for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced itchy throat/back of the tongue reaction. No rash, then they gave her epi 10, ED (emergency department) doctor assessed for 2 hours. No evidence of tongue swelling, hemodynamics was normal. Outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the close temporal relationship and the description of the events, itchy throat/ tongue reaction there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.,Linked Report(s) : US-PFIZER INC-2020500303 Same reporter, product, and event, different patient

Extreme arm pain alternating with numbness and tingling, joint pain in shoulder, elbow, and wrist, chills, low grade fever (100.5), fatigue

Patient developed bilateral lower extremity numbness and tingling, as well as weakness that resolved after several hours of observation in the Emergency Department. It is highly likely that the response may have been in part related to anxiety. After several hours of observation the patient had return of motor strength and was able to discharge. She continued to have paresthesia that was improving at time of discharge.

Pfizer-BoiTech COVID-19 Vaccine Immediate burning at injection site following dose. (Similar to the sensation of receiving contrast for a CT scan) which I found odd. Injection site pain continued over night, swelling and site redness to follow and A 1.5 inch welt appeared approx 24hrs after receiving vaccine.

Pain is localized to the injection site only . Treatment includes rest and Tylenol with little effect. Continuing to monitor for any further developments or additional side effects.

Swollen hands; dizzy; This is a spontaneous report from a contactable nurse. A 38-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EK5730), intramuscularly in the left arm, on 17Dec2020 at 14:00 (at the age of 38-years-old) at a single dose for COVID-19 immunization. Medical history included non-ongoing COVID-19 (previous well recovered from COVID-19 months earlier) from 2020 to an unspecified date. The patient was not pregnant at the time of vaccination. The patient's concomitant medications were not reported. It was unknown whether the patient received other vaccines within four weeks prior to vaccination or other medications within two weeks of vaccination. The patient experienced swollen hands and dizzy on 17Dec2020 at 15:00. The events resulted in emergency room/department or urgent care visit. Therapeutic measures were taken as a result of the events, which included cetirizine hydrochloride (MANUFACTURER UNKNOWN) and monitoring. The clinical outcome of swollen hands and dizzy was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

40 minutes later, I became flushed, hot, sweaty and clammy and tachycardic along with a syncope episode. Nausea came after, and only treatment was fluids. This episode happened after discharge around 9:45pm and then returned to the hospital for the same course of action.

Slight intermittent headache, neck and shoulder soreness, left arm soreness. Right hip and thigh pain when getting up from the chair about 3 times over the course of a few hours. Stabbing left heel pain x1 in the middle of the night. The next morning (12/22/2020) my right thigh was just slightly sore. Later in the day I had slight right hip discomfort again but it went away quickly. About 30 hours after the injection I had right knee discomfort lasting a few hours.

Possible allergic reaction - paresthesias of L tongue and throat; Possible allergic reaction - paresthesias of L tongue and throat; Possible allergic reaction - paresthesias of L tongue and throat; Sensation of tongue and throat swelling; Sensation of tongue and throat swelling; This is a spontaneous report from a contactable Health Care Professional. A 48 years old non-pregnant female patient received BNT162B2 (Pfizer-Biontech covid-19 vaccine) on 17Dec2020 at 15:15, at single dose, for COVID-19 immunisation. The vaccine was administered at hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Relevant medical history included food and drug allergy. The patient received concomitant medications (unspecified, received within 2 weeks of vaccination). Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient has not been tested for COVID-19. On 17Dec2020 at 15:15, the patient experienced possible allergic reaction - paresthesias of L tongue and throat, with sensation of tongue and throat swelling. No anaphylaxis. No abnormal physical exam findings. Emergency Room Visit required and the patient received the following treatment: diphenhydramine hydrochloride (BENADRYL), prednisone, and loratadine (CLARITIN). Clinical outcome of the adverse events was unknown at time of this report. The case was assessed as non-serious. Information on the lot/batch number has been requested.

Next day after vaccine was given, I had whole body aches and low grade temp of 100.8. Off and on chills. It felt like I had covid all over again (I tested positive end of October). Very sore L arm.

"not getting any Covid nothing, always negative; "" I got 2 shot I feel like I have Covid ""; This is a spontaneous report from a contactable nurse (patient). A patient of unspecified age and gender received BNT162B2, via an unspecified route of administration in Dec2020 as single dose for COVID -19 immunization. The patient had already received two doses. The patient's medical history and concomitant medications were not reported. The patient reported not getting any COVID nothing, always negative; "" I got 2 shot I feel like I have COVID "" on an unspecified date. The patient underwent lab tests and procedures which included negative COVID; the patient indicated that it was always negative. The outcome of not getting any COVID nothing, always negative; "" I got 2 shot I feel like I have COVID "" was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up."

Pfizer-BioNTech COVID-19 Vaccine Swollen & inflamed (right) eye, right (axilla) tenderness, & fatigue.

Tachycardia, body aches, chills, headache.

Limited ROM; Cannot move arm; Severe arm pain; sharp pain while at rest; This is a spontaneous report from a non-contactable consumer. A 26-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration, in the left arm, on 17Dec2020 at 11:00 (at the age of 26-years-old) at a single dose for COVID-19 immunization. The patient's medical history was not reported. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications included unspecified birth control. The patient had no known allergies to medications, food, or other products. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced limited range of motion (ROM), cannot move arm, severe arm pain, and sharp pain while at rest on 17Dec2020 at 11:45. No therapeutic measures were taken as a result of the events. The clinical outcome of limited ROM, cannot move arm, severe arm pain, and sharp pain while at rest was not recovered. It was also reported that since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

AT 12:30AM MIDNIGHT I BEGAN WITH A LIGHT HEADACHE AND STARTED MY BODY FEELING ACHY. I TRIED TO GO TO SLEEP, BUT I COULD'NT, IN FACT IT TOOK ME A LONG TIME TO BE ABLE TO FALL ASLEEP. I DID NOT HAVR TACHYCARDIA, BUT I DID FEEL ANXIOUS-LIKE. I WOKE UP AT AROUNF 5 AM WITH A FEVER OF 101.1 F, CHILLS, LIGHT BODY ACHES AND MY INJECTION SITE FELT AS IF I HAD BEEN PUNCHED OR HIT REALLY BADLY. I THEN TOOK TWO TYLENOL, EACH 250MG, AND I BEGAN FEELING NORMAL AGAIN.

Moderna COVID-19 Vaccine- Fever, Chills, Muscle and joint aches, headache, fatigue. Self limiting, went to bed and woke feeling better. Only fatigue now.

Fever, body aches, chills, headache

My period bleeding more than usual

my eyes were painful; my eyes were itchy; Eyes swelling; my face were swelling; A little short of breath; Hands are still swollen, my arms are slightly swollen and so is my eyes; Dry rash on hand almost looks like dry eczema rash or psoriasis like it looks like it's a dry patchy rash; Severe headache almost like a migraine; I started to feel little bit, a little off; This is a spontaneous report from a contactable nurse, the patient. A 49-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EJ1685), intramuscular in the left arm on 16Dec2020 (at the age of 49-years-old) as a single dose for COVID-19 immunization. Medical history included hypertension and hot flashes. Concomitant medications included clonidine (MANUFACTURER UNKNOWN) taken for hot flashes, fish oil (MANUFACTURER UNKNOWN) for an unknown indication, omeprazole (MANUFACTURER UNKNOWN) for an unknown indication, spironolactone (MANUFACTURER UNKNOWN) as a diuretic, and multivitamin (MANUFACTURER UNKNOWN) for an unknown indication; all from unknown dates and unknown if ongoing. On 16Dec2020, the patient experienced eyes were painful and itchy, eyes and face were swelling, a little short of breath, hands swollen, arms slightly swollen, dry rash on hand almost looks like dry eczema rash or psoriasis like it was a dry patchy rash, severe headache almost like a migraine, and felt a little bit off. The clinical course was as follows: the patient received the vaccine on 16Dec2020 and waited 15 minutes and did not have any reaction. She went back to work. As she proceeded to work her shift, she started to feel little bit, a little off. She couldn't really describe it but thought it may have been psychological because she was just really watching heavily for any type of symptoms. She had worked an hour over her shift and it usually took her about 40 minutes to get home. When she got home around 21:00, her eyes were painful and itchy and when she looked in the mirror her eyes and face were swelling. Then, she became a little short of breath not to a point where she thought she needed oxygen, just a little short of breath. She called the hospital where she worked and talked to the manager and then they advised her to go the emergency room. At the emergency room, she received intravenous fluid, diphenhydramine hydrochloride (BENADRYL), famotidine (PEPCID), and dexamethasone (DECADRON) for treatment. She also took cetirizine (ZYRTEC), prednisone (MANUFACTURER UNKNOWN) and triamcinolone cream for the dry patchy rash. The patient stated that she had lab work done earlier in Dec2020 (before the vaccination) and everything was normal. The clinical outcomes of the itchy eyes, eye swelling, hands swelling, and arms slightly swollen were not recovered and ongoing; while that of the little short of breath, dry patchy rash, headache, and feeling a little off, were unknown. The outcome of the eye pain was recovered on an unknown date in Dec2020; while that of the face swelling was recovering.; Sender's Comments: Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate

Extreme Fatigue (started 3 days after vaccine), 'skipped heart beats' at least 4 times during the date of report (6 days post injection), daily morning headaches (started 2 days after vaccine) with runny nose and sneezing (started 4 days after vaccine) and myalgias with chills intermittently,

tiredness/body ache/fever/respiratory distress

arm pain at the injection site; This is a spontaneous report from a contactable consumer. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot number unknown), via an unspecified route of administration on 17Dec2020 as single dose for COVID-19 immunization. The patient's medical history and/ concomitant medications were not reported. The patient experienced arm pain at the injection site in Dec2020, reported as non-serious. Therapeutic measures were taken as a result of the event; patient took ibuprofen (ADVIL) 200 mg. The outcome of arm pain at the injection site was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up .

felt dizzy; elevated blood pressure; This is a spontaneous report from a contactable pharmacist. A 51-year-old female non-pregnant patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EJ1685, expiry date unknown) intramuscular on 18Dec2020 at single dose for COVID-19 immunization with her right arm. The pharmacist informed that COVID-19 vaccine was administered in a hospital facility. The patient's medical history and concomitant medications were not reported. The patient previously took doxycycline and experienced allergies. The pharmacist informed that the patient did not receive any other vaccines within 4 weeks prior to the COVID-19 vaccine. On 18Dec2020, the patient felt dizzy and has elevated blood pressure, the patient's pulse was normal. The pharmacist informed that the patient was not diagnosed with COVID-19 prior to vaccination and has not been tested with COVID-19 since vaccination. The pharmacist informed that no treatment was received due to the events. The outcome of the events felt dizzy and elevated blood pressure was recovering. The pharmacist considered the events non-serious and did not result in death, not life threatening, did not cause/prolonged hospitalization, not disabling/incapacitating, and not a congenital anomaly/birth defect.

Starting at 9am, had jaw pain, that subsided, nausea at dinner, severe chills when I went to bed, generalized fatigue and body aches throughout the day and night and continue to still have both

"Tingling throat; This is a spontaneous report from a contactable physician. This physician reported the same event for two patients. This is the first of two reports. A patient of unspecified age and gender received the first dose of the bnt162b2 (BNT162B2; also reported as COVID-19 vaccine; unknown lot number, NDC number and expiration date), via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was also reported that it was unknown if other products were received or if an investigation assessment was performed. On 16Dec2020, the patient experienced: tingling throat (non-serious). The physician called regarding the COVID-19 vaccine since they had two events that happened on 16Dec2020; however, the physician stated she needed to ask a question before speaking with Pfizer's Drug Safety Unit (DSU) and reporting the events. The physician stated that two patients reported tingling in their throats during the observation period after the vaccine was administered. The physician thought ""they just panicked and overreacted "" and she did not think they had a reaction. The patients did go the ER (emergency room) and were discharged the same day. The physician wanted to be able to give the second dose. The physician wanted to ask about the side effects

of the vaccine. The outcome of the event was unknown. The batch/lot numbers for the vaccine, BNT162B2, were not provided and will be requested during follow up. ; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020504906 same reporter/drug/event, different patient"

Fevers, headache, fatigue, myalgia about 12 hours after vaccine.

fever/mild side effect of fever; This is a spontaneous report from a contactable other healthcare professional (HCP, patient himself) via Medical information team. A 24-year-old male patient received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine; NDC/batch/lot number and expiration date were unknown), via an unspecified route of administration on the left shoulder on 17Dec2020 at 13:30 at a single dose for COVID-19 immunization. The patient had no medical history. There were no concomitant medications. The patient previously received a flu shot [influenza vaccine (INFLUENZA)] for immunization when he was a kid (a long time ago) and experienced the same reaction, fever. The patient was having a fever/mild side effect of fever on 18Dec2020. He said he just called the number on the packet they gave him at the site, where he got the vaccine and he was wondering if it was okay to take ibuprofen. He did not think they provided him with an NDC, lot, and expiration as it was not on the packet he got; he said they might have put the information on the little card they gave him, but he did not have it with him at the time of the report. He did not know the dose that he was administered. This was the first injection with this COVID 19 vaccine. He further stated that fever started on 18Dec2020; when he woke up, it was like that, but he woke up at 9AM. The event did not require a visit to an emergency room or physician office. The patient had no prior vaccinations (within 4 weeks). The patient had no investigation assessment. Therapeutic measures were taken as a result of fever/mild side effect of fever. The patient was not recovered from the event. No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

headache, fatigue, fever

Symptoms include light headedness that was immediate; 30 minutes later had a headache and neck pain; 30 minutes later had a headache and neck pain; Diarrhea started 2 hours after the shot and now symptoms are improving.; This is a spontaneous report from a contactable nurse. A patient of unspecified age and gender received bnt162b2 (BNT162B2), via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunisation. Medical history and concomitant medications were not reported. On an unspecified date, the patient had symptoms that include light headedness that was immediate, 30 minutes later patient had a headache and neck pain, and then diarrhea started 2 hours after the shot and now symptoms were improving. Clinical outcome of headache was not recovered while for the other events was recovering. Information on the lot/batch number has been requested.

Fatigue and severe headache x 2 days. Moderate arm pain x 4 days. Slept for 2 days straight

Mild headache; injection site soreness; This is a spontaneous report from a contactable consumer. A 48-year-old female patient received the 1st dose of bnt162b2 (BNT162B2, Lot # EH9899) at single dose at left arm on 17Dec2020 for an immunization, at Doctor's office/urgent care. The patient medical history and concomitant medications were not reported. No known allergies. Prior to vaccination, the patient

was not diagnosed with COVID-19. The patient had not received other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced mild headache and injection site soreness on 17Dec2020. The patient received no treatment. Since the vaccination, the patient has not been tested for COVID-19. The outcome of events was recovered in Dec2020. The events were assessed as non-serious.

Low grade temperature of 100.6 Friday at 1:30am; This is a spontaneous report from a contactable nurse reporting for herself. This 28-year-old female patient received on 16Dec2020 08:00 first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose in the left arm for COVID-19 immunization. Medical history and concomitant medications were not reported. On 18Dec2020 01:30 am, the patient had low grade temperature of 100.6 F. The patient recovered in Dec2020 without treatment. Information on the lot/batch number has been requested.

Nauseated; This is a spontaneous report from a contactable nurse (patient). A 54-year-old female patient received bnt162b2 (BNT162B2, Batch/lot # EK5730, Exp date Mar2021) at single dose at right deltoid on 17Dec2020 08:15 for immunization, administered at hospital. Medical history was none. There were no concomitant medications. No additional vaccines administered on same date of BNT162B2. The patient had not received any other vaccines within 4 weeks prior to the COVID vaccine. No adverse events followed prior vaccinations. The patient was really nauseated last night on 17Dec2020 from 21:00 and has been slightly nauseated 18Dec2020. The outcome of event was recovering. The event was assessed as non-serious.

Hives in her face; This is a spontaneous report from a contactable consumer (patient). A female patient of an unspecified age received BNT162B2 (Pfizer-Biontech covid-19 vaccine, Lot. PAA156051-EK5730) on 18Dec2020 at 10:15, at single dose, for COVID-19 immunisation. The vaccine was administered at hospital. Relevant medical history was none. Concomitant medications were unknown. On 18Dec2020, the patient experienced hives in her face. The patient was treated with diphenhydramine hydrochloride (BENADRYL). Clinical outcome of the adverse event was unknown at time of this report.

Mildly sore arm where injection; This is a spontaneous report from a contactable physician (patient) through a Pfizer sales representative. A patient of an unspecified age and gender received BNT162B2 (Pfizer-Biontech covid-19 vaccine) on an unspecified date, at single dose, for COVID-19 immunisation. Relevant medical history and concomitant medications were unknown. On an unspecified date, one day after the vaccination, the patient experienced mildly sore arm where injection of vaccine was given. Clinical outcome of the event was unknown at time of this report. Information on the lot/batch number has been requested.

Mild headache; This is a spontaneous report from a contactable consumer (patient) through a Pfizer sales representative. A 32-year-old female patient received the first dose of BNT162B2 (Pfizer-Biontech covid-19 vaccine) on an unspecified date, at single dose, for COVID-19 immunisation. Relevant medical history and concomitant medications were unknown. On an unspecified date, the patient experienced mild headache within 45 minutes of first Covid vaccine. Clinical outcome of the event was unknown at time of this report. Information on the Lot/Batch number has been requested.

sore arm; This is a spontaneous report from a contactable pharmacist. A male patient (physician) of an unspecified age received the bnt162b2 (BNT162B2; also reported as Pfizer-BioNTech COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On an unspecified date, the patient experienced sore arm (non-serious). The clinical outcome of the event was unknown. No follow-up attempts are possible; information about batch/lot number cannot be obtained.

headache and feeling overheated; headache and feeling overheated; fatigue; GI symptoms; loose stool; gas; mild tightness but not so much like a cramp; This is a spontaneous report from non-contactable physician via a Pfizer Sales Representative. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration, in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced headache and feeling overheated, fatigue, gastrointestinal (GI) symptoms, loose stool, gas, mild tightness but not so much like a cramp in Dec2020. The clinical course was reported as follows: The patient was symptom free for the first 20 hours after vaccination, had mild symptoms from the 20-28 hour mark, and felt fine since then. The patient woke up at 3:30 in the morning one day (day of reporting) with a headache and feeling overheated. The temperature was checked several times on an unspecified date, with no fever. For the next 3-4 hours, there were a wave of symptoms; mostly a headache, fatigue, and GI symptoms. The symptoms responded pretty well to increasing water intake, taking an electrolyte supplement (MANUFACTURER UNKNOWN), and breakfast. The patient also had gas, loose stool, and mild tightness but not so much like a cramp. Therapeutic measures were taken as a result of the events as aforementioned. The clinical outcome of headache and feeling overheated, fatigue, GI symptoms, loose stool, gas, mild tightness but not so much like a cramp was unknown. No follow-up attempts are possible; information about batch/lot number cannot be obtained.

Intractable nausea and vomiting with excruciating stomach pain for 4 hours - only relieved by Zofran.

patient complained of burning when vaccine was being injected. no swelling or redness noted.

Woke up from a dead sleep in extreme joint pain at 1:20 am. (Almost went to the er as I have never had pain like this) Finally went back to sleep woke up at 7:30 am. No pain.

"""Patient was given their first COVID-19 vaccine dose. Patient was given VIS sheet and informed of all potential side effects and when to seek emergent care. Patient was given a follow-up plan and scheduled for administration of second dose. Patient tolerated procedure well. At 15 minutes post vaccine 1147 patient reports that she had just experienced chest pain sharp on left side of chest followed by nausea and slight sensation of tightness in her throat. She reports this lasted about 30 seconds and then subsided and went away. Vitals taken BP 118/76 HR 66 R 16 pulse ox 100% on room air. Patient denies any cardiac history and no history of allergic reaction in past to any medications or injections. Vaccine was given in right deltoid. She was monitored an additional 15 minutes with during which time she was asymptomatic. I consulted with ARNP provider across the hall in care clinic prior to letting patient leave clinic and she was agreeable with plan of care. Patient was advised is symptoms

chest pain, tightness in chest, any shortness of breath she needs to seek emergent care by calling 911. She communicated understanding. Patient discharged to home."""

Injection site pain; tiredness; headache; muscle pain; chills; joint pain; nausea;

Patient complained of burning on injection. No redness or swelling noted.

"Employee received covid19 vaccine without issue. At discharge became diaphoretic and tachycardia. Medical proceed out called and ED team arrived. On arrival vital signs patient was hypertensive, A&O x3, able to answer questions. ED offered to transport employee to ED for observation. Employee chose to stay at the Administration Clinic to be monitored. After 30"", vital signs were within normal range, employee stated he felt fine, no tachycardia, no diaphoresis. Ambulated out of department with out issue."

I didnt notice but evidently my eyes changed because the CNO looked at me and asked if I was ok. Im not sure of what they looked like to make her cue in on I wasnt feeling well but she came over and began to monitor me at that time. I felt light and fluffy and when I got up to get juice I felt like I was disassociated from my body, my movements were awkward, I was severely weak and was not steady on my feel. I felt as if my mind was moving but my body couldnt keep up. I was very laggy and felt as if I was intoxicated. The head of the ER made me drink alot of cold water about 24oz of water and 4 oz of juice which then caused me to get super cold and shivery. Vitals were stable the whole time but my BP shot up to 170/90 a few moments after the water. I was transferred to a monitoring room where I was covered with alot of blankets and allowed to lay down until I warmed up until my BP lowered and I was released. My arm didnt begin to hurt until about 6-8 hours after and I have a red mark and the top layer of skin just do not want to heal. I am still today having to put bandages on the spot because its red and the skin on top keeps coming off. I had joint pain and aches into the next day after causing me to take an Aleve gelcap for the pain. Nausea here and there also.

Sore/Itchy throat - 25mg Benadryl IM. Relief 8 minutes post Benadryl

"Patient received Pfizer -BioNTech COVID-19 vaccine in the clinic. At check out, patient reported 'heart racing, dizziness, and feeling flushed"" ED Proceed Out called. Patient evaluated by ED team. Patient transported to ED for further monitoring. In ED, patient complained of mild throat tightness which was resolved by Benadryl. patient was monitored for 4 hours and was discharged home on benadryl"

12/22/2020 08:00 AM Nausea, chills, slight headache, sore arm; 12/23/2020 symptoms have slightly relieved

patient complained of burning while vaccine was being injected

Notified by girlfriend. Patient woke up this morning with arm soreness. States temperature 102.3 this am. Instructed to call primary care. Instructed patient could have COVID or flu not related to shot. Waited 30 minutes post vaccination, without complication.

panic attack sunday night around 1030-11pm. Had to seek treatment from my family physician to get some antianxiety pills. As of 12/23/20 I still wake up with severe anxiousness. If COVID weren't around I would have went to the ER. I have never experienced anything like that in all my life.

Vomiting, Cheeks feel tingling, Slight difficulty swallowing. Rest and will take oral Benadryl when gets home. Will take Phenergan for nausea when gets home as well. Starting to feel better after 2 hours.

recipient became flush and began itching all over

Recieved the vaccine 12/21 and on the evening of 12/22 my arm became very sore, more than usual for other shots such as the flu shot I received in October this year. It kept me awake it hurts at the injection site down to my middle finger and up my neck. No redness or swelling that I could see. No fever that I can tell.

Approx 10 min after receiving vaccine- patient developed rash and hives on neck and chest with complaints of itchiness on R arm at vaccine site. Also developed redness to right ear. no respiratory difficulties noted. Patient transported to ED for further evaluation and treatment

After administration of COVID vaccine - pfizer, patient noted that he didn't feel that it went into the deltoid, that the injection site had been too low. Questioned if he should be administered another dose. No symptoms. consulted with other clinic staff, ID oversite and will follow-up to determine if patient develops appropriate response to vaccine or if will require additional vaccination

*Describe the adverse event(s), treatment, and outcome(s), if any: (symptoms, signs, time course, etc.) S: 35 yo F who received Pfizer vaccine at 16:47 w/acute onset of left sided facial swelling and difficulty swallowing. Within five minutes of being administered vaccination, pt reported pain at the injection site radiating up to her jaw followed by left sided facial swelling. She started reported palpitations and subsequently reported a ball in her throat O: Pulse was in the 60's, BP of 128/72, pulse of 88-97 satting at 99% on RA. General: young female, anxious. HEENT: NC, AT, mild left sided cheek swelling, OP clear, MMM. Neck: Supple, left sided tender cervical LN. Lungs: CTAB. CV: tachycardic rate, regular rhythm. Extremities: Hands are clenched and cold. Neuro: Alert & oriented. A/P: Anaphylaxis -Given left facial swelling, 25 mg Benadryl PO administered. pt tolerated well. -17:22-Throat swelling reported. EPI #1 administered right thigh. -17:32-EPI #2 administered. Throat felt better at 17:35. 17:36-FD EMS arrived. BP 194/126. -17:38-EPI #3 administered right thigh. HR 135, BP 154/105. -17:43-EPI #4 administered left thigh. -17:46 pt transported to ER via EMS.

Warm feeling to face and ears. Tingling or burning feeling to face. Started 25 minutes after injection. still with mild tingling. No breathing issues.

Severe itching, irritation, took oral Benadryl, proceeded to nearest Emergency Room

Headache, nausea, chills, runny nose, cough

"employee initially complained of itching on arms, noted slight redness bilaterally upper arms. itching progressed to neck slight redness noted around neck area. complained of feeling ""hot"",Denied

difficulty swallowing. Placed in room and Rapid Response called. Given Epi injection in right upper thigh, INT inserted. and Bendryl 50mg IV, solumedrol 125 mg IV, and Pepid 20 mg IV given IVP. placed on EKG and B\P monitor. RR nurse and Covid Nurse at Bedside. employee transported to ER for continued observation. Client remains alert, talking via transfer to ER. continues to complain of some ""itching"""

Mild rash on bilateral upper extremities, non-pruritic rash. No associated symptoms or shortness of breath.

1300 Recipient had transiet HR of 136 sustained for 5 min. Tachycardia started during 15 min. observation period. HR stabilized to baseline 80's by 8PM.

Patient called Employee Health department c/o diarrhea, cough + headache one day after receiving vaccine.

Flush, throat itchiness, red Tx Benadryl IV, EpiPen 1mg IM, Solu-medrol

Patient with hx of SVT stood up after receiving COVID-19 vaccine and did not feel well - sat back down. put pulse ox on and HR was 180. Pt vagaled twice, HR sitting in the 90s - brought to ED for evaluation.

Fever body aches chills fatigue starting 16 hrs after vaccine. Symptoms continued for 4 days after vaccine before reducing in severity. All symptoms still present today, 5th day after vaccine . Max temp recorded 100.7

After receiving the vaccine, the patient developed a hard quarter sized bump above the injection site. Ice applied to site. No bruising, bleeding, pain, or redness noticed.

Patient received vaccine during the day and overnight pateint developed chills, rigors, headache and body aches. Tylenol has helped a little but did not completely resolve symptoms

About 30-40 minutes after patient received COVID-19 vaccine, she felt that she was having difficulty swallowing. Denied respiratory distress. Some swelling felt in middle of throat. No fever, chills, pain, shortness of breath or wheezing.

facial swelling, numbness in face, red patches on neck and face.

Headache with Pressure on eyes, body aches

Woke up with severe bodyaches worse on injection site with fever of 100.6 degrees farenheit.

Next day after vaccination redness and swelling to injection site. Later that day and still today redness, swelling and now itching.

On the date of the vaccine that night my blood pressure went up to 143/130 which is higher than it has ever been. My blood pressure the bottom number would not go under 100. The entire night my head felt like I was in a tunnel and my heart and chest felt tight. I was unable to work the following day due to not getting any sleep out of fear of something tragic happening to me. In addition last night or early this morning at 3 AM I woke up and my body was itching all over. The palms of my hands were itching my

gums were itching I had red marks on my body and had Not done anything out of the ordinary or eight anything out of the ordinary. I took two Benadryl?s and was able to fall back to sleep for a little while and now the itching has stopped but my eyes are swollen.

dizziness, chest tightness, light headedness, SOB

Lightheaded, dizziness, flushed face, sweating

Patient experienced severe symptoms such as severe headache, severe myalgias, brain fog, and dizziness. Upon waking up currently he is currently fine, but symptoms yesterday were very severe

Past 24hours after being vaccinated, I got home from work and realized I had a rash over my stomach and both arm. Felt achy and had a sore throat. The rash was tiny red spots all over. I still have rash on me today, and same symptoms. It has not gotten any worse.

12/22/2020 07:00PM Rash on back

RASH ON FACE, NECK, CHEST AND ARMS. MILD NAUSEAS AND ELEVATED BLOOD PRESSURE. TREATED WITH BENADRYL 50MG IV. RASH LASTED 15 MINUTES AFTER IV TREATEMENT.

About 5 min after receiving the vaccine, I got dizzy, 15 min after I stumbled after I tried to stand up. I have not had breakfast so they thought could be low blood sugar, and gave me some trail mix with m&ms and water. About 40 min after that I stated jerking and then they called the MERT team (emergency) and was transferred to the ER. My speech was delayed. They gave me clonapin and it stopped maybe between 20-30 min later. I believe it was all caused my my PNES. Somehow the vax triggered it, it has been in control for over 2 years. After that I was just fatigued for 24 hrs later. Now I am fine

12/23@9:35am EST- Caller stated on12/22/20 at midnight he felt fever 103.0, chills, muscle soreness and aching, nausea and extreme fatigue. Caller called Primary and was told to take Tylenol 1gr. Benadryl and naproxen for headache and body aches. Rash covered arms , neck and thighs and patika on elbow and armpit. This morning rash is still prominent, eyes are swollen and urine is bright red. Caller is awaiting primary to call back.

Itching started on left arm and then around the temples of the head and on right shoulder.

Sore arm, fever (Max 100.5), body aches, chills, headache, fatigue, general malaise

Itching started on left arm and then around the temples of the head and on right shoulder.

Patient descrived a metallic taste in her mouth 10 minutes after getting the COVID19 Vaccine. Soon after, she described the posterior left side of her tongue was feeling numb. No itching of throat, no swelling of lip or tongue. No respiratory or GI symtpoms. No urticaria or pruritis. She was treated with loratadine 10 mg and famotidine 20 mg orally. She was observed for 2 hours with no progression or additional symptoms. She was discharged to home.

Pfizer-BioNTech COVID - 19 Vaccine EUA Had injection at about 1230 on 12/22/20, woke up at 6am on 12/23/20 with chills, fever of 100.1, headache, dizziness, body aches, sore arm. I had COVID 3 months ago and some of these side effects are worse now then when I had COVID.

12-22-2020 1am- arm soreness at sight 12-22-2020 7 am -arm, armpit, and chest muscle soreness 12-22-2020 1 pm chills, muscle pinches , shooting muscle pain (legs, body upper body) 12-22-2020 4 pm additional pain in right toes along with same symptoms above, facial muscle pain, irritable, tiredness 12-22-2020 10 pm headache

Patient feels metalic taste on the right side of her tongue, along with pain behind the right eye.

approximately 12 hours after receiving the Covid 19 vaccine on 12/18 that I had nausea and vomiting. The vomiting lasted about 2 hours from approx 5:30 AM to 7:30 AM on 12/19. Also, I was extremely fatigued for the rest of 12/19. I slept the entire day only being awake for approx 4 hours. The next day I was slightly nauseated but able to go about my day as normal.

Shingles, left T4 dermatome. Treated with valacyclovir. Adequate response to treatment.

urticarial rash to bilateral upper extremities

swollen and painful testicle

12/21/2020 2:20PM Facial spasms, left side of face-- eye, nose, lip (prominent) - occurring for minutes at time, symptoms have not resolved

First day I was in PPE I started to get really hot , trouble breathing , feeling flu like symptoms Second day . was extremely hot, trouble breathing again , Tiredness , chills, headaches ,

tiredness, muscle ache for approximately 12 to 14 hours

Patient was given covid vaccine, and within 3 minutes, began to develop tachycardia. Patient was placed in chair to be assessed, vital signs done. HR was 160 to begin, dropping to 140, and 117 when being transported to ED for evaluation. Patient stated that she felt like her chest was on fire, and heart was going to beat out of chest. Rapid Response Team called, and team responded, bringing patient to ED for closer evaluation. From the ER MD: 39 year old female patient who was a rapid response after receiving her Covid vaccination. She began to have palpitations and was tachycardic. She appeared to be very tremulous and anxious. She has no known history of allergic reactions. She denies recent illnesses including fevers and chills. Patient felt short of breath. She had an O2 sat of 100% on room air. Lorazepam 1mg po x1 dose ordered and was administered.

Patient felt like back of tongue swelling and itchy ~ 15 min after administration Patient received 12.5 mg Benadryl, 125 mg soul-Medrol in ED Sent home with an epi pen and steroids x 4 days

Reported fever of 100.8, nausea, headache, chills, arm pain- which is common reported side effects of vaccine. Patient reported walking up in the middle of the nights gasping for air- short of breath. Only lasted 3 times during the night, no interventions were done. Went away on it's own.

c/o (L) cheek NUmbness 3/10 scale at 9:50 AM BP 118/52, 100, 20, 98% RA. Rechecked VS at 9:57 BP 127/77, 91, 18, 98% RA. (L) cheek numbness 2/10 scale. Rechecked VS at 10:11 AM BP 137/83, 91, 18, 99% RA (L) cheek numbness 2/10 scale.

2-3 MINS after vacciNE Administered SHE BEGAN TO EXPERIENCE SHORTNESS OF BREATH FEELING OF A FUZZY TONGUE & DIFFICULTY SWalloWING. SHE WAS SEEN IN ED WHERE SHE gOT Benadryl & DECADRON

Patient c/o feeling dizzy + lightheaded 10 minutes after receiving vaccine. Treated in ER

Employee presented to COVID Clinic for Moderna COVID 19 vaccination 1st dose. Given to right arm. Left clinic after waiting 15 minute observation time. She returned to work and returned about 45 minutes reporting she was having difficulty taking deep breaths, numbness to bilateral extremities, abdominal discomfort and lightheaded, NO rash or hives noted. VSS stable A&O, Within a few minutes employee started vomiting, shaking, and C/O of severe abdominal discomfort, Epinephrine injection 0.5mg given to left arm. Employee transported to ED.

Employee presented to COVID Clinic for Moderna COVID 19 vaccination 1st dose. Given to left arm. Left clinic prior to completing 15 minute observation time and told an MA in waiting area that she felt ill ot her stomach and having trouble taking deep breaths. Employee found in nearby Bathroom sitting on the floor, she had vomited, reported she was lightheaded, couldn't breath, shaking, abdominal discomfort sweating, attempted to move employee to wheelchair, did respond well to transfer to Wheelchair, She reported symptoms worsening: HA, abdominal pain and developed blotchy skin, hyperventilating, and dizzy. CODE Blue called, patient given Epinephrine injection 0.5mg patient sent to ER

Employee presented for COVID 19 vaccination: Survey reviewed, no history of Anaphylaxis reaction Moderna 1st dose given today to Left arm. She immediately developed Numbness to her body, chest tightness, and abdominal discomfort. Remained Alert and oriented, voiced concerned she felt like she was going to pass out. She developed blotchy skin to chest and neck area within minutes of injection. Patient sat in a wheelchair. Vital taken: BP 140/98 Pulse 123, given water to drink, tolerated well. She quickly reported she continued with above stated ymptoms, and continued with nausea, blotchy skin, heart racing and weakness. She was given 0.3mg of Epinephrine IM to right arm and taken to the ED

Patient reporting pressure behind both of her eyes and some mild eye pain with extraocular movements. Patient also had generalized myalgias, arm soreness where vaccine was administered along with some chills.

tingling in throat, swelling of tongue Became very anxious upper lip swelling

Seen in urgent care approx. 30 minutes after vaccination for diffuse muscle aches, nausea and dizziness, her BP was elevated. Treatment dugs:

The day after vaccination development of abdominal cramping, urgency, repeated episodes of diarrhea. Some nausea, no vomiting. Abdominal cramping still episodic 3 days later. No fever.

Patient began feeling lip numbness shortly after receiving the vaccine. Patient reported feeling tightness in throat that felt like muscle tightening, not airway compromise. Refused IM epinephrine. Patient awake, alert, mild symptoms. Patient given water and is resting. 0704 HR 70, oxygen saturation per pulse oximetry 95%, BP 130/70. 0712 BP110/80, pulse 80, 0732 BP 116/74 and 25 mg Benadryl given. At 0830 lip tingling and throat symptoms have resolved. Patient report lips feel cool, but all other symptoms have resolved.

Woke up the morning after receiving vaccine with some queasiness, and stomach gurgling. Still having the queasiness and gurgling. No diarrhea or vomiting.

Development of flushing, hives, throat and tongue swelling, difficulty breathing, all developed within 30 min of administration, and resolved after admin of epinephrine and IM Benadryl.

Employee had tongue tingling after injection denies swelling, SOB, chest pain. She waited 30 minutes and declined ED evaluation there were no further symptoms after observation.

3hrs after had normal arm pain. 1030 am following day woke up with shivers, soo cold my bones of my spine and arms were hurting. Headache, dizziness and heart rate over 130 (normally low 60s)

she has a cough and itchy throat.

Client received Pfizer COVID vaccine at approximately 8:42am and reported that he immediately felt tingling in upper left leg/ hip area. The tingling continued and moved down his leg to his foot. First Aid and EMS assessed client. V/S WNL. Client given aspirin and leg massage. Client declined transport to ED for further evaluation. The tingling remained only in foot at time client left.

rash on chest and neck progressing to numbness & tingling of face & tongue. Went to ED, treated with Benadryl, solumedrol, famotidine. some improvement after med administration & observation. Pt sent home with steroid rx & Benadryl.

Woke up this morning with dizziness, weakness, headache, aches. Unable to come to work.

Muscle and joint pain, headache, vomiting (could be from the headache), fatigue, shortness of breath.

Sore throat, swollen lymph nodes in the neck

muscle and shoulder pain, with warmth and redness, congestion, headache, R leg soreness, with redness and warmth

This morning 12/23/20, the site is very tender and very sore.

2 Hours after vaccinated I felt hot from my neck to my head, with slight headache. went away after 3H. Had chills, slight fever and Body aches that night. Took Advil 400mg, felt better. The following day the site of injection was sore, felt warm, temperature was 99.9 degrees F, had chills and sneezing, like my seasonal allergies, with body aches. Took Advil 400mg and Zyrtec. Felt better. Today I had body aches and soreness @ the site of injection. Took Advil 400mg, now I am feeling better.

lightheadedness & dizziness soon after receiving vaccine - went to ED for evaluation

"Approximately 1-2 minutes after vaccination she felt a ""fullness"" in her throat, Felt ""woozy"" and ""altered"". given 25mg Benedryl with lessening of symptoms."

Patient was vaccinated and within just a few minutes of vaccine administration began to feel throat tightening, difficulty getting air, tachycardia, and dry mouth. Admitted to a past history of anaphylaxis with shell fish and endorses similar symptoms. Employee was treated with an epi pen and taken to the emergency room for additional monitoring and treatment as needed Treatment dugs:

Sore arm Fever 99.9 took Tylenol and it went away.

Vaccine at 1245pm on 12/16/2020, severe migraine 12/16/2020 at 6pm vomiting 8pm 12/16/2020 both continued all night and the next day 12/17/2020 I couldn?t eat or drink I would vomit it back up even water, went to Urgent care at 11:30am 12/17/2020 where they covid tested me with a Rapid swab and a PCR swab, gave me zofran for the nausea and a shot of Troradol for the migraine, called me in a prescription for Zofran and Ibprophen 800mg. Couldn?t work that night due to still feeling ill tired and weak, and dealing with the headache. 12/18/2020 no more vomiting or headache just feeling extremely tired and drained, slept most of the day and started having stomach cramps became constipated so I had to take Miralax and use a suppository and stool softener, 12/19/2020 finally went to the restroom and after that had diarrhea for the rest of the day. All symptoms subsided by 12/21/2020.

""" injection site red hot swollen and itching getting worse. having symptoms of nausea, vomiting, tired and a headache that feels like a migraine."""

Developed fever 4 days after vaccination. This patient also had a tonsillectomy done on 12/17/20 and it is unclear if fever was due to post-operative infection. No other symptoms.

The healthcare worker felt a systemic sensation of warmth and tingling throughout the entire body immediately following injection. The sensation of warmth remained with onset of weakness and dizziness requiring rest period. Noticeable rubor- flushed skin on the chest and torso area. Weakness followed by episode of tachycardia and pulse rate of 120 bpm. Episode lasted 30 minutes and fully resolved with no residual effects. No emergency or follow up medical treatment needed.

Immediate reactions were slight fuzziness of vision lasting approximately 30 minutes and body fatigue throughout the day (12/22/2020). At 2:30am I suffered from diarrhea and nausea lasting approximately 2 hours. I woke up at 9:00 am (12/23/2020) with a lowgrade fever of 99.0F.

day after vaccine started to have sweats, body ache, headache, fever. Self resolved after 24 hours. Did not report until 12/23/20 at 10:40. vaccine recipient completing RL

Right eye became heavy within 2 minutes of receiving vaccine and resolved 20 minutes following injection. No visible deficit. Bilateral eye blurring R>L that has lasted for 2+ hours following injection.

Soreness on injection site Chills Body aches Fever101

Stuffy nose-resolved. States that's the first symptom she has with any reaction body aches, injection site pain

15 mins after arm pain , neck pain, headache, cough and shortness of breath Lungs expanded Chest felt weird , took a decongested Breathing was uncomfortable took Tylenol right after for pain . Third day after lung wasn't feeling better Pain finally went away in neck and shoulder on 12/21/2020 Breathing is still not better , scheduled to see a doctor

Pfizer-BioNTech COVID-19 Vaccine EUA Injection site pain 12/22/2020 05:30 to 12/23/2020 05:30 Tiredness/Headache/Muscle pain/Chills/Fever/Feeling unwell 12/22/2020 approximately 11:15am to 12/23/2020 06:30; Took Ibuprofen on 12/22/2020 at approximately 06:15pm Minor headache 12/23/2020 06:30am; took Tylenol

Arm soreness and mild fatigue

Fever blisters appears the next day

I woke up at 2AM with a funny sensation in my esophagus, it felt tight and hot, the trouble breathing woke me up, I had chills, shaking, but no fever, extreme muscle weakness, I could barely walk steps. My main issue was the trouble breathing. Went to the ER and pulse/ox was 96/97 so it was good my oxy saturation was really good. They just observed me for some hours and by 5AM and I discharged and on Saturday I woke up ok but felt weak. I still feel some muscle weakness.

"Patient's reaction(s) noted during COVID vaccine observation period: Pt states that after 17 minutes of receiving the Covid vaccine she developed feeling of lips tingling and tongue ""prickly"". She denies SOB or dysnpea. á 1533: 180/74, HR 59, O2 98% 1544: 144/67, HR 60, O2 99%; states that her lips and tongue have stopped tingling and feel back to baseline. áActions Taken: Pt states that she is fine to drive home. áDisposition: Patient declined ED visit"

Employee had onset of chills nausea on 12/17/20, headache, body aches, fatigue, dizziness on 12/18/20 symptoms relieved by Tylenol. Treatment dugs:

12 minutes after injection developed acute onset tachycardia with HR increase from 64 to 160s (monitored on apple watch), dizziness, flushing, tachypnea. No rash, no wheezing. BP 140s-150s/90s (baseline 110s/70s). HR improved to 100s-120s in ~30 minutes and remained elevated with symptomatic orthostatics for several hours. Monitored on telemetry for ~2 hours. EKG sinus tachycardia. Given 1L NS bolus, no further treatment required. HR 80s-90s upon discharge from ER ~4.5 hours after injection

Patient had a fever of 101.0.

I was dx with possible bell palsy mainly effecting my right eye. I was prescribed prednisone and famciclovir.

diarrhea Nausea pain in upper abdomen extreme fatigue chills adverse event was over in 48 hrs

Vaccine administered at 0800. 5-10 minutes later, patient reported tightness in throat and shortness of breath. Patient became dizzy, nauseous, diaphoretic, reclined back and elevated feet. Patient was taken to emergency department for further treatment.

Patient began to experience numbness and tingling of her mouth and lips 40 mins after administration. Denies SOB, wheezing, airway compromise or oral swelling. Symptoms lasted 48-72 hours. She was prescribed a Medrol dose pack and antihistamines by her PCP.

Chest tightness and arm heaviness starting from the left arm to the right arm, with a burning sensation in the chest. Brought to the ER.

Received vaccine aprox 0745 am 12/22/2020, aprox 09:00pm 12/22/2020 while at work onset tachycardia at rest 140's-150s, , chills, flushing, and light headiness. Employee continued to work through her 12 hr shift, she advised tachycardia persisted throughout the night 140s. She reported taking Tylenol at 3am, and chills resolved. She reported to Employee Health at 0730am 12/23/2020, vitals HR 142, BP 103/72 (she advised that was her normal BP), resp 14, Temp 97.2. She denies chest pain, shortness of breath, weakness, headache, cold symptoms, n/v/d. Advised the chills, flushing and light headiness had resolved, but the tachycardia continues. Employee denies any medical history, takes no daily meds, reports recovered from COVID early November. Discussed with Employee the need to seek higher level of care, she was escorted to the ED.

Patient had a fever of 99.0.

Rash, redness, hot to the touch(fever feeling), swelling, and severe headache

Employee calling to report a reaction after receiving a COVID-19 vaccine. Vaccine Name - Pfizer Vaccine Lot # - EJ1685 Vaccine Date and time - ? 12/18/2020 @ 8:30am Is this your first or second dose? EMPLOYEE STILL SYMPTOMATIC AT THE TIME OF VISIT; Treatment dugs:

nausea, headache, fever, chills

Acute change in systolic BP < 90 mmHg or > 200 mmHg and numbness

Takes promethazine for nausea and took Excedrin Migraine for her headache, has history of migraines. Low grade fever ranging from 100.1F to 100.5F

64y/o FEMALE presents to the ED for evaluation of facial itching after COVD vaccine in left arm. The patient states shortly after the vaccine (about 10 minutes) her nose and mouth started itching. She was given PO Pepcid and IM Benadryl PTA in ED. She denies any associated SOB, nausea vomiting wheezes or near syncope. Denies fever/chills, n/v/d or other complaints at this time. IMPRESSION/PROBLEM LIST:----------1. Adverse Reaction to Vaccine for COVID

37y/o FEMALE doctor was brought to the ER via gurney from the vaccination area after getting Covid 19 vaccination, patient felt SOB, buffy eye and become pale, she took immediately Claritin and Pepcid, patient was brought to the ER. she denied light headedness. Swelling of lips or the tongue. IMPRESSION ----------Adverse reaction to the Covid 19 Vaccination-Resolved

Employee was observed in emergency room for one hour Treatment dugs:

12/16/2020 - woke up at 2 in the afternoon with a sore left arm at the site of injection. (She works nights.) She also had a headache and her stomach felt bloated. She developed a temperature of 101.4 on 12/18 and it went down on Sat to 99.6. H/A, body aches and low grade temperature lingered through 12/20. She woke up feeling normal on 12/21.

Patient reported significant arm pain with the injection that within about 24 hours progresses to COVID like symptoms inclusive of vision issues (blurry, loss of peripheral vision, felt like falling), fatigue and endurance issues, resulting in lost work time second to symptoms. Patient is approximately three months post COVID infections and endorses that symptoms were similar.

44 y/o MALE doctor with no hx of allergic reaction with previous vaccination was brought to the ER from the vaccination area, patient stated he become tachycardic, dizzy and nauseated 10 min after the vaccination shot was given. Patient denied rash, SOB, wheezing or Swelling of the face and the tongue. Benadryl & Zofran given 1.Adverse Reaction to Vaccination-resolved

Nausea, headache, more SOB fatigue

Bumps on tongue

Patient's reaction(s) noted during COVID vaccine observation period: diaphoretic, pale, clammy, nausea occurred 10 minutes after vaccine administration. Pt states that she has not eaten since breakfast. á1422: 97/67, 66 BPM, O2 94% 1432: 146/93, 91 bpm, O2 96% (states she is feeling better, color in cheeks, not diaphoretic; eating cracker and drinking Sprite) 1445: 130/77, 84 BPM, 96% She states that she does not want to be further evaluated in ED. She is stable and states she is okay to drive home. Actions Taken: vitals, comfort, water, graham cracker áDisposition: Patient declined ED visit

Received the injection at 17:20 on 12/22/20 and had no immediate symptoms. At 23:00 hives and itching on chest, arms, back, and legs. Arm soreness at injection site. Soreness improved with oral

tylenol. Hives did not resolve. Asymptomatic after taking oral benadryl at approximately 7:00 on 12/23/20

Patient called vaccine clinic on 12/22/20 to report loss of bowel function. He reported that it happened on 12/21/20 on the way to work. The patient could not make it to the bathroom in time and soiled his pants. On 12/22/20 in the morning it happened again on the way to work and the patient soiled his pants. At this point the patient called the vaccine clinic with this information. The nurse at the clinic did inform the patient that there are some GI side effects that have been reported with the vaccine. She also recommended the patient get tested for Covid since GI side effects are also reported with Covid and the vaccine has not had enough time to offer immunity yet.

Pt started to complain of dizziness and feeling flushed. Pt states she has a history of SVT. Pt states the incident feels like her SVT symptoms. Pt's symptoms went away after 5 minutes. EMS was called and pt refused transport to the hospital.

"Medical History: severe anaphylactic shock requiring intubation related to rattlesnake bite August 2019. On September 2019, I went to the dentist and received septacaine, mouth and face swelled up immediately. Toxicologist said this was due to me still being in a ""cytokine storm."" 12/22/2020- I received my COVID-19 vaccine by Moderna. Within 5 minutes of me receiving the vaccine I first experienced tachycardia, felt my heart pounding, dizziness, and tunnel vision. Three hives, dime sized, appeared on my chest within 10 minutes of the vaccine. I felt difficulty swallowing (may have been anxiety related). The dizziness was intermittent for the next hour. I took 25 mg of Benadryl 15 minutes after the shot. My blood pressure was elevated for an hour, 170s/100 s, Osat maintained above 94%, and heart rate 80s-90s. My resting HR and BP are 100s/60 and HR 61. I also started to feel bloated and burping. An hour and a half after the shot, the symptoms resolved and I drove home"

Arm pain.

Irregular, skipping heartbeat, improved. Diarrhea, resolved.

hypertension, hyperglycemia, mild rash

Pfizer-BioNTech COVID-19 Vaccine EUA. This last night I experienced chills and a low grade fever, along with weakness. It doesn?t feel like I have a fever currently but weakness is still apparent.

extreme fatigue, sore throat, cough, facial swelling, extreme arm pain

Dizziness, Flush, Shortness of Breath

Onset of symptoms began approximately 1.5 hours after vaccination. Patient became weak c/o tongue swelling, nausea, difficulty breathing, numbness especially in lower extremities. Felt she couldn't breath, numbness continued to get worse and affected her upper extremities as well, weak speech.

Injection site aching, chills, body aches, fatigue, tiredness, nasal congestion. 12/23/2020 in AM All symptoms starting to resolve - feeling better; Nasal congestion, Fever 102.1, Tylenol and Ibuprofen some relief; fever at time of reporting 100.5.

The patient was doing great. After 30 min later, the pt started to have numbness on the face. Felt like the face was completely numb. Came back to clinic and numbness started to go away. It would wax and wane. It started to improve. Now the patient is doing great. Other vitals fine. NO SOB, No intervention done. Pt released home.

48 y.o female with history of atrial tachycardia who presents to the ED via EMS for a possible adverse reaction to Covid vaccine. Patient received her Covid vaccine around 1600 today, and soon became diaphoretic, shaky, and lightheaded. She had presented to the emergency department. Currently she denies any chest pain, difficulty breathing, throat swelling, tongue swelling, or any other symptoms currently except for palpitations. áAllergic Reaction The primary symptoms are shortness of breath. The primary symptoms do not include cough, abdominal pain, vomiting, dizziness or rash. The current episode started 1 to 2 hours ago. The problem has not changed since onset. The onset of the reaction was associated with a new medication. Significant symptoms also include flushing. 48-year-old female with a history of atrial septal defect, status post atrial septal defect repair in 1980. She works as a nurse at Hospital and has been experiencing increasing rapid palpitations associated with chest pain, and hypertension. With her episodes, she experiences marked lightheadedness, dyspnea, and feeling marked anxiety, as well as chest tightness. She received the COVID-19 vaccine today and while waiting in the observation room,she started feeling unwell, with rapid palpitations, associated with lightheadedness and dyspnea. She last had a sustained episode 2 - 3 weeks ago and had presented to ER and Hospital. No syncope. No orthopnea, PND or increased lower extremity swelling. Active Hospital Problems á Diagnosis ? Atrial paroxysmal tachycardia ? History of repair of atrial septal defect á á á 1. Paroxysmal atrial tachycardia in setting of prior atrial septal defect repair - she is having breakthrough episodes through flecainide/digoxin - it is likely her atrial tachycardia is related to her ASD patch. Will hold flecainide/digoxin for now, and try to schedule an ablation during her hospital admission due to highly symptomatic episodes resulting in multiple ER visits. á 2. Acute renal insufficiency - most likely pre-renal - iv fluids started. á 3. Possible COVID-19 vaccine reaction - she probably had an incidental atrial tachycardia episode post vaccine administration, rather than an actual adverse reaction. Continue to monitor.

COVID vaccine admin 1645 around 1715 sudden onset heart palpitations feels like heart racing, employee heart rate was noted to be 170s, employee was escorted to the ED. 12/23/2020 1030 spoke with Employee she advised d/c from ED last pm, this am resting heart rate 90s, but 140's-150's with ambulation. Denies chest pain, shortness of breath, palpitations, cold symptoms, n/v/d. Has reported moderate fatigue this am.

Loose stool on 12/20/20, post nasal drip 12/21/20, nasal and chest congestion, fever of 100.7 on 12/22/20.

injection site soreness, mild headache, fatigue, muscle aches with hear palpitations x 2 days then it started to improve and resolved on day 3. I am also breastfeeding an infant. There were mild heart palpitations the day prior to getting vaccine as well, which are not uncommon to patient during times of stress.

At 0030 (about 12 hours after receiving shot), awoke to sudden development of severe epigastric pain, severe headache, fever (temp 101 F, maximum later at 102 F), and rigors. Rigors quickly abated, while abdominal pain, fever and headache maintained for next 12 to 14 hours. Abdominal pain was unrelenting, could not sit up, work, sleep, or interact. Mild nausea, no vomiting or diarrhea. Pulse ox 99%, pulse in the high 90s (baseline 50s). Took 325 mg acetaminophen at about 1100 (11 hours after symptom onset) with mild relief. Experienced more relief by about 1500. Was able to eat a small meal about 1700. Mild post-flu-like symptoms the next day, and no symptoms after that.

Tachycardia, rate 135

Patient reports having horrible symptoms such as sweats, chills, bad HA, nausea and vomiting, arm pain, extreme fatigue and tachycardia. She states she feels much better now and is taking Motrin for the HA.

I received the first Pfizer Covid 19 vaccine on 12/22/2020 at Hospital. I woke up on 12/23/2020 with a fever of 102 degrees, body aches and headache. I was advised by Employee Health that if my symptoms are still bad that I should follow established protocol and take the next day off of work. December 23rd is my normal day off of work. I am scheduled to work on December 24th. I was also advised that if I felt I could work with a fever that I should go into work tomorrow. I filled out a form and a Covid 19 questionnaire. Someone is supposed to call me within 24-48 hours. I suppose I should take Tylenol for the fever/headache. Employee Health had no advise for me as to what I should do for the symptoms.

Caller stated that 30 minutes after vaccine she developed tingling sensation in lips and feet. Rash over the chest and back. Caller took Benadryl 25mg . Caller stated that symptoms lasted about 1hr and half. Symptoms have subsided. Vaers report successfully completed over phone

Staff member complained of a stiff arm. Was seen by Dr. and advised to see personal physician if problem persists. Stuff arm went away.

Patient began with hives and itching all over. Patient given 50mg IM Benadryl Patient watched for 40 minutes. All sx improved.

Dizziness, nausea, vomiting. Elevated BP. Shortness of breath. Headache. Went to ER, improved with solumedrol.

Patient reported experiencing fever, night sweats and nausea. Patient called out from work next day due to symptoms.

I received the vaccine and the sat to wait the 15 minutes of observation. Within 5 minutes of receiving the vaccine I started to feel flushed and felt my heart rate increasing . They took my vitals and my heart rate increased to 175. I was taken to the Emergency room. Given IV fluids, IV benadryl, and monitored.

My heart rate came down but continues to stat at 90-100s at rest. Almost 24 hours in now and I am very weak with no energy. I still get dizzy intermittently and my heart rate increases easily.

fatigue ,headache ,myalgia ,arthralgia ,diarrhea , stomach ache ,bloating & blood pressure dropped down . still have stomach ache , bloating & low blood pressure

Headache started a couple of hours after the vaccine . Tried 600 mg of Motrin that evening. The next morning still had headache tried excedrin. 6 hours later tried zomig. Still have the headache.

Patient had metal taste in mouth upon administration of vaccine that lasted the duration of patient's observation period of 15 minutes.

Tongue tingling and throat swelling

Diarrhea and stomach issues. They were resolved by 8pm. I took an Covid Test and it was negative

12pm started feeling fatigue and sickness throughout body. 3pm nausea. 6pm body aches and chills. Slept horribly like I was getting the flu. Up at 4:30am to go to work. Still fatigue, nausea, chills and some little bit of upper back pain, between shoulder blades. Went home early today from work.

Pt stated experiencing the onset of itching in her left arm and face after receiving the Covid vaccine in her left arm. Pt also stated experiencing a mild episode of feeling light headed after the administration of Covid vaccine. No Redness, Swelling, or Rash at injection site or on face. 25mg Benedryl administered p.o. at 9:21am.

Migraines, body aches, severely sore Lt arm, extremely fatigued, nausea, and congestion

Migraines, body aches, severely sore Lt arm, extremely fatigued, nausea, and congestion

Fever 27 hours after injection. Started with chills prior to me checking my temperature.

3 hrs after shot: chills, fever 100.7, joint pain, muscle aches, headache pain in upper left arm

injection site pain, L arm pain resolved in 24 hours

c/o dizziness, HA, nausea, went to ED on 12/18 for tx, will f/u with rheumatologist on 12/21

Soreness had spread to neck at 6:45 when patient woke up

The day after I received the vaccine I noticed some redness and swelling at the injection site. Over the next 2 day the swelling increased to about 2-2.5 inches in diameter and became itchy. At the time this form was filled out, the swelling had decreased to about 1.5 inches in diameter but the redness had not decreased and there was still mild itching at times.

Moderna COVID-19 Vaccine EUA Left arm pain started 15 min post vaccination and has not subsided. General fatigue started 2 hours post vaccination and has not subsided. Nausea started 5 hours post vaccination and subsided by 4:45AM the following day. Tinnitus usually sits at 2 on a scale of 1 to 10

with 10 being obnoxiously loud and distracting causing lack of concentration. Tinnitus started to increase 2 hours post vaccination and topped out at about 8 at around 6 hours post vaccination. Could not sleep well and maybe got 2 hours of sleep due to tinnitus and increasing left arm pain.

Some burning, discomfort in the injection site within the first 15 minutes, which dissipated after about an hour later. Some itching/irritation in the back of the throat, about 30 minutes after injection, that turned into a inflamed/sore tonsil on the right side around 8:00pm in the evening. Waking this morning the day after, around 7:00am, the soreness and irritation in the throat is on both sides, but has dissipated after a few hours, and drinking dome water. My arm has increased soreness the next day, described as a dull ache at rest, and painful with movement. I also have a residual headache that has not dissipated since waking up, but is barely noticeable, and will treat most of these side effects with Ibuprofen.

Patient noticed mild tingling and itching after vaccine was given. Patient denies the need for any medications or creams to treat her reaction.

Systemic: Rash (other than injection site)-Mild, Systemic: Headache-Mild, Systemic: EpiPen was given by nurse. Her vitals were fine 140/82, Oxy 98%. 2 benadryls were also given. Pt will be pretreated before second dose

Staff member felt a buzzing sensation was concerned that she may be having an anaphylactic reaction. She took a Benadryl and called 911. EMTs evaluated her and determined that she was fine. No further follow-up was needed.

None. Resident was given Shingrix vaccine (2nd dose in series) on 12/14/2020

fever, malaise, light headedness-- taking Tylenol

Patient felt chilled and very tired. She started falling asleep while sitting upright. She also became acutely confused and could not identify what year it is, what her phone code was, etc. 911 was notified, but pt felt better about an hour later and did not go to the emergency department for evaluation.

Sensation of palpitations. Then, she felt warm and flushed.

12 hours after dose - headache and bodyaches 18 horus after 1st dose - rigors, chills, hot flashes (flushing). Severe sore arm (could barely move arm that received dose, could not touch it) 24 hours after 1st dose - fatigue, bodyaches, headache, persistent flushing without fever (max temp 99.1 F) 36 hours after 1st dose - headache, flushing. Arm soreness significantly improved 48 hours after 1st dose - mild flushing, rest of symptoms resolved

Redness, pain, swelling hardness injection site Ice/Cold compress, Ibuprofen

Associate complained of headache and that she didnt feel well. Associate noted to have a swollen tongue and rapid response was called. Associate was taken to ED. HR 80. BP 100/70

c/o throat tightness, neck hot and tight about 8 minutes after injection. Gave Epipen at 17:10 and taken by wheelchair to our ER. Employee states she was monitored and given 1 liter of IV fluids and benadryl. States she was discharged home about 3 hours later. Felt exhausted 12/22/20. Today feeling better. Planning to see primary MD 12/24/20 for follow up.

Seizure (Grand mal)

Mild headache the day of injection. Moderate nausea and overall malaise on day 1 after injection. Mild nausea, overall malaise, mild fatigue on day 2 after injection.

Patient reported that she developed tingling in her face on the same date of her vaccine. Was evaluated by provider on 12/22/2020 and Kenalog 40mg IM given as one time dose. Patient was contacted that same evening and reported that her symptoms had resolved.

Became flush and clammy 2-3 times. Recovered after 30 minutes of observation

symptoms started afternoon following day (Saturday)around 3 pm as chills denied fever, muscle aches and pains, soreness all over, Tx Motrin as needed. The following day (Sunday) had 2x loose bowel movement last episode 6 hours before showing up for work. Denied any more symptoms.

phone call

Anaphylactic with throat swelling , tachycardia and high BP. Pt was given steroids, epi pen, Benadryl and observed in ICU overnight.

headache, injection site arm pain

Initially; confusion/difficultly focusing. Secondary: imbalance. Then developed, dizziness (room spinning sensation).

The morning after receiving the vaccine I woke up with a headache. I drank lots of fluids and tested, but the headache seemed to get worse. It was throbbing with associated light-headedness and general fatigue. Maximum temperature after vaccine so far has been 98.8

Right arm weakness

Left axillary lymph nodes swelling and pain; Left arm pain Headaches Cough Dyspnea with exertion Body aches

Vaccine recipient received COVID-19 Vaccine on 12/22/20 and 3 minutes after felt that they were going to pass out and developed dizziness and headache. Vaccine recipient was administered ketorolac 15 mg IV, acetaminophen 650 mg, IV fluids in the emergency department. Patient felt better and was subsequently discharged to home. During a follow-up phone call on 12/23, vaccine recipient reported that their symptoms have resolved and they were able to return to work.

cough, sob, sweating, belly pain for 48 hours after vaccination, body soreness, advised to contact PCP.

Patient summoned nurse over while waiting 10 minutes post-vaccination. Stated felt heart racing and like she was alternating getting hot/cold however skin was warm, pink and dry on palpation. Radial pulse 140 bpm. SpO2 100%. Stated she had a history of anxiety; nurse reassured and distracted her which helped symptoms initially but then symptom of heart racing returned accompanied by dry mouth and numbness of upper lip. Was transported in wheelchair to ED by RN. Discharged from ED after 2 hour observation diagnosed as suspected anxiety attack; was instructed to follow-up with PCP and Employee Health regarding receipt of 2nd dose.

"Individual developed rash 5-7 minutes after vaccination. Denies other symptoms including difficulty breathing or itchy/scratchy throat. Says ""I'm fine"". Individual self administered benadryl. went back to department and later called Employee Health. Employee Health instructed individual to go home and self monitor"

Muscle aches and temperature of 100.3 began 1 day post injection, headache additional symptom on day 2 post injection.

Soreness at injection site and surrounding area, deltoid muscle soreness

Vaccine administered around 10:45(am) on 12/21/2020. Around 23:00(pm) (12/21/2020) I was feeling chilly, put my jacket while at work (night shift) on but continued to feel tired, eyes hurt a little, slight headache, general muscle soreness, and increasing pain in my left arm where I got the shot. I took 600mg Advil, felt fine most the night but still really tired. End of shift (07:30(am)) I was very tired with symptoms returning. Got home (08:00 on 12/22/2020), went right to sleep but at that point had chills, felt cold, headache, body aches, pain in left arm worse / really hurting - tender to touch but not swollen or red, neck glands ?felt swollen? but I don't think they actually were swollen. I woke up 4 hours later (12:00 - 12/22/2020) around noon exactly sweating, with all the same symptoms. No GI discomfort. I took 975mg Tylenol. Checked my temp, 99.9F. I couldn't fall back asleep for several hours and my body temperature felt like it was all over the place (sweating and hot, then cold, repeat). Finally fell asleep again from 16:00 to 21:30. Symptoms were all still present. Took Tylenol 1,000mg and stayed up until 05:00 (12/23/2020) with good relief from the Tylenol throughout the night and then went back to sleep from 05:00 to 10:00 (12/23/2020). Woke up symptom free and have remained symptom free.

Patient presents palpitations

Employee complained of lightheadedness/dizziness after vaccination which was at 9:15am

Date and time of symptom onset: 12/17/20 at 4:15 PM Symptoms: 12/17 during 30 minute observation window, patient reports the following symptoms: felt dizzy, heart palpitations, shortness of breath and difficulty breathing. Patient reports, ?I didn?t tell anyone because I didn?t know who the monitors were. I tried to get eye contact with someone, but I wasn?t able to. I didn?t want to stand up because I was afraid I would pass out and would be really embarrassed for causing a scene.? Patient was tearful on phone when describing account. Patient verbalized concerns with being unable to determine who was assigned to be monitoring employees after vaccination administration. Patient reports she did not notify anyone of her symptoms/what she experienced and remained at designated ?monitoring? location for

40 minutes before she drove home. Patient endorses, ?I probably shouldn?t have driven, but I did anyway.? Patient reports she struggles with anxiety and wondered if what she was feeling was a result of hx of anxiety. Patient reports resolution of SOB approx. 1 hour she got home. Patient endorses hx of ADHD, depression, thyroid issues and hypoglycemia. Patient reports compliance of prescribed medications. Patient reports the following timeline for symptoms listed: Dizziness: Patient reports continued intermittent dizziness (denied at time of call) and feelings of ?cloudiness/spaciness?, currently experiencing today Headache: began with severe headache on night of 12/17 and continued with headaches, pt denies headaches today (12/23). Patient with hx of migraines Heart palpitations: continued with heart palpitations through evening of 12/17, intermittent palpitations on 12/18 and 12/19, denies palpitations today. Fever: low-grade fever on 12/17 (pm) and 12/21 (am), denies fever since 12/21 and has not taken antipyretics since 12/21 at approx. 9:30 pm. At time of call: Patient endorses continued ?cloudiness and feeling spacy.? Patient reports feelings of fatigue. Last day of work and shift: 12/23, working from home Home remedies: Rotated Tylenol and motrin, last dose of motrin at 9:30 PM on 12/21 Patient scheduled PTO on 12/18 and 12/21 due to concerns of not feeling well after vaccine.

Rash, generalized weakness

"Patient pre-medicated with diphenhydramine, albuterol, Claritin, and singulair. After roughly 10 minutes after administration the patient reported tingling in her lips and ""felt like she needed to use her inhaler"". Our administration station is in our front lobby, when the patient reported her side effect she was taken to the Emergency department for observation. The patient was hooked up to the monitor and a set of vitals were taken. On arrvial she was tachy in the 100's wtih a BP of 140-90. On the repeat vitals in 15 minutes she was within normal limits. The patient was treated with Diphenhydramine 12.5 mg PO and Albuterol 2 puffs via spacer. The patient was observed for ~3 hours, the patient had mild angioedema and a numb tongue/lips. After resolution symptoms the patient was discharged from ED."

Diarrhea, Fatigue, headache, injection site pain, injection site swelling, malaise, new or worsened join pain and new or worsened muscle pain. more than 23 hours of severe all over pain, horrible pounding headache and nausea

Injection at 12:46, Experienced Tingling on tip of tongue at 1303 took oral Benadryl 25 mg, reported symptoms at 1309- 161/93 sat 100% on room air, P-84, Repeat 1310 135/94 sat 98% P-81, 13:13 152/101 sat 99% P-87, 13:17 145/87 sat 99% P-86, 1330- 141/82 sat 99% P-89, reports tingling decreasing, 13:38 149/83 Sat 98% P-84 13:45 still having tingling transferred to Urgent Care

Pt developed a rash on her entire upper trunk and face. Started behind her ear on day one and by the next day had spread all over with extreme itching and discomfort.

Fever 102

Chills, Headache, Body Aches, Runny nose, congestion, dizzy , nausea

Nexk to my head feel really hot, nauseous, dizziness, high blood pressure, shaking feel Hot and cold

extreme fatigue, itching at site, some redness on deltoid.

Reports had joint pain & shoulder pain, shortness of breath, pale-instructed to go to ED for medical treatment.

patient covid +,on day 13 since identified. received covid 19 vaccine 19 hours prior to fever presentation. patient to receive full medical work up to rule out other medical contributions for fever. Confusion, Fever, HYPERtension & FEVER 101.5 fahrenheit, weakness

Per Vaccine recipient approximately 4-4 1/2 hours after receiving vaccine she noticed facial swelling in and around nose, to neck area, to R elbow and a petechial rash near R elbow. She immediately took Benadryl and Pepcid and then went to ER for further evaluation, where she was given a dose of Zyrtec and 5 day course of Prednisone. She left ER with no further complication.

Headache Arm soreness Swollen Uvula

History to allergic to IVP dye, after the covid vaccine and said felt itchy in face. Patient given dexamethasone 10 mg diphenhydramine 50mg ,epinephrine 0.5 mg and lactated ringers. Patient issue resolved and will be discharged home.

"Pfizer-BioNTech COVID-19 Vaccine EUA Patient stated that 2 1/2 to 3 hours after receiving vaccine she had 2 ""red dots"" on the arm she received the vaccine in. States one dot was where vaccine was administered and second dot was next to area where she received vaccine. The next day patient stated ""the two dots became red, raised, and sore to touch"". States they were not warm or hot to touch. 2 days following vaccination, the 2 ""dot areas"" were still present. Patient stated ""running through the dot I got the shot in, I developed a red line that ran through the place I got the shot and was about 2 inches long down my arm. "" Patient described red line as ""It looks like a cat scratch"". 3 days following vaccination, states ""Bumps are still there but faint"" also states ""red line is still there"". States line is not raised, tender, or hot to touch. States no other reactions. States no fever or fatigue."

Headache Sore injection site

vasovagal syncopal reaction. I experienced sudden onset of feeling flushed and warmth body wide, sudden metallic taste in mouth, muffled hearing, dizziness, lightheaded, began to lose vision and consciousness, pallor noted by nurse caring for me, blood pressure recorded was 90/60. I have never experienced this type of reaction before to any vaccine or blood donation but know it can occur occasionally.

BODY ACHES, MIGRAINE

Itching started on left wrist approximately 20 minutes after receiving vaccine and progressed to other arm, back, and legs. Patient has no other complaints. Initial blood pressure elevated 180-210 / 120-130.

Patient reports no history of hypertension. Patient reports having taken Zyrtec approximately 30 minutes prior to receiving vaccine. Benadryl offered, but declined by patient at this time.

Staff member experienced a fever of 101.7 and chills through the evening. Symptoms then resolved.

On 12/23/2020 woke up with Fever 100.6 F, significant muscle aches, headache, diarrhea, and dizziness.

Developed SOB, chills, fever 102.0, cough and posterior back pain with symptoms improving on 12/20/2020 in the PM. He did not seek care or report issue until now. States he feels fine now.

Cellulitic response to injection site.

Stated fever 99.5, body wide aches, fatigue

Took NSAID (ibuprofen) to relieve pain and reduce fever. Applied local analgesic to injection site (Methyl/M-salicylate, camphor, menthol ointment).

rash to lower back & itching some pain @ site of injection No swelling, HA, fatigue, fever. Txt with antihistamines

Employee developed fever of 101 initially. Was 102 by 12/22/2020 @ 3AM. Alternating Tylenol/Ibuprofen and reports improvement in symptoms.

IM given 12/18/2020 at 2:40 pm , evening time 9pm claimed fever(no temperature was taken) ;; chills, myalgia, headache on and off tolerable on and off; nauseated (common symptom even in situations employee does not feel well); Took Motrin alternating with Acetaminophen at least 2 tabs a day of each. Medications alleviate symptoms but recurs again until after 48 hours Showed at work but decided to leave work to return to residence. Advised to contact primary care provider to inform provider of the signs and symptoms. Employee was advised to get Covid TEST (PCR)

12 hours after vaccination -->generalized muscle aches and arthralgia (of major joints symmetrically painful (both knees, lateral movement of neck stiff) no joint swelling; felt chills no fever. No URI symptoms; and both thigh pain aggravated by change of position (standing from sitting to rising from chair)and even going down flight of stairs. Generalized malaise, felt sick and tired. NO diarrhea no loss of taste. The following day (Sunday) all complaints resolved. No meds taken throughout post vaccination

Has allergy with prior reaction to sulfa drugs that she had the same symptoms of warmth and then developed hives. Her left upper extremity was warm to the touch when compared to her right, which was where she received her injection 20 minutes prior. Treated with motrin and benadryl 50mg po and symptoms resolved.

patient had left arm numbness and tingling, lips numbs, and headache at 15 minutes. Symptoms continued to increased headache, SOB, nasal congestion, nausea and vomiting, all extremities numb. face pale.

Employee was called 5 hours after medication administration, referring improved but still having Shortness of breath. Referred will go to the ER if symptoms continue

Soreness, stiffness, fatigue, headache nausea

Developed diarrhea x 10 episodes on 12/17/2020 through 7:00PM on 12/18/2020. Treated with Zofran, Pepcid, and Lactaid.

Developed headache and body aches by 11:00PM following injection. Fever of 100.6 on 12/19/2020.

Phone call- already 80% improved

Developed a 101 fever along with body/joint aches on 12/19/2020

One hour after injection I was at the store felt disoriented like I was on a strong pain pill. I felt impaired and used caution driving home from the store. That feeling lasted for 3 hours. I still feel a little foggy headed today at work.

developed itching within a few hours of vaccine administration. developed a rash all over body on 12/20/2020. Took Benadryl and symptoms now resolved.

Headache, lightheadedness, fatigue 5 to 10 min post vaccination

NauseaVomiting

NauseaVomiting

phone call

12/23 patient transferred out to acute care hospital for treatment/evaluation of gi bleed. patient does have h/o PPI use that was d/c 5/2020 and no recent gerd symptoms requiring intervention >60 days. NauseaVomiting, GastricBleeding & heartburn

12 hours after receiving the vaccine on saturday afternoon experienced severe headache sunday morning. was able to work through it. subsequently developed vertigo on monday night and missed work on tuesday. very unusual for this employee. now on tuesday evening symptoms are wearing off. did not seek medical attention.

Approximately one hour after receiving the vaccine, as the patient was driving home he began experiencing throat tightness and tongue swelling. Once home, they call 911 and administered 0.3 epi (had previous severe allergy to lidocaine). EMS then administered iv benadryl and an albuterol treatment. The patient was reported to go unresponsive en route and received bag and mask ventilation very briefly as well as additional 125g solumedrol and another IM epi injection. On arrival he was reported to be stable, talking, tolerating secretions, without significant complaints. He was observed in the ER for several hours without any symptoms nor objective findings to support anaphylaxis (tongue and airway normal, no wheeze, no rash). He was anxious in the ER and the treating physician wrote that he felt it may likely have been anxiety and not anaphylaxis based on their evaluation.

96hrs later still feel disoriented

About 12 hours after the vaccine I started to get a fever that got up to 101.2 degrees, headache, body aches and flank pain. I took Tylenol, which helped break the fever and body aches but still have a low grade fever and headache. I believe I have COVID antibodies from a previous infection back in September so think that having the antibodies already could have caused this.

Yesterday afternoon, she developed a loss of taste and smell. This morning around 0400, she awoke to a splitting headache. She took some Advil and tried to go back to sleep, hoping she could maybe come in to work today a little later. Around 1030 this morning, she began to have significant swelling to her face and eyes along with her skin becoming flushed. She has taken some Benadryl and been instructed to follow up with her PCP

I received the vaccine at 1:40 PM in my left arm. They had me wait 15 minutes for observation. 15 minutes later, I left feeling fine. I went back to work. Around 2:15 I started getting chills. I ignored it thinking that I was psyching myself into it thinking about the shot. But then the nausea began. I was at work and started feeling horrible. I started cramping in my stomach. I was alone at work, and then I started throwing up. It started at 3:40. I left work at 4:30 with the most body wracking chills and went to the emergency room. I was violently heaving at this point and they rushed me into a room where I received an IV drip of fluids and anti nausea medication. It wasn't until after the medication was administered that I felt better. I would say this was around 5 pm. They sent me home with an anti nausea medication. I was released to go home around 730-8 PM. I felt so much better after the medication was administered.

"Patient reported a metallic taste on vaccine administration, after ~ 10 mins reported a tongue tingling. The patient was escorted to the emergency department for observation. Patient was slightly hypertensive 140's/90's which is not normal for her. Some of this could be attributed from the ""white coat effect"". The patient had no visible angioedema, just a mild rash on her trunk/upper torso/chest. The patient was treated with 50mg PO diphenhydramine and 40mg of Famotidine. The patient's symptoms resolved within 30 minutes of medications administered. Patient was discharged after ~ 2 hours in the ED."

Patient experienced immediate and severe nausea and then tachycardia ~140 bpm within 30 minutes of dose monitored by nursing home physician assistant and sent home from work.

2 hours after the vaccine felt like she was hit by a bus. Had facial droopiness. Has Migraines with the same facial droopiness. Left eye blurred vision. Stroke like symptoms. Fatigue, weakness.

Acute onset nausea and abnormal throat sensation shortly after receiving COVID vaccine. Hemodynamically stable in ED, saturating well on RA, did receive Epi .3 mg IM for concern of throat sensation, tolerated well.

Patient received Covid vaccine while sitting without issue. Within minutes of receipt of the vaccine he had a vagal reaction (fell off his chair). Initial eval was notable for supine position, pale face, HR in 30's,

clammy skin, small lac to L forehead (not actively bleeding). Pt was alert and oriented initially then was noted to slow his speech/had decreased responsiveness <1 minute. He was then alert and able to answer all questions. Denies any past medical history, not on any meds, NKDA, no hx of reaction to vaccines. He denies any itching, rash, swelling, difficulty breathing/SOB/Wheezing, or GI sx. Exam remained unchanged with no objective signs of allergic reaction. His color improved as well and he reported feeling better, was able to sit up. He reports eating minimal breakfast this morning. Has a history vasaovagal reactions with blood draws. Decision made to call EMS for transfer for additional observation. EMS arrived at 1115 and transported patient to ER for observation.

Minutes after being vaccinated; patient felt flushed and arms and back and chest developed hives/rash. Hyperventilation with throat tightness. Healthcare worker was immediately transported to the Emergency Department and was treated with Benadryl, Epinephrine, Solu-medrol, Pepcid and Ativan.

Left arm swelling, redness, heated/ burning, bruise, rash, low grade fever 99.4, hardened area somewhat similar to a knot on site Took Benedryl

Right arm pain

Employee calling to report a reaction after receiving a COVID-19 vaccine. Vaccine Name - Pfizer Vaccine Lot # - EK5730 Vaccine Date and time - ?12/16/2020 @ 06:15am Is this your first or second dose? Pfizer-BioNTech COVID-19 Vaccine EUA Patient had eaten before the vaccination, but had walked to the location of the vaccine administration, administration facility heat was on/very high, approximately 8 minutes after receiving the vaccine the patient stated that she felt hot, prickly, lightheaded and weak. She laid on the floor, remained conscious but used an ice pack on her forehead. She was able to walk to another chair located away from the heater and was observed for 30 additional minutes at which time she had a snack, drank water and was cleared to leave. Patient states that she feels okay today.

Head aches; Nausea; Fever; Metal flavor on mouth; This is spontaneous report from a contactable consumer. A 38-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), unknown route (site of vaccination left arm), on 16Dec2020 05:00 PM at single dose for COVID-19 immunisation. Medical history was none. Concomitant drugs were unknown. The patient experienced headache, nausea, fever, metal flavor on mouth, all at 07:30 PM on 17Dec2020. Patient was treated with acethaminophen. The action taken in response to the events for BNT162B2 was not applicable. The outcome of the events was recovered Information about lot/batch number has been requested.

Nausea, severe headache, very dizzy, started 22 hours after Very flushed, fever 100.6 at 28 hours after

Hand feels tingley for 15 minutes

mild pain at injection site 24 hours after receiving vaccine dose; This is a spontaneous report from a contactable via a Pfizer sales representative. A 40-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced mild pain at injection site 24 hours after receiving vaccine dose in Dec2020. Patient is healthy and within weight parameters. The outcome of the event was recovered in Dec2020. No follow-up attempts are possible; information about batch/lot number cannot be obtained.

Sore arm, body aches, headache, and fatigue.

Fever 101.7F Rigors Nausea Vomiting

"Hoarseness; Nausea; Loss of appetite; Weakness; Headache; whole body ached; pain in the area the shot was applied; some swelling at the injection site; This is a spontaneous report from a contactable nurse. A 49-year-old female patient received the first dose of the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EH9899), via an unspecified route of administration in the left arm on 15Dec2020 at 15:30 at 49-years-old at a single dose for COVID-19 immunization. The vaccination facility type was a hospital. History of all previous immunization with the Pfizer vaccine considered as suspect (or patient age at first and subsequent immunizations if dates of birth or immunizations are not available): none. There were no additional vaccines administered on the same date of the Pfizer Suspect. The patient's medical history was reported as none. The patient was not a smoker. Family Medical History Relevant to adverse events: none. Concomitant medications included routine medications. On 15Dec2020, the patient experienced: pain in the area the shot was applied (non-serious). On 16Dec2020, the patient experienced: weakness (non-serious), headache (non-serious), whole body ached (non-serious). On 17Dec2020, the patient experienced: loss of appetite (non-serious). On 18Dec2020, the patient experienced: hoarseness (non-serious), nausea (non-serious). On an unspecified date in Dec2020, the patient experienced: some swelling at the injection site (non-serious). The events did not require a visit to an emergency room or physician office; there was no prior vaccinations (within 4 weeks), there was no adverse events following prior vaccinations. The clinical course was reported as follows: The patient (nurse) had the vaccine administered on 15Dec2020 at about 15:30; and was told to notify if she had any side effects. On the same day, the patient had a lot of pain in the area the shot was applied. The patient received the shot in the left arm and after that, she was feeling weakness, headache, her whole body ached, she had difficultly speaking, and nausea. The patient was advised to call and report anything she experienced after the vaccine. The patient first started with strong pain in the area where the vaccine was administered. It was very painful, and she had some swelling at the injection site. Next, she had a headache and loss of appetite. The patient had weakness in her body. On 18Dec2020, the headache started with some nausea. There was a very strong pain in her whole body and hoarseness (like she had no voice). The patient clarified later in the call she had a headache prior to 18Dec2020. The patient reported that the "" pain in the area the shot was applied"" was better. The patient reported ""it is not too annoying like it was yesterday."" The patient took acetaminophen for pain and applied ice packs. The patient reported that the weakness was better

on 18Dec2020. The headache was better because she took medication. The whole-body aches: were about the same, a strong pain in her back, in her arms, everywhere. The hoarseness which was clarified by the patient as what was meant when reporting difficultly speaking: The patient clarified she had no voice. On 18Dec2020, in the morning, she felt a hoarseness. The patient never presented this symptom until 18Dec2020. Loss of appetite: This started on 17Dec2020 and it was about the same since starting since she really had not eaten anything. Nausea: Started on 18Dec2020 in the morning when she woke; she had not done anything because she had lost her appetite. The patient had only fruit juice. The nausea was about the same since starting. "" When asked a seriousness criterion for the events: She would describe it has had a cold."" The patient reported that there was no difficulty breathing and so she felt it was not so urgent that there was a need for her to go to the emergency room. The patient received a call from the place where the vaccine was given; and was told if her symptoms were to get worse, she would have to go to the emergency department. The patient will get the card after her second dose; The patient was given a piece of paper. There was no expiry date or NDC provided on the paper. The patient reported that she takes nothing other than routine medications. The patient had no other vaccines on the day she received the COVID vaccine. The patient reported she had no important medical history and has had no reactions to any other vaccines previously. There was no relevant family medical history. The patient had been able to manage the symptoms herself at this point and did not require any additional trips to the hospital or doctor's office. Therapeutic measures were taken as a result of pain in the area the shot was applied, and headache. The clinical outcome of the events: pain in the area the shot was applied, weakness, headache, was recovering. The clinical outcome of the event, whole body ached, loss of appetite, hoarseness, nausea was not recovered. The clinical outcome of the event, some swelling at the injection site, was unknown."

light nausea and headache, dizziness, and vertigo, chills, overall unwell, prior to vaccine, patient states she was fine.

light nausea and headache, dizziness, and vertigo, chills, overall unwell, prior to vaccine, patient states she was fine.

MILD RASH, TINGLING IN THRAOT

Nausea, dizziness, states body feels like jelly, shaky. No vision changes or shortness of breath. Given oral Benadryl and oral Pepcid and discharged in stable condition after 2 hours.

Rash on face and neck, redness, itching, rash

The patient received the vaccine at about 1500, did wait 15 minutes for observation, and left around 1515 with no reported complaints. At around 1535 while driving home patient started having difficulty swallowing and contacted hospital advice nurse who referred the patient to the emergency department.

Elevated blood pressure Elevated pulse Heart palpitations Light headedness All started within 3 hours of receiving injection

12-22 HPI 53-year-old female with a history of Addison's disease, anaphylactic reaction who presents to the ED complaining of hives and shortness of breath. Patient reports that 3 days ago she received the COVID-19 pfizer vaccine. She reports that since that time she has developed progressively worsening hives on her legs and arms. Approximately 1 hour ago she began to develop shortness of breath and so she presented to the ER. Patient reports a previous history of anaphylactic reactions multiple times. Denies any other acute complaints at this time. MDM Patient came in with shortness of breath and hives. Suspect allergic reaction to the COVID-19 vaccine. Patient had already taken 50 mg of Benadryl. She was given Solu-Medrol and EpiPen. She reported feeling better with improvement in the pruritus. She reports that she has had rebound reaction requiring EpiPen at 24 hours. Given the distance that she lives from adequate medical care and the possibility for recurrent severe reactions, the patient will be hospitalized for further observation. 12-23 Female with history of asthma and addison's had anaphylaxis to covid vaccine. Admitted over night to ensure that she did not rebound. Received IV Dex and this am has had no reoccurrence of hives or shortness of breath. Will discharge home on epipen, hydrocortisone prn, prednisone bid for 5 days. Return to ER or go to PCP for worsening symptoms.

Patient reported that 2 days after the injections she had bilateral arm swelling (left more than right, injection was in the right arm) and hand swelling. She had some facial edema around her eyes. No difficulty with breathing, swallowing or tongue swelling. This all occurred at home.

Prior to receiving the vaccine I was feeling well, history of asthma, seasonal and environmental allergies, and no history of significant symptoms after previous vaccinations. Shortly after administration of the COVID-19 vaccine I began to feel nauseous which lasted in duration for approximately 3 days. On the vaccine administration day, several hours after administration I developed retrobulbar pain, bilateral eyelid edema, erythema of the right eyelid, this was one of the most significant symptoms that persisted for several days. In addition, on 12/20 I experienced a several hour episode of tinnitus and diminished auditory acuity in my right ear, this has also resolved. From day 2 until current I have experienced decreasing myalgias and arthralgias, the most significant has been lower back midline pain which has been improving. I developed a temperature of 99.7 Fahrenheit, with administration of acetaminophen. Although the symptoms have improved this is certainly the most significant constellation of symptoms I have experienced after any vaccination.

Dry mouth and itching on the back 20 minutes after receipt of vaccine. Throat feeling blocked. Headache. Diphenhydramine 50 mg PO x1 given. Symptoms started to subside approximately 20 to 30 minutes after administration of diphenhydramine. Blood pressure initially elevated at 178/84 but decreased to 142/82 approximately 15 minutes following administration of diphenhydramine. Patient a little drowsy from the diphenhydramine. Ears ringing and itching began 1 hour 15 minutes following administration of vaccine (and approximately 45 minutes following administration of diphenhydramine). Famotidine 20 mg PO x1 administered.

Weird taste in mouth.

After patient received the vaccine at 3:20pm, he was cleared to return home at 3:48pm. At approx. 8:20pm, patient became faint while laying down, experineced hot and cold flashes and observed

darkness closing in on his vision. He then expereinced auditory disrutpitions and became highly disoriented. He was ice cold to the touch on his forehead, expericning cramping and sweating profusely on his back. Thereafter, he had diarrhea and continues to be symptomatic. He currently has no fever, but continues to remain confused and feels like he needs to lay down from this experience. He also has a metallic taste that has developed.

Chills, fever, fatigue, muscle pain

Patient reports she also had severe flushing, burning pain in her chest dizziness. tachycardia, nausea and throat tightness.

Onset about 1 hour after injection with mild left deltoid pain. Then over course of 3 hours developed left arm pain, frontal headache, and posterior neck pain. No rash.

About 1 hr after started to have muscle pain/soreness. Still sore ~40 hrs out.

Employee received vaccine, stayed 15 minutes and left ?. came back within 5-10 minutes c/o throat tightness and difficulty breathing

Warmth and tingling that started in the injection site (right deltoid) that ran down the arm and to the hand a couple minutes after injection. Warmth and tingling in moderate intensity lasted about 20 minutes and decreased with increased arm movement but lasted the first 24 hours with mild aches in the same arm. An enlarged and painful lymph node occurred in the armpit of the same arm two days later and lasted (although decreasingly) for at least the next 5 days.

sent to the emergency room for body rashes and hives.; sent to the emergency room for body rashes and hives.; This is a spontaneous report from a contactable pharmacist. This pharmacist reported same events for 4 patients. This is the 4th of four reports. A patient of unspecified age and gender received BNT162B2 via an unspecified route of administration, on an unspecified date at single dose for immunization. Medical history included allergies to bee stings. It was reported that the patient sent to the emergency room post vaccine for body rashes and hives. There seemed to be a commonality of allergies to bee stings for the 4 different individuals. The pharmacist wondered if there are other reports of this. They are recommending that those with a bee sting allergy hold off until knowing more and wondered if any guidance from Pfizer. Event took place after use of product. Outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020502532 same reporter, drug, event but different patient

"more than likely anxiety; red, splotchy rash on her neck; sweaty; felt slightly dizzy, particularly when moving her head side to side; ""tightness"" in the upper middle quadrant of her stomach, near the

xiphoid process; ""tightness"" in the upper middle quadrant of her stomach, near the xiphoid process; HR was 140; This is a spontaneous report from a contactable pharmacist. A 41-year-old female patient received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine; lot number: EK5730), intramuscular (IM) on the left arm on 17Dec2020 at 18:30 at a single dose for COVID-19 immunization at the hospital. The patient's medical history and concomitant medications were not reported. The patient had no other vaccine in four weeks. Approximately 4 minutes after administration, on 17Dec2020 at 18:34, the patient complained of ""tightness"" in her upper middle quadrant of her stomach, near the xiphoid process. At that time (18:34), her heart rate (HR) was 140. At 18:40, her HR was 96. At 18:44, the patient had a red, splotchy rash on her neck. The patient received 25 mg of diphenhydramine (BENADRYL) orally. The patient noted that she was sweaty and she felt slightly dizzy, particularly when moving her head side to side. At 18:47, the patient's HR was 80. At 18:52, HR was 84 and at 18:58, HR was 68. The patient stated she felt much better, dizziness seemed to resolve quickly per patient's report. She was able to ambulate and turn her head side to side with no further difficulties. Throughout the episode, the patient denied nausea, shortness of breath, itching, urticaria or any other rash besides the redness on her neck. After discussion with the physician (MD), nurse (RN), and doctor of pharmacy (PharmD), who were present for the vaccine administration and reaction, it was determined that this was more than likely anxiety (17Dec2020 at 18:45) and not an allergic/anaphylactic reaction. The patient had no Covid prior vaccination and not Covid tested post vaccination. The events were assessed as non-serious. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Therapeutic measures were taken as a result of ""more than likely anxiety; ""tightness"" in the upper middle quadrant of her stomach, near the xiphoid process; HR was 140; red, splotchy rash on her neck; sweaty; and felt slightly dizzy, particularly when moving her head side to side."" The patient recovered from all the events on an unspecified date."

last night legs began burning like she had rubbed icy hot on them, extending down feet/the feeling was all over her body; This is a spontaneous report from a contactable nurse. A 56-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular from 17Dec2020 09:30 at single dose for immunization (reported as COVID-19 vaccine). Medical history included vertigo and small whole in heart. Concomitant medication included acetylsalicylic acid (BABY ASPIRIN), ergocalciferol (VIT D), magnesium taurate, selenium and zinc. The patient previously took Kepra, Oxtellar and Sulfa which she had allergies. The patient experienced that last night (17Dec2020) her legs began burning like she had rubbed icy hot on them, extending down to her feet. Then woke at 2am and the feeling was all over her body. Awoke again at 6am and feeling was still there. She went to work, feeling wass not confined to ankles and feet...icy hot although warm to touch. The patient underwent lab tests and procedures which included sars-cov-2 test: negative on 13Nov2020 and sars-cov-2 test: unknown results on Dec2020. Outcome of event was not recovered.

lost sense of taste; Headache; arm was hurting; fatigue; sinus congestion; sneezing; nose hurting because it was dry; nose hurting because it was dry; flu like symptoms; increase in urination; erythema; at the site of injection; swelling at the site of injection; malaise; pain and achiness; This is a spontaneous report from a contactable other healthcare professional (nurse practitioner) reported for himself. A 29-

year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EH9899, expiry date unknown) via an unspecified route of administration on 17Dec2020 06:30 at single dose for COVID-19 immunization with his left deltoid. The reporter informed that the vaccination facility was a hospital and not administered at military facility. The patient's medical history included autoimmune stuff going on and the patient understand that the vaccine could intensify it. The patient informed that his autoimmune condition was psoriasis; lichen planus, irritable bowel syndrome (IBS), everything hypertension and other generic condition, migraine without aura. There were no concomitant medications. The reporter informed that no additional vaccines was administered on same date and within 4 weeks prior. The patient previously took thimerosal and was allergic. The patient had flu shot/flu vaccine (influenza vaccine) when very young and experienced allergic reaction. The patient experienced almost immediately had a headache (17Dec2020 06:35). He had the pain and achiness (Dec2020) like generic symptoms, something else was lost sense of taste that was 12 hours (17Dec2020 18:30) after taking the vaccine. His first dose was yesterday 17Dec2020 at 6:30 am. He clarified further that the headache started within 5 minutes of receiving the vaccine, arm was hurting within an hour, had the fatigue after 2 hours, and about 12 hours after noticed a loss for sense of taste. He also experienced sinus congestion and sneezing that started around 1 or 2 o clock on the same day (17Dec2020) and it was 8 hours after. The patient's headache was very mild now, fatigue was hard to say because the patient just woke up after sleeping 9 hours straight, sinus congestion greatly oscillates back and forth between being congested and not able to clear his nose at all and then it change in the matter 3 minute to suddenly his nose hurting because it was dry (Dec2020). The congestion could last half hour. The patient clarified that yesterday it was completely congested and today it was going back and forth. The patient informed that his side effects were flu like symptoms (Dec2020). The patient experienced increase in urination, erythema and swelling at the site of injection (Dec2020). The patient informed that he was tested maybe 2 months ago and at that time it was negative, but he didn't have a recent one. The events did not require a visit to emergency room and physician office. The patient took Advil for the achiness malaise (Dec2020). The outcome of the events headache was recovering, lost sense of taste, sinus congestion, sneezing was not recovered, while pain and achiness, arm was hurting, fatigue, nose hurting because it was dry, flu like symptoms, increase in urination, erythema and swelling at the site of injection, malaise was unknown. The patient's second dose was unknown, he was given a separate card for the second date and was having issues finding it. The patient has misplaced the card but knows it was his calendar, he will go in the office today and find out, he knew it was scheduled on a Friday.

Chills; fatigue; malaise; joint and muscle aches all over body as well as at and around injection site; joint and muscle aches all over body as well as at and around injection site; joint and muscle aches all over body as well as at and around injection site; mild fever: 99.6 oral Fahrenheit; This is a spontaneous report from a contactable consumer (patient). A 39-year-old male patient received bnt162b2 (BNT162B2) lot number: Ek5730, expiration date: not reported, via an unspecified route of administration in the left arm, first dose on 17Dec2020 09:45 at a single dose for immunization. Medical history included allergies to cephalosporins. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the covid vaccine. On 17Dec2020 at 04:00 pm, the patient experienced chills, fatigue, malaise, joint and muscle aches all over body as well

as at and around injection site, mild fever of 99.6 oral Fahrenheit, lasting two days with lessening severity so far.The events were reported non-serious with no treatment received. The patient had no covid prior vaccination nor had he tested post vaccination. The outcome of chills, fatigue, malaise, joint and muscle aches all over body as well as at and around injection site, mild fever: 99.6 oral Fahrenheit was recovering.

anxiety was kicking in really bad/anxiety episode/triggered her anxiety; metallic taste; arm pain at the injection site; This is a spontaneous report from a contactable consumer (patient). A 34-year-old female patient received the first dose of BNT162B2 (Pfizer product, lot EK5730, expiry date Mar2021) via an unspecified route of administration on 18Dec2020 (reported as today at 11:45, unknown if AM or PM) at a single dose on the arm as Covid 19 Vaccine. Medical history included cervical cancer since 2010, both mother and father have had cancer; post-traumatic stress disorder (PTSD); anxiety; had been on therapy counselling. Concomitant medications included hydroxyzine, sometimes uses medical marijuana, sometimes taking prenatal vitamins just because of the whole virus and stuff thing going around; the patient might not be pregnant but become pregnant (consumer was unsure- PENDING CLARIFICATION). She's in the middle of a divorce but she just takes the prenatal vitamins because of the higher doses to help run her immune system because of the virus. The patient received the vaccine today (18Dec2020) and she was not sure what these ingredients were. She's a single mother and an EKG and EEG tech working around Covid positive patients. She inquired if any of the ingredients or the vaccine itself do cause cancer. She really had a bad anxiety and PTSD and she didn't know but her anxiety was kicking in really bad right now. She's currently having anxiety episode now. The more she got home, the more she's thinking and that's kind of triggered her anxiety. She already has anxiety taking the vaccine/have anxiety about this Covid19 vaccine. She inquired if the lady knew like what triggered the anxiety if there's like any ingredient that could potentially cause cancer, do they spike protein, do those cause cells to mutate which causes cancer, so many answers and questions the patient had and there were no answers to her questions, nobody knew because it's still being studied and that's also where her anxiety was getting triggered and all about this was just unknown. She was just trying to figure out if there's a chemical ingredient made to be administered in the vaccine because being a mother she was trying to find answers and nobody seemed to have any answers and all she heard was she did not have. It was also stated that after she got the vaccine, she had really metallic taste for about an hour and a half and it finally went away. She also had a regular arm pain at the injection site, it's normal like how one get flu shot and stuff. The patient had no investigation assessment. Treatment for the events was reported as no. The outcome of the event metallic taste was recovered on 18Dec2020 while the rest of the event was unknown.

About 5 minutes after the injection, got a flushed feeling for a couple of minutes.; This is a spontaneous report from a contactable Other Health Professional. A 43-year-old female patient received bnt162b2 (BNT162B2) lot number: EK5730, intramuscular (left arm), first dose on 16Dec2020 19:00 at a single dose for immunization. Medical history included high blood pressure and known allergies to penicillin and sulfa. Concomitant medication included escitalopram oxalate (LEXAPRO), lisinopril and omeprazole (PRILOSEC [OMEPRAZOLE]). It was reported that about 5 minutes after the injection on 16Dec2020 at 07:15 PM (as reported), the patient got a flushed feeling for a couple of minutes. The patient recovered

from flushed feeling for a couple of minutes (16Dec2020). The event was reported as non-serious with no treatment received. The patient had no covid prior vaccination. She had covid tested post vaccination on 18Dec2020 through nasal swab with negative result.

soreness at the site of injection.; This is a spontaneous report from a contactable consumer, the patient. A 54 year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), lot number EK5730 via an unspecified route of administration on 18Dec2020 at 10:45 (at the age of 54-years-old) as a single dose in the left arm for COVID-19 immunization. The patient had no relevant medical history. The patient had no known allergies to medications, food, or other products. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications included loratadine (CLARITIN) from an unknown date and unknown if ongoing, or an unknown indication. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 18Dec2020 at 12:00, the patient experienced soreness at the site of injection. The patient did not receive any treatment for the event. The clinical outcome of the soreness at the site of injection was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19.

Fatigue; Nausea; This is a spontaneous report from a contactable consumer (patient) and contactable Other healthcare professional. A 41-year-old female patient received the first dose of bnt162b2 (BNT162B2, lot number: EH9899), via an unspecified route of administration (left arm) on 18Dec2020 08:45 at single dose for immunization. Medical history included endometriosis and allergies to lavender and stevia. Concomitant medication included levonorgestrel for birth control. The patient previously took metoclopramide hydrochloride (REGLAN) experienced allergies. On 18Dec2020 03:00 PM, the patient experienced fatigue and nausea. The most recent COVID-19 vaccine was administered in the hospital. She did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. No treatment was received for the events. The events recovered on unspecified date in Dec2020.

Tiredness; Muscle pain; Chills; Fever; Joint pain; Vomiting; Nausea; Feeling unwell; This is a spontaneous report from a contactable nurse, the patient. A 54-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot number: EH9899), intramuscular in the right arm on 16Dec2020 at 09:30 AM (at the age of 54-year-old) as a single dose for COVID-19 immunization. Medical history included hypertension, sleep apnoea syndrome, glucose tolerance impaired, breast cancer (5 years ago), and anxiety. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medication taken within two weeks of vaccination included HCTZ, losartan, anastrozole (ARIMIDEX), escitalopram oxalate (LEXAPRO), calcium, ergocalciferol (VITAMIN D), and fish oil; all for unknown indications from unknown dates and unknown if ongoing. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient previously took Bactrim and experienced drug hypersensitivity. On 17Dec2020, at 10:00 AM, the patient experienced tiredness, muscle pain, chills, fever, joint pain, vomiting, nausea, feeling unwell. The events were reported as non-serious. The patient did not receive any treatment for the tiredness, muscle pain, chills, fever, joint pain, vomiting, nausea,

and feeling unwell. The clinical outcome of the events tiredness, muscle pain, chills, fever, joint pain, vomiting, nausea, feeling unwell was unknown. It was also reported that since the vaccination, the patient had not been tested for COVID-19.

Very painful injection site 5 hours after injection; Headache; Nausea; Myalgia; Arthralgias; Severe fatigue; Mild confusion; Chills but no sweats or fevers; This is a spontaneous report from a contactable physician. A 59-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; lot number: EH9899), intramuscular on the right arm on 15Dec2020 06:30 at a single dose for immunization. Medical history included treated hypertension; he had no known allergies. Concomitant medication included chlorthalidone and nifedipine (PROCARDIA). The patient did not receive any other vaccines within four weeks prior to the COVID vaccine. On 15Dec2020 10:30, the patient experienced very painful injection site 5 hours after injection; 8-10 hours after: headache, nausea, myalgia, arthralgias, severe fatigue, mild confusion, chills but no sweats or fevers; had to take 2 days off work due to severity of symptoms; symptoms decreased but some continue on day 5. The events were reported as non-serious. No treatment was received for the events. The patient was not diagnosed with COVID prior to vaccination and has not been tested post-vaccination. Outcome of the events was recovering.

Headache; Metallic taste; This is a spontaneous report from a contactable nurse (patient). A 25-year-old female patient received bnt162b2 (BNT162B2; reported as Pfizer-BioNTech COVID vaccine; lot number: EL0140; expiration date: unknown), intramuscular left arm on 19Dec2020 06:45 AM at single dose for immunization. The patient's medical history and concomitant medications were not reported. It was reported that the patient received the COVID vaccine in a hospital. The patient did not have other vaccine in the last four weeks. The patient reported that she had headache and metallic taste on 19Dec2020. The events were non-serious and did not result in hospitalization or prolonged hospitalization. The patient received naproxen (ALEVE) as treatment. The patient was not diagnosed with COVID-19 prior vaccination and the patient has not been tested for COVID-19 since the vaccination. The outcome of the events was recovered on Dec2020. The following information on the batch/lot number has been requested

Tingling; Tachycardia; This is a spontaneous report from a contactable nurse. A 38-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EJ1685; Expiration date was not reported), intramuscularly on the left arm on 17Dec2020 at 1 DF, single for Covid-19 vaccination at the hospital. The patient's medical history and concomitant medications were not reported. The patient was not pregnant at the time of vaccination; and reportedly did not have Covid-19 prior to receiving BNT162B2 vaccination. On 17Dec2020 (03:00), the patient had tingling and tachycardia. The patient did not receive any treatment for the adverse event. The outcome of the events, tingling and tachycardia, was recovered in Dec2020. The patient was tested for Covid-19 post-vaccination. No follow-up attempts are possible. No further information is expected.

pain at the injection site; I had discomfort in my arm; sore throat; cough/Bit of a cough; This is a spontaneous report from a contactable nurse (patient). A female patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot# not provided), via an unspecified

route of administration in Dec2020 at SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On Thursday (in Dec2020), the patient received her first dose of COVID vaccine that Pfizer makes. By Thursday night and yesterday (Friday), the patient had pain at the injection site. The patient also had discomfort in her arm. It was also mentioned that by Friday afternoon until night, she developed a sore throat and a bit of a cough (she doesn't know if the coughing was because her throat was sore or it's other way around). She also mentioned that she doesn't have a fever and still have her sense of taste and smell. Outcome of the events were unknown. Information on the Lot/Batch has been requested.

"left lower leg paresthesia in the left lateral sural nerve dermatome / felt like a tingling sensation localized to dermatome lateral to shin; felt like a burning sensation localized to dermatome lateral to shin; This is a spontaneous report from a contactable consumer, the patient. A 33-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: E51685), via an unspecified route of administration on 17Dec2020 05:45 (at the age of 33-years old) as a single dose in the left arm for COVID-19 immunization. Medical history included penicillin allergy from an unknown date and unknown if ongoing. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications included an unspecified multivitamin received within 2 weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the vaccination. The patient experienced left lower leg paresthesia in the left lateral sural nerve dermatome which felt like a tingling/burning sensation localized to dermatome lateral to shin on 18Dec2020 08:00 (reported as about 12 hours after injection). There was no loss of sensory, ""temp"" or pain detected, as reported. The patient did not receive any treatment for the events. Since the vaccination, the patient had not been tested for COVID-19. The clinical outcomes of the lower leg paresthesia in the left lateral sural nerve dermatome which felt like a tingling/burning sensation localized to dermatome lateral to shin was not resolved."

sore and tenderness on left arm; soreness on left arm; slight HA (headache) in the morning; This is a spontaneous report from a contactable consumer (patient). A 49-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; lot number: EH9899), via an unspecified route of administration on the left arm on 15Dec2020 09:45 at a single dose for immunization. Medical history included iron deficiency and was diagnosed with COVID-19 on an unspecified date; no known allergies. Concomitant medications included ascorbic acid (VIT C), tocopherol (VIT. E), cetirizine hydrochloride (ALERCET). The patient did not have other vaccinations within four weeks prior to the COVID vaccine. The patient experienced slight HA (headache) in the morning of day 0 (15Dec2020), occasional HA and increased soreness on left arm on day 1 (16Dec2020), still sore and experienced tenderness on left arm on days 2 to 4 but was mild at the time of report. The events were reported as non-serious. The patient took Tylenol and applied heating pad on her left arm. She was diagnosed with COVID prior to the vaccination and has not been tested for COVID post-vaccination. Outcome of the events was recovering.

Mild grade fever (99.8); Unable to leave bed for 24 hrs due to extreme fatigue and muscle soreness; Unable to leave bed for 24 hrs due to extreme fatigue and muscle soreness; Unable to leave bed for 24 hrs due to extreme fatigue and muscle soreness; This is a spontaneous report from a non-contactable healthcare professional. A 32-year-old female patient received the first dose of BNT162B2 (Pfizer-

BioNTech COVID-19 mRNA vaccine; Lot Number: EH 9899), intramuscularly in the right arm on an unspecified date (at the age of 32-years-old) as a single dose for COVID-19 vaccination. The patient did not receive any other vaccines within 4 weeks prior to the vaccination. Medical history was reported as none. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medication included ethinylestradiol, etonogestrel (NUVARING) for an unknown indication from an unknown date and unknown if ongoing. The patient did not have any allergies to medications, food, or other products. On 04Dec2020 at 09:00 (as reported), the patient experienced a mild grade fever (99.8), was unable to leave the bed for 24 hours due to extreme fatigue and muscle soreness. The patient was not treated for the mild grade fever (99.8), was unable to leave the bed for 24 hours due to extreme fatigue and muscle soreness. Since the vaccination, the patient had not been tested for COVID-19. The clinical outcome of the mild grade fever (99.8), was unable to leave the bed for 24 hours due to extreme fatigue and muscle soreness was resolved on 06Dec2020 at 9:00 (reported as resolved in 48 hours). No follow-up attempts are possible. No further information is expected.

Numbness and pain in left jaw line; Numbness and pain in left jaw line; This is a spontaneous report from a contactable consumer (patient). A 41-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EH9899), via an unspecified route of administration at the left arm on 18Dec2020 at 11:15 AM at single dose for COVID-19 immunization. The patient was not pregnant at the time of vaccination. The patient was not diagnosed with COVID-19 prior to vaccination, and the patient has not been tested for COVID-19 since the vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient had no medical history and no known allergies (no allergies to medications, food, or other products). Concomitant medication (other medications in two weeks) included cephalexin (CEPHALEXIN) stopped 1 week prior, and fish oil. The patient experienced numbness and pain in left jaw line on 18Dec2020 at 11:45 AM. The patient did not receive treatment for these events. The clinical outcome of the events was not recovered. The report was reported as non-serious.

Fever of 101 for hours; chills; shakes; severe joint pain; body aches; dizziness; This is a spontaneous report from a non-contactable consumer (patient). A 45-year-old female patient received the first dose of BNT162B2 (also reported as Pfizer-BioNTech COVID-19 mRNA vaccine, lot no: ELO140, expiry date not reported), via an unspecified route of administration on the right arm on 18Dec2020 at 10:45 at a single dose in the hospital for immunization. Medical history included having had COVID-19 prior to vaccination on an unspecified date. The patient had no known allergies. Concomitant medication included bifidobacterium lactis, lactobacillus acidophilus (PRO-IMMUNE) powder (as reported). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced fever of 101 for hours, chills and shakes, severe joint pain, body aches, dizziness all on 18Dec2020 at 22:45. Treatment was not received for the reported events. The outcome of the events was recovering. Since the vaccination the patient has not been tested for COVID-19.

Headache; neck and back ache; neck and back ache; injection arm very tender; Nausea; fatigue; This is a spontaneous report from a contactable consumer. A 49-year-old female patient started to receive BNT162B2 (Solution for injection, lot number and expiry date was unknown), via an unspecified route of

administration on 18Dec2020 10:00 at single dose in the left arm for immunization. Medical history included migraines and COVID-19 from an unknown date. Concomitant medication included acetylsalicylic acid (ASPRIN), potassium, curcuma longa (TURMERIC [CURCUMA LONGA]), ospemifene (OSPHENA) and black cohosh [cimicifuga racemosa] (BLACK COHOSH [CIMICIFUGA RACEMOSA]). The patient previously took penicillin and experienced allergies. On 18Dec2020 19:00, the patient experienced headache, neck and back ache, injection arm very tender, nausea and fatigue. No treatment received all the events. Since the vaccination, the patient has not been tested for COVID-19. The outcome of the events was recovering. The following information on the batch number has been requested.

had a high level of anxiety with a heart rate of approximately 100-120 bpm for about 1-2 hours; had a tingling feeling all over during this time; This is a spontaneous report from a contactable consumer. A 31-year-old male patient started to receive bnt162b2 (BNT162B2), via an unspecified route of administration from 17Dec2020 08:15 to 17Dec2020 08:15 at a single dose for COVID-19 vaccine. Medical history included intermittent anxiety. There were no concomitant medications. It was reported by the patient that the night of vaccination he woke up from sleep around 0200 and had a high level of anxiety with a heart rate of approximately 100-120 bpm for about 1-2 hours. He also had a tingling feeling all over during this time. The outcome of the events was recovering. Information about Lot/batch no has been requested.

transient (1-2 minutes) flushing; chest tightness (on the same side as vaccine); lightheadedness; This is a spontaneous report from a contactable consumer (the patient). A 33-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, lot number EK5730), via an unspecified route of administration in the left arm on 18Dec2020 at 08:45 (at the age of 33-years-old) as a single dose for COVID-19 immunization. Medical history included Hodgkin's lymphoma from Nov2019 (treated for cure Nov2019 through Feb2020). The patient did not have any allergies to medications, food, or other products. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient had received unspecified concomitant medications within 2 weeks of the vaccination. The patient did not receive any other vaccine within 4 weeks prior to the vaccine. On 18Dec2020 at 08:45 (as reported), the patient stated that 5-10 minutes after vaccine administration, she experienced transient (1-2 minutes) flushing, chest tightness (on the same side as vaccine), and lightheadedness. The patient was treated for flushing, chest tightness, and lightheadedness with BP measurements (as reported) and oral hydration. The clinical outcome of flushing was recovered on 18Dec2020, while chest tightness and lightheadedness were recovered in Dec2020. It was also reported that since the vaccination, the patient had not been tested for COVID-19.

Chills; shakes; headache; nausea; This is a spontaneous report from a contactable consumer (patient). A 37-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), via an unspecified route of administration on left arm on 18Dec2020 at 11:45 (dose number: 1) as a single dose for COVID-19 immunization. The patient medical history included anxiety. Concomitant medication were not reported. The patient was not pregnant at the time of vaccination and the facility where the most recent COVID-19 vaccine was administered was a hospital. The patient

did not receive any other vaccines within four weeks prior to the vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient previously took clindamycin and had allergies. On 19Dec2020 01:30, the patient experienced chills, shakes, headache and nausea for 2 hours, 13 hours after administration (as reported). The patient did not receive any treatment for the events. The events were assessed as non-serious. The reported outcome of the events was recovering. Information on lot/batch number has been requested.

Fatigue 24 hrs after vaccination; Swelling and redness at injection site 36 hrs after vaccination; Swelling and redness at injection site 36 hrs after vaccination; This is a spontaneous report from a contactable consumer (patient). A 27-year-old female patient started to receive started to receive BNT162B2 (Solution for injection, lot number: Eh9899 and expiry date was unknown), via an unspecified route of administration on 17Dec2020 15:00 at single dose in the left arm for COVID-19 immunization. The patient was not pregnant at the time of vaccination. Medical history included allergies to sulfa drugs and diagnosed with COVID-19 prior to vaccination. The patient's concomitant medications were not reported. On 18Dec2020 18:30, the patient experienced fatigue 24 hrs after vaccination and swelling and redness at injection site 36 hrs after vaccination. No treatment received for all the events. The outcome of the events was unknown. The following information on the batch number has been requested.

shaking chills for at least 4 hours; nausea; fatigue; This is a spontaneous report from a non-contactable nurse. A 68-year-old female patient started to receive bnt162b2 (BNT162B2), via an unspecified route of administration from an unspecified date at a single dose unspecified dose for an unspecified indication. Medical history included covid-19 (Prior to vaccination). The patient's concomitant medications were not reported. It was reported that 24 hours after the first vaccine, the patient had shaking chills for at least 4 hours. She was wrapped in 2 heavy blankets and a heating pad. She also had nausea and fatigue. Symptoms gone the next day. The outcome of the events was recovered on an unspecified date. No follow-up attempts are possible. Information about lot/batch number cannot be obtained. No further information is expected.

Sore throat; This is a spontaneous report from a contactable Nurse (patient). A 21-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection) via an unspecified route of administration on 17Dec2020 06:00 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. No other vaccines received in four weeks prior to Covid-19 vaccine. No Covid-19 prior vaccination. It was unknown if patient was tested for Covid-19 post vaccination. The patient was not pregnant at the time of vaccination. The patient experienced sore throat on 18Dec2020 05:00. No treatment was received for the adverse event. The event was non-serious. The outcome of the event was recovered on unspecified date in Dec2020. Information on Lot/Batch number has been requested.

"Light headed; hypertension lasting approximately an hour/hour and a half; ""Mental fuzziness"" lasted until the headache took place.; ""Mental fuzziness"" lasted until the headache took place.; photo sensitivity; This is a spontaneous report from a contactable consumer. A 27-year-old female patient

started to receive BNT162B2 (Solution for injection, lot number and expiry date was unknown), via an unspecified route of administration on 18Dec2020 14:30 at single dose in the left arm for COVID-19 immunization. The patient was not diagnosed with COVID-19 prior to vaccination and since the vaccination, the patient has not been tested for COVID-19. The patient was not pregnant at the time of vaccination. There were no medical history. The patient has no known allergies. The patient's concomitant medications were not reported. On 18Dec2020 14:30, the patient experienced light headed, hypertension lasting approximately an hour/hour and a half, ''Mental fuzziness'' lasted until the headache took place and normal side effects accompanied such as a headache and photo sensitivity. No treatment received for all the events. The outcome of the events was recovered in Dec2020. The following information on the batch number has been requested."

"headache; This is a spontaneous report from a contactable nurse (patient) via Medical Information Team. A 31-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; lot number: EJ1685, expiry date: Mar2021), via an unspecified route of administration on 18Dec2020 at a single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient reported that she was experiencing a ""really super bad headache"" on the day of report (19Dec2020) after receiving the covid vaccine the day before (18Dec2020). She took Tylenol and wanted to know if she can take Advil. She was suffering from a terrible headache and did not know if she can take Advil and there was nobody that can tell her whether it was okay with the vaccine. Outcome of the event was unknown."

have had a metallic taste since then, it has dissipated slightly; This is a spontaneous report from a contactable health care professional (patient). A 37-year-old female patient received the first dose of BNT162B2 (also reported as Pfizer-BioNTech COVID-19 mRNA vaccine, lot no: EK5730, expiry date: 01Mar2021), intramuscular on the on the left deltoid on 17Dec2020 (reported as 'at about 12:40 PM') at 0.3 mL at a single dose for COVID-19 immunization and ipratropium bromide (manufacturer unknown, specified as non-Pfizer, lot no: 348501, expiry date: May2022), nasal from an unspecified date to an unspecified date, 2 sprays, in each nostril as needed for rhinitis. Medical history included seasonal allergy for which the patient receives allergy injections regularly but have not received one recently or within the last 14 days and ongoing rhinitis. Concomitant medication included fexofenadine hydrochloride (ALLEGRA) and fluticasone propionate (FLONASE [FLUTICASONE PROPIONATE]). The patient stated that she was a healthcare worker and received the vaccine at her workplace. She called as she had a question about a very benign symptom that she was wondering if it's related to the vaccine or if it's something separate. She developed a metallic taste in her mouth about 2 hours after getting the vaccine, it's slowly dissipating but it's still there. She said no one else said that they did have it and actually one other person who she works with said that they also had a slight thing (upon further clarification it was unspecified) but it's not in the list of expected symptoms so she just wanted to call and check. The patient did not receive any treatment for the event. She stated that she also used a nasal spray, Ipratropium Bromide Nasal Solution because she has rhinitis and she did use that and she never had a symptom or side effect with that because she uses it chronically but she did use that right before and noticed the taste develop so she doesn't know if there is a possible interaction between that and the vaccine. That morning she did 2 sprays in each nostril about 6 o'clock in the morning and then she

did 2 sprays in each nostril about 2:15 PM and got her vaccine at about 12:40 PM that day. The patient got blood test for serology antibodies on 04Dec2020 with unknown results. The outcome of the event was recovering.

sore arm; patient received BNT162B2/ breastfeeding a 14 month old; patient received BNT162B2/ breastfeeding a 14 month old; This is a spontaneous report from a contactable consumer (patient). This consumer reported information about mother and baby. This is the mother case. A 36-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), via an unspecified route of administration on left arm on 17Dec2020 07:30 (dose number: 1) as a single dose for COVID-19 immunization. The patient's medical history included uncomplicated vaginal delivery (14 month old has no diagnosis. Was born 41 +5. Mother and baby have no issues postpartum). The patient had no known drug allergies. Concomitant medication were not reported. The patient was not pregnant at the time of vaccination and the facility where the most recent COVID-19 vaccine was administered was a hospital. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient did not receive any other vaccines within four weeks prior to the vaccination. Since the vaccination, the patient had not been tested for COVID-19. The patient was breastfeeding a 14 month old. The patient was not having symptoms except for a sore arm on 19Dec2020 (12:00AM). The patient did not receive any treatment for the events. The event was assessed as non-serious. The outcome of the event was not recovered. Information on the Batch/Lot number has been requested.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020504610 baby case

Lightheadedness; This is a spontaneous report from a contactable pharmacist. A 52-year-old male patient started to receive bnt162b2 (BNT162B2, lot number EJ1685), intramuscular from 19Dec2020 10:45 to 19Dec2020 10:45 at a single dose for an unspecified indication. Medical history included hypertension. The patient's concomitant medications were not reported. The patient experienced lightheadedness on 19Dec2020 11:00 and took ondansetron. The outcome of the event was recovered on 19Dec2020.

having soreness to her arm at the injection site of the vaccine; This is a spontaneous report from a contactable healthcare professional (patient). A 26-year-old female patient received first dose of bnt162b2 (BNT162B2 lot number and expiry date were not reported), intramuscular on the left arm from an unspecified date at a single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient experienced having soreness to her arm at the injection site of the vaccine on an unspecified date. Outcome of the event was unknown. Information on the lot/batch number has been requested.

puffiness and itchiness around her upper eye/last night she had a puffing, her eyes were puffed; it was itchy and she experienced itchiness everywhere/itchiness around her upper eye; This is a spontaneous report from a contactable consumer (patient herself). A 33-year-old female patient received first dose of bnt162b2 (BNT162B2, lot number: EK5730), intramuscular on Dec2020 at single dose for COVID-19 immunization. The patient has no medical history and stated that she had no other medical conditions, stated that she was generally healthy. Concomitant medication included ibuprofen and paracetamol (TYLENOL). The patient received the bnt162b2 and she had a puffing, her eyes were puffed, the upper

eye and it was itchy and she experienced itchiness everywhere on an unspecified date in Dec2020. Patient mentioned that there was no rash or hives. She said she took Benadryl and it helped with the puffiness around the eyes, it did help with itchiness but she was still having some itchiness so she wanted to go just ahead and report that to our safety department. Patient clarified that Benadryl helped with the puffiness around her eyes but the itching part was still there, it (Benadryl) helped but not that much. Patient reported that she had a CBC recently and she got her antibodies checked few days before she got the vaccine. Patient reported that there were some mild generalized itchiness. It was just mild right now. Outcome of eyes were puffed was recovering while outcome of itchiness was not recovered.

fatigue; fever; body ache; chills; headache; injection site soreness and swelling; injection site soreness and swelling; This is a spontaneous report from a contactable consumer (the patient). A 22-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, lot number EJ1685), via an unspecified route of administration in the left arm on 18Dec2020 10:15 (at the age of 22-years-old) as a single dose for COVID-19 immunization. The patient had no medical history. The patient did not have any allergies to medications, food, or other products. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported. The patient did not receive any other vaccine within 4 weeks prior to the vaccine. On 18Dec2020 at 20:30, the patient experienced fatigue, fever, body ache, chills, headache, injection site soreness and swelling. The patient did not receive any treatment for the events. The clinical outcome of fatigue, fever, body ache, chills, headache, injection site soreness and swelling, was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19.

body ache; fever; headache; This is a spontaneous report from a contactable consumer reporting for herself. A 52-year-old female patient received bnt162b2 (BNT162B2, lot number and expiration date were not reported), via an unspecified route of administration on 18Dec2020 at a single dose for immunization. Medical history and concomitant medications were not reported. The patient stated that she took the covid vaccine the day before (18Dec2020) and was experiencing body ache, fever and headache on an unspecified date in Dec2020. The outcome of the events was unknown. Information on batch number has been requested.

Swelling of throat; lightheaded; right arm injection site arm pain; This is a spontaneous report from a contactable consumer. A 27-year-old female patient received the first dose of bnt162b2 (BNT162B2, lot number: EK5730 expiry date: unknown), via an unspecified route of administration on the right arm on 19Dec2020 09:30 at single dose for immunization. Medical history included cervical spine disc herniations. Concomitant medications included sulfamethoxazole and bisacodyl (DULCOLAX [BISACODYL]). The patient had no known allergies. The patient was not diagnosed with COVID-19 prior to vaccination. The patient has not been tested for COVID-19 since the vaccination. The patient did not receive any other vaccine within 4 weeks prior to the COVID vaccine. On 19Dec2020 10:00, the patient experienced Swelling of throat, needing to keep clearing my throat, lightheaded, right arm injection site arm pain. The event was considered as non-serious. The patient received BENADRYL as treatment for the events swelling of throat, lightheaded, right arm injection site arm pain. Outcome of the events swelling of throat, lightheaded, right arm injection site arm pain was not recovered.

Left jaw pain slightly radiating into ear. Pain level 4/10; Left jaw pain slightly radiating into ear. Pain level 4/10; This is a spontaneous report from a contactable consumer. A 57-year-old female patient received the first dose of bnt162b2 (BNT162B2, lot number: EK5730, expiration date was not reported), via an unspecified route of administration on the left arm on 18Dec2020 09:30 at single dose for immunisation. Medical history included controlled hypertension (HTN) and allergies to milk products. Concomitant medication included meloxicam (MOBIC), escitalopram oxalate (LEXAPRO) and irbesartan. The patient was not diagnosed with COVID-19 prior to vaccination. The patient did not receive any other vaccine within 4 weeks prior to the COVID vaccine. On 19Dec2020 at 07:00, the patient experienced left jaw pain slightly radiating into ear. Pain level 4/10. No treatment was given for the events. The patient has not been tested for COVID-19 since the vaccination. The patient has not recovered from the events.

swollen lymph node on left side reddened and painful throat (left part)

today she has redness around the site; This is a spontaneous report from a contactable consumer (patient). A female patient of an unspecified age received bnt162b2 (BNT162B2, lot number and expiration date not provided), via an unspecified route of administration on 18Dec2020 at a single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient took the Covid shot the day before (18Dec2020) and said it was ok, but on the day of the report, 19Dec2020, she has redness around the site. The patient wanted to know if she can put the ice pack around it, and also stated she should have not taken the shot. The outcome of the event was unknown. Information on the batch/lot number has been requested.

Heart rate 110; This is a spontaneous report from a contactable nurse. A 39-year-old female patient received bnt162b2 (BNT162B2 lot number and expiration date were not reported) intramuscular at the right arm first dose on 19Dec2020 09:00 at a single dose for immunization. The patient had no relevant medical history. The patient's concomitant medications were not reported. On 19Dec2020 11:00, the patient experienced heart rate 110. No treatment was received for the adverse event. The most recent COVID-19 vaccine was administered in a hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No other medication was received within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, has the patient has not been tested for COVID-19. No Allergies to medications, food, or other products. Outcome of the event was unknown.

Tattoo raised out of ski hours 6-14, forearm hot and red 24-36h; Tattoo raised out of ski hours 6-14, forearm hot and red 24-36h; bodywide itching 6-48h; This is a spontaneous report from a contactable physician reporting for herself. A 33-year-old female patient received first dose of bnt162b2 (BNT162B2, lot number: EK5730), intramuscular in the left arm (also reported as left deltoid) on 15Dec2020 15:15 at single dose for COVID-19 immunization. Medical history included asthma, environmental allergies, anxiety, and history of C. diff. The patient had known metal allergy (contact dermatitis). Concomitant medication included vortioxetine hydrobromide (TRINTELLIX), amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL), ethinylestradiol, norethisterone (ALYACEN), all given on an unspecified date in 2020. On 15Dec2020 at 18:00, the patient reported that her tattoo raised out of ski hours 6-14, forearm hot and red 24-36h, bodywide itching 6-

48h. The events were reported as non-serious. The patient has COVID prior to vaccination and no COVID test post vaccination. The patient recovered from the events without treatment.

Aches; mild nausea; chills; fever up to 100.8 for 6-8 hours; Headache; fatigue; This is spontaneous report from a contactable consumer. A 63-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via intramuscular (left arm), on 16Dec2020 at single dose for COVID-19 immunisation. Medical history included type 1 diabetes mellitus, hypothyroidism, Raynaud's phenomenon, drug hypersensitivity (to sulfadiazine, erythromycin). The patient experienced aches on 16Dec2020 18:00, mild nausea on 16Dec2020 18:00, chills on 16Dec2020 18:00, fever up to 100.8 for 6-8 hours on 16Dec2020 18:00, headache on 16Dec2020 18:00, fatigue on 16Dec2020 18:00. The action taken in response to the events for BNT162B2 was not applicable. The outcome of the events was recovered in Dec2020 Information about lot/batch number has been requested.

nausea; This is a spontaneous report from a contactable consumer (patient). A 41-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date in Dec2020 at SINGLE DOSE for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received almost exactly the covid 19 vaccine 48 hours before 19Dec2020 and now experiencing nausea in Dec2020. The patient wanted to know the time to onset of the side effects. The action taken in response to the event for BNT162B2 was not applicable. The outcome of the event was unknown. Information on the lot/batch number has been requested.

Headache all day; This is a spontaneous report from a non-contactable physician. A 38-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) intramuscularly in right arm on 19Dec2020 07:30 at single dose for COVID-19 immunization. Medical history was none. There was no other vaccine received in four weeks prior to the COVID vaccine, no other medications received in two weeks. The patient experienced headache all day on 19Dec2020 08:30 AM. No treatment received. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Facility type vaccine was hospital. The outcome of event was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

extreme diaphoresis; Diarrhea; shaking chills; shaking chills; visual disturbances; This is a spontaneous report from a contactable nurse, the patient. A 47-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE) solution for injection via an unspecified route of administration in the left arm on 10Dec2020 at 23:30 (at the age of 47-years-old) as a single dose for COVID-19 vaccination. The patient was not pregnant at the time of vaccination. Medical history and concomitant medications were not reported. The patient did not receive any other vaccine within 4 weeks prior to the vaccine. Prior to the vaccination, the patient was not diagnosed with COVID-19. On 11Dec2020 at 00:15, the patient experienced extreme diaphoresis, diarrhea, shaking chills and visual disturbances. No treatment was provided for the events extreme diaphoresis, diarrhea, shaking chills and visual disturbances. The outcome of the events extreme diaphoresis, diarrhea, shaking chills and visual disturbances was recovered in Dec2020. Since the vaccination, the patient had a Nasal Swab, Covid test

name post vaccination on 11Dec2020 was negative. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

received vaccine @ 725am noted itchy ears back & (R) wrist @744 am denied SOB, difficulty swallowing, nausea rash, hives given Loratadine 10mg @ 7:50 VS BP 110/70 HR 72 O2 sat 98% RA 7:59 reported symptoms resolved

"almost unmanageable amount of jaw pain/hurting/terrible pain/jaw is sore/the worst pain ever; almost unmanageable amount of jaw pain/hurting/terrible pain/jaw is sore/the worst pain ever; Jaw is sore and swollen; This is a spontaneous report from two contactable other healthcare professionals (HCP, one of them is also the patient). A 37-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: PF12N EJ1685), intramuscular on 18Dec2020 13:00 at single dose for COVID-19 immunization at a hospital. The patient's medical history included root canal done on 07Dec2020, which was healing nicely with some jaw pain managed effectively with ibuprofen. Sore, easily manageable. Resolving nicely. No known drug allergy. No COVID prior vaccination, the patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No COVID tested post this vacccination. The patient's concomitant medications within 2 weeks of vaccination included ibuprofen for jaw pain/Sore. No other vaccines in four weeks. It was reported that the patient had an almost unmanageable amount of jaw pain in the ""12ish"" hours after getting the first dose of vaccine. The patient received the vaccine around 1300 on 18Dec and within an hour (at 1400) it started hurting terribly. So much that he wanted to pull the tooth out with pliars. Terrible, terrible pain all through the night that would not abate at all with ibuprofen and ""tylenol number 3"". By morning, the patient started feeling better. Jaw was sore and swollen. Ibuprofen started working again. It seemed to be resolving. The patient saw the dentist urgently that morning and the dentist didn't see anything amiss in the gum line, and had the thought that some systemic response/inflammation in response to the vaccine contributed to this. The patient commented it to be literally among the worst pain he had ever experienced in his life. The outcome of the events was recovered in Dec2020."

chill; temp at 1200 was 100.4 and at 1830 101.7; shortness of breath; body aches; headache; This is a spontaneous report from a contactable consumer, the patient. A 59-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE) solution for injection via an unspecified route of administration in the right arm on 18Dec2020 at 16:30 (at the age of 59-years-old) as a single dose for COVID-19 vaccination. The patient was not pregnant at the time of vaccination. Medical history and concomitant medications were not reported. The patient previously took cefadroxil (DURICEF) and experienced allergies. The patient did not receive any other vaccine within 4 weeks prior to the vaccine. Prior to the vaccination, the patient was diagnosed with COVID-19 in Apr2020. On 19Dec2020, the patient experienced chill, temp at 1200 was 100.4 and at 1830 101.7, shortness of breath, body aches and headache. No treatment was provided for the events chill, temp at 1200 was 100.4 and at 1830 101.7, shortness of breath, body aches and headache. The outcome of the events chill, temp at 1200 was 100.4 and at 1830 101.7, shortness of breath, body aches and headache was not recovered. Since the vaccination, the patient has not been tested for COVID-19. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

heart began to pound; a warm tingling through my abdomen and chest with flushing to my face; a warm tingling through my abdomen and chest with flushing to my face; a warm tingling through my abdomen and chest with flushing to my face; a metallic sort of taste in my mouth; This is a spontaneous report from a contactable consumer (patient). A 32-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), via an unspecified route of administration on left arm on 18Dec2020 at 10:00 AM at single dose for COVID-19 immunisation at hospital. Medical history included history of svt (supraventricular tachycardia), patient had no allergies to medications, food, or any other products. Concomitant medication included escitalopram oxalate (LEXAPRO), colecalciferol (VITAMIN D) and levocetirizine dihydrochloride (XYZAL). About five minutes after vaccination on 18Dec2020, the patient experienced a warm tingling through her abdomen and chest with flushing to her face, a metallic sort of taste in her mouth and her heart began to pound. The tingling subsided after a couple minutes and heart rate returned to normal over the next 10 minutes. The patient was monitored by the clinic nurses for another 30 minutes before released. The patient felt warm for the rest of the day but no further effects. Prior to vaccination, the patient was not diagnosed with COVID-19; Since the vaccination, the patient hadn't been tested for COVID-19. The patient did not receive any treatment for events. The outcome of events was recovered on 18Dec2020.

I got a strong metallic taste; About 30 seconds later my entire body started to tingle and I couldn't feel my hands or feet; My heart started to pound out of my chest; headache; I got an extreme hot flash and all my coworkers said I looked bright red and glassy eyed; became drenched in sweat and had to sit down for about 15 minutes with cold packs; she looked bright red and glassy eyed; This is a spontaneous report from a contactable consumer (patient). A 36-year-old female patient received her first dose of bnt162b2 (PFIZER COVID-19 VACCINE, Lot Number: EK5730), via an unspecified route of administration on 18Dec2020 at 14:15 on her left arm at single dose for COVID-19 immunization. Medical history included hypothyroid- well controlled with levothyroxine and known allergies: Penicillin, sulfa, cephalosporin. Concomitant medications in two weeks included levothyroxine, multivitamin, ascorbic acid (VIT C), colecalciferol (VIT D3). It was reported that on 18Dec2020 at 14:15, the injection was painless and she felt great. About 30 seconds later she entire body started to tingle and she couldn't feel her hands or feet. Her heart started to pound out of her chest. She got a strong metallic taste. This subsided after 1-2 minutes. She went back to feeling good. Then about 15 minutes later, on 18Dec2020, the patient got an extreme hot flash and all her coworkers said she looked bright red and glassy eyed. She became drenched in sweat and had to sit down for about 15 minutes with cold packs. Then it subsided again. She had a few more hot flashes and headache the remainder of the evening, but felt generally pretty good ever since. No treatment was received for the adverse event, prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient had not been tested for COVID-19. The outcome of the events was recovered in Dec2020.

erythema and swelling on injection arm below the actual injection site; erythema and swelling on injection arm below the actual injection site; Face and neck rash; This is a spontaneous report from a contactable physician. This physician reported for herself. A 42-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration on 16Dec2020 18:00 at single dose for covid-19 immunization. It was the first dose. The

COVID-19 vaccine was administered at Hospital. The patient's vaccine location was left arm. Medical history included hypertension (HTN), and mild asthma, the patient's known allergies included Black pepper, hydroxychloroquine sulfate (PLAQUENIL), hydrochlorothiazide (HCTZ), almond extract. Concomitant medications included Losartan, spironolactone, progesterone, metformin. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced face and neck rash, erythema and swelling on injection arm below the actual injection site, adverse event start date was provided as 16Dec2020 06:00 PM. The patient Took fexofenadine 360mg for facial rash. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not tested for COVID-19. The outcome of the events was Recovering.

"Numbness at the tip of her tongue; This is a spontaneous report from a contactable nurse (patient). A 39-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 19Dec2020 at time of 15:40 at single dose for COVID-19 immunization. Medical history included Irregular heart beat. Concomitant medication included potassium, magnesium; both for irregular heart beat. The patient just had a baby 9 weeks ago, and was breastfeeding. She also mentioned that her daughter just had her 1st round of her vaccines (other vaccines: rota, mmr vaccines, etc.) last week. She wanted to know if it's still okay to nurse her daughter considering that she just had her Covid 19 vaccine this afternoon on 19Dec2020. The patient also wanted to know what was the risk or potential complication of passing her milk, which contained the Covid 19 vaccine, to her daughter. The patient also wanted to know why it was contraindicated to take the Covid 19 vaccine if she has taken other vaccines within the 2 weeks timeframe before getting the Covid 19 vaccine. The patient experienced numbness at the tip of her tongue. Her tongue was numb, just the tip. The patient stated, ""I have two things I got my vaccine today at 15:40 for now it is just passing 18:00 anyway. That's all my tongue is numb, no other symptom, nor I am feel tiring. I don't have numbness in my hand or feet anything but there is my tongue is numb."" Nurse stated, ""Just a tip (of tongue)"". The patient stated, ""I do have another questions. I had a baby 9 weeks ago so one of the question is asked is that I had not any vaccine over the past two weeks and I have not well my daughter has, she just got her a week ago. So am I okay to breastfeeding?"" The outcome of event was unknown. Information on the lot/batch number has been requested."

scratchy throat, stiff neck ,

Headache, dizziness, fatigue; Headache, dizziness, fatigue; Headache, dizziness, fatigue; This is a spontaneous report from a contactable physician. A 50-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE): EJ1685, via an unspecified route of administration, in left arm on 18Dec2020 at 1845 (at the age of 50-years-old) as a single dose for COVID-19 immunization. Medical history included asthma and an allergy to penicillin. Concomitant medications were not reported. The patient was not pregnant at the time of vaccination. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced headache, dizziness, fatigue on 19Dec2020 at 19:00. The patient was not treated for the events. The outcome of the events was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19.

Within 2 minutes of injection, I became tachycardic; shaky; a bit dizzy; This is a spontaneous report from a contactable consumer (patient). tenosynovitis L 2 finger, felt most on back of hand, worse with flexion, extension; This is a spontaneous report from a contactable physician. A 64-year-old male patient received first dose of bnt162b2, intramuscularly at site of left arm at 09:15 on 19Dec2020 at single dose for COVID-19 immunization. Medical history included allergies: bananas, kiwi, avocado, latex. Concomitant medication included atorvastatin in Dec2020. The patient experienced tenosynovitis l 2 finger, felt most on back of hand, worse with flexion, extension at 13:00 on 19Dec2020. The patient took advil 600 TID as treatment received for event. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of event was recovering. Information on the Lot/Batch number has been requested.

Swollen Lymph Nodes; This is a spontaneous report from a contactable nurse (patient himself). A 39-year-old male patient received first dose of bnt162b2, intramuscularly at site of left arm at 12:00 on 17Dec2020 at single dose for COVID-19 immunization. Medical history included COVID-19. There were no concomitant medications. The patient experienced swollen lymph nodes at 09:00 on 19Dec2020. No treatment received for the adverse event. Prior to vaccination, patient diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of event was recovering. Information on the lot/batch number has been requested.

Fever; Chills; muscle aches; Fatigue; Joint pain; nausea; vomiting; This is a spontaneous report from a contactable nurse (patient herself). A 33-year-old female patient (no pregnancy) received first dose of bnt162b2, intramuscularly at site of left arm at 10:00 on 18Dec2020 at single dose for COVID-19 immunization. Medical history reported none. Concomitant medication included iron, cyanocobalamin, pyridoxine hydrochloride, thiamine hydrochloride (VITAMIN B 1-6-12) (reported as vitamin B supplement) and birth control pills. The patient experienced fever, chills, muscle aches, fatigue, joint pain, nausea and vomiting at 21:00 on 18Dec2020. The outcome of events was recovering. Information on Lot/Batch number has been requested.

Patient experienced sore arm following COVID vaccine; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age and gender received bnt162b2, via an unspecified route of administration in 2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced sore arm following COVID

vaccine in 2020. The outcome of event was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

fever; body aches; headache; sharp pain in my left arm; limited in mobility to bed; This is a spontaneous report from a contactable consumer reporting for herself. A 21-years-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE Lot Number: EH9899), via an unspecified route of administration in the left arm on 18Dec2020 13:45 at single dose for covid-19 immunisation. Medical history included asthma, factor v deficiency, covid-19 and allergy to bee venom. The patient was tested positive for COVID on 10Nov2020 and was asymptomatic. Concomitant medication included benzathine benzylpenicillin (DEPO PEN). On 18Dec2020 at 23:00 (the night following the vaccine) the patient woke with a fever, body aches, headache, and a sharp pain in her left arm. She was limited in mobility to bed. these symptoms continued throughout the next day. The patient took ibuprofen but that had no effect. Diphenhydramine hydrochloride; paracetamol (TYLENOL PM) was able to reduce her fever on the second night so that she was able to sleep. Most of her symptoms started to clear up by 20Dec2020. The outcome of the events was recovering.

fever/Her body is very hot (99.8F); This is a spontaneous report from a contactable consumer. A female patient (mother of the reporter) of an unspecified age receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient woke up with fever on 19Dec2020 with outcome of unknown. Her body was very hot. The temperature was 99.8F. Information about lot/batch number has been requested.

injection site pain; Feeling more tired than usual the day off and after; headache; This is a spontaneous report from a contactable consumer. A patient of an unspecified age and gender (reported as the front-line physician) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/lot number: unknown), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was reported that the patient got COVID-19 vaccine and reported some injection site pain, feeling more tired than usual the day off and after. The patient also mentioned having a headache on an unspecified date. The outcome of events was unknown. No follow-up attempts are possible. No further information is expected.

Itching hands, feet, to arms, legs, scalp, inside ears, Benadryl 25 mg Qhs

"1245: Patient vitals taken, BP 169/122, HR107, 02 SAT 98%, Temp 98.4. Patient advised he no longer has the headache but still feels flushed . 1257: vitals taken again BP 167/122, HR 101, O2 SAT 98%. Patient also advised he was having GI upset (diarrhea). Dr. monitoring patient with this RN, aware of patient vitals, Allegra 80mg PO given at 1300 by CNO per protocol. 1315: BP 172/116, HR 108, O2SAT 98%. Dr. has advised patient to log BP's at home and that he may have underlying hypertension. Dr. has advised patient that he will be called for a follow-up appointment tomorrow with a physician. 1326: BP 174/104, HR 103, O2 sat 99%. Patient states he is now felling back to normal, denied headache and flushing at this time. Dr. had given the patient clearance to return to work at this time. Advised patient

that if he starts to have any s/s again to go to Urgent Care or ER. RN will follow-up with Caregiver. 1537: Spoke to patient states he currently had a mild headache and is fatigued. States he left work an hour early and is going to go home and rest. 1547: Spoke with Dr., MD advised for Caregiver to be seen at Urgent Care today for follow-up. Patient states he feels ok to drive and will make his way to Urgent Care now. 1653: Patient called RN back, states he is feeling better and declines going to urgent care at this time. He advised his headache and fatigue is resolved, stating ""I only have mild soreness at injection site."" Patient states he will go to Urgent Care tomorrow for a follow-up. RN will follow-up with Caregiver tomorrow."

Immediate pain in right arm with administration of vaccine. 30 mins after administration noticed shooting pain in to elbow. Shooting pain has continued through today. Also reports palm sized hardness at injection site.

Approximately 35 minutes after patient received the vaccine, she noted redness around her chest and neck, goin up to her face and both ears. Ears were swollen. She was transferred to the ED for evaluation, where it was noted that she had redness of her throat and chest with slight swelling of her lips. In the ED, she was given prednisone 40mg PO and famotidine 40mg PO. She was observed and discharged after ~90 minutes.

Mild headache, mild fatigue, dry non productive cough, soreness in injection site, and 100.6 ¦F temperature.

chills; pain at the injection site; This is a spontaneous report from a contactable consumer, the patient. A female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration on 17Dec2020 in the as a single dose for COVID-19 vaccination. The patient medical history and concomitant medications were not reported. On Dec2020 the patient experienced chills and pain at the injection site. The clinical outcome of the chills and pain at injection site was unknown. Information regarding lot number has been requested.

12 hours after receiving vaccine patient experienced pain in right arm, headache, fever (did not have working thermometer to check her temperature), chills and hallucinations. Symptoms persisted for 36 hours. She did not report symptoms until they had resolved.

Tingling in lips and throat, sensation of swelling in lips, not visible, that started 25 min. after the vaccination and lasted about 2 min.

feeling similar to a slight hangover; This is a spontaneous report from a contactable consumer and a non-contactable consumer. These two consumers reported for a female patient of an unspecified age who received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration on 17Dec2020 as a single dose for COVID-19 vaccination. The patient's medical history and concomitant medications were not reported. The patient experienced feeling similar to a slight hangover on 18Dec2020. The clinical outcome of feeling similar to a slight hangover was unknown. The lot number for the vaccine, VACCINE BNT162B2, was not provided and will be requested during follow up.

Lightheadedness, blurry vision, dizziness, chest tightness, nausea, red splotchy rash Pt was treated with benadryl and pepcid by mouth and Solumedrol IM. Pt's symptoms lasted 90 minutes.

Sore arm; Mild fever; Flushing; This is a spontaneous report from a non-contactable Other-HCP via Pfizer sales representative. A patient of unspecified age and gender received BNT162B2 (Pfizer-BioNTech COVID-19 vaccine) via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was unknown whether the patient received any other vaccine within 4 weeks prior to the vaccine. On an unspecified date, the patient experienced sore arm, mild fever and flushing after use of the product. Clinical outcome of the sore arm, mild fever and flushing was unknown. No follow-up attempts are possible. Information about batch number cannot be obtained.

Patient started experiencing dizziness, flushing and rash. Vital signs obtained at 10:19, patient was feeling better and less dizzy, slight HA, swallowing fine. BP 166/57; HR 79; Temp 99.4. At 10:20 temp was 99.7. 650 mg of APAP given po at 10:22. At 10:30, patient c/o tension across shoulders, no c/o pain or pressure. At 10:32 dizziness improving with BP 167/63; O2 sats at 100%; HR 70, Temp 99.3. Benadryl 25 mg po given at 10:25. 10:47 O2 sats 100%; HR 72; BP 152/64.

EYE AND THROAT SWELLING

flushing of face; chest arms with slight red rash slight itch; chest arms with slight red rash slight itch; This is a spontaneous report from a contactable consumer (patient) via Pfizer Sales Representative. A female patient of unspecified age (age:33, units: unknown) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 19:30 at single dose for COVID-19 immunization. The relevant medical history included idiopathic urticaria. Concomitant medications were not reported. After administration of vaccine, the patient experienced flushing of face, chest arms with slight red rash, slight itch in Dec2020. Events took place after use of product. She was given Benadryl and held in Emerge-department for 90 minutes until symptoms were better. The outcome of the events was recovering. Information about Lot/Batch number has been requested.

aches; This is a spontaneous report from contactable nurse via Pfizer Sales Representative. A 53-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), the first dose via an unspecified route of administration on an unspecified date at single dose for immunization. The patient's medical history and concomitant medications were not reported. One day after receiving the first dose of the COVID vaccine the patient experienced aches. Outcome of event was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Severe dizziness and nausea 3 days after vaccine with fatigue for approximately 24 hours

Pfizer-BioNTech COVID-19 Vaccine EUA metallic taste in mouth, tingling in hand

Reported arm soreness and headache after being administered the COVID 19 vaccine; Reported arm soreness and headache after being administered the COVID 19 vaccine; This is a spontaneous report from a non-contactable Physician via Pfizer sales representative. A patient of unspecified age and

gender received BNT162B2 (Pfizer-BioNTech COVID-19 vaccine) via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was unknown whether the patient received any other vaccine within 4 weeks prior to the vaccine. On an unspecified date, the patient experienced arm soreness and headache after being administered the vaccine. Clinical outcome of the arm soreness and headache was unknown. No follow-up attempts are possible. Information about batch number cannot be obtained.

I was tachycardic and hypertensive.

Metallic taste in mouth, started shortly after vaccine administration (during 15 min waiting time after administration). Persisted for approx 24 hours.

metallic taste; This is a spontaneous report from a contactable nurse. This nurse reported similar events for two patients. This is the first of two reports. A patient of unspecified age and gender received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration, in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced metallic taste in Dec2020.

The clinical outcome of metallic taste was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020504716 same reporter/drug/event, different patient

Severe headache and fever up to 100.4 no treatment, resolved on own in a few hours

at 7 minutes after vaccine administered, reported feeling shaky and lips tingly, anxiety. Did not immediately notify monitoring staff thinking she was anxious, by 10 minutes after started to experience some coughs and felt voice changed, Epinephrine administered via EpiPen at 13 minutes post vaccination with immediate relief. No visible hives or swelling.

metallic taste; This is a spontaneous report from a contactable nurse. This nurse reported similar events for two patients. This is the second of two reports. A patient of unspecified age and gender received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration, in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced metallic taste in Dec2020. The clinical outcome of metallic taste was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020504715 same reporter/drug/event, different patient

MODERATE TO SEVERE PAIN ON INJECTION SITE WITH REDNESS AND MODERATE SWELLING. PAIN INCREASED WITH ELEVATION OF EXTREMITY. COUGH STARTED ON 12/22/2020. MILD DYSPEPSIA.

chills, and cold , pain to injection site

increased left upper arm soreness; mild injection site pain; This is a spontaneous report from a non-contactable consumer. A 51-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 15:30 at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient developed mild injection site pain that evening on 18Dec2020 and reported as increased left upper arm soreness on morning no limitation in movement on 19Dec2020. No other local/systemic events. Event took place after use of product. The outcome of the events was unknown. No follow-up attempts are possible. No further information is expected.

Starting the evening of the 5th day after receiving the vaccine I noticed a sore, irritated throat. By the 7th day it was a more severe sore throat, runny nose, violent sneezes and the beginning of a deep painful cough. No fevers have been noted to date, with the highest oral temperature of 98.6F on the 7th day. I called the employee hotline, had a virtual visit with a Dr and took the drive up COVID test around 11:00 am on 12/23/20. I am in self quarantine currently awaiting results of the COVID test.

vomiting a lot; This is a spontaneous report from a Pfizer sponsored program . A non-contactable consumer (patient's partner) reported that a male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in Dec2020 at single dose for covid-19 immunisation. The patient's medical history and concomitant medications were not

reported. Caller's partner received the vaccine yesterday morning and drank a lot of alcohol in the evening. In Dec2020, her partner (patient) was vomiting a lot. She was worried if this was due to the vaccine and wanted to know what else could happen. Outcome of event was unknown. No follow-up attempts are needed. Information about lot/batch number cannot be obtained.

Slight tingling/numbness in cheek and upper jaw, lasted for 45 minutes. No medication taken.

Moderna COVID-19 Vaccine EUA pain in injection site, fatigue, sneezing, runny nose

Nausea; have really bad runny nose; have really bad stuffy nose; I had a fever; I got flush rash, itchy rash kind of all over my body; I got flush rash, itchy rash kind of all over my body; Headache; This is a spontaneous report from a contactable Nurse (patient). A 32-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The relevant medical history and concomitant medications were not reported. The patient stated that she got the first round of COVID vaccine the day prior the report and she was told to report her symptoms. She had a fever and got flush rash, itchy rash kind of all over her body and a headache on 18Dec2020. She took Tylenol Benadryl, it had helped with symptoms. At the time of the report morning she woke up with headache and she had really bad runny nose and stuffy nose and nausea on 19Dec2020. The outcome of the events was unknown. Information on lot/batch number has been requested.

After 15 min patient had tingling in her left arm all the way down to her hand, then started to travel to left side of face. 5 min later tingling started to travel to her left leg. Pulse ox- 96% HR 57. 1251- ED lead RN was then contacted to evaluate patient in the ED.

Nauseous; This is a spontaneous report from a contactable consumer (patient). A patient of unknown age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), at an unspecified dose via an unspecified route of administration, on 19Dec2020 at single dose for COVID-19 immunisation. Medical history and concomitant medications were unknown. The patient reported she got the vaccine yesterday (19Dec2020) and she is really nauseous right now (Dec2020). It was unknown if a treatment was received. Outcome was unknown. Information for Lot/Batch number has been requested.

In the evening, the day I got the vaccine, I started feeling body aches all over. The arm that got the vaccine hurt the most, as to be expected, and there is a knot in the muscle where I got the injection. I have felt pain all over since then. It has not been touched by naproxen sodium. A cold shower gave temporary relief.

Patient complained of a rush of feeling very hot. Patient was offered an ice pack for the back of her neck and was monitored until she felt better. Returned home following observation period.

My upper lip swell up, it is swollen, it is all swollen; This is a spontaneous report from a contactable consumer (patient). A 38-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899) first dose on 16Dec2020 around 3 o'clock in the afternoon intramuscularly in left arm at single dose for COVID-19 immunization. Co-suspect product included

mepyramine maleate, pamabrom, paracetamol (PAMPRIN) with unspecified date and dose for cramp. Medical history was none. Concomitant medication included sertraline. Patient took it on Wednesday (16Dec2020) around 3 O clock in the afternoon and then last night (18Dec2020) her upper lip of mouth swell up, it is swollen, it is all swollen. Patient worked in a hospital and they started the vaccination program for the employees and of course she wanted to take the shot and then she went in and took the shot. It was the first dose. Consumer stated she was completely healthy. Consumer further added last night she did take something for cramp it's called Pamprin, it's for, like when you have your period and you have like cramping, headache, back ache all of that, it's over the counter. For treatment for lip swell, Consumer stated No, just put ice on it. The action taken for mepyramine maleate, pamabrom, paracetamol was unknown. The outcome of the event was unknown.

Severe neck and spine pain. No neurological symptoms noted but severe pain. Feels muscle related.

Body pain and headache, second day.

Fever; Chills; My arm was killing me; Not feeling well; This is a spontaneous report from a contactable consumer (patient). A 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EH9899) at single dose via unknown route of administration on 18Dec2020 for COVID-19 immunization. Medical history and concomitant medications were reported none. Consumer stated, she got the COVID vaccine yesterday (18Dec2020). And she woke up and she had fever and chills, and like her arm was killing her and it was just like she was not feeling well. So she was just wondering how long this was supposed to last. Due date for next shot was 08Jan2021. About the Indication, Consumer stated, Juts to get it she guessed. Because they worked at the hospital, they were providing it to all of them. Consumer stated, the adverse events probably started like around 4 O' clock this morning (19Dec2020). Consumer stated, she took some Ibuprofen as treatment. The outcome of the events was unknown.

Patient waited the mandatory 15 minutes and felt fine. Left for a few minutes and then came back in to the vaccine clinic with symptoms of lips tingling and possible her tongue swelling. She was given 50mg of PO Benadryl (Diphenhydramine) and was taken to the emergency department. Patient was monitored for 4 hours in the emergency department with no additional symptoms noted. Spoke with patient this morning, was still having some tingling of the lips but was being controlled with Benadryl. No problems breathing or swallowing

Headache; This is a spontaneous report from a contactable consumer (Patient). A 49-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899, reported as BioNTech SARS-CoV-2) on right arm at single dose for covid-19 immunization. Medical history and concomitant drug were not reported. Patient stated a side effect to the vaccine (BioNTech SARS-CoV-2), she was just having the headache that won't go away. Treatment: consumer stated just took some over the counter Aspirin. Outcome of the event was not recovered. Follow-up attempts have been completed and no further information is expected

Body aches, mild headache sore throat,mild cough. Started 12/20/20

ache all over, back pain, burning in thigh, numbness in foot

Upper body hives, Low grade fever 99.6, dizziness, weakness, tiredness, upper body muscle pain, nausea. All lasting 24 hours+.

"""Equilibrium off"", nausea, headache, and nasal drainage"

"woke up with the chills and fever; woke up with the chills and fever; I don't feel good; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age and gender received BNT162B2 (Pfizer product) via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the COVID Vaccine yesterday (18Dec2020). The patient was a health care worker (Further clarification was unknown, hence captured as consumer or Other non HCP) and stated that, ""they have gave us a paper that has a bar code to scan to report the side effects and I don't have that with me because I left work and that was regarding. I have it at the work but I cannot go to the work because I woke up with the chills and fever (Dec2020), so I just need to talk to someone regarding the side effects besides with Tylenol (incomplete sentence). Is there anyone I can talk to? I need to report this and see is there anything I need to do besides take Tylenol (Intent: Treatment) and rest."" In response to further probing, consumer stated, ""I am so sorry, I don't feel good. I don't want to talk on the phone right now."" Therapeutic measures were taken as a result of woke up with the chills and fever. The outcome of the events was unknown. Information on the lot/batch number has been requested."

"Staff was advised that patient had a brief episode of palpitaions ""30 seconds"" after receiving the COVID19 vaccine on 12/22/20 that resolved. Per report on back of patient consent, vitals done at 1513: BP 145/102, HR 84, O2 SAT 99%, RR 18, TEMP 97.6. Re-take at 15:21, BP 124/86, HR 86, O2SAT 100%, RR 18, TEMP 97.8. Patient was monitored for 30 minutes, Dr. was present at time of event."

Patient received vaccine and entered waiting queue. Within 1 0 minutes, pt requested help from pharmacy vaccination team because she felt severely dizzy. Patient ended up passing out in seated position. Systolic blood pressure dropped to ~80. Patient normalized 5-10 minutes after syncope. Blood pressure normalized. Patient escorted out in stretcher.

Patient complained of anxiety, feeling cold and clammy, and being lightheaded. Patient was laid supine, Vital signs monitored, reassurance, fluids, and snack. Patient left for home following an extended period of observation.

developed a lump in my throat within a half hour after receiving vaccine. I took Benadryl at 7pm without any improvement. Feeling of lump improved by Monday and today feels irritated in that affected area. No other treatment.

fever of 99.9 all night; Body ache; Pain in my arm from the vaccine; This is a spontaneous report from a contactable consumer. This consumer reported similar events for two patients (herself and her husband). This is a first of two reports. A female patient of unspecified age received bnt162b2

(BNT162B2, lot number: EH9899, expiration date was not reported), via an unspecified route of administration on arm on 18Dec2020 (morning) at a single dose for immunization. Medical history and concomitant medications were not reported. The patient reported that she received the Pfizer vaccine (COVID Vaccine) yesterday morning (18Dec2020) and last night (18Dec2020) she had fever of 99.9 (unspecified unit) all night. And then at this morning (19Dec2020), she came to work at the hospital. And she has been with 99.2 all day. She also experienced body ache and pain in her arm from the vaccine on 18Dec2020. She added that her husband was experiencing the same way who also got the shot yesterday (18Dec2020). The outcome of the event fever was recovered on 19Dec2020, while outcome other events was unknown. Information on batch number has been requested.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020506517 Same reporter/ drug/ event for different patients.

A few minutes after vaccination, sitting in chair started to feel dizzy, tachycardic, almost an anxious feeling- lasted about a minute or so, then subsided. I did not report it that day because I thought it may have been anxiety

Tingling around the mouth and throat, sensation of swollen lips, but not visible. Started around 25min after vaccination, did not last more than 1 min.

The day after had chills with no fever, fatigue, and palpitations. The second day had palpitations on and off. On the third day had palpitations that did not go away with a heart rate sitting in the 140s.

lost taste and smell; lost taste and smell; This is a spontaneous report from a contactable other HCP (patient). A 21-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140, Expiry Date: Mar2021) (reported as COVID Vaccine), intramuscular in right deltoid on 18Dec2020 at single dose for covid-19 immunization. Medical history included had a fever on Monday and took Tylenol Cold and Flu (lot number: SHA101, Expiry Date: Jun2024) as the treatment; had an intra uterine device. There were no concomitant medications. Patient was a frontline health worker (a CNA, Certified Nursing Assistant) and received a vaccine yesterday (as of 19Dec2020) and since then she lost taste and smell, patient was not sure if this is due to the vaccination or if its due she had a fever on Monday and broke and was unknown if it's okay to get the vaccine, patient was not sure if it's like a bacterial infection or related to the vaccine. She still doesn't have taste and smell but its really congestion. The outcome of events was not recovered.

Fever 101.0 f dry cough nasal congestion

12/23/2020 10:00 am swollen , tender glands in my throat, left side, slight headache.

"site was red, it was painful, it hurt across her shoulder and up her neck; site was red, it was painful, it hurt across her shoulder and up her neck; Headache; Diarrhea; it hurt across her shoulder and up her neck; it hurt across her shoulder and up her neck; This is a spontaneous report from a contactable Nurse(patient). A 65-year-old female patient received BNT162B2(lot number EH9899) via an unspecified route of administration at arm on 17Dec2020 at single dose for the vaccine for COVID. The patient medical history included Blood pressure high and Low thyroid. The concomitant products included losartan for Blood pressure high, levothyroxine sodium(SYNTHROID) for Low thyroid. The patient got the

BNT162B2yesterday afternoon on 17Dec2020 and her site was red and she had got a headache and stuff and she was supposed to report the adverse reactions on 18Dec2020. Her site was red, it was painful, it hurt across her shoulder and up her neck and she had got a headache and diarrhea on 18Dec2020. The patient stated she didn't have it before. The patient got it for work, she didn't have a doctor prescribed it. The patient took some Advil yesterday it helped a little bit but she haven't taken anything today. For the vaccine for COVID because the patient work in ICU. The patient was given the product in her arm. The reporter consider the events ""site was red, it was painful, it hurt across her shoulder and up her neck , headache and diarrhea"" were related to BNT162B2. The outcome of the events was not recovered."

Vaccine recipient developed mild nausea, acid reflux, and stomach pain 10 minutes after vaccine administration. Vaccine recipient then developed nasal congestion and cough at 19 minutes, and then shortness of breath at 21 minutes. The vaccine recipient was then sent to the emergency department. While in the emergency department it was determined that the vaccine recipient had an allergic reaction. When vaccine recipient had shortness of breath the oxygen saturation went to 89-90%. The vaccine recipient received albuterol, diphenhydramine, famotidine, methylprednisolone, and fluids. During re-examination, the vaccine recipient?s condition improved and stable. Vitals were within normal limits. 89-90. They were discharged to home. At follow-up phone call on 12/23/2020, the vaccine recipient reported that they felt much better but was still experiencing voice hoarseness.

15 minutes after getting the vaccine, she developed a pruritic rash over her neck, chest, and precordium. Also became tachycardic up to 130-140 (may be attributed to anxiety of having a rapid response called). She reported feeling a lump in her throat but no facial swelling or angioedema, no lymphadenopathy. Was treated with diphenhydramine 50 mg IV, famotidine 20 mg IV, and methylprednisolone 125 mg IV. After 1 hour of observation and ongoing feeling of lump in her throat with new mouth tingling, was also given 0.15 mg epi IM. Was observed with resolution over 8 hours, and discharged to home with instructions to contue treatment with oral prednisone, famotidine, and cetirizine over the subsequent few days.

Arm is kind of sore; Pretty tired; This is a spontaneous report from a contactable consumer (parent). A 21-year-old female patient received bnt162b2 (BNT162B2, lot no. and expiry date was unknown), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient had the Pfizer vaccine, the new Covid vaccine yesterday (17Dec2020). The consumer reported that her daughter's arm is kind of sore and she is pretty tired on unspecified date in Dec2020. The patient was given the vaccine because she interacts with Covid patients, she works in the Intensive Care Unit, so they provided the vaccine to her. The patient gets a Covid test every three days and she has been always negative on Covid test. The outcome of the events was unknown. Information on the lot/batch number has been requested.

First night following after vaccine I woke up with chest pain (i though pleuritic) which went away. I had mild body aches and fatigue, chills. next day I experienced chest(again I thought pleuritic) discomfort especially when taking a deep breath. i felt better then had mild fatigue and body aches again. day 3

post vaccine I woke up with discomfort when taking a deep breath with continued discomfort. i felt tired through the day. Then that evening i developed SOB, severe palpitations and chest pain and went to ER. Diagnosis New onset rapid A fib. I was hospitalized and once my work up was finished and I had normal sinus rhythm I was discharged home the next evening.

Patient presented for COVID-19 vaccine (Pfizer-Sars-COV2-vac), pt received the vaccine and then 15 minutes later started feeling some lumpiness in her throat, watery eyes, and ear fullness. Pt denied feeling any itchiness, difficulty breathing, lip swelling, or throat swelling. Pt received two doses of oral diphenhydramine 25 mg each without improvement in symptoms. Patient was observed for 1 hour and 20 minutes. After consulting with Dr., it was recommended to have the patient go to the emergency room for more observation. The patient was then escorted to the ER by one of the volunteering staff. In ED, reported throat tightness without SOB or difficulty swallowing. Also reports feeling sense of ingestion/gas bubble in chest. Had COVID, dx'd 12/1/20, recovered fully. States that sensation in chest was also felt during her COVID illness and seemed to be brought back by vaccine this afternoon approximately 90min pta, Observation for additional 90min in ED. with possible mild improvement, no progression/worsening. Discharged home

itchy, red, hives and pain at injection site and generalized muscle soreness, especially left arm

I woke up I really tired, tired/I got tired and fatigue; headache; when I came to have my breakfast I felt that food doesn't tastes nor regularly as it was before; This is a spontaneous report from a contactable physician (patient). A 75-year-old male patient received bnt162b2 (lot/batch number and expiration date not provided), via an unspecified route of administration, on 18Dec2020 (reported as yesterday of 19Dec2020), at single dose, for COVID. The patient medical history included COVID and changing his taste, both in Apr2020 and not ongoing. The patient's concomitant medications were not reported. It was reported that the patient got COVID himself what it started changing his taste in April and he was sick and come to better at the bottom month and he was fine. He started to work full time. Then he got a vaccine yesterday morning and today (19Dec2020) he woke up he really tired, tired. He know these the side effects of vaccine fatigue, muscle pain and headache but these are not he was concerned. The concern is he is losing his taste that he had when originally diagnosed with COVID in April of 2020. When this morning he got up, he got tired and fatigue and headache then when he came to have his breakfast he felt that food doesn't tastes nor regularly as it was before. The same thing he had before when he diagnosed with COVID in April. His question is, probably this is not connected, question is could that be side effects of vaccine or by the he checked his antibody week ago, he had antibody, could that he got another COVID or it is the side effects of COVID Vaccine? It was also reported that the patient deal with COVID patient every day. The outcome of the events was unknown. Information on the lot/batch number has been requested.

NONE

Two days after vaccination, I felt a little bit headache after I woke up. It was getting worse at noon. Then I took one pill of advil and felt better after that.

Itchy blotchy spots, left arm, left ear, back

Got the itches today; Got the runs; Maybe from the runs that's making me tired; Got the runs; Maybe from the runs that's making me tired; This is a spontaneous report from a contactable consumer, the patient. A 61-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: KN5730), via an unspecified route of administration on 17Dec2020 (at the age of 61-years-old) as a single dose for COVID-19 immunization. The patient had no known medical history. There were no concomitant medications. On 18Dec2020, the patient had the itches and runs, and was tired. The clinical outcomes of the itches, runs, and tired were unknown.

Several minutes after the injection, my right little finger was tingling. ~0815 I was driving home and lost function in my right little finger. The left side of my jaw felt tight, the left side of my tongue felt thick, and my vision was blurry in both eyes. I also noticed that my heart was out of rhythm and beating rapidly. I had a near syncopal episode. I began having mid-sternal chest pressure. I drove to my home - took 50mg of liquid Benadryl and had someone drive me to the ER. Symptoms started to resolve within 20 minutes of taking Benadryl. I was seen at Medical Center.

Progress Notes APRN (Nurse Practitioner) ? ? I had a cough , hives and a fever of 101

My lips, my cheeks inside and out, my jaws and the back of tongue all went numb; My lips, my cheeks inside and out, my jaws and the back of tongue all went numb; This is a spontaneous report from a contactable consumer (patient). A 58-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date in 2020 at single dose for COVID-19 immunization. Medical history included gastroparesis. Concomitant medication included lisinopril. In 2020, the patient reported she had an odd reaction to the COVID vaccination, her lips, my cheeks inside and out, her jaws and the back of tongue all went numb. There was no investigation assessment. No treatment was received for the events. The outcome of the events was resolved by itself in 2020. Information on the lot/batch number has been requested.

Within 15 minutes after the vaccine patient started to have tachycardia, dizziness, and light headedness with syncope episode. She was taken to the ER where she improved . No further syncope episodes and released.

LOW GRADE FEVER- 99.3, BODY ACHES, CHILLS, HEADACHE, MALAISE, FATIGUE, LEFT ARM SORENESS

Swelling and induration at site

Headache; Fatigue; This is a spontaneous report from a contactable physician (patient-pending clarification). A 34-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/lot number: unknown), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced headache and fatigue on 19Dec2020. The outcome of events was unknown. Information on the lot/batch number has been requested.

Fever 102. - 101, Chills for about 12 hours, bed rest for 24 hrs took Tylenol every four hours and fluids. The Vaccine site is red, swollen and hot size of an orange. After 12 hours fever broke, exhausted for additional 12 hrs. No symptoms 12/22 or 12/23/2020

"Got this biggest heat flash to my face; Nervous; Everything's swollen; face numb; Everything's swollen; face numb; This is a spontaneous report from a contactable consumer (patient herself). A 49-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number EK5730), as first single dose on 19Dec2020 for COVID-19 immunisation. No relevant medical history and concomitant medications were provided. The patient is an X-ray tech, mammography tech. She stated ''I had the COVID-19 Vaccine yesterday and I had there like they told me for 50 minutes. I went home and I started driving home and, on my way, home yesterday I got this biggest heat flash to my face and then I think became numb for about 2 hours."" The patient also stated 'I came home and my husband watched me and I was like I am nervous. I was like I may try get swell because everything's swollen, I would have called but it was just my face numb."" The outcome of the events was unknown."

Employee reports right sided eye and facial droop 2 hours after receiving vaccine but did not report the incident until 12/23/20. BP-140/89, light headache. Did not seek any treatment since , BP checked today 12/23/20 was 90/60. slightly facial asymmetry still noted, no other associated s/s. Neuro check intact as of this date. Employee referred to f/u with PCP.

Itching, Tingling to scalp, trapezius area of the back and arms. Experienced this 1 week after the vaccine. Patient took Allegra and symptoms resolved after 1 hour. Patient continues to have no symptoms 24 hours after taking the Allegra.

Body ache; pain in arm from the vaccine; fever; This is a spontaneous report from a contactable consumer (patient's wife). This consumer reported same events for two patients. This is 2nd of two reports. A male patient started to receive BNT162B2 on 18Dec2020 (reported as yesterday, as of 19Dec2020) at single dose for covid-19 immunisation. Medical history, concomitant medications or past drug history were not provided. He experienced body ache, pain in arm from the vaccine and fever in Dec2020. Outcome of the events was unknown. Information about lot/batch number has been requested. ; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020506072 Same reporter/ drug/ event for different patients.

awoke with chills fever nausea diarhea as well as tinitus and dizziness

"Woke up in middle of night with sore arm to include down arm to pinkie and ring finger. Next morning did not look in the mirror unknown if woke with hives. Around 11am 03/18/2020, noticed ""hives on neck, face and eyelids"". States purple dot rash ""reminded me of a hickey all over my neck."" Did not take any medications, call doctor or notify anyone until she saw her supervisor Monday. Started to Clear up almost gone away. States resolved now."

Incredible pain at the injection site that radiate down her arm, lasting through the night; Felt very fatigued after the vaccine; She didn't sleep well due to pain; This is a spontaneous report from a non-contactable consumer. A 33-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via intramuscular, on 18Dec2020 at first single dose on the arm for COVID-19 immunisation. No relevant medical history and concomitant medications were provided. The patient reported incredible pain at the injection site that radiate down her arm, lasting through the night. Also felt very fatigued after the vaccine. She didn't sleep well due to pain, fatigue may also be caused in part by this. The outcome of the events was unknown. No follow-up attempts are possible. No further information is expected.

"Woke up on 12/18 with chills, fever of 102, and achy. Also, noticed red rash on back (from shoulders to waist), under both upper arms, and belly on 12/19 (but said it could've been there on 12/18). On 12/19, spread to around neck. Pruritic (""couldn't stand it"") and used hydrocortisone."

Had a fever about a 102; This is a spontaneous report from a contactable consumer (patient's wife). A 54-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number EH9899), via an unknown route, at single dose on 18Dec2020 for COVID-19 immunisation. The patient did not have a relevant medical history and concomitant medications. On 19Dec2020, the patient had a fever about a 102. The outcome of the event was unknown.

the day she got the shot she had arm pain. The next day she had chills, fever and body aches. As of the 23rd she still has body aches.

Felt some palpitations, racing heart, scratchy throat, dizziness, a little shortness of breath. Alerted the professionals observing and was monitored. Starting feeling a little better, then got a second wave of above symptoms again. I felt tingly all over and my lips felt tingly. They ended up taking me to ER. I started to also feel nauseous. They ended up giving me 1L of fluid, 25mg of diphenhydramine, 125mg of solumedrol, and 20mg of Pepcid. Monitored me for a few hours and then discharged me home. I was instructed to take another 50mg of diphenhydramine before bed, which I did. I ended up missing work the rest of my shift since I was in ER, then missed work the next day.

Fever; Mild headache; Fatigue; This is a spontaneous report from the Pfizer-Sponsored program received by a contactable consumer. A 55-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number EH9899 with Expiration Date Mar2021), via intramuscular, on 17Dec2020 at single dose for COVID-19 immunisation. The patient did not have a relevant medical history and concomitant medications.. On 19Dec2020, the patient developed mild headache and fatigue. On 20Dec2020, the patient experienced fever. She stated ''I will take some paracetamol (TYLENOL) whatever for next couple days, if it is not then I need to get COVID Test''. The outcome of the events was unknown.

About 15 minutes I started to get hives, skin reaction and felt chest pressure, I let Dr. know I wasn't feeling well, administered Epinephrine with own EpiPen, noticeable hives and redness across neck and upper chest. Transported to the ED. 2nd dose of Epinephrine at 1:20pm for throat swelling and bronchospasm.

Patient misunderstood when to return for second Covid vaccine dose. Patient returned for dose #2 four days after dose #1. Screening process did not catch timing discrepancy. Patient received dose#2 four days after receiving dose#1. Patient did not experience any adverse effects from either injection.

Headache; This is a spontaneous report from the Pfizer-Sponsored program received by a contactable consumer (patient herself). A female patient of unknown age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via intramuscular, in Dec2020 (three days ago, as reported) at single dose for COVID-19 immunisation. No relevant medical history and concomitant medications were provided. The patient stated she took the COVID-19 shot three days ago and she started having headache. The outcome of the event was unknown. Information on the Lot/batch number has been requested.

No immediate A/E. At the one hour post-vaccine reported mild nausea, hot flashes on/off for another hour, and bumps on the forehead. Bumps we not visible, mildly palpable, not itchy, and possibly contact dermatitis from face shield - this vaccine is a nurse that returned to duty after the 15 minute observation time. No treatment, self monitor only .

Pfizer-BioNTech COVID-19 Vaccine- Chills, low grade fever 99.8, body aches/ joint pain, fatigue, start 12/19/20 and continued symptoms to present 12/23/20

She is not feeling well; Chills; Sweating; Fever; This is a spontaneous report from a Pfizer sponsored program from a contactable consumer reported for her daughter. A female patient of an unspecified age received her dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of

administration on an unspecified date at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The reporter She mentioned that the patient got her vaccine this morning and unfortunately the patient was experiencing some side effects or symptoms. The patient who was a nurse who just received the vaccine, the Pfizer vaccine yesterday from the hospital where she worked. And today she was not feeling well, she got chills and she was sweating, and just not well. It sounded like she was having some side effects 30 percent (Further clarification was unknown), to get the Chills and fever, 15 percent of (incomplete sentence). The reporter asked how long they had to wait if someone was feeling unwell from the shot. The patient got to start her 12 hours shift and should she be going back to work and doing 12 hours shift, if she was not feeling well with fever, she had got chills. The reporter asked how long it anticipated her feeling like this. The outcome of the events was unknown. Information about Lot/batch number has been requested.

Pt received the Pfizer-Biontech COVID19 Vaccine, Lot #EH9899 around 1830 today (12/22). A few minutes after the vaccine was administered in the left arm, the patient started having itching on her left shoulder that spread up to her neck. This was followed up by a warm feeling and mild blotching on the neck and face, more so on the left side of her body/face. When the patient brought this to staff attention, we began very close monitoring and started taking vitals regularly. Blood pressure ranging from 141/91 to 139/86, HR ranging from 120-86 bpm. . Around 1905 the patient was given Benadryl 25 mg tabs- 2 tablets by mouth one time only. Around 1908 the patient said her L ear started to itch also. We took vitals multiple times and the blood pressure and heart rate had decreased. Around 1935 the patient said she was feeling better, the mild blotching on the L side of her face and neck had almost completely resolved. The patient stated she felt much better and felt that she can could drive home safely. The patient spent a total time of one hour being monitored. á Of note: the patient admitted that she has white coat hypertension and today it was probably even worse. She said she had a lot of caffeine today and that could have also led to her being tachycardiac.

Employee had itchiness and rash on both arms almost 30 minutes after receiving vaccine. She denied shortness if breath, tachycardia, lightheadedness, and difficulty breathing. She denies a similar reaction from any other vaccines.

Little sinus pressure; may be a little bit of soreness of the throat; Little bit a soreness in throat, scratching of little bit but not too sore; or just allergies; Heart rate low/60 beats per minute; Ache in right side of my ribs; This is a spontaneous report from a contactable consumer (patient). A 53-years-old male patient received BNT162B2 (lot number: EJ1685) via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient medical history was not reported. Concomitant medication included fluticasone propionate. The patient was given vaccine shot (later clarified as Covid 19 vaccine) yesterday and just got a side effects of little sinus pressure, may be a little bit of soreness of the throat. About treatment, the patient took some Advil and he took some sinus pills, congestion pills a little bit earlier. It was clarified as nasal Decongestant, nasal congestion, 30mg, take 2 in 24 hours but he had taken two of them earlier along with 3 Advil pills. He deals with sinuses too but this one is like came on pretty much kind of overnight. He was wondering if doing the shot or something, he was not sure what's the matter or just allergies. It was just the sinus pressure yet. He didn't have the fever, not fever. Little bit a soreness in throat, scratching of little bit but not too sore. His

heart rate is 60 per minute so it is low, 60 beats per minute, very low. He had just low heart rate though. About lab work the patient stated that went in for side pain, side ache in right side of his ribs. They did ear analysis, CBC. They all came back normal. He just wanted a report in and see he guessed just find it out if the symptoms go away or maybe he is having sinus infection going on or this sinus be going on so. Events outcome was unknown.

lightheaded, dizzy, nausea, vomiting, tingling in the hands and face, diaphoretic, tachycardia

"I got the injection Friday Morning I had a little soreness and tiredness and when I drove home at 7pm I was having bad arm pain , Saturday morning the arm pain was really bad I couldn't lift my arm, I called my Dr I assumed it was the same and my palanziq. Dr said the pfizer and palanziq both made my immune system hyperactive and was prescribed acetaminophen and 6 days steroid pack that starts with ""M"", after I took the steroid my mobility was better by Monday the arm pain was gone. one ear temp was 99.4 and the other ear was 98.6 I never spiked a fever"

Fever, fatigue, injection sight pain, join pain, rapid pulse, headache, feel unwell

pain at the injection site; headache; joint pain; fatigue; chills; This is a spontaneous report from a contactable Pharmacist. A female patient of an unspecified age received BNT162B2 via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient shared information about her experience after receiving the Pfizer BioNTech COVID-19 vaccine. The patient reported pain at the injection site, headache that she treated with Naproxen, joint pain, fatigue, and chills that lasted for 72 hours. Events outcome was unknown. Information on the Batch/Lot number has been requested.

After an hour the left foot was numb. Arm is sore at the injection site. Then it went away. Today having body aches, back pain. Temp is 99.7. Had COVID in April.

Just a tiny red mark; This is a spontaneous report from a Pfizer-sponsored program Corporate (Pfizer) Social Media Platforms. A contactable consumer (patient) of unspecified age and gender received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for Covid-19 immunisation. The medical history and concomitant medications were not reported. The patient did not have pain, swelling or anything. Just a tiny red mark. The outcome of the event was unknown. No follow-up attempts are possible. Information about batch number cannot be obtained.

Waited 30 minutes for observation. Driving back home. Left side of face got tingling and on left arm. Just going away. Tingling is going away. Walking up the stairs, and got long winded and feeling fast heart rates. Tried to get up feeling fatigue. Notified manager. Informed of Vsafe to register there as well Scheduled to work on Monday 12/28 on site. Last onsite worked day was 12/22/2020 Covid testing last August and was negative Per the algorithm, her recommendations were to monitor and call PCP and 911 if symptoms persists or worsens

Started with a very sore arm with redness and warmth to the arm around 11PM and by 2AM started with chills but no elevated temp and then nausea. She reports she slept 12 hours and was then doing well.

Tachycardia, light headed,very dry mouth, numbing of tongue

Sore left arm; This is a spontaneous report from a Pfizer sponsored program Corporate (Pfizer) Social Media Platforms from a non-contactable Other HCP reported for self. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose on an unspecified date for COVID-19 immunization. Medical history and concomitant medication were not reported. Other than a sore left arm, patient felt great. The outcome of event was unknown. No follow-up attempts are possible. information about lot/batch number cannot be obtained.

Chest pressure, dizziness, increased troponin lab value.

"Fine? I've never felt fine after antiviral inoculations.; This is a spontaneous report from a Pfizer-sponsored program Corporate (Pfizer) Social Media Platforms via a non-contactable consumer. A patient

of unspecified age and gender started to receive BNT162B2, via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient reported ""fine? I've never felt fine after antiviral inoculations"". Outcome of the event was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained."

Scratchy, sore throat, cough, SOB, asthma like symptoms (closing/tightness of esophagus/throat. Lungs hurt with deep breath.

Feverish; Body is aching/I am in too much pain; This is a spontaneous report from a contactable consumer (patient herself). A patient (demographics unknown) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unknown route, at single dose on 18Dec2020 (at 14:00) for COVID-19 immunisation. No relevant medical history and concomitant medications were provided. On 19Dec2020, the patient had feverish and body is aching/I am in too much pain. The outcome of the events was unknown.

feeling off, shaky, swollen hand and arm on injection side. slight slurred speech

At 1103 reporting feeling itching on chest and arms

1. Significant Tinnitus, no treatment. Severity decreased the following day, but persists until present (12/23/2020). 2. Numbness of front upper teeth. Resolved by 12/22/2020.

Abdominal cramps overnight with back pain, then awoke with fever, chills, headache, significant body aches including continued back pain and fatigue. Symptoms improved the morning of 12/23

12/18/2020 02:45 AM WOKE UP BECAUSE UPPER RIGHT SIDE OF BACK, WAS HURTING, THROBBING, WOKE ME UP. STOOD UP, KEPT HURTING AND GETTING MORE INTENSE. BROKE OUT IN SWEAT, UNCOMFORTABLE, PAIN, DRY HEAVES DUE TO INTENSITY OF PAIN; 10/10 PAIN LEVEL 'SOLID'; LASTED 45 MINUTES. FELL BACK ASLEEP, WENT TO WORK 12/18/2020 THAT DAY. FELT LIKE IT WAS BRUISED 'KIDNEY AREA' ON UPPER R BACK. I BELIEVE IT WAS EVENING, I URINATE AND FELT 'SLIGHT BURNING' SENSATION; THIS HAPPENED THE REST OF THE EVENING. 12/19/2020 WENT TO CLINIC. DR. STATED URINED SAMPLE WAS NEGATIVE; UNDISCLOSED DIAGNOSIS OF URTHRITIS. GIVEN SHOT OF ANTIBIOTIC, AND PRESCRIBED ANTIBIOTIC FOR 7 DAYS. 12/20/2020-12/23/2020 FELT FATIGUED AND MALAISE. FELT LIKE JOINTS WERE 'TIRED' AND 'ACHY'; 'SLIGHTLY OFF'. 2 HOURS AFTER VACCINATION ON 12/18/2020 - 'TICKLE IN MY THROAT', STAYED AND IRRITATED, BROUGHT ON COUGHING. STAYED UNTIL 12/19/2020 WHICH TURNED INTO A RASPY WITH EXCESSIVE THROAT CLEARING. I DO DRINK A LOT OF WATER, STAYING HYDRATED. FLU VACCINE IN POSSIBLY OCT 2020

Received the vaccine on Thursday December 17th. On Saturday December 19th at about 48 hours, started to have an intense nerve type itch on the right arm and the right leg. No rash visible. Treated with Benadryl oral. Itch keeps coming back and is now at Day 4 without resolution. Also has felt very tired for about 4 days.

patient complained off flushed face; waited 15 extra minutes until feeling better

Shortly after receiving the Moderna COVID-19 Vaccine (Within minutes) she complained of the injection site and that arm of feeling warm. Upon further inspection, her arm was warm to the touch and was red. Patient could feel warmth from inside and we could also feel the warmth with touch. She stayed 15 minutes and we monitored the site. There was no further reaction. The patient had been offered Benadryl and declined. This will be notated for her second dose and will pre-treat with benadryl if needed.

No side effects until 1PM on the 18th, hot flashes with dizziness and nausea, then I started feeling like I was going to pass out and then felt like the blood was rushing through my head. Also head headache. I received a shot of Zofran 4mg. 30 min later I was able to sit up up and 10 min later I was able to stand without being dizzy. Still having waves of nausea. Body aches and flu like symptoms on Saturday. Right now only the nausea. Monday I was fine, but today it started the nausea and dizziness. No intervention needed today.

Patient received COVID vaccine at approximately 9AM this morning. Stayed 15 minutes after injection for monitoring, felt fine and returned to department. Employee returned at approximately 11:45AM with possible symptoms of reaction. Admitted to a headache that started approximately an hour after injection. Symptoms now include heaviness of arm, chest, feeling emotional, light headed. Vitals taken at 11:48 BP 150/86, P 79, R16 Pox 97. Oral Benadryl 25mg administered PO 11:50AM. EKG run. Patients symptoms progressed to include difficulty breathing and swallowing. Epi pen adult 0.3mg administered IM Left thigh at 12:13PM. Vitals checked at 12:13PM BP 188/90, pulse 97, pulse ox97. Called for emergency response for transport to ER. Pt remained stable until transport by EMS to ER. Employee health informed of patient transport. ER informed of patient transport.

After leaving Clinic symptoms started within 10 minutes. Started with scratchy throat. Then tingling in my lips. Bottom lip slightly swollen.

"History Present Illness: 26 year old female presents to walk in clinic with c/o feeling dizzy, flushed and heart racing after receiving COVID-19 vaccine earlier today. She took a benadryl about 30 min before receiving the vaccination. She is 11 weeks post partum. She is still breastfeeding her baby and reports she has ""not drank very much today."" At time of visit, she reports she ""feels much better."" She denies PMH of heart issues or any prior anaphylactic reactions. She denies shortness of breath or trouble breathing. She does not appear to be in acute distress at this time. Her vital signs are WNL."

THERE WAS NO ADVERSE EVENT. We realized after administration that we had inadvertently given the vaccine to a 15 year old girl. She is not having any symptoms or problems. We have been monitoring her and encouraged her to speak with us if she has any issues at all.

general warmth and dry throat

Stayed for 25 minutes for observation and told to call in 24 hours. Sore arm

12/18/2020 Day after injection chestpain that was progessive day before visit to ER on 12/19/2020.Described pain as pressure in middle of chest, radiated to upper left chest under armpit,

with associated nausea, feelings of Heart Palpitations, EKG shows 98bpm, normal intervals, t wave inversion lead III, normal sinus rhythm. BP 151/83, sats 100% temp 98.4 HR 99. labs cardiac enzymes negative, Ddimer elevated,CT chest negative for pulm embolism and chest xray no acute process. scheduled to see her PCP on 12/22. diagnosed with lymphadenopathy and chest pain, the lymph nodes noted after injection of covid #1 vaccine. 12/22/2020 was given a steroid shot in the PCP office,

Patient complained of a rush of feeling hot, symptoms progressed to feeling light-headed and dizzy. Skin was warm and dry. Experienced hypertension which got worse when told her blood pressure was high. Patient was transferred to the ED for further observation.

10 minutes after receiving the injection I was experiencing dizziness and lightheadedness. As I was moved to a new location I was still experiencing aforementioned symptoms in addition to feeling hot and nauseous and I vomitted. I was moved to the ER for further evaluation. I was given a COVID test, an EKG and my vitals were monitored. I was discharged home.

Nausea and dizziness within 5 minutes of administration, continued for 2 hours, transferred by private to ED for continued monitoring.

dizziness, vertigo nausea diarrhea chills weakness headache

Employee received vaccine on afternoon of 12/22/2020 at clinic She states she did have COVID previously in November. She called in this morning with vomiting and now has fever of 101.9, headache, body aches,fever, productive cough, loss of appetite, She has contacted her PCP for suggesntions.

Pt C/O blurry vision, palpitations and sweating for 3 seconds. this occurred 10 minutes after receiving vaccine.

Developed redness and warmth and some swelling at injection site that began about 7 hours after injection and grew in size to about 3 inches the next day. It did itch but otherwise some discomfort pain to area. By day 5 the area had almost healed entirely.

Metallic taste in mouth immediately Headache that lasted days

"About 12 minutes after receiving covid vaccine, pt felt like she had a lump in her throat. No difficulty breathing or swallowing. No facial swellling. Pt was evaluated by PA from urgent care. Pt was transferred to urgent care for antihistamine administration. Vitals remained stable. 12/23/20 @ 1212: Note copied from UC Visit: Diagnosis Allergic reaction (ICD10-CM T78.40XA, Working, Medical). Summary: 0916 ""Lump is still there but much smaller"" Still no sign of intraoral swelling 0925 Patient reports symptoms have almost resolved completely, comfortable going home. Instructed to take Zyrtec tonight before work and for the next couple of days and to go to hospital for SOB, worsening sensation of lump in throat. Patient verbalized understanding and is in agreement with treatment plan. Opportunity for questions was given, all questions answered.. Pharmacy: diphenhydrAMINE (Benadryl) AMB (Order): 25 mg, IM, InOffice."

About 4 hours later I began have tightness in my abdomen and cramping, followed by gastrointestinal upset and diarreha and pain in my upper abdomen. I will wait and see if it resolves by tomorrow before going to the hospital for care.

Pt stated she had a reaction to the Covid-19 vaccine. Pt states she cannot raise her arm, where she got the injection is very hot to the touch, and she has pain all the way up to her neck. A slight knot at injection site.

mild transient rash with some welts, but mostly redness and itching located on right foot and ankle. Took diphenhydramine 50 mg po x 1 dose and used hydrocortisone cream x 1 application. Rash resolved in that location, but came up on both thighs just above the knee cap on both legs on Sunday. Repeated diphenhydramine 50 mg po x 1 and used hydrocortisone 1% cream x 1 application. Both events resolved within 2 hours, with no further issues. This could be unrelated since it was 4 days out, but I wanted to report it for consideration.

On 12/18 feeling congestion and stuffy nose was able to go work that night as well 12/19. Then on 12/21 realized lost taste/smell went to get test for Covid results positive. As of 12/23 still haven't gain taste/smell. I had to miss 10 days of work.

tachycardia, dizzy, dry mouth

Progress Notes MD (Physician) ? ? Endocrinology COVID VACCINE CLINIC 12/22/2020 á Patient: Date: 12/22/2020 á Subjective Patient is a 42 y.o. female who was seen at COVID Vaccine Clinic today for her first dose of the COVID 19 vaccination. á Afebrile 98.6 á She denied any history of previous adverse reactions to vaccines. á She was given the Pfizer vaccination in the right deltoid muscle. á During her 15 minute waiting period after the injection, the patient began to experience dizziness. She denied rash, hives, welts, difficulty breathing, difficulty swallowing, wheezing, throat tightness, hoarseness, stridor, itching, facial swelling, lip swelling and tongue swelling. á This provider was notified of patient reaction and she was then assessed in the emergency bay area. á Monitored patient for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with wheezing and dyspnea, vomiting, abdominal pain, hypotension, dysrhythmia, chest pain and collapse. á Vitals were normal Checked her blood sugars-normal at 108 Offered her snack/water-she declined. á Repeat BP normal at 112/72 á Vitals: á 12/22/20 1737 BP: 126/82 Pulse: 87 SpO2: 100% á á á á Objective á á Physical Exam Vitals signs reviewed. Constitutional: Appearance: Normal appearance. She is normal weight. HENT: Head: Normocephalic and atraumatic. Nose: Nose normal. Mouth/Throat: Mouth: Mucous membranes are moist. Pharynx: Oropharynx is clear. Eyes: Extraocular Movements: Extraocular movements intact. Conjunctiva/sclera: Conjunctivae normal. Pupils: Pupils are equal, round, and reactive to light. Neck: Musculoskeletal: Normal range of motion and neck supple. Cardiovascular: Rate and Rhythm: Normal rate and regular rhythm. Pulses: Normal pulses. Heart sounds: Normal heart sounds. Pulmonary: Effort: Pulmonary effort is normal. Breath sounds: Normal breath sounds. Abdominal: General: Abdomen is flat. Bowel sounds are normal. Palpations: Abdomen is soft. Musculoskeletal: Normal range of motion. Skin: General: Skin is warm and dry. Neurological: General: No focal deficit present. Mental Status: She is alert and oriented to person, place, and time. Psychiatric: Mood and Affect: Mood normal. Behavior:

Behavior normal. Thought Content: Thought content normal. Judgment: Judgment normal. á á á Assessment/Plan Treatment included: no therapy. Follow up response to treatment: excellent. Patient discharge: Stable to go home and follow up with PCP. á á á á MD Electronically Signed 12/22/2020 5:38 PM á á á

Patient reports after she received the vaccine she reported to the observation area for the 30 minute monitoring period and reported feeling her heart racing. Patient with hx of histamine intolerance and angioedema, so carries epi pen with her. Patient notified monitors of her symptoms and her medical hx and that she had her epi pen with her. Patient reports ?heart racing? and recorded 130 BPM on activity tracker. Pt endorses history of anxiety and panic attacks. Patient reports resolution of symptoms at approximately 8:15 am, resting HR at that time 97-98 BPM. Patient denies any other symptoms.

Rash, Flush, felt hot, itchiness, headache, dizziness

Patient called and reported diarrhea, vomiting and nausea ~ 36 hours after vaccine was administered. Resolved in ~ 18 hours. Felt great the next day.

Right sided jaw pain started 12/22/20 in the AM progressed through the evening. When I woke I had numbness and weakness on the right side of my tongue which I quickly realized included the lower portion of my right face. An ER trip and a CT scan confirmed it was Bells Palsy. The upper portion of my face has is now included in the weakness and paralysis.

Temperature of 100.1 about 5 hours after administration with mild frontal headache. Today - about 24 hours after adminstration - herpetic rash developed along the left mandibular branch of the trigeminal nerve.

Patient given covid-19 vaccine at 1218, Symptoms started at 12:25 (dry cough, dry mouth). Benadryl 25mg by mouth given at 1238. No previous history of vaccination reaction. Of note: recent history of Clinically diagnosed bronchitis and treated with OTC medication (mucolytic) by pcp, no ATB given. No NKDA, no recent fever or illness in 24hours. Initial VS: BP: 142/84, HR: 111, RR: 24 Spo2% 99/RA, . End VS: BP: 118/94, HR: 82, RR: 16,, SpO2: 100%/RA. Patient denies shortness of breath or difficulty breathing, Lung sounds are clear. Patient states she feel better and is conscious alert and oriented X4. She was placed in he monitoring room within the vaccination clinic for intermittent monitoring of VS and reaction response at 1317.

on 12/16/2020 my arm was red from the injection like everyone else but my symptoms began the next day on 12/17/2020 I was in the shower in the morning it was noticeably sore and the following day the 18th it was quite a bit bigger and red, I could still move my arm. I was overly tired and very sluggish I went to the Dr on the 18th and they gave me a prescription for keflex and prednisode

Patient with past medical history significant for thyroid cancer was given Pfizer COVID-19 vaccine at approximately 1430 at our facility. After receiving vaccine patient felt flushed, face hot, felt something squeezing neck (similar to tight collar). 25 mg PO diphenhydramine given X 1. Patient having shivering on and off. Felt swelling progress up into back of throat. Had to clear throat and swallow harder. At 1511

patient was checked into the emergency department at our hospital. At 1527 famotidine 20 mg IV once given. BP was found to be 232/100. Amlodipine 5 mg IV once given at 1909. Labetalol 10 mg IV once given at 1812, labetalol 20 mg IV once given at 2034, clonidine 0.1 mg PO once given at 2127. Patient sent home at approximately midnight. Diagnosed with possible anaphylaxis and hypertensive urgency (no history of HTN).

Ten minutes after receiving Pfizer Covid vaccine shot in right shoulder, experienced partial numbing of the hands which persisted all day. Next day no numbing of left hand, but right hand still partially numb.

Patient complained of a rush of feeling hot. Patient was laid supine, VS monitored. Patient was transferred to the ED.

Right after patient was given vaccine injection he started to feel lightheaded and woozy. He had just worked the night shift and hadn't eaten anything. No prior illness reported. Patient brought to emergency department to be evaluated. Received 500ml of fluids and symptoms resolved and he went home. Diagnosis of near syncope.

Hives, administered Diphenhydramine 12.5mg po

Muscle aches, chills arm discomfort

Patient c/o numbness of arm and feeling like she is floating - resolved after 2-3 seconds

Diffuse hives started ~ 12 hours post vaccine, progressively worsened to involve entire body, and required solumedrol & antihistamines at an Urgent Care visit

"On the night of 10/22/20 patient sat up suddenly and had what she reports as, ""75% dimming of the right eye,"" that lasted for about 5 minutes. Vitals at that time were BP 122/82, p 72, o2 sat 97% on RA, and temp 97.8. (Patient is a CRNA) After confirming no other neurological deficits, patient laid down and experienced blurring of her left eye with left eye pain. No treatment given. Today she has no vision deficit or pain."

Frequent palpitations - never experienced before EKG on 12/23 revealed frequent PAC's, sometimes with runs of PAC's

Patient reports shortness of breath and persistent cough.

facial numbness and tingling, disappear in 24 hours

45-60 minutes post vaccination, patient experienced right eye twitching continuous for a few hours, then intermittent x 24 hrs; now resolved 12 hours post vaccination, patient experienced right ear/jaw numbness that lasted up to 36hrs 36 hrs post vaccination, the numbness is spreading to the right cheek no affect in muscle function, just numb pt seen at urgent care facility 12/23 @~0830 and prednisone initiated

Tingling down right arm into right hand, spread to left arm and hand. Stiffness in neck. After an hour progressed into muscle weakness in both forearms, more noticeable in the right arm. Best described as lactic acid buildup feel in forearm-had trouble lifting/pulling door handles. Has subsided over a day, no general soreness in both arms/ neck. Injection site has developed noticeable pain/soreness, somewhat like a tetanus shot . There was a fair amount of blood at the injection site (not typical for me), and the administration of the shot was a touch high in the arm.

Lightheadedness, tingling extremities and dizziness

Fatigue, sweaty, and dizziness

Staff member started to feel fatigue and chills the evening he received the vaccine. Symptoms continued the following day and a half. Fever was as high as 101.4. He had COVID nine months ago. Symptoms have resolved.

Nausea, fatigue, headache, flushing

PATIENT STATES HANDS TINGLING BUT WENT AWAY PATIENT HAD NOT INTERVENTIONS OR PROLONGED OBSERVATION

Lip and tongue tingling

TINGLING LIPS REPORTED

Soreness at injection site, Fever at 99.8 degrees F. Body Aches, headache

12/21/2020: fatigue, muscle ache 12/22/2020: fatigue, muscle ache, headache, fever, loss of appetite, nausea, and sore throat.

Patient became flushed, chest tightness and felt winded. BP was 130/70 and 02 saturation was 100%. Patient had not tongue swelling, previous reaction to a vaccine, medication or food and no shortness of breath. Patient was placed on gurney for 30 minutes and had no further symptoms after this time.

Fatigue, diarrhea, whole body aches, fever

Bad headache and sore on injection site

Injection site raised, firm area (size of quarter); redness but no streaking; extreme tiredness, chills, headache, neck pain. Patient went to walk in clinic and provider believed her to be having a localized allergic reaction to the COVID vaccine. She was given a steroid injection, and started on oral steroids.

1 hr post administration patient developed urticaria, pruritus

"Progress Notes PA-C (Physician Assistant) ? ? Orthopedics Cosigned by: MD at 12/22/2020 á9:48 AM á á Patient: Date: 12/21/2020 á Subjective Patient is a 34 y.o. female who was seen at COVID Vaccine Clinic today for her first dose of the COVID 19 vaccination. á á She was given the Pfizer vaccination in the right deltoid muscle. á During her 15 minute waiting period after the injection, the patient began to

experience generalized feelings of ""not feeling quite right"" as well as anxiety/nervousness, nausea and chills. She denied difficulty breathing, throat tightness, dizziness, chest pain, or other GI complaints. á This provider noticed her raising her hand from across the waiting area and tended to her where she noted the above complaints. she was then assessed in the emergency bay area. She was monitored for severe reaction symptoms, including rapid progression of symptoms, vomiting, hypotension, chest pain, collapse and Respiratory distress. á Past medical history includes anxiety for which she takes Effexor on a daily basis as well as type 2 diabetes, diagnosed approximately seven or 8 years ago during a pregnancy. She is on oral medication during the day and insulin at nighttime. She did take her oral medication today and last ate a pasta lunch right before arriving to the vaccine clinic. Last A1c was 6.5. Patient states that she generally runs a postprandial blood glucose following a heavy meal of about 180. á She reported a previous history of anxiety and nervousness following vaccinations in the past. Most recently, she experienced a 30-minute period of anxiety and nervousness following her flu vaccine this past October. These feelings passed without further incidents. á Review of Systems Constitutional: Positive for chills. HENT: Negative for drooling, facial swelling, hearing loss, rhinorrhea, sneezing and trouble swallowing. Eyes: Negative for redness and visual disturbance. Respiratory: Negative for cough, chest tightness and shortness of breath. Cardiovascular: Negative for chest pain. Gastrointestinal: Positive for nausea. Negative for vomiting. Skin: Negative for color change, pallor and rash. Neurological: Negative for dizziness, speech difficulty and light-headedness. Psychiatric/Behavioral: Negative for agitation and confusion. The patient is nervous/anxious. á á á Objective á She ambulates into the emergency treatment bay under her own power and without difficulty. She is seated on the gurney, and continues to answer questions appropriately. á Physical Exam Constitutional: General: She is not in acute distress. Appearance: Normal appearance. She is not toxic-appearing or diaphoretic. HENT: Head: Normocephalic and atraumatic. Nose: No rhinorrhea. Cardiovascular: Rate and Rhythm: Regular rhythm. Tachycardia present. Pulmonary: Effort: Pulmonary effort is normal. No respiratory distress. Skin: General: Skin is warm and dry. Coloration: Skin is not pale. Findings: No rash. Neurological: Mental Status: She is alert. Gait: Gait normal. Psychiatric: Mood and Affect: Mood normal. Behavior: Behavior normal. á á á Assessment/Plan Stress reaction secondary to vaccine administration and history of anxiety and nervousness following vaccinations. á Vital signs obtained at 1352 with blood pressure at 154/95, mild tachycardia at 109 and 97% O2 saturation on room air. Patient denies any chest pain, shortness of breath time. á She is given a bottle of water and assisted to lie down with the head of the bed slightly elevated. She continues conversating appropriately without any acute distress. Vitals reassessed at 1359 with blood pressure of 133/76, heart rate 97% on room air. Dr. at the bedside now. Suggested obtaining a blood glucose. Blood glucose obtained at 1405, elevated at 234. She continues to deny any chest pain, shortness of breath, chest tightness, swelling in the throat, nausea/vomiting or other GI complaints. á Vital signs checked again at 1406 with blood pressure 133/77, heart rate 107 and 97% on room air. á Vital signs last checked at 1415 to reveal a blood glucose of 219, blood pressure 127/82, heart rate 100 and O2 saturation of 97% on room air. Patient has no additional complaints at this time and reports feeling well. Her mother has driven her to the clinic today. She felt that she was able to safely walk out with any issues. She was assisted by nursing staff and ambulated out of the treatment bay independently. á Treatment included routine surveillance of vital signs at about a 5-minute intervals following notification of her feeling poorly. Vital signs continued to normalize and remained stable through the duration of her 30 minutes following her vaccination. á Follow up response

to treatment: excellent. á Patient discharge: Stable to go home and follow up with PCP. Recommend to patient that she present to the ED or call 911 should she develop any symptoms up to and including but not limited to chest pain, shortness of breath, chest tightness, signs or symptoms of angioedema, or syncope. She expresses understanding the above and has no further questions today. á Orders Placed This Encounter Procedures COVID-19 MRNAá PA-C Electronically Signed 12/21/2020 1:51 PM á á"

injection site soreness; myalgias; chills; fatigue; nausea; loss of appetite; enanthem (2 oral ulcers); enanthem (2 oral ulcers); This is a spontaneous report from a non-contactable consumer (patient). A 39-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Solution for injection (lot number: EH9899 and expiry date unknown) via an unspecified route of administration at the left arm on 18Dec2020 12:30PM at a single dose for COVID-19 immunization and monascus purpureus (RED YEAST RICE), via an unspecified route of administration from an unspecified date to an unspecified date at an unknown dose and frequency as supplementation therapy. The patient's medical history included elevated LDL cholesterol and supplementation therapy, both from an unknown date and unknown if ongoing. The patient had no known allergies to medications, food, or other products. Concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to BNT162B2. The patient only received red yeast rice supplements within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. It was reported that on 19Dec2020, the patient experienced injection site soreness, myalgias, chills, fatigue, nausea, loss of appetite, and enanthem (2 oral ulcers). No therapeutic measures were done in response to the events. Outcome of the events was recovering. The events were assessed as Non-serious. No follow-up attempts are possible. No further information is expected.

fever; chills; malaise; This is a spontaneous report from a contactable physician (Patient) via Pfizer-sponsored program. A 27 year-old-male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 18Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient experienced fever and chills on 18Dec2020 (in the night); the patient also experienced malaise throughout the weekend (in Dec2020). Patient had vaccine on 18Dec2020 and was still having symptoms 3 days later. As of 20Dec2020, patient stated he was feeling better but wanted to know if he should get tested or did the vaccine cause these symptoms. Final outcome of the events was reported as unknown. Information on the lot/batch number has been requested.

"Experiencing burning while urinating; This is a spontaneous report from a contactable consumer (patient who is Nursing assistant). This 56-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot # EK5730), via an unspecified route of administration, on 19Dec2020 approximately at 10:00 AM (age at vaccination 56-years-old) at single dose for COVID-19 immunisation. Medical history included blood pressure. Concomitant medications included losartan for blood pressure and colecalciferol (VITAMIN D). The patient experienced burning while urinating on 19Dec2020 afternoon after she came home and on 20Dec2020 morning too. About treatment consumer stated: ""Not really, long time ago I had that but yesterday I did like oh"". The patient had complete

blood count (CBC) and C-reactive protein (CRP) test, results are unknown. Outcome was not recovered. Next shot is due on 09Jan2021."

Increased heart rate up to the 115-120s for 3 hours - self reported

Sore arm at injection site night of vaccine and next day. Then resolved (without taking any acetaminophen).

I had the covid 19 virus in March 2020. Actually, I still have loss of taste and smell. When I received the vaccine on 12/21/2020, I immediately felt a burning sensation at the injection site and in my chest. A headache developed 5 minutes after the vaccine. I began to experience fatigue, nausea, muscle aches and joint pain. I have been treating myself with Tylenol and Ondansetron. I am still experiencing these side effects today (12/23/2020)

Migraine headache with nausea and aura, treated with Toradol 60 MG IM 12/23/20 at 13:35.

pt became lightheaded and nauseated. Elevated feet and given ice pack for neck. Pulse 70, resp 16. rested for 30 minutes, feeling much better - able to ambulate without difficulty. States she just feels a little off. Husband came to take her home.

"After she waited for 30 minutes after receiving vaccine she stated that she had generalized itching and 2 small hives on her right arm. She said it started about 3 mins after receiving the vaccine. She was given 25mg of Benadryl syrup po. She stayed at facility another 30 minutes before being cleared to leave after she said the itching was better and no further hives formed. 12/23/20 -9:56am She was contacted by phone. She said she woke in the night and felt like ""asthma"" and had a rash at the site. She took another 25mg of Benadryl. She took another dose of Benadryl at 06:00am. As of this time, 9:56am, she states, no shortness of breath, no more rash at site, and the itching has subsided. She will follow up as needed."

I was itchy only to find out it was Shingles

1049: CG called OH and advised she received the COVID19 vaccine yesterday and woke up this morning at 0630 with a rash to her right chest and right hand, and complains of fatigue. CG denies any SOB or any other symptoms at this time. CG advised she has a history of COPD, Asthma, and granuloma disease. Advised she spoke with her Oncologist about receibving the vaccine who did not have any concerns but also voiced that she did not speak to her PCP. Occ. Health advised CG that she be seen by urgent care or PCP for current symptoms and to go to the ER if symptoms worsen or she becomes SOB. 1106: Called CG to see if she was able to touch base with PCP, advised that she has a call out to her and messaged her PCP. CG states that the rash has remained the same since this morning and that it does not itch anymore. Again advised CG if worsens to go to Urgent care or ER. CG verbalizes understanding. Will follow-up with CG later today. 1448: Called CG states the hives are mostly gone, she took some benadryl and feels back to her normal self, just has some scabs from where she scratched herself. CG states her PCP responded back to you that if she felt necessary should go to the urgent care or do a virtual

appointment. Cargiver declined and states she is feeling a lot better. Advised CG to call OH with any changes and to go to the ER or Urgent care for any emergency symptoms. CG verbalized understanding.

30 minutes after vaccination pain occured on my left upper gums, left upper lip and into my left chee with swelling in the same locations, that have not resolved

EXTREME BILATERAL ITCHING ON BOTH ARMS THROUGHOUT

The day after receiving the vaccine, the arm that I got the vaccine in was in severe pain. I would say 7/10 pain. Anything even slightly brushing against it was very painful. It was a little red and hot to the touch. I woke up multiple times through the night because of the pain. I did NOT take anything for it. By the following morning it was just sore, like how you normally would feel after a vaccine.

11am on the 20th I noticed pain on my back torso and it came around to the left of my abdomen and was told it was textbook shingles rash and was prescribed valacyclovir 1gram 3x daily for one week, the pain is now mild and I can treat it with tylenol and I've only had to take it once, the rash is still there but it's not spreading I started the medication at 3pm after seeing the dr

25-30 min post injection patient reported feeling itchy and became flushed. Reported mouth tingling and difficulty swallowing. No difficulty breathing. Monitored the patient, sats were wnl BP was elevated. Cool pack placed on forehead, and patient took oral benedryl. After about 20 minutes color and BP had normalized, itching and tingling resolved. Patient ate and drank and felt well enough to leave on her own. No further issues.

after vaccination client had a weird taste in back of throat during 15 minute wait time. Had client wait additional 15 minutes and still had a weird taste in mouth.

First 30 min post-vaccine: flushing and lightheaded, self limiting. 1.5 hours post-vaccine: vertigo x10 minutes, palpitations, chest tightness. Palpitations were brief and at rest. BP 172/110, HR 95, O2 Sat 99% on RA. 2.5 hours post-vaccine: chest tightness has remained constant with mild restrictive sensation on full inhale, vertigo returned but briefer in duration, BP 173/100, HR 85, Temperature 98.5F, O2 Sat 97% with decrease during conversation. 3 hours post-vaccine: lightheaded with constant chest tightness, BP 168/110, HR 88, O2 Sat 98% on RA, 6 hours post-vaccine: symptoms resolved, BP 148/100, injection site burns and sore to touch.

Progress Notes 12/22/2020 á á Subjective Patient is a 46 y.o. female who was seen at COVID Vaccine Clinic today for her first dose of the COVID 19 vaccination. á She denied any history of previous adverse reactions to vaccines. á Pt has h/o hypothyroidism on LT4- last lab a few months ago Started feeling lightheaded and warm Doing a temp check á 135/94- repeat BP check Pulse between 72-90s on rechecked á á Blood sugar was just checked and normal at 76--repeat also normal at 86 á She is eating a snack and having some water. á She was given the Pfizer vaccination in the right deltoid muscle. á She said she has a h/o vasovagal episodes with shots, mammograms, etc. á During her 15 minute waiting period after the injection, the patient began to experience dizziness. She denied rash, hives, welts, difficulty breathing, difficulty swallowing, wheezing, throat tightness, hoarseness, stridor, itching, facial

swelling, lip swelling and tongue swelling. á This provider was notified of patient reaction and she was then assessed in the emergency bay area. á Monitored patient for severe reaction symptoms, including rapid progression of symptoms, vomiting, abdominal pain, hypotension, dysrhythmia, chest pain and collapse. á á á Objective á á Physical Exam Constitutional: Appearance: Normal appearance. HENT: Head: Normocephalic and atraumatic. Nose: Nose normal. Mouth/Throat: Mouth: Mucous membranes are dry. Pharynx: Oropharynx is clear. Eyes: Extraocular Movements: Extraocular movements intact. Conjunctiva/sclera: Conjunctivae normal. Pupils: Pupils are equal, round, and reactive to light. Neck: Musculoskeletal: Normal range of motion and neck supple. Cardiovascular: Rate and Rhythm: Normal rate and regular rhythm. Pulses: Normal pulses. Heart sounds: Normal heart sounds. Pulmonary: Effort: Pulmonary effort is normal. Breath sounds: Normal breath sounds. Abdominal: General: Abdomen is flat. Bowel sounds are normal. Palpations: Abdomen is soft. Musculoskeletal: Normal range of motion. Skin: General: Skin is warm and dry. Neurological: General: No focal deficit present. Mental Status: She is alert and oriented to person, place, and time. Mental status is at baseline. Psychiatric: Mood and Affect: Mood normal. Behavior: Behavior normal. Thought Content: Thought content normal. Judgment: Judgment normal. á á á Assessment/Plan Treatment included: rest, snack. Follow up response to treatment: excellent. Patient discharge: Stable to go home and follow up with PCP. á Discharge time 5:51pm á á á 12/22/2020 5:19 PM á á

visual disturbances and severe headache started about an hour after vaccine. This improved over night, then 24 hours after vaccine severe headache which lasted another 2 days, aches

Increased HR and BP 4 minutes after injection. Rest and VS monitored. Return to baseline at the 29 minute mark. Released after 30 minutes.

mild left upper arm swelling, quarter to half dollar sized lump under skin; sore tight muscle that interferes with daily activity; area is warm to the touch Symptoms started within 3 hours of dose and have continued to progress for 20 hours.

5 minutes after receiving the vaccine patient felt light headed and her heart rate was elevated.

So about 12 hours after receiving the shot I started experiencing COVID symptoms. I called employee health and they told me to come in and get tested for COVID and tested positive. Body aches, headache and a fever last night at 102.8. I took some Tylenol. Woke up and I was drenched from sweat. I also have a nagging cough and sore throat.

Severe vertigo, nausea and vomiting, and weakness presented to emergency department after 8 episodes of vomiting over 12 hours with no relief

Patient monitored x 15 min per guidelines. Returned within 10 mins c/o itching hands. 25 mg diphenhydramine given IM per order. Post adm VS stable. Symptoms resolved within 15 min.

About 22.5 hours after shot, she experienced extreme dizziness. She was shopping with husband and he had to drive home due to this dizziness. She got home and went to bed and slept 4 hours and woke up without any further issues. When she was dizzy she did experience some nausea.

DIZZINES WITH STANDING

Felt sick , sedated , as if she was going to pass out.

10 minutes after receiving the vaccine, I became tachycardic. Heart rate was in the 150s. I believe the rest of my vital signs were normally initially, but about 10 minutes after the tachycardia started, my BP was 170/110. I remained tachycardic so was sent to the ER. I continued to have waxing and waning tachycardia during my ED stay. Per MD, EKG, BMP, CBC were all normal. I did not receive any medications. After about 3 hours of monitoring, my heart rate was under 100 at rest so was discharged home. For the next 24 hours, with minimal exertion (talking, walking on flat surface) my heart rate would elevated into the 110-120s. 48 hours after vaccine, my heart rate returned to normal. I will be following up with cardiology 12/28/2020

Patient stated she was feeling sluggish, little to no appetite over last couple of days. Today her saturations dropped to 84% while at work.

LIGHTED HEADED

Shortly following vaccination, developed redness, skin rash, itchiness, dizziness and anxiety. Was given diphenhydramine 25mg with no relief and began worsening - walked over the Emergency Department in same building and treated there with the following: Solu-Medrol 125 mg IV Push, Diphenhydramine 50mg IV Push, and Prednisone 40 mg by mouth. Symptoms began to improve within about an hour and was given a prescription for Prednisone 20 mg Po X 3 days.

ANAPHLACTIC REACTION, SOB, CHEST PRESSURE, TIGHTNESS IN THROAT, TACHYCARDIA

swollen lymph node extends from injection site toward breast, shooting pain down side

High fever with chills approximately 12 hours after vaccination. Severe headache, mild nausea, loss of appetite, joint pain. Arm pain significant with almost no range of motion without pain. Swelling around armpit. Ibuprofen taken with minimal relief. Arm pain, headache, intermittent fever is ongoing at this point in time.

12/19/2020 MORNING WOKE UP AT 4PM FOR WORK, HAD HIVES ALL OVER EXTREMITIES AND TRUNK. WENT TO URGENT CARE; PRESCRIBED MENTHOPREDNISONE. TAKING THE PREDNISONE AND ZYRTEC SINCE THAT DATE. *HX 5-6 MONTHS OF HIVES. CONSULTING WITH ALLERGIST. SEEN 12/21/2020.

Resident noted to be experiencing a full body tonic/clonic seizure approximately one hour and forty-five minutes post receiving the vaccine. Supplemental oxygen via nasal cannula provided, vital sign monitoring, solu-medrol IM provided, epinephrine IM provided, clonidine tablet provided PO, stat labs ordered: CBC, BMP, depakene level, UA. Resident exhibited positive reaction to interventions. Seizure lasted approximately 5 minutes, afterwards resident presented at baseline: alert and oriented x3 and communicative. Oral intake tolerated approximately an hour and a half post seizure. Enhanced monitoring in place.

,headache, tiredness, chills, light headed, feeling unwell

Felt fine for first 30 minutes. Then face started to burn and tingle. 10-15 minutes later felt heart racing, slightly short of breath. Felt like I was going to faint. This only lasted 20 seconds or so. Base of the tongue felt strange. Took Benadryl 50 mg and prednisone 20 mg. Paramedics came. Hr was 68, O2 sat 99, bp176/126. Lungs clear. No trouble breathing. I felt better and they left. All symptoms improved except my face is still burning and tingling at 2 pm on same day (today). Face is mildly red but no hives. Bp is now normal 126/76, hr 50.

GI upset

Got the vaccine at 11AM. around 3PM very tired, headache wok me up around 3AM next morning I was fatigued, felt hot and cold (couldn't decide if I needed a jacket or not while at work), very tired, the next day still fatigued, chills, hot and cold, went to work and decided to leave after talking to one of the doctors. I was clammy, very sluggish, had a very mild headache, did not feel well overall. That was the worst day for me (Friday). My ears felt plugged. Slept almost entire day going through cold/hot chills,

even wore 4 layers of blankets. Back and forth with hot and cold chills. Next day ear pain and fatigue. Very mild hot and cold flasher.

A few minutes after vaccine administration, while sitting down for post-vaccine monitoring, she became dizzy and diaphoretic. Ice packs were given and the dizziness improved over about 5-10 minutes. Vital signs were taken and were normal: BP 125/80, Pulse 86, O2 Sat 100%. After symptoms resolved she went back to work.

Slight Fever of 100.4 degrees Fahrenheit

Vaccine was administered 11:45 am. Post vaccine (~30 mins) slightly nauseous and diaphoretic but resolved. Around 9:30 pm had 3 consecutive syncopal episodes. 911 was called and EMS arrived. Finger stick and BP were unremarkable; however, BP was slightly elevated for my usual (136/72 at time of reading where I am usually 110/80)

I have been experiencing intermittent, involuntary twitching of my my left thumb that started around 12;00 noon. There is no numbness or tingling (normal injection site ache, however) or recognizable pattern of when the twitching occurs, and the twitching does not seem to last longer than 10 seconds at the most before stopping. 1-3 minutes will pass before my thumb starts twitching again. Other digits do not seem to be affected. I did not experience this prior to the COVID-19 vaccine administration and not have any neurological conditions that this would be a symptom of.

Fatigue, headache, fever, muscle pain, chills

After shot arm was sore. Woke up felt not herself, tired achy. Took Tylenol went to sleep. The next day she couldn't move. Was in bed in a ball. Today she can walk a little bit. Went to pharmacy to get more Tylenol. Cannot concentrate. Chills and fever. Bolt of electricity down spine. Very tired.

visual changes- resolved within minutes; MD examined, no intervention required

Received the COVID vaccine, after the 30 min observation time she left the area and returned about an hour after her administration with complains of Shortness of breath, tightness in chest, elevated BP, Flushing and rash on upper extremities and neck.

Received the COVID vaccine, after the 30 min observation time she left the area and returned about an hour after her administration with complains of Shortness of breath, tightness in chest, elevated BP, Flushing and rash on upper extremities and neck.

Patient tested positive for Covid morning after vaccination with symptoms. Fever of 100.2, headache, eyes burning, head is heavy, chills, very fatigued

An 1 h and 20 mins after vaccine was given, driving home and felt some difficulty swallowing. Was able to drink water no difficulty but unable to do swallow without the aid of water. No SOB, some tachycardia. Went to closest ED.

I woke up and have been experiencing severe body aches, a dull headache, and it feels like I might have a low grade temperature but when I check my temperature it is normal.

hives, pruritus within 30 minutes

Increased heart rate and blood pressure, dizziness, chest tightness, tingling left arm , leg and foot, left should heavyness.

I had dyspnea and palpitations started about 5 minutes after vaccination, lasted about 2 minutes. I had similar another episode after about 9-10 minutes after vaccination which is less severe compare to first one. I was sent to ER after second episode for close monitoring. No event on tele monitor in ER.

At exactly the 10 minute mark, I started feeling very flushed and hot. 1-2 minutes later, I was very lightheaded and dizzy. Felt like my heart was going to beat out of my chest and that I might faint. Walked down to tell the RN and she could tell I didn?t feel well as I approached. She said she could see my pulse bounding in my neck. Asked me to sit down arm she checked my pulse. Said I was tachycardic, over 100bpm. She asked me to sit there another 15 min for observation and gave me some water. I started to feel less flushed but then a second round of flushing came. The bounding/tachycardic episode never stopped. They suggested I go to the ER for observation. I text the Dr I was working with and she came down and spoke with the vaccine nurses saying she was comfortable monitoring me for the next several hours. I continued to feel this way for 3-4 hours. Also very pale and shaky. The above symptoms finally lessened around lunch time. For the remainder of the day, I felt very exhausted and had a lingering headache. The next day (today) I feel better. Other than soreness in the injection arm and some general body aches.

Patient presented to ED 1 day after administration of COVID-19 vaccine. She had rigors and chills the day before and day of ED presentation. Denies having a fever prior to ED presentation but did note general body aches and nausea. Patient also had 1 episode of vomiting on 12/22. Patient's vital signs were BP 145/109, HR 75, RR 20, O2 sat 96, temp 98.7F. Receive IV bolus of NaCL 0.9% 1,000 mL in ED in addition to ketorolac 15 mg, and ondansetron 4 mg. Patient was discharged home from the ED.

Nausea

Calling in to report itching and rash after Pfizer COVID vaccination. she received a vaccination on December 18th and started having symptoms that same day. She contacted the emergency room where she received the vaccine and they told her to take Benadryl. Since that time the itching and rash has progressed and now she is having some difficulty swallowing. No difficulty breathing or speaking.

Itching followed by multiple Erythematous urticarial areas on face, chest and arm. Swelling of upper eyelid

JOINT PAIN, RIGHT HAND SWOLLEN, CAN'T BEND MIDDLE FINGER, PAIN RADIATES TO WRIST, FINGERS START TO TINGLE IF USES RIGHT HAND FOR EXTENDED PERIOD OF TIME.

fever, confusion, blurred vision, nausea

mild chest tightness, cough, feeling anxious and lightheaded minutes after receiving the shot pt received: Benadryl 25 mg iv push Solumedrol125mg iv push Normal saline 1000ml IVpb

"PT WAS ADMINISTERED MODERNA VACCINE AT HD ON 12/23 AROUND 1540. PT HAS EXTENSIVE HISTORY OF ALLERGIC REACTIONS (HEP A VACCINE AND TREE NUTS). PT ALSO COVID + ON 12/8/20 . HX REVIEWED WITH HD RN PRIOR TO ADMINISTERING. PT WAS ADVISED TO WAIT 30 MIN IN WAITING ROOM. EMS STAFF ON SITE FOR CLINIC. PT STARTED COMPLAINING OF ""ITCHY MOUTH"" AROUND 1620 AT WHICH POINT EMS ATTEMPTED TO ESCORT PT TO PERSONAL VEHICLE TO DRIVE HER TO LOCAL ED. PT MADE IT TO THE THE VEHICLE BUT DEVELOPED INCREASED RESPIRATORY DISTRESS AND AIRWAY RESTRICTION. AMBULANCE WAS CALLED. EMS ADMISNTERED .3ML EPI AT 1631 AND APPLIED 8L O2 VIA MASK. ABUMBULACE ARRIVED AT 1636. PT TAKEN TO LOCAL ED VIA AMBULANCE"

Redness and tingling of the hands, arms and then body about 5 minutes after vaccine administration. Was also hypertensive to 142/87. Did not have progression of symptoms and BP and redness improved after about 30 minutes of resting and monitoring. Did not require any medications.

After waiting 15 minutes after receiving the vaccine she complained of having generalized itching. No other adverse reactions. She was working in the Intensive Care Unit. It wad discussed with her and decision was made to let her return to work for the evening without taking any medications for the itching. She was to go to Emergency department if she had any other adverse reactions develop. She was followed up with this morning and she reported that she did not have to seek treatment. The itching had subsided, no other adverse reactions developed, she just had some soreness at injection site.

localized raised red rash at injection site - given diphenhydramine 25 mg PO x1 - increased monitoring for 30 minutes. Patient still had rash but it was improved. Was able to leave clinic to home

Patient complained that 3 hours post vaccination began to have sweats and feeling like he was running a fever. He checked his temp on 3 different occasions during a 3 hour period and it did go up to 99.2 from 97.6. The patient denies any other symtoms. He received his vaccine around 4pm 12-22. He reported his concerns at 9am on 12-23. There was soreness at the injection site. No redness. And he felt fine today. And indicated by the time he went to bed last night was feeling fine again. Advised patient to contact me if any further concerns on work cell #.

After the vaccine I was fatigued, had diarrhea, a 102 fever and headache which lasted exactly 24hrs I took tylenol and zofran and the symptoms resolved . At the time of the vaccination i was 23 weeks gestation, EDD-04/12/2021.

Lymphadenopathy in left arm pit sore arm Slight fever of 100.1 headache fatigue muscle and joint aches

"The evening after she received the vaccine, she had a HA and stomach distress. She reports waking up frequently due to sweating. On 12/22/20, her symptoms continued and got a bit worse - including soreness at the injection site with continued stomach distress and HA. She took ibuprofen 400 mg PO TID. Was unable to eat food, only drank Sprite. During the early morning hours of 12/23, was unable to

sleep due to severe pain in right upper arm. She felt a ""pulling sensation"" and felt an enlarged lymph node under her arm. It was very ""tight"" - she was able to come to work - sent to the ED for evaluation - found to have BP slightly above her normal range, mild tachycardia. Was released and told to continue symptomatic treatment and to call or come in if symptoms worsened."

Approximately three hours after receiving the vaccine I was violently puking and nauseous. I never had a fever, but I had uncontrollable shaking and chills.

Approximately four minutes after receiving the vaccine, I felt dizzy while I was seated. The feeling subsided and returned a couple more times within 15 minutes. After approx 10 min, I felt a burning sensation on the top of my right hand and it spread to both hands and arms. My skin looked a little blotchy and red. The girl next to me said my face looked flushed. I also noticed I was sweating. The Rn brought me a bottle of cold water to drink. I drank half the bottle and that seemed to help cool off my skin. Thereafter, I had the chills. Then I noticed a tingling sensation in my feet. My shoes started to feel uncomfortably tight , so, I loosened my shoe laces. That subsided after a while. After sitting for a few more minutes, I believed I was feeling better. I stood up to prepare to leave and I felt a little bit dizzy. I sat down again, notified the RN and waited some more. I tried to stand up again and I felt slightly dizzy again . I remained standing and I was talking with two RNs. At that moment, I became dizzy again. I remained seated for another period of time before being escorted by the RN back to my department where I sat down and ate my lunch. Thereafter I was fatigued with the occasional chills and hot spells . I went home and rested on my couch.

After receiving the vaccine I initially had some arm soreness that later progressed to a headache and just an overall run down feeling with some slight body aches.á I woke up for work this morning with worsened body aches and had felt like I had a fever throughout the night. I took my temperature just to be safe and it was 100.5 (take twice). I called into work and was told I was not allowed to come in today to contact employee health. I went back to sleep and now my temperature is 98.6. I still have some slight body aches but it seems improved.á I am sending this email at your request to state that I no longer have a fever as result of my COVID vaccine obtained 12/21. My temperature has returned to a range of 98.2-98.6.á Sx resolved

A little over 12hrs after vaccination experienced significant fever, chills, and body aches. Able to manage with acetaminophen PO.

Whitehead Zit over injection site Dry lips throat and mouth initial day Headache at 36 hours in Some low grade fevers

10 minutes after vaccination received, pt complained of fullness feeling in throat and itchy ears and head. Epi given, pt transferred to ED, rec'd another epi and IV fluids. Discharged after a few hours.

Patient flushed red and felt nauseated within 60 seconds of administration. Complained of difficulty breathing, became blotchy and began crying. Called 911. Paramedic on site for his own vaccine assisted. Airway sounded restricted. Administered 0.3 mg Epinephrine (Epi Pen). Color improved. Blotchy patches

improved. EMS arrived. Breathing became more labored. They took her to we assume was regional hospital

Age: 43 years 12/23/2020 12:21 Chief Complaint: ALLERGIC REACTION History of Presenting Illness: This 43 yo female presents from specialty clinic for an allergic reaction. Patient has just received the Moderna Sars-Cov2 vaccine. She has had covid in the past, and her Igg tested outpatient was positive at 5.2 (per patient). She had received the vaccine at 11, and says that she usually has a reaction to vaccinations and drugs. She began having some rash around the neck and felt like her throat was closing. She was brought to the emergency room.

tightness in chest, felt like when i get stung by a bee and my asthma is acting up. started about 7 minutes after receiving the vaccine, did not go away after about 1 1/2 hours felt increased tightness/shortness of breath/wheezing. used my albuterol mdi and felt better. lasted about 2 1/2 hours and then began to feel the tightness start again and felt need for albuterol inhaler, took albuterol again and a pepcid po. continuing to monitor and will inform primary MD also.

2am chills,achiness,shakes, temp 100 3am temp 100.7 no change 4am no change took advil no change all day 12/23 shooting pains level 8 ,chills body aches. no fever. no change all day will see employee health in AM

I got the shot on a Tuesday , woke in the middle of the night at 3 am with a fever of 101, body aches, and swollen lymph nodes on the sidt that I get the shot. Took tylenol and still had body aches until 3PM. My skin was sore afterwards.

Pt was vaccinated at Conference room COVID19, with PfizerBionTech vaccine, Lot# EK 9231, at 1258 hours, while waiting in monitoring area, complained of rash and facial flush at 1305 hrs, initially given PO Benadryl by APP's at 50 mg for the rash and seen by me at 1306 hrs and got vitals. BP 160/110, HR 120 -130, SpO2 was 100% on room air, not complaining of shortness of breath, no stridor noted, tachycardia noted with regular rate and full bounding pulse, no wheezing noted bilateral lung fields, initiated early response call for eICU staff, also initiated potential call for inhouse and 911 call as back. At 1315 hours she had mild chest discomfort, tightness and felt dryness of throat. Rash not significantly visible on chest, facial flush present, decided to go ahead and gave epinephrine 0.3 mg IM to right deltoid as she was a unitard Stat suit. She was put on continuous monitoring, had response from eICU (Tele-ICU) team and Dr., SBP still noted to be elevated to 160's and DBP 110, Pulse still around 130, additionally IV access was secured, given IV Solumedrol 125 mg and IV Pepcid 20 mg. She felt somewhat better, still felt very anxious, with chest tightness, EMS on site by 1340 hrs and moved to ED by 1400 hrs, was with patient all through and transitioned to ED care To Dr. When last discussed her condition, was still stable noted at 1745 hrs in discussion with ED RN, with still persistently elevated BP and heart rate. No clear cut evidence for typical anaphylactic reaction. Treatment and observation still ongoing in ED.

chest tightness, throat closing in, sent to Emergency room

developed dizziness, palpitations, shaky, headache

Within an hour developed a headache that got worse every hour. Within 24 hours from vaccination, felt extreme myalgia that I have not been able to find relief for. 48 hours after still feeling myalgia. Headache has gotten better but still have one.

hand shaking, chills, rash, nausea, lightheadedness ? reports hard to take a deep breath, given diphenhydramine 50 mg PO x 1 @ 10:15 in clinic and an additional 25 mg PO x 1 @ 10:30 in the clinic. Symptoms persisted - pt anxious - taken to ED for evaluation. After 10-15 minutes in ED, her symptoms subsided ? she only had mild tingling in the left hand along with two red spots on the back of her neck. Given prednisone 50 mg PO x 1 in ED. observed in ED for 2 hours ? pt feels much better ? pt felt comfortable going home ? told to continue to take Benadryl and prednisone for next 3 days. Instructions given to return to ED for any worsening of symptoms. Rx with Prednisone 50 mg daily x 3

5 minutes after administration of vaccine, patient states he does not feel well. He was sitting and passed out.

On the first day I had pain on injection site. The second day I had muscle aches, fever and chills.

approx 12 hours after administration of vaccination, teeth chattering chills for 1 hour followed by a fever with temperature increase of 2 degrees, extreme muscle and body pain, nausea, headache, runny nose, sore throat, cough, soreness at injection site and inability to lift right arm (injection site). Fever and chills resolved at 7 am on 12/22/2020. At that time I took Alka Seltzer cold and flu and finally slept and woke up with fatigue, muscle aches and headache. All symptoms, aside from bilateral shoulder pain, pretty much resolved by morning of 12/23/2020.

Fever 101, chills, aches, chest pain

site soreness and residual headache at base of skull x3 days On 12/18 at 12 noon, I found myself passed out in my office at work laying over my keyboard. My assistant had me on-hold at that time and estimated I was out for 1 minute. Was loopy the entire next day. Just hydrated and rested. Felt great by Monday

Patient developed diarrhea, chills and a measured fever 100.4 24 hours after receiving the vaccine.

Pruritus - Benadryl given at COVID vaccine area. Relieved. Symptoms advanced after the caregiver went back to work. Called vaccine provider. Went to ED. Received Solu-medrol and Epinephrine. Released in stable condition

PALPTATAIONS, ANXIOUS, MONITORED NO TREATMENT

Fever 100.9

I got the Pfizer COVID19 vaccine at a drive through site on 12/21/20 through Department of Health Services. This morning I woke up in the middle of the night with lower spinal discomfort which has increased as the day has continued. There is nothing visible on my spine externally that I noticed except a very faint pink line.

Extreme fatigue, head ache, chills, severe generalized body aches, (temp 95.5 F). Started the day after vaccine, 12/20/20, and lasted until 12/21/20. Tylenol was taken for immediately after vaccine and continued until 12/21/20.

Benadryl given at COVID vaccine area. To ED received Ativan, Decadron, Pepcid, Benadryl, and 2L NS.

I received the first dose of the Pfizer COVID vaccine on 12/19 at 3:30pm. The next day I began to feel fatigue, body aches, joint pain, headache, and a fever of up to 100.9 that began around 2:00pm. It was fully resolved by the next morning.

Malaise, brain fog, fatigue, fever (100.8), cough, runny nose, sore throat over the last 24 hr.

Injection site pain within 6 hour of administration. Mild fatigue after 8 hours. Upon waking up the next morning, fatigue, myalgias, slight headache resolved with 1000mg acetaminophen taken 3 hours afterwards. 5 hours after acetaminophen, chills, myalgias, generalized weakness are experienced. No fever. Another 500mg acetaminophen was taken.

Pruritic, erythematous, patches in forehead ans R side of face

Fever, chills, nausea, sore throat, headache, extreme body aches and cough. Fever elevated longer than 3 hours at 100.4. Had rapid heartbeat which happened about three times. Slight difficulty breathing. Had Covid 19 about a month ago and felt like she was having it again.

Developed painful lump/ knot left WRIST

Left arm injection site soreness started about 4 hours after administration. Left full arm tingling lasted about 12 hours then resolved. Left arm soreness lasted for about 36-48 hours with some mild nasal congestion and shortness of breath.

WAS HAVING MYALGIAS AND MILD FEVER STARTING ABOUT 12 HOURS AFTER VACCINE, BUT AT 2 AM, I WOKE UP TO URINATE, FELT SOME DIZZINESS. AT THE END OF VOIDING I COULD TELL I COULDN'T THINK RIGHT AND HAD TROUBLE FLUSHING. TRIED TO WALK BACK TO BED AND HAD A SYNCOPE AS I GRABBED THE DOOR HANDLE. STUMBLED DOWN SLOWLY AND LOSS CONSCIOUSNESS FOR A SHORT WHILE, SECONDS. LAYED IN THE FLOOR FOR A BIT AND WHEN I STOOD UP AGAIN AND WALKED TO MY ROOM HAD ANOTHER SYNCOPE. WOKE UP AFTER SEVERAL SECONDS AND WAS NOT CONFUSED AND DIDN'T REMEMBER THE SECOND TIME I FELL BUT COULD UNDERSTAND I HAD PASSED OUT. MY WIFE SAYS I HAD MY EYES OPEN AND WAS STIFF BUT NO TONIC CLONIC MOVEMENTS. AFTER THE EVENTS I WAS ABLE TO GET BACK IN BED AND AFTER A LITTLE WHILE TESTED FOR ORTHOSTASIS. WHEN I STOOD UP I STARTED FEELING THE LIGHT HEADEDNESS AGAIN AND PRODROME TO FAINTING AND LAYED BACK DOWN. HR 60, MY BASELINE IS 50-60. HAD A FEVER OF 100.7. I TOOK 650 MG OF TYLENOL AND WENT BACK TO BED. I DIDN'T SLEEP WELL BUT NOW (THE FOLLOWING MORNING) I AM FEELING BACK TO NORMAL MINUS SOME MILD SOARNESS. I HAD A RAPID COVID PCR TODAY THAT IS NEGATIVE. NO OTHER LABS. I HAD NEVER FAINTED BEFORE THIS EPISODE. I DID NOT HAVE ANY TRAUMA FROM SYNCOPE.

Right side of body (leg foot hand arm cheek neck torso ear, etc.) experienced tingling sensations, numbness, some burning sensations, mostly cold feeling, weakness (like moving through water) sensations have lessened in two days, but minor sensations and weakness persist. monday (12/21/2020) visited the E.R. for exam and testing. E.R. doctor reported current testing normal. 12/23/2020 visited normal MD to go over results from previous testing and get checkup.

Diagnosed with UTI Sat 12/19/2020 at Urgent Care Monday 12/21/2020 returned to urgent care for fever, flank pain, no relief from urinary symptoms, later went to Hospital for treatment Today 12/23/2020 have severe body pain, extreme fatigue, still having urinary symptoms; unable to do daily activities such as grooming and dressing without assistance

Dizziness and elevated BP

Patient stated that he had blurred vision. He was taken to the Emergency Dept at the Hospital where his vital signs were monitored to include blood pressure, pulse and oxygen. After 1 to 1.5 hours of observation, patient stated that he was no longer experiencing any symptoms.

Nausea Vomiting Fatigue

Vision changes, blurry and distorted vision lasted for about one and a half to two hours after vaccination. Vision return to normal.

Quarter sized raised red area at injection site that is warm to touch. It has gradually grown over the day.

Beginning at approx 16 hours after receiving the vaccine and continuing until approx 36 hours after the injection, I experienced fever of 100-101 that was relieved with ibuprofen and acetaminophen (alternating). Significant headache and fatigue also present during most of this time. Now appears resolved.

Patient presented to the ED vaccination clinic on 12/20. She received her first dose of the vaccine, and then went into the breakroom to finish the rest of her lunch break. Approximately 10 minutes after she received her vaccine, she noticed she was feeling very warm, like a hot flash. She asked her coworker if it was hot in the breakroom, who responded no. She then noticed that she was developing reds spots on her chest, back and neck. We moved her into a private area to monitor her, and allow her to undress and cool off. She developed redness to her chest, back, neck, and redness around the injection site. This mostly resolved within 45 minutes. At about 45 minutes, I was able to secure PO Benadryl and provided her 50 mg of Benadryl, which she took. The employee returned to work the rest of her shift with no other complications noted. The employee denied swelling or itching to the throat, denied SOB, and her vital signs were normal the entire time. The employee does want to get her 2nd dose of the vaccine, so we will plan on administering it in the ED, and may pre-medicate with Benadryl.

Difficulty breathing, no oral swelling, stridor, altered mental status. Bag valve mask ventilate. IM epi. Initial care by MD and nurse. 911 ACLS called, transported to ER.

Arm was sore and swollen, muscle pain, body aches, headaches, tireness and fever.

I had a headache, nausea, muscle soreness and stiff joints on the first day and the second day fatigue.

swelling of tongue, lips, throat

Pt was lighted and dizzy about 10 mins after vaccine. Vitals were all normal and after we changed him from N95 to surgical mask, laid him down and gave him water he recovered fully.

Vertigo. Nausea. Dizziness. Headache. On and off for 3 days. Still having symptoms .

Lightheadedness, chest tightness, body ache, fatigue, weakness,flu-like symptoms but without fever

After about 7 minutes after the vaccine she started having palpitations and generalized feeling unwell. Felt as though she had low blood sugar but did not feel lightheaded or faint. She had this reaction similar prior when she had anxiety surrounding getting TB testing. Felt anxious and did have elevated BP to 144/86. No shortness of breath, rash, nausea, chest pain, dizziness. Resolved with observation, deep breathing, crackers and water.

24 hours post vaccine developed itchy legs. Over the course of 5 days both thighs developed red hot blotchy rash that burns and itches, radiating heat. Not helped by benedryl, Zyrtec, hydrocortisone.

Fever 101.8, vomiting, mental status change

"itching, facial swelling, throat swelling ""lump in throat"", hoarse voice"

Patient became diaphoretic and nauseated about 10 minutes post vaccination with Moderna Covid-19 vaccine. Patient was assisted to stretcher who he had dry heaves and stated he felt nauseated. HR was low around 38 and we were unable to determine a B/P but patient had a very weak radial pulse which at times was unable to be felt at all (due to low B/P). Decision made to transport patient to the ED for further evaluation. Patient eventually discharged from emergency department.

On the fourth day after receiving the vaccine, I developed a rash in the anterior and posterior thoracic region consisting of dispersed 1mm - 3mm size dots ranging from the clavicle to the pelvic region. These dots appeared in a diagonal, going from superior and lateral to inferior and medial. On the second day of noticing the rash the bumps appeared as if they were blistering. No medication was used at this time.

30 mins after vaccination Felt rapid heart rate, tingling in lips, initial BP 100/60

Patient felt warm and had some tightness in her chest which subsided and changed to intermittent sharp pain at sternum. Physician's who had just received vaccine asked for her to be sent to the ER.

Severe whole body myalagia and weakness with inability to stand or walk without significant pain and weakness. Unable to work or do ADL . Doctors not sure what to do . Have seen pcp and ER with still severe pain and weakness over three days

Redness and swelling around injection site on day two (day one being day of injection). Redness and swelling on day three decreased to just small red dot. No other complaints.

Fever 102.3 , chills, body aches, headache, tachypnea,. All symptoms started 19 hours after injection. Besides that, soreness & swelling at injection site.

Incomplete administration by MD that lead to seeping of vaccine. Second dose was administered.

"About 10 min after receiving the vaccination, the patient described feeling of throat closing, coughing. Patient given IM epi with initial improvement in symptoms. No rash. On arrival to ED, no stridor, no oropharyngeal swelling, speaking normally in full sentences, clear lungs. Subsequently, patient complained of nausea, but resolved after Benadryl. Patient had recurrent ""funny feeling"" in throat about 3 hours into observation and had difficulty swallowing liquids, but had normal speaking voice normal oropharynx. Currently pending ENT evaluation."

Diarrhea/upset stomach

Employee reported reaction of hives approx 2 hours and 12 minutes after getting the covid vaccine. She was administered epipen and was sent to the ED. The ED observed her and then discharged her.

pt complained of dizziness that progressed to headache. BP taken at 1315 was 184/106, hr 106. At 1430 bp 183/104 hr 87. o2 97%. Patient stated that they forgot to take bp meds

Pain at injection site around 12 PM, Fatigue around 4 PM.

Day of injection, developed pruritus of back. Worsened the day after and started seeing a papular rash over multiple areas of back.

Received vaccine at 1259, remained for 15 minutes without symptoms and returned to work. At approximately 1600, felt itchy and discovered hives covering body. Went home and took Benadryl. When spoke with at 1900 stated that her hives were still there but improved.

Felt lightheaded since the vaccine

30 minutes after receiving her 1st dose of the COVID vaccine, she started feeling a burning sensation in her nose and in her chest when she took a deep breath. Symptoms persisted overnight, today reports to have had chills and a sore throat. She was seen by her PCP today, 12/23 for further instruction. PCP told her to take benadryl and to follow up with an allergist prior to second dose for clearance. Patient reports she was COVID positive July 2020.

Staff member felt brief lightheadedness. Blood pressure was 147/72 (normal for her). Staff member then felt fine.

The first night I had a headache, chills, soreness and bruising at the injection site.

hot all over her face, followed by itchiness on her face, tongue and throat. denies any shortness of breath or chest pain. She denies any difficulty speaking or swallowing

Staff member felt some dizziness. Then felt alright.

fatigue/fever for 48 hours of 101.5/ nausea/severe headache/ blotchy rash all over body 3 days after vaccine. Hot to touch to inchy. 4 days later still large ichy rash.

rash, vomiting, nausea, hives, migraines, tremors, facial swelling

Staff member started to feel dizzy and lightheaded a few minutes after the injection, with brief episodes of palpitation. Blood pressure taken by physician, measured 180/90. Staff member was given Amlodipine 2.5 mg at 3 pm. Another Amlodipine 2.5 mg given at 4 pm. At 4:30 pm blood pressure was 160/100. Patient symptomatically felt better. At 5:04 pm blood pressure was 150/90. Staff member was observed until 5:15 pm, the discharged home in the care and supervision of her husband. Staff member will follow-up with personal physician.

"Pfizer-BioNTech COVID 19 VACCINE EUA- within 2 minutes felt tingling on the tongue and then tingling around the mouth. Within five minutes, itching of the face that spread to scalp and neck. Continued to increase itching during the 15 minute observation time. Sensation of heart in my ""throat"" upper chest. Slightly light headed. Nausea 15- 20 minutes after receiving injection. Headache. Given 50 mg Benadryl IM that resolved symptoms of itching within 5-10 mins. Observed in ER x 1 additional hour. BP 149/90 approx. HR 88, estimated from .memory."

Generalized itching

After 5-10 min following vaccination pt began to exhibit itching of the neck and slight SOB

Pain and numbness in left side of face and lips; advil taken and improving but no resolved

Moderate body aches and headache beginning about 20 hrs after the vaccine, then progressed to severe headache, nausea, photophobia, phonophobia at about 27 hours after the vaccine and lasting about 4-5 hours, then reducing to moderate headache and fatigue until about 40 hrs after the vaccine, then gradually resolved over the following 6 hours.

"She exhibited no symptoms immediately after the shot and began driving home at approximately 6:30 pm. As she was driving home, she gradually developed perioral numbness with the sensation of a ""gummy"" throat and bilateral eye ""warmth and numbness"","

Initially started with nausea around min 5, shortly after then itching on arms. Around min 15 ?lump? sensation in throat. Around min 20 swelling of tongue, worsening feeling in throat, wheezing, itching around mouth. Sent to ER, received IM Epi, IV: Steroids, Benadryl, Zofran, Pepcid, Albuterol inhaler.

Within 20 minutes after I had the vaccine I developed a sudden feeling of warmth in my upper body, most intense over my face and especially my neck and back. I was sweating too and I also developed palpitations and chest pressure.

About 45 minutes after inject upper lip and chin tingle and itches. about 45 minutes after injection was have tickling sensation in throat which followed into voice lost, chest tightness, decrease in expiration

efforts, occasional coughing , increase breathing and heart rate. Use albuterol inhaler and called for the on call doctor. took zyzal, zertex, benadryl, Prednisone, and use nebulizer

10 min after inj. started with tingling at inj site, progresses down arm then to other arm and across chest, started to feel tingling in throat. Initial BP was high at 152/86 P94. Pt asked to defer Benadryl as was driving and symptoms were already lessening. No flush no chest pain denied other symptoms. Next BP 115/78 P85. Then 10 min later 113/81 P80. After watching, pt discharged to home with instructions.

Muscle soreness

sat 12/19/20 , approx 2000 , started to feel hot, burning, and itchy. went to emergency room 12/20/20 at 1200pm , was taking Benadryl since onset of symptoms, given peptid, loratadine, and have continued these medication as directed , called PMD , given hydroxyzine 12/21/20 due to severe itching and burning feeling, and currently taking at directed,

Woke up with just a sore arm the following day. As time progressed my arm got more sore; the site was hot, with a red circle and lump under the skin. Headache, muscle and joint aches, fatigue. Treated with some Nyquil, Excedrin, and sleep. Onset was about 16 hours after the original dose. almost 2 days later I'm still very fatigued, although the rest of the pain has largely gone away.

Injection was made into tricep and not deltoid. Tingling started town right arm into right pinky. Tricep pain when lifting arm above head. Symptoms started within 1 hour of injection.

Had chills and body aches one day after vaccine. Symptoms resolved the day after.

Approx 5 min after vac. inj started with flush and tachycardia Initial BP 137/80 P129. Given 50 mg po Benadryl Repeat BP123/76 p91 @1135 No further sx BP 124/74 P91 DC stable

Dizzy, pinching feeling in left shoulder, tingling down left leg, pins and needles. Gave patient banana and water, checked pulse and observed. Patient started to resolve in 10-15 minutes, at 8 PM, resolved, pulse back to normal. Called Chief Medical Officer to consult, patient detained for 30 minutes before release, at patient request and CMO approval.

Nausea, vomiting, headache, back ache, dizziness.

About one week after the vaccine, body aches, chills and shortness of breath began to occur. Overall fatigue and general malaise also persistent.

Left arm soreness at the injection site on 12/23 at 7:45 am

Started w cough ~15 min after inj. Cough was progressing, unable to complete sentence w/o cough even after water. Agreed to take Benadryl as stated had had 2 anaphylactic responses when she lived in (-unable to determine that cause). Initail BP 153/91 P71 Recheck BP 145/93 P 69. Coughing decreased after Benadryl 50 mg po. No other sx. Dicussed letting PCP know and possibly premedicate before booster.

12/23/2020 sore injection site, Nausea, fatigue

Headache, redness below injection site, mild swelling

headache post immunization

Patient reported numbness on left side of tongue, being lightheaded, rash under chin and excessive secretions in the throat within 15 minutes of covid-19 vaccine administration. Vital signs were stable, O2 was 98% and BG was 225. Patient reported not taking his DM and BP medication prior to vaccination.

fatigue started day after vaccine given and continued through today (two days post vaccination).

10/10 left lateral hip cutaneous burning sensation that radiated to the inguinal region in a dermatomal distribution.

More than 24 hours after getting the vaccine I noticed warm spots on my arms and legs and noticed red raised blotchy spots where it was warm. At the injection site there is a very warm raised hard lump. I took Benadryl and it helped me sleep. It got more painful and warm and I was very uncomfortable. Its not as bad 16 hours later, however the swelling is still pretty bad at the injection site

Fever of 39. Chills shakiness severe fatigue Arm soreness

soreness at injection site

Pt. c/o moderate anxiety during vaccine. Around 15 mons after the vaccine , she c/o mild headache and stated she has history of HTN. She was hypertensive and her pulse was WNL. She was rechecked in 15 mins and her BP decreased and HR stable with continued headache. The patient denied any other symptoms and declined going to the ED. She left without further complaints 45 mins after her vaccine.

Chills, headache, extreme fatigue,joint and muscle aches

My jaw felt numb. I was lightheaded, and a felt nauseated

Pt c/o tachycardia and maybe anxiety. Pt is an MD. Tachycardia at 15 mins post vaccine- radial pulse 132 and BP 150/90. Denied other symptoms. Rechecked in 15 mins and HR 84-91 and BP 154/95. Continued to deny any other symptoms to include CP or SOB. No change in mental status. Declined treatment in ED. Kept and monitored for 15 more mins. and left 45 mins post vaccine. Continued to state maybe he was anxious

Silver dollar size whelp at injection site, rash, abdominal pain, fatigue, chest discomfort requiring use of inhaler

"Pt states night of vaccine on 12/22 she felt dizziness and ""incoherent"". This resolved by 12/23 and today is experiencing headache ""10"" on 0-10 pain scale, fatigue. Advised Urgent Care or ER and pt has declined."

Headache and significant fatigue

About 20-25 minutes after injection as I was walking out I felt slightly dizzy, hot and nauseous. Lasted about 5 minutes and I felt OK to go home, but I would not have felt safe to drive after that (I had a friend drive me). This after and evening any exertion, causes the same symptoms now with a mild headache. I feel fine sitting down, but even mild activity brings back the nausea and dizziness in particular.

9:22 am tingling/itching of throat, followed by dizziness/generalized weakness and lightheadedness. Rapid HR and elevated BP .

Local injection site pain Generalized myalgias/ache diffusely

Difficulty breathing, numbness of the lips, redness of the face

Pfizer dose 1 received 12/18/20 via left deltoid. 12/19/20 the injection site had a half dollar size of redness and edema and was warm to touch. 12/20/20 the edema decreased by half and became itchy like a mosquito bite. 12/22/20 redness barely noticeable at left deltoid. Still warm to touch and indurated.

Headache Extreme fatigue Generalized body aches

Numbness to the tip of the tongue, no loss of taste 2pm the day after vaccination 12/22/2020, resolved after 1 hour, but person took one dose each of prednisone 40mg/benadryl 25mg/pepcid 20mg. Numbness recurred on the tip of tongue again at 11:50 pm the same day 12/22/2020. same one dose of 3 meds as above taken, and the numbness subsided after 30 min. no loss of taste. no reports of recurrence on 12/23/2020 as of now (6:41 pm)

severe headache

Mild to moderate headache, muscle aches, fatigue, nausea, tender armpit

Body aches, fatigue, mild headache, scratchy throat, ?foggy? feeling, sore arm

Patient experienced severe nausea and vomiting within 10 to 15 minutes after vaccination was given by the pharmacist at the clinic at the on 12/21/20 in the morning. In the afternoon patient was back to her normal service as well as the following day.

Patient experienced an anaphylactoid reaction within 20 mins of receiving the vaccine. Patient is a physician and attempted to self treat with diphenhydramine. After a short time of seemingly no resolution patient presented to the Emergency Department. Patient was examined. Elevated BP was noted (192/100), flushing, difficulty swallowing, and strange sensation of mouth and tongue were also present. An ECG was preformed and sinus tachycardia was observed at 105bpm. Patient received IM epinephrine and PO dexamethasone. Symptoms resolved. Patient was observed for 3-4 more hours.

Injection site pain, low grade fever and chills, fatigue

Migraine headaches, nausea, dizziness

Edit: about an hour after my vaccine I began itching on my neck and got a scratchy throat. Then felt blisters in my mouth and felt a tingly feeling on my face. I had swelling in my eyes, jaw, lips, nose and tongue. And hives on my neck and chest. I went to my local ER and was given IV PEPCID, benedryl and a steriod. Swelling came down significantly and I was discharged home after about 2 hours with a steroid dose pack, Claritin and Pepcid. I now have a strong migraine.

RASH, ITCHING

Patient reports allergy to potassium as itching with a history of hives. Patient was aware of the risk vs benefit and potential of ADE due to allergies prior to receiving the vaccine. Patient was observed for 30 minutes. Patient experienced itching about 25 minutes post vaccine. Diphenhydramine 25mg was given to patient.

After the vaccine on 12/21/2020 , I experienced mild muscle aches and fatigue. 12/22/2]20,I felt fine. 12/23/2020 at work I experienced an acute onset of nausea and explosive diarrhea.

Shortness of breath, fatigue, headache, muscle pain, joint pain, chills, nausea, fever

Headache, sore injection site, tiredness, some nausea, feeling unwell,

I experienced dizziness onset 5 minutes after the vaccine, mild. lasting about an hour. That night I experienced intense vivid nightmares, chills and temp 96.0. Friday night, dec 18th, awoke form intense vivid nightmares at 2 am. chills. arm 7/10 pain at injection site, all day, no erythema. On saturday chills but no fever all day. At about 10pm abrupt onset of severe abdominal pain and prolonged projectile vomiting that awoke me from sleep after eating normal dinner that I shared w family none of whom were having similar symptoms. This lasted for about 90 minutes accompanied by severe abdominal pain. afebrile, 97.Dry cough started , lasting thru Sunday morning. spontaneously resolved. Sunday dec 20th, chills, nightmares, Monday chills, sweats, 96, 97 temps. Dec 22 Tuesday 3:30 am, awoke from sleep with sudden excruciating abdominal pain and dry heaves . Family shared Monday night meal, no other symptomatic people. <30 min started itchy palms, tingling lips, tongue, and face felt prickly. Eyes swollen, and sclera puffy bubbly. I took two 25 mg Benadryl w water, had trouble swallowing - immediately proceeded to Hospital ER - admitted - steroids IV, Pepcid, IV and in 4 hours when nausea and abdominal pain began again IV Zofran. 2 liters total of NS. discharge home around 12:30pm . stable to home to rest.

Hives, joint pain, elevated B/P, elevated HR, flushed upper body and tingling

Warm and dizzy with hypotension; feet up and juice given; transported to ED; improved with rest

Throat felt tight and sticky, difficulty swallowing, anxious, tingling from waist up

Day of shot Left arm was sore after few hours Suddenly felt chills Around 930 pm and muscle ache then joint pain by 1030 pm Feverish but no fever Felt so weak by 11 pm Next day Woke up with joint pain and muscle pain slowly went away after advil came back around 7 pm then took advil by 8 pm all pain disappeared

Chills started at 1730, day of vaccine. Fever of 100.2 at 2100. Tylenol taken. Fever Returned at 0315 on 12/21/2020. Tylenol taken once more. Woke up with fatigue and mild fever at 0845 on 12/21/2020 of 99.9. Tylenol taken once more. Chills and fatigue through out the entire day of 12/21/2020.

The patient is a 57 year old female who presents to the ED with an allergic reaction. Patient received her COVID vaccine this morning at a vaccine POD at 0708, 5 minutes after receiving the injection she began to feel short of breath, with dry cough and felt tightness in her throat. Patient used her inhaler at that time and then her symptoms improved. Of note patient also took a Benadryl prior to receiving the vaccine because she has a history of allergies (reports allergy to codeine). She was evaluated by people at Covid vaccine site and cleared. She went to work at the clinic where she works as a tech but continued to have tightness in her throat, so a doctor at the facility told her to take another Benadryl. Patient states that an hour after taking the second dose of Benadryl she began to feel drowsy and nauseous. She had a sip of coffee and try to eat something but then became tremulous and vomited. She was given epinephrine at work and transferred here for further work-up and management. On arrival patient reports that she feels back to baseline. She denies at any time having any rash, pruritus, or angioedema.

Heart palpitations

Vaccination to right deltoid; 7 days later developed diminished grip strength in right hand, right thoracolumbar muscle spasm with tingling radiculopathy to right hand and leg

Hot; Cold sweats/having night sweats, like she was hot and cold; Cold sweats/having night sweats, like she was hot and cold; Chills; Shakes; intense nausea/ nauseous; just feels nauseous and depleted; it feels like she has the flu; she didn't know if maybe her body was low on oxygen, she didn't feel out of breath, but she just didn't feel well overall; This is a spontaneous report from a contactable other healthcare professional. A 27-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EH9899, expiry: Mar2021), via intramuscular route of administration (left deltoid) on 17Dec2020 17:40 at a single dose for COVID-19 immunisation. The patient's medical history included sulfa drug allergies. There were no concomitant medications used. The patient was having some intense nausea, and throughout the night, she had night sweats. It was further stated that she woke up a 12AM, today (18Dec2020), and she just felt like she had the flu. She was nauseous, and she was having night sweats, like she was hot and cold, and she tried to go back to sleep, but then she had an episode of chills and the shakes, and every time she was about to fall asleep, it was like her body would wake her up. Patient stated that in her mind, she didn't know if maybe her body was low on oxygen, she didn't feel out of breath, but she just didn't feel well overall. All these persisted until about 3AM, and then she went back to sleep. She woke up for the day around 530AM, and she feels a little better now, like she doesn't have the hot and cold fever feeling anymore, she just feels nauseous and depleted. She stated that she sees on her information sheet that these are possible side effects to getting the vaccine, but it feels like she has the flu. Outcome of the events was unknown. Follow-up attempts are completed. The following information on the batch number has been requested.

Anaphylaxis; This is a spontaneous report from a contactable pharmacist. A 55-year-old female patient received the bnt162b2 (BNT162B2; also reported as: PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at a single dose for COVID-19 immunization. The patient's medical history included eosinophil process allergic reaction, fish, iodine and shellfish allergy; all from an unknown date and unknown if ongoing. Concomitant medications were not reported. The patient previously took rabies vaccine for immunization and experienced anaphylactic reaction on an unspecified date. On 17Dec2020, the patient experienced anaphylaxis; which required hospitalization, and was assessed as medically significant. The patient was hospitalized for anaphylaxis from 18Dec2020 to an unknown date. The clinical course was reported as follows: The pharmacist called about a patient who received the COVID-19 vaccine on 17Dec2020 and started having a reaction approximately 30 minutes later. The patient used epinephrine (EPIPEN) and 50 mg of diphenhydramine hydrochloride (BENADRYL) and returned to the hospital on 18Dec2020. The patient was currently in the intensive care unit (ICU) receiving an epinephrine drip. The patient had a previous history of an anaphylactic reaction to the rabies vaccine, eosinophil process allergic reaction, fish, iodine and shellfish allergy. The patient was stabilized but continued to have reactions (not specified). The pharmacist had not seen the patient and was reaching out to Pfizer on behalf of the physicians. The pharmacist believed this had been reported by the hospital. The pharmacist had no patient information. Therapeutic measures were taken as a result of anaphylaxis. The clinical outcome of the event, anaphylaxis, was unknown. The batch/lot numbers for the vaccine, BNT162B2, were not provided and will be requested during follow up.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event anaphylaxis due to temporal association. However patient previous history of allergic reaction cannot be excluded to have played a contributory role

"started to feel a warmth in her chest and abdomen; She felt like her heart was racing; Developed chest pain; This is a spontaneous report from a contactable other HCP (healthcare professional). A 45-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot #: EJ1685), intramuscularly in the left arm on 18Dec2020 at 15:30 (at the age of 45-years-old) as a single dose for COVID-19 vaccination. Medical history included known allergies to apple, cantaloupe, peach, avocado and IV contrast dye; all from unspecified dates. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications included ongoing famotidine and salbutamol (ALBUTEROL HFA) as needed (PRN); both for unknown indications from unknown dates. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient previously received hydromorphone (DILAUDID) and triamcinolone acetonide (KENALOG); both from unknown dates to unknown dates for unknown indications and experienced allergy. The patient also previously received diphtheria vaccine toxoid/pertussis vaccine acellular/tetanus vaccine toxoid (TdaP) vaccine on an unknown date for immunization and experienced allergy. On 18Dec2020 at 15:45, the patient started to feel a warmth in her chest and abdomen, she felt like her heart was racing, and developed chest pain. It was reported that ""patient started to feel a warmth in her chest and abdomen. She felt like her heart was racing. Developed chest pain. No shortness of breath or difficulty swallowing"". It was unknown whether the patient received any treatment for the events. It was reported that the adverse events resulted in emergency room/department or urgent care visit. It was also reported that the events were non-serious

and did not cause or prolong hospitalization. The clinical outcomes of the events started to feel a warmth in her chest and abdomen, she felt like her heart was racing and developed chest pain were all unknown. It was unknown whether the patient had been tested for COVID-19 since the vaccination."

dry cough; low grade fever/he had a low grade temperature of 99.0 Fahrenheit last night and 101.0 Fahrenheit this morning; body pain; body weakness; This is a spontaneous report from a contactable Nurse A 50-years-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in the left arm on 16Dec2020 10:30 at single dose for covid-19 immunisation. Medical history was none (no relevant patient or family medical history). The patient's concomitant medications were not reported. On 17Dec2020 the patient experienced low grade fever, temperature of 99.0 F on 17Dec2020 and 101.0 F on 18Dec2020, body pain and weakness with outcome of not recovered. On unknown date the patient experienced also cough with unknown outcome. The event fever was considered serious as medically significant and was reported as worsened. The reporter wanted to know what to do. The caller read somewhere not to take Tylenol, though he did take one this morning. He was to increase fluid intake but what other treatment was recommended. Information on Lot/Batch has been requested.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, fever, body pain, cough and weakness there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Nausea; Vomiting; Chills; Migraine like headache; This is a spontaneous report from a contactable consumer (patient). A 32-year-old female patient (not pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/lot number: unknown), via an unspecified route of administration (left arm) from 18Dec2020 (01:15 PM) to 18Dec2020 13:15 at single dose for COVID-19 immunization. The patient's medical history included PDA (Patent ductus arteriosus) ligation, fatty liver disease, and anxiety. Concomitant medications included melatonin, escitalopram oxalate (LEXAPRO), balsalazide sodium (BALZIDE), multivitamin, and prebiotic. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No known allergies. The patient was not diagnosed with COVID-19 prior to vaccination. The patient has not been tested for COVID-19 since the vaccination. The patient experienced nausea, vomiting, chills, and migraine like headache the night after she received the vaccine (18Dec2020 07:00 PM). There was no treatment received for the reported adverse events. The outcome of events was recovering. This case is reported as non-serious. Information on the lot/batch number has been requested.

body ache; muscle and joint pain; muscle and joint pain; fever; injection site pain; chills; headache; This is a spontaneous report from a contactable consumer. A non-pregnant 20-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EJ1685), via an unspecified route of administration in the right arm on 18Dec2020 10:15 at single dose for COVID-19 immunization. Medical history included COVID-19 (prior to vaccination). Concomitant medication included ethinylestradiol, norgestimate (SPRINTEC). No other vaccinations were given within four weeks

and the patient had no known allergies. On 18Dec2020 23:30, the patient experienced body ache, muscle and joint pain, fever, injection site pain, chills and headache. No treatment was received for the events. The clinical outcome of body ache, muscle and joint pain, fever, injection site pain, chills and headache was recovering.

Fever; Shortness of breath; Headache; Muscle ache; This is a spontaneous report from a contactable consumer (patient). A 24-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EH9899, expiration date unknown, 1st dose via an unspecified route of administration on 18Dec2020 14:00 at a single dose at right arm for COVID-19 immunization. Medical history included penicillin allergy. There were no concomitant medications. The patient experienced fever, shortness of breath, headache and muscle ache on 19Dec2020 01:00 am. There was no treatment received for the events. The patient underwent lab tests and procedures on 19Dec2020 which included COVID test post vaccination (Nasal Swab): unknown result (pending). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine and no other medications received within 2 weeks of vaccination. Prior to vaccination, the patient was diagnosed with COVID-19 and since the vaccination, the patient has been tested for COVID-19. The action taken in response to the events was not applicable. The outcome of the events was recovering.

it felt as if pulsing was radiating was coming from the upper middle of my spine; feeling really achy in shoulders both arms and neck; left arm hurt with any motion; feeling really achy in shoulders both arms and neck; feeling really achy in shoulders both arms and neck; This is a spontaneous report from a contactable healthcare professional. A 28-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EH9899), intramuscularly in the left arm on 16Dec2020 12:00 at a single dose for COVID-19 immunization. Medical history was none. The patient's concomitant medications were not reported. There was no known allergies. On 16Dec2020 at 16:00, the patient experienced feeling really achy in shoulders both arms and neck and left arm hurt with any motion. On 17Dec2020, it felt as if pulsing was radiating, coming from the upper middle of spine. No treatment was received for the events. The outcome of the events was recovered with sequel on an unspecified date.

fine rash noted Saturday evening on arms and chest w /slight itchiness; occasional itchiness on Friday w/ no rash noted/fine rash noted Saturday evening on arms and chest w /slight itchiness; face felt prickly and itchy; face felt prickly and itchy; This is a spontaneous report from a contactable nurse (the patient). A 54-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot EH9899, via Intramuscular route of administration in right arm, on 17Dec2020 at 16:30, at single dose for COVID-19 immunization. The vaccine was administered at Hospital Facility. The patient did not receive other vaccine in four weeks. The patient medical history included sinus infections and past history of mono. The patient had allergy to kindest care hand sanitizer, alcare and eucerine hand cleanser. The patient's concomitant medications included ascorbic acid, zinc oxide (IMMUNE BOOST OTC). The patient on 17Dec2020 at 17:15, felt face prickly and itchy. No airway distress. Benadryl was administered at 22:30 that night. Physician was made aware. Occasional itchiness was observed on 18Dec2020. No rash noted. Fine rash was noted on 19Dec2020 evening on arms and chest with slight

itchiness. No Covid-19 was diagnosed prior vaccination. Covid-19 was not tested. The outcome of the events was resolving.

Body aches; Muscle pain; Chills; Headache; Fatigue; This is a spontaneous report from a contactable consumer reporting for herself. A 28-year-old female patient received the 1st dose of bnt162b2 (BNT162B2, Manufacturer Pfizer-BionTech), via an unspecified route of administration, on 18Dec2020 at 12:00 PM, at single dose, for Covid-19 immunisation. Medical history was none. Concomitant included an unspecified birth control medication within 2 weeks of vaccination. The patient experienced body aches, muscle pain, chills, headache and fatigue all on 19Dec2020 at 07:00 AM with outcome of recovering. No therapeutic measures were taken as a result of the events. The events were considered non serious. The information on the lot/batch number has been requested.

arm pain at injection site; redness from injection site up over shoulder; Tired; chills; body aches; This is a spontaneous report from a contactable consumer (patient). A 42-year-old female patient (not pregnant) received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot/batch number and expiration date not provided), via an unspecified route of administration on 17Dec2020 at 12:45 on arm at single dose for COVID-19 immunization. The patient medical history included SVT (Supraventricular tachycardia) with ablation, silicone sensitivity. Prior to vaccination, patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. There was no any other medications patient received within 2 weeks of vaccination. The patient experienced tired, chills, body aches, arm pain at injection site, redness from injection site up over shoulder, all on 17Dec2020. All gone within 48 hours of injection. Since the vaccination, patient had not been tested for COVID-19. No treatment was received for the events. The outcome of the events was recovered in Dec2020 within 48 hours of injection. The report was reported as non-serious. Information on the lot/batch number has been requested.

Redness in cheeks, greater on (opposite side from injection) right cheek; Mild swelling on right cheek; This is a spontaneous report from a contactable nurse reporting for herself. A 37-year-old female patient received the 1st dose of bnt162b2 (BNT162B2) (Manufacturer Pfizer-BionTech, lot# EJ1685), intramuscular in arm left, on 19Dec2020 at 12:00 PM, at single dose, for COVID-19 immunisation. Medical history included type 1 diabetes mellitus and hypothyroidism both from an unknown date and unknown if ongoing. The patient had no known allergies. The patient was not pregnant. Concomitant medications included insulin lispro (HUMALOG), levothyroxine (unknown manufacturer), ascorbic acid (VIT C), folic acid (unknown manufacturer), minerals nos, vitamins nos (PRENATAL VITAMINS) dexamethasone (DECADRON), metoclopramide (REGLAN), ondansetron (ZOFRAN), propofol (unknown manufacturer), midazolam hydrochloride (VERSED) fentanyl (unknown manufacturer). The patient experienced redness in cheeks, greater on (opposite side from injection) right cheek on 19Dec2020 at 12:30 PM with outcome of recovering and mild swelling on right cheek on 19Dec2020 at 12:30 PM with outcome of recovering. Therapeutic measures were taken as a result of the events which included Benadryl 25 mg oral. The events were considered non serious.

After 2 hours of receiving the Vaccine I got joint pain, tiredness, and severe headache. It's been more than 24 hours and I'm still having the same symptoms.; After 2 hours of receiving the Vaccine I got joint

pain, tiredness, and severe headache. It's been more than 24 hours and I'm still having the same symptoms.; After 2 hours of receiving the Vaccine I got joint pain, tiredness, and severe headache. It's been more than 24 hours and I'm still having the same symptoms.; This is a spontaneous report from a contactable consumer and contactable other-Health Care Professional (HCP). A 33-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration in the left arm on 18Dec2020 07:45 PM (at the age of 33 years-old) as a single dose for COVID-19 vaccination. Medical history was unknown. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported; however, there were no other medications the patient received within 2 weeks of the vaccination. The patient did not receive any other vaccine within 4 weeks prior to the vaccine. On 18Dec2020 at 09:30 PM, the patient experienced joint pain, tiredness, and severe headache. The report was reported as non-serious. Treatment was not received for joint pain, tiredness, and severe headache. The clinical outcome of joint pain, tiredness, and severe headache was not recovered. It was also reported that since the vaccination, the patient had not been tested for COVID-19. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

flush; fast heartbeat (120bpm); rash; nausea; dizzy, lightheaded; feeling unwell; This is a spontaneous report from a contactable consumer (patient). A 25-year-old female patient (pregnant: no) received first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date unknown) via an unspecified route of administration at arm left on 19Dec2020 11:45 at single dose for covid-19 immunization. The patient medical history was not reported. Concomitant medication included celecoxib (CELEXA), ethinylestradiol and etonogestrel (NUVARING) received within 2 weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient previously took cefalexin(KEFLEX) and cefdinir(OMNICEF) and experienced allergies. The patient experienced flush, fast heartbeat (120bpm), rash, nausea, dizzy, lightheaded, feeling unwell on 19Dec2020 12:00 PM, the events resulted in emergency room/department or urgent care. Treatment of Benadryl received for the events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of the events was recovered in Dec2020. Information on the lot/Batch number has been requested.

I got increasing pain at my injection site, it was very sore. The soreness spread through my muscles; I got increasing pain at my injection site, it was very sore. The soreness spread through my muscles; headache; general fatigue; This is a spontaneous report from a contactable consumer (patient herself). A 23-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number EJ1685), via intramuscular in the left arm, as first single dose on 04Dec2020 (at 17:30) for COVID-19 immunisation. Relevant medical history included allergy to Latex. Relevant concomitant medications included loratadine (CLARITIN), birth control and multivitamin. The patient stated 'I got the vaccine on Friday and today (Saturday) half way through my shift at around 3:00 pm I got increasing pain at my injection site, it was very sore. The soreness spread through my muscles and I got a headache and general fatigue''. The patient did not perform a Covid test prior vaccination but after vaccination Nasal

Swab, COVID test, Rapid PCR was Negative. The patient was not treated for the events. She was recovering from the events. Information on lot/batch number has been requested

Injection site pain 14 hours after with body aches; 28 hours after fevers 102 sever body aches rigors; Injection site pain 14 hours after with body aches; 28 hours after fevers 102 sever body aches rigors; This is a spontaneous report from a contactable physician (patient himself). A 27-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via intramuscular on the left arm, as first single dose on 18Dec2020 (at 12:45) for COVID-19 immunisation. Relevant medical history included acid reflux and allergy to cats. Relevant concomitant medications included omeprazole (PROTONIX). 14 hours after vaccination, the patient had injection site pain with body aches. 28 hours after vaccination, he had fevers 102, sever body aches and rigors. However, it was reported that onset of the events was on 19Dec2020 at 17:00. The patient did not have loss of smell, SOB, dyspnea, loss of taste or diarrhea. The patient did not perform COVID test prior or after vaccination. No treatments were given for the events. The patient was recovering from the events. Information on the lot/batch number has been requested.

"Felt lightheaded and dizzy.; Felt lightheaded and dizzy.; skin pale; very fatigued; she was currently breastfeeding; she was currently breastfeeding; This is a spontaneous report from a contactable health care professional. A 34-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), intramuscularly on 18Dec2020 (at the age of 34-years-old) as a single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. It was unknown if the patient received any other vaccines within 4 weeks prior to the vaccination. It was unknown if the patient was pregnant at the time of vaccination. Prior to vaccination, it was unknown if the patient was diagnosed with COVID-19. On 18Dec2020, the patient felt lightheaded and dizzy and was brought to the observation area, ambulatory. She denied shortness of breath, itching or difficulty swallowing. No rash was noted, but the skin was pale. Water was provided to the patient. It was reported that the patient was currently breastfeeding, was very fatigued, probably dehydrated and had not eaten breakfast. She stayed in the observation area until 10:37, drank a total of 3 bottles of water and was up to the restroom ambulating on her own. Her blood pressure was 131/83, heart rate was 83 and ""100% on RA"" as reported. She left ambulatory to drive home and was informed to notify the appropriate person of this episode prior to a second dose of vaccine. It was unknown if treatment was received for the events ""felt lightheaded and dizzy"", ""skin pale"", and ""very fatigued"". Since the vaccination, it was unknown if the patient had been tested for COVID-19. The patient recovered from the events ""felt lightheaded and dizzy"", ""skin pale"", and ""very fatigued"" on an unspecified date in 2020, while the clinical outcome of ""she was currently breastfeeding"" was unknown. No follow-up attempts are possible; information on lot/batch cannot be obtained.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020504266 mother/baby case, same reporter /drug , different patient"

"Right wrist swollen and painful; Right wrist swollen and painful; Immediate itchy rash on lower left arm between wrist and elbow; This is a spontaneous report from a contactable consumer (the patient). A 55-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, lot number BH9899), via an unspecified route of administration in the left arm on 17Dec2020 at 10:00 (at the age of 55-years-old) as a single dose for COVID-19 immunization. Medical history included rheumatoid arthritis (RA), penicillin allergy, and contact dermatitis to multiple agents. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications included: prednisone, leflunomide (ARAVA), hydroxychloroquine sulfate (PLAQUENIL), meloxicam, ""and more"" (as reported, unspecified), all for unknown indications from unknown dates and unknown if ongoing. The patient did not receive any other vaccine within 4 weeks prior to the vaccine. On 17Dec2020 at 10:30, the patient experienced immediate itchy rash on lower left arm between wrist and elbow. On day 2 post vaccine (19Dec2020),

her right wrist was swollen and painful. The patient did not receive any treatment for the events. The clinical outcome of immediate itchy rash on lower left arm between wrist and elbow and right wrist swollen and painful was not recovered. It was also reported that since the vaccination, the patient had not been tested for COVID-19."

Developed pain and swelling in right index finger late evening after injection of vaccine, same side as vaccine injection; Developed pain and swelling in right index finger late evening after injection of vaccine, same side as vaccine injection; This is a spontaneous report from a contactable physician (the patient). A 68-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, lot number EH9899), intramuscularly in the left arm on 18Dec2020 at 17:15 (at the age of 68-years-old) as a single dose for COVID-19 immunization. Medical history included hypertension and history of prostate cancer. The patient did not have any allergies to medications, food, or other products. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported. The patient did not receive any other vaccine within 4 weeks prior to the vaccine. On 18Dec2020 at 23:00, the patient developed pain and swelling in his right index finger late evening after injection of the vaccine, on the same side as vaccine injection (as reported). The patient was treated for pain and swelling in his right index finger with ibuprofen 600 mg (MANUFACTURER UNKNOWN). The clinical outcome of pain and swelling in his right index finger was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19.

Soreness at injection site; This is a spontaneous report from a contactable consumer (patient) and healthcare professional (HCP). A 52-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE) solution for injection via an unspecified route of administration on 18Dec2020 at 10:30 (at the age of 52-years-old) as a single dose for COVID-19 vaccination. The patient was not pregnant at the time of vaccination. Medical history included HTN (hypertension) and known allergies sulfa. Concomitant medications included pneumococcal vaccine polysaccharide 23valent (PNEUMOVAX 23) on 14Dec2020 in right deltoid and varicella zoster vaccine RGE (CHO) (SHINGRIX) on 14Dec2020 in left deltoid. The patient did receive other vaccines (PNEUMOVAX 23 and SHINGRIX) within 4 weeks prior to the vaccine. Prior to the vaccination, the patient was not diagnosed with COVID-19. On 18Dec2020, the patient experienced soreness at injection site. No treatment was provided for the event soreness at injection site. The outcome of the event soreness at injection site was recovered in Dec2020. Since the vaccination, the patient has not been tested for COVID-19. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

Arm felt tingly after; This is a spontaneous report from a non-contactable nurse. A 30-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, Lot EK5730) solution for injection intramuscular in the left arm on 20Dec2020 at 12:30 (at the age of 30-years-old) as a single dose for COVID-19 vaccination. The patient was not pregnant at the time of vaccination. There was no medical history. There were no concomitant medications. The patient had no known allergies to medications, food, or other products. The patient did not receive any other vaccine within 4 weeks prior to the vaccine. Prior to the vaccination, the patient was not diagnosed with COVID-19. On 20Dec2020 at 12:30, the patient experienced arm felt tingly after. No treatment was provided for the event arm felt

tingly after. The outcome of the event arm felt tingly after was recovered in Dec2020. Since the vaccination, the patient has not been tested for COVID-19. No follow-up attempts are possible. No further information is expected.

"patient's several members of family tested positive for COVID 19 virus and was potentially exposed; it was like she got the flu/whole flu like symptoms; Sore throat; Joint ache; Body ache; Low grade fever; Running nose; Terrible headache; Laryngitis; Muscle ache; Loss of smell; Chest discomfort; Joint discomfort; This is a spontaneous report from a contactable nurse. A 53-year-old female patient started to receive bnt162b2 (reported as Pfizer-BioNtech vaccine; lot number: EH9899), intramuscular on left arm on 18Dec2020 at single dose for COVID-19 immunization. Medical history included migraine, arthritis, gastritis, and esophageal spasms all from unknown dates and unknown if ongoing. Concomitant medications included dicyclomine, biotin, tocopherol (VITAMIN E [TOCOPHEROL]), and ergocalciferol (VIT D). Patient reported getting the vaccine and is now having a reaction. Patient stated that she got the COVID vaccine on 18Dec2020 at 7 in the morning and she started to get sick 5 in the morning the next day. Patient stated she worked night shift the next day and got sick and it was like she got the flu from the shot. When the above concern was paraphrased, the patient stated, ""Yes I had all of my joint ache, body ache, I had low grade fever, running nose, terrible headache, just whole flu like symptoms"". The patient was informed the role of the Pfizer Drug Safety and permission to probe was asked from the patient. Patient also stated, ""Yes, I always get my flu shot every year for many years, two other times I have been sick from the flu shot (Further clarification was Unknown) and it was like this it was like the flu and I believe this because of the shot but you know I mean I still think it would have been, I think it is better than having received COVID itself"". Patient mentioned taking turmeric. Patient mentioned that she had a COVID test done on Thursday at the clinic that she works at and that must have been negative because nobody contacted her and it was just they do random testing because of the patients she works with. Patient further stated ""I got my vaccine between 7-8 am mornings Friday morning and then around 5 am on Saturday morning, I started feeling really bad and then when I woke up at 4 in the afternoon I was done. It is probably, yes 18Dec, 7 or 8 in the morning I got the shot and then 19Dec at 5 am is when I started getting sick, by the evening I was full grown sick and I had to call I am sick because I couldn't pull another 12 hour shift"". The patient also reported that she was much better today (unspecified date), had a sore throat and headaches but her joint pains were better, and she has no fever not even low grade fever. It was further stated that the patient received first dose of Pfizer-BioNtech vaccine on Friday 18Dec2020. Developed symptoms on Sat 19Dec2020 which included ""sore throat, laryngitis, muscle ache, loss of smell, chest discomfort, low grade fever, joint discomfort"". Patient mentioned that she took Theraflu and NyQuil. Patient also stated, ""And the only other question is because when I called up to work to tell them to give me COVID a day for COVID pay because it was COVID related and they said they were not sure if they could. This is COVID related they should pay me for a day of COVID pay, correct. Who would know that?"". It was also found out ""recently"" that patient's several members of family tested positive for COVID 19 virus and was potentially exposed. It was asked that if patient gets tested for COVID virus, will she be positive because of receiving the Pfizer-BioNtech vaccine and can patient test positive for COVID 19 virus after receiving the Pfizer-BioNtech vaccine. Outcome of the event 'Low grade fever' was recovered, unknown for event

'patient's several members of family tested positive for COVID 19 virus and was potentially exposed', while recovering for the remaining events."

had 1 episode of shortness of breath; tachycardia; dizziness / light headedness; This is a spontaneous report from a contactable consumer reporting for herself. This 29-year-old female patient (non-pregnant) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 19Dec2020 at 15:30, at single dose, for COVID-19 immunization. No other vaccine was given within 4 weeks prior to the COVID vaccine. Medical history was not reported. The patient was not diagnosed with COVID before vaccination. Concomitant medications included vitamin C and sambucus nigra fruit (ELDERBERRY) and unspecified multivitamin and immune support. On 19Dec2020 at 23:30 the patient experienced one episode of shortness of breath, tachycardia, dizziness. Lasted for about 20 minutes and totally resolved within 1.5 hours. Continuing to have light headedness 24 hours after. Emergency room/department or urgent care required. No treatment was given. COVID was tested post vaccination on 20Dec2020 via nasal swab (rapid test), with negative result. The events were resolving. Information on the lot/batch number has been requested.

Near syncopal episode the morning after; Extreme fatigue; generally unwell; body aches; nausea; chills; ear fullness; abdominal pain; This is a spontaneous report from a contactable consumer (patient). This 26-year-old female consumer received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Lot number EJ1686, at single dose on 17Dec2020 08:00 on left arm for COVID-19 immunisation. Medical history included Environmental allergies, childhood asthma. The patient had no covid prior vaccination. The patient did not have covid tested post vaccination. The patient had no known allergies. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Concomitant medication included cetirizine hydrochloride (ZYRTEC), birth control, multivitamin. The patient experienced Extreme fatigue, generally unwell, body aches, abdominal pain, nausea, chills, ear fullness. Near syncopal episode the morning after on 18Dec2020. No treatment was received for all events. The outcome of the events was resolving.

"blister on her index finger; injection site is ""typical bruise looking and is tender; injection site is ""typical bruise looking and is tender; This is a spontaneous report from a contactable physician (who is also the patient). This female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunisation. Relevant medical history and concomitant medications were not reported. On an unspecified date, the patient noticed a blister on her index finger and said it was a round, red, raised, red spot on the index finger of the same side of her vaccination. She also stated that the injection site was typical bruise looking and was tender but did not look red or raised. The outcome of the events was unknown. The information on Lot /Batch Number has been requested."

Disequilibrium; This is a spontaneous report from a contactable nurse (patient). This 38-years-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular, on 18Dec2020 at 04:00 PM at single dose for COVID-19 immunisation. Vaccine location was right arm. The patient was vaccinated at hospital, age at vaccination was 38-years-old. No other vaccine was received in four weeks. Medical history was none. Concomitant medications were unknown. On 20Dec2020, the

patient experienced disequilibrium. The event was reported as non-serious. The patient was tested for Covid post vaccination through a nasal swab on 20Dec2020, results are unknown. Outcome was recovering. No treatment was received for the event. Information on the lot/batch number has been requested.

Chills; sweating; Fever (99.1F) started at 22 hours and peaked at 99.9 (approximately 32 hours after vaccine administration); Diarrhea at 18 hours after administration; Injection site pain; Muscle aches; fatigue; severe nausea (no vomiting); mental fog (last about 4-6hrs); Within one minute: tachycardia (lasted about 3mins); dizziness (lasted 4-6hrs); weakness (lasted 12hours); This is a spontaneous report from a contactable consumer reported for herself. A 27-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose for COVID-19 immunization on 17Dec2020 at 19:30 via unspecified route of administration at the right arm in the hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient haven't known allergies. About 7 years ago the patient had received HPV vaccine on unknown date and she experienced reaction to excipient. Within one minute the patient experienced tachycardia (lasted about 3mins), mental fog (last about 4-6hrs), dizziness (lasted 4-6hrs), and weakness (lasted 12hours). Starting 15mins after vaccine, severe nausea (no vomiting) that last two hours. Muscle aches and fatigue started at two hours after vaccine administration. Injection site pain started 6hrs after administration. On 18Dec2020 chills and sweating. Fever (99.1F) started at 22 hours and peaked at 99.9 (approximately 32 hours after vaccine administration). Due to fever, other symptoms, and recent exposure to COVID at place of employment, COVID nasal swab was done on 19Dec2020 at 1300 to rule out possible active diagnose. Test pending at this time. Tylenol administered to reduce fever and symptoms. Outcome of events at the time of last observation was reported as recovering. Information about lot/batch number has been requested.

Left arm start swelling at the injection site and down to the elbow around 5:30pm; This is a spontaneous report from a contactable consumer reporting for herself. A 47-years-old female patient received bnt162b2 (BNT162B2; Lot #Eh9899) vaccine, via an unspecified route of administration in the left arm on 20Dec2020 10:00 at single dose for covid-19 immunisation . Medical history included hypertension from an unknown date , migraine from an unknown date , partial seizures from an unknown date , intracranial aneurysm from an unknown date. Concomitant medication included spironolactone (SPIRONOLACTONE), hydrochlorothiazide, triamterene (TRIAMTERENE & HCTZ), estradiol (ESTRADIOL). The patient was allergic to lisinopril , amlodipine , gentamicin sulfate; methylmethacrylate;polymethylmethacrylate;zirconium dioxide , zonisamide . The patient left arm start swelling at the injection site and down to the elbow around 5:30pm with outcome of recovering.

Generalised rash; Injection 15 mins later developed generalized rash, palpitations and rash to face. I had to go home and take medication.; Injection 15 mins later developed generalized rash, palpitations and rash to face. I had to go home and take medication.; This is a spontaneous report from a contactable Nurse for herself. A 29-years-old female patient received bnt162b2 (BNT162B2; Lot # FJ1685) vaccine , intramuscular in the right arm on 19Dec2020 08:00 at single dose for covid-19 immunisation . Medical history included drug hypersensitivity from an unknown date , food allergy from an unknown date , allergy to metals from an unknown date. The patient 15 mins after the injection developed generalized

rash, palpitations and rash to face. and had to go home and take medication. The outcome of the event was recovered.

I feel a little Tachycardia; This is a spontaneous report from a contactable nurse reporting for him/herself. A patient of unspecified age and gender received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient experienced felt a little tachycardia on an unspecified date with outcome of unknown. The heart beat was 101 and body temperature was 97.7 F. The patient asked if she should go see her doctor or the emergency room or should she wait. Information about lot/batch number has been requested.

His blood pressure keeps going up right now it is like 191/111, which is really high; Has been experiencing like severe headache for the past two days; This is a spontaneous report from a contactable consumer. A 54-years-old male patient (reporter boyfriend, anesthesiologist) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in Dec2020 at single dose for covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient experienced severe headache for the past two days and his blood pressure keeps going up on Dec2020 with outcome of not recovered. On unspecified date the blood pressure was like 191/111, which was really high. As treatment the patient took some type of analgesic, ibuprofen (MOTRIN) or something, and he also took Propranolol to try to get his blood pressure down but it kept going up. The patient underwent COVID test on unspecified date with unknown results. Information on lot/batch number are requested.

I began intense itching & redness that began in hands & feet, then head, arms back of neck then torso turned red and itchy; I began intense itching & redness that began in hands & feet, then head, arms back of neck then torso turned red and itchy; This is a spontaneous report from a contactable consumer, the patient. A 52-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration on 20Dec2020 at 14:30 (at the age of 52 years old) as a single dose in the left arm for COVID-19 vaccination. Medical history included asthma from an unknown date. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. No known allergies. Concomitant medication included progesterone (PROGESTERONE), estriol (ESTRIOL), diazepam (VALIUM) all for unknown indications from unknown dates and unknown if ongoing. The patient did not receive any other vaccines within four weeks prior to the vaccination. The vaccine was given at a hospital. On 20Dec2020 at 19:00, the patient experienced she began intense itching & redness that began in hands & feet, then head, arms back of neck then torso turned red and itchy. The event resulted in a doctor or other healthcare professional office/clinic visit. The patient received treatment for the events which included steroids and benadryl. The clinical outcome of began intense itching & redness that began in hands & feet, then head, arms back of neck then torso turned red and itchy was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

tachycardia (HR 150s); hypertension (BP 180/110s); This is a spontaneous report from the contactable nurse. A 45-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date were not reported), via an unspecified route of administration on 17Dec2020 at a single dose for COVID-19 immunization. The patient's medical history included COVID-19 from Sep2020. Concomitant medications were not reported. On 17Dec2020, approximately 5 min after receiving the vaccine, the patient experienced tachycardia (HR 150s) and hypertension (BP 180/110s). Therapeutic measures were taken as a result of the events and included treatment with labetolol. Outcome of the events was unknown. Information about lot/batch number are requested.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, tachycardia and hypertension, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Headache and injection site pain; Headache and injection site pain; This is a spontaneous report from a contactable consumer. An approximately 40 year old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration on 17Dec2020 (at the age of 40 years-old) as a single dose for COVID-19 vaccination. Medical history was unknown. The patient's concomitant medications were not reported. On an unknown date, the patient experienced injection site pain and headache. The clinical outcome of injection site pain and headache was unknown. No follow up attempts are possible; information about lot/batch number cannot be obtained.

little fatigue on first two days; This is spontaneous report from a contactable consumer. A patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), unknown route, on 15Dec2020 at single dose for COVID-19 immunisation. Medical history and concomitant drugs were unknown. The patient reported so far there are no side effects except little fatigue on first two days from 15Dec2020. The action taken in response to the events for BNT162B2 was not applicable. The outcome of the events was recovered on 17Dec2020 Information about lot/batch number has been requested.

"left ankle is very swelling, redness, it's very painful; left ankle is very swelling, redness, it's very painful; left ankle is very swelling, redness, it's very painful; This is a spontaneous report from a contactable physician (patient). A 66-years-old male patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), Batch/lot number unknown, intramuscularly from an unspecified date (at the age of 66-years old) as a single dose (reported as I think it was 0.5 ml they gave me some card, normally it is 0.5 ml I believe, I don't know) for covid-19 immunization. Medical history included mild hypertension for which he was on blood pressure very low dose like 50 mg from an unknown date and unknown if ongoing. The patient is very active, four days of gym. He is not obese, not a smoker and doesn't drink. Concomitant medication included losartan. The physician reported he worked for the hospital so was exposed to COVID-19 patients. The hospital offered the COVID-19 vaccination and he got it on Friday like 1 O clock on unspecified date and since this morning like 3am (03:00) on unspecified date, his left ankle

is very swelling, redness, it's very painful. He read about the side effect its says joint swelling. ""I never had problem like gout or any degenerative joint disease"". He was healthy. He doesn't know if this is related with this. He was going to call the hospital. The physician further he never have swelling like this, he doesn't know what exactly happened. He cannot say 100 percent but nothing happened, he did not take any new medicine. He doesn't have any injury. He never had gout. He never have any degenerative joint disease. ""I cannot say 100 percent but there is a possibility."" For treatment the physician stated, ""no, it happened 3 am in the night since morning I am doing hot, I have put heater in front of my feet."" The patient did not have lab work performed. He was thinking to go ask hospital to rule out any gout, any arthritic pain, ""I am going for arthritic"". Outcome of the events left ankle is very swelling, redness, it's very painful was unknown. The lot number/batch for the vaccine, BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, was not provided and will be requested during follow up"

Headache; Last night was throwing up; Dizziness/light headed; nausea; just like overall unwell; This is a spontaneous report from a contactable consumer (patient). This 25-year-old female patient reported that she received BNT162B2 (COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. Medical history included anxiety. Concomitant medications included bupropion for anxiety. Consumer stated she thought that she was having adverse side effects. Last night (18Dec2020), she was throwing up. She got COVID-19 vaccine yesterday (18Dec2020) around 5' O clock and last night around mid-night she was throwing up and had like dizziness, she was just getting a headache now (19Dec2020), she was light headed last night, just like overall unwell. Regarding treatment, she took like calcium carbonate (TUMS) (antacids) for like nausea and ibuprofen (ADVIL). Outcome of events was unknown. Information on the lot/batch number has been requested.

sore arm; lightheaded; This is a spontaneous report from a non-contactable consumer. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EK5730), via an unspecified route of administration on 19Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced sore arm and lightheaded on 19Dec2020. The outcome of sore arm and lightheaded was recovered in Dec2020. No follow-up attempts are possible. No further information is expected.

Chills; Experienced mild flu like symptoms; Fever; This is a spontaneous report from a non-contactable physician (patient). A 31 year old female patient (physician) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration on19Dec2020 as a single dose for COVID-19 vaccination. Medical History was reported as none. There were no concomitant medications. On Dec2020, the patient experienced chills, mild flu like symptoms and fever. In Dec2020, she was now fully recovered. The clinical outcome of chills, mild flu like symptoms and fever was recovered Dec2020 No follow-up attempts are possible; information about lot number cannot be obtained.

feeling arm soreness; This is a spontaneous report from a non-contactable physician. A male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical

history and concomitant medications were not reported. The patient experienced feeling arm soreness in Dec2020. No other symptoms were reported. The outcome of feeling arm soreness was recovered in Dec2020. No follow-up attempts are possible. information about lot/batch number cannot be obtained.

Headache; This is a spontaneous report from a Pfizer Sponsored Program A non-contactable consumer reported that a patient of unspecified age and gender received bnt162b2 (BNT162B2 lot number and expiration date were not reported) via an unspecified route of administration on an unspecified date at a single dose for immunization. The patient's medical history and concomitant medications were not reported. On an unspecified date, the patient had a slight headache the day after getting the vaccine. Patient had no arm soreness. Patient stated that this vaccine was the best bet at getting an excellent IgG titer level without actually getting sick with Covid. Outcome of the event was unknown. No follow-up attempts are possible. No further information is expected.

Started out as a sore arm about 4 hours after getting the shot. Then progressed to severe body aches and a headache about 8 hours after getting the shot. Then after about 10 hours post-vaccine it progressed into chills and a 100.0 degree fever. I took 2 Tylenol Extra Strength pills at 12 hours post-vaccine and the symptoms decreased significantly within an hour. Still experiencing mild symptoms of all of the above.

Severely delusional, elevated high BP, vertigo, chills, moderate fatigue, swollen ankles,

Headache, night sweats

Metallic taste

Nausea (dry heave), Light-headedness, slight hand tremors, increased respirations, pain and warmth at injection site, tiredness, slight facial skin tightening, tingling of hands and feet

"PT RECEIVED Pfizer-BioNTech COVID-19 Vaccine. During observation period, pt felt as though her tongue was ""thick"" and her lips were tingling. Pt took a Claritin Ready Melt 10 mg tablet and sat under observation for addition 30 minutes. Symptoms subsided and pt left pharmacy area. She will carry her Epi-Pen with her for the next couple days."

Leg muscle pain in quadriceps in both legs, headache, nausea, one instance of vomiting

No symptoms during the mandatory 15 minute post-vaccine period in clinic waiting area. Experienced mild fatigue/general tiredness approximately 6-7 hours after receiving vaccine (given 12:35 pm). Full body chills/muscle spasms then occurred around 9:30 pm and lasted about 40 minutes.

5 minutes post-injection onset of nausea. 10 minutes post-injection retching. 1 hour post injection intense abdominal pain. 2 hours post injection onset of full body itching with no rash or hives. Itching responded to 50 mg Benadryl po and 20 mg po pepcid. Next day light itching; no other symptoms

Tired since about 10:00 AM, lethargic, pain at injection site, muscle aches, brain fog, slight headache.

Seizure witness by wife who is a physician. Bit tongue. No history of seizure or other neurologic disease.

Had vaccine yesterday. Last night had body ache and fever 98. Today only had body ache. But when she check the temperature it was the same as yesterday.

Soreness at site, tiredness, headache, sleepiness, soreness at hand joints, lymph nodes inflammation.

I started to feel a little dizzy at work within hours of vaccine, had not slept well the night before but dizziness continued on and off remainder of the day, felt a little ?off?.

Received Covid 19 vaccine on left deltoid via IM. I felt warm in my left deltoid immediately after the injection. While I was sitting in the recovery area I started feeling palpitations and Shortness of breath. I actually felt I was going into cardiac arrest. Personnel started assessing me and upon checking my vital signs my SBP was in 150?s-160?s and DBP was in 100?s range. Normally my BP ranges in 110?s. I also started feeling numbness on my left arm. My bilateral lower extremities were also numb, tingling, burning and very weak. I was not able to stand up and bear weight. I then was taken to the ED where blood work was done and ATIVAN Po was given. I was then discharged at 2325. The next morning, I felt my legs are still heavy and sore. They are still very heavy and sore while I am writing this and I feel like they will buckle when I walk.

lip swelling, eye lid swelling began approximately 36 hours after vaccination. Patient presented to ED and was treated with benadryl, protonix and prednisone. Plan to discharge home with the same

Staff having running nose, cough, fatigue, arm/body ache. States its post nasal drip. Same symptoms she had after her last flu shot. Took sudafed and is feeling better.

Injection site pain from hour 6 of the day the vaccine was given (12/19/20) until day 3 (12/21/20).

Had vaccine on L arm on Mon. Mon afternoon stiff L arm and hurt. Tue evening felt a lot of pain to lymph note under left arm pain.

right sided tingling at corner of lip up towards top of eye approx 10 min post shot

Patient developed arm muscle twitching the day after injection.

three hours after vaccine, felt tired, dry throat, HA, loss of taste, chill, no fever, nausea

On day of vaccine, had migraines, took Excedrin yesterday for HA, Nausea started yesterday afternoon. Today feeling tired, chest tight, SOB.

c/o facial redness, sweating, and hives at 1015

Started on Monday: tired, body aches, chills, called out from work. neg test results yesterday . Today symptoms are getting better today.

1 hour after felt dizzy/nausea. Staff has back pain, pain in bone, knee and feeling cold last night. No fever. He is taking Comudin, blood thinner. Staff states feeling better.

Had body aches started last night, but is feeling better today.

Approx 54 hours after vaccination, the lymph node in my left armpit swelled up to the point it was painful and relatively uncomfortable. My arm was no longer sore at the injection site, but I was unable to lie on that side while sleeping in bed. I took 600mg of Ibuprofen every 6 hours to help with the pain and swelling. It has subsided some, but is still swollen.

Quite a bit of pain and swelling in the left arm around the injection site, chills,headache,abdominal cramping all presented within 12 hours.

Pt. developed chest tightness which she described as her usual feeling when needing her rescue inhaler for asthma about 5 minutes post vaccination, had felt very anxious prior to vaccine due to needle phobia. She denied any associated symptoms either cardiac or respiratory system related and no localized arm pain at the injection site. She was also fatigued having worked since 5AM as a medical screener at a nearby clinic and had not eaten in more than 8 hours

-Swelling, sore throat: lasted about 8 hours, exacerbated by continuous use of n95 mask. -Injection site swelling: so far, started upon injection, has stayed swollen for 3 days. Measures ~6cm wide, still itching and tender. Redness comes and goes. -Myalgia: Lasted about 4 days, exacerbated by physical nature of job.

Body aches for 24h, starting about 12 hours after vaccination. Fatigue for 24hours.

warm, raised, hard, painful to touch at injection site

Pt. developed a typical (for her) migraine headache about 5-10 minutes after vaccination. She also described significant flushing and feeling hot, quickly removing her head covering and scarf. She took her regular dose of aspirin which she carries with her and we applied cold compresses to her neck which relieved the flushing and hot flash. We turned the lights low above the cot, she rested and symptoms all resolved over about 20 minutes and she left feeling relieved her headache did not progress.

Fractured right shoulder/ dislocation while doing a work out lifting low weight

Moderna COVID 19 vaccine eua, lip swelling approximately 12 hours after injection, chills, fatigue and hardness at injection site approximately 10 hrs after injection

Approximately 2 hours after Vaccination developed body aches, feverish feeling, injection site pain Next morning woke up with severe body aches, fever 101degrees F

Generalized body aches, chills, fever

Severe nausea, headache, chills, temp 100 4 - 101 8, body aches, swollen lymph nodes under left arm, lethargy. Started at 1130 on 12/22/20. All symptoms except headache resolved by 3 am 12/24/20

patient received vaccine and walked to chair and immediately started to c/o headache 2 -advil were given, patient was allowed to lie down on stretcher, close here eyes and ice pack to forehead was given

Following Pfizer BioNTech COVID-19 Vaccine dose 1, patient complained of dizziness, nausea, and chills for about 20 minutes. Patient was placed supine and offered fluids and crackers. Symptoms improved. Vital signs taken and were stable. Patient raised to sitting position and ambulated without difficulty. She was observed in the clinic for 45 minutes after her vaccine was given and she was able to leave the clinic independently. She was advised to call her primary care provider for any return of symptoms, and to report immediately to the emergency department if symptoms become severe.

Patient broke out in hives across left chest and across her back following the vaccination. The patient did not notice this until approximately 25 minutes after her vaccination and had left the clinic area. She returned with these symptoms, and was taken to the emergency department for further evaluation. She denied any shortness of breath or difficulty breathing.

Approx 20 min after the injection a wave of dizziness came over me as I parked my car at home, I sat in the car it lasted 1 to 2 minutes. Approx 60 min after the injection the 2nd wave of dizziness came over me lasting less than a minute. I read the paperwork provided and noticed this was a reaction, not a side effect. I told myself if it happened again I would go to the emergency room. Luckily it did not happen again. I will make them aware of this when I go for my booster vaccine on Jan 8th, 2021 Happy New Year and thank you for all of your hard work on this project to help people all over the world.

Chills, Fever, Nausea and Vomiting, General feeling of malaise (not feel well)

5 minute bout of vomiting 11 hours after vaccine given. Resolved completely, did not recur.

Low grade fever, headache, muscle ahes

patient felt lightheaded for 20-30 minutes

Patient complained of a headache initially, and then several minutes later, began to experience chest pressure following the first dose of the Pfizer BioNTech COVID-19 Vaccine. She was taken to the emergency department for further evaluation.

Diffuse splotchy erythematous, mildly pruritic rash on arms, neck, trunk, and legs. More prominent on flexor surfaces of limbs.

The patient had a fever of 101.8 with increasing body aches. She was advised to go to the emergency room and her fever was 104 at the time of arrival. The patient received IV fluids and was discharged after being monitored.

Employee felt like headed pretty soon after vaccine and had never experienced that feeling before. He has had no reactions like this in the past. He was evaluated by EMS and was tachycardic and hypertensive at first. Blood pressure and tachycardia normalized. He reports his baseline heart rate is on the higher end. He was monitored for a total of about 30 minutes and felt back to baseline after he was evaluated.

about 30 min after vaccination, pt reports numbness in mouth that lasted about 1 minute then resolved. After that, he had nausea, which resolved quickly as well.

"The patient reported a numb feeling in his face for a ""short time"""

headache pain score 7 out of 10 and chills over 1.5 hours after receiving vaccine.

extremely Stiff muscles and joints. Fatigue. stuffy nose. Mild headache.

Moderna COVID 19 Vaccine EUA Next day 12/23 after 5pm Chills, Temp 100.9. 12/24 Temp Current 99

fever 101.1F mild headache body aches flu like symptoms

diarrhea, nausea, muscle aches, cough,

Chills over 1 hour after receiving vaccine. resolved in 10 minutes

Nausea the following day (12/22)--@ 11AM. Vaccination at 550PM the night before 12/21. no medications needed. mild arm soreness at injection site on 12/22. All have since resolved.

None stated.

Nausea, Lightheaded, sweating, dizziness, increased blood pressure, left ear pain and left tonsils felt swollen, felt ?off?

patient c/o nickel sized red round & hard around injection site, placed heat pack over site with good relief.

STARTED SOB AND DRY COUGH AND RASH WITHIN 15 MINUTES OF VACCINE

Vaccine administered at 0730. Pt went home and went to bed. Woke up at 0930 with shaking, chills and feeling like she was going to pass out. Evaluated in ER and noted to have sinus tachycardia in 140-160's. Given 5mg IV Lopressor which took heart rate down to 110's. Admitted to hospital 12/23/2020.

On December 22nd I became tachycardic with heart rate ranging from 105 to 130. I then went to the Ed thinking I may develop a pulmonary embolism. Fortunately, cta of chest was negative. On 12/23/20 at around 10:30 I develop diffuse erythema rash essentially from face to groin, arm. I went to the hospital?s employee health to report my adverse effects. I took prednisone 80 mg and benAdryl 50 mg and symptoms subside. However, I woke up this morning and the rash is more pronounced with slightly tachycardic.

Approximately 15+ minutes after receiving the vaccine, the patient stood up from the chair and felt dizzy and faint. She was escorted to a bed to lay down. Ice packs were placed on her neck. Patient said she felt tachycardic. Pulse was 86. She denied SOB, had appropriate mentation. No rash was visualized on face, neck, abdomen, or legs. She drank apple juice. At 4:26, patient tried to sit but again felt dizzy and faint. She was transferred to the ED via wheelchair.

Full body shakes and chills that woke me up out of a deep sleep. Felt like my body was convulsing, resolved about 4 hours Nausea and Vomiting for about, resolved after 2 hours Woke up and feel weak, and have a headache. Current as of 12-24-2020 at 8:30 AM No treatment was taken

Nearing the end of 15 minute observation period, patient began to experience palpitations, sweating and felt faint. We moved patient to a private area and RN checked BP, (144/98) and reviewed issues with patient. Patient then shared that she felt tingling in hands and arms. She then recalled that she may have experienced this before but continued to feel unwell. Two RN's continued monitoring of patient until EMS arrival in <3 minutes and they proceeded to check BP again, (slightly higher) and blood sugar which was normal. They were on site for approximately 10 minutes evaluating and both EMS and patient confirmed that she was able to leave and did not need to visit hospital.

Employee developed face/neck flushing, pruritis, and shortness of breath following receipt of COVID-19 vaccine.á There was no swelling of the lips, tongue, or throat.á She was moved to the ED for additional monitoring (not registered).á She was monitored for an additional hour in the ED.á Her flushing decreased and SOB improved.á She was released from the ED with no intervention needed.á The patient had a history of allergic reactions to multiple injectable meds and vaccines in the past.

None stated.

Shingles outbreak emerged about 72 hours after vaccine. Prescribed Acyclovir 800mg on 12/22/2020 Also had a co-worker develop shingles within 24 hours of the vaccine this week.

Right now starting to get some chills and body aches. Is any type of confusion normal?

Some Nausea, Headache, facial itching

Approx. 45 -- 60 minutes following the vaccine, pat c/o lightheadedness, blurry vision, tingling in Left cheek, x 1hour, skin turned bright red heart rate 147 BP 147/80. Iced back of neck/forehead, sat for a few minutes. Heart rate down to 104, went back to work, but continued to feel flushed. Upon examination, her skin was normal in color but she stated that she still feels flushed & hot.

Lightheaded, Dizziness, Tachypnea, Tachycardia, Diaphoresis

Scratchy throat, mild fever (100 degrees), vomiting, nausea, headache, diahrrea

None stated.

Headaches, dizziness, nausea started around 5pm. By 10pm did manual BP, was 84/48. Chills and mild sweats overnight and BP in AM was 90/50s despite 2L water intake overnight. Fatigue and generalized aches by 0500 on 12/24/20. No symptoms prior to vaccine. Of note I work as Hospitalist with ER and inpatient wards- always using ventilator mask.

Adverse events initially began with chills the night of injection. There is significant bodyaches malaise and severe headache as well as our palpitations. And aura was associated with the headache specifically difficulty visualizing through the right eye the following day for several hours. Symptoms continue

through the following day and night. There was also nausea and loss of appetite. Symptoms started to prove two days after injection at the time of this report

Patient felt flushed and hot and felt a sudden headache start. Escorted to a bed to lay down. Ice packs applied to forehead and neck. BP 137/87, pulse 92, RR 20, temp 98.2. Rapid Response team called. Patient drank apple juice. When asked about a hx of reactions, patient stated she had a hx of reactions to T-dap, Hepatitis, A, and flu. She stated her reactions usually occur 2 hours after the vaccines and has a high fever of 103.0F with chills. She stated she had pre-medicated with 1 gram of Tylenol prior to coming to the COVID vaccination clinic. Repeat vital signs BP 138/89, pulse 94, RR 22. No improvement on how she felt and was transported to the ED via wheelchair.

I woke up with my heart pounding in my chest at 0038. I put on my daughter's pulse oximeter (she has asthma) and my heart rate ranged from the 110s up to the 130s. I got back into bed and tried to relax, then took a Restoril, fell asleep, but woke up again around 0300 with the same symptoms.

Moderate chills, body aches, slight nausea and headache which developed approximately 48 hours after receiving the vaccine and lasted for approximately 4-6 hours during the middle of the night and then completely resolved.

fever, headache

None stated.

Patient received the vaccine @ 0830am in her Left deltoid, @ 10pm that night she developed chills, temp of 101.2, felt awful, mild/moderate headache. took motrin alternated with Tylenol, called out of work for one day, now present s with no temp. States she feels completely exhausted.

Pt reports heart rate in 130s x 45 minutes-1 hour. She reported shortness of breath and O2 sat 95%,. Symptoms resolved simultaneously after 45 minutes- 1 hour. She also reports weakness and fatigues that lasted x 1 day.

Had headache fatigue and sinus pressure

Patient said she felt burning hot inside and her throat had a tickle. Shortly after that, she said she felt nauseous. She was taken to the emergency department for further evaluation.

swollen glands, headache, fever 99.4, slight cough

Ringing of both ears, dizziness, headaches, body aches, temp 99.1, injection site soreness, nausea , fatigue.

I premedicated prior to injection with benadryl 50mg po and otc pepcid. Approx 25 minutes post injection felt some very mild chest pressure that slowly developed to moderate pain scale 4 over a period of approx 2 hours then returned to a mild pressure once again, all left sided and no radiation of pain noted. At approx 430pm the pressure began to increase again and became painful at approx a 5 on the pain scale, it was then I developed diaphoresis,dizziness and severe nausea/vomitting., Bright green

bile appearing vomitus. Went to ED where I was given IV,Zofran 4mg x 2 doses,Reglan 10mg IV and contiued go vomit violently. Recd prescriptions for antiemetic and dc home to ride out the vomitting.

None stated.

Developed rash about 90 minutes after receiving vaccine

Within 10 minutes of receiving the vaccine in her Left deltoid, pt. c/o tingling of the tongue & in the back of her throat & being diaphoretic. She sat down for a bit and returned to working. The next day (Saturday) she c/o mild headache & diarrhea all day. Called out of work on Sunday with continued headache & diarrhea. Denied fever & no reaction at immunization site. Back to work on Monday.

Shot received at 7:15 am. That night at 2 am I awoke after developing rigors that lasted for 1 hour then resolved. I took 600mg Motrin at 2 am and 1g of Tylenol at 2:15 am. I was able to go back to sleep around 3 am. I woke up for work at 7am feeling sweaty but temperature was normal at 97.3. Overnight temperature at time of rigors was also normal. It is now 9:15 am and I feel better with mild residual symptoms.

None stated.

MILD RIGHT NIPPLE SWELLING AND SORENESS

Right sided facial swelling involving right cheek and lower jaw. No eye involvement. No breathing or swallowing difficulty. Symptoms were noted around 21 hours after the injection

36 hours following vaccine patient c/o injection site left deltoid, being reddened, tender & swollen approx. 2.5-3 inch circle around site. Encouraged to ice, take Benadryl &/or antihistamine.

Approximately one hour after injection I noticed a feeling of slight numbness on the left side of my neck extending up the left side of my face to the top of my ear. Feeling of numbness extends to middle of my cheek on left. No neurological deficit. Sensation to touch of area intact. Sensation continues through current time with no changes.

None stated.

"vaccine administered 0900 with report of ""warmness"" around and in mouth area 0904. 25mg Benadryl given PO."

red, hard lump in arm at injection site

On the next day after vaccine, I woke up with chills. I ached all over, I had a headache and fever later. Then nausea and dizziness along with weakness. On the next day it was the same, until about 12:30pm, the symptoms started lessening and was not as severe. Today, on 12/24/20, I still have nausea and I am really tired , and injection site is bright red and really sore (about the size of a dime). Feels like I have fever around it. Swelling on both hands.

Awoke at 5am with fever of 101.5; fatigue; tachycardia (HR103-105) at rest, tenderness at injection site. Took 2000mg acetaminophen to break fever, Fever broke on Saturday evening. Slept all day Saturday.

red, swollen, hard lump at injection site

Received vaccine on 12/21, c/o injection site being very painful 7/10 24 hours later, site appears slightly pink & very tender to touch. Instructed to ice & take Tylenol & or antihistamine.

Left arm leg and face numbness bilateral legweakness Vaccine given at 915 am Symptoms started at 11 am Called Pfizer to report at 1151 am Saw primary doctor at 2 pm Return to primary md again 12/22/20 Referral to neurosurgeon 11/22/20 Hospitalized 11/22/20 to 11/24/20 lepto Meningeal inflammation hospital

None stated.

Body aches, slight dizziness, fever with chills, lack of energy/fatigue

Dizziness, nausea after the dose. Vitals; BP 135/70, pulse 91, O2 100%. After 10 minutes, both symptoms subsided

Pt described mild numbness on and around her lips and face that started within 15 minutes of vaccination and lasted several minutes.

left under arm along side of breast pain and swelling. swollen lymph node on left side of neck.

None stated.

patient felt tremulous and lightheaded after receiving the vaccine. patient had worked the overnight shift immediately prior to receiving the vaccine.

She reported having PAC via her fitness watch. She said this was a new event for her last a few hours.

Chills, fever, body aches and head ache that lasted 24 hours. Small rash near injection site and a slight arm pit pain. Patients took Ibuprofen 200mg x 4 tablets

Tender, red raised wheal, 4 cm in diameter. Began next morning, and is beginning to resolve after 48 hours. No rash, fever, pruritis. Was 26 pregnant at time of injection. No known pregnancy complications.

Moderna COVID-19 Vaccine EUA. Fever, pain at the injection site, generalized malaise, headache

Began with facial pain in my cheeks where my cosmetic filler is. Then I woke up on 23rd of December with facial swelling and a nodules in cheeks. Talked with one of the providers in the office and they said it has been happening to some with fillers. It literally happened over night. Still ongoing only day two.

None stated.

Patient received the COVID-19 vaccine. Patient described feeling dizzy and light headed. Patient placed on floor. Syncopal event / vaso-vagal. No signs of anaphylaxis or allergy, but epipen 0.3mg was

administered. anticubital IV line placed for access if needed. Patient taken to ED for observation. Returned to duties within 1 hour of the event.

Slight numbness in L cheek and inner L lip, symptoms worsened on the way home, seen in the ED (6:23PM), MRI completed, diagnosed with Bell's Palsy, discharged home (10PM)

fever with tmax 105, chills, tachycardia to 150, moderate headache, cough, lightheaded, dizzy, somnolence

Severe fatigue lasting approx 12 hours. If I sat down I felt like falling asleep. I left work early and rested

Caller stated after vaccine about 45minutes she began having pain in the neck down into her right arm with hives. Next day she had fever, shortness of breathe and extreme pain in injection site. Caller is not getting second vaccine due to bad reaction. Vaers report was completed successfully online.

Lingering fatigue. Recovered the next day.

None stated.

I was very tired at 18:30 after receiving the vaccine at 14:29. I went to bed at 18:30 that night awoke at 3 am for work and was still very tired and body aches. I was driving to work and notice that I was having a delayed reaction to such things as I was looking at Christmas lights and had to remind myself I was driving. The drive to work otherwise I do not remember. I felt as if I was just not processing things around me correctly. At work the symptoms were intermittent. The thought process or lack of continued. I began to have stomach pain felt like diarrhea coming on however I never had it. Then nauseated and thought I was going to throw up and felt like I was going to pass out. The passing out feeling continued until I had my coworker call a rapid because I knew my blood pressure was dropping and my hear rate became slow and I was passing out. I was then taken to the emergency room to where I continued to experience orthostatic blood pressure changes and bradycardia and hypotension. I was given fluids and potassium IV and was feeling slightly better. I went home and slept for the next 18 hours. When I did briefly awaken through the evening I had an elevated temperature 102, chills and an extreme headache and body aches. Today I awoke at 6 am and still sluggish with a slight headache and absolutely no appetite.

Approximately 1.5 hours after injection the patient reported right sided facial tingling, mostly around her lip.

dizziness, nausea, heart racing

Swelling, soreness, and redness at injection site on left arm. My shot was given pretty far back in my arm, and not in the deltoid muscle.

Systemic: facial and tongue swelling and tingling-Medium

After vaccine, 1 day later, I had body ache and fever, then the next day I had joint pain in elbows. On the 21st, of December, I started feeling very tired and fatigue. On the 22nd, Tuesday, I had the stuffy nose,

congestion and sore throat. Today is day three of me being sick. I was told to go get tested for the virus and report. Yesterday my husband woke up with a fever of 101 as well.

None stated.

Fever, Chills, swollen upper lip and eyes, rash on upper lip, tongue prickly and taste is some what lost

Left Jaw pain at temporomandibular joint, (Trigeminal neuralgia?). No numbness or paralysis. Jaw aches. Best description is after the anesthetic from dental work wears off and jaw aches from injections and dental procedure. Injection given at 1pm left arm. Painless injection. Injection site pain increased to moderate throughout day. Jaw pain began at 10:45pm. Next morning jaw pain still present. Took two naproxen 200mg tablets at 05:30 am.

1. Tingling and numbness to the teeth ? immediately after the vaccine (the feeling went away) 2. Tingling and numbness to the teeth, tongue, and lower jaw about 30 minutes after the vaccine (lasted for about 1 hour) 3. Experiencing residual (very mild) numbness to the lower jaw/teeth 17 hours after the vaccine

Felt fine when sitting (in monitoring room) but felt dizzy when she got up and started walking

Received vaccine Tuesday at 10:30. Woke up at midnight that evening (Wednesday morning) with fever of 101.5, heart rate in the 140s, body aches, injection site pain,and nausea. Still experiencing these symptoms today, Thursday, at 10 am.

"After employee took a hot shower 5 hours after receiving the vaccine, she experienced sensation of lump in throat and facial flushing. She also felt her tongue ""had a heartbeat"" but not swollen. She drove herself to our ED. Also after arrival to ED felt nauseous, but no vomiting."

None stated.

Received vaccine around 0700 this morning. Started itching around 1300, rash appeared on both hands around 1500. Arms also itch but no current sign of rash. Has taken benadryl. Talked to employee health and was directed to go to ED if rash spreads.

Within about 20 minutes of receiving the vaccine my lips began to tingle, throat became scratchy, and began to feel light headed. At that time, I returned the the vaccination room and took two - 25mg Benadryl capsules and just asked to have an eye kept on me incase it continued to progress. Denied epipen at that time because did not have shortness of breath and throat did not seem to be closing. Symptoms were mostly relieved within 30 minutes. Continued to have a metallic taste and itchy tongue throughout the day. Following day, no symptoms. Given underlying anxiety disorder, panic attack is not out of the realm of possibility though those have been well controlled for years.

Patient indicated feeling of nausea, arm became numb, head felt tight and a dull headache

Headache and nausea

Received the Pfizer COVID-19 vaccine on Wednesday 12/16/2020 at approx. 1700 and developed a mildly itchy, maculopapular rash under my jawline on bilateral sides of my neck, not extending onto my face or chest by Friday 12/18/20. The vaccine site is clean and without skin changes, and I have no respiratory symptoms or compromise related to the rash or otherwise. I have no changes in detergent, lotions, clothing etc to blame at this time that aware of. By Wednesday 12/23/2020 the rash has lessened and appears to be improving and has not spread.

12/19 - onset of abdominal pain which is like her usual chronic necrotizing pancreatitis which she has had off and on for 10 years. This was accompanied by nausea. The pain & nausea last for about 3 hours. 12/20 - nausea and diarrhea. Today 12/21 she reports that she has recurrence of the abdominal pain, nausea, and feels hot. She is at work today. Advised to contact her physician for assessment and treatment as needed. Will follow-up with her

Lymphadenopathy left axilla

None

Red blotchy skin reaction at injection site and up arm

Jaw tightness, itchy lips, throat tightness

Jaw tightness, itchy lips, throat tightness

Fatigue and tachycardia (heart rate ranging from 70-140) within 2 hours after receiving vaccine. Cardiac workup done 12/21/2020- No treatment at this time, observation of symptoms.

Woke up with lump at injection site. Very painful, red, and hot to the touch.

Chills, headache, body ache, tiredness

Visual aura, predominately in right eye, 1.5 hours after receiving vaccine. Resolved in 10 minutes, with no lasting effects. I did have a headache for 2 hours prior to receiving vaccine, but never in my life experienced an aura.

Patient tested + for COVID back in April 2020, recovered. Developed localized erythema and a circular swelling and induration that is 2-3 cm in diameter, with some pruritus at the center. Denies fever, chills, headaches, or myalgias. Advised that localized reactions to COVID vaccine are not uncommon, and to seek additional if she developed systemic symptoms, worsening pain or redness, blistering or suppuration of the localized skin rash.

Unknown / Lost due to computer system

Chills, shivers, fever (t-max 103.4), body aches, neck pain, headache, injection site soreness

2225 lower lip numbness, spread to top left. aching pain left cheek, then left sided head pain. Pressure in head especially forehead, tingling in feet. 2228 trouble swallowing. taken to ED: 2256 prednisone 20 mg x 1 Pepcid 20 mg iv x 1 Benadryl 25 mg x 1, NS 1000 ml bolus. 0123 felt like new woman, took nap feels better.

headache, tiredness, joint pain all over, muscle pain nausea, not feeling well at all

Body aches and headache

Chills and sweats, hydrated and rest. Symptoms subsided around 1530 12-21-20.

chill. nausia, headaches body aches pain in left arm

10 minutes after injection, patient began to have redness/flushing of her face/neck. Symptoms partially resolved. She flushed approximately 3 times. Reported tingling in fingers bilaterally. Kept rubbing her fingers together and shaking hands. Pulse 107, BP 154/101. Patient states normal BP for her is 120/60. Hives and itching also reported. Patient states often flushes/gets hives when stressed/upset. No issues prior to injection. Patient take to hospital ED for observation. Symptoms had resolved when she spoke to the ED doc but are lingering today 12/24 as of 1030 am.

Extreme arm soreness and stiffness starting evening of vaccination and continuing. No treatment at this time

"Patient experienced ""pounding headache"" during the 15 minute post-injection observation period. Patient was taken to the Emergency Room, treated, and released. She complained of continued symptoms the following day, noting improvement in severity."

Lightheadedness, dizziness, nausea starting 30 minutes after vaccination, bradycardia.

Sore muscle at injection site for 2 days.

Patient developed severe headache about 10 minutes post vaccination. Patient took Ibuprofen 800mg. Headache resolved approximately 1 hour later

Felt weak and congested. Called PCP, he ordered a COVID test. I tested positive 12/22. Husband tested positive for COVID 12/19. I don't think this is an adverse event, just a coincidence.

Felt weak and congested. Called PCP, he ordered a COVID test. I tested positive 12/22. Husband tested positive for COVID 12/19. I don't think this is an adverse event, just a coincidence.

Injection site soreness.

Itchy inner ears and throat 20 mins after injection

with severe muscle ache , low grade fever, eyes lids and eyes were heavy

Patient started with watery red eyes and face was flushed. initial vital signs after notice of reaction was Bp 120/88 then noticed mild hives on neck and behind ears. Decided to give patient Benedryl 50 mg IM in Right Deltoid at 1:12pm and retook vitals at 1:20 Bp 118/74 pulse 86 and SAO2 99% on room air. Vitals at 1:36 pm were BP 116/84 pulse 90 and SAO2 97% on room air. Redness and eye watering and itching improved. Spoke with patient again today she says she still has a slight itchiness between fingers and will consult physician prior to second dose.

Headache for 7 days intermittent requiring tylenol, ibuprofen 4 out of 7 days Dizziness transient on day 5 corrected with oral hydration Dizziness, presyncopal event, Sinus tachycardia, chills, nausea, headache at 930 AM on 12-22-2020. Sinus tachycardia lasted 12 hours and now improved. EKG twice, Holter and echocardiogram confirmed sinus tachycardia. Thyroid profile normal Normal comprehensive metabolic panel, CRP, ProBNP, ferritin levels are normal.

About 30 minutes after vaccine I felt heart palpitations. 1 and 1/2 hours later I felt slight chest pressure, throat swelling (still able to breath), and an adrenaline type rush causing anxiety, shakiness, and energy burst. I did not seek medical attention. Instead I managed it at home with 50mg Benadryl. I slept through the night without any distress. When I woke up my throat still had mild swelling (felt like when you have a sore throat and a lump in your throat). This continued the whole next day along with intermittent chills, mild body aches, slight shortness of breath on exertion. No fever. I did not take any medicine on this day. The next day, day 3 my throat swelling was gone. I did not seek medical attention during these symptoms because the were tolerable and able to be managed at home.

Hypersensitivity reaction. Redness, flushing, runny nose, watery eyes. Gave Diphenhydramine 25mg PO. Symptoms subsided after about 20 minutes. Patient stayed in the clinic for observation for approximately 1 hour. Advised to call 911 and seek emergency medical care if any symptoms started again after leaving the clinic. Patient expressed understanding.

"Sensation of lump in the throat and metallic taste in mouth approx. 10 minutes post vaccination while still in Vaccine Observation area. VS normal and stable. O2Sat 100%. Evaluated by on site physician. Received diphenhydramine 25mg PO at clinic. Remained stable and D/C'd home. F/U telephone call

12/24/2020. States additional 25mg diphenhydramine at home in ""evening"" for ""Scratchy"" throat. No problems overnight and all sxs resolved in AM of 12/24 2020."

Fever 101.2, chills, body aches

About 30 minutes after receiving vaccination, patient started to have tingling and mild swelling in her lips as well as tachycardia. Vital signs taken. Heart rate was 102 bpm, respiratory rate 18, blood pressure 144/80, O2 Sat 98%. Received cetirizine 10 mg PO. Symptoms resolved within one hour of receiving cetirizine.

102 fever, vomitting, headache, body ache, fatigue

Headache after 30 minutes Joint pain after 5 minutes Nausea after 30 minutes Hand/arm numbness after 3 hours Chills after 4 hours Injection site pain after a day

bp spike since Saturday, no fever head ache and nausea , Shortness of breath and big discomfort in the chest and last 2 days whole hands swelled up during night and goes during the day time

received vaccine at 1500 on 12/22. woke up at 0200 with mild headache and moderate vertigo. went back to sleep. woke up at 0730 with ongoing vertigo. vertigo resolved after 2 hours without any intervention

scratchy throat, hoarse voice, itchy ears inside. 1 1/2 hrs after vaccine. 12/23/20

12 hrs post vaccine- runny nose, severe headache, arm tenderness, and generalized body aches 24 hrs post vaccine- sluggish and achy; headache has lessened, but still there; dizziness < 1min, 1 time; Tylenol Extra strength taken 12/23 830pm, 12/24 230am, and 12/24 8am

Caller stated that he experience left side tingling and numbness that was continuous. Caller went to employee health under went neurology test. Positive for numbness on the left side of his face. Caller will be getting second vaccine 1/8/21. Vaers report was completed successfully online.

"6 hours after vaccination, chills and chest ""tightness"". Felt like reactive airways. Tight x 3 days with slow development of cough, continues to progress, feels like pneumonia. Unrelenting cough, frequent use of rescue inhaler. On day 6 full exam in ER. Chest x ray clear, covid negative, ekg normal. Day 9 back in ER. Unable to sleep. Constant cough so violent I am wrenching."

Patient was driving back to work. Became tachycardic during the drive and pulled over to a local pharmacy. She self administered 50mg of diphenhydramine and took her blood pressure at the pharmacy. The BP was found to be elevated. EMS picked the patient up and transported her to ED.

Fatigue and achiness about 6 hours after receiving injection. Developed chills, muscle aches and fever, 99.3-100.4, 8-9 hours after injection. Fever was gone by 7:30AM the next morning (11 hours after injection), however continued to have muscle soreness and increased fatigue for the remainder of the day

Pfizer-Biotech Covid-19 Vaccine. Adverse Effects: Fever (101.1¦F), Chills, Body Aches lasting 24 hours

Headache, arm pain, sleepy and very tired also I had a really bad sore throat very read and painful.

15 minutes after vaccines became dizzy when she stood up. B/P elevated 158/85. Was extremely fatigued and localized site redness, swelling and pain.

Muscle aches, headache and congestion

Nausea/Headache

Rash from neck to pubic bone started 12/23 at 5am. Called and spoke with patient this am, 12/24 at 11am. rash is subsiding and she feels fine.

itchy nose and chin. Lasted about 5 minutes

At 1800 developed headache, 2000 developed chills, temperature of 99.6 (normal daily T on this thermometer 96.8-97.5), slight nausea, dizziness with standing. Excederin at 0000, sweating at 0100, T 98.2 at 0400.

"""Scratchy"" throat, dizzy, shortness of breath, and flushed approx. 10 minutes post vaccination. Evaluated onsite at vaccine clinic by physician. Received diphenhydramine 25MG PO. VS normal and stable. O2 Sat at 100%. Monitored and observed for 60 minutes and D/C'd in stable condition. Contacted by phone in AM of 12/24/2020 and states all sxs resolved yesterday evening. Will receive 2nd dose of vaccine in hospital Allergy Clinic."

At around 3 am. I woke due to excessive sweating and coughing. I also experienced a stuffy nose as well as feeling as though my saliva was thick. I drank water in an attempt to aid the coughing and the water also seemed 'thick'. I sweat throughout the remainder of the night; in addition to severe left arm pain.

The COVID vaccine was given at 2046. At approx. 2050 patient complained of tingling to her left leg and a headache. Her vitals were obtained at 2050. They are as follows; B/P 146/86, HR 111, Spo2 98 on RA. She denied any SOB, chest pain or discomfort, no difficulty swallowing. She was able to ambulate to the wheelchair without any issues. I called house supervisor at 2049. He came up to asses her and she was transported to the ED by 2 MA's and a nurse. She was transported via wheelchair on the monitor. She did not require supplemental O2

Had a low fever (99.5) last night. Minor aches. This morning I woke up and the lymph nodes under my left arm are swollen

12-18 0730- received vaccine at work. I am a registered nurse. 12-19 11am feeling extremely fatigued, chills, mild aches, and temp 100.1 12-19 2pm temp 101.8 and more severe arthalgia, myalgia, and shivering.... cant get warm 12-19 6pm temp 102.1 and rigors.... shaking head to toe and severe aches/ pains 12-19 11pm temp 104.1 12-20 temp 102.5 12-21 SOB, bradycardia to 41, dizziness, temp 100.5 12-22 SOB, vomiting, cough, temp 99.6 12-23 SOB, cough, diagnosed with Covid pneumonia

started to experience scratchy throat, lasted about 30 minutes and resolved on its own.

Developed severe epigastric pain and had a syncopal episode while at lunch. Individual lost consciousness for a few seconds and returned to baseline with in a minute. No further care was needed or given.

Headache beginning from time of wake-up about 0730. Pain slightly diminished but not relieved with migraine medication 4 hours later.

diarrhea, shortness of breath, chest pain, headache

blotchy rash flanks, not itchy. 'Flushed' head to toe. Dry Mouth

Fever starting at 5am on day after vaccination. Highest measured temperature was 102F. Also had associated fatigue and headache. Headache was helped by acetaminophen and ibuprofen. Fever was intermittent and lasted until about 6pm of the same day. Fatigue and headache also lasted until about 6pm on day after vaccine.

Headache: 2/10, global/ diffuse, responds to excedrin & getting, worse in the morning. +R Foot went numb and the resolved. No tingling, weakness, or numbness, dysphagia, slurred speech, seizures, blurry vision. Thirst: Very thirsty. ALtered Mentation: Slower in responding, Having to really think before she speaks Muscle Spasms +hot flashes no fever, chills, chest pain, or sob. hyper-emotional (Sponteneous crying).

Started 12/23/2020: Body Aches, Sore Arm, Fatigue, Cold Chills, Elevated Temp from normal.

Received the COVID vaccine on 12/22/2020 - approximately 4 hours later started with body aches, took NSAID and went to bed, woke up with loss of taste and smell and other COVID symptoms

Achiness in neck

Patient was in the 15 minute post-observation window and was scheduling his appt for second dose. Patient noted that he has a fear of needles and mentioned that he was feeling light-headed and experiencing tunnel vision.. He subsequently became diaphoretic and syncopal. He spontaneously recovered and was helped back into the chair. Did not fall to ground or hit his head. A SWAT was called. During SWAT evaluation, patient was given cool compress for neck and mentioned that this has happened before with injections. Subsequently had another syncopal episode and witnessed clonic seizure of roughly 25 seconds in duration. Patient again spontaneously recovered and was brought to the ED. the patient was unable to recall the events and has no history of seizure activity. Patient was given crackers and juice in ED and monitored for approximately 3 hours. Patient was discharged to home.

My arm from 7pm-7am exp pain, tingling and purple in color. On 12/21 went to employee health nurse told to take Ibuprofen went home. As of today still purple and yellow in 3 to 4 inches in bruise. I dint miss any days of work.

I WOKE UP IN THE MIDDLE OF THE NIGHT WITH PAIN, SWELLING, HARDNESS AND REDNESS ON THE INJECTION SITE OF UPPER LEFT ARM.

Dizzy

sore in arm

Woke up in the night with c/o headache, malaise and soreness in the arm COVID vaccine administered.

I had a headache about an hour after the vaccine. Started feeling extremely tired around 8pm. Around bedtime I was really cold, my hands were like ice and I just kept trying to get warm. I woke up feeling fine this morning. The only pain I feel is that my left arm feels sore and aches when I move the muscle around.

12/22/2020 at 3:00pm Moderna Vaccine administered. 12/23/2020 at 2:00pm Strong shaking chills. Temperature started at 99.8. 12/23/2020 at 4pm Chills continue. Temp 101.4 Body aches. 12/23/2020 4:30pm Advil 3 tabs taken. 12/23/2020 6pm Temp 102 chills body aches. 12/24/2020 8am Temp 100.4 12/24/20 11:30 am Temp 99.5improving, body aches but no chills.

The day after receiving the vaccine, I developed rhinorrhea, ST, and dry cough. It worsened the next day, so I got a rapid COVID test that was positive. (This was confirmed with a positive PCR 2 days later). Two days after the vaccine (the day of the positive test), I developed fever to 103, chills, body aches, fatigue,

headache and worsening cough/congestion. Fever and chills resolved after 24 hrs, but mild congestion and cough has persisted until today.

within minutes after receiving vaccination employee felt lightheadedness,, clammy, nauseated and vomited x 1. slowly resolved, went back to work and totally did not resolve so sent employee to ED to be evaluated.

Immediately after I received the injection, my upper lip started tingly. My lip started getting bigger, I took Valtrex as a blister came upon my lip. About 6pm , I started getting a mild headache. I woke up this morning and my headache is getting worse, I have body aches, and fatigue. My arm is sore as well.

No adverse event reported. Found in paperwork that this person was only 16 years of age and should not have received Moderna Vaccine.

Pt received vaccination and immediately afterwards syncoped. Pt recalls receiving the inoculation and becoming acutely lightheaded before losing consciousness. No preceding SOB or palpitations noted.

Progress Notes PA-C (Physician Assistant) ? ? Orthopedics Cosigned by: MD at 12/22/2020 á9:46 AM Expand All Collapse All á 12/21/2020 á Patient: Date: 12/21/2020 á Subjective Patient is a 58 y.o. female who was seen at COVID Vaccine Clinic today for her first dose of the COVID 19 vaccination. á She denied any history of previous adverse reactions to vaccines. á She was given the Pfizer vaccination in the left deltoid muscle. á During her 15 minute waiting period after the injection, the patient began to experience dizziness/shakiness. This provider was notified of patient reaction and she was then transferred to the emergency bay via wheelchair where she was assessed. Monitored patient for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with dyspnea, increased work of breathing, persistent cough and cyanosis, vomiting, hypotension, dysrhythmia, chest pain and collapse. á She denied difficulty breathing, throat tightness and tongue swelling, nausea. á She reports a history of atrial fibrillation and states that she had a procedure in the past and the anesthesia provider questioned her about this diagnosis. She reports taking metoprolol and methimazole on a daily basis. She took all of her am medications today, including an 81 mg aspirin. Reports history of watery eyes and blurred vision, takes Zyrtec daily. Denies any worsening of these symptoms outside of her baseline. Denies use of anticoagulant use or diabetes. Last ate and drank about 1130 or noon. á Review of Systems Constitutional: Negative for diaphoresis. HENT: Negative for congestion, drooling, facial swelling, rhinorrhea, sneezing and trouble swallowing. Eyes: Positive for discharge. Negative for redness. Respiratory: Negative for chest tightness and shortness of breath. Cardiovascular: Negative for chest pain and palpitations. Gastrointestinal: Negative for nausea and vomiting. Skin: Negative for color change, pallor and rash. Neurological: Positive for dizziness and headaches. Negative for syncope. Psychiatric/Behavioral: Negative for agitation and confusion. The patient is not nervous/anxious. á á á Objective Vitals There were no vitals filed for this visit. á á Physical Exam Constitutional: General: She is not in acute distress. Appearance: Normal appearance. She is obese. She is not toxic-appearing or diaphoretic. HENT: Head: Normocephalic and atraumatic. Nose: No rhinorrhea. Eyes: Comments: Watering of both eyes Cardiovascular: Rate and Rhythm: Normal rate and regular rhythm. Comments: At right radial pulse Pulmonary: Effort: Pulmonary effort is normal. No respiratory distress. Skin: General:

Skin is warm and dry. Coloration: Skin is not pale. Findings: No rash. Neurological: Mental Status: She is alert and oriented to person, place, and time. á á Assessment/Plan Stress reaction following vaccine administration. á Patient was transported to the emergency bay via wheelchair. á Treatment included no therapy, but did continue with vital checks at approximately 5 minute intervals. á 1603-blood pressure using the large adult cuff was 154/60 with large adult cuff, heart rate 69 with regular rate and rhythm at right radial pulse, 96% O2 sat on room air. Patient continues to feel slightly dizzy and shaky though denies any chest pain, shortness of breath, swelling of the lips or tongue. á 1611 vital signs reassessed with blood pressure of 150/63, heart rate 64, 97 percent on room air, continues to feel slightly dizzy/shaky, though, reports not nearly as bad. Patient continues to answer questions appropriately and is talking without any signs of further decompensation. á 1618-reports feeling better. Vital signs rechecked with BP of 121/55, 59 hearty rate and 96% RA. No new complaints. á 1624- patient reports a slight headache, but denies chest pain, shortness of breath, chest tightness, lip or tongue swelling. á Discharge vitals obtained at 1626-with blood pressure of 135/55, heart rate of 58, 95% on RA. No new complaints, except feeling a bit cold. Patient reports feeling better and feels that she can safely discharge. Discussed need for urgent evaluation at the emergency department or to call 911 if symptoms of chest pain, shortness of breath, angioedema present. line of numbness from injection site down arm

Urticaria, allergic reaction to COVID-19 vaccine, treatment with famotidine and benadryl, along with prednisone for 5 days.

15 min post injection c/o heart racing, rate 160 on watch Skin flush Confirmed heart rate 160 RRT called , pt never LOC Pt stayed 1 hour for observation, heart rate 106.

Patient began experiencing hot flashes and chills a few hours after receiving the vaccine. The next day she experienced chills, fatigue, left arm pain (same arm as vaccine administration). Advised to obtain COVID19 testing, and seek immediate medical attention if symptoms worsen or severe symptoms appear.

"About 5 minutes after receiving the vaccine, the individual reported feeling light headed and stated that her ""vision wasn't matching up."" She was assisted to a laying position and symptoms did not resolve. She was given 50 mg of benadryl IM in her right arm. 15 minutes later, her symptoms resolved and she was able to go home."

flush on legs and arms, transient throat tingles that resolved. Arms heavy

A rash started under both armpits in the middle of the night. The armpits were swollen and welped . The rash continued to spread across my chest and back and down both arms . Went to doctor and got medrol dosepack and triamcinolone cream.

Fever, headache, chills, muscle pain all over, joint pain, general malaise

Feels like lump in back of throat, given Epi at clinic without resolution. No shortness of breath or pain

I THREW UP 4-5 TIMES AND HAD DIARRHEA AROUND 9PM, AND SLIGHT DIZZINESS PRIOR TO THAT

About 24 hours after the vaccine, arm became red and swollen at the injection site. Eyes became red and swollen. Experienced coughing if laying flat, had to sleep upright. Symptoms resolved around 12 hours later.

Hives on arms face and chest

Pt. states an hour after, she started a 2-3/10 headache, after 2hrs, she had 7-8/10 headache. Tylenol 1000mg PO taken. After 5 hours, she was very fatigued, headache 5/10. Fell asleep. Fever started during the night, when she woke up today 12/23/20 @ 6AM, it was 101.3 - she had a cold shower and had a headache of 5/10. She took tylenol 1000mg PO at 6:30AM. at 8:30AM, temp. is 99 degrees and headache gone.

Fever, Chills, Muscle aches, joint pain, headache

Migraine at 0420 12/24/2020; Body Aches; Joint stiffness; Skin feels hypersensitive especially at injection site. Took Tylenol and symptoms are better.

Pt(I) report swelling, redness, and warmth at the injection site was first noticed in the morning at 6:30 am on 12/24/2020 currently 2.5 inches by 1 5/8 inches. Pt has history of hives. Hive type rash noted on inside of right arm. Hive do not itch.

feel flushed, warm all over, itchy, and an urticarial rash appeared on her upper chest and arms.. given diphenhydramine 50mg IM x1, methylprednisolone 125mg, famotidine 20mg. felt better and all symptoms improved except for pruritis by 1715 on 12/23. discharged home from emergency room

Eye dryness progressing to neuropathic type pain localized to the face (left upper face with clear demarcation, same side as injection). At the worst, felt neuropathic pain plus ear pain. Not improved with 1g tylenol and advil. 3 hours later with no improvement, took 10mg prednisone finally offering relief.

Patient states that she started experiencing mild arm soreness shortly after receiving the vaccine. Later that evening, she stated feeling slightly fatigued. Patient states that she was Covid positive in July. She has not been around anyone with Covid recently and she has no travel history.

Nausea Vomiting Shaking Chills Arm soreness

I received the injection at 08:15 arm after hung around upon me getting ready to go elevated heart rate and pulse started to race. Then I stayed there lips started to tingle after 10 mins heart rate came down. I went back to work 1 1/2 hrs tongue was till numb and tingling. I went back to facility where I first received my vaccine. I was told to go to the ED checked blood pressure and I was offered Benadryl I declined. I dint miss any days of work.

About 10 minutes after receiving vaccine, patient reported feeling hot and not well. Patient had not eatten breakfast prior to appointment. Patient's oxygen sat was 100% but heart rate initially 42 (normal range 55-65) and blood pressure 90/60 (normal for him). Patient was diaphoretic and was given crackers and juice. Patient's symptoms continue to progress with heart rate down as low as 34. Due to progression of symptoms, patient was taken to the ER.

"Returned to Vaccine Clinic approx. 60 minutes post vaccination with generalized itching, hive-like rash on chest, arms, and legs and ""mild"" lip swelling. VS normal and stable during clinic observation. O2 Sat at 100%. Evaluated by onsite physician. Received total of 5omg diphenhydramine during observation. D/C'd in 2 hrs with less itching and resolving rash. Accompanied and driven home by friend. Spoke with EH nurse on 12/24/2020 and stated additional 50 mg diphenhydramine at home 12/23/2020. Mild, fading rash today. PLAN: will be evaluated by Allergy Clinic and if cleared, will receive 2nd dose of vaccine in Allergy Clinic."

Had headache, Temperature of 100.3 degrees F took Tylenol 650mg Temp down to 99.7 degrees F. Also experienced Nausea, No vomiting. 12/19 in the evening Temperature was 99.6F. Called Primary MD and advised to rest.

- Swollen face - headache - area of injection raised and iches and sore Txt - steroid, antihistamine

Pt reports feeling dizzy and lightheaded & flush about 30-45 mins after vaccination. Pt reports that flush feeling resolved after 30 min however the dizziness & lightheadedness persisted. Pt ate lunch and did not feel any better and reported s/s to staff v/s were taken and were stable. Pt was given water and brought to lay down for continued observation

Pt was seated and suddenly became flushed and reported a strange taste in her mouth. Vitals taken. BP 116/65, pulse 87, O2 99%. Pt given water and continued to observe. Pt reported feeling better.

Within minutes I had lower chest pain and wired sensation in my lungs. My throat was swelling. I was very hot and red. I the gurney my right arm was tingling. Opposite arm from vaccine.

Achy, fatigue, headache, sniffles, nausea and diarrhea

Patient states she was receiving her COVID vaccination today, 12/23/20, in the left arm. About 5 minutes after the vaccine was administered, patient felt left arm pain that radiated into the left shoulder. About 10 minutes after the arm/shoulder pain began, she had left anterior chest tightness. She had her blood pressure taken, which was 109/104. She states the 104 diastolic is high for her.

Lightheadedness, dizziness, patient lowered to the floor and elevated feet. Moved to a gurney, symptoms improved with pursed lipi breathing

Chills, myalgia, fever, syncope and vomiting

severe arm pain

Severe asthma attack, duration a good 5 minutes. No history of asthma. Was given inhaler.

I had severe abdominal pain that changed at a day and a half to mild abdominal pain.

Pain and stiffness in neck and shoulders, some relief with Ibuprofen Pain in right thumb , new onset, worse pain in left thumb and wrist join

Body Aches - mainly on Left side - arm and leg - muscle and joint. Arm Sore at injection site. Took Tylenol, symptoms subsided

"Pt received vaccine at 1210. At 1220 said her throat was feeling a little scratchy. She stated that it just felt like she ""needed to clear her throat"". NP was called to assist, evaluated and epinephrine 0.3ml IM was given. Benadryl 50mg and Zantac 40 mg was also given po. Pt was monitored, 9-1-1 was called and arrived in 10 minutes. Pt was sitting up, stating that it just ""feels like my throat is thick"". After EMS arrived and assessed pt, she began to ease her anxiety and stated she was feeling less tightness and felt better. Pt was observed, VSS. She denied going to the hospital stating she was feeling better so called for a ride home. EMS left and within 10 minutes she began to feel a tightening sensation in her upper chest, not in her throat this time. She said she felt the tightness again and the back of her throat was scratchy. NP evaluated, Epi 0.3ml IM was given again and 9-1-1 was called again. Upon arrival her vitals were stable, although tachycardic running 100-120 after the epi, but her breathing was not labored or difficult. EMS loaded pt and took to hospital for evaluation where she was monitored, received IV steroids for edema in the back of throat and uvula."

Pfizer-BioNTech COVID-19 Vaccine EUA Increased site redness, swelling and pain, site is warm to the touch, also rapid heartbeat.

during our covid vaccine clinic, we ended up giving 62 doses out of 60 vials. this was not realized until the end of the day when we had 2 doses left after we filled the 60 patient slots. there is apparently a small amount of overfill in the vials where 2 extra dose were able to be retrieved out of the 6 vials used. the patients did not receive a 'short dose' they received the full 0.5ml. our state told us to report the overfill via VAERS. i will inform the nurses to only draw up 10 doses per vial at our next vaccine clinic.

Fever, chills, headache, myalgias, fatigue - 5 days

Pt felt tingling sensation throughout body and was feeling SOB. Patient given IM benadryl and symptoms subsided

Symptoms started with feeling slightly faint with legs feeling weak from knees down, followed by 3 minutes of tachycardia at 130-140 BPM. Resolved without intervention; At (12/23/2020 app 23:40PM) developed periods of hot and cold, muscle aches and restlessness

20 hours after receiving developed extreme fatigue and headache. 6 hours after that developed chills, bone pain all over and nausea. That lasted about 8 hours. When chills stopped temp was 100.2. Temp relieved by aleve.

Received 2 doses of vaccine one day apart; no adverse events

throat swelling, SVT

Patient became hot, nauseous, and blotchy five minutes after vaccine administered (09430). Clinic nurses and a physician in the clinic area responded immediately: history, comfort, pulse, BP, comfortable/safe position in chair. Approximately 8-9 minutes later (0938-9), patient asked that her

personally-owned Epinephrine Auto-Injector (EpiPen) be administered, as she was unable to do so. Her symptoms were worsening and she had developed a lump in her throat. At 0940 a clinic nurse (RN) administered the EpiPen in the patient's right anterolateral thigh. Symptoms improved. 911 was called. Paramedics arrived quickly, and transported patient to Hospital Emergency Department, less than one minute away.

Received 2 doses of the vaccine one day apart; no adverse events

vomiting, fever 101

dizziness and warm feeling in chest immediately upon receiving shot

"Intense headache started around 3 p.m (vaccinated close to 11:00 a.m.). Nausea followed. Took acetaminophen before bed because of the headache. Woke up in the middle of the night with shakes and chills. Headache worse. Was hot and sweaty. Took temp, was 99. Likely low due to high acetaminophen dose. Shakes lasted for about 2-3 hours. Slept until 12:00 p.m. today. Still having some ""hot flashes"" but feel much better."

Had a weried sensation in her head during the injection. 10 min after receiving the COVID vaccine she reported not feeling well ranf had a burning sensation throughour her body. Has burining sensation on face, rash on chest , face amd arms, started to sweat, hair and uniform became wet, she was them taken to the ED. B/p 166/100 became elevated, pule rate over 100. Was prescribed benadryl, epipen, prednisone. Next day felt better, had some itching rach under her breast and have light headaches. Taking prescribed medicine including Benadryl

Extreme body aches high fever chills nausea Extreme weakness. Felt like I was dying. Probably the sickest I've ever felt.

woke up with low grade fever 99.4, nausea, headache, injection site pain (continuously since injection), chills, tierdness

Experienced syncope after receiving vaccine injection. Clinical Assessment Team called but declined going to emergency department.

Approximately 5 minutes after vaccination, patient became diaphoretic and warm/flushed. Complained of nausea and had one episode of emesis. Patient given 50mg of diphenhydramine orally.

Fever and chills noted day after administration. Fever of 101.2 on 12/23 at 14:25 and returned to baseline at 12/23 19:03.

5:30 Chills, fever to 102, Tx with Tylenol. GI Upset, diarrhea. 11PM Difficulty sleeping; GI upset, LOC x2. Pallor. Transport to ER via ambulance. Treated with IVs, Zofran, toradol

Developed tremor, dizziness, and chills almost immediately after vaccine. She developed hives to her chest approximately 30 mins after the vaccine was given. She did get IM benadryl in the office which

resolved the hives. She was transported to the hospital via ambulance as the dizziness and tremor worsened over the time she was in the clinic. She was discharged from ER the same day.

My heart was racing, I was light headed and dizzy with 6 episodes for about an hour.

Employee received 1rt dose of COVID-19 vaccine on dec,16, 2020, two days later she developed rash at the chest, arms, swelling at Rt eye, and skin lessions on posterior aspect of thigh, legs.

Hives on wrists, under arms, groin and penis

Vomiting 5 minutes after inject.

Patient awoke at 2 am and felt like she could not breathe. felt hot, tight, and severely weak. Had chills and shaking. No fever. Patient was transported by ambulance, observed in the Emergency department until 5 am and discharged home. Patient received oral acetaminophen in the ED.

Unable to move left arm in any direction for 24 hours.

Mild itching began around injection site within 5 minutes of receiving vaccine then resolved. After another 20 minutes, mild itching noted on hand, forearms, stomach, leg (not all at the same time). Itching resolves after scratching then starts up in a new location minutes later. Itching still ongoing 24 hours after vaccination.

Developed redness, induration, warmth to touch at injection site

Fatigue, weakness in legs and arms, fever of 102.2 , tiredness, stuffy nose, headache, chills, and hot flashes with burning sensation of lips.

15-20 minutes after injection felt sore in neck and lower back; few hours later body aches, lightheaded and fatigue. Symptoms remain the same today 12/ 24/2020

INITIAL SITE PAIN FOLLOWED BY LOCALIZED ITCHING AND HIVES (30 MINUTES AFTER VACCINE). HIVES AND ITCHING SPREAD TO BILATERAL ARMS , TRUNK, NECK, AND FACE (60 MINUTES AFTER VACCINE) AND CONTINUED TO GET WORSE (90+ MINUTES AFTER VACCINE). ORAL LORATADINE TAKEN AT INITIAL ONSET OF SYMPTOMS. IV SOLUMEDEROL, BENADRYL, AND PEPCID GIVEN APROX 2 HOURS AFTER ONSET OF SYMPTOMS. SYMPTOMS HAD MOSTLY RESOLVED APROX 60 MINUTES AFTER IV MEDICATIONS. HIVES AND ITCHING RETURNED WITH FEVER/CHILLS APROX 0300, 50MG ORAL BENADRYL TAKEN AND RESOLVED SYMPTOMS.

Left-arm pain, axillary pain, and inflammation shooting down to left hand left side neck swelling, pain, shooting to the left side of the head.

Fever 100.2, taking Tylenol and GI upset post COVID vaccine 12/16/2020, resolution of symptoms in 3 days

First felt nauseous at 1103. Was moved to area where patient was able to lay down. At 1119 blood pressure was 139/78, pox 99 and HR 84. At 1124 sat up and was given diphenhydramine 25mg solution.

At 1144 was able to stand without any change in symptoms. Blood pressure, pulse ox and heart rate were monitored throughout and remained normal.

Patient had hives on right side of neck to the nape of neck, bilateral elbow creases, bottoms of bilateral feet. Redness and swelling of mouth. Patient was prescribed 80mg Depo-Medrol IM, 50 mg Benedryl IM, and sent out with 6 day Medrol Dose pack with OTC benedryl and pepcid.

Nausea, vomiting and light headed

Right after injection on 12/16, the employee developed rash, hot flush on the chest. Was sent to the ER for monitoring. Took Benadryl 50mg at home at 1500. Another rash appeared on her face at 2200, took another Benadryl 25mg. On 12/18 at 0430, she developed chills, fever of 101.7, and body aches. Took Motrin and Tylenol, continued to have low grade temperature on Saturday. No more symptoms on Sunday.

after receiving the covid vaccine 12/22/2020 in the observation area began to feel flushed in the face and head rushing, given PO Benadryl 25 mg by OBS nurse and monitored.

I received the vaccine at 11:15 am and felt fine all day, began coming down with chills, fever, body aches and headache and slightly stuffy nose about 9-10 pm that night. It is still lasting throughout today, the next day and I called off of work. Currently have a fever of 99.6, highest fever was 100.6. F.

Employee received vaccine at 1100. At 1400, rash developed on the chest and tongue and lips were swollen. Took Benadryl 25mg and symptoms resolved.

Pfizer-BioNTech COVID-19 Vaccine EUA initial IM caused intense pain at site, then through evening into night pain radiated to shoulder and neck, experienced sweats/chills during night, site swollen but not red, recovered next day but exhausted.

Day #1- Minimal Localized Right Deltoid Soreness Day #2 12-24 hours post-vaccination- Myalgias, Affected Arm Lymphalgia in axilla, Fatigue, Elevated Temperature to 100.1 despite Acetaminophen and Ibuprophen. Night sweats, worsening myalgia throughout night. Would not have been able to go to work and perform duties (fortunately did not have to work this day or the next) Day #3- Symptoms improving-still myalgias, fatigue, mild-moderate right axillary lymphalgia.

Vomiting X 3 12/24/2020

Headaches from 12/22/20-12/24/20 Nausea from 12/22/20- currently

45 mins post vaccination patient experienced severe dizziness, nausea, extreme vomiting, headache behind eyes, tachycardia (bpm 120), elevated BP (190/120), PVCs. Patient was an on-duty EMT and received Zofran and Benadryl in the ambulance. Patient presented to Emergency Room and received fluid bolus, acetaminophen, and metoclopramide. Symptoms resolved within an hour but some residual nausea existed 24 hours later.

Pfizer-BioNTech COVID-19 Vaccine Tingling from injection site to mid forearm

Tachycardia, muscle aches, fever.

"Pt states had some dizziness about 1/2 hr after Immunization Then started to have like a lump in throat- ""Frog in throat"" Provider ordered IV and NS with 25mg Benadryl PO Pt had no other complaints was transferred to ER per Emergency provider consult"

Arm started to be sore early afternoon after receiving the vaccine that morning. By that night, redness around the injection site started. This was about quarter size. The area was sore to touch., The next day I experienced generalized malaise and muscle aches. It is now 6 days post injection and I still have redness quarter size/half dollar size around injection site, but the redness has faded some.

c/o lip tingling, neck pain, & LLE heaviness x 30 mins

1915: associate had left facility, associate started feeling generalized itchiness. Associate took a dose of Zyrtec. Associate states she woke up feeling body aches that Saturday and Sunday. Itchiness had resolved. As of Monday morning, all symptoms had resolved.

Itchy arms, back, legs Noticed rash on bilateral arms, legs, and lower back

The employee received the vaccine on 12/17 at 0922. On 12/18 at 0200, he developed severe headache. At 0800, he started vomiting and had nausea until the evening. After the nausea/vomiting stopped, he took medications for headache. All symptoms were gone by 12/20 at 0200.

at 8:40 am patient felt dizzy and flushed, she asked for extra attention and indicated she felt embarrassed, but denied difficulty breathing, no trouble speaking in full sentences, no rash, no change of vision; BP was 158/108 with pulse of 95 and then patient was brought to a more quiet area and seated in a wheelchair. She was able to ambulate, a nd speak normally, but she said she felt very strange and shaky. she was visibly tremulous. She was seated, and vitals reassessed and her shakiness increased and she felt panicky. She was taken by stretcher to the Emergency room for further observation . in the emergency room, her symptoms gradually subsided. She was able to return to work after an hour of observation.

Palpitations with HR of 120 within 5 minutes after receiving the vaccine. Wheeled to the ER for further evaluation. Dizziness and high BP. Was given Benadryl, Pepcid and Solu-Medrol and a liter of NS. Discharged after 2 hours with Benadryl and Prednisone prescribed for home meds.

Moderna COVID-19 Vaccine Developed some blotchy bruising on the bottom half of both legs within 12 hours of receiving the vaccine

About 6 hours after injection, injection site pain worsened. This continued to worsen until about 48H post-injection. About 30 hours from injection, experienced aches and feverish feeling without elevated temperature. Aches primarily in joints of hands, feet, knees, back pain, neck stiffness.

Pfizer-BioNTech COVID-19 Vaccine Dizziness, headache, generalized tingling. No reactions to vaccines in the past. Rapid response called, BP 187/104, O2 sat 100% on Room Air. nauseous, vomited 2-3 times. admitted to ER, discharged 3 hrs later, BP normal 122/73

Started with sore arm and progressed to fever up to 103.0, chills, vomiting, body and joint aches.

Eyelids are itchy, neck itchy.

I had a fair amount of pain at the injection site, by night time I had crackling in my lungs and weezing and a low grade temparture.

Injection site sensitivity, unable to have anything on my arm without significant pain. Movement of any kind of my left arm, even wiggling a finger, cause significant pain radiating throughout my entire left arm

Received the vaccine on 12/18 and 1820. She developed lip swelling for 24 hours. Took Benadryl and the swelling resolved after 24 hours. No other side effects.

Pfizer-BioNTech COVID-19 Vaccine EUA metallic taste

- Received Vaccine 1045 AM 12/19 - Sore arm at injection site started later that day and persisted - On morning of 12/21 I had a mild headache, and by mid day had some muscle aches - Night of 12/21 could not get rid of fever, sweats, chills, muscle aches, headache - Symptoms persisted, and decided this may be something else as well - Tested positive for covid on 12/23 (got results today 12/24)

At 8:55am individual reported a tingling sensation down the right side of face radiating down to upper deltoid/arm area. Individual described the sensation as a feeling of pins & needles. At 9:10 individual reported the symptom was gone. At 9:12am Blood Pressure 120/76, Pulse 90 and Respirations 20. Blood Pressure and Pulse taken using an automatic machine using the left arm.

Pfizer-BioNTech COVID-19 EUA metallic taste in back of mouth

On 12/22:First noticed roof of mouth started to itch, back of throat itching, difficult to swallow, noticed hives on chest/torso, difficult breathing, wanted to vomit, close to fainting. Hives around injection site. Placed on gurney and sent to ER. In ER given epi-pen injection, benadryl injection, albuterol, pepcid, toradol, solu-medrol and observed for 4 to 5 hours. On 12/23: Hives still present, injection site has two large bruises on arm; arm in swollen down to elbow. Broke out in hives on chest and face. Re-evaluated in ER.

EE c/o pruritic rash on trunk and peeling of skin on hands

Patient developed face and periorbital swelling 3 days after receiving covid vaccine. Swelling continued next day, responding to antihistamine treatment

30 min after dose felt like my tongue was getting thicker, neck and throat felt tight, tingling around upper gum line near front teeth. Slight numbness in skin around upper mouth. Difficulty swallowing for

five hrs post dose and I took 50mg of Benadryl at 730pm when I got to my car. Swelling in throat and back of mouth remained same from 530-730, gradually noticed improvement at 1015 pm

Within an hour and half I started to experience Dry Mouth and Nausea, later that day my Lymph nodes in my neck/jaw were Swollen and I had a Runny nose and Cough. By the evening I was experiencing Body Aches, Chills, Headache, and Fatigue.

"REQUESTED BY THIS WRITER PRIOR TO INJECTION FOR HEALTH TO RECORD PROCEDURE ON PERSONAL CELLPHONE. INJECTION GIVEN TO RIGHT DELTOID. LESS THAN 1 HOUR APPROXIMATELY 3:50PM TINGLING, PINCHING FEELING TO RIGHT HAND BEGAN THEN NUMBNESS STARTED TO RIGHT ARM FOLLOWED BY SAME SENSATION ON RIGHT LOWER EXTREMITY. MEDICINE CUP STARTED TO FEEL HEAVY AND I WASNT ABLE TO WALK CORRECTLY (LIMPING). HEALTH VERBALIZED ""TO CONTINUE MONITORING YOURSELF WHILE WORKING"". APPROXIMATELY 4:35PM NUMBNESS IS FELT TO RIGHT SIDE OF FACE, FACIAL DROOPING VISUALLY SEEN ON RIGHT SIDE OF FACE. ADVISED HEALTH TO GO TO ER. HEALTH DROVE THIS WRITER TO THE ER"

Swelling and hard lump around injection site, I noticed it about 24 hours after the injection and it remains approx. 45 hours after the injection. The arm of the injection site has hurt since about an hour after the shot. I noticed some slight dizziness about 20 minutes after the shot but that was gone within about 10 minutes. I woke up with some congestion the morning after the shot.

Pain and swelling at injection site and radiating into shoulder, extreme fatigue and tiredness, headaches, dizziness and nausea. Overall feeling of maliase

Approximately 48 hours after receiving injection she began developing papular, erythematous rash to left arm spread throughout the day. Following day same rash description occurred to right arm. Papules clustered to left posterior leg, faint to anterior legs, anterior superior chest.

12/22 7 pm, severe leg cramps; 12/23 7 am: diarrhea, abdominal pain. noon: nausea requiring medication; 5 pm, shaking chills, normal temperature. 9 pm: bloody diarrhea, and what looked more like sloughing nonpigmented tissue rather than stool, continued abdominal pain. Woke with diarrhea and pain 1 am. This morning, frequent stool and moderate abdominal pain. No chills. Recovered from diverticulitis around 12/3, scheduled for colonoscopy 1/6/21 and probably colectomy 1/8/2021.

When I filled out visage I put the wrong brand of vaccine and need to change it.

Pain and slight swelling in left arm at injection site with pain upon movement and touching site, muscle aches all over body, severe pounding headache/migraine, fever up to 101¦ 12/24/2020 at 11:00 am, first fever at 100.3¦ at 3:14 am 12/24/2020, tachycardia at 164 bpm at 3:30 am 12/24/2020, tachycardia into high 120s with walking 12/24/2020 around 10 am 12/24/2020, chills, light sensitivity, weakness when fever spikes, and overall malaise.

Itchy rash on the torso

On 12/22/20 I began to feel fatigued and sore arm at 1900. By 2330 on 12/22/20 my left arm was hurting down to my fingertips and extremely painful. I took 2 325 mg Tylenol and went to sleep. I tried sleeping but felt like my heart was coming out of my chest. I checked my Heartrate and it was between 100-120. I could not sleep all night. My left arm was so painful that I could not sleep on it or lift it above the level of my heart. On 12/23/20 I was very fatigued. I went about my day but was not feeling well. By 1900 on 12/23/20 I was running a low grade fever 99.9 and felt terrible. I took 2 325mg Tylenol and 2 200mg ibuprofen to help with the pain. I went to sleep and woke feeling better.

Physician called to report an adverse reaction to the COVID-19 vaccine. Patient had a 6.5 cm x 6.5 cm reaction at her injection site. This included erythema, warmth, and swelling. The patient also reported chills. Patient's O2 saturation measured at 80% a few hours after the vaccination. Patient received a liter of oxygen on Saturday and Sunday. Patient was tested for COVID-19 and had a negative result. On Monday and Tuesday, patient was given 25mg of oral diphenhydramine as the injection site had not improved. Patient has a mild history of asthma, but is not currently taking any medications for that condition.

ARM EXTREMELY SWOLLEN; SHE SPIKED A HIGH FEVER OVERNIGHT; LOT OF REDNESS AT INJECTION SITE NO TREATMENT SOUGHT

I developed fever and chills and headach for 2 nights now my fever was a 102.3 lasted at least 6-8 hours had Pfizer-bioNTech COVID-19vaccine

Pfizer-BioNTech COVID-19 Vaccine EUA reported headache that she did not have prior to injection

Pfizer-BioNTech COVID-19 Vaccine reported headache that she did not have prior to injection

Severe total body muscle ache, fatigue,chills lasting about 40 hours after vaccine. Inabilty to lift left arm more than 45 degrees due to severity of arm pain. Improving

bumps on wrists with loss of hair, itchiness

Pfizer-BioNTech COVID-19 Vaccine EUA metallic taste, relieved after drinking water

Woke up with onset of left sided facial weakness, paralysis, and numbness around 0600. Was evaluated in the ER and diagnosed with Bell?s Palsy.

initial fatigue, chills. After 24 hours, extreme fatigue, lips tingled, went to bed. In am, about40 hours after vaccination developed swollen upper lip and swollen armpit on side where she was vaccinated.

Headache started AM of 12/23/20; Body aches started 1100 12/23/20; lymph node discomfort, same arm as vaccine, early AM 12/24/20; Alternating Tylenol, naproxyn and rest helps. Once meds wear off, symptoms return.

body aches, fever 100.5 oral, cough, upset stomach

Complaints of warm sensation on her throat @ 10:15 am. VS bp 165/77, Pulse 136, O2 sat 99%. 10:30 BP 133/96, Pulse 121 O2 sat 100% Had sips of water and tolerated well 10:40 complaining of warm sensation to the left side of body. Send to ED for further evaluation accompanied by an RN

Fever malaise headache tired slightly dizzy

None stated.

3-5 minutes following administration of vaccine patient experienced itching and swelling of upper lip, swelling of mouth, rash bilateral arms. Benadryl 50mg intramuscular was administered and additional 30 minutes of observation conducted. ER referral was offered to the patient, she declined. B/P 135/82 and HR 85 at time of check out.

nose bleed after injection

Headache,muscle ache,injection site pain, tiredness, chills,joint pain, feeling unwell.

I start to have allergic rashes on random places on my body. I need to take benedryl to stop the itchiness for the past 2 days and ongoing. It appears off and on.

Patient reported a headache and some itching.

Lightheadedness and palpitation

Swollen lymph node

Once I received the vaccine 2 secs immediately started feeling flushed , blood rush going up to face, heart beat more rapid, and exp difficulty breathing. I spoke with staff was taken for a observation area and had a EKG. While being observed after 5 mins felt as if I couldn't breathe. Around the 5 of 10 mins mark started feeling better and at 10 mins felt totally fine.

Headache Fatigue

I?m having sore muscles, joints pain, headache, reduced tasting, fatigue, nose congestion, sore throat, heavy chest, and facial swelling. It?s been like this since I got my shot.

"Pfizer-BioNTech Covid 19 Vaccine: Patient reports ""indescribable"" muscle pain beginning almost exactly 4 hours after vaccination which has persisted until time of this report (day 7). She notes minimal pain at injection site. Has had no fever, no nausea/vomiting/diarrhea. She states that her entire body hurts, including hair, teeth, toenails, and fingernails - she describes as throbbing pain. She also reports pain in back and thoracic muscles to the extent that she cannot bend down to put on shoes. She notes that the back pain was not initially present but started around day 5 (12/22/20). She describes this as muscle pain and does not have visceral pain. She reports some relief with acetaminophen and ibuprofen. She also describes alternating episodes of feeling ""freezing cold"" with shaking chills followed by profuse diaphoresis (describes sweat as pooling and dripping). Acetaminophen and ibuprofen have not relieved or lessened the episodes of chills and sweats."

Pt felt rush of warmth throughout body immediately after vaccine administered. About 30 minutes later, he felt itchiness at the back of his throat. Pt was accompanied to ER , where he received solumederol 125 mg, pepcid 20 mg and benadryl 50 mg IV. Pt symptoms resolved post medication.

Very mild, but unexpected nose bloody nose from left nostril. Only noted when blowing nose. With 1 clot.

Had sore throat, itchy throat, cough, running nose and shortness of breath started yesterday. But shortness of breath has gone away this morning. Anything she need to do?

Headache, Body aches, nausea

Pfizer-BioNTech COVID-19 Vaccine EUA ~30 minutes post injection developed bilateral visual disturbance best described as an aura (shiny waves) in my inferior visual fields. No associated migraine/HA, photophobia, N/V, etc. This lasted for ~ 2 hours, did NOT hinder my day-to-day activities that day.

Pfizer-BioNTech COVID-19 Vaccine 4 minutes after the injection, my heart felt like it skipped a beat and my heart rate raised to 110. I thought this was related to anxiety of getting the vaccine. My heart rate went back down to 84 within a minute. Then I felt fine, just tired so I did not report this feeling to anyone at the time. 25 minutes after receiving the vaccine, my Heart rate raised to 139-145, felt dizzy, numbness of nose and upper lip. Was in transit when this occurred. Pulled into a parking lot and rested. Heart rate decreased to 96. I called family to come pick me up. On the way hame I continued to feel tired and dizzy but my heart rate decreased to 96. By 11:45, I felt better just continued to be tired. Been working overtime so I was already feeling tired before receiving the vaccine.

patient was vaccinated at approximately 12:40 and began having an itchy face and itch throat at 1:30. Patient is breastfeeding and decided she was going to pump and toss her milk due to getting vaccine. When pumping she noticed that her milk was blue in color. Today patient is feeling achy, joint and legs week. States she feels like when she had COVID in July.

Nausea and tingling sensation in both legs

About 6am morning of 12/24 Dizziness , vertigo, extreme fatigue, nausea and vomiting (3 times) injection site pain May go to ER if condition gets worst or unable to keep anything down. Took zofran twice but has since thrown it up

Developed chills, fever 100.6, achy, nausea, hurt to move several days, sleepiness, fatigue, achy joints. Fever broke 12/19/20. 1/20/20 fever 99.3. 12/24/20 Working but still fatigued.

day after the vaccine, her arm started to hurt, the pain is radiating to the back. Fatigue Headache congestion cough weakness

Left sided facial numbness (ear, oracle, earlobe, cheek, jaw).Timeframe going on 25 hours and not yet resolved.

On administering Pfizer-BioNTech COVID-19 Vaccine 12/15/20 at 9:15 PM to recipient staff member, vaccinator did not dilute vial and administered undiluted vaccine, resulting in an estimated 5 -fold increase over the intended dose and at an increased concentration. The error was nearly immediately recognized and disclosed to the recipient staff member. They were observed for adverse reactions and before leaving the clinic they were counseled to immediately report and seek medical attention for any serious signs or symptoms. A follow up phone call was made the following morning 12/16/20 with soreness at the injection site being the only reported reaction. They returned to work on 12/17/20 with no additional reported signs or symptoms.

Rash, hives and redness, and swelling of the arms that soon improved with benadryl

Dizziness, light headedness, feeling faint. Lasted 1 day. Better with food and water, Tylenol and Ibuprofen alternating every 4 hours, rest.

The morning after the vaccine I had a sore arm, severe headache, 120 HR and felt achy all over. I took tylenol and felt a little better. Sunday my eye irritation began in the right eye. The right eye was hurting, had a little drainage and was severely swollen. Conjuctivitis set up in the right eye and the right side of my head hurted really bad with the right eye area throbbing. Contacted my PCP who prescribed eye drops for me. My eye is still a little swollen and my head still feels really strange and still hurts a little on the right side. I have consulted with the NP and the PCP who is currently monitoring the situation

90 minutes post injection experienced numbness and tingling in all extremities lasting 1 hour. Resolved in all extremities except left arm. Left arm pain radiating from shoulder to forearm became severe. She sought treatment 12/23/2020 PM at a hospital emergency room where she received IV fluids and IV Toradol. On 12/24/2020 the pain persists but has improved with continued Ibuprofen 600mg every 6 hours and a sling for support.

It started with itching hands and feet and then spread over my whole body. It all turned red. I had shaking.

Patient had an elevated temperature.

Soreness in injection site, headache, and tiredness.

1300: Pain to L upper arm 1400: increasing pain to L upper arm 1600: increasing pain from shoulder to elbow 1630: face feels hot, mild sweating, temp of 100.3 1700: fatigue, exhaustion; pain in L arm extends to forearm, pain with lifting L arm 2000: rotating between episodes of chills and sweating 0700 on 12/24/20: continued fatigue; no longer have chills/sweating/fever; significant decrease to L arm pain

12/18/2020: COVID19 vaccine received. 12/19/2020: Patient noticed petechiae/bruising on arms, legs and face. Worsened over next 48 hours. 12/21/2020: Patient had blood drawn (CMP, PT/INR, CBC) at lab. 12/22/2020: Labs resulted; CMP and PT/INR WNL (exceptions: SCr 1.24, TBil 1.7); CBC with platelet count of 1,000 resulting in patient admission to Hospital. At admission he received 80 mg of prednisone, 40 g of IV Ig and a unit of platelets. 12/23/2020: Continued hospitalization. Patient's platelets improved to 20,000 and he received another 35g of IV Ig. 12/24/2020: Patient discharged with platelets of 38,000.

sore arm at injection site, fatugue, general malaise, neck soreness on side of injection

None stated.

Pt c/o lightheaded, elevated BP 180/98. Pt was seated, given snack and water. Felt betterand was discharged 20 minutes later

Chills Fatigue Muscle soreness

Five minutes after the shot she had trouble swallowing her saliva. Dry Cough Tight Lungs

He was fine ate lunch, in a room with a patient, felt light headed and dizziness, passed out, he became unresponsive, he was hypotensive, he is now in the ER.

About 12 hours after receiving the vaccine, I felt weak, achy, and quite dizzy. I awoke approximately 20 hours after receiving the vaccine with a 101 degree fever, worsened body aches, soreness at site of injection, and increased dizziness.

Left infraclavicular and supraclavicular lymphadenopathy, severe myalgias, local injection site swelling and pain. Patient was diagnosed with COVID-19 on September 28, 2020 and was 87 days after diagnosis at the time of vaccine.

After a few minutes tingling in arms, anxious, tongue felt funny. Lasted 10 minutes. Prior medical history of panic attacks. Normal vital signs , verbal felt better sent to the ED for observation

Lightheadedness

EE states that she started feeling dizzy and fatigued but it quickly resolved. Today, 12/24/2020 at 1:20pm EE states that she was driving and started having chest pains, sternum area, pain 3 out 10, the pain comes and goes, it happens when she is moving and resting, when asked about other symptoms, EE states that the chest pain is her only symptom at this time, tested negative for Covid, no travel history. I advised the EE to go to the ER immediately for further evaluation. The EE stated that she prefers to go the Urgent Care.

Pt was dizzy became nausea, and developed a headache. BP was163/105. She was obcerved for almost an hour and then had dry heaves. She was sent to Er for further treatment and observation

10 hours after shot, back pain started then body aches and chills. Fell asleep then woke up feeling like I was on fire but not sweating. Body aches continued through the night. Took Tylenol at 945pm and again at 845am. I went back to sleep and by 1130am I only had a mild headache.

Around 8:00 pm on 12/23/2020, I began to experience headache, fatigue, soreness at injection of site, and nausea. Over the next hour, the headache and nausea intensified dramatically, and at around 9:00 pm, I vomited.

Approximately 20-25 minutes after the vaccine my lips and tip of my tongue started tingling, then approximately 20 minutes after that my nose and forehead started to feel numb. I was instructed to

take Benadryl and come into be observed. The tingling sensation decreased a little after a few hours but continued throughout the night. The numbness of nose and forehead went away later that evening around 9. When I woke up the next morning the tingling sensation of my lips was gone but then returned later in the morning around 11. Breathing and airway were not impaired.

Low grade fever, chills, body aches, sore arm.

It all happened next day when I woke up. My both hands were swollen, swelling went for four days in my hands, now its better, I was nauseated, and had joint pain, it first started on my left ankle I had pain in the joint, next day and still going I have pain in both my joints in the legs, for for four days I had headache but as I was reading that's normal it was controlled with Advil and now feels better. Only joint pain still going but its not something that its terrible pain its just there. I started wearing compression socks hopping that will help.

Patient vaccinated at Nursing home. Transferred to ER the following day when patient developed fever and altered mental status. Found to have acute kidney injury on chronic kidney disease, hyperkalemia. Required emergent hemodialysis for hyperkalemia with ECG findings of peaked T waves.

44 y F referred to clinic after allergic response to COVID vaccine this afternoon. Pt received dose of covid vaccine at 1713. at 1723 pt c/o itching R wrist and neck. 3 small reddened areas noted. Vaccine hypersensitivity protocol initiated; RRT initiated. Allergic reaction to COVID vaccine-pruritic hives without angioedema-resolved with Benadryl

Approx. 35 minutes after the injection Heavy feeling s in his body and light headed. New funny taste. PMH hypertension. No itching no rash no SOB normal VitalS igns . Sent to ED observed and released

2 hour 30 min after injection severe pain radiating down left arm from shoulder to forearm, unable to raise left arm. Persists through 12/24/2020. Acetaminophen start at midnight every 6 hours without relief. Pain exacerbated with any movement of left arm. Injection site high up on upper arm close to shoulder.

pt started having headache and body aches first, then fever 100.6 and chills and a red face

FULLNESS IN THROAT PERI ORIAL NUMBNESS CHEST TIGHTNESS PRESSURE IN CHEST PATIENT WAS GIVEN EPI PEN , TRANSPORTED TO ED DEPARTMENT IMMEDIATELY

Difficulty breathing, palpitations, feeling like she is developing hives

Pfizer-BioNTech COVID-19 Vaccine Slight headache on the morning of 12/22/2020, and feeling exhausted. These two symptoms persisted during the day but did not get worse. In the early morning of 12/23/2020, the headache was worse, I had chills and my fever was 102.1. I was very dizzy at the time when getting up. I took Tylenol and ibuprofen, alternating, to help with the headache and fever. On 12/24/2020, I still have a slight fever of 100.4 but symptoms are getting better.

Pfizer-BioNTech COVID-19 Vaccine Slight headache on the morning of 12/22/2020, and feeling exhausted. These two symptoms persisted during the day but did not get worse. Low grade fever, chills, fatigue, headache

99.4 fever, headache, body aches, injection site inflamed , red and a hematoma. Aches especially in my neck

Fatigue, nasal drainage, no treatment, resolved

Parasthesia in left arm within 5 minutes of vaccination. Parasthesia radiated into fingers (tingling but not painful). Parasthesia in left arm resolved in about 1 hour with no treatment. Parasthesia in tongue within 5 minutes of vaccination. Parasthesia in tongue (tingling but not painful) lasted through the evening (~5 hours). Resolved without treatment. Heartbeat increased (bounding heartbeat) onset within 5 minutes of vaccination; resolved within 5 additional minutes with no treatment.

Was scheduled for 3:10 yesterday and received it at 3:25 ish. Did fine at first ? a little flushing/burning around neck and chest about 35 minutes after but then around 10:00 pm I had a full on inflammatory response throughout the entire body. Thankfully it was evening/bedtime but it was an awful night with significant pain everywhere with any kind of movement. Mild headache that has been intermittent. I wouldn?t call it true chest pain but did have intermittent, weird stabbing pains in chest at times. I dosed up on gallons of water and Tylenol and certainly felt better by around 7:00 a.m. but if that was my response to round one I am hesitant to go back for seconds.

The first 5 mins felt dizzy like small fainting I started relaxed. I went home took shower I had a mild fever took Tylenol. The next day some headache and weakness. On day 2 mildness and weakness again. Then on day 3 fever and weakness was almost gone and headache is sill there.

it really started on the 21st when I felt fatigue, wiped out ,runny nose, sore throat, and now I have a dry cough and I still feel it today 12/24/2020, I went to the dr on the 21st and they did not prescribe anything to me

patient felt SOB, coughing and having sensation as if something was in her throat. Epinephrine epi-pen administered VS 130/70 HR 106, O2 Sat = 99% after epi administration

After 15-20 minutes of receiving the vaccine I began to have tingling in my lips that felt almost numbing but not quite. This progressed into my mouth with the slight swelling of my tongue and lips. I had incredibly dry mouth as well. Felt very thirsty. I was given a Zyrtec (10mg I think). Swelling and numbness never progressed into anything serious, could swallow and speak fine. Did develop a small rash on my forehead that went away about an hour after the Zyrtec. 30 minutes after taking the Zyrtec the tingling and swelling in my mouth and lips subsided. Around 7pm my cheeks and face felt tingly so as recommended I took a benadryl. In the morning all symptoms were non existent.

1) rigors without fever; 2) severe HA. These both lasted approximately 6 hours.

numbness and tingling in both hands. after 5 minutes it spread to her body, tongue and lips. Maybe after an hour, left side of face was numb for a little while. Today, feel ok, except left hand still feels the same.

""""Moderna COVID-19 Vaccine EUA""; patient reported jaw and throat area felt numb approximately 30 min following vaccine. Patient vital signs were taken and patient was monitored the entire time: BP and heart rate readings: 140/89, HR 64; 126/85, HR 73; 136/99, HR 69; 139/94, HR 68; 100% pulse oximetry all readings, each approximately every 10 min. Patient stated she was not getting better, but able to speak. EMS was called and arrived; patient was taken to hospital."

Headache and nausea after 15 mins of vaccine. Headache lasted all day, even with taken 1000mg of Tylenol. On 12/23/2020 around 7:30 PM my left arm was extremely sensitive and sore. I could not lay on the arm or touch it. Very hard. This morning when I woke, I had ability to move the arm slightly more than day before. Now my arm is hard and injection sight is red measuring 3 inches wide and 1 inch long. It hurts to touch the upper arm. I cannot stretch my arm all the way or rotate it as normal.

Patient is a 47 y.o. female who arrived by Car presented to the emergency department for Stroke symptoms. Patient awoke at 6:15 this morning, some difficulty seeing out of the right eye and also was stumbling towards the left and to table. Concerned about things not being right so brought to the emergency department. Patient feels her speaking and swallowing are okay. She did drink a bit of coffee earlier. She denies headache or significant vision problems presently. Continues to not feel normal on her left side. No history of stroke and parents or siblings. She does give personal history of an occipital migraine many years ago at which time she did not have a headache but had some vision troubles. Physical Exam Vitals signs and nursing note reviewed. Constitutional: General: She is not in acute distress. Appearance: She is not ill-appearing or diaphoretic. HENT: Head: Normocephalic and atraumatic. Right Ear: Tympanic membrane normal. Left Ear: Tympanic membrane normal. Nose: Nose normal. Mouth/Throat: Mouth: Mucous membranes are moist. Pharynx: No oropharyngeal exudate or posterior oropharyngeal erythema. Eyes: Conjunctiva/sclera: Conjunctivae normal. Pupils: Pupils are equal, round, and reactive to light. Comments: Patient displays absence of left lateral movement Neck: Musculoskeletal: Normal range of motion. No muscular tenderness. Cardiovascular: Rate and Rhythm: Normal rate and regular rhythm. Heart sounds: No murmur. Pulmonary: Effort: Pulmonary effort is normal. Breath sounds: Normal breath sounds. Abdominal: General: Bowel sounds are normal. There is no distension. Palpations: Abdomen is soft. Tenderness: There is no abdominal tenderness. Musculoskeletal: Right lower leg: No edema. Left lower leg: No edema. Lymphadenopathy: Cervical: No cervical adenopathy. Skin: Findings: No rash. Neurological: Mental Status: She is alert. Cranial Nerves: Cranial nerve deficit (left facial droop, dysarthria) present. Comments: Patient's speech seems a bit slurred to me. Absence of ocular movements towards left noted as well as upward movements. Tongue is midline. Patient is unable to shrug the left shoulder or lift the left arm off the bed. Grip strength is 4 out of 5 on the left. Left leg strength is 3 out of 5. Extremity strength on right arm and leg is 5 out of 5. After consultation with a neurologist, the patient is being transferred from the ED.

This resident received the first dose of the Pfizer Covid vaccine at the Covid vaccine clinic at medical Facility. He had a rapid response, experienced low blood glucose and low heart rate. NP and medical director were in attendance. Heart rate remained low despite all measures. He was transferred to Hospital for bradycardia.

numbness soon after vaccine, as the day progressed difficult elevate left arm, resolved by next morning

Febrile 101.3F, body aches and chills.

She got very light headed immediately after vaccine was given. We had her sit and gave her a cold ice pack and bottle of water. I went to get her crackers as she said she didn't eat much today and when I got back from grabbing crackers my intern was attending to her and she ended up throwing up. She continued to throw up and still felt lightheaded for about 20 minutes. I monitored her and she ate a few crackers and had more water and then she started feeling better. No medical treatment was needed. Continue to monitor for remainder of 30 minutes after vaccine.

Patient was very anxious about getting her vaccination. After a couple minutes of receiving the vaccine, the patient went to stand up from the chair she was vaccinated in and became light headed. She then put her head on the table and began shaking. She was safely lowered to the floor and placed on her back. 911 was called and paramedics arrived within 10 minutes. The patient was lucid and responsive, but breathing quickly and shaking. She was taken to the hospital by paramedics and discharged shortly after arriving.

WHEEZING SHORTNESS OF BREATH FULLNESS IN THROAT RAPID PULSE PT WAS GIVEN ALBUTEROL, EPI PEN, TRANSPORTED TO ED DEPARTMENT

Five minutes after receiving the vaccine I started feeling slight nausea, which got progressively worse, started feeling lightheaded and had to sit down at about minute 6, at 7 minutes a clinical assessment team was called because I was feeling like I was about to pass out. Everything seemed far away and removed and sound distorted/muffled , I was extremely nauseated, lightheaded and extremely thirsty and was seeing ?spots? in my vision. When the team arrived only a minute or so later, they checked my vital signs and found that my blood pressure was low, at 89 for systolic, with my normal systolic being 120-130.. I got very pale all over and my arms and especially fingers became weak, numb and tingly, the left arm more than the right. I was told I had a vasovagal response and also that I was expelling too much CO 2 because I had been hyperventilating. I was monitored and given po fluids for about half hour at which point I felt recovered enough to leave. I was offered/recommended being checked out at the emergency room but declined

Went to sleep at 8am. Woke up at 1am with unilateral angioedema. Presented to ER, given 125 mg methylprednisolone, 20 mg famotidine, and 25 extra mg of diphenhydramine (in additional to 50 mg I had already taken). Observed in ER. Swelling decreased. I was not admitted because I'm a doctor. Symptoms resolved 10 hours later.

Whole body aches, fever, loss of appetite. Took Tylenol. Symptoms decreased after about 24 hours, but currently still present (still have a low fever).

Approximately 9 hours post injection, patient developed chills, fever, cough with phelgm production which then progressed into uncontrollable cough. Patient went to ER, treated with albuterol inhaler and released without restrictions. Pt using inhaler but symptoms decreased at this time.

"About 10 minutes after injection, c/o tachycardia and became diaphoretic and stated she felt ""weird"" Taken to ER for eval/tx."

"""Moderna COVID19 Vaccine ""; patient reported she was feeling flushed/hot. Vital signs were taken and patient monitored for over 30 minutes. BP and Heart Rate readings approximately every 10 minutes: BP 142/105, HR 110; BP 139/101, HR 110; BP 132/83, HR 104; 124/94, HR 102; 98 % pulse oximeter readings during episode. Patient's mother works at the facility as well, stayed with patient and decided to leave with patient to go home. Mother returned inside facility and stated daughter was vomiting outside. Dr. advise mother to take daughter to ER."

Temperature of 100.04, head ache, back ache, muscle ache Running nose

1-2 minutes after injection a whole body flush developed along with heart palpitations, tingly throat and tongue, and a rash across the chest and neck.

high fever, severe headache, myalgia, chills

Within 5 minutes of receiving the vaccine, patient experienced anxiety, shortness of breath, and body aches in her elbows, knees, and ankles. Vital signs were normal. No lip/tongue/throat swelling on exam. She was pale and diaphoretic. Symptoms resolved in 35 minutes with laying supine and applying cold cloth/compress to neck and upper chest. She developed a headache at 40 minutes, however it was mild and it did not cause her to stay for monitoring any further.

Lip swelling and tongue tingling

"Physician Assistant texted the Dr. this morning: ""High fever and aching all night. It feels like having the virus all over again. Temperature down now but still pretty achy."" At 1347, he texted clinic: ""My fever is down. I still fee achy, about like when I had the original infection."""

About 10 minutes after vaccine I was extremely hot, dizzy, disoriented. My blood pressure was 30 points higher than usual and 15 minutes after the first episode, I had another episode.

Nausea, bilateral hip joint pain, fever, headache. Currently approaching 42 hours.

Minor sore arm at the site of injection

Felt a rush in my arm 5 minutes after. Then one hour following the injection I started getting dizzy and vertigo. Driving home I felt like something was very wrong like impending doom. My heart started racing

almost pounding out of my chest. I was extremely dizzy and almost fainted. Flushed feeling and tightness in my chest followed. Flushed feeling felt all day. Also had a rash on my neck and chest.

Received vaccine before shift. Within 10-15 mins bilateral back of the tongue numbness and tingling. Walked to ER (my department) and asked charge nurse for Zyrtec. Advised to stay and be monitored, opted not to be checked in to ER. BP 146/105, 126-120 BP, abnormally high. Experienced red lips, itchy hands and feet, 'frog in throat' feeling. Convinced to check into ER. Swollen uvula, tonsils, lips red/swollen, stridorous breathing. Checked in to ER, given IV Benadryl, fluid, prednisone, and Pepcid. Hands and feet were mottled. Confirmed anaphylactic reaction. Became nauseous, given Zofran. Given Epi in left shoulder. Stayed for 4 hours for continued monitoring. Symptoms started to subside. Also given inhaled albuterol. Discharged w/ Benadryl, Pepcid, prednisone 5 days course, and prescription for Epi.

Metallic taste

32 y.o pregnant female (8weeks) receive covid 19 vaccine in left deltoid at 6:45 pm. Around 7:10 pm patient developed tingling/pins/needles feeling and decreased motor coordination of left arm. Tingling/pins/needles sensation progressed to left eye lid, mouth, face, neck, throat, left lower leg and right hand. Pt was monitored in ER for an hour and sensation gradually dissipated

Dizziness, lightheaded was starting 10 minutes after injection and subsiding in about two hours

"Patient received vaccine at 1005 and approx. 20 minutes later reports ""tickle"" in throat feeling the urge to clear throat. and ""tingling' of lips. Benadryl 50g given by mouth per standing order. Monitored for additional 30 min. 30 min after administration of benadry Patient reported no change to symptoms. Patient was escorted to ER to be seen."

Headache

Mild soreness at the injection site noted in the evening of 12/22 and felt chills at 11:50 pm 12/22 but no fever at that time. Woke up the morning of 12/23 at 5:30 am and had a fever of 104 general body aches and shaking rigors. Took Tylenol and the fever came down. I was extremely fatigued and was in sleeping for most of the day on 12/23 and had no appetite . I informed my place of employment on the afternoon of 12/23 that I may not be able to report to work as scheduled on 12/24. Stayed home 12/24 but noticed an erythematous rash on my trunk around 3pm 12/24. I continued to alternate Tylenol and Motrin on 12/23 and 12/24 for general aches.

Severe muscle aches/pain throughout my entire body as well a consistent headache which I believe caused the nausea. For a period of an hour, I was having muscle spasms which them subsided. My body hurt so badly that I had a very difficult time turning from side to side and getting out of bed. At one point, I felt so badly that I thought I would have to be hospitalized. I started feeling a bit better by 8am but then started feeling badly again around 10am or so. I'm feeling better now, 4:25pm.

12/24@5:00pm EST-Caller stated that on Sunday 48hrs after vaccine he was chills, lost of taste and smell, fatigue with fever. Nose and throat dryness with chest pain. Today caller has been spitting up dark

green mucus with red streaks. Caller is taking doxycycline for strep. Caller keeps having elevated temps of 102.0 and chills. Dry cough has been persistent since 12/23/20. Vaers report completed over the phone.

Monday night pain on arm at injection site, Tuesday pain still there, Entire body started to ache. Couldn't stand. Runny nose. Could barely walk that night. Hallucinations sleeping at night, chills, tired. Took1 Tylenol.

Vasovagal syncopal episode, fainted within 10 minutes of vaccine, rapid returned to baseline after episode

Observed for 15 minutes after vaccine. About 30 minutes later in my car, felt sharp shooting pains in left neck. About 8 hours after receiving first dose, started coughing up blood, bright red, with streaks and clots. No cough, fever. Seen in ER with chest xray and ct scan with contrast. No resolve. On second day after receiving vaccine? Continue to experience bright red sputum. No resolve.

Developed Bell's Palsy symptoms on the left side of my face almost exactly 24 hours after vaccine administered

Tingling of face difficulty breathing with a swollen tongue

Right arm tingling, felt as though asleep, improving but lasted at couple hours after

Sore arm & headache. Motrin helped.

Headaches, chills, runny nose sore throat body aches, 5 hours after the Vaccine

ABOUT 5 MINUTES AFTER THE VACCINE, THE PERSON EXPERIENCED LIGHTHEADEDNESS AND NAUSEA AND VOMITING

Since vaccine headache, diarrhea fatigue, dry cough and tinnitus

Starting that night 12/19/20 at approx 8pm I became nauseous with a 100.8f fever. I felt achy for the 2 days with the fever subsided. On Monday 12/21/20 I was at work (Firefighter) when I started to have palpitations. I was able to obtain a 12 lead EKG right away which showed a ventricular rhythm lasting for approx 5 min. After that I was having multiple PVC's / Ventricular beats. I was taken to Hospital where I was admitted. Over night the rhythm subsided, all my labs were good with other test's being done. I was discharged home. I have not had any other episodes since Monday. I was cleared by our Occ Health Doc who suggested I fill this out.

Hives on chest transient noticed at 4:30 pm, diffuse red raised patches and erythema, gone by 8 pm, no pruitis. Site injection deltoid soreness, beginning about 1hour after injection, soreness increasing through today.

I had a intense headache, nausea & vomitting, body aches, joint pain and fatigue.

Patient (RN who works at hospital) complained of jaw tightness about 15 minutes after the vaccination. Diphenhydramine 50mg IM x 1 was administered. Patient then developed a rash across her chest and stated that she was not feeling well. EpiPen x 1 IM was given at 11:17 and Code Blue was called per hospital policy. Patient's vitals were BP 175/99, HR 129, Oxygen 100%. Patient was alert and oriented but anxious. Patient was sent to ER at around 11:20 for observation

15 min after receiving Covid 19 vaccine patient started to feel like her heart was racing / felt faint. Burning feeling in upper thigh and pelvic area. BP 180/100 HR 130. Rapid Response called / transported to ER. Admitted for 24 hr observation.. Solu -medrol, Benadryl and Ativan given in ER. Released home the next day. 72 hrs later patient states she has numbness and tingling in hands and feet. 12/24/2020 patient reports she is feeling better today / no symptoms noted.

I started feeling week and had muscle aches and joint pain about 8hr after the vaccine. Then had stabbing sharp pains all over my chest like it was pain in my lungs. Severe aching for 10 hrs. Severe chills and dizzy for several hrs. Better now. Seemed important to report.

50Y female, with history of PTSD, anxiety and afib. Was seen in covid vaccine clinic during her break on 12/24/2020 at 1113, for covid 19 vaccine. At 1133, she reported scratchy throat and felt her heart was racing. Heart racing symptoms lasted only for a few minutes and then resolved. She reports mild scratchy sensation with swallowing. Reports that she had a lot stress since start of shift today. Also admits to stress while sitting in the clinic for observation, stressors include work related stress and responding to multiple phone calls related to codes. She was on the phone with husband prior to symptoms onset. She denies shortness of breath, dizziness, wheezing, chest discomfort, palpitations, change in vision, weakness or fatigue. She denies history of hypertension. Was previously on coumadin and diltiazem. But currently not on any medications. O: VS at 1140: BP 166/104, HR 75, O2 97% RA 1150: 164/93 HR 70 O2 99% RA 1158: BP158/83 HR 70 RR 17 O2 98% RA 1210: BP 147/82 HR 64 RR 15 O2 100% RA AAOx4. Employee was teary and anxious. Follow commands. Lung sounds clear. Heart sounds normal. No focal weakness, numbness, tingling. No respiratory distress. Able to tolerate fluids. A: Allergic reaction to COVID 19 vaccine. P: Employee was closely observed in clinic for an hour. Employee was provided fluids and emotional support. Symptoms gradually resolved. Her vital signs stabilized. Benadryl was offered but not given because employee reports symptoms improved and wanted to return to work. Employee was advised to monitor her symptoms. If her symptoms recur, she needs to go to urgent care or ED. Advised her to follow up with her PCP for further evaluation of her blood pressure and PTSD. She stated understanding and agreeable to plan. Employee returned to work and left in stable condition.

Fatigue, chills, fever, headache, body ache, right sided chest pain, neck pain, left arm pain at site of injection.

Headache, facial flushing, ears red/hot, nausea, diarrhea, chills, body aches, fatigue, arm pain

2:44p Stated felt dizzy, feet elevated, ice pack to neck and forehead, BP 151/99, HR 60, repeat six minutes later 152/94, and he stated he is not hypertensive. Within ten minutes stated was feeling fine, no longer dizzy. After about 15 minutes more he left the area.

Heart rate from 80 BPM to 128 BPM in 30 mins. and remained > 105 for 16 hours. Headache, Nausea with Vomiting, Shortness of breath. Chills No fever

Pain at sight of injection.

fever, Fatigue and Chills, Treated with Tylenol and Advil to ease the symptoms and lower the fever. Symptoms persisted for two days after taking the first dose of the vaccine.

Hyperacusis

Toes appeared bruised and painful upon touch. 15 minutes later, toes became inflamed and felt hot to touch. Also, experienced burning sensation. 10 minutes later, burning and erythema subsided and bruising reappeared. Bruises are still painful to touch, but both pain and appearance is improving since the event occurred.

Localized soreness and tenderness onset 1.5hrs post vaccination, peak at 12-24hrs post, slow improvement until 23hrs post after which improvement rate quickened. Still mild soreness and tenderness at 53hrs post vaccination. Low grade temperature (100 F), diffuse muscle aches, chills ~26hrs post vax, responsive to acetaminophen. Similar symptoms resurfaced at ~51 hrs post vax but acetaminophen taken prior to temperature elevation if it were to occur.

Angioedema, face swelling. Went to bed feeling fine and woke up with face swelling, mouth, throat and lips swelling. Delayed adverse reaction

Had some chills, headache the evening after vaccine. Next afternoon only had running nose.

Severe body aches and headache. Low back pain. Temperature between 100.6 and 101.8 today. Still 101.3 even after Tylenol.

Localized pain and some swelling. Swelling is approximately 1.5 cm in diameter and red.

nausea, vomiting, lightheadedness, chills, diaphoretic

Severe under arm pain on second, third and fourth day, enlarged lymph nodes.. Redness and swelling of shoulder on second day, Severe itching at injection site on third and fourth day, fever on third day. Urgent care thought it is expected symptoms for some.

Bilateral axillary pain

The Monday night I got the vaccine I had chills and headache all night. The next day (Tuesday) continued having chills and fevers and headache. Wednesday morning I woke up feeling great

On 12/20, I woke up to swollen eyes, ears, and face. I had itchy, red patches and welts on my legs and forearms, and a burning red rash across my forehead that circled my face and went around my chin. I went to the ER, where I was given benedryl, a steroid, and pepcid. I was sent home with a prescription for the same. On 12/21, I woke up with the same rash as described from the day before. I continued my prescriptions. On 12/22, I woke with with the rash only on my legs. I continued with my prescriptions.

On 12/23, I went to an immediate care facility where I asked for a COVID test. My rapid test was resulted as positive. I never had any of the listed COVID 19 symptoms. I continued my prescriptions. On 12/24, I woke up with no rash, no COVID 19 symptoms, and I continued with my prescriptions.

About 1-2 minutes after vaccination, I developed palpitations, tachycardia, tingling, and also a scratchy throat and full sensation in my throat. The palpitations, tachycardia, and sensations of a full throat lasted approximately 10 minutes and tingling several minutes. The scratchy throat lasted approximately 1.5 hours. Also, several minutes after the injection I developed twitching of my fave lasting several minutes as well.

NAUSEA

I started feeling palpitation after 2 minutes then was placed in the observation room. Vital sign showed heart rate of 145 with normal blood pressure and oxygen. Then after few more minutes I started feeling numbness and tingling in the mouth and started feeling dizzy and had cold sweats. Heart rate was 130s and BP was undetectable and my skin was severely pale. I administered my Epipen and rapid response team arrived after few minutes. I felt better 5-6 min after infection of the epipen but was still feeling dizzy and mildly short if breath. I was transferred to emergency room when I was treated with IV steroid, benadryl , pepcid and IVF. I was observed for 4 hours and was discharged with improvement in symptoms .

Pfizer-BioNTech COVID-19 Vaccine EUA Day of vaccine - Fatigue 1 day after - Sore muscle in left arm 4 days after - Achy left shoulder joint, sensation of heat, tingling sensation on left arm just above elbow. Minor swelling just above elbow. 5 days after - Rash on torso, red spotted

Subsequent idiopathic anaphylaxis event 1 1/2 days later

Patient complained about difficulty swallowing, and tongue swelling about 12 minutes after receiving vaccine. 50mg Benadryl given and EMS called. Patient transferred to Hospital.

Fatigue, Headache, myalgia, mild joint pain, extreme right deltoid muscle tenderness

Soreness at injection site.

Fatigue

Few minutes after vaccine heavy right side throat/tonsil, right are very sore and painful raising right arm, and headache next day.

Fever

Severe headache, muscle pain in whole body, fatigue, fever, inability to do any daily work due to sx

Hyperpigmentation of lower extrememities. Dark discoloration of skin from the pelvis down to ankle

Fatigue

Low grade fever

BODY ACHES, CHILLS, AND VIRAL RASH OVER ABDOMEN/BACK/FOREARMS

Swollen and tender at injection site.

"""Pfizer-BioNTech Covid-19 Vaccine EUA"" Had fatigue the morning after receiving the vaccine from 7:00 to approximately 7:00pm. Have injection site pain, swelling, and redness. Noticed on second day after the injection, but injection site was sore the first day after the injection, I just did not check for any swelling or irritation."

Subjective fevers, chills, myalgia, extreme fatigue, headache, severe injection site soreness Have persisted over the day after the vaccine

Tenderness at injection site.

Received dose at 0800. By 1730 was nauseated and achy. Fever of 104 by 2330 with vomiting, severe joint pain, shortness of breath, tachycardia, BP 174/110. Fever down to 101.8 in Emergency Department. Received nausea medicine and Tylenol. Chest X-ray negative. MD felt it was a severe hypersensitivity reaction. Fever continued through today (12/24 low grade, 99.8). I had severe Covid-19 the last week of March and was hospitalized. I?m just resting and waiting for the reaction to pass and have stayed off work.

Bell?s Palsy

Tenderness at injection site.

Injection site sore arm, pounding headache, fatigue, nausea

Headache, tenderness at injection site.

Headaches and body aches

Headaches and body aches

I experienced bleeding bilaterally from my lower gums and the inside of my lower lip ~1.5 hours after receiving the vaccination. I went through several tissues to try and stop the bleeding but it continued for 3-4 minutes at this rate until it spontaneously resolved.

My jaw hurts; feels like TMJ

Tenderness at injection site.

Tenderness at injection site.

Severe fatigue Sore throat Abdominal distention Dyspepsia/GERD Shortness of breath intermittently Moderate to severe headache Left arm pain (mild) Angina at rest Right claviclular/subclavian pain

12/22/20 at 1800 I noted angioedema in my face and itchy/sore gums. I went to two different urgent cares I did not receive any care at due to lack of physician at one and lack of epi at another. After being refused at the second urgent care my throat and chest started to feel tight. I then went to the ER for further evaluation. I received a dose of epinephrine IM and prednisone 125 mg IV at 1930. I was observed for 4 hours then discharged. I returned to the ER 30 minutes later because my throat started to feel tight again. I received a second dose of epinephrine at 2358 and noted some improvement. I was discharged at 0600 on Dec 23rd. I returned to the ER Dec 24 at due to my throat feeling tight and burning sensation in my chest. I got CXR, and troponin that were WNL. I was observed for 4 hours and discharged at 0900. ER physician felt that the sensation in my throat and chest could be related to the reaction from the 22nd.

About 20 minutes after vaccination, patient reported generalized itching and hand swelling (left). Patient had red spots on her face and complained they were itchy. EMS personnel were on-site and and MD administered 50mg oral diphenhydramine and 100mg oral prednisone. BP: 130/90, P: 92, R: 16 with no obvious signs of distress. Lungs were clear to auscultation and patient was sitting on her own and able to hold a conversation. Ambulance was called and arrived about 10 minutes after reaction started. IV with Normal Saline was started and patient was given 25mg IV diphenhydramine. Patient was taken via ambulance to a nearby hospital.

Patient presented with signs and symptoms of sepsis, developing over 12 to 24 hours 6 days after vaccination. was hypotensive and confused (beyond baseline)

Woke up at 0400 on 12/22/20 with tympanic temp of 100.8, chills, body aches, very tender left deltoid injection site pain. Ibuprofen resolved elevated temp. Spent all of 12/22/20 with fatigue and body aches despite ibuprofen - these symptoms fully resolved by 12/23/20. Tender left deltoid persisted for a total of 3 days, then became less tender.

Body Aches, Arm Pain, HA, Fever of 102- 12/24/2020

Initially no pain, then moderate-severe pain at injection site that radiated down towards my fingertips. This started approximately an hour after receiving the vaccine. Tingling in both hands and forearms, which began shortly after midnight. Today (12/24) I have mild swelling, as well as the same pain and tingling.

Fatigue, chills, myalgia, arthralgia, nausea, headache, soreness at injection site

Patient had redness and swelling on her face. Transferred to emergency room for observation

Pain at the injection site, general fatigue, myalgias, and chills starting about 6 hours post-vaccination and lasting for 24 hours

Hypertensive and had tongue and throat swelling. Epi was administered per protocol an d transported to ED.

Lots of physical pain and soreness, red and visibly swollen, hot to touch, pain in limbs and joints continuing for 2 days and counting.

Lymphadenopathy - left supraclavicular. Painful, onset approx 36 hours post vaccine. Arm soreness almost completely resolved at this time

patient has had hot and cold feelings on her body, feels like her chest is heavy, denies short of breath or difficulty. fever, chills, fatigue, arm soreness.

waiting in observation on a 30 minute wait time, reports change in voice, gravelly sensation in throat, clammy hands, not feeling right reports similar reaction to contrast dye, no SOB no audible wheezing

Dizzsiness, orthostatic hypotension, migraine, nausea

Nausea headaches light headed dizzy

Began with fatigue and nausea/stomach upset. This progressed all day and then 12/24/2020 late at night woke up in a sweat and noted a fever of 102F via oral thermometer.

12/21/2020 0200 hrs severe chills & Temp 104.2 F took Tylenol 500 mg , 0400 hrs Temp 103.4F. 0600hrs Temp 104F took Tylenol 500mg . 0700hrs 103.6F. all day temp ranges from 102.8F to 103.4F 12/22/2020 no chills Temp ranges from 101.6F to 103F 12/23/2020 Temp ranges from 99.5F to 102F

Fever, body aches

Begin to feel tingling and some numbness in left arm. Moved over into right also. About an hour after shot feeling chest tightness, winded with activity. Tingling stopped within an hour but tightness and breathing continued Did not feel bad enough to worry We but did not feel good for several days. Continue to have feelings of not being able to get deep breath. Have been in contact with my physician about issues. Have never been bothered with vaccines before but did not feel right pretty quick after this one.

Headache Fatigue Weakness Fever Sore Throat

About 0400 hours became extremely hot, dizzy, and nauseated. Threw up and then became short-of-breath. Felt hot and fever went up to 102.6 (oral). Charge nurse was notified and the house supervisor. Was sent home and told to fill out this form.

Dry, nonproductive cough , first day 12/24, fever 105.2 (temporal) 0700 12/25/20.

immediately after injection, facial flushing, then continuous waves of flushing and chills through body, from abdomen to toes, lightheadedness, cold hands and feet. This occurred for several hours and did not worsen nor did this improve. Tongue felt numb, and mouth was dry. Tongue felt swollen, however, the tongue size was normal. No rash, no fever and no shaking. Blood pressure, Oxygen saturation were normal. No breathing difficulties. I was observed in the ER and administered iv Benadryl 25 mg and pepcid, and iv fluids. I woke up a few hours later. I still had the rushes of chills, numb tongue, and cold

hands and feet. I was discharged to home. I still have the rushes of flushing and chills that flows through my body.

All mild Covid-19/flu like symptoms, in addition to sharp pain in armpit area, into the chest area, down the right side of upper body on side where vaccine was injected. Couldn't move right arm to should level or further without intense pain. Right armpit area swollen and extremely tender. Also experienced dizziness. This all began roughly eight hours after vaccine, lasting throughout the entire next day, and still in existence today.

Received the vaccine on 12/23/2020, felt great after, no allergy reaction, just a sore arm at the injection site. During the night of 12/24/2020, started having my lymph node in my left armpit swelling up, and feeling very tired. Felt like I was breaking a slight fever. Took ibuprofen in the morning, no fever (97.6), still having lymph node swollen and feeling extremely tired. Otherwise no other side effect so far. Will continue to self monitor and treat symptoms with ibuprofen. When i received the flu vaccine and tDap vaccine in my left arm, same situation, lymph node in my left arm pit started swelling within 24 hrs, and went away after 3 days. I'm expecting the same with this one.

Saturday around 2pm I developed intense body aches, progressed to chills, nausea and severe headache by 8pm. Next day improved but still had myalgias. Had some mild pleurisy and congestion starting on Tuesday. This would only be in an and resolve by evening time.

Pain at inhection site, fatigue, chills, fever 101.6, upset stomach, headache

Woke up Dec 24 with fatigue, chills, fever of 100.5, and phlegm, shortness of breath and cough. Tired throughout day and fever lasted til 6pm. Took Tylenol and Ibuprofen to break fever and chills. Recovered on Dec 25.

Reported sensation of tongue swelling during post-vaccination observation at 10 minutes. Epinephrine was refused and she was taken to ED for observation where she was given oral dose of Benadryl and Pepcid. Discharged with instructions to return PRN and follow up with PCP. Elevated BP noted.

red arm, swelling in arm , pain in arm

Pfizer-BioNTech COVID-19 Vaccine . Nausea started around 1:30, vomiting shortly after. Continued to throw up until approx 10am the next morning. Felt feverish as well. Had to lay in my car for several hours before my one hour drive home and threw up in plastic bag while driving. Had to stop and rest and throw up halfway home. Went to bed when I finally got home and continued to throw up all night

Fever 101.3, aches and pain, body Malaise

R arm pain and swelling at injection site starting about 24 hours after injection, still present 48 hours after injection Flushed feeling in face with headache starting about 33 hours after injection, lasting approximately 6 hours

Day 1. Queasy nausea, some soreness at injection site. Day 2 runny nose, itchy throat some cough, day3 muscle cramps up into shoulder a and back. Later day 3 muscle cramps in both calfs and some nerve pain. Left side face. Day 4 bowel cramps, fatigue, congestion and some loose stools. Day 5 symptoms subsiding.

Twenty-fours after injection, experienced fatigue, body aches, chills and high fever of 102.4. Took two Aleve. Fever kept spiking. Took Tylenol PM (that was the only Tylenol I had); it took one hour for Tylenol to take effect, which finally brought fever down to 100.8 then 98.3. Went to bed. Woke with bad headache. Took an Excedrin Migraine for relief from headache. Body aches and fatigue gone. Not looking forward to these symptoms again after the upcoming second dose on January 20, 2021, but will take the second vaccine shot in order to get the full effect.

Patient received Pfizer vaccination in Administration clinic. While in post vaccination observation, patient complained of feeling warm, lightheaded. At that time, patient reported she failed to inform nurse of current penicillin allergy. Proceed out called. Took vital signs at 15:05, 130/83, HR 83, 02 sat 99%. Repeat vital signs 15:24 BP 125/83, HR 83, 02 sat 97%. Patient transferred to ED for further monitoring. In the ED, patient was monitored for few hours where the light headiness has subsided. patient was discharged home.

Nerve pain in upper back started to increase and had a strange numbing feeling in my neck and face. Some pain in my abdomen as well.

C/o stomach ache that started after vaccine. 24 hours. LLQ, dull, no radiation. movement exacerbates and deep breaths. Constant. Mild, reported as a 3-4/10 in severity at it's worst. Responds to tylenol. Denies changes in BM, bloody bowel movements, obstipation.

1756 Pt c/o itchy throat. Vitals taken. 1758 Team alert called. 1759 c/o tingling in fingers . c/o shortness of breath and not feeling well. MD arrived.

10 min after injection hot flash, 1 hour p injection quarter size red welt, raised and hot to touch 24 hrs p injection dollar size red welt, raised size of goose egg and hot to touch. Also, all joints ache. 48 hrs p injection same as above 24 hrs

Hives

"Right side of face (from mid eyebrow-line to below temple) became numb and has a ""pins-and-needles"" sensation when touched."

I woke up around 4am at night because my feet were tingly, like pins and needles. At first I thought maybe I was wearing tight socks, so I took them off, but it wouldn't go away, so then I thought maybe it's just how I have been sleeping so I woke up and started to walk around. I noticed that my feet weren't only just tingly, but they also felt heavy to walk around. It felt like someone had put weights on my feet, and I could hardly pick them up to move. This was on going for about 45 min until I panicked, and I called the ER. They told me since there wasn't much information about adverse effects from the

vaccine to just monitor it, and if it didn't go away to go to the ER. It did take about 3 to 4 hours for the sensation to leave. It did gradually fade, so it wasn't the same height of sensation the whole 4 hours.

swelling and tenderness to left axillary area

Rash all over body

within a few minutes I became overly warm and feeling dizzy, my blood pressure went up to 189/80 and my pulse elevated to 99. My normal levels are usually 120/70 and pulse 54-60. I had acute anxious feeling and overall body shaking. I was taken down to the ED by stretcher, I received the vaccine in the hospital setting, I stayed in the ED for 3 hours and was discharged home. I felt fatigued and weak for 24 hours after.

Pain at injection site, body aches, chills

Sense of Taste and smell going in and out

Shortly after receiving vaccine, experienced soreness at injection site. Soreness continued to spread, encompassing area from shoulder to elbow. Soreness lasted approximately 24 hours. No medications or treatments administered.

I received my shot at 1347 and within 5-10 minutes after receiving the shot I got a hot flush feeling through my body. My heart then began to race and I became dizzy. I started to get a tickle feeling in my throat. Soon after my lips and tongue felt numb. My tongue had the feeling of having been burned by hot soup. I also had red splotches over my entire body (not a rash but redness). When I alerted the vaccination staff that I thought I was having a reaction they all seemed shocked. They didn?t really know what to do and asked me what I wanted to do. I, myself, was having a hard time making choices since I was in a bit of a panic. They wanted to give me oral Benadryl but since I was having the reaction in my throat and mouth one of the nurses suggested IM Benadryl. They gave me that shot around 1405. They watched me for about an hour and I still had the numbness in my lips and tongue and the red splotches over my entire body. (During this entire time no one took my BP or pulse). I had 2 work friends (RNs) come to check on me. It was only then that one of them took my pulse. I was still had tachycardia. Since my symptoms were not fully resolving they sent me to the ER where I got solumedrol and Pepcid. They sent me home still having slight numbness in my lips and tongue.

Individual woke up in the morning at 3:00am with complete numbness of the entire left and right arms/hands with concomitant tingling of both feet and lower legs. Tingling on the feet and lower legs resolved within 15 minutes with movement. Complete numbness on the arms and hands persisted until 7:00am when feeling in arms and hands began to return. Mild tingling in hands and arms persisted throughout the day and would worsen with use of hands and arms. Individual took a dose of ibuprofen 600mg with no improvement in symptoms. Symptoms seemed to improve by resting arms and hands. The tingling in hands and arms dissipated with complete resolution by 5:00pm on 12/24/2020.

Body aches, chills, fever (as high as 101, with 800 mg of ibuprofen) , nausea. Symptoms started around 600 pm. Woke up at midnight 12/25 with a fever still and I woke up 0600 am 12/25 with mild symptoms (body aches, fatigue)

- 5 hours after Covid vaccinated, I had sweating, chilly, and mild muscle ache for 2 hours. After that I had moderate pain at injection site till the next day. - The next day, I felt dizzy and heavy headache for 3 hours; after that I felt normal and no pain at injection site. I took Tylenol 500mg by mouth twice a day and Vit C daily to help for releasing symptoms.

Headaches, muscles pain, joint pain, nausea and fever

Headache, occasional chills, sinus head pressure throat irritation without closure, fatigue

Moderna COVID-19 Vaccine EUA Palpable 5cmx6cm lump/erythema/edema/soreness just inferior to injection site on R middle deltoid. Onset of sx was approx 5 hrs after injection. Localized moderate mm soreness began approx 3 hours after. Approx 1 day after vaccine, experienced chills, fever, generalized body aches, muscle soreness which has continued through Day 2 (today). Then came onset of grumpiness when I realized ...

Injection site soreness starting 12hrs after vaccine Fatigue and body aches starting 20 hrs after vaccine Fever max temperature 101 F after 28 hrs after vaccine

buccal edema herpes blister

Site reaction. Red, swollen, hard and warm. Fever. Severe body aches, chills, shaking, cough, SOA, headache, fatigue.

on 12/24/2020 the resident was sleepy and stayed in bed most of the shift. He stated he was doing okay but requested pain medication for his legs at 250PM. At 255AM on 12/25/2020 the resident was observed in bed lying still, pale, eyes half open and foam coming from mouth and unresponsive. He was not breathing and with no pulse

Moderna COVID-19 Vaccine EUA Received vaccine at 5:03pm 12/23, through night arm became increasing sore. I woke up 12/24 at 6:45 and the injection site was red, raised, and painful. The area then became very hot to the touch. By 9:00am that morning I began experiencing excessive dry mouth and thirst. I drank close to a gallon of water 12/24 and it was not satisfying this. Woke up 12/25 and now the injection site and surrounding area is extremely itchy.

arm soreness: started about 4-6 hours after injection and lasted 3 days; stabbing type stomach/intestinal pain (no nausea, vomiting or diarrhea): started the next day and lasted 3 days (completed this report 3 days after vaccine and still with GI symptoms) ; backache: started the morning after the injection and lasted 3 days. Overall, similar to flu-like symptoms. No significant fever or chills.

patient has a telephone appointment with me on urgent care shift on 12/25/2020 . he works in ICU in COVID positive patient's floors. he received COVID vaccine Pfiser on 12/18 and he had a phone

appointment with me today on my urgent care shift. he reports fever for the last week after getting the vaccine highest around 102 F. today his temp is 100.6F . no cough or SOB or respiratory sx other than generalized body aches.O2 sat is 98%. I consulted with our ID specialist on call today and they recommended that we test the patient for COVID-19 infection which I scheduled for tomorrow . ID specialist also recommended that I report the adverse effects in here . thank you

Client developed itchy rash to face, neck and chest approximately 15 minutes after injection. Client then reported that she had similar experience after her flu vaccination the past 3 years. Client took 25mg of Benadryl and was monitored for an additional 30 minutes at clinic site until rash was resolving. Client denied any issues/ complications with swallowing or breathing. Rash and itching was resolving prior to client leaving vaccination / monitoring site. Her significant other had brought her to the clinic and was available to drive her home. EMS was also on scene but did not need to provide assistance.

High fever Headache Tired Body aches Joint aches

Diarrhea every time since shot given. 5-6 qd

Pfizer-BioNtech COVID 19 Vaccine EUA: Developed throat itching, mild throat swelling, flushing, and mid upper back pain about 24 hours after the vaccine was given

Individual presented to outside hospital after receiving first dose of the Moderna COVID-19 vaccine 2 days prior at Hospital. Individual presented with possible SIRVA from injection. Patient had a stat neuro consult due to being unable to move her arm (same arm that received the vaccine).

Fevers 101F to 102F, severe rigors, diffuse myalgia, headaches leading to Emergency Dept visit at Hospital Rideout on 12/24/2020

Tachycardia Malaise

I was working at the Hospital and around 1000AM, I noticed a ?sideache? on my right side of my abdomen above my waistline going around to my back on the right side. It came and went throughout the rest of my shift. Came home, at dinner and went to bed after taking some Tylenol. I woke my Husband up at 1:30 AM due to worsening pain/discomfort and He took me to Hospital ER.

"Client began feeling flushed approximately 10-15 minutes following vaccination with COVID-19 vaccine. Client stated her ""chest had a heavy feeling"" and she was experiencing heart palpitations (which she also reports are normal for her). She was concerned as the heart palpitations were occurring along with chest pain. EMS on scene at clinic site (precaution) and escorted client to area where EKG was completed. Normal sinus rhythm was noted along with possible infarct age undetermined (as reported on strip)and client was asked if she would like to go to ER for additional evaluation which she refused. (Client signed refusal of medical treatment, transport and/ or evaluation form). Client was advised by EMS and health district staff to seek medical treatment or call 911 if symptoms persist or become worse. Client voiced understanding."

After have the vaccine done and taking my medications, I started have hallucinations of bugs all over my skin and coming out of my skin. the hallucinations lasted for about 20 hours. Called my doctor and he had to increase one of my meds to get the hallucinations to stop.

Fever, body aches, chills, fatigue, nausea around 19 hours after vaccination.

The evening of the 24th, I felt lightheaded, sore, and extremely fatigued. Waking up on the 25th, I had diarrhea, vomiting, headache, coarse cough, asthma exacerbation, chest pain. Chest pain subsided but other symptoms remained. Around 11am, I developed cervical neck pain in the back of neck, and lower pack pain. I started to experience loss of vision upon standing, tachycardia, tactile fevers, chills, and loss of appetite with extreme fatigue.

Vertigo, three episodes in early morning. Then quick episodes of dizziness throughout the day. No further dizziness or vertigo at bedtime nor after that.

Muscle pain all over the body, injection site sore to the point cant lift left arm, nausea, low-grade fever/chill, diarrhea, sore throat, congestion and runny nose.

Perioral and Tongue Paraesthesias-

Diarrhea and fatigue, day after vaccination

Fever, nausea, fatigue, pain at injection site, swelling at injection site, generalized pains

Supraventricular tachycardia--needing to be seen in ER twice before controlled

Fever 100.4 F/ Fatigue/ Headache/Body ache/ Chills.

Massive headache 7/10 take came on after I woke up from a 5hr nap after I got my vaccine I am also feeling tired. My arm is feeling a bit sore (esp if I raise it) but not worried about that. My headache really hurts more then my usual post covid headaches which I've recently gotten under control I took sumatriptan to see if it will help. Will eat and probably go back to sleep. (it's 3pm for reference)

dizziness shortness of breath tachycardia hypertension forceful heart contractions

SEVERE diarrhea

Fatigue/tired, nausea, body aches, chills started dec 23

Began just as sudden sharp headache on 12/21/20 at 6:00 pm, noticed after shift after showering, left upper extremity was slightly red, and slightly tender to touch. Not unbearable. 12/22/20 noticed redness was continuing to spread and arm was beginning to ache, still not unbearable. On 12/23/20 during shift, the redness in my left upper arm had spread from elbow to below injection site, arm was increasingly aching as well as new noticeable left sided facial swelling from directly underneath the left eye throughout the cheek area. and slightly tender. This is when I checked into the urgent care and was examined. At first the mid-level reported she thought I had experienced vaccine induced bellspalsey; however, after consulting with the MD, this was dismissed. Left upper extremity was diagnosed as

cellulitis and treated with bactrim and informed to take zyrtec or benadryl for facial swelling. If symptoms worsened, visit nearest ER. Also informed to report symptoms to CDC for tracking. Today I have been treated with 2 full days of antibiotics and the redness and swelling has reduced. left sided facial swelling remains present.

Moderate to severe unilateral headache unresponsive to Tylenol or Advil on day 3, 4 and 5 (today). The headache gets better after several hours but returns.

Day 1 (day of vaccination): dry mouth Day 2: pain in left arm and body aches Day 3: none Day 4 (today): tingling in lips and mouth, swelling of left side of face with numbness

Cough, fever, chills, diarrhea,fatigue, headache

Rashes/Hives started on the my left hand on the date of vaccination, about 30mins after vaccine administration. Then today, Dec 25, 2020 I have rashes on both forearms that are itchy.

Lightheaded, Metallic taste in mouth, and tingling in my throat for the first 15 min after vaccine given. Then after that just localized injection pain to site

Acute NSTEMI with symptom onset 4 days after vaccination

Sore arm, tingling sensation slightly numb, tingling numb sensation also in left 3 outside fingers (pinky, ring, middle). That started about 15 min after injection. The next day on 12/24, increased pain at site, redness, swelling and hard lump in area of vaccine. It is about 2 inches diameter round spot. Pain in arm continued. Fingers feel slightly improved as of 12/25. The injection site is the same as yesterday.

Moderna Covid -19 vaccine EUA

None

Localized upper lip swelling. No lower lip or tongue swelling. No rash. No shortness of breath. No throat swelling or pain. Resolved in approximately 1 hour with Claritin PO

Bilateral ear pain and ringing in ears. Varies in pain severity from 8/10 to 3/10 depending on activity.

more than usual bowel movements and body tingling all over at random. Body tingling would occur more during strenuous movements and would occur with presyncope sensations without having a syncope episode

Herpes zoster (intraoral - left hard palate and left scalp V2 distribution) which began 4 to 5 days status post vaccination. No prior history of shingles.

Rash on my stomach and legs day after and still present. Day after vaccine I had a light headache and felt very tired.

Immediately after the vaccination I felt warm and clammy. I did not have shortness of breath. I sat down for a few minutes and took off my shoes and I began to feel better. I went straight home and laid down.

Throughout the night I felt anxious to where I felt uncomfortable sitting still. I have anxiousness in my chest which travels down my body. My hands and feet are clammy sporadically.

Pfizer-BioNTech COVID-19 Vaccine EUA On 12/19/20 around 11:15 PM, patient experienced ?pinching? pain in armpit of left arm (arm of injection). Pain persisted throughout night with accompanying generalized underarm swelling (fluctuate). On 12/20, NSAIDs were taken to relieve pain. 1 dose of Advil were taken on 12/21 and 12/22 to manage pain. On 12/22, pain level on 1?10 scale was 8-9 in the morning with increased swelling, warmth, and discomfort. At night, swelling was less than that of morning. On 12/23 pain level was 3. No NSAIDs were taken and patient visited doctor at 10 AM. Upon examination, doctor made diagnosis of a localized lymph node/inflammatory response, possibly Cellulitis and prescribed Keflex to be taken 2 times daily for 10 days. Pain has mostly subsided (level 1 or 2 when it occurs), swelling has gone down but not completely resolved. Left underarm continues to feel fluctuate following day 2 of antibiotic regimen. Possible axillary lymph node reaction suspected. Patient has also experienced persistent redness, swelling, mild pain and itchiness at injection site. Most of swelling and pain has subsided, itchiness remains.

Headache, fever 101.2, chills, body aches, left knee joint pain, right arm lymph nodes swelling and pain.

Got vaccine 12/21/20.@1645. Felt fine until 1500 on 12/23. Started with severe H/A, then started with extreme dizziness. Had to have some drive me 100 yards home from the dog park. Needed my hiking poles to navigate from bed to bathroom. Even had bed spins.

Patient presented to ED states was sleeping when awoke with feeling of rapid heart. Has pulse oximeter at home and states HR was 150s felts sharp chest pain and sweat. Had husband bring her to Emergency room. Emergency room physician states patient is mildy anxious and mildy diaphoretic. Blood pressure 155/83 and pulse rate in 120 upon arrival. Patient was given Ativan 1 mg IV and 1 liter of normal saline HR in 90s upon discharge form ed. Admitted at 2134 discharged at 2353

Febrile to 101.4, vomiting, joint pain.

Extreme injection site pain day 1. Nausea the same night and following morning with vomiting. Massive headaches and extreme fatigue. Injection site pain got worse throughout the day and now I?m having several rounds of diarrhea.

listed before

Approximately 2 minutes after injection, felt flushed and tingly. This subsided, but developed a cough. Felt fine enough to leave the vaccination area after being monitored for 15 minutes. Cough continued, and developed a scratchy throat that eventually led to swelling of the throat at approximately 30-35 mins post administration. Sought care in the ED, where I was tachycardic and hypertensive. Received IV Benadryl, steroids, and IV fluids. Discharged home, but symptoms returned around 2pm. Sought care in a different ED, where I remained hypertensive and tachycardic. Received additional IV fluids, IV Benadryl and steroids. Eventually was treated with IM epinephrine after my heart rate was decreased to about 100bpm with IV metoprolol.

Moderate pain at site. Next day started with fever of 102.3, chills, severe body aches. Headache as well. Fever subsided by end of first day but started again the next day.

Received vaccine at about 0830 on 12/24/20, at about 0100 on 12/25/20 started feeling lethargic then developed nausea and vomiting, additionally had mild to moderate shaking chills and mild myalgias. Went to sleep and resolved when woke up in AM.

Moderate dizziness, nausea, chill, fatigue started around 5 pm lasted throughout evening. Had to take zofran 4 mg ODT for nausea. No known fever. Unable to drive home from work for 2 hours. Went to bed around 11 pm. Felt better the next morning with mild residual dizziness and chill and fatigue. Minimal chill and fatigue ongoing at 55 hours after injection. Left arm injection site pain started at time of injection and ongoing after 55 hours.

36 hours after vaccine, sudden onset tachycardia, shortness of breath, dizziness on the verge of passing out, called covid hotline, sent to ER due to resting heart rate of 130-150. Lasted approximately 9 hours, was going to be kept for observation in ED. Resting HR came down to 90 and sent home, following day unable to perform normal activities and unable to work for two days as of now

Diarrhea starting 12/25/20 at 11:00 am (5-6 episodes in a 24 hour period)

Approximately 10 hours after vaccination I developed sudden onset of fatigue, severe headache, lightheadedness, cyclical chills, tachycardia, bilateral conjunctival erythema, excessive tears and muscle spasm which lasted for about 4hours

Headache and lightheadedness right after vaccination which disappeared after a day. Headache returned 9 pm on Dec 24 with chills and sore throat. Fever of 100.7 on Dec 25 at around 6 am w/ chills, headache, sore throat and body aches.

Tingling og tongue and itchy eyes at 10min post admin Swelling/redness and flushing of head 20mins post admin Shortness of breath at 20mins Whole body hives and itching at 40min pot admin Swelling under the jaw and tightness/burning in chest at 40min After treatment in er...symptoms resolved after 5hrs. 14hrs later, symptoms reoccurred, with increasing severity. Went back to the ER for treatment. Again symptoms resolved after 5hrs. Now on 25mg benadryl 4x/day, 40mg prednisone 1x/day, zertec 20mg 1x/day and 20mg famotidine 1x/day for the next 4 days. Still being treated.

Fever/ runny nose/ sinus pressure/ extreme fatigue for about 36 hours

Pfizer-BioNTech COVID-19 Vaccine EUA: During vaccine administration patient complained of flushing, lightheadedness, dizziness, and arm tingling. No loss of consciousness, respiratory symptoms, or gastrointestinal symptoms reported. Inital vital signs: Blood pressure 147/84 mmHg, heart rate 115 beats per minute, oxygen saturation 95% on room air. Repeat vitals ten minutes later: blood pressure 123/60 mmHg, heart rate 77 beats per minute, oxygen saturation 98% on room air. Patient monitored for 30 minutes. Symptoms improved with time and snack. Patient was discharged in stable condition.

Left lymph node swollen next to breast. Warm to touch and painful to touch. Slightly red area noted as well. Currently taking motrin, did ice first day

Swollen lymph node in L arm pit and above L clavicle

Axillary lymphadenopathy

"Pfizer-BioNTech COVID-19 Vaccine EUA: Patient reports fever, body aches, chills, headache, and chest pain one day after receiving the vaccination. Patient had COVID before (November2020) and reports ""this felt very similar to one of my worst days with symptoms"". Patient reports only persistent symptom was feeling more tired than usual. On 12/22/2020, patient noticed a rash on back and under arms."

Soreness at site 48 hours following vaccine administration. General muscular and joint discomfort beginning approximately 48 hours out. Onset of fever (103.4) and chills at approximately 72 hours out. Fever between 99.4 and 102.0 for the next 48 hours.

At the time of the injection sharp pain across my back , then at about 5 mins after feelings of light headedness, progressing pain across my back, trouble feeling like I could get enough air in with breathing and dizziness and I tried to get to the floor to sit or lay down but passed out. Then the next event I recall was a sharp pain in my thigh(apparently administered Eli pen) . I regained consciousness and was gasping andI was told I had been given a shot of epi.

Sweating on first day, fatigue from first day persistent for 3 days. On day 5 (12/23) pain under the arm pit began. From 12/23-12/25 pain worsened into arm pit, down back, into breast, and into right side of neck. Swelling of lymph nodes in that area

Approx. 18-19hrs after receiving the vaccine I suddenly became nauseous and had an upset stomach, lack of appetite. Then shortly followed a headache, muscle aches, bone/joint pain, weakness, fatigue, dizziness, chills, fever of 102.4f, general feeling of illness or unwell, anxiety, tachycardia, painful breathing and slight SOB with exertion. O2 saturation?s 94% per my Apple Watch. Fever controlled with Tylenol, I have not sought out further medical treatment at this point. Full recovery of this adverse event is pending.

Pfizer-BioNTech COVID-19 Vaccine EUA: Patient reports dizziness, lightheadedness, and mild skin reaction (redness) at injection site soon after receiving vaccination. No respiratory or gastrointestinal symptoms reported. No loss of consciousness reported. Initial vital signs: blood pressure 141/72 mmHg, pulse 121 beats per minute, respiratory rate 24 breaths per minute, oxygen saturation 98% on room air. Repeat vital signs a few minutes later: pulse 105 beats per minute, respiratory rate 20 breaths per minute, oxygen saturation 94% on room air. Juice, snack, and ice pack provided. Vaccine administration site cleaned and patient monitored for one hour after vaccine administration and symptoms resolved. Patient left ambulatory in stable condition.

Headache several hours after injection with mild shortness of breath. I felt warm but did not seem to have an elevated temperature. Sore muscles and tired.

Headache, mild pain at injection site, lymphadenopathy, fatigue, nausea, malaise

Immediately after receiving the vaccine tongue felt fuzzy/a little swollen. Also lightheaded, dizzy, eyes not focusing very well. After 10-15 minutes, eyes focusing better but still lightheaded. ~1 hour later noted swelling of uvula, posterior palatal arches, tongue, neck, face, lips, intermittent wheezing. In addition the next day headache and rash started. Now day 9 with continued intermittent severe swelling, wheezing, rash and headache and some level of oral and facial swelling every day as noted above. Muscle aches started on day 8. Consulted with angioedema specialist; he felt was allergic reaction due to onset of symptoms. Had telemedicine visit with NP on 12/23/20. Had to go to Emergency Department on 12/25/20 for severe uvula, posterior palatal arch, face, lip, neck swelling unresponsive to oral Benadryl and oral steroids.

Severe fatigue, nausea, lightheaded, almost blacking out, eyes getting fuzzy/black around edges, fever 101.5 F, severe arm pain, swollen arm at injection site, chills, slept the whole day after getting the vaccine, rapid heart rate, excessive thirst. Most symptoms resolved by 12/25/20.

Migraine/headache, chills, nauseous/vomiting, body ache,l

Initially, lump and tenderness at injection site, which dissipated within 3 days. Chills, sweats, muscle pain, lightheadedness, headache began 3-4 days following vaccine and lasted approximately 3 full days

Oral ulcers on my looking like Aphthous ulcers with similar ulcer on my urethral meatus 24h after taking my vaccine

Moderna COVID-19 Vaccine EUA Afternoon after receiving the vaccine on 12/22/20, developed arm pain at injection site, 'can't keep eyes open' fatigue and sore throat. 12/23/20 symptoms were continued arm pain, manageable fatigue, and worsening sore throat with new drainage and sinus pressure. 12/24/20 arm pain noted to be much improved as with fatigue & sorethroat- sinus issues worsening. 12/25/20 sinus issues continuing but less severe. No fever at any time during past 3 days.

C8 distribution numbness directly after inject. 4th and 5th digits of hand on injection side felt like tight rubber bands at base of digits, improved with benadryl and dexamethasone). C8 sx followed by 35 min later abrupt onset central facial numbness (felt as if I had received dental block, and lip swelling Mild but noticeable (upper lip more than lower), per ED attending also some blotchy red areas, not hives on the neck same side as injection. No shortness of breath or swallowing difficulties. Bp higher than base line and slightly tachycardia compared to baseline. Treated with benadryl and dexamethasone . Facial symptoms lasted over night took additional 10 mg of prednisone, with improvement over the course of the day.

2 hours after vaccine sudden onset burning and cramping abdominal pain with cold sweat, generalized weakness, lightheadedness and flushed sensation required lying flat for 30 minutes before started improving. Day after vaccine arm moderately painful and hot, generalized headache, occasional sweats. Two days after mild generalized headache, arm mildly sore. Sweats less frequent.

Swelling in the injection site of 0.5 cm, hardness, Redness, Muscle pain for 3 days, Headache,

Injection received at 1330 on 12/24/20. Localized reaction about 2 hours after. By 2000 hours same day, severe muscle aches and joint pain. Nausea and vomiting at 2330 same day. Fever of 101.6, controlled with Tylenol but requires regular redosing. Chills and headache.

Severe swelling, erythema pain at at injection x for first 4 days Headache, first day. Day two fever, body aches started. Third day joint aches, cough, congestion, sore throat started and continue today.

Body/joint ache 18hrs post inj, slight fever 99.2 , 24 hrs later, w/ chills, dull headache, increased heart rate, pressure/heaviness around sternum, cough, tired. Feels like covid! Some dizziness when moving around

Rash to bilateral deltoids for 3 days, slightly itchy, felt like sunburn

I was very tired during the day. More so, as the day went on. Sometimes, I am tired during the day. It was only obvious that this might be a side effect later in the day. 1-2 cm blisters at antecubital site on left arm, which was the extremity of vaccine injection. My neck was sore. At first, I thought I had just slept so long that first night, that I was sore from that. It was more sore than from an odd sleeping position. My left neck/trapezius muscle at insertion in neck.

Received shot at 12:30 PM. Started feeling really tired about 8:30 PM. Severe body aches and chills at 9:30 PM. Wearing layers under blankets and teeth chattering. Started getting a headache. Took Aleve 440 mg at 11:00 PM, did not help. Sleep at midnight, woke at 2:30 freezing and very achy. Woke again at 0630 same symptoms, woke again at 11:00 AM, severe aches, headache, but being so cold was subsiding. Highest temp I had during this was 99.7, so not bad. Felt tired and very achy all day Thursday arm is red and have other red areas now on that arm that are hot and painful, no more chilling. Just feeling tired Friday and still have the red spots on the arm by the injection site. Aches and headache subsided. I still had a post Covid cough and palpitations when I received the vaccine.

Paresthesias, gait disturbance, vision disturbance

I am an RN and I received the Covid Vaccine on Friday, felt some expected fatigue and arm soreness on Saturday, but woke up Sunday for my shift with a dry throat and hoarse voice that progressive worsened that day. I got a Covid PCR swab Monday morning at 0900 and made an appointment to see my doctor that afternoon. At my appointment I had almost lost my voice, had some nasal drainage, slight sore throat, fatigue, and she felt I had decreased lunch sounds that warranted all abs and a chest X-ray. I was swabbed for strep, Flu A & B, and Covid antigen testing was done. All were negative. The CBC was mostly within normal limits. The chest X-ray show inflammatory process, a possible beginning pneumonia, and stranding. She prescribed a ZPak. I received a negative COVID PCR test result on Wednesday. I reported to my employee health nurse at my faculties where I work and received the vaccine and she asked me to fill out a VAERS report. Licensed provider note states ?December 21, 2020 To whom it may concern, This is a note to confirm that patient was seen in my office today for a doctors appointment. Patient was seen in office today, x-rays were taken, does as symptoms consistent with bilateral bronchitis, pre pneumonia right side of concern this started with the COVID vaccine. ?

developed a pruritic red burning rash on hands and arms 1 hour and 23 minutes after Pfizer covid vaccine. Itching all over and mild itchiness of throat. Had premeditated with 10mg zyrtec. Upon reaction took additional 10mg zyrtec and prednisone 10mg. symptoms resolve in 4 hours

Within 10 minutes lips were tingling and small hives on roof of mouth (1635). After 30 minute evaluation I left since I thought it might be anxiety or Placebo. Took 2 Benadryl. At 1830 decided I needed to go to the ER since symptoms were worsening. Tongue swelling, hives on roof of mouth getting larger in size and increasing surface area, larger hives on inside of mouth, lips noticeably swelling to those who didn?t know me, lips tingling, face itchy and discolored, getting harder to breathe to the point of being painful to swallow and talk. In the ER they have me a epinephrine shot in my left thigh and a intravenous dose of steroids in right arm. Observed for roughly 2-2.5 hours then sent home. Have a Rx for prednisone (3 20mg tablets for next 5 days) and instructions to contact allergist/ immunologist within 10 days. To date (12/25) symptoms are: still swollen lips although not as large, itchy face/ neck, sores on inside of mouth, throat still sore but can safely talk and eat without problems.

12/22 - Extreme fatigue 12/23 - Arm pain and swelling at the injection site, Feverish feeling but no actual fever

Hives and scratchy throat

Moderate full body myalgias and low grade fever 100.2 approximately 20 hours later. Resolved spontaneously by 48 hours.

2 days after receiving the injection I noticed a large amount of swelling under my left arm. It is tender and about the size of 2 golf balls. I have had COVID 19 in June and had antibodies in July and October during my blood tests.

24 hours after receiving the vaccine, patient discovered a rash approximately 1/2 inch in width extending from the left corner of their mouth to about halfway down their neck (approximately 5 inches in length). The rash was washed with cool water and soap, and monitored.

Slight weakness/tiredness, muscle soreness, low grade fever, general feeling unwell

20 minutes post vaccine to approximately 1 hour post vaccine: hot flushing from chest up to face. Flushing felt like nose and cheeks were numb. 12 hours post vaccine: left upper arm (injection site) with not only muscle soreness but arm was difficult to lift. 27 hours post vaccine: sudden onset of diarrhea (only 1 episode)

irritation an inch below the injection site. the size of a silver dollar. seems to be increasing size.

"WITHIN 5-10 MINUTES OF GETTING THE VACCINE. I STARTED FEELING LIGHTHEADED WHILE SITTING ON A CHAIR. I FELT LIKE I NEEDED TO LIE DOWN AND PUT MY FEET UP BECAUSE I FELT LIKE MY BP IS GOING UP. I TOLD SOMEBODY AND A NURSE CAME WITH A CRASH CART. I TOLD THE NURSE IF SHE COULD CHECK MY BP BECAUSE I COULD FEEL IT GETTING HIGH (I CAN TELL IF MY BP IS HIGH BECAUSE I TAKE BP MEDS FOR MY HTN.) I TRIED TO TAKE A DEP BREATH TO CALM MYSELF. NEXT THING I KNEW, A

NASAL CANNULA WAS PLACED ON MY NARES. I FELT TACHYCARDIC, AND STARTED TO FEEL PALPITATIONS CREEPING UP MY NECK AND CHEST. THEY DID AN EKG AND FS BLOOD SUGAR ON ME. I HEARD SOMEBODY SAID, 'HER BP IS 200!"". THE DOCTORS AND NURSES WERE STARING AT ME TO ASSES ME FOR ANAPHYLACTIC REACTIONS. I SAID ""I DONT THINK IT'S ANAPHYLACTIC REACTIONS"". A DOCTOR TOLD ME THAT THEY ARE BRINGING ME TO THE ED FOR FURTHER OBSERVATION. ON THE SECOND DAY POST-VACCINATION, I FELT SO TIRED, FEVERISH AND IT'S LIKE I HAD A HANGOVER."

extreme soreness and swelling at injection site, followed by soreness and tenderness up same side of neck

Sores on tongue Fatigue Diarrhea 6 days after shot

On 12/24 I started having muscle twitching in my back, shoulders, eyes and my mouth are felt drawn up. It subsided after about 15 minutes. On 12/25 the same thing happened, bit twitching muscles also affected my arms and hands. It lasted about 35 minutes.

I was at work (I am emergency doc) on the day following the vaccine. That day I woke up with some pain only at palpation of the right deltoid muscle at the site of the injection. At about 1p, I began to feel cold and soon after that my teeth began to chatter and I began to have rigors. I continued to work and left at 330p, as usual. I reached home at about 430p and took my temperature: 102.2F. I took 1000mg acetaminophen and 600mg ibuprofen. At that time I had stopped shivering. I had dinner without problems and went to bed at approx. 1000p, repeating the dose of both meds. I woke up at 5 the following morning and reached to work by 0700a. Symptoms did not reoccur. Deltoid pain was gone by morning as well. I rationalized the event as a boost reaction, as I had Covid-19 in July 2020.

Feeling that something was wrong, headache, racing heart beat, short of breath, dizziness, weakness, inability to stand, hot then cold, shaking, chills,

Fast Heart Rate of 107 24 hours after vaccination; sluggishness

Mild anaphylaxis with angioedema of the tongue within minutes of injection.

1-day post-vaccination, injection site swollen, raised circle about 1.5 inches in diameter, warm to touch. No past reactions to other vaccines.

Intermittent Abdominal cramping on 23rd and 24th. Diarrhea on 25th at night. I?m usual sensitive like this to some antibiotics. Feels similar.

Began experiencing pain in left arm shortly after injection, approximately 12 noon. Pain continued to worsen throughout day. Unable to move arm without severe pain by 5 pm same day. Began taking liquid advil gels approx 9 pm on the same day. . Pain continued throughout night. At approximately 10 pm I called the VAERS toll-free number to report this problem. I left a message and have received no return call as of yet. I have been taking 400 mg liquid advil gels every 4 to 6 hours since. I placed a call to my primary physician on December 25th. I was told this was a common reaction and to take Ibuprofen for pain. I am writing this approx 2:30 am on Saturday December 26th and pain has not subsided.

First and second night rigors, full body cramps. At 30 hrs ageusia following an exercise run with severe knee pain. Dry mouth starting at 48 hours. Chills continue 3 days later. No resp symptoms. Afebrile. Going on 4 days and symptoms continue

"FELT FLUSHED, ""TINGLY"" AND HER THROAT ITCHED"

Itching, urticarial rash, mild shortness of breath, headache, mild nausea.

Right arm is painful with a rash and redness in the area. There is also pain from the elbow to the shoulder. Pain especially with lifting my right arm or lifting something with right arm.

"Headache like I experienced with Covid, painful hips/back like I experienced with Covid - both only on 12/20/2020. I took Ibuprofen. My arm was sore at the injection site and it still is sore 12/22/2020. A small area around the site of the injection became red on 12/20/2020 and the red area continues to grow on 12/22/2020. What was the size of a thumb nail on 12/21 has grown to about 2"" long by 1"" wide."

Dizziness,Nausea, and Tense

low grade fever 99.3, fatigue, achiness, headache, congestion

Patient c/o of overall warm, tingly rush through her body, feeling shaky. Denies difficulty breathing or any other symptoms. BP 133/98, HR 95, O2 100%; BP rechecked after a few minutes, 116/81. POC 114. Reports feeling better right away and returned to monitoring area to be observed for 30 minutes.

fever to 100.8 around 1pm on 12/25, lasted for 1-2 hours.

Developed large hives on face, returned back to clinic. They gave me two doses of 25g Benadryl liquid. Vitals were taken. BP was 170-180/1-teens, pulse between 100-120. Was observed and hypertensive emergency remained, was then sent by ambulance to ED. Treatment given there was liquid Decadron.

RIGHT UPPER ARM STRTED FORMING A REDDENED AREA SATURDAY 12/19/2020. AREA KEPT GETTING BIGGER SITE MORE PAINFUL. tUESDAY 12/22/2020 RIGHT UPPER ARM HAD GRPE SIZE HARD AREA WARM TO TOUCH, VERY TENDER. DR EVALUATED, PLACED ME ON ANTIBIOTICS FOR 10 DAYS. WAS INSTRUCTED TO CALL AND SEE HIM IF ANY CHANGES/ WORSENING OF THE AREA.

Localized raised, reddened area. Warm and tender to touch. Took Benadryl-did not remedy the area but no worse. No systemic reaction. No further swelling of arm I have reacted this way to previous vaccines (tetanus being worse than this one. ----

I had bodyaches, fever of 101.4, nausea, chills, headache that started at 2230 on 12/24/2020. Tylenol was taken and fever continued to increase. Hip joint is stiff and walking is difficult.

Moderna COVID-19 Vaccine EUA Severe body chills(started at 7pm to 10am)) body aches (8pm to 10am)) headache (10pm to 8pm next night) Lethargy 10pm to present)

fatigue nausea vomitting

single episode of diarrhea 20 minute after vaccine administration, no other systemic symptoms, no other complaints or concerns

Stomach cramps, fatigue, diarrhea.

Feeling hot, redness

Dizziness. Lightheadedness. Fever (100.1)

Hypertension, hives on chest, arms and torso, sweating. 50 mg Benadryl administered

Day 2 post vaccination: Tinnitus. Ringing in ears, ears feeling plugged, hearing diminished, and every sound seems to echo around me.

Got covid vaccine around 0745, Driving home from hospital, felt like throat was warm and closing, heart racing and shakey, pulled over call 911 at 0816 and ambulance arrived. Blood pressure was elevated, symptoms subsided and took Benadryl. Minor tingling in throat post- event.

red, hard, painful, raised, warm area at injection site measuring 8cm x 5cm five days after injection

Approx 10 hours after receiving vaccine began feeling nauseous with headache that worsened. Followed by high fever of 102 came down to 100 with use of ibprofuen. Fever was on and off for another 12 hours fever and headache/body aches resolved by 3 pm on 12/25/20

Sharp pain in left arm shortly after injection with ROM of shoulder. Pain progressively worse over the next 48 hours to 5/10 at rest and 8-9/10 with ROM. Unable to work as scheduled as a OT for patient safety reasons due to limitations of left arm use.

I began to have itchiness on my eye lids, around my eyes, and on my neck. I took 2 Benadryl and went to sleep. Today, I continue to have itchy eye lids as well as some itchiness around my chin although that is less severe than my eye lids. I have no rash nor do I feel this possible reaction requires any immediate attention.

Woke up the morning of 12/24/20 and had Developed raised red rash with itching to right shoulder, chest and arm down to the hand. Rash only developed on The right side, did not move down to abdomen or legs at all. Also developed blister in the mouth only on the right side on the roof of the mouth. Took Benadryl and applied cortisone cream topically to rash. At this time 12/26 0800 most of the task has resolved only remaining in on the back of the right hand and wrist and the blisters in the mouth remain.

Patient had a syncopal episode after receiving her first dose of the COVID-19 vaccine.

lLeft arm was warm them whole body got warm. Heart Racing Broke out in hives

Vomiting w/o nausea. Chills

myalgia, chills and drenching sweats

Sore throat, fever , tested positive for covid

Experienced mild bloating, mild abdominal cramping, hyperactive bowel sounds, mild diarrhea, and mild nausea starting at 0130 on 12/23, with the worse of it 12/23, improving on 12/24, and resolved by 12/25. Symptoms were improved with over the counter gas medicine.

Numbness and tingling of face unilateral on same side as injection, nerve like pain shooting thru neck, followed with bilateral reynauds of hands and feet. Started within 15 min on injection side and was bilateral within one hour.

I got the vaccine on Tuesday, on Wednesday night In the middle of the night, I had extreme leg cramps, more severe than I have had before in both legs. I got nauseous and vomited, not sure if due to pain or a reaction. I took potassium and drank more water the next day. Again, I Thursday nIght, I had another EXTREME episode. Felt my whole body was cramping. It lasted about 5 to 10 minutes. I drank a lot again, took several vitamins, potassium and one gabapentin on Friday night. I did not have an episode on Friday night. I am not sure if this is related to vaccine but felt the need to report as I suspect somehow my electrolytes were affected.

I began feeling short of breath, heart palpitations, and dizziness. It felt the same as my reactions to bee stings and fire ant bites. This lasted about 10 minutes and started to subside on it's own. Then, I was also given 25 mg of benadryl by mouth. Within about 30 minutes I was feeling back to normal.

Body aches, fever, headache, sore throat, coughing, congestion, no taste, loss of appetite.

12/23 body aches - generalized all over, just don't feel well. 12/24 body aches, just don't feel well. 12/25 body aches, just don't feel well, skin on back feels itchy and burning - nothing is reliving it. 12/26 body aches, just don't feel well, skin on back feels itchy and burning - difficulty sleeping/getting comfortable.

Low grade fever, muscle soreness, chills, headache, disorientation, confusion

Nausea

Received Moderna COVID vaccination on 12/25/20 at 7:50am. Felt fine with vaccine and immediate period. woke up with pain in arm 1900. Upset stomach 3am. Vomited. Presented to COVID vaccination clinic at 9am. Headache on left side of head, nausea, malaise, achy. Tingling down left arm and into hand. Swelling at the site. Red skin size of a dime at injection site. Reports she worked last night 2300-7am. No fever. Iced the arm. Took Aleve.

Fever up to 100.8, treated with ibuprofen, body aches.

Sore arm about 4 hours after receiving vaccine. Next morning: woke up feeling fatigued and had 3 bouts of diarrhea in total (each time after eating).

Diarrhea, onset about 12-16 hours post dose. Multiple times for roughly 24 hours. Self limiting, not requiring any treatment beyond oral fluids. Injection arm soreness, swelling and small contusion,

starting about 8-12 post dose lasting for 48-72 hours. Self limiting did not require any treatment. Fatigue, developed within 18-24 hours post injection. Self limiting not requiring any treatment.

lightheaded, sweaty, and nausea. Past hx of vasovagal reactions to needles

12/26/2020 Generalized body urticaria/rash, itchy, Fever 100.9¦, headache, GI s/s, Sore arm 12/25/2020 2pm-nighttime Fever 101.1¦ (continued throughout evening), GI s/s, fatigue , Sore arm/shoulder 12/24/2020 7pm Scalp Itch, Sore Arm

Immediate: arm numbness and tachycardia Day 1: injection site swelling swollen, tender, red, and warm; myalgias; occipital headache; general malaise Day 2 & 3: injection site swelling swollen, tender, red, and warm (still ongoing)

intial light headedness. spotty vision and fatigue. Patient felt like they were going to faint. Vitals were taken and patient had elevated HR, and 90% O2. Resolved in 60 seconds from initial response. Patient was observed for 30 minutes post vaccination

severe myalgias, joint pain, bone pain, chills - lasting from hour 15 after vaccination till hour 45; associated with severe fatigue . slept all day on 12/24. took tylenol and ibuprofen every 4-5 hours. 80 % resolution of symptoms by hour 48. complete resolution of symptoms in 72 hours.

16 hours after injection- (6 am) and lasting 10 hours Nausea Vomiting Dry heaves Cold sweats Headache Fatigue Muscle aches

Chills fever over 102f headache cough body pain weakness 48 hours

12/24- bad headache 12/25 bad headache, sore throat, swollen lymph nodes, fever 101.6, chills, nausea 12/26 headache, temp 99.5, sore throat

On the 19 had a horrible headache and then at about the 24 hour mark I had really bad left ear pain almost like an ear infection but worse this lasted about 24 hrs then I felt like crap for 2 more days

LIGHTHEADEDNESS, HEART PALPITATIONS, SHORTNESS OF BREATH, FELT FAINT

Right side of face felt hot and slightly numb. Continued to persist for several hours. Appeared slightly puffy on right side. Muscles on right side of face felt stiff when moving them. Symptoms seemed to resolve but the next morning but returned around 1pm on 12/25. Additionally I noticed slight dropping in my face on the right side of my face.

Patient developed symptoms early the next morning after the Covid vaccine. Started with fever 102.8 and body aches. had fever for 5 days. Extreme low energy for 8 days and continuing. Headaches everyday. cough for the last 2 days. no SOB, no N/V D, no Sore throat, no nasal congestion. no loss of taste and smell. not pregnant.

Shaking chills, sweats, fever

complains of heart racing. Had patient site down checked bp 151/92 and pulse now 72. Patient reported heart rate no longer racing and has history of high BP

Body aches that started within 24 hours Low grade fever tmax 100.3 started late on the 25th and today.

Rapid onset of hoarseness, throat tingling and tightness

diaphoretic, shaky, nausea (transient)

dizziness resolved within 20 minutes

Chills, joint pain with redness and swelling, fever. Fever ranged from 99 to 101.7. Left foot pain causing issue walking for 24 hours, both elbows pain right shoulder. Right hand thumb, index finger and middle finger red and severely swollen. Fever continued off and on from 12 22 to 12-25 as of date. As of 12/25 pm, had episode again of chills, fever up to 100.1 again and left foot started hurting again.

Complains of heart racing. Had her sit down pulse 100 and BP 161/96 at 1120. At 1123 BP 161/96. At 1125 pulse 64 and bp 144/93 and states heart not racing and I feel better

Swollen armpit

Sneezing -12 hours, runny nose- 24 hours, mild cough 24 hours, fatigue for 36 hours, mild headache12 hours, muscle aches. Used OTC multi symptom cold medicine and Allegra.

Really bad reflux all day two days later (I don't get reflux unless I am pregnant, and it's been close to 4 years). Then the next day I had a really bad pain in my chest which occurred every time I swallowed. Was told this was probably an ulcer (I've never had one of these before).

Generalized rash

Injection Site Reactions included: pain, tenderness and swelling of the lymph nodes in the same arm of the injection (left arm) and hardness and some swelling around injection area of said left arm. Started on Wednesday, December 23, 2020 at approximately 5;30 pm and is still ongoing as of December 26, 2020 at time of this report. General Side Effects: Fatigue: Started on Wednesday, December 23, 2020 at approximately 5:30 pm and is still ongoing Muscle Pain, Joint Pain, Chills and Nausea: Started on Wednesday, December 23, 2020 at approximately 5:30 pm and subsided on December 25 at approximately 6 am. headaches and sporadic fevers: Started on Wednesday, December 23, 2020 at approximately 5:30 pm and is still ongoing - taking ibuprofen to keep fever and headaches down.

extreme dizziness a couple hours following the vaccine, headache for around 36 hours, weakness for 36 hours,

Headache, nausea, dizziness, dehydration, weakness, shaking

On 12/25 woke up with chills, body aches ,no appetite, mild nausea & extremely tired. Low grade fever 99.2. Only had orange juice to keep my blood sugar up. I have Type 1 Diabetes. Felt this way all day until I went to bed. Woke up today 12/26 feeling fine

Vomiting 1 week post injection followed by headache lasting 2 days

i developed mild cough at first, then fever and chills and body aches on the 2nd day up to present. I am taking tylenol fort he fever and Mucinex for coughing. Also Albuterol Breathing treatment Q 6 hours PRN Also the high temp and humidity of my CPAP at night helps

15 seconds after administration I felt tingling in my mouth and felt warmth come over my body from my feet to my head. I then experienced a sudden increase in heart rate. I was tachycardia to the 140s and BP 140/90s (high for me). This lasted for about 1 hour then resolved. The same event occurred 3 additional times, resolving in between episodes with a heart rate in the low 100s.. I was taken to my workplace Emergency Department. The entire even lasted over 4 hours.

Experienced numbness and tingling unilaterally to one side of face. Began 45 minutes after vaccination and lasted 4 hours.

Headache similar to migraine in location and intensity, first day of vaccine and every day since receiving vaccine. Nausea the day after the vaccine No appetite every day since receiving vaccine

At 72 hr marl I began having nausea and intermittent vomiting. Voming has subsided but nausea is persistent to the pint ive taken zofran many times.

Approximately 5 days later I began having symptoms which then developed into a shingles rash on the 7th day after receiving the vaccine. I wanted to report this to see if others had the same experience.

headache, upset stomach

Itching with redness and raised welts beginning 36 hours post injection, starting bilateral inner thighs and ascending bilaterally along groins, flanks, axilla, to arms and hands over a 36 hour period.

Fatigue, chills, fever, joint pain and pain at injection site

12/18 afternoon: asthma attack. This was the same as previous asthma attacks and occurred after my normal triggers (exercise in cold air). Symptoms resolved completely with albuterol. I was coughing continuously and strenuously for about 10 min before using albuterol. 12/18 evening: low-grade fever (100.1 F, baseline is <98) with chills. Also with altered mental status/delirium, which is typical for me while febrile. There was also nausea. 12/19: fever decreased to 99.2 F with normal mental status. New general malaise, worsened nausea. Single episode of vomiting, large volume of bile with some blood (streaks of fresh blood, larger volume of coffee grounds emesis mixed with bile). After vomiting I noted tachycardia to 130s--140s but this is a typical finding for me post-vomiting. 12/20: No further vomiting. Subsequent 2 bowel movements with moderate melena, since resolved. Fatigue and cold extremities, improving.

Within minutes of receiving first dose of Moderna COVID-19 vaccine, patient became lightheaded and pale, developed clammy skin, and was confused. He was assisted to a supine position with his feet elevated while his vitals were checked. His symptoms rapidly resolved in this position, and he was noted

to have the following vitals: P: 60; BP: 118/68; O2 Sats: 98% on room air. He remained supine for ~15 minutes and then was able to sit and ultimately stand without return of symptoms. He was monitored for 30 more minutes during which time he remained asymptomatic and was able to tolerate eating and drinking without difficulty. He was released to home with advice to seek immediate evalution for any symptoms.

"After injection patient reported feeling dizzy and ""woozy"". Patient states he is very anxious and nervous about injection today. Patient was assisted to floor x 2 assist with RN and Dr. and feet put up. BP 94/51 HR 90. Patient reported feeling nauseous initially. Patient responsed well to supine position. He requested a drink of water and reports he has not eaten today. Patient remained alert during the entire episode. Repeat BP at 1225 116/72. Patient was offered water with gramham crackers to eat, okay per Dr. Patient was assisted to a sitting position on the floor. Color improved, cheeks pink and patient appears in no distress. Patient was assisted to standing position at 12:30, reports no dizzy or light headedness and repeat BP 130/80 HR 74. Patient was assisted to the observation area with 1 assist. He will continue in observation area for 30mins."

Anxiety and slight shortness of breath that didn?t interrupt my sleep. I used my regular inhaler as scheduled. I felt better the next morning. Just arm soreness.

Full body hives beginning about 36 hours after vaccination. Angioedema in the hands, feet, and lips beginning about 48 hours after vaccination. Hives did not improve with Benadryl so doctor prescribed prednisone. No severe reaction such as anaphylaxis, but reaction was moderate enough to make daily life difficult.

Urticaria rash on bilateral arms and abdomen

Day off sensation going up my left arm to my head Headache dizzy lightheadedness and nausea almost fainting. Bp 115/70 hr 80. Tylenol helped with headache but head still felt heavy. 1st day Chills and extreme fatigue 2nd day fatigue nausea 3rd day fatigue nausea severe headache ?exploding? after getting up from picking up toys off the grown blood pressure 90/60 .

The day after I got my vaccine (a Thursday) my arm hurt really bad, and my body aches started as soon as I woke up, but were not severe. As the day progressed, the body aches got more severe and were accompanied by a headache and fever by around 7 PM. I literally felt like I was dying, and have never had body aches that bad before in my life. I laid on my couch and didn't move until 11 PM, with no apetite, and then went to bed. The day after that, when I woke up the body aches weren't as bad, and my temp was 98.8. Again, around 3 the body aches started getting worse, I was so tired I could barely function, couldn't eat without being nauseous, and laid in bed as still as possible until I could fall asleep. The Saturday following my vaccine, I woke up at 6 and my body hurt so bad it felt like I couldn't move, my head was so bad even the light from the shades felt like it was piercing me, and I still had no apetite. I stayed in bed until 10 until the body aches got a little better, and was able to go about my day almost as normal, just with my body feeling kind of like I slipped and fell on ice. On Sunday, I still had no apetite and was nauseous without even eating. My body still ached, but I was able to do things like the dishes and just hang out at home. My headache was still unbearable. I called the hotline number for my

hospital that was given to me when I got my vaccine, and they scheduled a COVID nasal swab test at 1. I put on sunglasses to drive the 10 minutes to the clinic, got my test, and went home and went to bed. Since I had a COVID test ordered by my employer, I wasn't allowed to work until I got the results and HR cleared me. The results were negative, and I didn't get cleared by HR until Monday morning. When I contacted my supervisor, he wanted me to stay home anyway since the body aches (even though they were getting better), fatigue, headache and nausea were still there, regardless of a negative covid test. He was worried I had the flu. I made an appointment with my primary care doctor for 2:10 on Monday, and he told me it was just serum sickness. I went home and went to bed. My body aches and fatigue fully went away by Wednesday, and my headache still remains, on the following Saturday. I haven't had a headache in maybe 5 years.

Patient received vaccine around 4:15pm on 12/24/20. Around 11pm he was feeling extremely tired, however, patient had been working very hard the week leading up to Christmas. Patient woke up in the early hours of the morning with chills and very fatigued. Chills and fatigue remained on and off through out the day and the patient realized he was running a temperature of 102.8 at some point during the day. Patient stayed at home and rested and took Ibuprofen and eventually started feeling better towards the evening and night. However, the fatigue still remains on 12/26/20.

Initially very mild tingling to nose and lips. Then in ED, BP 170s/110s. Then about 1 hour and 10-15 minutes later had rash start to pop up on random areas of my face. Then next morning with sore throat and rash around the next about 21-22 hours after the vaccine

Bodyaches, weakness, bone pain, lethergy, brain fog

Moderate soreness at injection site.

Moderna COVID-19 Vaccine EUA Severe teeth chattering chills, body aches, muscle & bone pain, temperature 99-101. Diaphoresis, Dizziness, Nausea, Vomiting & Diarrhea lasting 48 hours. Severe body aches, muscle & bone pain persisted.

12/18/2020 I HAD A LOT OF BODY, MUSCLE AND JOINT PAIN. THIS LASTED ALL DAY 9:00 AM - 9PM. I WENT HOME AT 5 AND WENT TO SLEEP FOR 90 MINUTES. SYMPTOMS WERE MILDER. I STARTED TO NOTICE L UNDER ARM PAIN, INTENSIFIED OVER THE WEEKEND. 12/21/2020 CONTACTED PCP; LYMPHNODES SWELLING. PAIN LASTED UNTIL 12/22/2020, LATER EVENING THRU 12/23/2020 12/25-/12/26 NO PAIN TELECHAT WITH PCP NOT VISIT; DR PRESCRIBED TYLENOL

12/23/20 0850 Stinging/burning at injection site right arm; 2000 entire arm right burning and feeling of sunburn across chest down to liver then to left flank and entire back; 12/23 2300 generalized joint pain; 12/24/20 0830 101.3, 1030p 100.6; Friday 12/25/2020 1030am 100.1; 5pm 99.3; Vomited 830p;11pm 101.3 Saturday 12/26/2020 1pm 100.0

C/O of tachycardia, dizziness 20 minutes post vaccine, placed on monitor. HR 80-100, B/P 157/102, SaO2 100%. Progressed to SOB & HR 174 @ 25min post vaccination. Epi auto injector 0.3mg IM x1 given,

called emergency response. Patient awake, alert, oriented x3. Verbalized improvement in SOB after epinephrine, taken to ED via wheelchair.

Patient had fever and malaise that lasted 48 hours

Flush feeling through entire body within 10 min with dizziness associated. Numbness of bilateral hands and feet as well as lips. Rise in Bp up to 150/100. Red, blotchy neck. Within hour, dizziness subsided, but numbness of extremities and lips lasted approximately 10 hours.

12/23/20 0000AM constipated like symptoms started; 0200AM woke up to severe stomach discomfort with refluxing feelings with body chills; 0300AM had bouts (at least4) of violent vomiting with very thin, liquid greenish vomitus, vomiting lasted for about 20 minutes then followed by loose bowel movements consecutively (about 6 times) with very liquid, greenish stools; stomach discomfort somewhat subsided right after but body chills remain and joints and back started to ache. Noticed that exposure to cold air would trigger bowel movement. Was afebrile all this time until about 1100AM where it was recorded to be mildly febrile at 37.8, took some tylenol with gatorade after which mild fever seem to subside. For much of the day of 12/24/20, body aches continues with intermittent loose bowel (especially after eating or drinking anything)still averse to cold, took some tylenol again 6 hrs. later for the body aches mostly. 12/25/20 felt much better for most of the day then at 1100PM reflux symptoms and body aches started again but no vomiting this time, still afebrile. 12/26/20 at the time of this reporting, stomach still feels queasy and still having loose bowel and body aches. No other symptoms experienced except for the ones described above.

Vaccination administration error - equipment syringe failure. While giving the shot, the cap (needle part) of the syringe came off. Nurse vaccinator stated that patient likely received 0.3mL or 0.4mL of the dose (full dose is 0.5mL). The remaining dose was pushed out of the syringe, so unable to see how much of dose was remaining that did not get into the patient. The patient displayed no signs and symptoms at time of this error. We called Moderna manufacturer after error occurred, while patient was still waiting in the room. Moderna Medical information stated that they do not have any recommendations outside of the information published to providers and to wait for call back from their experts regarding next steps. Patient was observed for recommended amount of time and then left the facility. We'll contact her if anything is needed besides the second dose that is scheduled in 4 weeks in order to complete the vaccination series.

Local site reaction: erythema, hard welt, warm to touch, burning at injection site at time of injection. Erythema grew over next 48hrs to a max of 2inches, warm, hard to touch with persistent burning. Resolved 12/25/2020. Beginning at 4:00pm 12/22/2020 generalized body, muscle, and joint pain, increased generalized neuropathy pain and generalized sensitivity to touch. Symptoms resolving 12/26/2020 at 10:00am.

Fever, body aches,

Left supraclavicular lymphadenopathy

Injection given on 12/21/20 at 0830 - Injection site pain noted for 12 hours. 12/22/20, tiredness, nausea, swollen lymph nodes noted and continued through 12/23/20. All side effects resolved by 12/24/20.

Extreme soreness at site of injection that has continued into third day. Pain worst the second day and is waning, but use of arm is still painful. Experienced lightheadedness shortly after injection, but with no bad effects. Like being high. Painful body aches began at end of day of injection and continued for 36 hours, with highest intensity after 24 hours. Body aches diminishing on third day, but arm soreness still quite evident

tingling, dizziness, tunnel vision, nausea

"I have been experiencing overall of ""being unwell"" including intermittent palpitations, nausea, lower GI upset/cramping, dizziness, fatigue, chills, low grade temp of 99.5 F, right sided neck pain, and Headache. Treatments: Tylenol PRN, and PRN Zofran Outcome: ongoing"

Very sore , swollen , red arm below injection site. Headache and chills for 24hrs

I received the shot at 7pm on the 23rd, when i woke up on the 24th i had some soreness around the site but I felt fine otherwise, around 10am on the 24th, I started by first having chills then feeling flushed, I started to have severe muscle and joint aching, headache and body sweats. my fever got up to 103. I was taking tylenol and ibuprofen about every 4-6 hours. this all lasted until 6am on the 25th, on the 25th i had some fatigue and headache, the night of the 25th around 10 pm i noticed a little swelling and tenderness under my left axilla and left upper chest near my collar bone. i think it is lymph node swelling or tenderness. Today is the 26th and i still have the tenderness under my arm and upper chest, but i feel better otherwise. I was told that people usually have worse side effects from the second shot, is there any reason you wouldn't get the 2nd shot??

Lip soreness 12/23 around 6p. Mild Lip swelling 0900pm and took 1000mg of acetaminophen. Severe lip swelling mainly on the left side at 0400am. Took Benadryl and 1000mg of Tylenol. Swelling went down slightly. Went to ED 12/24 around 1130AM with low grade fever of 100 F arm soreness and continued lip swelling. 12/24 at 0900p fever of 101, fatigue, aches, and lip still swollen, but less then AM-took 1000mg of Tylenol and Benadryl. 12/25 at 0500AM 102.2 fever, body aches, sever headache, night sweats, and other side of lip swollen took Benadryl and 1000mg of Tylenol. At 6 AM fever went down to 101.2. 1200pm fever of 100.5, severe head ache, muscle and joint aches, lips mildly swollen-took 100mg more of Tylenol. 6pm 101 fever, headache, and lips itchy/swollen. Benadryl taken and 1000mg of Tylenol. 1200AM fever of 100 and headache, lips sensitive-1000mg of Tylenol and Benadryl. 12/26 at 0930 AM fever broke with temp of 98.6, mild headache, lips sensitive, but minimal swelling.

*A small rash of around 10 mosquito bite size bumps appeared under left armpit and left torso only. Shot was given in left arm. There are no bumps anywhere else on body. *They do not itch, hurt, or bother me. *It has been almost 72 hours since shot and bumps still remain.

Small amount of fluid leaked at needle hub.

10 minutes after dose experienced tachycardia, dizziness shortness of breath, and flushing. It lasted about 30 minutes.

HAD FEVER TO MAX OF 101, BODY ACHES AND CHILLS AND EXTREME FATIGUE FOR ABOUT 36 HOURS AFTER INITIAL SYMPTOMS STARTED

-Arm soreness started almost immediately, worsened within 8 hours, much improved by 48 hours -Bilateral trapezius myalgia, started about 10 hours later, unrelenting with heat/massage/oil/relaxation but still able to go out with a heavy backpack and hike, about 60% improved by 48 hours

sudden onset of pain in throat, base of tongue and increase dry cough. Oxygen saturation 97% which patient reports is at her baseline, no increase work of breathing, slight dry cough x 3 but not other cough

Light headed and dizzy, funny taste(metallic taste),pins/needles in tonsil area, nausea/vomiting

Facial hives, ear ringing, happened around 1 hr and 30 min after vaccination

Patient described feeling flushed. We activated our rapid response and hooked the patient up to the monitor. The patient was observed by our ED physician and observed for ~ 30 minutes. All vitals were normal, the patient reported a Migraine for 1-2 days after.

Experienced High fever chills muscle aches and malaise

Pt had fever and headache within 1 hr. This went away about 9 pm. The next day patient was ok. On day 2 post vaccine (12/20/2020) patient woke up with lymph node swelling in his left armpit. It was about palm size. Pt took meloxicam on that day and next day. Swelling has started to decrease.

Dizziness, syncope, nausea, feeling of going to faint.

Pt stayed for 15 minute observation time and then went to the cafe to eat breakfast. Once she got in her car about 45 minutes after, she noticed her lips were swelling. Pt took 25 mg of Benadryl. She continued to have to take it q4h on day of vaccine. Over the next 2 days she started to cut back on the amount of Benadryl she was taking but lips were still swollen some. She saw her PCP on 12/21/2020 and was told to continue Benadryl as needed and to take Pepcid 20 mg daily until better.

Pt had injection site soreness the next day. On day 2 post vaccination, pt developed a golf ball size knot. Five days post vaccination, the knot is gone but injection site still sore. Pt took ibuprofen as needed and Benadryl at night.

Soreness at injection site 3/10 for 24 hrs. Soreness radiating down to elbow and up to neck and base of skull starting 3 hrs after injection lasting 11 hrs.

Headache and general fatigue

"several minutes after vaccination, complained of shortness of breath. Nurse used standing order protocol to administer epi 0.3 mg into right deltoid. Patient reports feeling a little better BEFORE the epi, but reported feeling ""strange"". Charge nurse notified the emergency department, an ED nurse advised

coming for workup in the ED (which is right down the hallway). Patient walked to ED. Appeared pale. Patient discharged from the ED with a prescription for zyrtec."

Employee had nausea lasting 2-3 hours following vaccination and malaise for the rest of the day

Blister at injection site. Skin peeled. Approximate size green pea. Red line less than an inch.

itching, fatigue

Chills, malaise, nausea, vomiting, diarrhea, currently at a total of 44 hours from symptom onset without significant improvement

Right Shoulder Muscle Soreness

Fever 100.5, shortness of breath, heart racing, wheezing, fatigue

Fever, all over body aches, severe headache and chills, all this started about 11:00PM on 12/23/2020, about 11 hours after I received the vaccine. lasted throughout the night, around 0830 the next morning, felt better, still had a headache. Had low grade fever and slightly achy (not as bad as evening before) on 12/24/2020 evening. Felt completey back to normal by morning of 12/25/2020. I tool OTC extra strength Tylenol and Advil for my symptoms.

fever 101.8, body aches , chills, back pain , cough, shortness of breath , loss of taste and smell, sore throat

Tachycardia, elevated blood pressure, tightness in throat

Body aches and pains (started at 8PM), shaking chills and really cold(1:30 AM), nauseous (1:30 AM), fever 100.5 (8:45AM and throughout the day). The next day, some coughs cause my head hurts, aches and pains, low grade fever. Treatment:aspirin and benadryl. Doing better than the day before.

nausea, cold sweat, dizziness

"Patient entered observation area and upon greeting states ""I feel something"". Patient stated ""feeling something when I swallow"" denies difficulty swalling or breathing. Patient appears comfortable, Dr. speaking with patient who reports similar episode in the past mostly after a long shift at work. Patient states she has a history of SVT and usually has this response when she gets nervous. Initial BP 165/108 HR 112 02 99%. Patient reports feeling anxious and denies all other symptoms including shortness of breath or difficulty swallowing. Repeat BP 143/92 HR 95 O2 99%. Patient offered bottled water and appears to be calm at 15:20. Repeat BP 134/94 HR 83 @ 15:30. Patient speaking on her cell phone with employer re: issues at work. Patient in no apparent distress at this time. BP 139/92 HR 89 O2 98%. Patient without complaints. Will discharge after 30 mins of observation. discharged at 15:45."

None . Just got vaccine shot today the first shot.

metallic taste headache

Period cycle is lasting more than 8 days without relief or a reduction of intensity. This is abnormal and hasn?t changed within the last 24 hours

dose 1 of vaccine at 11am 12/24/20, after vaccination I noticed some pain and burning that radiated down arm, lasted for seconds and resolved. This pain came and went throughout afternoon of 12/24. Upon waking around 730am on 12/25/20 I noticed slightly red erythematous ovoid rash that measured approx 3 in x 1 in in size, was exquisitely tender to touch, but smooth, without vesicles, pustules, non-fluctuant. Took tylenol and applied heat to area without relief of pain. Pain is burning in nature, with a soreness that radiates down the back of my upper arm. Pain worse with raising or using arm. Also have aching in neck and upper back. Also having increased fatigue and slight headache all of 12/25, worst at night and located on right side of head, throbbing. On 12.26.20 I woke and noticed rash has slightly increased from markings made on 12/25/20. I continue to feel tired, achy, with slight headache. Arm very sore and upper back very sore.

"Minutes after getting the vaccine dizziness, flushing, and racing heart present. I was taken to a back room, laid flat, cool washcloth, vitals taken. Rash began to develop on chest and spread across the body. No itchiness, but a mild burning sensation accompanying rash. Throat was hot and scratchy. Within 10 minutes taken down to the ER. Rash came and went in waves and would appear on different parts of body. Each wave had increased heartrate, dizziness, flushing, rash, burning. Was given 50mg benedryl at 10:45, oral 10mg dexamethasone, and 1L bolus of saline solution. Was monitored in ED for 4 hours. Last reaction ""wave"" experienced around 1pm. Discharged around 2pm. No reaction since discharge."

Received Moderna Vaccine at 11:36, waited 30 minutes per Dr. recommendation. Left hospital, starting driving home and felt lips tingling and bilateral sides of tongue feeling thick and words sounding thick. Return to the Vaccine clinic at the hospital in 5 mins . Escorted to the emergency dept. BP 203/95, HR 80s, O2 Sats 94% room air.

Sore throat Fever of 100.4

When I put food in my mouth around 3pm and then again around 5pm, I felt burning/tingling in my mouth which quickly resolved.

Heart rate of 159 with palpatations, tingling on the throat, (red, no hives), surface rash on throat, clear speech, clear lung sounds Local EMS was contacted at 1:17 p.m. and the patient was administered 50 mg of Diphenhydramine at 1:21 p.m. After admininstration visual signs of rash subsided, and patients status improved. Patient was handed off to Local EMS

near syncope, hypotension, nausea/vomiting, tachycardia (120-150) within 5 minutes of administration. did not resolve and worsened within 1 hour. Pt went to ER for workups. Received IV benadryl without improvement. Admitted to hospital overnight for continuous cardiac monitoring. Improved overnight and discharged in the afternoon 12/24/20.

next day mild headache (next morning) for 3 hours inflammation of the inferior lips (1 month ago i was inyected with fillers). for 2 hours

Severe injection site soreness- Start: 0100 12/23- end: 0800 12/24 Fatigue- Start: 1200 12/23- end: 0800 12/24 Nausea- Start: 1700 12/23- end 1900 12/23

Muscle aches. Chills. Fatigue. Started 2 days after the vaccine. Temp 99.4. Had Shingrix shot #2 2 weeks before the COVID shot.

Felt fine day of shot. Next day low fever 100.6 chills, tired , generalized aches rap hand joints. Now arm soreness atvi jection site and a red small rash distal to site

Went hiking in the morning of the 25th.. Got home at 1pm. At around 1;30pm started experiencing nausea and vomited 4 times. Went to bed, felt tired and nauseated but did not vomit again. By 8pm I felt much better and have had no symptoms since.

Chills, fever (101), bodyache, headache

Patient developed rash/hive 1 hours after receiving the vaccine. Patient self medicated with a dose of Benadryl when the hives started. Send to ER and was observed for 2 hours. Hives resolved in 24 hours with no further treatment.

Employee consulted with PCP regarding taking covid vaccine with a know allergy to flu vaccine preservative. PCP recommended taking covid vaccine and pre-medicating with Benadryl 50 mg 30 minutes prior to the injection. The employee followed those instructions. Thirty minutes after covid vaccine administration, employee started to lose her voice and developed some wheezing. Employee was taken to ED where she received a dose of epi and solumedrol. The employe was observed in the ED for 2 hours and symptoms were resolved at the time of discharge.

Within 5 minutes of received the vaccine employee became pale and felt faint. Employee was lowered to the floor and examined. BP 122/64, alert and oriented, HR 100. Employee stated he was nervous and had not had eated that day. Pt. received juice and a cookie. Felt better after ingestion of food. No hives, wheezing, or other symptoms of an allergic reaction.

Severe low back pain, had to take muscle relaxers and pain meds. Couldn't stand up straight and needed help with adls. I also had chills at night a day prior to back pain.

1800 Chills started. 2100 fever 100.8, hr 115, slight sob resp 28, spo2 96, achy, lost appetite Next day fever 100.5, resp 32, spo2 93, very achy, head ache, sob walking around house, bad reflux heartburn Day 3 fever 99.5, resp 28, spo2 93, same symptoms Day 4 normal temp, resp 26, spo2 95, same symptoms, now with loose stool Gradually improved but stayed very fatigued. Day

Swollen lymph nodes left side of neck, rash all over

Felt nausea and headache after receiving the vaccine. She was laid supine and had continuous blood pressure taken for 30 minutes. After that time her symptoms resolved completely.

Headache 5 days now, face flushing 1st day, face swelling 2nd day.

Bilateral lower extremity myalgias and chills lasting 3 hours.

Metallic taste after around 20 mins after the shot Muscle pain around the injection site - 20 mins after Mild headache after around 4 hours after the shot Mild headache on and of until two days after the shot Mild sore throat until two days after No treatment done

Injection site discomfort within 3 hours, increased pain day 1 & 2. Significant headache at 12 hours post-vaccine, persistent through day 3. Significant fatigue and drowsiness on day 2 (none like I've ever experienced before) - slept 18 of 24 hours. Mild on day 3. Sore throat day 3.

Her lips began to feel tingly and became swollen. She also reported a mild headache. Laid supine for about 30 minutes. After which she reports all symptoms resolved.

Fever, chills, sweating, shivers, myalgias, fatigue, headache, not feeling well in general.

Felt as though her throat was closing and fatigue. She was talking the entire time but kept clearing her throat.

this morning I noticed swelling and pain in the lymph nodes under my left arm, no redness or warmth just swelling and pain/tenderness

Felt a flushing sensation, nausea, and reported feelings of anxiety. Laid supine for 30 minutes. After which she reported a resolution of the symptoms.

Painful, extremely sore arm; stomach pain, headache, just feel generally not good

Painful and red contralateral side (right) olecranon bursitis (Ulnar Bursitis)

Vaccine given in Clinic on the 18th. No pain no issues then on 21 st started having nerves on my left leg firing during the day like I had a pinched nerve. Later that night I had lower back pain like sciatica nerve pain like 10/10 Tylenol 500 could not help added 400 md Motrin still no help got to 8/10. and also right hand finger next to the thumb was numb occasionally. I felt tightness on left hamstring area. Massaged it and all pain disappeared on the back after a while. But since that incident I have been having lower leg bil never firing and occasionally same numbness on the same finger . Today got slightly worse as seems like my right hand getting a bit more numb.

On 12/24 @3am I started vomiting and did so on and off for the next 4 hours. A felt very fatigued the rest of the day. On 12/25 I developed a macular pruritic rash to my chest that progressed throughout the day that covered my torso. By 9pm on 12/25 I was experiencing fatigue, headaches, muscle aches and chills. I took Tylenol and ibuprofen and went to bed. I current have a headache, worse pruritic rash and upper tooth pain .

Patient asked for extra monitoring in the observation area due to Sulfa and other antibiotic allergies. Patient states tongue was swelling. No difficulty breathing, no airway obstruction. Assessed by on site provider, 25 mg po Benadryl liquid ordered and given without difficulty BP elevated to high of 151/95. 911 call placed. EMS on site. Patient refused transport to hospital and was picked up by her mom after

signing AMA documents. Advised to not drive, not be alone and was being monitored by mom who was a physician. Patient states tongue swelling improving on discharge to mom. Last BP 140/90. Patient is obese.

Client is 17 year old and vaccine given. Unknown adverse reaction. Underage for vaccine approved.

Second day on December 21 had moderate arm pain extending up neck to base of head. Dec 22 pain was gone but began to have continuous twitching of left eyelid, Dec 23 eye pain. Started prednisone dose pack on Dec 22. Eye twitching gradually improved and am currently having minimal symptoms

APPROXIMATELTY 10 MINUTES AFTER RECEIVING MODERNA VACCINE, SHE REPORTED TO THE MONITORING PHYSICIAN THAT SHE FELT LIKE HER HEART RATE WAS HIGH A LITTLE BIT. DENIED ANY OTHER ISSUES. PHYSICIAN CHECKED MANUAL PULSE=100BPM, THEN DECREASED TO 84 BPM THEN DOWN TO 76 BPM WITHIN A 3 MINUTE TIME SPAN. PATIENT SAID SHE FELT BACK TO NORMAL AFTER THAT AND CONTINUE TO WAIT AN ADDITIONAL 15 MINUTES JUST TO BE SURE. NO FURTHER ISSUES NOTED. PHYSICIAN REPORTING THIS INFORMATION WAS AT THE COUNTY HEALTH DEPARTMENT

Numbness and tingling in lips and tongue - post 1 hour Dizziness day 2-3 Fever Low grade 99.4 post 1 hour Achiness day 4-5 Fever 100.4 day 5

Approximately 4 hours after receiving vaccine, patient broke out in full body hives. Patient took Benadryl and Claritin that night and Claritin the next day and symptoms subsided.

Nausea and intense vertigo

57 hours after vaccine, I woke up with stomach cramps, diarrhea, chills/sweats feeling awful and soon after had a sudden syncopal event while walking back from the bathroom. I recovered, laid in bed and then within 15-20 minutes had diarrhea again so went to the bathroom and had another syncopal episode on the toilet (both witnessed by my husband) with diarrhea during this episode. I then went to the ER and was treated with 3L IV fluids for hypotension, IV zofran and bentyl. I left the ER within about 3 hours. still have been fatigued but was up most of that night. my body all hurts but I fell into my bedframe face first during the first syncope so would relate that to those symptoms/injuries.

Within grove minutes of receiving the injection my throat closed, my heart raced. My pulse was 107 my oxygen was low around 89-90 I believe. My neck became red with a rash and I was shaking. I was taken to the emergency room as the shot clinic was attached to the hospital and received Benadryl 25mg and Predinose 50mg. I have no known allergies that have ever caused an anaphylactic reaction. I have never had vaccine reactions in the past either.

Day of vaccination (Monday) and day after vaccination (Tuesday) experienced a sore, tender arm and mild fatigue. Wednesday morning woke up with tender, swollen lymph nodes and sore throat. Arm still sore as well at injection site. Thought sore throat may have been due to acid reflux so went to work at the hospital as usual. Thursday morning woke up with a worsening sore throat with difficulty swallowing, cough, nasal/sinus congestion, ear fullness, fatigue with dizziness, and nausea. Was unable to perform daily functions. Notified employee health at the hospital who advised a covid test and

exclusion from work. A rapid strep test was also performed which was negative. Friday symptoms still present but slightly improved. Saturday morning received negative covid test result and approval to return to work if respiratory symptoms improved and under control. Today is Saturday afternoon, now returned to work (arrived late). Experiencing mild symptoms currently similar to the common cold.

within 3 min of receiving the vaccine, I experienced flushing, racing heart, lightheadedness, dizziness, mentally fog, winded/ shortness of breath, and felt like an adrenaline rush. All that calmed down by 30 min. Then experienced nasal congestion for an hour. within 3 hours of vaccine, developed a headache and later that day it worsened and chills developed. The next day was just slight headache. The second day was sore arm and fatigue that lasted for 1 to 2 more days.

Severe vomiting and diarrhea to where had to go to ER due to dehydration, lasted 4 days. Body aches, fever, muscle aches

I have a large bruise, found the next morning. Right foot tingling, and soreness on right calf and right leg hamstrings.

Injection site pain, no swelling or redness Fatigue (moderate) Headache Pain with eye movements Nausea Abdominal pain No treatments needed.

"Received Moderna Covid 19 Vaccine EUA Approximately 8 hours after receiving the vaccine I developed a cold sore (not unusual when I have had influenza shots in the past). Approximately 36 hours later, late at night, I developed pruritus on my left arm (near elbow, same are as injection). I examined it in the morning and there were small lesions as well as a circular ""bulls eye"" lesion, similar to when I was told I had contracted Cox Pox when doing surgery on farm workers at Hospital, 10 years ago. Acyclovir helped relieve the puriritis. At this time (60 hours after vaccination and 18 hours after pruritus and lesion developed) the condition has not progressed and has slightly improved."

pain in injection site (few hours after injection, all day), muscle aches(12/24/2020 in the evening into the next day, 12/25/2020, all day), numbness on entire left side (12/25/2020, few mins)

Fever 100.9 approximately 12 hours after injection, body aches, fatigue

Employee was waiting to be observed for the required 15 minutes post vaccination. She started to complain of not feeling well and feeling short of breath. She was immediately assessed by staff and transported to Emergency Department for further evaluation.

Pt began feeling flushed, tremulous, c/o weird sensation in throat. developed rash. Had near syncope. 1-2hrs of symptoms.

Nausea, vomiting, fatigue, muscle aches, headache, chills unrelieved by over the counter medicine lasting over 3 days

Had complete relief of my chronic back and leg pain for one day. Pain gradually returned in three days.

Transient pleuritic pain -- about 3 incidents lasting about 1/2 hour each, day following vaccination. Minor headache a few hours after vaccination. Mild abdominal discomfort off and on for a couple of days. Soreness in the arm at site of injection -- not unexpected. Resolved after three days.

Swelling at injection site with redness that became visible within 12 hours. At 72 hours site is larger, measuring 2 inches in diameter. Area is also swollen, slightly sore, periodically itchy.

lightheadness/weakness

Loss of taste. Body aches coughs

Swelling at injection site, redness, pain

Arm/sight pain pressure weakness x 3 days following vaccination, Nausea, diarrhea x 2 days following vaccination, tiredness, body aches x3 days following vaccination, mouth sore 5 days following vaccination

Migraine with aura and pain 1 hour after injection. Laid down, took OTC migraine medicine and applied ice pack to head pain area. Migraine disappeared after 3 hours.

Tender lymphadenopathy in left axilla. Began 12/24 (one week after vaccine administration on 12/17).

"Moderna COVID-19 Vaccine Vaccine administration was okay and without issue. Patient reports having sensation of ""vice around heart"" that spontaneously resolved less than 5 minutes after injection. No anaphylaxis or shortness of breath, but sensation of tightness in chest that subsequently resolved within the 10-15 minutes after injection."

Began to feel tired in afternoon. Woke from nap and began to vomit several times. Also malaise, fatigue and feeling feverish even with normal temperature.

Tachycardia and Dizziness

Headache, nausea , retroorbital pain, cough, shortness of breath, vomited once

Dysgeusia: a sweet, metallic taste in the mouth that started about 2 hours after the vaccine was administered. This effect lasted for about 3 hours and resolved on its own without intervention.

Shortness of breath and chest tightness

On 12/24- vomiting, severe chills, diarrhea On 12/26- woke up with head cold symptoms- stuffy nose, sinus pressure, fatigue.

Fever 102.8 Myalgia Chili?s Muscle spasm Severe headche

Today I am 36 weeks and 4 days pregnant, due on January 19, 2021. This is my first pregnancy, and going well so far. This is not a bad adverse event just something I noticed: I developed 2 ulcers in my

mouth and one inside my vagina today. I had ulcers pop up in my mouth when I tested positive for COVID on May 1, 2020. Just interesting, not bad.

Day 1/2 - Headache, Pain at injection site/slight arm sweeping, tiredness Day 2 - nausea, tiredness, dizziness, shortness of breath, feeling hot/flushed, fainted (led to a 911 call / ED visit)

swollen and painful possible lymph node on left clavicle left arm sore for 3 days numbness and tingling in left arm following injection for a few hours

Sore arm started ~5hr s/p injection and persisted for 2 days. Mild-moderate headache started ~5-6hr s/p injection and lasted for 2 days. 1 day s/p injection had eye itching that lasted 3 days.

After 5 minutes, tachycardia, lip tingling, tremors

About 25 min after receiving 1st dose, migraine headache, the right side of my body felt heavy and the muscles in my leg, lower back and neck hurt, I also had a lump on my right arm at the injection site. Within 6 hours the heaviness and the pain in my leg and back were gone. As of 12/26, the pain in the neck has decreased but it is still there, the lump in the arm still there and the migraine is still continual

Severe persistent joint pain on right arm extending down to right hip 24hrs after injection was administered.

Skin Rash, itch,inching, haves 12/20/2020 Skin rash, itching, haves 12/26/2020

Within minutes of innoculation, site area became extremely itchy. I brought this to the attention of the medics in the 15-minute observation room, and they immediately took me to an exam room where I was attentively cared for by several nurses, medics, and healthcare staff. I was given liquid Benedryl as my arm began to rash around the site. Within about five minutes of being in the exam room, my tongue began to feel like it was swelling in the back of my mouth, it soon began to feel swollen through the whole tongue, and it became increasingly difficult to swallow. Upon notifying the nurse nearby, I was immediately given an EpiPen injection. I do not know what may vitals were as everything happened very quickly, but I was told that my face, neck, and chest became rashy quickly, but subsided after several minutes from the EpiPen, at which time I was given more liquid Benadryl. Once stable, I was taken to the emergency room for monitoring for two hours. I felt better quite quickly after arriving in the emergency room, but the itching persisted through the evening. After 15 hours of sleep, I awoke to only a sore arm and thigh from each injection site.

Rashes on the neck started on 12/25/2020

Left side only , eyelid heaviness, feeling unable to lift eyelid that developed and has lasted since. Since then my eyelid sometimes droops and sometimes it appears normal but still feels heavy. All other facial movement has been symmetrical & without problems.

throat swelling, itchy eyes, flushed skin and a headache

12/23 Patient reported fever lots of body ache and headache

Day 1 (day of vaccination) - 6 hrs after injection extreme tenderness of left upper arm Day 2 chills, body aches, sore throat, headache, fatigue, sore injection site - sx lasted all day Day 3 sore injection site - no other symptoms Day 4 after doing some housecleaning - in afternoon, chills, body aches, sore throat, headache, dizziness and fatigue. lasted 5 hrs (is this from vaccination or post covid episode?)

A low grade fever started approximately 5 hours after the vaccine paired with overall feeling of being run down and achy muscles. The injection site was very sore and it was hard to move my arm. Symptoms subsided by 36 hours post vaccine.

About 10 hours after vaccine was received, severe headache started. Became terribly headache, no fever but chill even with 5 blankets, skin felt like it had been burned, nausea and vomiting, leg cramps though out night and most of the next day. Headache and fatigue for another 24 hours which are present now.

12/23 injection site pain immediately 12/24 arm pain and slept 11 hours - tiredness 12/25 no symptoms 12/26 returned with injection site stabbing pain

Exhaustion. Nausea joint and body aches mild headache

About 5 hours or so after the injection I began to feel a stiffness and soreness on my left forearm and left shoulder. The soreness in the forearm persisted for about a few hours and the pain was negligible unless I applied a slight squeeze to my forearm, which caused significantly more pain. At that strength I would normally not feel any pain at all, but it was strong enough to cause me to almost instantly release my grasp. The pain in the shoulder was also negligible but caused far less pain when pressed compared to my forearm. My shoulder symptoms lasted until I woke up the next morning.

Loss sense of taste and smell

Red rash, bumps that itch appeared 4 days after, mainly on arms.

I developed generalized pruritus, sore throat, lip and tongue tingling and numbness. Symptoms started 30 min after the injection and progressively got worse. Took Zyrtec without much relief. Took Benadryl 25mg when lip tingling and Buke ness started and went to bed. Symptoms resolved by morning.

12/17 Patient report sore throat, loss of smell, cough, muscle aches, loss of taste, shortness of breath and headache.

Symptoms started after 2-3 mins of vaccine. Started having numbness, tingling on face, arms, legs, tachycardia up to 144 bpm, dizziness, palpitations, chest tightness. Lasted up to 1 hour. Observed in clinic and went home after 2.5 hrs. At home continued to have on and off palpitations for 2-3 hrs with heart rate increasing to 110 bpm.

O had the vaccine at 9 am this morning waited 15 mins after vaccine before leaving while driving I had a pounding heart rate and hot I rolled down the window felt better. 1 hour later while at home.e started with nausea diarrhea rapid heart rate headed to medical office while in care tongue swelled I called 911

pulled over when the ambulance got to me my throat swelled and I had hives on chest they took me emergency while there I had sever pounding heart and vomiting treated with meds sent home with medication and benadryl

12/23 report feeling lightheaded, anxious, body aches, fatigue, headaches, chills without fever, dry cough and nasal congestion

Headache Runny nose Congestion Neck stiffness

Fever (101.1) Chills Headache fatigue

Dizziness, diaphoretic, wheezing, cough, hoarse voice, tingling to my throat and headache. Sent to emergency room, received medication. Decadron IV, Benadryl IV and Pepcid. I was monitored in ER. Eventually was discharged home with medications.

Lip swelling/tingling without airway compromise, full body itching, Covid symptoms. Lasted approx 48hours, took 50 mg benadryl every 4 hours and pepcid twice a day for 5 days

I had several episodes of dizziness on Saturday, December 26th, approximately 6. All of them occurred while I was sitting. In all but one case, I had been sitting for long periods and had not recently stood or moved around. They started in early afternoon and continued through late night. I hope they go away tomorrow.

Aching arm, loss of train of thought, deeper breathing, steady increase in heart rate with the occasional drop in heart rate.

Fever, nausea, dizziness, muscle pain, joint pain, headaches, vomiting

The patient developed palpitations, lightheadedness and nausea and came to the ED and was found to have sinus tachycardia. Unclear if it is a vaccine reaction or due to anxiety or severe iron deficiency anemia.

Left clavicle pain with point tenderness over the bone (not the muscle) no lymphadenopathy. Pain lasted few days and seems to start to improve today.

Approximately 30 minutes post injection experienced left jaw numbness lasting approximately 2 hours. Experienced left ear tingling and bitter taste in mouth lasting approximately 5 minutes. Experienced left sciatic numbness lasting approximately 10 minutes. No treatment. Self-resolved.

body aches, chills, feeling of being unwell, swollen lymph nodes. the body aches, chills and feeling of unwellness, i treated with aleve cold and sinus. but the swollen lymph nodes is on going.

Eyes twitching, headache, and nausea.

reddened rash with hives Benadryl to ED

24 hrs- lymphadenopathy, submandibular, ear pain 36 hrs- primary outbreak of VZV- trigeminal n involvement- tingling/burning 48 hrs- rash and vesicles in trigeminal n distribution

sore upper arm. mild reactoin

Severe chills, headache, lack of appetite and Temp of 101.9 for 5 days following injection.

Fever, chills, body aches. Improved with Tylenol and motrin

Employee states had vaccine on 12/20 and was monitored in Emergency Department for approx. 4.5 hrs r/t which started with metallic taste, then within 10 minutes lips/throat/tongue tingles, full feeling in throat followed by heaviness in chest with self-resolving (only IV fluids administered in the ER). Employee states took 50 mg of Benadryl when she went home after the ER. Employee endorse body/headache post vaccine on 12/21. Patient is unsure to take second dose and seeking advice, has already contacted her PCP.

Sugar spiked increased insulin till comes down to normal, tea and tylenol for the throwing up, fever ,headache body feeling like it weighs 1000pound. Calling Dr. on monday

About 6 hours after injection, sore arm At 3am awoke from sleep shivering uncontrollably. This went on for about 2 hours. Woke at 6am with muscle aches and temp 101.2. Took Tylenol. About 11am took temp - 100.1. Took several naps and laid around most of the day not feeling well. Temp went back to normal. 12/26 woke feeling fine, but took morning nap and afternoon nap, and still did not feel back to normal; tired. No fever and slight muscle aches. 12/27 feel back to normal.

Extreme muscle twitching in the left wrist muscles

Moderna COVID-19 Vaccine. Received the vaccine at 8:30 AM 12/24. Morning of 12/25 I started to feel a slight sore throat and tender lymph nodes. By the early morning of 12/26 I was experiencing a moderate-severe headache, fatigue, swollen/red tonsils, swollen lymph nodes, congestion, sore throat, and trouble swallowing. Around 2:00 AM on 12/26 I took NSAIDS which only mildly helped. I went to an urgent care center at 9:30 AM on 12/26 where after my examination the CRNP ordered a strep test and COVID test. Strep test resulted positive, prescribed amoxicillin 875mg twice daily for 10 days, and prednisone 20mg twice daily for 2 days. As of now, 12/27, symptoms have significantly reduced. Awaiting COVID test results.

Brusing Pain Entire arm soreness Nerve tingling pain Fingers moving on their own

Intermittent parasthesia, numbness and tingling to arm vaccine was administered

Generalized itching/rash, red bumps to arms and neck, scratchy throat.

Severe injection area soreness, mild-moderate fever (100.3 - 101.9), achiness, fatigue, mild headache (later in day)

Patient received Moderna COVID-19 vaccine IM in the Administration clinic. During the observation period, patient reported feeling flushed, warm, sweaty, with lip tingling. Vital signs 138/95, HR98, 02 Sat 98%. Proceed out call. Patient transported via wheelchair to ED for further monitoring. In ED, monitored with resolution of tingling of the lips, cheeks still with slight flushing to them. No sob or abd pain or tongue/lip swelling, no worsening rash. Encouraged followup with working well clinic. Patient was discharged home 4 hours later.

Dizziness, syncope, nausea, fatigue

Patient reported having reaction to flu shot in past so was being monitored closer. Upon her completion of 30 min observation, patient felt lump on throat, slight pain to touch on upper chest, slight headache, some redness to chest area and arms. Patient came prepared and took 25mg of chewable Benadryl at 10:13am, two minutes after symptoms began. 20 minutes later lump on throat was gone and redness to skin had disappeared. Symptoms resolved, patient was monitored for an extra 15min, asymptomatic upon leaving, had husband waiting outside to drive her home. Patient has EpiPen and understands if any sx return, chest pain, trouble breathing, should go to ED.

Patient began reporting of a tingling sensation in right arm approximately 15 minutes after vaccine administration in the right arm. Patient denied shortness of breath, chest pain, palpitations. Patient encouraged to wait in observation room for another 10-15 minutes with enhanced monitoring by MAs and RNs, patient agreed and complied to plan. Patient reported continuation of tingling sensation in right arm with noticeable tingling sensation beginning in left arm and lips as well. Vital signs taken on patient at 1300: BP: 165/84, HR 78, O2 100% on RA. Proceed out called, team arrived and transported patient to ED for further evaluation. In ED, patient was observed for few hours, and was discharged home.

Redness and swelling at injection site and surrounding area noticed ~day 1. Today is day 10 and the redness and swelling (same shape/area) and now warmth to touch (noticed warmth on day 9) have not gone away. No other symptoms of note.

""""PFIZER-BIONTECH COVID-19 VACCINE"" Adverse effects: Swelling under the left arm extending to the back to about under the shoulder blade. The swelling also extends to the left side of the chest area where there is also visible rash/hives with swelling. All of these areas are painful to the touch."

Patient reported tingling sensation in hands and feet ~15 minutes after Moderna Vaccine Administration. Patient states the tingling sensation was not present prior to receiving vaccine.

"Patient was given injection and mentioned she had a warm feeling and had tingling in her face. Patient stated, ""It made me very anxious."" Resp therapist checked her breath sounds no stridor or wheezing. B/P was taken- 116/83 Pulse of 73 bpm. Kept for 15 minutes and the symptoms resolved. Patient was offered Benadryl but stated he mother has had a reaction to Benadryl and patient refuse the medication."

Around 10 that night I felt chills, lethargy, and fever. Next morning a headache. Still have a headache.

Saturday 12/26/2020 received Moderna vaccine dose #1 of 2 at 12:00pm. 15 minute observation required (no symptoms) was able to leave. At 12:30 pm - 30 minutes post vaccine: experienced lip & tongue tingling & numbness, throat felt weird. Jaw line became itchy. Self-resolved 15-20 minutes after. At 2:00pm experienced severe migraine & lightheadedness - unable to perform daily routine due to pain & feeling of passing out. At 3:15 pm tongue became itchy & throat feeling weird again. Self-resolved 15 minutes later. Today 12/27/2020 only symptom is severe pain in left upper arm (where injection was) feels like solid mass & difficulty raising arm due to pain & tight feeling (this is very different than just having sore arm post flu vaccine). Pain in arm constant throbbing heavy pain.

Passed out twice - at 5pm on 12/26 & 8:30am on 12/27

Arm soreness at sight of injection ans involving shoulder. Extreme pain with arm movement. Difficult to move arm especially lifting arm over head.

Arm soreness at sight of injection ans involving shoulder. Extreme pain with arm movement. Difficult to move arm especially lifting arm over head.

Woke up with whole-body muscle aches, chills, and a slight cough. Feeling tired, weak, and fatigued. Headache.

Severe rash. Treated at ER with prednisone and recommended Benadryl.

General Itchiness, fatigue, joint inflammation, worsening hives on trunk and extremeties

Day 9 post vaccine started with local vaccine reaction. Itching, redness and swelling at site of immunization. 5.0 cm of erythema and induration.

Moderna COVID 19 Vaccine EUA Nausea and Bodyaches

Very large and swollen left supraclavicular lymph node

Intense Vertigo and tachycardia lasting for approximately 2 hours post injection, nausea/motion sickness lasting 5 days post injection

High blood pressure Pain in injection site Light headed Fatigue Headache Body aches Shaking

"B/p elevated, states ""feel swooney, like dizzy"""

Within two minutes of injection: started feeling flushed, light headed, elevated pulse, and tightening of my throat. Waited 30 minutes at site while physician monitored my symptoms. Flushness, pulse rate and feeling of throat tightness diminished over the 30 minute period and I was released to leave. On the way home I bought Benadryl and took 50 mg. I began to feel more normal 1-2 hours post injection.

"Patient stated, ""She got pain immediately during injection."" Next day she stated it was swollen at the site."" Went and saw her doctor who confirmed it was red and hot to the touch. Patient stated, ""I tried advil and it helped a little bit. I did not try Benadryl."" Staff stated, Patient's arm was fairly/pretty large (swollen)."

Couch, high fever, chills, body aches, headache, severe fatigue

Fever, chills, sore throat

severe headache and fatigue from 3 days after the shot continuing; the illness has not stopped and is now 8 days after the shot

Waited 15 min without issue. While driving home after approx 10 min developed acute throat fullness, lip tingling, hand tingling, nausea, clammy & lightheaded. Felt like going to pass out. Was able to call 911, pull over. After EMS arrival throat fullness & lightheadedness improved, still with lip tingling. Refused ER went home took Benadryl 50 mg with improvement after a couple hours.

Shingles, left side leg and foot

After 5 min of receiving vaccine felt woozy/dizzy, sudden burst of chills, elevated heart rate. Asked for someone to check HR; obtained VS. Discharged after acceptable HR and BP. Home (day of and after vaccine) - HR elevated after minimal exertion and temperature.

An inflammatory response noted in right hand joints (index and ring finger). Severe swelling and pain.

About 1830 (6 hours post-vax), I developed numbness/loss of sensation in the right side of my face from mid-eyebrow to just below the temple. I continue to have this symptom.

Swelling, redness, and warmth that emerged 8 days after vaccination.

On the next day exp fatigue last mostly that day. I woke up on Thursday no issues at all. The following Sat on 12/19 exp coughing and that was it. I stay home one day to rest but dint miss work.

Day one achy and nauseous. Day 2 sore arm swollen armpit temperature and nauseous.Took Tylenol and went away third day.Temperature up to 101.9F.

shingles, nasociliary branch. started with burning in the inside of my left Nare, vesicular rash appeared which spread to the tip of my nose. I immediately (day 2 of rash) started valtrex 1gm TID. After 48 hours on valtrex no progression of rash. I have not had any visual symptoms (herpes opthalmicus) yet and hopefully don't.

Vertigo started during the night following the vaccination. It felt like the room was spinning, while I was lying in bed and on getting up. It is mild, and I can still go about my regular activities.

Vaccinated member,. Recently received tetanus 9 days ago upon clarification

Received Moderna vaccine at approximately 4:05pm on 12/26/2020. Within 15 minutes, developed flushed feeling throughout body, developed strange taste in mouth, mouth and tongue felt numb and tingly. Was given 2 Benadryl, symptoms improved, resolved within 6 hours.

vesicular rash occurring on right upper arm, not at the injection site. small groups of nodular bumps that are now occurring on my right hand, left arm, back, and neck. they do itch but are not painful. they do not appear to be fluid filled. appeared about 3 days after initial vaccine.

I woke up with a fever 100 it did reach 102 afternoon, I exp alot of muscle ache and pain stayed in bed. I was uncomfortable sitting felt better laying down. After taking Tylenol I felt better also exp nausea and headache it dint feel overwhelming. I felt totally back to normal on 12/17.

Patient developed a feeling of warmth all over within a few seconds of receiving the IM injection. She had no other symptoms initially. Approximately 35 minutes after the vaccination, she had a brief (approximately 3 second) syncopal episode. No other symptoms developed.

Approximately 15 hours after vaccination I awoke with severe pain of the left fourth toe, medial aspect of the proximal phalange. There was a 3 mm pustule on a 1 cm erythematous base. At the time I also had mild routine constitutional symptoms from the vaccine: fatigue, headache, vague malaise. I had no fever. The pustule progressed over the following 15-20 hours. I was prescribed doxycycline 100 mg po bid and the pustule was incised and drained. A wound culture was not sent, but the assumption was that S. aureus was the pathogen. Over the next four days, the lesion resolved without complication.

12/25 10 pm: Chills, fever 100.2 congestion, slight cough, headache 12/26 1 pm: Chills, fatigue, 100.3, headache, fatigue 12/27 1:00 am: fever 102.5, headache, nasal congestion, fever broke after motrin, at 6am. 12/28- 11:00, chills, fever 100.2, fatigue, mild headache

Attempted to sleep but could not focus and kept having problems all night not being able to sleep. Woke up sore and with a headache and a bit of nausea. Was shaking a little in the morning.

"within about 5 minutes of receiving vaccine, pt states that tongue felt ""tight and swollen"". No difficulty breathing and no other airway symptoms. Given Benadryl 50mg IM at 1108. Symptoms quickly improved. By 1150, pt swollen feeling resolved and tongue just feeling dry"

Rash and pain at injection site, chills, fever, headache/neck pain, muscle pain, fatigue

Chest pain followed by Syncope approximately 5 minutes after injection.

Tingling, general flush, BP 132/82, HR 92 O2 98% - positioned supine, administered Benadryl IM

Within first 5 minutes, pt reports feeling dizzy and lightheaded and that throat was tight and it was difficult to swallow. Symptoms did not progress. Benadryl was considered but with medical staff, agreed to observe for worsening over the subsequent 5 minutes. Symptoms slowly resolved and by 12:10 throat just feeling dry. No dizziness reported.

Face became red with hives and swollen., sweating and clammy, chest tight and tachycardia. Went to emergency room. Given Benadryl. Occurred about 8 hours after vaccine

Exacerbation of vertigo associated with nausea and loss of appetite.

Woke up due to arm being very sore- went to get ibuprofen and got very light headed. Needed to sit down, ears began ringing and felt like I was going to faint/pass out. Went into bathroom, felt some what nauseated and weak. Suddenly felt hot, sweating and ears still ringing. Had to keep my head below my knees due to still feeling like I was going to faint. Eventually sat on floor doing deep breaths, feeling weak and hot/sweaty. Then started to feel very cold/clammy. Took temp at this point- no temperature. More deep breaths and eventually after possibly 5 to 10 minutes felt like I could walk to my bed. Still felt very cold but no longer like I was going to faint and ear ringing had stopped. Slept through the remainder of the night until approximately 7am without incident.

Pfizer-BioN Tech COVID19 Vaccine EUA Injection site soreness in deltoid and shoulder region starting next day lasting roughly 24 hours. No treatment other than Advil

I am a healthcare provider, received first dose of Vaccine, had slight tachycardia about 5 minutes after receiving. Tachycardia resolved after about 5 minutes, chills lasted about 5 minutes. Most concerning when driving home about 20 minutes after vaccination right side of my face began tingling and numbness. This numbness and tingling lasted throughout the night until sleeping. There was no facial paralysis. When I woke up symptoms had resolved. Throughout the next 48 hours would have intermittent tingling on right side of face only for a period of a couple minutes. After 48 hours no symptoms.

R temporal tingling, numbness, treated by supine positioning, resolved

Dizzyness, resolved with juice, crackers

Adverse event: developed papular rash to right flank 12/24, treated with topical hydrocortisone cream, rash remained through 12/27. OTC PO benadryl taken the night of 12/26. Developed another papular rash to right neck and subclavian region on 12/27 @0800. Papular rash to left neck smaller but also developed 12/27 @0800-0900.

Moderna COVID-19 Vaccine EUA. Swelling, redness, soreness, itching from the injection site to the elbow. Soreness began 10-11 hours after injection. The injection site-related symptoms have progressed. Had headache and chills followed by a low grade temperature within 24 hours of injection. No longer experiencing any symptoms besides those associated with the upper left arm. Will advise primary care physician of the issue today.

Dizziness, dyspnea, neck swelling

Vaccine administered at 823am; at 0831, patient reported feeling warm and that her throat felt like it was swelling. 0834 pt placed on VSS monitor; 911 called; 0843 Pt was given epi pen 0845/0850 VS repeated; 0851 ambulance arrived and pt taken to ED

Headache Muscle pain Low grade fever Sweating Cough Sore throat

Headache on day 1 evening and all day 2 Day 5-7 tenderness on left side of face in distribution of trigeminal nerve. like trigeminal neuralgia. Gone by day 7 after vaccine. It only occurred on the left side (same side as left upper arm vaccination)

I am experiencing nausea, diarrhea, and a migraine.

Vaccine administered at 0924; 30 minute observation due to past history of allergic reaction to tetanus vaccine; 0948, pt notified RN of tickle in the back of her throat; 0951 VS taken and WNL, remained with tickle in throat. 1016 pt reports having muscle cramps on back of neck, radiating to shoulders; VSS 1026 pt reported new onset chest pain; pt agreed that symptoms were progressing and epi pen was administered at 1031, 911 called. 1034, pt reported improvement; 1036, 911 arrived and pt transferred to ED

About 12 hours after receiving the vaccine, woke up to use the restroom and while standing in the bathroom, I became dizzy, lightheaded, weak, and fell to the floor. My spouse was able to arouse me after a few attempts at shouting my name but informed me that I had lost all the color in my face, lips and face were very pale. I laid on the floor for approximately 30 minutes until I was able to sit up & stand without feeling lightheaded and dizzy.

The patient was vaccinated on 12/17/20. Wife was diagnosis with COVID-19 on 12/18/20. He was diagnosis with COVID-19 on 12/21/20. Symptoms woresen on 12/26/20. And he had chest exam (x-ray's), pneumonia bi-lateral and he was hostipalized on 12/26/20.

Client reported rash on left side of neck and facial tingling/slight swelling about 4 hours after vaccine; HR 88, BP 130/90 RR 18. Assessed by Medical Director - urticaria most consistent with an allergic reaction. Patient offered Benadryl and encouraged to stay at clinic for observation, but chose to go home - explained risks and danger signs to be aware of that would require immediate visit to ED. Client took 25mg Benadryl at 5pm and MD spoke with her at 6pm - she indicated there was improvement with her rash after the initial dose.

Had the expected side effects of arm pain, body aches, headache and chills beginning several hours after vaccination. The morning after the vaccination, I felt like I would be okay to go to work, so got up to take a shower. Felt very lightheaded in the shower and fainted. Fell to the floor outside the shower, hitting my head on the tile floor. Was later able to proceed with going to work. No other ill effects or treatment.

Covid vaccine received, was instructed to go to ?observation area? for 15 minutes. While walking, started to feel faint, sat down and started to feel okay. After 5 minutes, I started to feel faint again and felt my heart rate go up. My Apple Watch showed my heart rate at 144. I asked staff to check my vitals and I was instructed to go to the nurse area. Vitals showed heart rate of 140s-150 (Apple Watch registered my highest heart rate during that period was 160). Blood pressure about 135/90 (my normal is 115/80), SPO2 of 99%. After 5 minutes, heart rate down to 90, BP 120s/90s. Every 5-10 minutes I would feel faint, a sense of ?impending doom,? mild nausea, and my heart rate would go up to 140s, it would last about 2 minutes then go down to 90s. This cycle of heart rate going up and down kept

repeating for 30 minutes. No chest pain, no shortness of breath. Prior to going home, heart rate was 90, blood pressure was 125/98. Total time being observed was 40 minutes from time of vaccine to leaving observation.

Sudden onset of numbness and tingling in Left arm at 11pm (arm that received injection). Arm appeared to be mottled as well.

Progressive pain in arm

Nausea and vomiting

"Besides from the low grade headache, i started to have chills, then fever for 5 days, joint pains and generalized body malaise, observed "" petechiae rash"" on my face"

Splotchy Redness and extreme itching on both left and right arms, hands and feet started itching about an hour later. Took 1 dose of benedryl and redness subsided.

1120 informed staff was feeling lightheaded and dizzy- VS checked BP 83/63 58 100 RA reck at 1130 78/45 52 taken to ER via WC for evaluation

At approximately 11:30PM on 12/25/20, pain in my left axilla woke me from deep sleep. There was (is) a palpable, painfull swollen lymph node . It remains painful at the time of reporting (12/27/20 12noon). The pain is temporarily relieved with NSAID. Other than pain, there are no other associated symptoms. I had mild pain at injection site on day 2 but no other notable events following vaccination on 12/19/20. I will send a message to Dr , (my PCP) but do not think a visit will be necessary. I am scheduled for my second vaccination on 01/08/21 and intend to get it - in my right arm.

c/o dizziness not feeling right very anxious scratchy throat taken to ER via wheel chair

Moderna covid-19 vaccine EUA. Pain at injection site, pains on lifting injection arm next day. Diffuse muscle and joint pains next day. Extremely tired next day. Upset stomach next day. Peculiar feeling on the tongue - not burning just a weird sensation.

About half hour after vaccine had a headache woke up with a 100 temp fever. The next morning fever went away. The night of 12/18 my temp was 102. temp, lost taste/smell and felt fatigue. On 12/19 I went to get a Covid Test results positive. The week of 12/21 started to feel better and then on 12/26 OT started dropping. I had to miss 5 days of work.

About 10 minutes after receiving the injection I felt tightening in my throat. I then felt a hot flush all over, and some chest tightness. I notified one of the nurses at the site who took my VS: BP 200/100, P 100, R 22, O2 sat 99%. Symptoms resolved in about 20 minutes. I went back to work when the symptoms returned. As I was walking to the site where the injections were being given I saw a pharmacist from the hospital. He took me to the pharmacy and recommended Benadryl. Since I was at work and Benadryl makes me sleepy he gave me another Claritin, knowing I had taken one that

morning. He also suggested that I use my Albuterol inhaler, which I did. Symptoms resolved within the hour.

On December 25th at about 8 pm I became extremely lethargic and unable to think clearly. I had a temperature of 103.7. My face and tongue were swollen and I developed a rash on both lower limbs. I went to Emergency Room and was admitted.

did fine at time of vaccination and left after the 15 minute time period and went back to her desk and after 10-15 minutes in registration states started feeling funny dizzy starting to get a HA met her and manager in the hallway instructed to go to ER. Taken to ER via wheelchair for evaluation

Received Pfizer COVID-19 vaccine without untoward effects on 12/18. Given her usual allergy shot by her allergist on 12/22 (she has been receiving these for several years; I was told this is a protein antigen in a glycerine suspension). Within 15 minutes, patient developed anaphylaxis: generalized erythema, swelling, pruritus and hypotension requiring epinephrine, and diphenhydramine. Patient recovered over several hours.

Abnormal heart rhythm, mild tachycardia. 90 to 100 bpm.

c/o came back in after being discharged 10- 15 minutes and stated she was dizziness, scratchy throat, heart racing taken to ER via wheelchair for evaluation

periorbital edema, flushing, itching

Nausea beginning Sun Dec 20, in the late afternoon. Vomiting around 6:00 PM. Nausea a bit relieved then, but persisted until Mon Dec 21 evening. Headaches noticed daily until Dec 27. Soreness in arm for only a few days.

Pfizer-BioNTech COVID-19 Vaccine EUA headache, swollen L tonsil and L ear ache for 4 days post-vaccine; symptom treatment with Dayquil and Nyquil. resolved without further treatment

Fever, muscle aches, hypertension, rapid heart heart

24 hours after the vaccine injection I had severe chest and abdominal pain along with nausea and vomiting. I went to the ER where they did blood work, an ekg, and a chest xray, all of which were within normal limits. I was give IV morphine for the pain and IV pepcid. The symptoms went away after a couple of hours and I was released. The symptoms did not return.

"Received vaccine at 0930... was checked on and feeling well ?. at 0950, she raised her hand and stated she was having tachycardia, ""not feeling right"" and c/o numbness and tingling in legs. METs team called and pulse was 130 and was taken to ER here at MC via wheelchair."

Fever (100.4), chills, myalgia on the next day.

On 12/22/2020 between 2000-2100, while driving, I experienced a definite notice of sensation of absence of my heart beating between 6-10 times. At one point, I was able to safely pull over, but by that

point my right radial pulse palpated was 60 bmp and strong. Prior to this time but after the vaccination, I had felt instances of a similar lack of sensation but am not sure of the times, had paid little attention to the events ? presumably because they were very very short and, though not driving, I was never able to catch them/i.e. palpate my heart rate during the events. On 12/23/2020 at 2005, I again sensed my heart wasn?t beating. I immediately attempted to palpate my right radial pulse and felt no pulse for at least 3 seconds (I was not watching a clock to time). After the 3 seconds, I could suddenly feel a strong right radial pulse, HR was 56 bpm (my pre-vaccine HR). I had not taken my evening dose of Propanolol.

"I received my first dose of the Pfizer vaccine through employee vaccination for medical center at about 6:45 pm on 12/16/2020. The same evening, I had no side effects to report. The next morning, on 12/17/2020, I woke up with a sore arm (know this is a common complaint). As the day progressed on 12/17/2020, I became fatigued and developed joint aches. Took a normal dose of Tylenol, took a bath, and went to bed. Went to work at the hospital the following day, on Friday, 12/18/2020. Was fatigued for my twelve hour shift on 12/18/2020. Following my shift on 12/18/2020, I came home, ate a little supper, showered, and went to bed. I did not have much of an appetite at this time. The following morning, I woke up with vertigo, dizziness, slight nausea, and felt a little shaky. I informed my workplace that I did not feel well and my charge nurse instructed me to ""see how it goes.' I proceeded to go into work at 0630 that morning on 12/19/2020. Upon arrival at work, I stated that I did not feel well or normal and I was instructed to call the employee health hotline to report my symptoms. I did and spoke with a woman, over the phone. She instructed me to go get a COVID test to confirm I did not have COVID. I told her that I really felt like it had to be from my vaccination, but she insisted I get tested for COVID. She scheduled me an appointment at a walk-in across from our hospital and I went and was tested. I went home to wait for my results and ended up missing the rest of my twelve hour day shift. My test came back negative later that day. the following days, until 12/26/2020, I had nausea when I would wake up. I still had some vertigo and dizziness and fatigue. Today, 12/27/2020, I have felt better. I am a little scared to get my second dose and wanted to report what I experienced."

Almost immediately following vaccine administration I had tingling in my lips, followed by swelling and tingling of my soft palate. It was minimal and became worse at around 20min following the vaccine. I had left the facility and was having some increased mucous production. No difficulty breathing, but I had some slight difficulty swallowing. I took 50mg of Benadryl and after about 1.5 hours the symptoms had resolved. Now over 24 hours out. I have some swelling of my right bicep, as well as some tenderness with right elbow and right wrist pain. Some myalgia worse in my right shoulder and right sciatic area and right thigh. Slight fatigue.

Headache, fatigue, body aches, sharp abdominal pains

Progressive and fluctuating hives and red rash on the shoulders, chest, abdomen, back, and upper thighs. Began on December 25 in the afternoon lasting about 30 hours, waxing and waning until a final flare-up in the PM in December 26. No more symptoms Dec. 27

5:00 PM chills, felt freezing, arm sore, muscle aches , headache, congestion, tired. 11:00 pm same symptoms and nausea. 1:30 am dizzy, temperature 97.8, other symptoms slightly better. 8:45 am arm sore, muscles sore, thirsty, nausea, dizzy, mucus.

Red rash on left forearm and back of left hand. Lasted 48 hours. High, uncontrolled blood glucose, unable to correct using insulin pump and additional insulin delivery. (Held over 300 mg/dl) Lasted 30 hours. Within 48 hours all symptoms alleviated.

N/V with severe diarrhea approximately 24 hours after vaccine administration. Symptoms lasted for 36 hours and resolved.

35min after injection. Swollen, numb lips, hoarse voice, difficulty swallowing, nausea. Patient is RN and self treated with 50mg benadryl, zyrtec, and caffeine. Patient was somnolent for several hours with concurrent nausea. Reported full resolution of symptoms within 6 hours. .

"patient reports ""chest pain after 5 minutes of receiving the vaccine""; then in the past 6 days, body aches and intractable headache"

On the day of my injection approximately 20 minutes later i had tingling down the arm I received the vaccine in and in my face which lasted for about 2 hours but went away. Other symptoms began 12/25/20 including body aches, fatigue, chills, and fever.

I am 67 year year old physician and have been inline distance skater for more than 30 years. I normally skate 3-4 times per week ~ 15 miles over about 90 minutes. I only walked for the two days after I received the vaccine (about 5 miles each time)and developed some low grade myalgias following which responded to 600 mg. of ibuprofen. On December 26, 2020 (approximately 72 hours post vaccination) I skated about 15 miles and upon returning home developed more intense systemic myalgias, nausea, fatigue, and general malaise which lasted about 12 hours. Today (December 27), the myalgias resolved. I have never had anything like this before. Since I see firefighters in my practice on a regular basis (as well as other first responders) I was concerned that coincidentally I actually developed Covid. I feel fine now but will get a Covid test on December 28 through my office. Curious if others reported similar side effects after the vaccine with vigorous exercise?

approximately 1.5 hrs after my vaccine I started to feel lightheaded and flushed all over my body. My heart rate was 120's and my temperature was 100.2F. No difficulty breathing, SOB, chest pain or rash. I was checked into the clinic and monitored in the Nurse Treatment Center. I was placed on a bedside cardiac monitor, an EKG was done, labs drawn and IV fluids administered. I was there for approx 1 hr and discharged to home. Temp was 99.1 HR 100's.

Chills and fever for 3 days. Chronic Fatigue and headache starting on 12/25 until today (12/27)

Dizziness, numbness hands & feet (feeling cold) for 2 hours, extreme thirst, chills for 6 hours, injection site pain 2 days

Palpitations, shortness of breath, chest tightness, presyncope, which led to New onset atrial fibrillation with rapid ventricular response and required synchronized cardioversion and hospitalization. Discharged on anticoagulation and beta-blocker.

Site pain, fever ro 102¦F for 2 days, body aches, headache, fatigue, and weakness

10 minutes after the injection while I was sitting and relaxing, I felt my feet tingling with a pins and needles sensation. They also felt cold. The pins and needles and coldness then shifted to my hands as well. It also happened in my lips and nose. I occasionally felt a cold tight feeling in my chest. I felt a little weak and shaky, like maybe I would faint but I did not. This did not improve with eating some candy and drinking water. I later felt anxious but the anxiety was brought on by these symptoms, as I was definitely not feeling anxious prior to the tingling. I tried resting and that did not resolve it. It just eventually stopped after about 6 hours.

approximately 24 hours after administration, I had vertigo and nausea lasting for approx 6 hours. I was treated with zofran with some improvement. I was able to get to sleep and in the morning the symptoms had resolved

Rapid heartbeat, SVT

felt flushed, developed hives on forehead and forearm; took 25mg of Benadryl, symptoms went away.

2 nights on migraines with light headaches continuing during the day. Upset or sour stomach with pain and decreased appetite for several days. Vertigo on December 24. Headaches starting Monday morning and continuing off and on through today, December 27.

24 hours after vaccine: feverish but afebrile, chills, headache, nasal congestion, change in taste and smell, malaise lasting for 5 to 6 hours. 48 hours after vaccine: chills, intense headache, nasal congestion, change in taste ans smell, malaise lasting over 8 hours. 96 hours after vaccine: feverish but afebrile, chills, intense headache, nasal congestion, change in taste and smell, occasional cough, malaise lasting over the next 24 to 48 hours.

Diarrhea, severe cramping, lighter stools, 24 hours duration, improved after loperamide

10 min: light headed, very scratchy throat, flushed hot lasted 2 hrs took Benadryl/Pepcid/Claritin an hr after shot Started Motrin/Tylenol every 3 hours alternating about 4 hours after shot 3 hr: severe global headache lasted 48 hrs 5 hr: nausea/diarrhea last 30 minutes 7 hr: chills/severe body aches lasted 36 hrs 12: hr: fever 100, with Motrin and Tylenol lasted 2 hrs Unable to work the next day

Itching to right forearm and bilateral upper thighs, provided Benadryl 25mg po, and recovered

Stronger than usual hay fever symptoms: rhinitis, sneezing, runny nose, stinging or burning sensation in side if nose

Dec 21- vaccine Dec22- soreness right arm Dec23- nothing Dec24, 4pm... I was cleaning up, getting everything tidy for Christmas Day. All of a sudden, I felt very nauseated and sick and just bad. I laid on

the couch, and around 5, I noticed my left forearm getting swollen and splotchy. It continued to get more swollen, red and hot. I put an ice pack on my arm. It was very tender to touch or graze over. I realized then that I had a temp of 99.8. I had body aches, headache, was still nauseous, and I had diarrhea. Dec 25- felt terrible, fever, extreme fatigue, body aches,and arm still the same. Dec 26- get tested for Covid, only slight headache and little fever Dec 27-Covid test negative, arm still swollen, but not as red

Severe headache, chills, sweating, stomach upset, altered mental state, vision impairment, shaking. Started 30 minutes after injection and increased in severity over the next 48 hours then began to decrease. Headache is still present 4 days after injection.

Fine rash to arms and legs. Red, itch patches to abdomen, back, neck and chin. Hot, burning feeling to palms of hands and soles of feet. The rash started 5 hours after receiving vaccine. The rash improved the next day and was gone by 2 days.

5 minutes post administration complaint of lightheadedness. 15 minutes post administration bilateral hand tingling, hot flushed and sweaty. Oral Benadryl 25mg given. 5 minutes, resolution of sweaty/hot flushing. 15 minutes post Benadryl resolution of all symptoms. Monitored for 60 minutes, full resolution

Soreness at site of injection - 4 days. Soreness and inflammation in right armpit - 5 days, starting 1 day after injection. Pain on right side down to hip/groin area 1.5 days, 3 days following injection. I did not experience any drowsiness, back pain or nausea.

Swelling, redness, pain, itchin, achy

Intractable vomiting (12 episodes in 24 hours) with dizzyness, throat swelling, chills, headache. Took Zofran/benadryl with mild relief. Went to ED on 12/26/2020 and had IV fluids and Zofran. Improved and discharged. Symptoms slowly resolving with no longer vomiting and no dizzyness.

vaccine given 12/23. reported slight swelling and redness on 12/26. on 12/27, tenderness, redness, and warmth noted to the majority of the left upper arm along with slight swelling

Approximately @1900 day after vaccine I started experiencing a headache, stuffy nose, and drainage accompanied with cough. Since then it has steadily been getting worse. My head is achy and stuffy. I am fatigued, running low grade temp, and been sleeping a lot the past 2 days. I have been taking Benadryl liquid and ibuprofen. Symptoms still the same. I feel a bit dizzy but I associate that with Benadryl for 2 days.

Injection site itching (2 hours), redness and swelling (2 days). Chills and fatigue (2 days).

Experienced significant tachycardia (hr ~140) beginning about 5 mins from vaccination, lasting ~5 mins. Self limited.

Experienced significant tachycardia (hr ~140) beginning about 5 mins from vaccination, lasting ~5 mins. Self limited.

Experienced significant tachycardia (hr ~140) beginning about 5 mins from vaccination, lasting ~5 mins. Self limited.

Rash

Rash

Left arm soreness, ~5pm Fatigue,8pm Chills, miss nausea ~10pm Fever (110.3') and headache, 12-4am Fever ended following 2 Tylenol tablets ~5am (98.1') Fatigue, mild headache, slight nausea, moderate left arm soreness, and intermittent chills remain 12/27/20

Itching on arms, trunk, legs. Hives on thighs, trunk, and arms. Took Benadryl and they went away and came back about 24 hours later. Took more Benadryl and they have not returned.

Within 12 hours of vaccination I had 24 hours of: fever as high as 103.7, regular tachycardia 120 at rest (likely fever related), generalized headache, malaise, fatigue, diffuse joint pain, severe right arm pain without redness/warmth radiating down my right arm and up to the right trapezius.

On post vaccine day #2, the onset of notable bilateral jaw pain, most intense at TMJ. Muscle fatigue also noted in the jaw and jaw clenching. No treatment has been taken at this time, just close monitoring of symptoms and noting progression of pain and constant symptoms. Currently on day 5 post vaccine and symptoms are still present, worsening since day 2 onset.

severe chills, achiness, fever

Severe body aches, feeling feverish (without elevated temp.), fatigue, headache, extreme arm pain at injection site, welt-appearance under injection site, redness and warmth at injection site. Treated with Tylenol (1000 mg) around-the-clock starting ~18hrs after injection.

Fever on/off up to 101. Tylenol makes temp go down to 98-99. Chills, sharp pain in face, chest pain, muscle pain, joint pain, hx of covid in June, aching, headache, chest feels hot, HR up to 140

redness, tenderness, and warm to touch at injection site (apprx palm-size)

On the morning of the 24th I noticed a large, circular, red, raised lump on the head of my humerus above the injection site. As the day went on, my neck became sore, and I could feel swollen lymph nodes. No fever, no sore throat, no cough.

On the morning of the 24th I noticed a large, circular, red, raised lump on the head of my humerus above the injection site. As the day went on, my neck became sore, and I could feel swollen lymph nodes. No fever, no sore throat, no cough.

Diarrhea stomach cramps on Sunday afternoon Very sore arm Saturday to now Feeling like my nose is stuffy or tender but no congestion or mucus

Headache onset the night of vaccination. Body aches / congestion next day.

Patient reported she had been feeling anxious about receiving the vaccine all day due to its newness. About 10 minutes after receiving the vaccination she reported an elevated heart rate per her watch. Her hands were shaking mildly. She denied chest pain, shortness of breath and/or dizziness. Palpated radial pulse was 130s-140's. BP was 150's/70's. She was taken to hospital emergency room; she declined any medications. Through use of meditation techniques and calming practices, her heart rate lowered to 90's, then returned to 120's then lowered again to normal heart rate.

Within minutes of receiving vaccine, became pale with faint feeling, and elevated BP. Experienced this feeling in waves for an hour after the event.

My tongue & roof of my mouth was feeling numbness & I felt off. I told nurse I was leaving and she said no get reevaluated. An doctor checked my symptoms and vital signs were elevated. He gave me an Benadryl IM. Send me to ER and had me on observation for a couple of hours. My symptoms subsided and my vitals returned to normal. I went back to work.

I developed severe arm pain within 6 hours of getting the vaccine making it difficult to turn to my left side so I could sleep. The following day in less than 24 hours I spiked a 101 fever with chills and fatigue. Took Tylenol and it went away. My arm was still painful with warmth and swelling, noting a red circle approximately 2.5 inches in diameter around the site of injection which was noticed by a friend on 12/26. I continue to have pain in the arm on 12/27 with lessening of warmth and redness but still with swelling.

Patient experienced headache, nausea, and light-headedness after receiving the Pfizer BioNTech COVID-19 Vaccine. She was observed for 30 minutes and her symptoms resolved.

Shingles lasting about 5 days -mild case

Approximately 20 to 30 mins after vaccine i developed feeling of hot all in my body reminded me of broom injected worn contrast dye my heart was pounding tachycardia some chest heaviness jaw popping have self epi pen went to hospital monitored for 4 hours give ativan im had feeling of hot flushing tachycardia chest heaviness impending doom at least 10 or more times before it went away. Slept for 16 hours nausea threw up once. Mild confusion don't remember leaving hospital coming home or talking to some people on the phone

"Moderna COVID-19 Vaccine EUA Patient reported generalized pruritic rash upon waking up the morning of 12/27/20, also reports ""scratchy/itchy"" throat. Patient with stable vital signs, speaking in full sentences and hives over bilateral upper extremities and chest, examined at 815am. Patient given 20mg dexamethasone IM, zyrtec 10mg and sent home to take 50mg oral benadryl."

Arm tingling and soreness first 30 minutes, then just sore. About 6 hours later, extreme chills and pain throughout body, sore joints, lightheaded, fever.

Vision interference, tachycardia, hypertension, flush, rash, sweaty, hot, shakey, light headedness

Shortness of breath, chest pain, itching, near syncope, blood pressure spike

Severe cramping pains in the left calf that woke my up from sleep. I had difficulty moving my leg. I am assuming it was about 2 AM and it kept me up for at leas 20 minutes. However I did not look at the clock. I am an internist. I have not reported this to my PCP's office of to employee health yet as it is the weekend. It did not recur so far and I hope it does not

5 hours after shot administered developed a moderate amount of pain in my left arm that continued into the next day. On 12/25/2020 I developed a pretty constant left sided headache. Pain is moderate and is affected my daily life. Unable to complete household chores.

intermittent headache since vaccine given. Relief with Tylenol

""""Moderna COVID-19 Vaccine"" Developed rapid pulse and flat red rash across chest immediately after vaccination. Within 8 minutes developed metallic taste in mouth. Reported tongue swelling and throat tightness. Taken to Emergency Department after onset of symptoms. Symptoms resolved within 1 hours of vaccine and patient was at baseline with in 2 hours. Patient was discharged home from Emergency Department."

Fever up to 102 degrees Chills Fatigue Headache

Headache Fatigue Nausea

Dizziness, Shaking and Nausea

Received the vaccine on 12/21/20 without a reaction 15-30 minutes after administered. On 12/24/20 experienced flush, and rash on my face with swelling of the eyes and face. The swelling has progressed since then getting larger even after treating with Benadryl and cold compresses. It is now 12/27/20, and swelling is not decreasing. Am not experiencing difficulty breathing or any other symptoms.

Rash on both arms that is itchy

Left arm pain, headache, fatigue

12/24/2020- morning- noticed pain in R deltoid at site of injection (expected) and also L ankle pain not associated with any type of trauma and with no hx of injury to ankle in past. Also noticed mild aching pain to R knee (which has had extensive surgical repair several times) 12/24/2020- by midday, limping noted due to pain in L ankle, negative for swelling, bruising, or decreased range of motion 12/24/2020- 8pm- moderate to severe pain to L ankle, still no swelling or bruising. 12/25/2020- midday- still noticeable limp, however pain was moderate and tolerable all day 12/26/2020- increased pain in L ankle as day progressed, still no bruising, decreased ROM or swelling 12/27/2020- woke at 3 am due to pain, elevated L leg. Swelling noted in lateral aspect of ankle by 7am, decreased ROM and point tenderness had developed around lateral and anterior ankle joint. Took 2 Aleve for pain. Went to walk-in orthopaedic clinic when they opened at 9am for assessment,

Flushed, Headache, Hypertensive Event

Moderna COVID-19 Vaccine EUA dizziness room spinning had trouble standing, light headed, vomiting drinking water made it worse for a short time, shakiness, head ache the lights in the er room made this worse.

Mild Fever (max 100.3), Cough, Fatigue, Runny nose, Congestion, Headache, Dizziness, Nausea. Symptoms started within 3 hours of receiving vaccine. Symptoms continue still today 12/27/20. Taking Tylenol and ibuprofen to control the fever and afrin nasal spray for congestion.

Painful fluid filled bumps in a linear formation discovered this morning 12/27/2020 at 9am. I received the COVID vaccine on 12/19/2020 at 10:15am

Lips & Tongue became numb Tx with Steroids by PCP

Fatigue, Malaise, Back Pain/Joint Pain - From 12/24 at 11 am to 12/25 at 6 pm

rapid heart rate Difficulty breathing dizziness weakness

Body aches and Fatigue

Moderna COVID-19 Vaccine EUA 12/23/2020: Received vaccine at 1:00 pm. Experienced left arm soreness, injection site tenderness, body aches, and chills from 10:00 pm throughout the night. 12/24/2020: Awoke with left arm soreness, injection site tenderness, body aches, chills, and a fever of 100.6 F at 8:00 am. Fever rose to a maximum of 102.0 F at 9:30 am. Took acetaminophen and ibuprofen around the clock starting at 9:30 am until I went to bed that night. Symptoms were completely controlled with the acetaminophen and ibuprofen by about 3:00 pm. 12/25/2020: Arm soreness and injection site tenderness throughout the day. Chills with temp of 99.8 F at 2:00 pm. Took single dose of acetaminophen (1 g). Chills and low-grade fever resolved and did not recur. 12/26/2020: Mild injection site tenderness only (did not require treatment) 12/27/2020: all symptoms resolved

Sluggish , body chills , cold sweats

12/23- began to experience intermittent right lower quadrant pain in the morning, fever of 100.4 F in the evening which subsided with ibuprofen. 12/24- no fever noted but intermittent right lower quadrant pain continued, seen at the Health Clinic, sent to Hospital ER for CT scan, diagnosed with appendicitis, appendectomy performed.

c/o dizziness and increased heart rate. Assessed by attending and hospital MD present. HR went from 138 to 80 beats per min in 3 minutes. Able to walk to reclining chair from straight back chair without incident.

"S: Patient 41Y F unit assistant came to Covid vaccine clinic for vaccination on 12/27/2020. Received injection at 1436. Employee was instructed to sit in clinic for observation. At 1445, employee reported nausea, lightheaded, a ""floating' sensation and sore throat. The floating sensation was also described as a ""oozing sensation"". States that she ate noodle soup for lunch at approximately 1pm. Took Tylenol at 2pm prior to arriving to clinic for vaccine. She denies chest discomfort, palpitation, shortness of

breath, wheezing, or blurry vision. History of craniotomy in 2017 and pulmonary embolism in 2016. No history of HTN or GI conditions. á O: VS at 1445: BP 126/75, HR 75, temp 98.3, O2 sat 96% room air, RR 18, pain 0/10. Reports symptoms onset. At 1455: BP 123/76, HR 72, temp 98.3, O2 97% room air, RR 18, pain 0/10. Nausea resolved. Continue to have mild sore throat, lightheaded, and ""floating sensation."" At 1510: BP: 132/80, HR 69, temp 98.3, O2 96%, RR 18, pain 0/10. Sore throat improved. Denies lightheaded, floating sensation. AAO4, follow commands, lung sounds clear, heart sounds normal. No angioedema. No acute respiratory distress. á A: Adverse reaction to Covid-19 vaccine á P: Employee was closely monitored in clinic for additional 30 minutes. Employee was provided fluids. Employee states that her symptoms has gradually resolved. Employee was advised to monitor her symptoms. If symptoms worsen or persist, she needs to notify her manager and go to urgent care/ED for further evaluation. She stated understanding. Employee returned to work, left clinic in stable condition. No acute distress."

Sever Headache that progressed to a Migraine

Warm feeling all over the body possibly a slight fever and as of now later on in the day a warm tingly sensation on the injected left arm.

8 minutes after vaccine, started to feel dizzy, room got quite, started to feel hot around neck ears chest, red blotchy all over and continued to get worse. Started to feel a cold sensations. Nurse came over to assess had me sit and put legs up, rash got worse dizzines got worse, took me to a cot to lay on, had me take dose of pepcid and claritin, then decided i needed benedryl injection at 713pm. monitored my blood pressure, pulse ox and heart rate. heart rate was tachycardia. just felt off felt like something was wrong. about 30-40 minutes after benedryl injection the redness started to lighten in color. after more time of monitoring me i slowly started to feel a little better, after an hour and half or so i felt ok enough to be dropped off at home. Today 12/27/20 i have felt very jittery, nausea chills and fatigue started around 430p.

Lightheaded, metallic taste in mouth, and tingling in my throat at time of vaccine. Localized injection pain to site the next day, now joint and muscle pain the following day and to this day along with fatigue

WITHIN MINUTES SUDDEN ONSET OF PALPITATIONS AND SUBSEQUENT CLAMMINESS

about 45min after injection time, my lips started to tingle and my throat was scratchy. the muscles in my anterior neck and upper back felt acutely tight. I did not have any trouble breathing. the scratchy throat and muscle tightness lasted about 10 min. the lip tingling lasted about 20 minutes. after those symptoms resolved, I started to feel flu-like and fatigued/diffusely achy. those myalgia/fatigue symptoms lasted 5 hours. I never had a rash. I never had trouble breathing. I was back to normal about 6 hours after injection--other than an expected sore injection site.

Tired, body aches, fevers and cough

Dizziness, dim vision, sweating, flushing, metallic taste in mouth, chest pressure

Moderna COVID-19 Vaccine EUA. Side effects included arm pain at the injection site, chills and low-grade fever to 100.0 starting approximately 10 hours after receiving vaccine. Fever broke a few hours later and symptoms had resolved within 24 hours of vaccination.

At 4:00 today started feeling nauseous and vomited twice so far

Myalgias and mild head discomfort. Scratchy throat and cold symtoms

Extremely sore arm, full body aches, and headache the day after the vaccine. Resolved the following morning. Also presented with hive like raised red itchy rash on lower back starting approx. 9 PM the night of the vaccine on 12/24,. I still have the rash- it hasn't gotten any worse or any better. It hasn't changed in size either. I tried Benadryl spray with fair effect.

Swelling of lower lip 5 hours after injection. Resolved slowly over 9 hours after taking Allegra. Developed 2 hour episode of atrial fibrillation 11 hours after vaccination that lasted 2 hours and was treated with PO Diltiazem and Xarelto.

Localized reaction. Erythema initially 1 in diameter, indurated, sore arm. Worse 12/24. Induration/erythema up to 3 inch diameter. Soreness obviously worse. Took antihistamines, tylenol. Today induration down to 1 inch, bruised not nearly as sore.

Migraine was present at time of vaccination, but evolved and worsened after 36 hours. Nausea and anorexia developed after 24 hours. Severe aching back pain developed after 32 hours. Fever 101.5F developed after 36 hours. Symptoms lasted 24 hours and resolved. Diarrhea developed at 48 hours, was intermittent, and lasted 12 hours. Ondansetron 8 mg PO was taken once. Ibuprofen 400 mg PO was taken after 48 hours.

Had a sudden strong wave of nausea and felt very hot. That went away after a minute. Have had consistent mild nausea since then.

Headache beginning two to three hours after the injection. Generalized malaise approximately 9 pm. Awoke from sleep at 1 AM with severe chills and tremors lasting until 3 AM. Temperature of 103. Back to sleep and awoke at 4:30 with severe headache and N/V. Temperature 100.8. Muscle aches, headache extreme tiredness throughout the day on the 25th. Chills again around 11:00, temp 100.1. Generalized malaise, stomach cramping and headache lasted throughout the day. Awoke on the 26th at approximately 2am with night sweats. Went back to sleep and awoke at 8am on the 26ths with wet blankets and pajamas. Felt better after showering. Still had a headache but didn?t really hurt unless sneezing or coughing. Well enough to go to church. After returning had diarrhea a couple of times. Now only a lingering heaviness in center of my chest and need to cough that I have had since a week before my Covid diagnoses in November

"Pt was vaccinated at approximately 1135, exact time on consent form for vaccination. Pt was visitnig with another pt outside the lobby for about 15-20 min. then came iinto building stating that she had ""chest tightness"" pt was calm and able to descrive sesation. No distress. Pt was instructed to sit in chair and vital signs obtained, 2 sent obtained immedicately after. Pt still awake and alert able to

verbalize needs. Manual blood pressure taken. Dr called by Pharmacist. Pt was anxious and was verbally calmed by RN. 2 RN's and pharmacist at pt side. Pt c/o of dizziness, respirations elevated but able to maintian airway. Pt heart rate elevated. Dr arrived and asessed pt. After stabilation and meds administered, pt taken to urgent care for further monitoring and evaluation. Pt declined EMS transport to ER."

Myalgias, chills, dizziness and restlessness, feeling unwell. The dizziness and restlessness resolved with an antihistamine (Cetirizine 10 ml, one dose) and tylenol was used for myalgias and chills with good response.

Migraine headache, severe. Associated nausea, vomiting, light and sound sensitivity.

Fever (100.4) and chills starting approximately 12 hrs after administration. Temp was back to baseline by noon the following day. Some lymph node swelling to right armpit noted the day following administration. Subsided 2 days later

Employee was given moderna vaccine on 12/24/20. On Friday night, he started to get fatigued and sore. Today, he developed fever of 101 and still feel fatigued and sore.

Within 5 mins of receiving I had systemic tingling and felt very hot. My heart rate went into the 110s (usually 60s). Throat tightness occurred and I was given 50mg IV benadryl. Within 30 mins all of those symptoms subsided

Hot flashes, extreme headaches, extreme fatigue, muscle fatigue, lasting greater than 12 hours

Sore arm, sinus-type headache, and fever for approximately 7 hours.

Pain at injection site 2 days of severe fatigue Yellow/orange urine despite doubling water intake

Fatigue, headache and pain at the injection site all started within 6 hours of vaccination. Headache lasted about 1 day. Sever fatigue later about two days. And pain at the injection site for about 3 days. Yellow/orange urine despite doubling water intake for about 3 days .

All initial symptoms- soreness at site passed at day 3, At day 5 woke up from sleep with headache, did not respond to excedrine, progressed to migraine with photo and sound sensitivity, called out of work for next shift (bedside rn) vomited twice, telehealth urgent care proscribed imitrex and zofran, encouraged ER visit if headache not relieved by first dose of triptan. Migraine lasted about 9-10 hours from onset to pharmacy filling two new prescriptions for me to allowing medications time to work

Experienced L sided visual changes, including decrease in visual field and inability to focus eyes. No intervention, recovered 30-40 minutes after it began.

Headache, nausea, low-grade fever, malaise

Headache, took tlyenol

Subconjunctival hemorrhage in my right eye.

Chills Fatigue Joint Pain Body Aches Started 1800 on 12/27/2020 I took no medication but considering Tylenol

dizziness with horizontal nystagmus, improving the next day. No fatigue, no weakness, no headache, no fever, no aches or pains at any time, no other symptoms.

Flushed, hot feeling, sweating, rapid heartbeat, dizzy starting about 10 minutes after vaccine and lasted over 3 hours.

Pfizer-BioNTech COVID-19 Vaccine EUA: pruritic rash at injection site (localized), appeared 10 days after first dose

fatigue, muscle ache, joint ache, headache, nausea, chills

severe nausea and vomiting lasting 4 hours; moderate headache lasting 12 hours; mild left arm pain at site of injection

Chills, shivering, migraine , body aches, painful tinnitus, fever, elevated resting HR of 90 (normal is 46), bounding heart beat, tightness in chest, elevated resting BP 150/80 (normal 124/72) 600mg ibuprofen & 500mg acetametaphine made me comfortable to get about an hour and half worth of sleep. Went to ED for elevated HR, BP and chest pain. ED took EKG and monitored vitals. ED discharged with 975mg acetametaphine and 800mg ibuprofen with 24hrs quarters. I was able to get about 3 hours of sleep.

Decrease appetite-12/23,12/24, 12/25,,12/26,12/27 Increase Joint pain-same as above General muscle aches-same as above Numbness bilateral arms w/ tingling in fingers-12/24, 12/25, 12/26 Fever w/ chills - 12/25 Headache w/ nausea on and off 12/23, 12/25, 12/27 Dizziness and weakness 12/23, 12/27 Tiredness and feeling unwell 12/25, 12/26, 12/27 Chest tightness 12/27 I didn?t take any other OTC medicine, just tried to Go through

I developed left arm soreness (at the injection site) 12 hours after getting the shot. I also developed a temperature up to 100.7 associated with chills. I took Tylenol 1000 mg and fever subsided for 4 hours but fever and chills came back and now temp was 101.1 which was relieved by Aleve (took 2 of the 375 mg tabs). I had low-grade fevers up to 100-101 for 24 hours, associated with myalgia but no more chills for the whole Christmas Day. All symptoms resolved except for left arm soreness within 24 hours. Left arm is still sore even after 72 hours.

Joint pain. Most significant in hips. Effected my walking / sitting throughout the day.

Received the vaccine at 1038a. 1045 developed minor tongue tingling. Called the RN she gave me 25mg Benadryl. By this time whole tongue became tingly and the roof of my mouth started to feel numb. A minute later throat started to feel full and it became hard to swallow. This feeling of it being hard to swallow, came with a painful headache and some chest pain. Once in ER, was given more Benadryl, Epi, Lorazepam, and Protnox. The feeling in my throat and the difficulty swallowing slightly improved 25min after the oral Benadryl. It took about a little over an hour from the onset of symptoms to start to feel they were resolving.

Small bumps/mild rash on chest and a little itchy (but I?m also on Zyrtec)

Horrible debilitating non stop migraine like headache for three days following 1st dose of vaccine starting 12 hours after dose. Extreme tiredness, muscle pain, nausea three days duration. All symptoms resolved 3 days after vaccine

8:27 Hives, itching all over chest and on tongue, tongue swelling, slight difficulty swallowing. 8:30 epi administered/ benedrly 8:32 pseudo seizures begin off and on till the 27th

IM shot received at 0750. Went to sleep for the day since I work nights. I work up at noon with severe headache and numb bilateral hands. I took Tylenol 1000mg and went back to sleep. I woke up for work at 1630 feeling flushed. I took naproxen and went to work(in the ER). I developed a rash on my chest that evening. Over the next 3 days the rash progressively worsened across torso, back, and extremities. Since I received the vaccine on Christmas eve, employee health has not answered my calls or messages with the holiday. I also am scheduled to see PCP for this after the holiday weekend. I have been medicating with Zyertec BID, Benadry Q4hr, Pepcid BID, Tylenol TID since 12/24. I started a prednisone taper on 12/27.

I am sore throughout my body, muscles and joints, constant. I have never had any issues like this before. Tolerable pain/ discomfort 2-3 out of 10. Iwould guess what arthritis feels like. Also I?m very tired.

"I received the 1st moderna shot on 12/23/20. A couple hours later I experienced extreme fatigue. My memory became cloudy and I was so tired that I had difficulty walking. This fatigue lasted the rest of the day. I awoke the next morning with less fatigue but feeling hungover. I also had blurry vision that morning. The blurry vision abated within 5 hours. The fatigue was much improved within 36 hours. My allergy symptoms were triggered the day after the shot and my dermatitis flared within a couple days of that- super annoying because I have significant allergies and dermatitis that took specialists a couple years to control. All was ""in remission"" until the covid vaccine. Hoping that everything better by tomorrow- fingers crossed."

flushing , rash to face and chest. small bumps on the lips and tip of tongue. Improving symptoms with claritin and benadryl taken by the patient prior to arrival to the ER.

"10 minutes following vaccination, itchiness, ""fullness in face and chest"" She took benadryl and cetirizine due to known adverse reaction to H1N1 vaccine Overall resolved in 30 min no worsening Arm achiness x2 days"

12/18: First hour after vaccine: increased heart rate, felt flush and jittery - like I had drank a lot of espresso. Not debilitating but unpleasant. Then mostly went away, felt drained 12/19: headache and nausea started along with fatigue. Nausea would come in waves 12/20: Fatigued, headache 12/21: Headache, Nausea, waves of feeling flush (never had fever) and increased Heart rate. Worked all day but felt lousy 12/22: Continued symptoms from day before - feeling drained especially after episode of nausea/increased HR. Worked all day 12/23: Heached, Nausea - stayed home from work because they wanted a covid test to rule out that I had not contracted. Slept on and off all day. Cough started PM

12/24: Just headache, no nausea but no appetite, low energy 12/25: started feeling normal. still no appetite.

Facial numbness on side vaccine was given

Pain and generalized swelling to left arm for 3 days post injection. One day after injection fatigue and myalgia, Tylenol taken twice that day. Day 8 post injection a hot and painful red circle at injection site, approximately size of a quarter. Day 9 circle is size of half dollar and still hot and painful.

Weakness/ chills and fever.

Tongue went numb on right side. My face then went numb on the right side and spread to my ear. It then progressed up to my right eye lid. I took a dose of Benadryl and Flonase. Numbness stopped spreading. It lasted about 35 hours. No facial drooping noted. I was able to close my eyelid then entire time.

syncope, anxiety, nausea, vomiting, diarrhea, perceived tongue swelling although no visible swelling

fever of 100.4 deg F, took tylenol

Significant fatigue ~24 hours after vaccination. Muscle aches, joint pain, fatigue ~48 hours after vaccine. No fever noticed.

I took the shot at 11:45. By 3ish my shoulders and neck began to become stiff with slight pain which progressed throughout the evening until I developed a severe headache. By 6pm I had difficulty turning my head due to neck stiffness with a resting HR:98 SpO2:99%. I then developed a cough, SOB, dizziness, and balance deficit. Around 9pm my lips went numb with tingling when touched. I then developed small blisters around my lips. I was awake till around 4am with a severe headache. By 9am all these symptoms subsided except for the tachycardia and lips tingling with paresthesia which resolved by the next morning. 48hrs later I was back to normal.

Left sided facial numbness

Significant pain at injection site that lasted about 36 hours and prevented any touching of the site. Also had mild headache and some generalized myalgias. These also resolved after 36 hours.

Injection site pain, low-grade fever, bodyaches, sore throat, headache, tiredness - lasted from around 10 am to 9 pm, when I went to bed. I had a confirmed negative antibody test 11/24/20

Numbness of the tongue

Moderna COVID-19 Vaccine EUA Excessive shoulder pain with limits on range of motion. Has diminished in the past 36 hours but pain still persists and range of motion is not back to normal. Only took Tylenol, aleve, and albuterol.

Enlarged left cervical lymph nodes. Two palpable nodes that are hard and tender. Measuring about 3 cm in diameter today.

Chills, malaise, nausea, muscles sore, temp 100.1-100.5 13hrs post injection. All s/s gone within 36-48 hrs post injection.

Blood pressure has been 145/80 p.60 since 12/24. I do not have high BP normal pressure for me 110/75 Extreme muscle strain experienced 48 hrs after vaccine given.

12:30 pm injection given to left arm, after 10 minutes of waiting a sudden warm sensation began from left arm traveling across chest to right arm, up my neck and inside throat to my face and head. I found this sensation to be strange and describe the feeling similar to receiving contrast for CT scan and when administered you can feel the warm sensation as it travels through out your body. My vision became a bit blurry I tried to remain calm and asked others in the room if they experience similar symptoms in which no one had. I stood up and walked across the room to get some water. I had an unsettling feeling and coached myself to remain calm. I drank 2 cups of cold water and sat down. After about 5 minutes the hot flush went away. I decided to stay longer than the 15 minute observation time that I was told to do. After 30 minutes from injection I felt okay to leave.

Chills, fatigue, h/a, joint pain, bruising on forearm

-Dec 24: received -Dec 24 evening: fatigue, sore joints -Dec 25th: fatigue, generalized malaise, sore joints - especially those affected by the arthritis.. Moderate symptoms.Last all day. Bed rest. -Dec 26th. Symptoms improving. bed rest -Dec 27th: Much improved. Only symptoms remaining is sore joints (mild) Treatment: 1000 mg Tylenol q 4 -6 hr since Dec 24th

Prolonged symptoms. Pain, swelling to injection site that radiates down arm to fingertips and up arm into shoulder for 5 days and continuing. Swollen, painful lymph nodes in left under arm for 5 days and continuing. Pain so severe unable to sleep.

Within 30 minutes of vaccination, there was tongue numbness and tingling in addition to chest tightness. After 5 hours there was also upper lip numbness and tingling. Benadryl 50mg po was given in Emergency department of Hospital (where patient is a resident physician) and patient took another 25mg po Benadryl before bedtime. Tongue numbness improved by next morning, however upper lip numbness persisted. There was also upper lip swelling the next morning after vaccine, which was noticed when patient woke up (~ 16 hours after vaccination). This was treated with 20 mg cetirizine in AM and 10mg cetirizine at night by patient. Swelling persisted into the following day ~ 48 hours post vaccination before resolving. Patient?s initial chest tightness resolved within the few hours of observation in ED.

Agitated that night starting in 4 hours Resolved by am Mild arm pain and febrile sensation during night after injection Myalgia for 3-4 days

12-14 hours after vaccine, very sore injection site arm, fever, chills, viral syndrome symptoms and intensely sore, burning mouth. All symptoms came on simultaneously. felt great after one dose of NSAID except for sore mouth. Following day looked with flash light and have red based mucoid lesions multiple throughout the oral pharynx. no trouble swallowing. I take valtrex 1 gram daily as my dry mouth causes

chronic HSV outbreaks but these are NOT hsv as there are no central ulcerations and they burn but aren't intensely painful like hsv lesions.

Approximately 30 mins after injection I started to feel my heart racing. Checked my pulse and it was reading 130bpm. This continued on for approximately 60mins. I then started with a migraine that lasted 36hrs. Starting on 12/25/2020 I felt a lump in my throat and have been periodically choking on food and liquids. It feels like my thyroid is enlarged.

Pfizer-BioNTECH COVID-19 Vaccine EUA I had a mild headache 20-30 minutes after vaccine was administered on 12/18/20 that went away 4-5 hours later. I did not take any medication to help with headache. I woke up the next day with extreme fatigue, muscle aches and hot flashes/chills from Saturday-Tuesday morning. I had radiating pain down my arm to my fingers that lasted about a day on 12/19/20.

Arm soreness, Diarrhea, Headache, Nausea, and Fatigue. The last four were exact symptoms I had when I was ill with the virus. The side effects only lasted approximately 12 hours and most were alleviated with Zofran and Naproxen. No medication helped the headache, which was also my experience when I had the virus a month ago.

Muscle/body aches, fatigue/tiredness, and fever

Chills a couple hours overnight. Woke up on 12/17/20 with a moderate headache.

Mild pain and mild headache

Slight runny nose, mild rash, moderate headache lasted 14 hours

With in 5 minutes of receiving the vaccine, my feet began to burn. It continued to get worse throughout the day and turned into numbness and tingling in both feet and both hands. Still continuing to have these symptoms 17 hours post vaccine and unable to sleep.

Received COVID vaccine 12/22 at 1100. Noted hive on right wrist, opposite arm of vaccination at 1700; hive- 1 cm in dimeter, red raised in middle, not itchy. Benadryl at bedtime and when woke up red outline was present but not raised, 24 hours later completely resolved. Some fatigue and slight headache within the first 12 hours, resolved. Also reported mild chills and mild fever lasting less than 12 hours.

Excessive thirst 15mins post Heart palpation with fluttering sensations 30mins post HTN 156/96, 80hr, 1hour post Chills 1hour post Muscle spasms with cramping throughout body 45mins post Muscle weakness to left side 2hour post Facial twitches Treated with tylenol and Gatorade and rest. Symptoms lasted 48hours post.

Vaccinated on 12/23/2020 at 1 PM. Moderate pain and tenderness on injection site. One white pustule on left tonsil. Tender lymph nodes. Moderate generalized body aches. Mild headache, mild fever. Went to urgent care Negative for mono and strep. Got script for erythromycin if symptoms persist.

Developed cough, fever, body aches, and chest pain

Flushed skin, elevated HR, extreme feeling of internal heat, dizzy

nausea/vomiting, elevated heart rate and cough

Patient received COVID 19 vaccination and developed elevated heart rate. It is less likely that this was a reaction to the vaccine given no complaints of nausea, vomiting, itchiness, shortness of breath, abdominal or epigastric pain, wheezing which are typical signs of a reaction. Most likely this was an anxiety event.

Severe nausea/abd pain lasting 24 hours

Developed headaches the week of vaccine, especially Saturday, 12/26/2020. Experienced body aches on 12/26/2020, intermittent in nature and fatigue. Called Nurse to report symptoms and confirm clearance to return to work on 12/28/2020 and was instructed to complete potential vaccine reaction.

Woke with nausea/vomiting, chills, and dizziness

pt with history of anaphylaxis to latex and fruit, presents to ED with urticarial skin reaction with itching, throat itching, cough, lightheadedness soon after receiving Covid vaccine.

Day 1 injection site pain, Day 2 extreme fatigue and temperature of 100.4, injection site red, warm with a 5 cm hardened lump, Day 3 injection site red, warm with a 3 cm hardened lump, day 4 injection site remain red and warm, no longer swollen

Patient developed a soreness and then itching developed. She then noticed a knot to the left of the injection site. She has now developed approximately 2 inch long area of redness across her deltoid.

within minutes of being vaccinated, developed feelings of swollen lymph nodes, fullness and stiffness in her neck. She has redness across her upper chest. She has experienced side effects similar to this from other vaccines she's received in the past. She was observed in the ED but no medications were administered. Her symptoms improved and she was discharged with a prescription for an EpiPen and an appointment to follow up with an allergist.

12/27 woke up with pain in left armpit. Swelling increased throughout the day. Pain was manageable without medication, did hurt when swelling was palpated or I squeezed my left arm down to my side. Woke on 12/28 with same pain, does not appear to be further swelling, but hurts in my armpit to hold my arm above my head.

Approximately 20 hours later, I began getting chills. When I put on a jacket, I began sweating profusely., yet freezing cold. My head was pounding. Came home from work a couple hours later and took a nap for a few hours yet woke up multiple time covered in sweat, yet again freezing cold

Within 10 minutes of receiving the Pfizer COVID vaccine, she complained of chest tightness, feeling flushed, mild headache, and paresthesias in her hands and mouth. Symptoms lasted approximately 10

minutes and resolved spontaneously. No treatment was administered. The patient was observed and discharged to home with no additional treatment.

Erythema and edema at injection site measuring 4 inches by 2.5 inches lasting 3 days. Day 2 had an excruciating headache unrelieved by Tylenol or Aleve.

Patient received the Pfizer Vaccine. Mild rash was noted on the forearms by the patient

10 minutes after receiving vaccine patient complained of head heaviness, palpitations and feeling hot in the ears. BP = 166/97, HR = 129, O2 SAT = 100%, Temp. = 98

10 minutes after receiving vaccine patient complained of head heaviness, palpitations and feeling hot in the ears. BP = 166/97, HR = 129, O2 SAT = 100%, Temp. = 98

Pfizer-BioNTech COVID-19 vaccine EUA on 12/15/2020--12/19/2020 @ 0300 I woke up with joint pain in all joints including hands, feet, fingers & toes, also muscle aches. I had an occasional cough, nasal congestion, nausea and headache. The joint and muscle pain lasted approximately 48 hours and was relieved with Tylenol and ibuprofen every 4-6 hours. The HA lasted until 12/22/20. As of today 12/23/20 I still have some nasal congestion but no other symptoms. I never ran a fever.

Tongue swelling a bit. Postules formed. Bumps all over tongue. No fever or other symptoms

FEVER 100.1, HA, body aches

These are expected side effects, I was told I still need to fill out this form by my boss. Temp 100.2, extreme fatigue, chill, extreme muscle pain, cough, left eye irritaion

Serum sickness syndrome, fever not greater than 101, severe muscle and body aches/pains, nasal congestion, extreme fatigue, cough, nausea, loss of appetite First vaccination in 55 years

"12/23/2020 0200 Severe Tremors and Chills. Nausea, dizziness, & near syncope. Headache. 0700 Softball size lump(edema), 6""x6"" area erythema, hot to touch, and pain at injection site. Difficulty raising arm due to pain. Fatigue. 12/25/2020 0100 Awakened hot and sweating which lasted approximately 6 hours, fatigue. Arm issues continued. 12/26-27/2020 Arm slowly improving but fatigued and headache continued. 12/28/2020-Improved but headache continues."

Bruising at site of injection and multiple areas covering body (limbs, back, abdomen) that was noticed beginning 12/24/20 and has continued over several days

12/20/2020 12:00 PM DEVELOPED LAPID ATRIAL FIB. WENT TO ER WHEN IT PERSISTED, MEDICAL CENTER. ADMITTED TO INPATIENT; 12/21/2020 - ELECTRICAL CARDIOVERSION. MONITORED OVERNIGHT. 12/22/2020 - DISCHARGED *ON CHRONIC BLOOD THINNER

12-23-2020 severe chills, nausea, and severe body aches did not check temp. 12-24-2020 she still feels off, but not as bad. Temp is normal

Local redness, swelling, left upper arm at injection site.

Rash on abdomen approximately 2x4 inches with slight itching that lasted about 3 hours without requiring any treatment.

Almost immediately after vaccination the recipient felt faint. She was helped to lay on the ground, vitals were checked and monitored, and remained stable. She quickly felt better and stayed in observation a total of 25 minutes. She reported that she has experienced this in the past when getting a blood draw or vaccine. She returned to her work unit with a colleague. We checked in with her a few hours later and she was completely fine.

Arm pain

Patient reports developing a mild headache post vaccination within 15minutes that progressed in severity with nausea, dizziness and fainting. Occupational Health is following up with patient and recommending comprehensive provider evaluation

Immediately after receiving vaccine recipient stated that he felt faint. Eyes rolled back and he became limp. Two nurses laid him on floor. He came to within seconds but was diaphoretic. Vitals were checked and monitored (BP 130/70, 118/74, 120/72; pulse 57, 72, 68; pulse ox 98%, 99%, 99%). He quickly felt better (within a few minutes), was given water, chocolate and a granola bar. He stayed in observation a total of 35 minutes. He reports that he had been very nervous about getting a vaccination. He returned to his unit with a colleague. We checked in with him a few hours later and he reported that he felt well.

Muscle aches, fatigue. Treatment rest. Resolved by 12/27/2020

Fatigue on 12.26, fever 101f on the night of 12.26, fevers 101 to 102 from 12.27 to today 12.28. headache beginning 12.28

Moderna COVID-19 Vaccine EUA Headache for 2 days

Vaccine recipient received the vaccine on 12/18/2020. On 12/19/2020 reported that the injection site had prominent redness and swelling. On 12/22/2020, the site was warm to the touch and the pain was mild, but bothersome. Over these 5 days the injection site became swollen with increased redness and pain. On 12/23/2020, the vaccine recipient reported that they were feeling better and has followed-up with occupational health with no further issues.

low grade fever 99.8 F, slight nausea, over feeling not well, fatigue

Redness, swelling at vaccine site

12/25/2020 08:00AM patient awoke with left eye twitching, mouth drawn to left side. Neck severely aching from right earlobe to the back of neck, severe headache. Unable to close left eye. ER visit 12/26/2020 in the morning - discharge diagnosis, Bell's palsy. Prescription Valacyclovir hcl 1 gram tablet, Butalbital, Acetaminophen, Caffeine Oral tablet 50-325-40mg , solution eye drops , Azithromycin cream

Flu symptoms including headache, nausea, chills, joint pain and low grade fever of 99.3 Symptoms began in the middle of the morning about 10:30 - 11:00 am while I was at work; worsened through the afternoon and night; all better by morning; symptoms completed gone

Patient complained of tachycardia about 15 to 20 Minutes after receiving the vaccine

Quarter size swelling at injection site, entire deltoid became quite sore, firm, warm and extremely tender with significant decrease in ability to perform abduction and extension over the next hour. Pain and stiffness progressed to right shoulder blade and right trapezius. At this time these areas remain somewhat tender and sore, however ROM has improved. Of note, also developed some SOB and redness to neck and chest within 30 minutes of injection, Fexofenadine was taken and the SOB and redness to chest resolved by 4pm day of injection.

Within 12 hours of receiving the vaccine I developed sever flu-like symptoms - low grade fever, chills, body aches, extreme fatigue, runny nose

I had a headache, extreme fatigue, achy joints and muscles. I had a scratchy throat also.

who presents with complaint of rash , itching minutes after COVID vaccine. Also notes nausea and fatigue. Pt notes no throat swelling , pain , voice change , shortness of breath , abdominal pain , vd or other concerns. Pt has known allergy to flu vaccine and other medications as noted

Fever 100.1 to 101.5. 24 hours. I was very weak. I could barely walk to the bathroom. At 5 AM when the symptoms started I felt like it was going to faint or just collapse. I felt like I was going to faint on multiple trips to the bathroom. I had no energy .I felt like I had Covid symptoms all over again. I had cold sweats for almost 24 hours had to take my clothes off to get comfortable. I was so warm. exhaustion .slept for almost 24 hours. I just felt miserable my stomach was nauseated and felt very sore in my abdomen. aches and pains in my hips and legs.

After receiving the covid vax, I had shoulder soreness the first couple of days. That night, the vein , was a different color than the rest of my veins in my bicep. The discoloration of the vein was at the top of my bicep. Now, the vein is visually fine now.

Two hours after the injection my tongue started swelling and pain increased throughout the day to the point where I could not eat. The next morning (Dec. 23rd) I had painful white lesions under and on the sides of my tongue. This worsened over the next day and I was seen at an urgent care clinic who took culture swaps for lab test. (eventually negative for oral herpes). Pain and lesions continued to worse and I was admitted to the ER on December 26th. Breathing, heart rate, and blood work all normal. Diagnosed with Herpangina/Coxsackie Virus.

Injection site pain x 2 days, nausea x 5 days, fatigue x 3 days, chills x 2 days, muscle + joint pain x 2 days, headache x 1 day, weird dreams x 2 nights

Hive reaction began on day 7 post vaccine, isolated to left arm, back, trunk.

Experienced nausea, dizziness, felt hot and face flushed, and felt like he was going to pass out 15 minutes after receiving vaccine. Patient assessed in the emergency department and found to be stable but has complaints of nausea and dizziness with headache. Received IV fluids, meclizine, and prochlorperazine. Discharged from emergency department at 1454 after tolerating fluids and foods by mouth without difficulty, no recurrence of symptoms, vital signs remaining stable, and stating he feels like he is back to his baseline status.

pt received a COVID vaccine of moderna and within 15 minutes pt c/o throat feellng itchy and tight down low. Also, c/o of tingling in fingers and toes. Pt noticeably shaking. Pt has a hx of fainting with needles. Pt become more anxious and requested and ambulance to be called. Color was flushed. B/P 169/99 P146 SPO2 99%. For pts comfort gave O2 at 2L/min via NC. Pt remained alert and oriented and talking. EMT administered Benadryl 50mg IM. Ambulance escorted pt to ER where only observation was done. F/U with pt about 2 hours later. Pt states she believes she panicked and was doing fine right now. No other issues.

first start with sore arm and neck-then started hurting in chest- now have blisters on lip and throwing up

Cold extremities, warm face & diarrhea - Monitored for 47 minutes, no abnormal finding except for elevated BP. Client did not have any rash, hives, angioedema, difficulty breathing, wheezing or altered level of consciousness. She reported all symptoms resolved and discharged home. Additionally, she reported diarrhea overnight which had resolved by the next day.

severe cold chills started at 3am no fever used heating pad to get warm then had to work the next day severe aches and chills again with some nausea took ibuprofen at 9am and chills and aches went away for about 5.5 hours then returned but not as severe. right arm pain x 2 days

Muscle aches, subjective fever, headache, sore arm

Arm pain for 2 days and a very bad headache for 2 days and extreme fatigue.

"approx. one hour after receiving vaccine pt started having throat tightness, nausea, lips tingling, SOB and ""feeling weird"". States has had anaphylaxis in the past from nuts and uses an EPI pen. States she used her pen but did not get relief so went to ER where she received IV benadryl, tagment and steroids. EKG was abnormal. States no problems at injection site. F/U with patient appox. 7 hours after incident and pt states she is doing fine and not having any issues now."

Hello I received my Covid Vaccination on 12/23/20 7:56 am at Healthcare Clinic. I waited 15 minutes after the vaccination and then went and stayed home. Six hours later my arm started to become very painful (no surprise) I then felt an overwhelming fatigue and sadness. I had tears just streaming down my face for about 3 minutes. I laid down and awoke later that night still feeling very fatigued. I showered and crawled back to bed I awoke the next day at mid-morning, still tired but 60 % better. I stayed awake for a few hours, showered, changed the bed sheets and went back to bed for several hours more. I awoke tired ate a lite dinner and went back to bed. I awoke at 8:00 on Christmas day feeling fine, just like my old self. If you need any more information just call. Oh my vaccine information

is: PFIZER EJ1685 12/23/20 1st dose. Thank you, Medical Interpreter Center for Advanced Pediatrics Endocrine Department.

Headache, cough, Fever 99.9, wheezing, body aches, fatigue

15 minutes after vaccine pt c/o mild SOB, no tongue swelling noted, rapid response team called

Arms became achy and wasn't able to lift it. Extreme Fatigue, Headache and chills

Moderna COVID-19 Vaccine EUA Side effects started about 12pm on 12/23/20 Nausea, headache, body aches, cough, runny nose, congestion, very tired

Patient reports shortness of breath and persistent cough.

About 10 days after the vaccine, I developed, over the course of 30 minutes, pain/pressure from my left distal forearm to my hand, with stiffness and vague weakness in the area. Over the next hour or so I noted swelling of the wrist; swelling and pain in the dorsal and radial aspects of the left wrist have persisted until the following day when I am submitting this report. I had done some activities with the wrist prior to the onset of symptoms (opened a difficult jar, sat on my hand to keep it warm while using the computer) but these didn't seem outside of my normal daily activities.

For the first day or two after receiving the vaccine I experienced injection site soreness, fatigue and malaise, and sore throat. Symptoms resolved within 2-3 days and I was symptom free by the time I went back to work on 12/24

Initial symptoms included a feeling of slight panic with associated need to take deep breaths. Once I left the facility 20 minutes later, I felt slightly lightheaded with sensitivity to light and sound. These symptoms were mild overall. The feeling of anxiety and mild sensory symptoms persisted for several hours. That night, I experienced night sweats. I have been feeling fine overall since that point.

12/26/2020 Chills, headache, fever 105.00, occasional dry cough, throat tickle, body aches. 12/28/2020 low grade temperature- fever, occasional dry cough.

I am a 46 yo MD who received the Moderna vaccine lot#037K20A exp 6/22/2021 on 12/24/20. I had also just recovered from a COVID infection 5 weeks earlier. 18 hours after receiving the shot, I developed severe chills/fever/tachycardia and muscle aches and headache that lasted about 7 hours. I slowly recovered and was better at about 36 hours post vaccine.

Vomiting, Diarrhea, Fever, Chills, Muscle Aches

Axillary pain and swelling

Eyes started itching. On December 20th eyes itched so bad that contacts were not able to be worn. Redness on hands and were itching which began 12/19 but on the 20th bumps and itchiness on elbows. I suffer from eczema and take self injection shots for it so the rash appeared as if my eczema was triggered.

Dizziness moments after injection, mild-moderate severity. Duration 2 hours. Treatment -rest after driving 15 minutes to home. Resolved without treatment.

facial numbness

The evening I received the shot I spiked a fever and my body started aching really bad. The next morning my head hurt and my body ached. I took some ibuprofen which seemed to help but that evening I spiked another fever and my body ached again.

After receiving the vaccine, 30 mins later. I started feeling dizzy with a rapid heart rate. I started feeling really weak and delirious. Then I had a really bad headache with nausea and fatigue. Then I eventually laid down and fell asleep for about an hour, I had a headache and the other symptoms were gone. All of the symptoms lasted about 3 hours. The headache was the only symptom that lasted longer, about 6 hours.

Mild to moderate widespread muscle and joint pain Temporary localized pain around injection site

Throat itching and light headedness; symptom duration 20 minutes.

When I woke up at 0800AM, noticed with rashes on my back about 25%. I took Loratadine but not relieved. Went to ER at 05:00PM and they give Benadryl IV. Prednisone 60 mg tab & Pepcid 20 mg tab. After 2 Hours rashes resolved. Noticed with rashes also on both legs and adomen when I was in the ER.

PAtient with a history of vision abnormalities reported blurry vision after vax administration. Patient sat for 30min, reported minimal or no improvement and refused to present to ED

Roughly 8 hours after vaccination I had fever to 100.0 and fatigue for about 24 hours. Mild muscle aches. Extremely tender shoulder for 48 hours

Day 5 after vaccine (12/23) severe joint pain only to right upper extremity (shoulder, elbow, wrist, fingers). Day 6 mild joint pain to right upper extremity. Day 7-10 Mild intermittent joint pain along with shooting nerve pain on right upper extremity. Under arm and AC stabbing pain. Numbness and tingling to right upper extremity intermittently. All positional except feeling of ?nerve pain?.

Employee received the Pfizer Covid vaccine. She was feeling nauseous. Soon after she ate, she vomited. She refuse to go to the Emergency room. She felt better to complete her shift.

- R side HA and sinus congestion followed by left sided HA with sinus congestion - Fatigue - muscle and joint aches - resolved after 48hours.

Severe headache onset at 4pm only normal headache at this time, woke me up at 12:30am was severe. Took 2 regular Tylenol eased up after 30 minutes. slight headache lingering on day 3.

Tingling, light-headed, red blotches

Symptoms included fatigue, headache, muscle and joint pain, chills, nausea, dizziness starting approximately one hour after the injection and lasting 4 days for most all the symptoms. The dizziness

lasted for 2 days and the body aches for three. Still with a slight headache and nausea today 12/28/20 5 days after the injection.

Anaphylaxis - epi pen X 2, transported to the ED for evaluation and further treatment.

Dizzy, nauseous, headache, body aches, fatigue, black tary stools., diaphoretic, near syncope

Began spotting period blood, but at least two weeks prior to normal period week.

Moderna COVID-19 Vaccine EUA

Face Started itching, Throat felt weird, rash started appearing on both arms

Tingling in hands and arm soreness, feeling like they are asleep 1 hour after injection. No treatment. Symptoms eventually resolved.

Aching in right arm, then pruritus, then swelling. Went to ED immediately since she was at work when reaction began. In ED was given prednisone, Pepcid, Benadryl.

After 3-4h of the vaccine, patient suffered intermediate headache, 1st dose of Tylenol 750mg PO was given, symptom partially resolved. 15h after, patient had chills followed by high fever, another dose of Tylenol 750mg PO and naproxen 60mg PO were given, 2 hours later, fever and chills resolved. Continuously having fatigue, dizziness, nausea, diarrhea, myalgia, arthralgia for 1-2 days. Lymphadenopathy was felt but unable to touch any swelling lymph nodes in left axillary area. All of symptoms were resolved after 3-4 days. Due to a possible exposure notice, got COVID-19 tested on 12/23/2020, both rapid antigen test and RT-PCR were negative.

Flu like symptoms, HA, sore throat, muscle aches, runny nose, dizziness, chills, felt feverish-but no fever noted.

Vaccine received at 3:29 pm on 12/26/2020. By 4:00 pm she had complaints of a headache, dizziness alog with nausea and vomiting. S/S without resolution or decrease. Sent to Emergency Department for evaluation at 5:35 pm. She was administered the follwing @ 5:39 Sodium Chloris IV, 6:18 pm 1,000 mg IV tylenol, ketorolac 30 mg IV push and Ondansetron 4 mg IV. She was discharged no longer nauseated and headache decreased from a 4 to a 2. discharged in stable condition. on 12/27/2020 she stated she had fatigue, nausea and vomiting, diarrhea and a temp os 102.0. 12/28/2020 N/V, diarrhea and fever resolved. C/o's joint pain and body aches.

Patient came to receive her vaccine. While in the monitoring area. Patient stated her mouth was experiencing numbness/tingling. Patient stated she never has adverse reaction to vaccines. V/S. B/P 130/99 P: 85 O2.98. Patient stated feeling lasted approx 3 mins. Patient was further observed for additional 15 mins. Patient stated feeling had stopped and she was feeling much better. Patient left observation approx 8:10 AM.

After receiving Pfizer vaccine, patient reported some lightheaded ness and some chest tightness. B/P 131/95, P 73, R 16. She was given orange juice, cookies and continued to be observed for an additional 30 minutes. Patient left on her own.

In the evening of Dec. 16, my arm was very tender and hurt to touch or move. It got better by the next afternoon, at which point I shoveled the snow, only to come inside with chills, sweats, low-grade fever (100.5), dizziness and headache. The entire episode was only acute for a few hours and by the next day I felt mostly myself.

10 min-heart palpitations 20 min-heart palpitations, could not catch breath, angst/panicky sensation, all intermittent 1 hour- akathisia, heart palpitations/panicky sensation, all intermittent, resolved with benadryl 24 hours- heart palpitations/panicky sensation, intermittent

3 cold sores appeared by the next morning

Headache, chills, horseness, weakness, cough.

"Day 1: approximately 1 hours after vaccine - dizziness, extremely tired, dosing off, , injection site tender, approximately the size of a dime knot at injection site. Day 2: body aches all over, moderate headache, extremely tired, no energy, about 1700 hours: profuse sweating, full body chills accompanied with entire body shakes, extreme headache, nauseated, unable to eat, lose of taste and smell, extreme body aches, sense of falling. Lasted for 36 hours, lost 7 lbs. Swelling at injection site, followed by a knot in arm approximately size of a quarter, raised approximately 1 "", red rash and extreme itching. Day 3/4: symptoms subsiding, rash and pain in arm increasing. Rash spread from elbow and shoulder, raised approximately 2"" and almost encompassed entire upper arm, approximately 1"" gap on the inside of arm not affected. Day 5: Started feeling human again. Temperature was never higher than 99.5 degrees. Took Aleve and Tylenol"

Developed a rash on abdomen that was discovered at approximately 10 pm on 12/29/20, the day following the vaccination. Personal physician diagnosed it the following day as shingles and an anti-viral (valacyclovir) was prescribed. Last dose taken on 12/27/20. Rash is clearing.

Severe bilateral arm pain, fatigue, fever, chills. Onset 12/24/2020 10:00am until 2:00am. Ibuprofen. Person recovered.

"""Flushing"" feeling felt during monitoring period. Patient requested a Benadryl but then symptoms resolved with no intervention. Pulse- 99 BP 154/99 O2 - 98 R - 22"

Patient experienced/reported nausea post administration, approximately two hours after. Patient had emesis x1, to where Zofran given by mouth, w/ patient reported relief.

She states that she had immediate pain at the injection site. On Saturday at 7AM, she developed malaise and frequent stools but would not classify them as diarrhea as well as a headache. She has never had a fever. Today, she continues to feel weak but reports that she is improving. Treatment dugs:

25mg po Benadryl given per vo Dr. at 9:20a -- 9:45 symptoms completely resolved Treatment dugs:

I was told to contact you and let you know that I have been having flu like symptoms since my vaccine Monday afternoon at 3:45. Started yesterday with the headache, body aches and chills. I stayed the day yesterday but i will be leaving early today as I am not feeling any better. Treatment dugs:

Treatment dugs:

12/16 - onset of fatigue and runny nose followed by headache and body aches. As of 12/23 he has a mild headache not requiring any medication for relief. He missed a day of work on 12/22. He did not seek medical attention. Treatment dugs:

Treatment dugs:

Throat swelling/closing feeling, outcome is anxiety, will take hydroxyzine. Feeling of throat swelling, throat closing

nausea, vomiting, severe enough to call out of work

headaches, mild but moved around mostly on right side; moderate to at times severe joint pain in hips, knees and hands. Headaches started 12/25/20 and continue today 12/28/2020. Joint pain started afternoon of 12/24/2020- was worst 12/26/2020 but some relieve with high dose ibuprofen. Still joint pain and stiffness, mostly in hips, knees, lower back and hands.

12/25/2020 Patient states that he started experiencing body aches and took Ibuprofen, on 12/26/2020 patient states that he wasn?t feeling well with flu like symptoms: fever 101, loss of appetite, fatigued, vomited once, body aches, continued taking Ibuprofen throughout the day, 12/27/2020 Patient states

fever decreased to 99, still feeling fatigued, shoulders are sore, feeling clammy, patient states that he has never tested positive for Covid, he has never been exposed to his knowledge , went away, still feeling fatigued, shoulders sore, clammy, temp no higher than 99. patient states that because of his flu like symptoms, he went to pharmacy for the PCR Covid Test and is waiting on his results.

Soreness to injection site, fatigue, fever, chills, body ache and nausea.

right after the vaccine she felt light headed felt better in observation after about 7 minutes employee c/o heart racing,Chest pressure, feeling light headed, throat scratchy and tight. allergy to MRI contrast dye only - Gadolinium. Has had lots of vaccines in the past without problems. Taken to ED via W/C was talking all the way not SOB admitted to ED. 12-28 States she was admitted to the hospital overnight for anaphalaxis on a second trip to ED. She will not be able to get her second dose of the vaccine. this should be entered into the VAERS reporting system. She is till using the benedryl.

facial rash - forehead/nasal area/ lips red and decreased swelling. Denies SOB.

Fever up to 102 degrees, muscle aches, fatigue, lymph node pain, injection site reaction, headache, chills, joint pain. Started about 26 hours after the vaccine and lasted about 48 hours. Injection site redness/warmth started about 96 hours after vaccine- large area on upper arm about 6 inches by 10 inches. The redness and warmth are still there, other symptoms have resolved.

Dermatitis.

Approximately 5 minutes after vaccine administration (8:14a) patient felt heart palpitations, Heart Rate up to 90, blood pressure 149/98. At 8:22a blood pressure at 153/98, At 8:37 a Blood pressue at 144/96 Within 30 min (8:43a) patient Heart rate down within normal limits to mid 60s and blood pressure to 130/80 (manually).

nausea and vomiting

Approximately 17 hours following vaccination, recipient experienced fever, chills, shortness of breath, nausea, diarrhea.

Supraclavicular adenopathy

After receiving the vaccine, I laid down at noon. When I woke up at 6:30 in the evening, I felt tired. Then by 9:15-9:30pm, I started getting chills. Then by 1:15am, I started running a temp of 101.5. When I got up this morning at 7:30am, My temp had gone up to 101.7. I took two tylenol at 8:30am and I have not checked my temp yet. Im just sitting in the chair sweating.

After receiving the vaccine, I laid down at noon. When I woke up at 6:30 in the evening, I felt tired. Then by 9:15-9:30pm, I started getting chills. Then by 1:15am, I started running a temp of 101.5. When I got up this morning at 7:30am, My temp had gone up to 101.7. I took two tylenol at 8:30am and I have not checked my temp yet. Im just sitting in the chair sweating.

The morning after the vaccine I woke up with a headache, took some Advil and it helped. On Monday I had the majority of other symptoms: chills, headache, nausea, mild abdominal discomfort, sore throat, congestion, muscle ache, joint pains. No fever.

During injection immediately felt itching at injection site. Over 3--45 minutes, itching spread up the deltoid to the left upper chest towards the mid chest. No airway involvement. Went to the ER and received prednisone, Pepcid, Benadryl. Discharged to home with prescription prednisone, Benadryl, and Pepcid, and Epi-Pen.

"Patient administered vaccine and remained in the vaccine clinic observation area for the recommended time period. Patient at that time had no reactions and returned to her nursing unit. Approximately 10-20 minutes after leaving clinic while working, patient developed: Right lip swelling,R scratchy throat,R tongue feels ""tingley"", No respiratory distress At onset of symptoms patient took her own benadryl 25mg po prior to re-presenting to clinic to notify staff of symptoms. Staff observe symptoms as listed above, again pt had no acute respiratory issues. Epinephrine offered to patient, refused by patient. Patient agreeable to repeat dose diphenhydramine, pt takes 12.5mg oral solution. Staff monitors patient closely, no worsening of symptoms and slight improvement noted within ~15-20 minute of presentation. Patient leaves against medical advice from clinic due to a rapid response call for one of her patients. Follow up with RN within an hour shows resolution of symptoms with diphenhydramine, no additional doses taken after the total of 37.5 mg"

Ran fever of 99 for 2 days

Immediately after vaccine my face started getting hot and itching. swelling to my face and neck area I took zyrtec for the adverse events

Severe chills, aches in hip and body, headache. Lack of energy the following day.

Moderna COVID- 19 Vaccine EUA Patient reported account of vaccination on 12/21/20: I received my 1st dose of the Pfizer Covid-19 vaccine yesterday afternoon and about 2 mins post injection I felt flushed, dizzy, and nauseous which disappeared quickly but then came back about 10 mins post injection and then never happened again. I felt completely normal after that and I feel fine today.

"1006: received vaccine 1022: 15 min observation complete - no difficulties 1034; lightheaded ""wash"" in my head lasting < 30seconds (as though standing too quickly) along w/ fleeting nausea then ""light"" numbness of face. Uncertain if subsequent tachycardia and hand tremors were from the initial lightheadedness and numbness or additional side effects. I was driving my car, alone and became nervous. 11:30 25mcg benadryl capsule taken ~13:00 numbness of face resolved."

15 minute post vaccination observation patient denied any symptoms. Later in the day patient experienced significant nausea and vomiting followed by mild SOB and throat swelling.

Developed red, blotchy, mildly itchy rash to anterior and posterior neck on the morning of 12/25/2020 (rec'd vax afternoon of 12/23/2020). The rash progressed throughout the day; extending to anterior

torso down to waist, right arm, and upper back. Took 25mg benadryl tablet. Rash began improving the next afternoon (12/26/2020) and completely resolved by morning of 12/28/2020.

DIARRHEA, FATIGUE, AND BODY ACHES AND SORENESS

About 8 hours post vaccine, at 2300 as I was going to bed I felt what I would describe as breathing resistance. I would not describe it as chest pain/pressure/tightness or SOB. It was just upper chest resistance to inhalation when lying down for bed. 12/24 started with intermittent gnawing epigastric during the day. Persisted through the night with gnawing epigastric pain radiating through to my spine, i was unable to sleep due to the pain. Attempted tums (I do not have GERD), motrin & tylenol however, nothing was helpful. 12/25 & 12/26 same symptoms persisted both day and night 12/27 asymptomatic 12/28 cramping/twisting epigastric pain returned, much more mild

Vasovagal like reaction after a light 1 mile walk. Lost consciousness.

Numbness in sole of feet. Unable to walk, develop high fever, resp failure resulting in intubation, acute kidney injury

Diaphoresis, syncope, and hypotension.

cold sweats and body aches day after vaccination

Patient had mild wheezing 15 minutes after vaccine injection.

Moderna COVID 19 Vaccination administered IM L deltoid. Client stayed 30 minutes for observation. Left and approximately 15 minutes later experienced numbness in tongue and neck area-felt like throat was constricting. Drove self back to clinic with epi and benadryl administered IM and oxygen placed at 8l. Blood pressure 170/98, HR 108. States felt better but after approximately 15 minutes became flushed and felt like it was returning. Left with practicing MD & NP to go to ER.

1. Injection site pain - more than typical with a flu shot - awakened in the middle of night with aching - took acetaminophine which remedied the problem. Continued general body achiness for 24-36 hours, again resolved withacetaminophine. 2. Next day, December 24 - (a very active day for me) - experienced fatigue as day progressed - had to stop in mid-afternoon and sleep - very uncommon for me. NOTE: The above symptoms were unpleasant but did not prevent me from playing the organ for 3 church services on the 24 and 25.

12/22/2020 Chills, body aches, fever 103.00 fever -- overnight fever unable to break 104.7 fever with Tylenol and Ibuprofen. Morning no change in temperature 104.7 no change -- ER Clinic Visit, XRAY-results: pneumonia , Covid test - positive; medications prescribed : 5day Z-pack

Shortness of breath had a terrible asthma attack very congested in my lungs weezing

Possible Bell's Palsy Rx of Prednisone 60mg Daily x7 days Valacyclovir 1000mg TID x7 days

Fever of 102.9 extreme body aches

About 2 minutes I received the vaccine I felt my right upper lip swelling and tingling, then left start and migrated to my ear and down to my jawline. Difficult to swallow.

Around midnight on day of vaccine, 12/23/20, patient experienced pain at the injection site, which lasted about 20 hrs. Patient also had a severe headache, which he says has abated as of today, 12/28/20. Patient starting having the following problems around midnight on 12/23/20 and is still experiencing them: fever (99+), occasional chills, difficulty in breathing, restless sleep, coughing, burning sensation in nose and sinuses.

12/20/2020 WITHIN MINUTES, I STARTED TO FEEL PINS AND NEEDLES. RADIATED LEFT TO RIGHT SIDE OF ARMS, AND THEN UP TO HEAD. NUMBNESS AND TINGLING. SEVERE PROFOUND WEAKNESS, DIZZINESS AND ORIENTATION. VISION FELT 'FAR AWAY'. HR INCREASED, HX SVT. 3 MINUTES BP WAS 'OK' BUT I BELIEVE IT BOTTOMED OUT. HR WAS 150. STRETCHER, TX TO ER. BLURRY, 'STAY WITH US'. ALERT, AWAKE, VERY IN AND OUT OF FOCUS. FEEL LIKE 'PTSD' FROM THIS EXPERIENCE. 'WHOLE BODY WAS BUZZING'. IV STEROIDS, IV BENADARYL, IV FLUIDS, IV ATTIVAN (NO EPI AS NO DIFFICULTY BREATHING) STILL FEELING 'DAZED' *FLU SHOT REACTION 2013 - BRONCHOSPASM, MILD. 2014 - BRONCHOSPASM, RINGING IN EARS, INCREASED HR, DRY HACKING COUGH, USED NEBULIZER AND TOOK BENADRYL. LASTED 4 HOURS. ALLERGIST APPT 2020 - ADMINISTERED FLU SHOT UNDER GUIDANCE; SCRATCH TEST; BROKEN UP INTO 2 DOSES. INFORMED NOT ALLERGIC TO FLU SHOW 'GOOD TO GET COVID SHOT'. *STILL HAVE TINGLING IN LEFT THUMB

chills, fever, extreme exhaustion

Uncontrollable shaking, muscle tremors, cramping of muscles in legs, calves and thighs, generalized fatigue and body aches, fever 103, diarrhea, vomiting, extreme headache, extreme soreness in arm where injection was given with limited range of motion. Egg size lump, bruising and rash at injection site. Most all symptoms lasting 2 days.

Within 8 minutes of receiving the COVID-19 vaccine, patient developed feeling of throat feeling itchy, tongue tingling, and progressed to throat tightness and difficulty speaking and squeaky voice within 15 minutes of receiving the COVID-19 vaccine. 911 was called with request for the facility's Rapid Response Team (RRT) to assist. While awaiting RRT arrival, patient was administered Epinephrine 0.3 mg IM via EpiPen, first dose within 18 minutes of onset of adverse symptoms, with short-lived improvement of symptoms. The Rapid Response Team arrived on the scene and when the same symptoms started to return, about 7 minutes after the first dose of Epinephrine, a second dose of Epinephrine was administered IM. Patient's symptoms responded positively to the second dose of Epi and patient was transported to the Emergency Department by the Rapid Response Team for observation and further evaluation/treatment as needed.

chills, fever of 103, bodyaches, headaches, and fatigue. Started 12/26/2020 and still active.

developed hives all over arms and thighs, few spots on calf. Slightly itchy at times. Arms were not painful welts, but the leg welt are very painful, feel almost like bruises. This along with generalized muscle aches

and pains. Took an antihistamine with no relief, hives have been gradually fading but pain in legs still persistent. no respiratory issues so did not go to ER.

About 8 hours after receiving the vaccine, I experience a severe migraine the radiated down my neck and was accompanied by nausea. I slept for 12 hours and the symptoms are almost completely resolved.

Severe injection site pain. Went to UC. Followed up with PCP. Supportive measures recommended.

"Left arm tingling down to fingertips within 15 mn of injection. Later down entire left side to toes. Later diffuse tingling. Resolved next morning 12/18. Lump at injection site for 1 week. Strong Left arm pain on 12/18 12/25 swelling and red rash (1.5"")around injection site. Strong itching. Used hydrocortisone x2 on 12/25and 12/26. Swelling and rash resolved. 12/28 lump is gone, minor skin discoloration remains."

Fatigue and arm soreness for 3 days following vaccine

Raised red rash to face, bilateral hands and forearms started approx 30 minutes post vaccination. Patient treated with PO Benedryl at home immediately following reaction. Applied hydrocortisone cream, but burned upon application, so she washed it off. Is now using topical diphenhydramine spray with good effect. Today, 12/28/2020, most of rash has dissipated; some reddened areas persist. Patient reports the rash affected areas feel much better. She will continue the topical spray and Tylenol prn.

Pt reports numbness above lip to right eye. Pt states she had some anxiety about injection and potential side effects, and wasn't sure if it was due to that. She states it resolved and is feeling fine.

Day 1: limited mobility in the left shoulder join, pain at the injection site Day 3,4,5: numbness of the arm and fingers on the left arm, unable to hold fingers together, whole left arm numbness occasionally, limited control of movements

Swelling and numbness around right eye and cheek; hives. Lasted for about 2 hours maximum. Took Claritin and showered.

possible anaphylaxis - throat itching, flushing, felt unwell

Developed a hardmlump at injection site within 1 hour of receiving. Several days later, lump subsided, but area because itchy. On 12-26-20 noticed a discoloration or pigmentation at injection site.

Around 2:00 am exp dull ache from arm to wrist ,tingling in fingers lasted all day. I called employee health was told to go to see PCP. The tingling went away after 3 days and the dull ache lasted 5 days. I was told to take Tylenol for dull ache. I dint have to miss any work.

extreme fatigue, nausea, dry heaving, headache, dizziness (all similar but milder than my covid19 symptoms from April); arm soreness, tender to touch (both expected), large knot in upper arm/injection area

Patient developed a fever 24 hours after vaccine administration

"Employee presented to COVID 19 vaccination clinic and received 1st dose of COVID 19 @ 13:48. Patient proceeded to wait in the waiting area 15 minutes and was about to leave to return to work when the contracted employee reported she developed a cough and flushed face. VSS @ 2:04 BP 172/105 HR 111, she was A&O, Employee was moved to stretcher, given water to drink unable to drink, she stated ""it feels funny"", VSS retaken BP 151/97, HR 91. She continues with intermittent non productive cough and C/O she was unable to clear throat and felt throat tightness. Within minutes, her face flushed, coughing worsened, difficulty swallowing, and she became diaphoretic. Solumedrol 125 mg IM Given to right arm. Patient reported she felt heaviness throughout her body, and was unable to move her Left arm as easy as before, with bilateral numbness to tingling to upper extremities and decrease strength to left arm. Patient crying out, stated she felt as if she could not breath, no hives present, no angioedema. Anxious, crying out that she felt ""heavyness on her chest"". VSS 2:19 158/108 HR 78. This writer attempted to call ED RN several times through operator: NO answer to each call. I left personal message with Unit secretary of COVID 19 reaction and needed to speak with RC or ED MD. I attempted to to call ED MD, no answer. Epinephrine 0.5mg IM given to right deltoid at 14:20 patient was taken to ED triage area, patient taken to room. Report given to RN and ED MD."

Upper lip swelling, associated with herpes labialis. Has history of occasional recurrent herpes labialis, though never with such swelling associated. Suspect possibly due to heightened immune response from recent vaccination. Patient did have slight right axillary swelling, likely lymphadenopathy, some time after vaccination, though this resolved.

Approximately one week after Pfizer Covid vaccine, experienced around 4 cm diameter area with redness, mild tenderness, and itchiness at injection site on left deltoid.

Palpitations felt after 15-20 minutes, subsided within 15 minutes. Fatigue set in after 4-5 hours. Fever the following morning to 100.8 F. Fever accompanied with dizziness and lightheadedness, syncopal event with brief LOC. Overwhelming fatigue until 3:30 pm the following day, with arm pain. On day #3 arm pain persisted, new development of neck pain and mild truncal rash.

Joint Pain, Fatigue, Nausea, Fever up to 102 lasting for two days.

Fever, headaches, myalgia/arthralgia, fatigue, decrease in breast milk production- treated with braids, resolved 3-4 days

Muscle soreness at injection site

Felt like throat was swollen

"C/o throat ""itchiness"" shortly after receiving vaccine - face also flushed. Received relief with Diphenhydramine 25 mg po"

C/o shortness of breath + chest tightness a couple of hours after receiving vaccine

12/22 c/o Low grade fever & malaise

12/22 Body aches, Joint pain, injection site swelling

12/21 PM - c/o headache, chills, night sweats

12/21 PM developed headache & fatigue - improved after Tylenol

12/22 Developed chills; 12/23 Chills, sore throat, body ache, headache by 12/24 only c/o headache

Patient received COVID-19 vaccine at 3:02 pm - approx 26 minutes after vaccine administration patient became dizzy/lightheaded/nausea. B/P-140/102, 98% RA, 98 HR, R 20 even and unlabored. Patient brought to UC for Evaluation. During UC Evaluation vital signs remained stable. Patient drank water. Tylenol was given for headache - 1 gram Acetaminophen at 3:40 pm. Patient had improvement in symptoms ER precaution were discussed, patient verbalized understanding of treatment plan. Patient discharged home.

One hour after administration, patient experienced a nose bleed. Approximately 2 hours after administration she noticed her heart rate fluttering which turned in to a strong throbbing feeling at the base of her sternum. This was regular rate, but very strong, intense feeling. This lasted until the next day when it decreased frequency and ended by afternoon. Also she experienced a mild headache the day after receiving the immunization. She states that she has a hx of seasonal allergies. Also states that she was very anxious about receiving the immunization prior to admin. She states that she was also a little dehydrated.

I received the vaccine on 12/23. I noticed my back was really itchy that day but didn't think much about it. The next day I had a rash on my arms, back, and chest. My eyes were swollen on 12/25. Rash still has not resolved today, maybe even worse.

facial flushing and dizziness experienced by the patient 10 minutes after administration.

Employee is complaining of chills, headache, dizziness, fatigue and feeling faint. She was tested for Covid on a rapid for the ID now and tested negative today.

Left arm was sore from shot and could not lift it, had to keep ice pack on arm. Fatigue, body ache, headache, Oxygen level drop Started on December 25, 2020, took Advil, noticed oxygen level drop on Saturday, December 26, 2020. Have been sleeping since Friday and had a hard time waking up on Saturday, so I started checking my oxygen level and it was 89. I got up and started walking and it helped to bring it up but every time I sit for any length of time it goes back down to 92 - 95. I have called Dr. my Pulmonary Doctor and waiting on him to call me back.

"21 y.o. female who arrived by from on-campus presented to the emergency department for Nausea, face/tongue/distal extremity numbness 5 minutes after receiving Covid vaccine. Patient states that the symptoms are intermittent and ""come in waves."" She states that she was simply sitting in a chair doing nothing on the symptoms started. She does not feel like her tongue is swollen, she has no difficulty with breathing, no new rashes, and her nausea is not persistent. She has no history of anaphylaxis. She has no history of food or other allergies, and has never used an EpiPen. She does not

typically have symptoms after receiving injections and is a phlebotomist and does not have fear of needles. Patient's symptoms resolved within 1 hour of her stay. She felt well, had no difficulty with breathing, did not notice any development of rashes, abdominal pain, nausea. She states that her heart rate is typically 80s/90s when she checks it. á After her fluids are complete, and she is observed for 4 hours, patient has no symptoms, and feels safe to go home."

I felt very dizzy afterward

During 15 minute monitoring time, patient developed throat irritation and tachycardia.

10 hours after vaccine woke with moderate body aches and chills. Tylenol and Motrin take every 3 hours alternating x 48 hours. Symptoms completely resolved after 4 days.

Sore arm with general swelling noted in deltoid and upper shoulder on post-vaccine day 0 and 1. Managed with acetaminophen and resolved by morning of post-vaccine day 2. Headache started in morning of post-vaccine day 2 and increased in intensity throughout day. Initially managed with acetaminophen. Difficult to manage as day progressed. In addition, dizziness and slight vertigo not dependent on position/posture manifested in moderate intensity in late afternoon. Rested in reclined position which did not ease symptoms of headache or dizziness. Was able to sleep and woke up in morning with no symptoms. Dizziness did manifest in mild intensity on post-vaccine day 3 off an o, not dependent on activity or position, but was manageable. No further symptoms since day 3.

Took vaccine 12/21/2020 12/22/20 Slight sore throat, injection site barely sore (left arm) 12/23/20 AM:slight sore throat, discomfort, pain left axilla PM:sore throat gone, pain under left axilla with sore/swollen Lymph Node (golf ball size) 12/24/20 All day: Pain left arm and under left axilla with sore/swollen Lymph Node (golf ball size), swollen Lymph Node left subclavicular, overall feeling of unwell, headache, nausea, hurts to breath deep. No appetite. Fever 99.8 Feel worse than when I had Covid. 12/25/20 AM: Didn?t sleep well, symptoms same as 12/24 with additional swollen and painful Lymph Nodes on left side of neck (pea size), no fever PM: Feeling some better, less pain, Lymph Nodes still swollen, no fever 12/26/20 Feeling better other than Lymph Nodes (still swollen and axilla still sore) 12/27/20 Continuing to feel better, still swollen Lymph nodes less sore

Numbness in fingers Severe pain throughout whole arm Unable to lift arm

On 12/24/20 I received the vaccine at Pharmacy, later that night I woke up feeling very cold. My temperature for the first 2 days of 103.1, chills, body aches, veins in my eyes busted. The fever has continued, today 12/28/20, 100.8, I feel dizzy, tired. Due to the holiday, will be seeing my PCP today.

I exp sore arm, fatigue, body ache and after taking Ibuprofen was gone. The fatigue is still lingering not entirely sure if this is due to vaccine.

Noted tongue starting to swell on 12/24 at 1030. Started on left side, then progressed to right side. No SOB, difficulty swallowing or breathing, but staff noted difficulty understanding her speech. Presented to ED at 1300. 50mg Benadryl given IV on 12/24 at 1328 and 125mg solumedrol given IV at 1327. Pt reported improvement in tongue swelling at 1630.

"09:48am While waiting her wait time, reading emails, she felt flushed, like a ""hot flash"". Heart rate per her apple watch was 152. 09:54am Seated, placed on monitor for BP and O2 sat., 151/90, HR 111, 99% on room air. 10:05 158/87, 111, 99% - RA 10:10 147/85, 102, 100% - RA, States feeling nervous. 10:20 144/84, 96, 100% - RA, States feeling better, less nervous. No shortness of breath, no facial swelling. No other complaints. Allowed to leave facility. With instructions to follow up with Emergency Department if any life threatening symptoms develop and to follow up with Employee Health if needed. She verbalized understanding of above."

12/26/2020 2:00PM ears itching, hives - left wrist to elbow -- Urgent Care Visit -- Solumedrol shot received and Benadryl advised to take. Hives cleared on skin 12/26/2020

Shortness of breath, dizziness, vomiting, increased BP.

About 11:50 I sat down for observation and between 12 and 12:05 I felt tachycardia, I could even hear my heart and felt my heart really racing. I could feel something on my fingertips as well. The nurse came to check on me and at 2:08 my heart rate was 109 and one minute after it was already 110. So they brought 2 RNS to observe me. I did not go to the ER. They came about 10 min later and stayed with me 20 mins. They kept taking my vitals and checking my BP and told me that my vitals were stable. I left and when I went to my car and checked my heart race and noticed that it was stable, around 83 and decided to go home. I left the hospital about 1PM. After I had the vaccine, the next day I felt body aches, I was not sure if it was my sinus issues or related to the vaccine. I also had joint pains, back pains. But sometimes I have it with my sinus but today I feel fine. My arm the soreness increased with each day but by Friday it got better today I don't feel it anymore.

migraine headache, woke up 12/28 with 2 blisters near lower back

I received the Covid 19 vaccine at 12:30PM on Wednesday, 12/23/2020. On 12/24/2020, mid-day, I developed the following S/S (which were similar to a Lamictal rash): Fine raised red rash over my body, but significantly heavier to face, neck and lower legs; throat swelling with a high pitched cough (with no difficulty breathing) productive with clear thin secretions; diarrhea; I took 6 benadryl every 4-6 hours, Pepcid twice daily, and had an epi pen available (but did not need it). The cough and rash resolved by late Sunday evening. I did not report to ED because I felt the symptoms were manageable at home.

experienced nausea, diarrhea and chills about 14 hours after vaccination. Lasted a couple of hours, and by daytime patient was feeling ok.

Moderna COVID-19 Vaccine EUA

The patient experienced jaw tightness and tingling in the face. She felt better lying down. No treatment was given; she was observed for about an hour and went home. The patient did report having plastic surgery with facial fillers approximately 6 weeks ago.

metallic taste in mouth starting 2 minutes after receiving. No shortness or breath or respiratory/cardiovascular symptoms

Patient developed fever, chills, body aches, ocular migraine and then developed cramping and abdominal pain. Symptoms lasted 3 days and then resolved completely.

Right side of tongue was numb and swollen , could fell the right side of my tongue for a day 12/28/2020 5/10 Lost still today at a week post Received Benadryl incase of allergic reaction

Patient had hives on both arms. Assessed by EMT and provider on site 25 MG benadryl admin to right delt.

Chills, body aches, fever 101.8, headache onset 2100-0300.

Paresthesia of the left foot. Feels like water flushing over the outer aspect of dorsal foot. Occurs about every half hour for the last day and a half. Mild headache grade 1/10.

On 12/24/2020 started with slight headache and a sore throat. On 12/24/2020 tiredness and slight sore throat. At 15:30 on 12/24/2020 she noticed tenderness in right groin. By 1730 she had chills. On 12/26/2020 at 0230 she had throbbing in her right groin and 2030 she had cellulitis in the right groin.

Decreased strength and mild tingling in left hand.

Within minutes of the injection I felt very dizzy with associated palpitations. The triage RN took my BP 160/80 HR 110. The sensation quickly subsided and i left the triage area within 10 minutes. Over the course of the next 3 hours that same sensation would come and go every 10-15 mins, again lasting a short time with return to normal, I would feel very dizzy with palpitations lasting about 30secs-1min and then it would subside. At one point I had a metallic taste in my mouth, another time i felt nauseous. My coworker stated I was pale. By 12:30pm that day the sensations stopped and I just felt very tired the rest of the day. By the following day I felt completely back to normal.

General malaise; Body aches; Chills; Fatigue

Covid-type headache unrelieved with tylenol or ibuprofen lasting greater than 12 hours. We finally gone when i got up the next day. Fatigue and loss of appetite until following morning.

Itchy and bottom lip felt swollen. Went to the ED.

numbness and itching in roof of mouth

within 12 hours of the vaccine, developed and hives; 24 hour later wheezing - mild. took benedryl, Zyrtec, Pepcid - symptoms continued Sought care at Urgent Care - 12/27/2020 - was given an inhaler. Symptoms lasting at least 10 days

Patient began felling flush and hot. Throat itching. She was given 50 mg of diphenhydramine. She does carry an Epi-pen due to bee stings. She did not want to take the Epi-pen initially. we watched for about 10 more minutes. Voice was beginning to get raspy, and she reported increased feeling of swelling in vocal chords. We took patient to the ED triage area and she administered her Epi -pen. She was registered in the ED and was placed in a room for observation/monitoring. She was given an additional

25 mg of IV diphenhydramine and also 125mg of Solu-Medrol. Following this regimen, the patient began feeling much better. She was monitored for an additional 2 hours. I stayed with the patient while in ED and she recovered from the reaction with no additional sequalae.

12/17/2020 20 MIN AFTER INJECTION, FELT ITCHY AND WELTS. MEDICAL STAFF ADMINISTERED TYLENOL AND BENADRYL. 12/20/2020 AFTER RASH AND HIVES DISAPPEARED, WOKE UP TO JOINT AND MUSCLE PAIN ALL OVER. PINS AND NEEDLES, FELT LIKE ON FIRE. *MISSED 2 DAYS OF WORK DUE TO ACHES

arm stiffness, cough, dizziness, ringing in ears, muscle aches and spasms. Seeing Primary care for symptoms and dizziness has not improve and ringing in ears has worsen. Recommend from to get a MRI.

Swollen lymph nodes of the right arm with itching and redness began on 12/24/20. No treatment. Swelling is improving, itching and redness remains unchanged.

After vaccine, muscle aches, swollen lymph nodes, low grade temps to 100.5 for 4 days. On morning of 5th day, symptoms improved. Evening of 5th day, fevers to 103.0, severe headaches, cough, sore throat, fatigue x 4 days. Covid tested- negative.

About 20 minutes after receiving the vaccine both hands turned flame red from the wrists to fingertips. No itching or burning. Resolved after about an hour.

I was very lethargic, warm (without a fever), and very achy. This lasted until I went to bed at 9pm and I felt fine when I woke up the next day. I took no medication for this nor did I seek medical treatment.

Mild Flushing/itchiness, blood pressure dropped for a few moments, slight dizziness for a few minutes, then about 15 minutes after symptoms abated then Istomach felt uncomfortable, and a headache started about 45 minutes after injection.

Tingling of tongue, shortness of breath, swollen lip. The patient was observed in the Emergency Department for about an hour and discharged home without further treatment.

blood pressure issues and tightness of throat

recipient complained of feeling lightheaded and thought she would pass out. gotten a snack and drink and then laid down on stretcher. vital signs stable but then symptoms did not improve and began to complain of numbness and tingling in her left arm. transferred to the ED

Paramedic who administered shot gave it too high. I noticed this maybe 10 minutes after administration when I felt that the Band-Aid was high and a nurse practitioner I work with confirmed that it was too high by observing the puncture site. Pain started about 2-3 hours later, with restricted range of motion left shoulder joint

Next morning I woke up with a migraine and stiff neck. Following day I had multiple episodes of diarrhea and significant nausea. I woke up with another migraine and stiff neck on 12/23/20. I still had GI upset. On 12/24/20 I had migraine again with body aches and GI upset.

Pain at injection site, severe body aches, fever raning from 99.3 to 100.8. Hip and knee pain

"She got a Covid vaccine Pfizer at the Health Dept on Dec 18th in her L arm. Within 30 minutes, she felt tingling going down her L arm and in then she felt tingling on the L side of her face. Muscle aches, fatigue and chills lasted about 33 hours. On the 22th she had L leg weakness when she got out of bed, this lasted just a few seconds until she ""worked it out."" Later, she developed a sinus type headache. She developed muscle aches on 25-26th, she went to have a covid test that was negative. The L side of her face is tingly and her L jaw is sore--she describes it as feeling like she has had a novacaine injection for dental work since 4pm yesterday."

Muscle soreness, fatigue

Came to recovery area and within a period of 5 minutes or less complained of a headache. Face became flushed and was taken to lay down on stretcher. BP 142/80, HR 140, RR 20. Patient was given water, Ibuprofen 800mg and Benadryl 50 mg. BP 135/90, HR 78, SaO2 100% room air. Patient sat up and drank juice and ate granola bar. Patient left at 0925

Employee stated that she woke up at midnight with severe nausea and started vomiting intermittently throughout the night. She also experienced fever/chills/body aches and right arm pain. Had to call in sick.

Arm felt very sore for 2 days after the shot, felt feverish, body was very warm.

15 minutes after vaccine, patient starting having itchiness and eye pain, looks like starting to develop hives. Benadryl 50mg IM given x 1 dose.

Slight increase in pulse for approximately 3 hours after the injection. Duration 45 minutes to an hour. Eye lids puffy approximately 20 hours after the injection. Unknown duration.

Patient on left jaw felt dull discomfort from ear to center of jaw Lower lumber/ Spine felt numbness for 20 minutes. Area still remain tight

12/20 - symptoms presented as possible right ear infection. 12/21 - began taking Amoxicillin 875MG 2xdaily 12/25 - presented in urgent care, for treatment of worsening ear infection. In addition to Amoxicillin, Prednisone was prescribed. Did not fill or take the prednisone on 12/25 due to Christmas Holiday and no open Pharmacies. 12/26 Awoke with Bells Palsy on right side of face. Went to ER. Was diagnosed with Bells Palsy and potential ear swimmers ear. Placed on and began taking the following medications on 12/26/2020. Prednisone 10MG Tablets taking 4 tablets every day for 2 days, 3 tablets every day for 2 days, 2 tablets every day for 2 days and 1 tablet every day for 2 days CIPR/DEXAMETH 0.3-0.0% OTIC SUSP - instill 2 drops into right ear twice daily for 7 days. AMOX-CLAV 875MG VALACYCLOVIR 500NG Bells Palsy impacting right side of the face. Symptoms began 12/20, presenting as possible right ear infection.

12/27/20 10:30AM swelling at the injection site, muscle aches, fatigue; 4:30PM sharp, pounding headache; 06:00PM chills, body soreness, night sweats. 12/28/2020 nausea, loss of appetite, fatigue Tylenol, some relief.

severe injection site pain, radiating down the arm, and just not feeling quite right. the headache that was reported last night is still hanging around along with some nausea. experiencing an overall feeling of being really hot, but not running a fever. HR 90s-100s

At 11:20AM Patient returned to vaccination room to show that she had developed hives on the right side of body (back, side, and legs). Patient was experiencing redness and itching--no shortness of breath. Patient was given 25mg of diphenhydramine. At 12:30PM Patient returned to show that the rash had cleared considerably and was not having any other issues. Patient was instructed to be observed by a healthcare provider for 30 minutes, rather than 15, for her second dose.

Dizziness

At 6 hours post vaccine (1400 on 12/26/2020), I woke up from a sound sleep sneezing convulsively and experiencing a headache, nausea, and extremely runny (literally gushing) nose and eyes. Within several hours, I also experienced swollen eyes and face as well as scratchy throat and slight cough. No effect: ibuprofen; ibuprofen; phenylephrine; loratadine; fexofenadine Effective: benadryl 100mg. q6hr(I was unable to take this previously because it puts me to sleep; once I was pulled from the work schedule I was able to take this) I have now taken three doses of 100 mg- as it wears off, some of the symptoms return, but they are gradually lessening. Since I am an RN, I am comfortable doing home treatment with my employer/employee health representative aware of the situation.

Fever, fatigue, pain, weakness

The patient reports developing CP and SOB about 1 hour after receiving the vaccination which resolved within 3-4 minutes. The patient denies seeking medical treatment and these symptoms were reported to employee health on 12/28/2020.

Began to have facial flushing and hives about 5 minutes after the injection, followed by itchy throat, hoarse voice, abdominal cramping, joint pain.

Fever, weakness, aches, tired.

Fevers up to 103.1 (started at hour 10 lasted through hour 48) Nausea (at approximately 24 hours) Vomiting (at approximately 24 hours) Severe headache (hour 20 through Hour 31) Somnolence (started hour 9) Chills (Hour 10- hour 25) Extreme Shivering (Hour 10-25)

immediately upon inj had bad taste in mouth and inside my mouth and lips felt filmy. from there broke out in itchy rash within minutes and my voice was crackly the pharmacist checked on me and had to wait a few extra minutes before leaving of note the APRN i work with was there getting her injection as well and advised on the benadryl. I have used benadryl and claritin since the injection to help with symptoms . after about an hour after the injection my lips were very red I never experienced SOB i did

report to my PCP (MD) the next day and he said to continue as I was doing and to alert him if things worsened (also note I work at my PCP office) Employee from pharmacy called to check in on me on the 23rd and advised I report the event to you and questioned if I should take dose 2 and I told him i WOULD NOT be taking another dose. since the injection i have continued to have the under the skin itchy rash and inside mouth and lips felt irritated after and i have experienced several other persistent symptoms of ha on and off, blurry vision, facial swelling around eyes, nausea no vomiting ,decreased appetite ,fatigue ,upper gastric pain for a few days after, and felt weak in lower back, voice is crackly at times and the tip of my tongue will feel a burn\tingly feeling. AGAIN i have not had what i would call SOB I did let my PCP know today of the persistent symptoms and that I was reporting them over to you as the pharmacy directed. I did not have a formal office visit but my pcp did note the effects in my chart

Patient experienced fever, edema and redness to injection site, neausea, headache, and diearrhea as well as body aches for 3-4 days.

Approximately 6-7 minutes of observation she developed flushing and warm sensation about the face and neck. Also developed red rash, non pruritic about the neck and chest. Also behind both ears right greater than left. No shortness of breath and no wheezing. Rash only on upper chest and neck. Vitals signs taken BP 174/91, pulse 73, 173/86, pulse 68, 163/92, pulse 64. Benadryl 50mgs by mouth. Observed additional 15 minutes. Patient had complete resolution of symptoms. O2 saturations were 97-98% the entire time. Patient discharged ambulatory.

Pediatrician working in the hospital. Was exposed the an office contact wo had covid. Shoulder in soreness. At work on Wednesday. Felt lightheaded had to sit in chair. That's all he reminders. He workup to a CODE team putting oxygen on him. He has a seizure. Took the COVID test has COVID. Admitted to hospital for 2 days. Likely a syncopal event.

REDNESS SWELLING HEAT TO THE RIGHT DELTOID, STILL SPREADING. PT EXPERIENCED CHILLS, FATIGUE, PAIN SWELLING TO EXTREMITY AND NAUSEA.

The evening after receiving vaccine had headache, severe body and joint aches, chills. This lasted for 2 full days. Awoke on day#3 and symptoms were gone. Left arm soreness and tenderness at injection site for 2 days.

I exp arm soreness greater than other vaccines kind of lingered for awhile (48 hrs.) I had fever up to 103.4 couldn't distinguish between the Covid and vaccine. I had a Covid test on 12/21 results positive. I missed work due to Covid not thinking cause of vaccine the timing was odd.

30 minutes after vaccine administered, pt had irregular heart beat (felt like it was going to come out of his chest through his neck). Lightheadedness, and terrible headache. Skin of chest and stomach were red. Pt received treatment in the ER, received IV benadryl, IV steroids, and anti-nausea medicine, and IV fluids. Pt was cold and shaking, couldn't stay warm. 4 days later, patient is still cold and fatigued.

Insomnia Deltoid pain Deltoid induration

dizziness, nausea

Right arm soreness: onset 6-8h after vaccine -- > worsened to full body soreness/aches with point TTP over injection site (couldn't sleep on that side); Injection site redness: No initial redness on day 0 or day 1 post-injection. Slight redness and TTP as above on morning of day 2. Body Aches: began ~18h after vaccine, worsened throughout day 1 before bed; ~36h vaccine symptoms resolved Fatigue: Started morning after vaccine (~18h post-vaccine) -- > peaked ~36h post-vaccine (went to bed early and simultaneously restless but also exhausted) Headache: Moderate, primarily frontal headache (like a head cold with NO congestion); began ~24h after vaccine, continues today (~48h vaccine) but improving without intervention. Fever: Began ~36h after vaccine at peak of fatigue symptoms (peak T: 100.2). No intervention, self-resolved by 48h post-vaccine

shoulder pain day of vax, itching, swelling, warm at injection site, redness. ER on 12/26 stated that vaccination may have been injected incorrectly, possibly lower than should have. ER gave Benadryl to pt.

Reports circumoral numbness and tingling onset about 30 minutes after received vaccine. Then mouth felt numb and tingling and finally symptoms moved to the back of her throat. She states it was hard to swallow and felt as though her uvula was large. States looked in the mirror at uvula, but could not see a difference. She states she considered going to the Emergency Department, but ultimately did not. She states that at about 7:30 p.m. she took 25 mg of Benadryl. She waited a little while and then took an additional 25 mg of Benadryl. She states that by 10:30 p.m. symptoms had resolved and she felt safe to sleep.

Patient received the Covid 19 vaccine on 12/23/2020. Twenty fours after vaccination she started to cough and wheeze (Hx of not well controlled Asthma, DM). Cough and wheezes relieve with nebuilzer. No fever, chills, or HAs. Symptoms have improved significantly and are stable. She has reached out to her PCP and EH. Covid Testing is scheduled on 1/4/2021 but awaiting for a sooner appt at EH.

24 hours after vaccine woke up with significant body aches. Then rash started on left forearm and wrist. Following day it spread to right arm and back.

21 y.o. female normally healthy who arrived by to the emergency department for Post COVID-19 vaccination reaction. Patient states approximate 5 minutes after the vaccine, she started to feel lightheaded and nauseated. She does notice the sensation of throat irritation, but denies any shortness of breath or difficulty breathing. Denies any tongue/lip/airway swelling, abdominal pain, new rash/pruritus, diarrhea, emesis, fever/chills, chest pain. She has no history of anaphylaxis or use of EpiPen. No significant allergic reactions in the past Initial reevaluation approximately 30 minutes after arrival, patient status unchanged. She still felt lightheaded and nauseated with a sore throat. No new rashes, shortness of breath, difficulty breathing. Her voice was normal, and did not report any new GI symptoms. Heart rate was 109 with one half fluids given thus far. á On reevaluation 2 and 3 hours after arrival, patient's heart rate normalized into the 60s?70s, she was asymptomatic. She was slightly fatigued from the Benadryl. She felt safe to go home. Follow-up call a few days later and patient was doing fine with no symptoms.

According to Hospital ED record: This is a 38 yo male present to ED with complaint of tingling sensation and reaction after receiving COVID-19 vaccination. Symptoms started approx 30 min after he received

the initial shot. Patient was on his way home when he noted some tingling in his tongue and strange sensation to the mouth. Pt denieschest painSOB, LOC, AMS, neurological deficits. No abdominal pain, nausea or emesis.

later that night at home about 6:15 I stared to get a red rash across my chest and on to my left arm and was very itchy, then was hard to take deep breaths. I also got a pretty good size bruise on arm I got the shot in and arm was sore for 2 days. I also had lil bit of rash around where shot was.

Fatigue, lightheadedness, achiness, left arm soreness and pain at the site for 48 + hours.

I felt tired couple hrs in the afternoon felt better after laying down.. I started to feel completely around 5 pm. I did not miss any work.

Pfizer-BioNTech COVID-19 Vaccine At approximately 4 pm on December 23 (day of vaccine) I experienced sudden onset of fatigue. I also had a low-grade temperature of 99.0 F with chills. By 5:30 pm, I was also bringing to experience lightheadedness and dizziness. That night at approximately 10 pm I had a temperature of 99.1. On December 24, I experienced lightheadedness and dizziness the entire day, from waking up to going to bed later that night. My eyes were glassy and I would feel an impulse of dizziness go distinctly from the right side of my head to the left, and then feel more dizzy after that. It was constant throughout the entire day and would occur while I was sitting, standing, or moving around. On December 25, I was tired but the dizziness had gone away.

Tachycardia started the morning of 12/28/20 and was distressing enough to lead to calling 911 and then visiting the emergency department. Emergency department work up was negative. No previous history of tachycardia prior to this episode.

BP- 110/62 HR- 78 Temp ? 97.7 Resp ? 22 Reports feeling tingling and shaky, no visible shakiness and no unsteady gait noted

Began experiencing dizziness on 12/26/2020 at around 10:30 am. Dizziness was initially off/on for the remainder of the day. By 12/27/2020, I began experiencing dizziness and feeling ?swimmy headed? with no periods of relief (even when sitting still or laying down).

I received the first dose of the Pfizer Covid vaccine on Tuesday, December 22 at 0730 in my left deltoid muscle. I felt fine that day - just some injection site soreness later that day that radiated to my left neck. On Wednesday, I experienced some fatigue, headache and moderate backache and neck ache which were all side effects that I expected. On Thursday, December 24 at approximately 1330, I experienced tingling of the tongue. It began at the tip of the tongue, but spread to the entire tongue over a five minute period. At the same time, my throat became scratchy/itchy. I realized that this was an allergic reaction and took 2 25mg Benadryl capsules. The symptoms resolved in about 20 to 25 minutes. I never experienced trouble breathing, speaking or swallowing. I also reviewed everything that I ate, drank, etc. in the last 24-48 hours and there was nothing new. About four hours later, I developed an intensely itchy rash. It began on my trunk, then spread to my bilateral upper extremities, then neck. My face and scalp also itched although they did not have a rash. My face was just red. There were no other

symptoms. I took 2 more 25 mg Benadryl at this time. It took about 45 minutes or so for the symptoms to resolve this time. Since that time, I have experienced significant body aches and fatigue (more than initially), mild headache and nausea. Due to the holidays, I was unable to report this incident to employee health until this morning, Monday, December 28. I have received no further instructions. On Friday, December 25, I noticed that I developed multiple apthous ulcers on my gums and hard palate. Since that day, I have experienced extreme fatigue, body aches and a mild persistent headache and nausea.

"Patient received the Covid 19 vaccine on 12/22/2020. Four days after vaccination (12/26/20) she started to notice that she ""loss her sense of smell ""while brushing her teeth. The toothpaste tasted ""weird"". All of the sudden, she lost her appetite. These symptoms persist today. Covid test scheduled on 12/28/2020 at Employee Health."

The patient reported subjective sense of lip and tongue 'tingling', described in intensity of 6/10 prior to EMS arrival, down to 4/10 on EMS arrival, but without interventions. Per EMS report, the patient had stable vital signs and a normal physical exam. The patient refused transport to the hospital, and a refusal of medical aid (RMA) was taken by EMS. The patient was advised to seek medical care should symptoms return.

12/24, I woke up with arm soreness and headache. 12/25, I had a headache, fatigue, arm pain radiating down to my elbow and into my right side. 12/26, I had all the above along with swelling under right axilla. 12/27, all of the above along with pain in right ribs, swelling worse under right axilla, fever of 100.3 (up to 101.2), body aches, and joint pain. The symptoms all continued as 12/27 into 12/28.

Vaccine was received on 12/17/2020. Patient states that he did not start experiencing symptoms until 12/25/2020. Patient states that he doesn?t think his symptoms are related to the vaccine and that he may need to be tested for Covid. Patient states that his symptoms are sore and itchy throat, congestion and runny nose, no coughing, no fever, no chills, no body aches. Patient states that his kids go to daycare and came home with a runny nose, no travel history, no exposure to Covid that he is aware of, never tested positive for Covid.

the day after receiving the vaccine the patient developed a fever TMax 101.7 and loss of taste, these later developed into congestion, general malaise, body aches. the pt sought out her PCP who is running covid and flu testing.

Felt fine to begin with, ate supper per usual, then at 7:10 pm sudden onset of symptoms, nausea & extreme diarrhea and chills for 2 1/2 hours. Temp of 99.9 Then headache, very severe, trouble seeing, disorientated. Sat in chair all night. Left arm and left side hurt into teeth and jaw. Thought about calling ambulance at 4:00 am, but decided not to. Headache lasted through Sunday and Sunday evening, until 3 am on Monday. Now at 11:30 am on Monday it is a 2 on a scale of 1-10. Had Tylenol #3 on hand, and took every 5-6 hours since Saturday night. Missing work today 12/28/20.

Major chills, fatigue, stomach ache, runny nose,

Patient states about 20 minutes after vaccine she developed scratchy throat, itchy all over but no hives and dry cough.

23 y.o. male who arrived by to the emergency department for suspected allergic reaction. Patient received his Covid vaccine 3 hours prior to ED arrival. Initially he was asymptomatic however, as the morning progressed, he developed a redness around the injection site. He then noticed a rash all over his face, that was mildly itchy in nature and felt warm. He denies any associated wheezing, shortness of breath, facial swelling, throat swelling, severe abdominal pain, vomiting, lightheadedness, dizziness, or syncope. He has not taken anything for his symptoms, and they continue to worsen. He has no prior history of allergic reaction to vaccines or other known allergies in the past. He states this is mildly itchy in nature. Patient was given 50 mg of p.o. Benadryl and Pepcid for symptomatic control. He was observed in the ED for 2 hours without any progression of his symptoms, no associated facial swelling, wheezing, shortness of breath, abdominal pain, vomiting, or hypotension to suggest anaphylactic reaction. He was discharged home in stable condition

12/16 EVENING OF VACCINE, VERY SORE SHOULDER. LASTED 24 HOURS. 12/17 - 12/19 VERY FATIGUE, ACHY JOINTS.

The entire reaction was over in an hour started at 115pm 12/19/2020 I had pain in upper back and shoulder, within 5 mins it started hurting my left arm and traveled down to my wrist and then went into my left thigh and I had this sharp headache for 3 mins and then it all went away and I have not had any symptoms since. That day I went to the ER and they kept me for 2 hours for observation and I went back to my work, The only reason I sought care was because I was already in a hospital, I was taken by wheelchair, blood pressure was fine

Fever 101.4F, Chills, nausea, dry heaving, achy joints, Low back pain, headache Treated with Tylenol

EE states that within minutes of receiving the vaccine, she started experiencing itching at the site, tingling down the left arm to finger tips. She did not report her symptoms at that time because she has similar symptoms with the Flu vaccine. Later that evening, EE states that she started experiencing tingling down the left leg to the left foot/toes. The next day, 12/18/2020, the tingling stopped but there was a lump at the injection site. The lump was warm to touch and slightly sore. She did not report this of take anything because her symptoms were similar to the flu shot. On 12/25/2020, EE states that the lump started itching and she scratched it which caused redness and inflammation. She used hydrocortisone on the injection site. The lump is now gone with no itching, just a little discoloration at the site.

12/17/2020 at 1250 Pt complained of itching, noted slight red spots about circumference of small tangerine on right hand, left lateral hand, and lower left leg, S/P COVID 19 #1 Injection; about 5 minutes after injection.

the patient developed symptoms 3 days later which included body aches, headache, cough, runny nose. pt is seeking her pcp for further testing/workup.

Shortly after receiving the vaccine, patient began feeling numbness and tingling down right arm to finger tips and stated that her right arm felt cold. She also reported a hot flash after receiving the vaccine. She waited for 1 hour after receiving the vaccine with no reports of improvement but denied any worsening of symptoms. The RN assessed the temperature and grip of each arm, reporting equal in both sides.

patient developed general malaise, body aches, cough, and diarrhea, temperature 99-100 F. Sought out pcp for testing/workup.

"26 y.o. female who arrived presented to the emergency department for concern of an allergic reaction. Patient reports being at the COVID-19 clinic just prior to arrival receiving her first dose of the vaccine. However, after walking a few minutes later she began to experience an abnormal sensation in the back of her throat, describing it as ""spicy"" accompanied by a general wave of feeling ""hot and heavy"" with some tingling in her fingers and toes. Patient currently states that overall her symptoms are improving with only a continued feeling of ""hot and heaviness."" Denies a history of allergic reactions to vaccinations or medications, besides a possible allergic reaction to Penicillin when she was younger. Denies shortness of breath, nausea, emesis, or any other complaints at this time. Denies a history of GERD, stating that she has not eaten anything today. Patient is otherwise healthy with no use of daily medications. Patient was observed for one hour while here in the ED with no residual symptoms. Patient feels comfortable going home and will return for worsening symptoms. Agrees to follow up with her PCP. Vital signs are stable at time of discharge."

41-year-old male who presents to the ED today with a complaint of weakness in his bilateral arms and legs. He states he fell slightly weak yesterday but this morning when he woke up around 6 AM he was not able to get out of bed because he was so weak. He states he feels like he has no muscle strength in his arms and legs. He denies any fever. He denies any cough or shortness of breath. He denies any chest pain or abdominal pain. He denies any nausea, vomiting or diarrhea. He denies any numbness in his extremities. He denies any neck or back pain. He did receive the first Covid vaccination on December 17.

After I received the vaccine exp nausea at 2:30 pm continued to 1 am. The following day I continued nausea and took Zofran. On 12/17 I left work due to nausea and around evening nausea stopped.

Sore arm at injection site for 3 days

cough got worse runny nose headache sore throat chills body aches teeth sensitive all these symptoms started Wednesday night which is the day I got the vaccine they lasted all Thursday and felt nothing on Friday

12/17/2020 at 1530 Patient states she has a little anxiety from just having received the COVID-19 vaccine. Per patient, she already spoke with her PCP who recommended she get the COVID vaccine. Patient offered ER evaluation for severe or worsening symptoms. Provided patient with phone number to Occupational Health dept to schedule appointment. States she will give them a call before going home. á1545 Patient observed for 30 minutes after vaccination. States she feels fine at this time and does not feel dizzy. No further needs

Woke up at night after vaccine Pain was intense at vaccine site, radiated to shoulders, body aches, headache x3 days Took Acetaminophen, slow resolution then resolved by day 4

Severe Myalgia, Extreme fatigue, mild headache, chills and nasal congestion

Patient lists that she woke up during the night after receiving the vaccine feeling sweaty and feverish. Upon waking the following morning she took her temp and it was 100.8 and 101. Patient also reported injection site tenderness and localized redness.

"PATIENT IS A PHYSICIAN. ALMOST 12 HOURS AFTER INJECTION, BEGAN HAVING BODY ACHES AND CHILLS - RESTLESS ALL NIGHT. IN A.M. WAS 101.0 F, TOOK TYLENOL EVERY 4 HOURS, ABOUT 2100 WAS 104.3F. FEVER STAYED ABOUT 100 TO 101 THROUGH NEXT DAY. SUNDAY, FEVER BROKE, MINOR CHILLS. FEELING ""FINE"" TODAY - NO SX'S."

I am a nurse practitioner here at the facility. I received the vaccine on 12/18/2020 at noon. On Monday evening 12/21/2020 I developed floaters and flashes of light in my right eye. I awoke on 12/22/2020 with continued worsening symptoms. I went to my optometrist. I was diagnosed with Vitreous detachment of the right eye. The optometrist did not feel it was related to vaccine but our health nurse advised reporting.

Chills, Fever middle of the night, headache, sluggish. No appetite.

FLUSHING, HIVES, FACIAL NUMBNESS ON THE LEFT SIDE

Fever, headache, sore arm at injection site, 72 hours after injection. resolved in 48 hours

about 3 hours after injection, began feeling nauseous. the next day at about 8 am temp went up to 102.4. took ibuprofen and temp finally broke about 4 pm that day. had injection site soreness for the first 48 hours then developed large red wheal that covered 3/4 of upper arm. still with red area when this report was filed on 12/28/2020

"reported no s/s of adverse reaction at time of vaccination and for 30 minute post-vaccination monitoring period. States that approximately 4 hours after administration , he had elevated BP (148/92) and heart rate (115bpm). Normal readings are HR in the 60s-70s and ""normal"" BP 120/60s. Had fever of 102 the first night that lingered for 48 hours, accompanied by extreme fatigue, nasal congestion, shortness of breath, decreased appetite, He took tylenol for fever and afrin for nasal congestion. By the 26th, he felt well enough to get dressed. No fever, appetite back to normal. BP on the 26th was normal to low and heart rate 105. Adverse reactions required no further treatment."

Pt recieved the vaccine and was hospitalized the following day with a bowel obstruction.

Employee was vaccinated at 4PM on 12/23. Hives started to develop on 12/23 at 8PM. Employee came back to the vaccination site at 1:15am on 12/24, complaining of hives on trunk of body and arms. No hives on legs or face. Denies shortness of breath , just itching and hives. 50 MG of Benadryl given IM at 1:30am on 12/24 and instructed to go to ER. Employee refused ER attention.

Assigned to work at nursing location. I reported for duty on 12/23/2020 @ 1310 and was offered the vaccine. No reaction at that time. Several hrs into my shift I became ill. Nausea, vomiting, trouble breathing, tongue was feeling funny, dizzy, stomach pain, extreme fatigue and lightheaded. I immediately reported to the charge nurse on the floor then shortly called my registry informing them of the current events. Registry offered to call 911 and I declined. Registry gave permission to end of shift and go home.. However when I notifed the charge nurse on the floor she stated I can't leave because she was leaving for the day. She called supervisor. I spoke to him and explained the situation and he informed me another person whom was a MD also was experiencing the same symtpoms. He instructed me to stay in the room I was at and they will send orange juice it should make me feel better. I waited and waited. I called the sup back and informed him my symptoms are getting worse and need to go. At this time I had developed a severe headache. I was not able to continue with extremely HEAVY workload caring 29 COVID patients in my condition and sup allowed me to go home. He said he would talk to the floor nurse because he had already arranged for 2 nurses to come in 7 pm which was shortly. Once home, my husband said I had a blank stare and dazed. Several hrs later I developed a fever, cough and severe body pain. I remained in bed for several days and most symptoms resolved. However on the 4th day went out and within a few started to become short of breath and heaviness on my chest and attempted the following day going outside and the same thing. I continue to have intermittent stomach pains and coughing.

12/17/2020 at About 2pm pt complained of some blurry vision, slight jitteriness and some queasiness; pt requested water. Nurse assisted pt to Overflow Observation Room. Pt A/O x4, Nurse provided pt water, crackers. Nurse continued to monitor pt: Continuous monitoring; and asked if she need anything periodically/ every 8-10 minutes. Pt refused any further care or assistance from Nurse; Pt stated she is feeling better and will continue to be in observation ; pt continued to be monitored by Nurse. Pt talked on phone during observation time; A/O x4. Pt monitored for about 40 minutes. Pt stated she feels better and fine; pt stated she was going to leave. A/O X4, denies chest pain, SOB, has steady gait.

Fever of 101.0 F that lasted until the next morning. Fever of 101.0 F for 2 hours the next night. Fatigue for 2 days, Chills with the fevers, night sweats for 6 days.

On 12/27/2020, I woke up with body aches and a headache around 0530. At 1230, I began experiencing severe stomach pain. I went into the bathroom and began sweating profusely. I had a bowel movement and started dry heaving. I then fell on the floor, and felt extremely weak. I did not bare down when having a bowel movement, I do not believe this was a vagal response. At this point I was still sweating profusely, my body hurt all over, I couldn't catch my breath, and I was incredibly weak. I crawled down the hall way to get my phone as I was home alone. My arms then began to tingle and my hands completely spasmed, I couldn't move them. My fingers locked completely straight but my palms closed. I activated Siri on my phone because I couldn't use my fingers, and had her call 911. I was having a very hard time catching my breath. By the time EMS arrived (about 20 minutes on the phone with 911), I had started feeling better. I had chills, and still felt out of it, but I was breathing better and my hands unlocked. My arms were still tingling. I let them check me out. My BP was normal, my O2 sat initially said 88% but was 98 by the time they left. EKG was normal. I didn't go to the hospital with them, I stayed

home. I didn't move around much the rest of the day. I felt tired and had lack of appetite. Today on 12/28/20, I'm feeling better but I am still taking it slow, just in case.

Blood pressure rose 190/100; got headaches in 10 minutes and started getting heavy chest; got headaches in 10 minutes and started getting heavy chest; Throat started to get tight, voice changed; Throat started to get tight, voice changed; had heart palpitations; Fast heart beat, difficulty breathing, dizziness and weakness; Fast heart beat, difficulty breathing, dizziness and weakness; Fast heart beat, difficulty breathing, dizziness and weakness; Fast heart beat, difficulty breathing, dizziness and weakness; This is a spontaneous report from a contactable healthcare professional. A 42-year-old female patient received first dose of bnt162b2 (Pfizer-BioNTech COVID-19 vaccine; lot EK5730), intramuscular on 17Dec2020 17:00 at single dose (left arm) for Covid-19 immunisation. Medical history included diabetic, high blood pressure and allergies to fruits such as canaloo, and peaches. Concomitant medications included amlodipine, loratadine, metformin, and ascorbic acid (VITAMIN C). On 17Dec2020 17:15, the patient experienced headaches in 10 minutes and started getting heavy chest, throat started to get tight, voice changed and injection was given; blood pressure rose to 190/100 and had heart palpitations, fast heartbeat, difficulty breathing, dizziness and weakness. The patient was given Epi injection and benadryl shot as therapy for the events. The vaccine was administered at the hospital. The patient did not receive any other vaccines within 4 weeks prior to the Covid vaccine. The patient visited a doctor or healthcare professional office/ clinic due to the event. The patient was not diagnosed with Covid-19 prior to vaccination and since the vaccination, the patient had not yet been tested for Covid-19. Outcome of events was recovering.; Sender's Comments: Based on the compatible time association ,the reported events are possibly related to suspect bnt162b2 injection in this patient. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

joints were aching; nauseous; hot flushes that progressed; feeling really hot; can't recall names; had a glazed look; This is a spontaneous report from a contactable registered nurse A 34-year-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number: 9899, expiry date: Mar2021), intramuscularly in left deltoid on 18Dec2020 at 10:20 am at 0.3 mL, single for COVID-19 immunization. Medical history included chronic lyme disease and anxiety both from an unknown date and unknown if ongoing. Concomitant drug included vivogen which is a stimulant to keep her awake during the day and took supplements, but reporter didn't have a full list. On 18Dec2020 at 10: 25, the patient had an adverse reaction within 5 minutes felt nauseous, hot flushes that progressed and feeling really hot, as it progress she started getting out of it, the patient also can't recall names, she had a glazed look, within 30 minutes (18Dec2020 10:50) joints were aching. She was asking for common adverse events during clinical trial study. The event was reported as seriousness for being other medically important condition. The reporter considered the events was related to the COVID 19 Vaccine. The patient still had the neuro symptoms. She was still very out of it and her joints were still hurting. The nausea had gone. The outcome of the nauseous was resolved in Dec2020, the outcome of joints were aching was not resolved, the outcome of other events was unknown.; Sender's Comments: The reported

information is limited. Based on the close temporal relationship and the description of the events, nauseous, hot flushes, feeling hot, can't recall names, glazed look and joints aching. there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

A very slight droop of relaxed right lip (Smile is symmetrical and NO orbital involvement); tightness, swelling and tingling in right jaw; tightness, swelling and tingling in right jaw; tightness, swelling and tingling in right jaw; generalized itching; A small patch (dime-size)of non-raised erythema noted behind right ear; A brief period of feeling hot followed immediately by a chills; A brief period of feeling hot followed immediately by a chills; Rash; This is a spontaneous report from a contactable nurse. A 41-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EJ1685), intramuscularly in the left arm, on 18Dec2020 at 08:45 (at the age of 41-years-old) at a single dose for COVID-19 immunization. Medical history included hypertension (HTN) and seasonal allergies. The patient was not pregnant at the time of vaccination. Concomitant medications, taken within 2 weeks of vaccination, included mometasone furoate (FLONASE) and cetirizine hydrochloride (ZYRTEC). Other concomitant medications included an unspecified antihypertensive. The patient had no known allergies to medications, food, or other products. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced a very slight droop of relaxed right lip (smile is symmetrical and no orbital involvement), tightness, swelling and tingling in right jaw, generalized itching, a small patch (dime-size) of non-raised erythema noted behind right ear, a brief period of feeling hot followed immediately by a chills, and rash on 18Dec2020 at 09:30. Therapeutic measures were taken as a result of the events, which included treatment with oral diphenhydramine hydrochloride (BENADRYL) 50 mg. The clinical outcome of a very slight droop of relaxed right lip (smile is symmetrical and no orbital involvement), tightness, swelling and tingling in right jaw, a small patch (dime-size) of non-raised erythema noted behind right ear, and a brief period of feeling hot followed immediately by a chills was not recovered and of generalized itching and rash was recovered on an unspecified date. It was reported that jaw tightness and slight asymmetry of relaxed lips continued on 18Dec2020 at 16:15. It was also reported that since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts needed. No further information expected.; Sender's Comments: Based on the close temporal relationship, there is a possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

experienced a strong medicine-like smell; a rush of warmth throughout my body; felt that my hands were swelling and slightly itchy but they did not appear to be swollen; felt that my hands were swelling and slightly itchy but they did not appear to be swollen; panicked; felt that my throat was tight but I didn't feel short of breath; My BP was elevated at 140s/80s; tachycardic; This is a spontaneous report

from a contactable nurse (patient). A 42-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EH9899), intramuscularly at the right arm on 18Dec2020 at 13:00 (1 pm) at single dose for COVID-19 immunization. The patient was not diagnosed with COVID-19 prior to vaccination and since the vaccination, the patient has not been tested for COVID-19. The patient was not pregnant at the time of vaccination. The patient's medical history included asthma r/t environmental allergies, anxiety, and known allergies to PCN, Sulfa, grass, trees, ragweed, weeds, mold, dust mites, cat and dog. Concomitant medication included cetirizine hydrochloride (ZYRTEC), venlafaxine hydrochloride (VENLAFAXINE XR), colecalciferol (VITAMIN D), ibuprofen, and montelukast sodium (SINGULAIR). The patient received the vaccine on 18Dec2020 at approximately 1 pm (13:00) and 5 minutes later (18Dec2020 at 13:05), she experienced a strong medicine-like smell and a rush of warmth throughout her body. She then felt that her hands were swelling and slightly itchy but they did not appear to be swollen. She was panicked and felt that her throat was tight but she didn't feel short of breath. Her BP was elevated at 140s/80s and she was tachycardic. She gave herself an epinephrine injection and about 10 minutes later the occupational health nurse gave her 25 mg Benadryl at her request. The adverse events results in Emergency room/department or urgent care. The clinical outcome of the events was recovered on an unspecified date.; Sender's Comments: Based on the close temporal relationship, the association between the reported events with BNT162b2 can not be fully excluded. The history of asthma, allergies, and anxiety may have been contributory. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

diagnosed with Bell's palsy; This is a spontaneous report from a contactable nurse (patient). A 33-year-old female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EK5730, expiration date: Mar2021), via an unspecified route of administration in left arm on 19Dec2020 10:00 at single dose for COVID-19 immunization. No other vaccine administered in four weeks. Medical history included drug sulfa allergy. Concomitant medication included cetirizine, cetirizine hydrochloride (ZYRTEC) from 18Dec2020, and multivitamin from 18Dec2020. No Covid prior vaccination. No Covid tested post vaccination. About 40 min after the vaccine (19Dec2020 10:40) the patient developed left facial/ left tongue tingling/ numbness. By 20:30 at night (19Dec2020 20:30), the patient had a left sided facial droop as well, the patient was diagnosed with Bell's palsy. 20:30 (19Dec2020), she had facial asymmetry. She looked in the mirror and noticed her smile was not symmetrical. She then checked into the Emergency Room and the ER doctors diagnosed her with Bell's palsy. She was not admitted to the hospital. Steroids were given for treatment. The patient was still expirencing. Intermittent tingling but tingling was not constant. Smile was not normal yet. The outcome of event was not recovered.; Sender's Comments: Based on the close temporal relationship, the association between the event Bell's palsy with BNT162b2 can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as

well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

bilateral periorbital swelling; Myalgia; Fever; This is a spontaneous report from a contactable physician. A 49-year-old male patient received BNT162B2, via an unspecified route of administration on an unspecified date as single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced bilateral periorbital swelling, myalgia and fever on an unspecified date, which were medically significant. Description was as followed: patient went to the emergency department. The vaccines was given on a Wednesday afternoon, and patient presented with bilateral periorbital swelling this morning, myalgias, and fever. Therapeutic measures were taken as a result of swelling, myalgia and fever; the only treatment given was diphenhydramine (BENADRYL) orally. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, periorbital swelling, myalgia and fever, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Diaphoresis; palpitations of 180-150 beats per minute, and SVT supraventricular tachycardia on the heart monitor.; palpitations of 180-150 beats per minute, and SVT supraventricular tachycardia on the heart monitor.; This is a spontaneous report from a contactable physician. A 56-year-old male patient received the first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at 09:00 at single dose for covid-19 immunization. Medical history included hypertension, episode of SVT (supraventricular tachycardia) in the past. There were no concomitant medications. The patient experienced diaphoresis, and palpitations of 180-150 beats per minute, and SVT supraventricular tachycardia on the heart monitor on 18Dec2020. The events were reported as serious per medically significant. Event details: the patient received the vaccine 18Dec2020 at 09:00AM. About 40 minutes later the patient returned to hospital where he worked, where he received the vaccine, with diaphoresis, palpitations of 180-150 beats per minute, and SVT supraventricular tachycardia on the heart monitor. Reporter stated this was temporally related. Patient was given Adenosine 6mg IV with no response; then 12mg Adenosine with no response. Then the patient the spontaneously converted 10 minutes after the last dose of adenosine to 75 beats per minute and sinus rhythm, in one beat. The reporter was an emergency room (ER) physician and the patient was the ER right now. The patient was stable at time of reporting and expected to be discharged. The reporter did order a Troponin and cardiac workup. Troponin result was less than 6 which was normal. With regard to the Adenosine that didn't work reporter stated those vials usually went into a container and after consulting with another coworker stated the Adenosine vial had been discarded at this time and he was unable to provide NDC, lot or expiration date. The outcome of the events was resolved on 18Dec2020. Information on the lot/batch number has been requested.; Sender's Comments: Based on the close temporal relationship and the description of the events,diaphoresis, palpitations and SVT,

there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

"fainted right after taking the vaccine; This is a spontaneous report from a non-contactable consumer (Pfizer company representative). A female patient of an unspecified age received the bnt162b2 (BNT162B2; also reported as COVID-19 vaccine; Batch/lot number, NDC number, Expiry Date: Unknown), via an unspecified route of administration on 17Dec2020 at a single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient experienced fainted right after taking the vaccine (medically significant) on 17Dec2020. It was unknown if the patient received other products, and any investigation assessment was unknown. The clinical course was reported as follows: The reporter stated they had seen quite a bit on social media and on the (site name), where people have been sending around a video regarding a healthcare worker who fainted. The caller was just wondering "" if Pfizer has been made aware of this. ""Apparently, this was on the news. This healthcare worker was taking the COVID-19 vaccine and as she was talking to the press, she apparently fainted. It looks as if she fainted as one would do when taking blood tests or faint from fear of a shot or being worried. However, this video has been sent all over social media, as seen as an AE, and telling people to not take the vaccine."" The reporter further clarified the healthcare worker was in (city name) and received the COVID-19 vaccine. As the healthcare worker was talking to the press, she fainted right after taking the vaccine. The reporter further clarified she was sent a link via (site name) from the news channel where it had the video recording. The reporter did not have a specific reporter. The reporter explained it was a "" whole group that was talking about it."" The reporter clarified she was in a (state name) group on (site name) with friends and family. The reporter also saw it on social media. "" People are sending it left and right."" When probed to determine if the reporter had any patient details or further details regarding the event, the caller stated the only information she had was that on (News name), and click on (City name) news and find the video of the healthcare worker taking the vaccine and fainting. The reporter clarified the news article was dated as 17Dec2020 ""so this event must have happened yesterday."" From the reporter's understanding from the news, the patient was fine, she got up. ""However, people are sending out on social media that she is dead"", which the reporter did not think was the outcome. According to the news, when the reporter opened the link, it was just a regular fainting, it was not a death. The reporter felt obligated to report and make sure Pfizer was aware of this since she had been seeing it everywhere on social media. The clinical outcome of the event, fainted right after taking the vaccine, was unknown. No follow-up attempts are possible; information about batch/lot number cannot be obtained."

"throat tightness; tingling of lips; allergic reaction; felt strange; This is a spontaneous report from a contactable Other-HCP (nurse practitioner). A 43-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, NDC, lot/batch number and expiration date unknown), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization (She wanted to be vaccinated against COVID 19). Patient history was no. She has no other history no other history of

reactions to vaccines or flu vaccines, no history of allergies noted before. She thought her weight was probably about 140. She did not have her height either, but she was about 5'4"" probably. Concomitant medication included atorvastatin (LIPITOR) and thyroid medications. It was reported that they have an employee that received the COVID 19 vaccination and experienced an allergic reaction. It had to be a brief call but it was there crazy. Patient received the vaccine and within 30 minutes she had throat tightness and tingling of lips. This happened on 18Dec2020(today) about 20-30 minutes after receiving the vaccine. The throat tightness had resolved after giving Epinephrine (Epi). She said the tingling of her lips resolved as well after Epi. She just said she felt strange but that could be from the Epi. She said it was an employee vaccination so there was no prescriber. She took Lipitor and thyroid medications. She said those were just her routine medications. She did not have a start date for the Lipitor. She had not been on anything new. It was definitely just the COVID vaccine. Outcome of the events tingling of her lips, throat tightness and allergy reaction was recovered on 18Dec2020, of other event was unknown. Information about lot/batch number has been requested.; Sender's Comments: There is a reasonable possibility that the events allergic reaction and throat tightness were related to BNT162b2 based on known drug safety profile and close temporal relationship. Based on the close temporal relationship, the association between the event tingling of lips with BNT162b2 can not be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."

Temperature up to 102.2; Numbness in fingertips; Chills; Nausea; Soreness in arm; Shaking too badly; This is a spontaneous report from a contactable Registered Nurse (patient) and Consumer (Patient's husband). A 64-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/lot# EK5730), via an unspecified route of administration in Left deltoid on 17Dec2020 14:00 at single dose for COVID-19 immunization. Vaccination Facility Type: Hospital. Vaccine administered at site: No. Medical history included cervical dystonia. The patient had COVID back in Mar2020. Symptoms were similar but she doesn't remember having the numbness in her fingertips. Family medical history: None. The patient's concomitant medications were not reported. Additional vaccines administered on same date of Pfizer suspect: None. The patient previously took povidone-iodine (BETADINE) and experienced allergy to betadine. Prior Vaccinations within 4 Weeks: None. AES follow prior vaccinations: None. The patient experienced temperature up to 102.2 on 18Dec2020 11:00, chills on 18Dec2020 10:00, numbness in fingertips on 18Dec2020 10:45, nausea on 18Dec2020, soreness in arm on 17Dec2020, shaking too badly in Dec2020. No AES require a visit. Relevant tests: None. The patient received shot at 2PM. Had a little soreness in arm and took paracetamol (TYLENOL, Acetaminophen 500mg, Product strength and count size dispensed: 500mg caplets; quantity 100, Provided 0CE3259A above date of Jan2022, Provided 484782EF17 from bottle, NDC: 49035-308-78, Manufacturer is Unknown) as pain reliever before bed, Dose: 1000mg on 17Dec2020 at 9PM. Took Ibuprofen (Product strength and count size dispensed: 200mg tablets; quantity 100, Provided 0DE2612A above date of Feb2022, Provided 604782EF8 from bottle, NDC: 49035-308-78, Manufacturer is Unknown) at dose: 400mg on 18Dec2020 at 4AM this morning. Having chills, temperature up to 102.2, numbness in fingertips and a little nausea. Clarified she is referring to the COVID Vaccine. The patient was shaking too badly. Symptoms started

with Chills around 10AM 18Dec2020. Temperature was checked at 11AM Central time 18Dec2020 and checked now during report. Temperature was the same. Numbness in fingertips began 10:45AM 18Dec2020. Nausea had been on and on due to chills. Chills were aggravating the nausea. Had not thrown up. Temperature was going up and she was worried about getting dehydrated. Clarified EK5730 is from CDC Patient Card. Indication: Front line worker; lead nurse in Intensive Care and is in front of COVID all day long. A sample of the product is available to be returned, if requested, notified of mailer. Packaging is sealed and intact. The patient underwent lab tests and procedures which included temperature: 102.2 in Dec2020 and on 18Dec2020. The outcome of all the events was unknown. Serious: Yes, Seriousness criteria-Other medically important condition: No (as reported). Reporter seriousness for Temperature up to 102.2, Chills, Numbness in fingertips, Nausea: Medically significant. Relatedness of drug to reactions/events: Reaction assessed: Temperature up to 102.2, Chills, Numbness in fingertips, Nausea; Source of assessment: Primary Source Reporter; Source of assessment: Global Introspection; Drug result: Related. Verbatim event relatedness: COVID-19 Vaccine: Temperature up to 102.2, Numbness in fingertips-Related.; Sender's Comments: Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events, temperature up to 102.2, chills, numbness in fingertips, nausea, soreness in arm, shaking, are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

had a syncopal event and hit her face when falling; had a syncopal event and hit her face when falling; hit her face; This is a spontaneous report from a contactable consumer via Pfizer sales representative. A 41-year-old female patient received BNT162B2 (Pfizer product) , via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient medical history was none. The patient's concomitant medications were not reported. The patient had COVID vaccine administration yesterday (18Dec2020). She went to bed that night and woke up in the middle of the night to use the bathroom. She had a syncopal event and hit her face when falling. She required a trip to the urgent care and stitches. She was a healthy female with no underlying conditions. Event took place after use of product. Therapeutic measures were taken as a result of hit her face. The outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

"Anaphylactic Reaction; felt like something was in throat; felt tingling on both hands and fingers; voice started to change; face turning red to white to purple; everything in mouth as tongue felt like it was growing; having chest pain radiating to left scalpel, and jaw; couldn't think of the words to say as it was hard to breath; chills; heart rate is racing; This is a spontaneous report from a non-contactable nurse via internet source via Pfizer Sales Representative. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EH9899) via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization. Medical history included had a lot of food allergies. The patient's concomitant medications were not reported. The nurse told that her manager (patient) had an anaphylactic reaction shortly after receiving Pfizer's COVID-19 BNT162b2

vaccine on 18Dec20. Patient stated via Social Media indicated that she received the Covid-19 vaccine right after work. Easy breezy didn't feel a thing. She was asked to wait for 15 minutes, 5-10 minutes of waiting, she felt like something was in throat, so she kept clearing it. Patient felt tingling on both hands and fingers. Her voice started to change. She informed the ER team there, the ER nurse described her face turning red to white to purple. ER nurse started an IV right on patient's right AC, gave her a shot of Benadryl, steroids and the epi pen right through pants. Patient felt everything in mouth as tongue felt like it was growing, but she can breath. Patient was route to the ED via wheelchair, everything started to look hazy, she was having chest pain radiating to left scalpel, and jaw. Patient couldn't think of the words to say as it was hard to breath. When got to the ED they gave her another dose of Benadryl, solumedrol, decadeon, HHN tx with epi and that worked. Patient felt her throat opening up and started talking but then came the chills. It took almost 3 hours to clear the symptoms, even though her heart rate is racing (prob due to the meds), she opted to go home. The outcome of ""heart racing"" was not recovered, of other events were recovered on 18Dec2020. No follow-up attempts are possible. No further information is expected.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylactic reactions with tongue swelling/voice alteration/hard breath/tingling/something in throat/skin discoloration, chill and chest pain cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

TTP; This is a spontaneous report from a non-contactable pharmacist. A 22-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), intramuscular on 17Dec2020 as a single dose for COVID-19 immunization. The patient did not have any known relevant medical history. The patient had no allergies to medications, food or other products. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported. It was unknown if the patient received any other vaccines within four weeks prior to the vaccination. On 21Dec2020, the patient experienced thrombotic thrombocytopenic purpura (TTP); which was serious for hospitalization. The clinical course was as follows: The patient went to the emergency room/urgent care and was admitted in the early morning of 21Dec2020 due to TTP. Work-up was ongoing with no known results. On 21Dec2020, the patient also had a COVID-19 test which was negative. The patient was treated with unspecified corticosteroids and platelets. The clinical outcome of the TTP was unknown. The reporter assessed that it was unknown if the TTP was related to the vaccination. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: Current limited information does not allow a full medically meaningful assessment, especially lack of medical history, concomitant medications, concurrent illness and diagnostic workups such as coagulation test, Combs test, bacterial/virologic/immunological biomarkers to identify the etiology. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any

appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

injection site pain; tiredness; headaches that come and go; muscle pain; few chill; severe joint pain; fever; This is a spontaneous report from a non-contactable healthcare professional (patient). A female patient of an unspecified age (Age: 60; Unit: Unknown) received single dose of (BNT162B2, batch/lot number and exp date not reported), via an unspecified route of administration on 21Dec2020 (last Monday), around 11amfor immunization. The patient's medical history and concomitant medications were not reported. Patient reported experiencing 7 side effects after receiving the COVID-19 vaccine on an unspecified date in Dec2020. She experienced injection site pain, tiredness, headaches that come and go, muscle pain, few chill, severe joint pain, and fever. Her temperature ranged between 99.9-100, at the low grade. Patient asked how long the symptoms would last and to what point does she assume that they relate to the vaccine. The outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Developed redness, swelling, and itching at injection site 6 days after receiving the vaccine.; Developed redness, swelling, and itching at injection site 6 days after receiving the vaccine.; Developed redness, swelling, and itching at injection site 6 days after receiving the vaccine.; This is a spontaneous report from a non-contactable nurse reporting for a patient. A 29-year-old female patient received first dose of BNT162B2 (Pfizer product, lot number EK5730), via an unspecified route of administration on 16Dec2020 on left arm at single dose for COVID-19 immunization. Medical history was none. The patient's concomitant medications were not reported. The patient was not pregnant. She had no known allergies, no Covid prior vaccination, no Covid tested post vaccination. The patient developed redness, swelling, and itching at injection site 6 days after receiving the vaccine (on 23Dec2020). No treatment was received for the adverse event. The outcome of the events was unknown. The report was assessed as non-serious. No follow-up attempts are possible. No further information is expected.

"chills; extremely dry mouth where she feels like she has no saliva; extremely dry mouth where she feels like she has no saliva; extremely tired; had a strange sensation of tingling in her skull, back of neck, and up her skull. Tingling sensation is more left sided than right/the tingling sensation in her head; This is a spontaneous report received from a contactable nurse (who is also the patient). A 63-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899, expiry date: Mar2021), via an unspecified route of administration, on 22Dec2020, at single dose, for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient reported that on 23Dec2020, she had a strange sensation of tingling in her skull, back of neck, and up her skull. Tingling sensation was more left sided than right. On24Dec2020, she experienced chills, which she knows is one of the normal effects. She also experienced an extremely dry mouth to where she feels like she has no normal saliva on 24Dec2020. She was constantly drinking ice water. She was also extremely tired. The patient reported that the most concerning to her is the tingling sensation in her head and the extreme dry mouth. The patient wanted to know if what she is experiencing is ok or not. She also reported that ""if it's urgent she cannot wait until USMI reopens, she will go to the ER"". The outcome of the events was unknown."

localized soreness in arm; This is a spontaneous report from a non-contactable physician via Pfizer sales representative. A male (nephew) patient of unknown age received on an unknown date BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose in the arm for COVID-19 shot. Medical history and concomitant medications were not reported. The patient, who is an ER doc, had localized soreness in arm from vaccination. Outcome was unknown. No follow up attempts are possible, information about batch number cannot be obtained.

"Patient states that she waited her required 15min at the vaccine clinic. She felt no symptoms. One hour later however she felt tired so she took a nap. That night she felt cold and had to grab a blanket. Before bed she felt that the skin on her abdomen was feeling ""tingly."" The next morning she noticed a rash on the abdomen that is itchy. She already takes 25mg benadryl daily for allergies so she started taking it twice a day but that hasn't helped. She now notices the rash in the b/l groin, left thoracic back and left arm (upper and forearm). The rash is still present and itchy 5 days later so she came to my clinic today. I prescribed her a 6 day dose pack of methylprednisolone and to continue benadryl."

Pain at injection site, fatigue

First day had chills, headache, body ache, body sweat, fever, fatigue for two-three days, first day slept for 21 hours, second day for 15 hours. Didn't start feeling normal until the fifth day. Arm swollen where the shot was given on right arm, 3 inches size. Today is the 6th day and still some visible swelling on the area down to two inches but itchy for two days now.

felt tired and had left elbow pain

Non-itchy slighlty raised rash that appeared about 24 hours after vaccine at location of shot that extended up to shoulder and down to elbow. It went away after another 24 hours. 1 week after vaccine, developed lip twitch on side of body that vaccine was administered. Still persists 1 week later, but is not as intense

0654 TACHYCARDIA. LIGHTHEADED, THROAT IRRITATION, HYPERTENSION, & FACIAL SWELLING

Arthralgia, sore throat, dry cough, congestion, pain to back of head and neck, leg pain, lower back pain, fatigue, fever 100.7 on 12/23/20 12/26/20- developed chest pain neck pain left shoulder pain lightheaded and nausea at night-resolved next morning

Severe headache causing mild nausea due to pain. Continues ongoing from 4hrs after dose to present. Itching all over they body from morning after the dose to present. Trouble concentrating, brain fog since morning after the dose to present. Restless from morning after the dose to present. Numbness around mouth, since the morning after the dose to present. Fatigue since morning after the dose to present.

7 days after receiving vaccine I?ve been having nausea without vomiting and headaches. It started on Dec 25 and has continued and is present as of today Dec 28th. I will make an appointment to be Covid tested as soon as possible. On the Vaccination record card it stated to report any possible adverse reaction. I?m unsure if this is related but felt I should report it.

Patient received the Covid 19 vaccine on 12/24/2020. On 12/26/2020 she c/o new onset fatigue, bodyache, cough, headache, sore throat. The dry cough and sore throat are worsening. Denies fever or chills. Covid test scheduled on 12/28/2020 at Employee Health.

vaccine at 11:30 am on 12/18/20 and after 15 mins she felt the room started to spin, dizzy and tunnel vision. nausea and dry heaves also 2-3 mins after. persistent dizziness. pruritic rash and was taken to the ER by wheel chair. About an hour after the vaccine, she felt something in the back of her throat, speech ok, able to swallow. No sob. She was treated with benadryl, pepcid, zofran and fluid. She felt very hot and shaking. In the ER, she noticed that the rash had progressed to her back. Notes chest redness, back with erythematous, raised pruritic bumps on back and arm (smaller size of dime) Within 4 hours of treatment, she had improved. That night at 2am she had a rash -not as pruritic. She took more benadryl. No rash after. No new meds, no nsaids. She has never had any medical problems or rashes before. Her symptoms are concerning for anaphylaxis but it is reassuring that her vitals were ok and that she did not progress and improved with benadryl and pepcid - advised to not get 2nd vaccine dose - will plan on skin testing her in the future

Arm pain and Migraine .. Took Migraine medication and that's when I had a anaphylaxis reaction . I have an appointment to see a specialist to verify if the reaction was caused by the COVID vaccine or the medication I took that day

Pt received COVID 19 Vaccine on 12/16/20. During 15 minute Observation; pt complained of Palpitations about 5 minutes into Observation. The nurse assisted pt to Overflow Observation room. Nurse Manually check Pulse; Pulse 68, A/O x4. Pt provided water and crackers. Pt stated her Palpitations have resolved on their own in about 4-5 minutes.

Around lunch time I felt inside my body a stinging sensation shooting down my body. 5-10 min it got worse and I felt my heart racing. I noticed I started getting a rash, it started on my chest, bottom and legs, I went to the ER where they recommended me a shot of Benadryl and a Pepcid. It took 3- 4 days for the rash to go away and 2 days for the itchiness to go away. It also broke out on my face a day later in the morning.

Approx. 3-5 minutes after receiving vaccine became lightheaded with blurry vision, tongue became thick and numb. About 10 minutes after vaccine pain in right arm and burning down my throat. My hands and arms became numb and tingly and were heavy to move. Symptoms got better with IV Benadryl and Solu-Medrol. Approximate 4 hours after vaccine developed vomiting and diarrhea.

numbness & tingling in tongue & throat after vaccine administration. Immediately taken to the ED, Benadryl & steroid given.

Difficulty breathing, catching breath then face flushing an hour after vaccination. She took her temp which was normal, went to sleep and woke up the next day feeling fine. No history of asthma or COPD. No history of AE from vaccines in the past.

Overall itchiness

Pt. received Covid #1 at 8:20 a.m. , 10 minutes later, she experienced palpitations along with heart rate of 90-100. Other vital signs stable. O2 sat 100% , afebrile. This went on for 1 1/2 hours on and off of wellness then again with the episode. She also experienced diarrhea X2 within the 1 1/2 hour span. This adverse event seems to be a vasovagal reaction to the injection and not to the vaccine itself.

Approximately 5 minuets after receiving Moderna, COVID-19 vaccine, while talking with writer, client became unresponsive and slumped over in chair. Client's extremities became stiff and his eyes rolled to the back of his head. Client was lowered to the floor with assistance and remained unresponsive for a minuet more. EMTs on site responded to event and monitored client for approximately 40 minuets before discharging client home in stable condition. During the monitoring period, client did have emesis x 1. His skin was also clammy after initially becoming unresponsive.

Red raised area to arms and chest that resolved within ten minutes without treatment

Nursing Notes: about an hour after COVID injection, severe vertigo, vomiting, severe headache, left arm completely numb, pt states she is sitting in her car in the parking lot of her apt, but not able to get out and walk bc the dizziness is too much. RN recommended ER disposition. Pt is going to take an Uber

The night of, I had vivid, strange dreams. I thought this was a fluke but have spoken with multiple people who had the same issue. I didn't have any weird dreams any other night, just the night of the vaccination. No treatment needed.

Patient tested positive for Covid-19 on 12/25/2020

angioedema face and hands, rash, fever, chills, fatigue, started menstruation all started about 7 hours post vaccination.

Myalgias, fever x24hrs

Employee developed heart palpitations shortly after receiving the COVID-19 vaccine. Heart palpitations lasted approximately 1 hour. No medical intervention needed. Pulse remained within normal limits (60-100).

Patient developed heart palpitations shortly after receiving the COVID-19 vaccine. Heart palpitations lasted approximately 1 hour. No medical intervention needed. Pulse remained within normal limits (60-100).

Awoke with a significant frontal headache. I considered that it might be sinus related, but decongestant did not help it. Awoke the following morning fine. So potentially could be related to vaccination.

"12.22.20 @ 20:30 injection site pain, radiating pain to right elbow and neck, tingling in right 4th, & 5th finger 12.23.20 @ 05:45 awoke with headache, body aches and continued pain in right arm 12.23.20 @12:45 headache worsened, continued arm pain, fatigue 12.23.20 @ 14:30 elevated temperature 100.2 and chest palpitations and nausea 12.24.20 @ 10:53 ""killer headache, and body aches. No fever since yesterday night w/o taking reducer fever medications."" BP1 164/106 Individual took her BP again in the

other arm: BP2 162/109 She stated she will take Tylenol, and rest for 30 minutes to take her BP again. She stated she will contact her PCP after this. 12.24.20 @ 12:03 BP 129/90 Individual stated she contacted her PCP and PCP is aware of this event."

Patient developed Covid 19 following vaccination.

8 hours after injection: itching, induration, pain @ injection site (left deltoid) Following morning: headache, earache & pressure, Post nasal drip, increased pain & itching @ injection site, ping-pong sized swelling at injection site with redness. Took Motrin for symptoms with some relief. 2nd Day: improvement in pain, swelling, itching, still present. Slight headache/bilateral earache. General malaise. Took Motrin with some relief. 3rd day: left arm tender to touch, swelling/redness further decreased, intermittent itching. Malaise improved. Remnants of headache/earache. No need for Motrin. 4th Day: arm pain/itchiness continues to decrease, no swelling now, no headache, no malaise, some ear pressure.

Patient had mild hypotension, decreased oral intake, somnolence starting 3 days after vaccination and death 5 days after administration. He did have advanced dementia and was hospice eligible based on history of aspiration pneumonia.

pt co fatigue over the weekend and then developed chest pressure and hypoxia per pt on 12/28/20

The sequence of events begins approx. 3:30pm on 12/23/20. 12/23/20 ? headache, nausea with vomiting, brief itching, chilled feeling, temp of 99.9, body/bone aches all over with legs hurting the most, very sore injection arm, husband and I debated on going to the ER, cried 12/24/20- headache, nausea without vomiting, body/bone aches, didn?t take temp, sore arm. 12/25/20- same as 12/24 12/26/20-body/bone aches but not as intense, headache, arm sore, neck was tad stiff. When I put on deodorant it hurt then felt pea sized lump painful to touch in left arm pit. Also felt lump on left side on my neck the size of thumb pad but not painful. Cold sore appeared on bottom lip 12/27/20- sore armpit-lump smaller, neck lump smaller non painful, nauseous 12/28/20-armpit feeling better lump almost gone still painful if I press on it otherwise not an issue, neck lump smaller -pinky pad finger size non painful June 2020 tested positive for COVID was moderate in symptoms

Less than 15 minutes after vaccination alerted lead of itching and hives. Noted rash. Has had similar reactions to medications in the past. No respiratory compromise. Per standing order was given Benadryl 50mg po with water at 1519. 1520 VS: 158/79-82-16-96.9 and 96% on room air. 1534 VS: 140/73-76-16-96.6 and 95% on room air. Employee was observed for an additional 15 minutes with no progression of symptoms. Instructed to call lead if any further symptoms develop. Returned to lab department to work.

I got vaccine tonight ~1750. I felt fine immediately after and stayed for the recommended 15 minutes. During my drive home, ~20 minutes, I had some expiratory wheezing and a sensation of something in my throat. No angioedema or swelling. No skin symptoms. This was mild but made me think twice so I drove back to the er. The wheezing resolved, but I felt like I was going to faint with hot flushing and nausea in the parking lot. I didn?t go in because things seemed better and my stomach was turning like I was going to have diarrhea. Since the wheezing was gone, I decided against going in. I stayed in the

parking lot for ~ 15 minutes and feeling of unease and presyncope waxed and waned, but eased. I continued with some nausea. I had waves of nausea, chills, flushing, and presyncope. The wheezing didn?t return. No tachycardia. I had chills and nausea on the drive home and at home. Took Tylenol and Pepcid when I got home and feel absolutely fine now after ~2 hours of fluctuating nausea, chills and sense of unease/anxiety. None were as severe as they were when I was in the parking lot. Throughout, I didn?t have high or low heart rate. After 8 pm or so, I feel just fine. I have zero symptoms now.

"patient became nauseated and began dry heaving. C/o ""tickle in back of throat"" with repetitive throat clearing. Mild periorbital swelling noted Given Zofran, Pepcid, Benadryl, epi-pen x 1, IV initiated EMS took patient to emergency department for further evaluation"

HR 101, anxious, BP cuff not reading, but patient indicates she has always has a low BP. Pt refused snack, symptoms have resolved. SPO2 100% and HR at 80 at discharge.

34 year old female who reports localized redness and itching within 5 mins after injection. Patient denied any shortness of breath, GI symptoms or rash. VSS. Patient received 50mg of Benadryl. Approx 5 min later patient developed throat tightness. Patient was promptly administered EPI. Patient developed urticarial like lesions. Patient reported improvement in throat tightness but continued to complain of itching at injection site. An additional 50mg of Benadryl was administered. Patient reported improvement of itching approx 5-10 min later. Patient VSS stable throughout but developed tachycardia.

Lightheaded, immediately resolved. HR 80 at discharge

Patient developed wheezing, c/o difficulty breathing. Denies tongue swelling, no visible rash. Treated with albuterol nebulizer and transported to hospital.

sharp pain in all my joints.

Injection site soreness starting on day of injection and has improved today. Headache, nausea and vomiting at least 6 times. Not pregnant but unsure if food poisoning

visible rash to anterior chest and left side of the neck (close to left ear). Client c/o of itching. Allegra 60 po given with water per protocol.

Headache, body aches, joint pains and low grade fever with feeling warm and fatigue x 36 hours. Headache with severe cervical/thoracic spine/neck pain, fatigue, fogginess has persisted x 10 days. Associated nausea when pain is severe. Sometimes headache is improved; but it usually worsens in the evenings.

Upper body flushing and dizziness (arms/face). Dizziness resolved in approximately 20 minutes. Pt left observation area still slightly flushed.

Pfizer-BioNTech COVID-19 Vaccine. Headache and fatigue

Friday patient experienced feeling fatigued and disoriented, Friday she reports muscle aches and headaches and Saturday patient reports feeling headaches and even more fatigue along with a sore throat on Saturday

Patient received the Covid 19 vaccine on 12/24/2020. On 12/27/2020 she c/o new onset fatigue, cough associated with slight itching of the throat and chills. Denies fever. Hx of allergic cough. Covid test scheduled on 12/28/2020 at Employee Health.

33 y.o. female who arrived by on-campus presented to the emergency department for onset of dizziness and a splotchy red rash after receiving the COVID-19 vaccine today. Patient states after onset of her symptoms she further sat down for approximately 15 minutes, but when she went back up to work she was further prompted to come down to the ED for evaluation. Denies wheezing, nausea, or abdominal pain. Denies a history of allergies. Patient tested positive for COVID-19 at the end of this past September. No prior immunization reactions Patient was given PO Benadryl and observed for one hour while here in the ED with no residual symptoms. Patient feels comfortable going home and will return for worsening symptoms. Will discharge patient with a prescription for Prednisone to use if symptoms return

Moderna COVID-19 Vaccine Nausea/Vomiting/Diarrhea upon awakening on 12/24. Lightheaded, near-syncope, diaphoretic. Lasted approximately 3 hours. Vomited then nausea subsided after about 1hr. Chills starting 12/26. Difficulty warming up after being outside in the cold. Prolonged effects that are not normal for me. 12/28 cold/clammy hands despite being in warm environment.

Hives to bilateral arms and chest

"""throat feels tight"" - no obvious signs of distress. Benadryl 50mg Po given and discharged at 1040 feeling better"

Just over 24 hours after receiving vaccine, began running low grade fever. First recorded at 101. Over the next 48 hours (approximately) fever fluctuated between 99-101. Also experienced pain at injection site and muscle soreness in left arm. Issues resolved on their own without medication. V-SAFE 1st check in, did not occur until 4 days post vaccine, at which time, fever had resolved.

Headache (akin to a tension headache, forehead location) almost instantly after injection that has persisted but lessened in severity since injection over the course of one week.

Same day after vaccine I started feeling tired. 2nd day i started having chills and muscle aches. Went to work and tried to work through it. Wednesday i worked 1/2 day. Thursday morning I started feeling light headed that afternoon I started getting hives on my legs. 12/24 I called internal med and spoke with Dr. He called in a rx for me a steroid. I took the 1st day and 1/2 of the 2nd and stopped because I started feeling nauseous and light headed but my hives started getting better(color change) He advised me to go to the ER but I started feeling better andf I told him i would follow up with Dr's office. if I wasn't getting better. I scheduled an appointment with Dr my PCP. I am still very weak and the back of my neck and shoulders are very tender. I still have hives on my legs but they are starting to clear.

5 days after I received the vaccine, I came down with severe abdominal pain, I went to the emergency department and was diagnosed with Acute Pancreatitis without a cause. I do not drink alcohol, and my gall bladder is working well, no gall stones noted to cause pancreatitis.

Shortness of breath, shallow breathing Fatigue Headache some body ache at first I went to the clinic, nothing prescribed but did take a Covid test which came out negative

Headache Fatigue Muscle Aches Nasuea

At 3:00 PM same say I started having arm pain 12:00 AM that night chills , back pain , muscle pain Next morning fever , I could Not stand up , eyes was burning , headache third day- Headache and arm pain

Sever dizziness, headache and nausea

12/17I had severe nausea I never threw up and fatigue and I had to leave work and Dr prescribed zophran, I was fine the next day on 12/18 I went to work I was just a little nauseous

12/23/20 - SEVERE stomach cramps, chills, low grade temperature, mild headache 12/24/20 - Fatigue

VACCINE 12/22 having congestion, cough, runny nose starting 12/24 and current 12/28

Left arm very sore, with some nausea (so far I haven?t thrown up).

Headache, neck pain & pain at injection site starting approx 2 hours after injection and lasting until bedtime on 12/18/20. Headache, swollen glands, neck pain, fatigue, nausea and fever beginning morning of 12/20/20 and resolved 12/22/20.

Fever over 100 degrees F

On 12/21/2020 at 1630, patient complained of anxiousness, feeling hot, and claustrophobia about 8-10 minutes S/P COVID 19 Vaccine administration.

tachycardia

vaso-vagal response to injection

First overnight after vaccination. No fever. Nightmares and vivid dreams all night long. Generalized myalgia and arthralgia (even my fingers and toes). I have had dengue (?break bone?) fever twice ?. It felt almost as bad. It?s like looking at your extremity wishing to move it, but it hurts so much that you just give up! Sounds dramatic but it is the best way I can describe it. Got better as I incorporated into the day. Some residual fatigue for 1-2 days. All resolved.

Patient had Hoarsness in her throat and felt like she could not breathe. Was given Benadryl, Prednisone and Pepcid.

Fever, sore arm, chills

Patient presents to the ED with complaints of an allergic reaction that started approximately 5 minutes after receiving the COVID-19 vaccine. Patient states that she started to experience throat swelling, tingling on her nose and lips, as well as feeling a little dizzy. Patient denies any trouble breathing but states that she has slight chest pain on inspiration. Denies any other symptoms, denies any significant medical history, has not ever had a reaction to a vaccine before.

Approximately 12 hours after the injection - started feeling that the L side of her face was numb and tingling. Also started with nausea (no vomiting); headache (located in the back of her head) and fever (102.2). She noted head felt very heavy and she had difficulty walking by herself (son was at her home to assist). Facial numb ness resolved in ~3 hours. She tried taking 800 mg ibuprofen but didn't have any relief so took Tylenol (this was still on 12/24) and then took another dose of each at around 5:00am 12/25. Fever was still coming/going (responded to the medicine but towards the end of that timeframe her temperature went up again). Last fever was on 12/26 - no fever since (reporting this on 12/28). Headache resolved on 12/27/2020. She also noted that her injection site had small vessicles and was red/tender to touch - as of 12/28 vessicles have resolved and injection area appears back to normal.

I had an elevated BP 218/116, shivering, sweating, light headed and had nausea.

lightheaded, nauseous, feeling faint. Manual BP was taken as automatic BP was unable to be obtained; manual BP was 80/52 mmHg. Water provided, cold pack applied to posterior neck. Patient recovered after 13 minutes and was walked out of building by RN.

Sore throat, body aches, and fever

"Very painful injection site; overall fatigue; muscle cramps in my legs; This is a spontaneous report from a contactable healthcare professional. A 50-year-old female patient started received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot number EH9899), intramuscular into the left arm on 16Dec2020 at 18:30 as single dose for COVID-19 immunization. Medical history included chronic bronchitis, asthma and hypertension from an unknown date. Concomitant medication included losartan (MANUFACTURER UNKNOWN). No allergies to medications, food, or other products were reported. The patient experienced very painful injection site, overall fatigue and "" muscle cramps in my legs "" on 17Dec2020, at 12:00. The events were not serious, and no treatment was required. The outcome of very painful injection site, overall fatigue and "" muscle cramps in my legs "" was recovering."

Muscle aches,Migraine, night sweat; Muscle aches,Migraine, night sweat; Muscle aches,Migraine, night sweat; This is a spontaneous report from a contactable healthcare professional. A 55-year-old patient of an unspecified gender received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), intramuscular on 16Dec2020 at 13:00 as single dose for COVID-19 immunization. Medical history included fibromyalgia, degenerative bone disease from an unknown date. The patient's concomitant medications were not reported. No diagnosis of COVID-19 was noted prior to vaccination. Since the vaccination, the patient has not been tested for COVID-19. There were no allergies to medications, food, or other products. The patient experienced muscle aches, migraine, night sweat on 16Dec2020, at 12:30, which was non-serious. The outcome of muscle aches, migraine, night sweat was recovered in Dec2020. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up .

"The day after I am feeling very tired, achy and weak with a temp of 100.1.; The day after I am feeling very tired, achy and weak with a temp of 100.1.; The day after I am feeling very tired, achy and weak with a temp of 100.1.; The day after I am feeling very tired, achy and weak with a temp of 100.1.; This is a spontaneous report from a contactable healthcare professional. A 44-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), intramuscular on 17Dec2020 at 14:00 as single dose for covid-19 immunization. Medical history included hypertension and being pre-diabetic from an unknown date and unknown if ongoing. No known food or drug allergies noted. Concomitant medication included metformin (MANUFACTURER UNKNOWN), amlodipine besilate (NORVASC), metoprolol succinate (TOPROL). The patient reported "" the day after I am feeling very tired, achy and weak with a temp of 100.1"" on 18Dec2020. No other vaccines within 4 weeks prior to the COVID vaccine were administered. No treatment received for the adverse events. No diagnosed of COVID-19 was noted before or after vaccination. Vaccine Facility information available. The outcome of "" the day after I am feeling very tired, achy and weak with a temp of 100.1"" was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up."

Sneezing, intermittent cough, congestion, body aches, fatigue, loss of appetite.

Headache, body aches (specifically to back), fatigue; Headache, body aches (specifically to back), fatigue; Headache, body aches (specifically to back), fatigue; This is a spontaneous report from non-contactable consumer, the patient. A 26-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EK5730), via an unspecified route of administration on 17Dec2020 at 20:00 (at the age of 26-years-old) in the right arm as a single dose for COVID-19 immunization. The patient's medical history was not reported. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications included omeprazole (PRILOSEC) and fexofenadine hcl (ALLEGRA); both for unknown indications from unknown dates and unknown if ongoing. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient previously took azithromycin (ZITHROMAX) from an unknown date to an unknown date for an unknown indication and experienced drug allergy. On 18Dec2020 at 04:00, the patient experienced headache, body aches (specifically to back), and fatigue; all reported as non-serious. The patient did not receive any treatment for the events. The clinical outcomes of headache, body aches (specifically to back), and fatigue were recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible. No further information is expected.

Woke up with hive-like bumps that itch; This is a spontaneous report from a non-contactable healthcare professional. A 32-year-old female patient received bnt162b2 (BNT162B2; lot number: EK5730; expiration date: unknown), intramuscular left arm on 17Dec2020 17:00 at single dose for immunization. Medical history included hives a few weeks ago. She is not pregnant. The patient's concomitant medications were not reported. The patient stated that she woke up on 18Dec2020 07:00 AM with hive-like bumps that itch. There was no treatment given. The patient added that it maybe unrelated as she had hives, a few weeks ago. The vaccine was given in a hospital. The patient did not have other vaccine in the last 4 weeks. The patient was not diagnosed with COVID-19 prior to the vaccination and was not COVID tested post vaccination. The outcome of the event was unknown. No follow up attempts are possible. No further information is expected.

Approximately 2 hours post injection, I began to feel fatigued and achy. At 3 hours post injection, I had a headache, muscle & joint aches. I also had slight nausea & a moderately severe stomach ache. These symptoms began to subside approximately 10 hours post injection with the stomach ache taking an additional 2 hours to resolve (12 hours total). The injection site was painful the day following the vaccine and did not resolve until 2 days post administration.

Fever, sore arm

Arm soreness; fever max of 101.9; cough; heart burn; fatigue; chills; headache; This is a spontaneous report from a contactable consumer (patient himself). A 35-year-old male patient received the first dose of bnt162b2 (BNT162B2, lot number: EH9899), via an unspecified route of administration on 17Dec2020 10:30 AM at single dose (left arm) for immunization. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Medical history included MI with Stent and diabetes type 2. The patient received other medications (unspecified) within 2 weeks of vaccination. The patient previously took amoxicilin and experienced allergies. On 17Dec2020 at 07:00 PM, the patient experienced arm soreness, Fever max of 101.9, cough, heart burn, fatigue, chills and headache. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. Therapeutic measures were taken as a result of the events which included Tylenol and Motrin. The events recovered on unspecified date in De2020.

Employee has history of anaphylaxis and was in the 30 min observation. C/O dizziness. Sits on gurney at 45 degree angles. No sob, chest pain or hives. VS obtained and employee hypertensive. Under observation of RN. Able to sip on water, but continues to have HTN and dizziness. Taken to the ED for further evaluation of symptoms.

Pain at injection site x 36 hrs.; This is a spontaneous report from a contactable consumer. A 50-year-old female patient received first dose of bnt162b2 (Pfizer-BioNTech COVID-19 vaccine; lot EK5730), via an unspecified route of administration on 16Dec2020 18:00 at single dose (right arm) for Covid-19 immunisation. Medical history included seasonal allergies, depression, elevated cholesterol and pollen and dust allergies only. The patient had no allergies to medications and food. Concomitant medications included fluoxetine, loratadine, Montelukast sodium (SINGULAIR), fluticasone and mul (as reported). On 16Dec2020 19:00, the patient experienced pain at injection site x 36 hrs. The patient was vaccinated at the hospital. It was reported that the patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient did not received treatment for the event. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient had not been tested for COVID-19. Outcome of event was recovered on an unspecified date.

Reports dizziness started evening of 12/24/20 and ongoing. Reports dizziness is much better today and feels it has almost resolved. Is following up with PCP today, 12/28/20 . no other symptoms reported.

felt warm; blurred vision; light headed; arm pain; This is a spontaneous report from a contactable pharmacist. A 61-year-old male patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), intramuscular on the left arm on 18Dec2020 at a single dose for COVID-19 immunization. The patient's medical history included atrial fibrillation (a fib). Concomitant

medication included flecainide and apixaban (ELIQUIS). The patient previously took pantoprazole sodium sesquihydrate (PROTONIX) and experienced allergies to pantoprazole sodium sesquihydrate. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 18Dec2020, 5 minutes after injection, the patient felt warm, blurred vision, light headed, and arm pain. No treatment was received for the adverse events. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient had not been tested for COVID-19. Outcome of the events was recovered on 18Dec2020. The events were considered non-serious.

Pt verbalized he felt dizzy. Pt was sitting down at this time. The patient verbalized that the dizziness resolved after a duration of 30 seconds. No epinephrine or diphenhydramine was required for recovery. Pt denied distress or SOA.

10 min after the vaccine had sudden cold hands; palpit; dizziness; BP 150/90 - high for patient; a sensation of chest awareness (not pain, but a bit of tension); anxiety; a clear sensation of chest warmth; presyncopal episodes; chest tightness; Still with waves of chest warmth/heat/burning sensation and chest awareness; This is a spontaneous report from a contactable physician (patient). A 45-year-old female patient (not pregnant) received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 15:00 at single dose at left arm for immunization. Medical history included hypothyroidism, migraine from an unknown date and unknown if ongoing. Concomitant medications included levothyroxine sodium (SYNTHROID), cetirizine hydrochloride (ZYRTEC), triamcinolone acetonide (NASACORT). There's no other vaccine in four weeks. 10 min after the vaccine patient had sudden cold hands (the kind of inside cold like Propofol gives you), with palpit and dizziness, self-limited in a few mins. BP 150/90 - high for patient. Similar episode but shorter and less intense within next half an hour. Also a sensation of chest awareness (not pain, but a bit of tension, which patient had experienced before with anxiety and put it on anxiety). Decided to go home and while walking patient noticed a clear sensation of chest warmth. Patient decided to stick around the hospital a bit more, pondering about going into the ER. Drank 2 bottles of orange juice and headed home. Then on the way home patient had 2 presyncopal episodes. The fact that patient had not eaten all day and wasn't well hydrated might have contributed. Patient didn't go to the ER. Patient ate, drank juice, took diphenhydramine hydrochloride (BENADRYL) 25 mg. The chest tightness got better. Still with waves of chest warmth/heat/burning sensation and chest awareness. Never had such sxs 2/2 anxiety. Patient received acetylsalicylic acid (ASPIRIN), diphenhydramine hydrochloride, clonazepam as treatment. Outcome of all events was recovering. Patient was not diagnosed with COVID-19 prior to vaccination, and no COVID tested post vaccination. Events were reported as non-serious. Information on Lot/Batch number has been requested.; Sender's Comments: Based on the close temporal relationship, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Pt had Covid vaccine. 5 minutes after vaccine complained of tachycardia. HR initially to palpation was in the 220s. Pt assisted supine. Code Blue called per protocal. Dr. to room. Pts BPs were 160/80, 144/90,

140/84, and 138/80. HR 140, 134, and 123 bpm. O2 sat the whole time was 100% on RA. Pt c/o nausea and dizziness. Assisted to stretcher and brought to ER for evaluation. Pt state she had a previous history of Covid and anxiety but this experience felt different to her then her previous panic attacks. No rash, wheezing, oral swelling, pruitis.

Flushing and hot flashes that have persisted 2 hours after vaccine.; Flushing and hot flashes that have persisted 2 hours after vaccine.; Notable feeling of dizziness; This is a spontaneous report from a contactable consumer (patient) and physician. A 37-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch # EH9899), via an unspecified route of administration on the left arm on 18Dec2020 11:15 at SINGLE DOSE for COVID-19 immunization at the hospital. Medical history reported as none. The patient had no allergies to medications, food, or other products. There were no concomitant medications. Prior to vaccination, the patient not diagnosed with COVID-19 and the patient has not been tested for COVID-19 since the vaccination. On 18Dec2020 11:30, the patient experienced flushing and hot flashes that have persisted 2 hours after vaccine. The patient also had notable feeling of dizziness. No treatment was received for the adverse events. Outcome of the events were not recovered.

Reporting on behalf of staff member. She received covid vaccine on 12/24. The following day, she experienced extreme weakness/fatigue, migraine, low grade fever, body aches, and tachycardia. She went to the ER, they gave her IV fluids, pain meds and tylenol with no relief. She was monitored for awhile and then sent home to rest and recover. 3 days later (12/27) she says she feels significantly better, but still a little tired.

No adverse events reported as of yet after patient was vaccinated in right deltoid except a sore arm; pregnant patient was vaccinated yesterday with the COVID-19 vaccine; pregnant patient was vaccinated yesterday with the COVID-19 vaccine; pregnant patient was vaccinated yesterday with the COVID-19 vaccine; This is a spontaneous report from a contactable physician via Medical information team. A 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EH9899, in right deltoid via an unspecified route of administration on 17Dec2020 10:30 at single dose for routine vaccination. Medical history was reported as none. The patient's concomitant medications were not reported. It was reported that patient pregnant was vaccinated yesterday with the COVID-19 vaccine. She received vaccine while pregnant on 17Dec2020 which was non serious per report. The patient was an MD and her age was 35 years old. She was vaccinated yesterday with COVID 19 vaccine and she was pregnant. She was able to speak to Pfizer Drug Safety. The patient was a frontline Healthcare provider and there was no prescriber for the vaccine. She thinks there should be a pregnancy registry so she wanted to get on it so Pfizer can use her data. Her next dose will be on 07Jan2021. The reason she got it was because she was high risk and a front line healthcare worker. The patient was 21 weeks pregnant. She assumed this was going to be a normal pregnancy and normal delivery. The patient had the vaccination in the hospital. No additional vaccines administered on same date. No adverse events reported as of yet after patient was vaccinated in right deltoid except a sore arm. Onset time of arm being sore was 5pm (17:00) yesterday, 17Dec2020. This did not require a visit to the ER or physician's office. No prior vaccinations within 4 weeks. No AE for prior vaccinations and no medical

history or family medical history relevant and no relevant test. The outcome of the events was unknown.

headaches, back pain, fatigue, nausea, foul taste in mouth

"she got the vaccine 2 nights ago and started to develop itchiness all over her body 30 min post vaccination/head to toe itching; I had serious flu like symptoms, full body aches; Knuckles hurting on both hands; Rash; She stated she had"" body aches but feeling better today""; This is a spontaneous report from a contactable nurse (patient herself). A 61-year-old female patient received first dose of BNT162B2 (lot number: EK5730) via an unspecified route of administration, on 16Dec2020, at single dose, for COVID protection. Medical history included asthma. Concomitant medication included albuterol (SALBUTAMOL) for asthma. The patient mentioned that she got the vaccine 2 nights ago and started to develop itchiness all over her body 30 min post vaccination (16Dec2020). She stated she had body aches but feeling better today. Her body got very itchy and she spent that whole night head to toe itching. Itch was so bad. She had serious flu like symptoms, and full body aches. Patient stated that she understood everything was normal. Patient stated, ""I need to find out from you guys who do I call to find out if I have that itching, if I actually, I had an allergic reaction to the vaccine whether or not if I should take the second dose."" She also stated, ""I was going to say the first day about hour an half my it started with my knuckles hurting on both hands and then I just got rash, I mean not rash itching head to toe and it left with through the night I took some Zyrtec (further clarified as treatment) because I can't take Benadryl. So, I took and it (Zyrtec) helped with the it and itch was resolved by yesterday."" She had lab work two days ago. On the same day, she had the injection and had a test for her thyroid and COVID antigen test both with unknown results. The patient recovered from pain and pruritus on an unspecified date in Dec2020, while for the other events was unknown."

"felt like I was going to pass out; lightheaded/Dizzy; 9 minutes after administration heart rate up to 154; leg shakes; started having chest itchiness; neck rash; facial hives; Injection site sore; This is a spontaneous report from a contactable consumer. A 29-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot: EH9899) via an unspecified route of administration in the left arm on 17Dec2020 08:00 at a single dose for covid-19 immunisation. Medical history included allergies to cephalosphorins. Concomitant medication include unspecified multivitamins. On 17Dec2020 08:09, the patient's heart rate went up to 154 after vaccine administration. On 17Dec2020 08:15, she felt like she was going to pass out, she was lightheaded and dizzy. The patient also experienced leg shakes, started having chest itchiness, neck rash, facial hives and injection site sore on 17Dec2020. The patient was treated with diphenhydramine (BENADRYL) 50mg intramuscularly (IM) for the events ""9 minutes after administration heart rate up to 154"", ""felt like I was going to pass out"", ""lightheaded/Dizzy"", ""leg shakes"", ""started having chest itchiness"", ""neck rash"" and ""facial hives"". The patient's heart rate came down to 130s then down to 90s and the hives subsided. The patient underwent lab tests and procedures which included heart rate: 154, heart rate: 130 and heart rate: 90; all on 17Dec2020. Outcome of the events ""9 minutes after administration heart rate up to 154"", ""felt like I was going to pass out"", ""lightheaded/Dizzy"" and ""facial hives"" recovered on an unspecified date while the outcome of events ""leg shakes"", ""started having chest itchiness"", ""neck rash"" and ""injection site sore"" was unknown."

after the administration of the first dose of the Covid Vaccine presented a leakage of about 2-3ml; the patient was administered Subcutaneously instead of Intramuscularly/maybe the product had been injected Subcutaneous rather than Intramuscular; This is a spontaneous report from a contactable physician. A patient of unspecified age and gender received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), subcutaneous at single dose on an unspecified date for Covid-19 immunisation. The patient medical history and concomitant medications were not reported. On an unspecified date, the patient after the administration of the first dose of the Covid vaccine presented a leakage of about 2-3ml, the patient was administered subcutaneously instead of intramuscularly/maybe the product had been injected subcutaneous rather than intramuscular. Information on the lot/batch number has been requested.

I'm not sure this is entirely vaccine related, but I wanted you to be aware. I occasionally experience unexplained swelling of my lips. It has been investigated by an allergist, but the cause is unknown -- doesn't appear to be a food allergy (no trigger foods identified, and it has never appeared immediately after eating), and may not even be histamine related. It could be something immune-system related, and my experience this weekend might support that. I had normal, expected symptoms on Friday evening (chills, headache). Those resolved Saturday. Saturday night, my lower lip swelled dramatically. Swelling spread into the upper lip as well. I have seen this before, but this was one of the more severe instances I have experienced. Lips remained swollen overnight. When I woke up Sunday morning and went to the restroom, I became suddenly lightheaded and passed out. That's a symptom I have never experienced before. I consulted with my primary care doctor and took it very easy the rest of Sunday. He and I will follow up to further asses what happened. No further light-headedness on Sunday or today. Lips eventually resolved late in the afternoon. This is all about 72 hours after the vaccine, so I can't be sure it is related, but I do wonder if it is related to having my immune system revved up by the vaccine. I reported it on the CDC check-in app and my primary care physician is noting it on his side as well.

fever of 38.6; cold fingers all day; very sore deltoid area from the night of 12/16 thru 12/17, cant raise my right arm; very sore deltoid area from the night of 12/16 thru 12/17, cant raise my right arm; very sore deltoid area from the night of 12/16 thru 12/17, cant raise my right arm; This is a spontaneous report from a contactable consumer (patient). A 48-year-old female patient received the first dose of the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EH9899), via an unspecified route of administration in the right arm on 16Dec2020 at 18:15 at 48-years-old at a single dose for COVID-19 immunization; administered in a hospital. Medical history included Vertigo, chronic pruritus from Apr2020 to Jul2020 (Vertigo, chronic pruritus (treated and recovered with gabapentin). Concomitant medications included ergocalciferol (VIT D), krill oil (MANUFACTURER UNKNOWN), niacin (MANUFACTURER UNKNOWN), guaifenesin (MUCINEX), loratadine (CLARITIN); all taken for an unspecified indication from an unspecified date to an unspecified date (received within two weeks of vaccination). The patient previously took ketoconazole and experienced Known allergies, gabapentin for pruritus and vertigo; all from an unspecified date to an unspecified date. On 16Dec2020, the patient experienced: very sore deltoid area from the night of 12/16 thru 12/17, cant raise my right arm. On 17Dec2020, the patient experienced: cold fingers all day (non-serious). On 17Dec2020 at 17:50, the patient experienced: fever of 38.6 (non-serious). Prior to the vaccination, the patient was diagnosed

with COVID-19; and since the vaccination, the patient had been tested for COVID. The patient underwent lab tests and procedures which included body temperature: 38.6 on 17Dec2020, Oral Throat Swab PCR (polymerase chain reaction): positive on 22Nov2020, Oral Throat Swab PCR: negative on 10Dec2020. Therapeutic measures were taken as a result of cold fingers all day, fever of 38.6, very sore deltoid area from the night of 12/16 thru 12/17, cant raise my right arm. The clinical outcome of the events: cold fingers all day, fever of 38.6, was recovered on an unspecified date. The clinical outcome of the event, very sore deltoid area from the night of 12/16 thru 12/17 was recovered on 17Dec2020. The clinical outcome of the event, cant raise my right arm, was unknown.

Pfizer-BioNTech COVID-19 Vaccine EUA; Generalized Itchy rash with hives all over body not relieved by benadryl, zyrtec, claritin and pepcid.

"I got a mild headache. Within an hour it was severe; I became diaphoretic and felt flushed; I became diaphoretic and felt flushed; felt my heart pounding; GI upset; vomited; This is a spontaneous report from a contactable consumer (patient). This 39-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot Number: ej1685), via an unspecified route of administration at single dose in the right arm on 16Dec2020 14:30 for covid-19 immunisation. The patient medical history was not reported. Concomitant medication included estradiol (ESTRACE), levothyroxine in Dec2020. The patient previously took amoxicillin and experienced drug allergy. The patient stated that ""on 17Dec2020 14:30, I got a mild headache. Within an hour it was severe. I became diaphoretic and felt flushed. and felt my heart pounding. Experienced GI upset and vomited once. Took Tylenol and went to sleep for 8 hours. Woke up feeling normal. Therapeutic measures were taken as a result of the events included Tylenol. The outcome of the events was recovered. The vaccine was administered at Hospital Facility. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination. The patient had not been tested for COVID-19 since the vaccination."

"feels sluggish; had a little bit of fever yesterday; Warm feeling shooting in head; developed a warm feeling in his head that turned into a headache; This is a spontaneous report from a contactable consumer. A 57-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EM9899), via an unspecified route of administration (arm left) on 16Dec2020 at single dose for precaution for front line worker. The patient's medical history included blood pressure abnormal, blood cholesterol abnormal, diabetes, enlarged prostate, sleep disorder, on anticoagulant therapy, and migraine. Concomitant medications included lisinopril, simvastatin, metformin hcl, tamsulosin, dutasteride, zolpidem, aspirin [acetylsalicylic acid], and melatonin. It was reported that the patient experienced warm feeling shooting in head on 16Dec2020. It was further reported that the patient developed a warm feeling in his head that turned into a headache on 16Dec2020. The patient also experienced slight fever on 1Dec2020. The patient received the vaccine on Wednesday afternoon (16Dec2020). The patient stated, ""initially it felt weird; for a couple of minutes, it felt ok and then he felt a warm feeling shooting in his head, like when you take strong medications or do MRI. It gives you that strong feeling. It was cold or warm but shoots in head. He felt it, so he went to occupational health and it went away. He went home early and did not finish his shift. Then he got a headache and it did not go away and it is not severe. He feels sluggish and had a little bit of fever yesterday and took Tylenol and

it went away. He still had a headache and it bothers him. He cannot remember the name of the medication that he got the warm feeling shooting in his head, but he believed it was when they did a dye for an MRI. He does not have the name and did not have a lot or expiration. He works at a hospital but not as a healthcare provider. He got the vaccine a few day ago and later stated it was Wednesday, 16Dec2020 warm feeling started an hour after getting the vaccine. As soon as he went to occupational health, it went away and improved. He did not have the headache yet. He did not work his full shift. He got home at night and felt not too bad of a headache. He has a history of migraines and he can feel somehow, he is starting to have a headache. It is not severe though. The headache started that night and it is still there. It is not so severe, but it bothers him. When he had a slight fever, it is gone after taking Tylenol. He never actually checked his temperature, he just felt warm. He takes medications every day, so he took medications the night before and did not take other medications since then. He wanted to find out if there was any interaction with the vaccine before taking them again. The outcome of event fever was recovering, events warm feeling shooting in head and headache was not recovered, and the event feels sluggish was unknown."

35 y.o. female who arrived by to the emergency department for Allergic reaction. Patient got the shot at approximately 8:10 AM and subsequently developed tingling in the back of her throat and felt like she had some swelling. She alerted staff who brought her here for further evaluation. She currently denies any trouble swallowing, voice changes, tongue, lip swelling, rash, abdominal pain, nausea, vomiting, diarrhea. Able to speak in full sentences without difficulty, not in respiratory distress. She is also able to drink water in the emergency department without difficulty. Will dose with Benadryl and observe. Patient was observed for over 2 hours in the emergency department with event of her symptoms. Doubt anaphylactic reaction at this time as she had no other symptomatic involvement. Patient safe for discharge home at this time.

"patient received the vaccination and within a few minutes she developed sore throat, wheezing; patient received the vaccination and within a few minutes she developed sore throat, wheezing; This is a spontaneous report from a contactable nurse. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 18Dec2020 at 08:30 at single dose for COVID-19 immunisation. Relevant medical history and concomitant medications were not reported. On 18Dec2020 at 08:30, the patient experienced sore throat and wheezing; within a few minutes she developed sore throat, wheezing. Facility where the COVID-19 vaccine was administered was workplace clinic. The adverse events resulted in Emergency room/department visit or urgent care. The patient received ""RT"" treatments. It was unknown if prior to vaccination the patient was diagnosed with COVID-19 and it was unknown if she was tested for COVID-19 since the vaccination. The outcome of the events was unknown. Information on the lot/batch number has been requested."

"a ""funny"" feeling in my mouth/A sore sensation; a ""funny"" feeling in my mouth/A sore sensation; It felt as if it had been burned; slurred speech; loss of taste; This is a spontaneous report from a contactable consumer. A 32-year-old female patient received the 1st dose of bnt162b2 (BNT162B2) at single dose at left arm on 17Dec2020 09:30 for immunization, administered at hospital. Medical history included asthma, allergies: aluminum, pet dander, trees/weeds/grass, seasonal allergy. She had not

Covid prior vaccination. Concomitant medication included montelukast sodium (SINGULAIR), colecalciferol (VITAMIN D [COLECALCIFEROL]), received within 2 weeks of vaccination. The patient had not received any other vaccines within 4 weeks prior to the COVID vaccine. On 17Dec2020 14:30, the patient experienced a funny feeling in my mouth/a sore sensation, it felt as if it had been burned, slurred speech, loss of taste. Course of events: Within 5 hours of injection she started noticing a ""funny"" feeling in her mouth. A sore sensation. By 19:30 her tongue was very sore. It felt as if it had been burned. she had nothing hot to eat that day and nothing new to eat. The soreness increased. She also had some slurred speech and loss of taste. The patient underwent lab tests: Sars-cov-2 test (Rapid nasopharyngeal, nasal swab): negative on 18Dec2020. She received no treatment. The symptoms have stayed steady and have not gotten better. The outcome of events was not recovered. The case was assessed as non-serious. Information on the lot/ batch number has been requested."

"thinks it is COVID toe; thinks it is COVID toe; an itchy toe/Her toe started itching. It is very red; an itchy toe/Her toe started itching. It is very red; This is a spontaneous report from a contactable nurse, the patient. A 49-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EK5730), via an unspecified route of administration on 16Dec2020 at 07:15 (at the age of 49-years-old) as a single dose for COVID-19 immunization. Medical history was not reported. Concomitant medications included zingiber officinale root (GINGER ROOT), clonazepam (KLONOPIN), progesterone (MANUFACTURER UNKNOWN), fluoxetine hydrochloride (PROZAC), spironolactone (MANUFACTURER UNKNOWN), vitamin D3 (MANUFACTURER UNKNOWN), and zinc (MANUFACTURER UNKNOWN); all taken for unknown indications from an unknown date and unknown if ongoing. On 18Dec2020 at 02:00, the patient experienced an itchy toe/her toe started itching and it was very red, reported as non-serious. The clinical course was as followed: the patient was at work on the night of 18Dec2020 and was having trouble with her toe. Her toe started itching. It was very red. She wondered if it was ""COVID toe"" as the picture she found looked exactly the same. The physician she worked with did not know what it was. She took a diphenhydramine hydrochloride (BENADRYL) and sprayed freezing agent on it to stop the itching. The clinical outcomes of the itchy toe, red toe, and ""COVID toe"" were not recovered.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, there is a possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."

herpes flair-up; herpes flair-up; I nerve pain, it happends all the time when I am under stress She mentioned this happened last night; I nerve pain, it happends all the time when I am under stress She mentioned this happened last night; This is a spontaneous report from a contactable Nurse reporting for herself. A 61-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9809, Expiry Date: Mar2021), intramuscular on 17Dec2020 at single dose for covid-19 immunisation (front line worker). Medical history included herpes treated with acyclovir (manufacturer: Calrsbad Tech), oral at 400 mg, as needed. The patient's concomitant medications were

not reported. The patient experienced herpes flair-up on 17Dec2020 with outcome of not recovered. On 17Dec2020 (last night) the patient had nerve pain, it happened all the time when she was under stress with outcome of unknown. The patient took acyclovir as treatment and wanted to know if there's any drug interaction with the covid 19 vaccine and if she will be eligible to get her second dose of Covid 19 vaccine while taking Acyclovir.

lightheadedness/feeling lightheaded/felt herself going backwards and caught herself; disappointed and upset; This is a spontaneous report from a contactable consumer (patient) who reported that a female patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration, on 17Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient was allergic to aspirin, if she takes it her eyes will come out of her head and quite a few other things will happen to her. Patient reported that she got the COVID-19 Vaccine on 17Dec2020 and it was like 1 hour after (also reported within 1 hour) she got the vaccine that she started feeling lightheaded which she had never experienced before, even today. Patient is an environmental service worker, she had so many discharges and so many COVID rooms to wipe down that she just kept pushing herself because they are just short staffed; but at one point she felt herself going backwards and caught herself, she decided to sit down and drink a water and continued to feel lightheaded. No one was available to relieve her yesterday (17Dec2020), she had to stay at the hospital until midnight and continue her activities with lightheadedness (pending clarification). Patient said, almost a day later, lightheadedness persists, she was still feeling the lightheadedness today (18Dec2020). Her concern is it's like 3-4 days afterwards that you will feel some effects. She wanted to know if this is what they are talking about, if this is expected. Patient initially reported being a healthcare professional (HCP), but clarified her profession is Environmental Service, working at (Institution name). Patient is allergic to aspirin, she wondered if the COVID-19 vaccine contains aspirin. Patient was suggested contacting her doctor to find out if she is allergic to any of the components in the vaccine. Patient was reminded it is possible to consult the ingredients as part of the Vaccine Fact Sheet on (Website name). Patient was disappointed and upset for experiencing lightheadedness after receiving the vaccine (Dec2020). She wishes she hadn't received it. As indicated in previous requests, was referred to an HCP for guidance after experiencing lightheadedness. Outcome of lightheadedness was not recovered, outcome of disappointed and upset was unknown. Information on the Lot/Batch number has been requested.

Fever, mild cough, headache & light-headedness

nausea; dizziness; Progressed to tachycardia; heart rate from 60-120; This is a spontaneous report from a contactable consumer. A 37-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration at left arm on 18Dec2020 at 07:45, single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. The patient, approximately 15 minutes after shot, experienced mild nausea and dizziness. Progressed to tachycardia, heart rate from 60-120. Felt it racing and pounding. Went to emergency room for evaluation. The patient underwent lab tests and procedures which included heart rate: 60-120. Therapeutic measures were taken as a result of the events and included electrocardiogram (EKG) and telemetry monitoring.

Extreme Vertigo and Dizziness 20 minutes following vaccination. Patient began to slowly feel better.

Right neck pain radiates from shoulder blade to occiput.; Tightness of chest and fluttering in chest that made me cough persistently; Tightness of chest and fluttering in chest that made me cough persistently; BP elevated 150/90; I had EKG report read occasional PVC.; This is a spontaneous report from a contactable nurse reporting for herself. A 45-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular in the left arm on 18Dec2020 10:15 at single dose for covid-19 immunisation at hospital. Medical history included asthma, eczema, allergies to PCN (penicillin), whey, glutamate, gluten, sulfites. Concomitant medication included isosorbide mononitrate (FLO). On 18Dec2020 at 10:45 the patient experienced right neck pain radiates from shoulder blade to occiput. Tightness of chest and fluttering in chest that made her cough persistently. BP elevated 150/90, no prior history of hypertension. In ED for check-up, the patient had EKG report read occasional PVC. Labs all within normal limits and symptoms and BP better within 1.5 hours so discharged to home. The patient was not treated for the events. Prior to vaccination the patient was not diagnosed with COVID-19 and has not been tested for COVID-19. Information on the lot/batch number has been requested.

numberless shoulder/extends numbness left leg weak when stood(felt numb)/numbness; This is a spontaneous report from a contactable consumer. A 49-year-old female patient (not pregnant) received bnt162b2 (BNT162B2, also reported as Pfizer-BioNTech COVID-19), via an unspecified route of administration on 18Dec2020 13:15, single dose (dose number 1) in left arm, for immunization. Medical history included allergies to food, perfumes, fragrance, smoke and residual odor. Other medical history includes asthma, OSA (obstructive sleep apnea), borderline DM, anxiety and depression. The patient previously took VICODIN and had drug hypersensitivity. She had no other vaccines in four weeks but had other medications (unspecified) in two weeks. The patient reported that on 18Dec2020 at 13:30 she experienced left arm lateral numberless shoulder- last 3 finger, extended numb to pointer finger, extends numbness shoulder up left neck to lips midpoint the complete lips extended to right side of face and neck and then to right temporal, ear and down to clavicle; left leg weak when stood(felt numb). She developed asthma exacerbation by 0900 and started to resolve in ER. About 0018 numbness now in lips, around lips, tongue, and starting down neck. Treatment for the event were Epinephrine IM, Benadryl, Dexamethasone, ab. She also had CXR (chest x-ray), no results reported. The outcome of events was recovered with Sequel. Information on the lot/batch number has been requested.

Bell?s Palsy to the left side of my face. Woke up Wednesday morning with symptoms.

"Increased congestion about 12 hours after receiving the vaccine. Congestion in back of throat and feeling like I need to clear my throat often.; When I clear my throat there is phlegm; Slight nasal congestion; Slight itching and soreness of the throat; Slight itching and soreness of the throat; coughing once through the night; pain and swelling of the injection site; pain and swelling of the injection site; fatigue; This is a spontaneous report from a contactable consumer. A 36-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE) via an unspecified route of administration on 18-DEC-2020 09:00 AM (at the age of 36-years-old) at an unspecified dose in the left arm for COVID-19 vaccination. Medical history was reported as ""None"" and the patient did not

have any allergies to medications, food, or other products. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient was not pregnant at the time of vaccination.The patient was administered the vaccine in the hospital. Concomitant medication included zolpidem tartrate (AMBIEN), clonazepam (KLONOPIN) and ""MVI"" (not further specified). The patient did not receive any other vaccines within four weeks prior to the vaccination. On 18Dec2020 at 17:00, the patient experienced increased congestion ""about 12 hours"" after receiving the vaccine as well as congestion in back of throat which she described as ""feeling like I need to clear my throat often"" and ""when I clear my throat there is phlegm."" Further, on 18Dec2020 at 17:00 the patient also experienced slight nasal congestion, slight itching and soreness of the throat that lasted for about 30 minutes and she woke up coughing once through the night. Additionally, on 18Dec2020 at 17:00 the patient experienced pain and swelling of the vaccination site and fatigue. The patient did not receive any treatment for the events. The clinical outcomes of congestion in back of throat, phlegm, nasal congestion, sore throat, itchy throat, coughing, vaccination site pain, vaccination site swelling and fatigue were not recovered. It was also reported that since the vaccination the patient had not been tested for COVID-19. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up."

Employee reports he developed tinnitus 8 hours after injection and has remained 4 days post injection with no history of tinnitus.

Eyelid and nasal bridge swelling; Eyelid and nasal bridge swelling; Swelling of hands and wrists; Swelling of hands and wrists; This is a spontaneous report from a contactable physician. A 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Batch/lot number: EJ1685), via intramuscular route of administration (right arm) on 18Dec2020 18:15 at a single dose for COVID-19 immunisation. Relevant medical history included depression, hay fever and acne. Concomitant medication included escitalopram, fexofenadine hydrochloride (ALLEGRA) and doxycycline. The patient was allergic to nickel and fragrance. On 19Dec2020 07:00, patient experienced eyelid and nasal bridge swelling; and swelling of hands and wrists. Patient received allegra due to the event. Outcome of the events was reported as recovering/resolving. Follow-up attempts are completed. The following information on the batch number has been requested.

Elevated heart rate (150-160)/ elevated heart rate of 160; shakiness/ shaky; dizziness; hives on her neck; This is a spontaneous report from a contactable nurse. A 37-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; lot number: EH9899), via an unspecified route of administration on the left arm on 18Dec2020 11:30 at a single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient had no known allergies and did not receive any other vaccines within four weeks prior to the COVID vaccine. The patient wanted to know if she should receive the second dose after experiencing this type of reaction after the first dose. On 18Dec2020, she experienced elevated heart rate 160 (also reported as 150-160), shaky, dizziness and hives on her neck; stated she received the vaccine at 11:30 am and symptoms started at 11:40 am. She was monitored for one hour to make sure heart rate went down and stated that her heart rate went down after 35-40 minutes. The patient was not diagnosed with COVID prior to vaccination and has not been tested post-vaccination. No treatment was given for the events. Outcome

of the events elevated heart rate, shaky and dizziness was recovered and of hives on her neck was unknown.

Joint pain started in right hand, then right arm, to right shoulder and eventually across back to left shoulder.; This is a spontaneous report from a contactable consumer (patient). This 40-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot number: EH9899) on 16Dec2020, via an unspecified route of administration, at a single dose in the left arm, for COVID-19 immunization. The patient had history of positive antinuclear antibody (ANA) without diagnosis. She had known allergies to penicillin. Concomitant medications received in two weeks included ethinylestradiol/ferrous fumarate/norethisterone acetate (JUNEL FE), acetylsalicylic acid (ASA), melatonin (MELATONIN). The patient did not receive other vaccine in the past four weeks. She had not had ever been diagnosed with COVID-19 prior the vaccination, not tested for COVID-19 post the vaccination. On 17Dec2020, the patient experienced joint pain which started in right hand, then right arm, to right shoulder and eventually across back to left shoulder. The event was non-serious. The patient did not receive any treatment for the event. The event was not resolved.

Soreness; Headache; This is a spontaneous report from a contactable Healthcare Professional reporting for herself. A 53-years-old female patient received first dose of BNT162B2 Pfizer-BioNTech COVID-19 Vaccine, Lot number: ER5730, by intramuscular route in right arm, in Hospital, on 17Dec2020 at 08:45, at single dose for COVID-19 immunization. The patient had no known allergies and no relevant medical history. Concomitant medications were taken, but they were unspecified. On 17Dec2020 at 15:00 the patient experienced soreness and headache, both assessed as non-serious and resolved on an unknown date in Dec2020 without any treatment.

unable to lift arm in active range of motion; difficulty sleeping; administered too high on the arm into the subacromial space; This is a spontaneous report from a contactable consumer (patient). A 41-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: Eh9899), via an unspecified route of administration at the left arm on 18Dec2020 at 15:00 (03:00 PM) at single dose for COVID-19 immunization. The patient was not pregnant at the time of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination, and the patient has not been tested for COVID-19 since the vaccination. The patient's medical history was not reported (other medical history: yes). The patient had no known allergies. Concomitant medication included other unspecified medications received within 2 weeks of vaccination. The patient reported that the injection was given and she thought that it was administered too high on the arm into the subacromial space. By end of day, she was unable to lift arm in active range of motion, and had difficulty sleeping. Following day, still unable to lift arm. The events unable to lift arm in active range of motion, and had difficulty sleeping started on 18Dec2020 at 16:00 (04:00 PM). The clinical outcome of the events was unknown.

Developed dizziness, lightheadedness, warmth, sweaty and had a syncopal episode at 8:45pm. All symptoms resolved then within 15 minutes of laying down in bed and having a cold compress on forehead

red splotchy itchy face; red splotchy itchy face; This is a spontaneous report from a contactable consumer, the patient. A 29-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration in the right arm on 17Dec2020 at 16:00 (at the age of 29-years-old) as a single dose for Covid-19 vaccination. Medical history included Premenstrual dysphoric depression syndrome from an unknown date. The patient did not have any allergies to medications, food or other products. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient was not tested for COVID-19 post vaccination. The patient's concomitant medications included citalopram (MANUFACTURER UNKNOWN) and ibuprofen (ADVIL); all for unknown indications from unknown dates and unknown if ongoing. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 19Dec2020 at 21:00, the patient experienced red splotchy itchy face. Therapeutic measures were taken for the red splotchy itchy face which included allergy medicine (unspecified). The clinical outcome of the events red splotchy itchy face was not recovered. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

Fever 103F, Shaking Chills Responded to Tylenol. Afebrile 12 hours later

Fever 103F, Shaking Chills Responded to Tylenol. Afebrile 12 hours later

ringing in the ear; unable to hear out of the right ear; This is a spontaneous report from a contactable nurse. A 53-year-old female patient (and nurse) started to receive bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EJ1685), intramuscularly in the left arm on 19Dec2020 at 08:00 at 53-year-old at a single dose for COVID-19 immunization. The vaccine was administered at a hospital. The patient was not pregnant at the time of vaccination. The patient did not receive any other vaccines within four weeks prior to the COVID-19 vaccine. Medical history included asthma, mitral valve prolapse, Sulfonamide allergy, and allergies to tree nuts; all from an unknown date and unknown if ongoing. Concomitant medications included atorvastatin (MANUFACTURER UNKNOWN), escitalopram oxalate (LEXAPRO), fluticasone propionate (FLOVENT); all taken for an unspecified indication from an unspecified date to an unspecified date (received within two weeks of vaccination). On 20Dec2020 at 14:00, the patient experienced: unable to hear out of the right ear (medically significant). On 21Dec2020 at 02:00, the patient experienced: ringing in the ear (non-serious). The clinical course was reported as follows: Approximately 30 hours post-vaccination, the patient was unable to hear out of her right ear. It progressively worsened; however, by 02:00, the patient's hearing returned, and the patient developed a ringing in her ear. By 14:00, all the symptoms had disappeared. There was no treatment received due to the events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The clinical outcome of the event, unable to hear out of the right ear, was recovered on 21Dec2020 at 02:00. The clinical outcome of the event, ringing in the ear, was recovered on 21Dec2020 at 14:00.; Sender's Comments: A possible contribution role of bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE) to the onset of event deafness right ear cannot be excluded due to temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as

well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

After vaccine my mouth started to get dry while I was driving home. 1/2 body sore and chest pain felt like heart burn and I was having a heard time breathing. injection site started hurting all the way up to my shoulder. I started getting chills and tired. i started feeling better last night but I did not sleep well. I still have body aches and my chest is feeling better. If I do not feel better in the next 24 hours i will be contacting my HCP.

High blood pressure; heart rate in the 100's/High heart rate; light headed and dizzy; This is a spontaneous report from a non-contactable nurse(patient). This female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose via an unknown route on Dec2020 (reported as on Thursday) for Covid-19 immunization. Medical history and concomitant drug were not provided. Patient received the vaccine on Thursday and within 15 to 20 minutes, she got light headed and dizzy with high blood pressure with a heart rate in the 100's. She went to the ER and was sent home, but her blood pressure continues to be high. Her primary care physician wanted to start her on some blood pressure medication due to continuous high blood pressure. The reporter was asking if high blood pressure and high heart rate had been reported as an adverse event for the Covid vaccine. Outcome of High blood pressure was not resolved. Outcome of the other events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's Comments: A causal association between BNT 162B2 and the events blood pressure increased, dizziness, and heart rate increased cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

diaphoretic; dizzy; This is a spontaneous report from a contactable nurse. A 51-year-old female patient (not pregnant) received her 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/Lot Number: ek5730) at single dose on 21Dec2020 11:00 AM intramuscular on left arm for Covid-19 immunization. Medical history included known allergies with codeine. Patient reported similar reaction of diaphoretic and dizzy to giving blood. It was unknown if the patient received any other vaccines within 4 weeks prior to the COVID vaccine, or any other medications the patient received within 2 weeks of vaccination. It was unknown if the patient diagnosed with COVID-19 prior to vaccination. Concomitant drug was not provided. Patient became diaphoretic and dizzy approximately 11:15 AM on 21Dec2020 (also reported as 8 min after injection). The adverse event result in doctor or other healthcare professional office/clinic visit, and Emergency room/department or urgent care. Treatment reported as patient was laid down with feet up, cool compress applied, drank some juice. The events were reported as non-serious. Since the vaccination, the patient had not been tested for COVID-19. Outcome of the events was unknown.; Sender's Comments: A causal association between BNT162B2 and the reported events diaphoresis and dizziness cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse

events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

Rash and Hives

Extremely painful legs; abdomen spasms; abdomen spasms and cramps; severe chills; This is a spontaneous report from a contactable nurse (patient). A 52-year-old female patient (not pregnant at the time of vaccination) received her 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose on 17Dec2020 04:00 PM Intramuscular in Right arm (also reported Arm Left) for Covid-19 immunization. Prior to vaccination, patient was not diagnosed with COVID-19. Medical history included hypothyroidism, hypotension, obesity, and allergies to onions. There were no other vaccines received in four weeks; however other medications received in two weeks. Patient experienced extremely painful legs and abdomen spasms and cramps, severe chills on 17Dec2020 09:00 PM. Patient applied arnica 35% on the affected area and it helped. Since the vaccination, patient had not been tested for COVID-19. Outcome of the events was resolving. The events were reported as non-serious. Information on lot/batch number has been requested.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events of extremely painful legs, abdomen spasms and cramps, and severe chills cannot be excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

respiratory distress with dyspnea and increased work; respiratory distress with dyspnea and increased work; rapid progression of symptoms; lightheadedness; tingling to right upper and lower arm; pain to mid forearm; generalized weakness; This is a spontaneous report from a non-contactable health care professional. A 72-year-old female patient received her 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot_number= HE9899) at single dose on 18Dec2020 10:00 AM intramuscular in the right deltoid muscle for Covid-19 immunization. Medical history and concomitant drug were not provided. She denied any history of previous adverse reactions to vaccines. Concomitant drug was not provided. During her 15 minute waiting period after the injection, the patient began to experience lightheadedness and tingling to right upper and lower arm. Also complain of pain to mid forearm. She denied hives, difficulty breathing, difficulty swallowing, wheezing, throat tightness, itching and tongue swelling.When walking to the emergency bay reported some lightheadedness and generalized weakness, patient denies facial drooping or weakness. No loss of strength and normal ROM to hand and arms. This provider was notified of patient reaction and she was then assessed in the emergency bay area. Patient was monitored for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with dyspnea and increased work. The events were reported as non-serious. Outcome of the events was unknown. No follow-up attempts are possible. No further information is expected.; Sender's Comments: A possible causal association between administration of BNT162B2 and reported serious events cannot be excluded, considering the plausible temporal relationship. The impact

of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

I received my first dose of Moderna vaccine at around 9:45 am on Dec 24 and I was fine for like 4 hrs after receiving it, until I started feeling similarly to the way I felt when I tested positive for Covid and had it at the beginning of November (feverish, headache, body ache, stuffy mucusless nose, fatigue, hangover sensation like nauseated and weird, etc...) Things got a little bit worse when all of a sudden I started feeling feverish and my heart started beating so fast I could hear it myself. I had to stop doing what I was doing and called (my insurance/MCD) because I was getting anxious and started hyperventilating, which did not allow me to breathe normal. They told me to take Tylenol which I did and little by little my fever started decreasing; it must have been almost 100 F at that moment. Then once again like 5 hrs after I had taken Tylenol I started getting fever again and this time I got extremely cold also and I was shaking so much and felt so weak I had to lay down and call once again; they told me to have someone take me to their urgent care center and I went there and they retested me for Covid but it was negative this time. Since I had taken Tylenol (2nd time same day, 6 hrs apart) just before I left, my fever was not that high when I showed up there. They told me studies have showed some people experience similar symptoms but when they get the 2nd not the 1st dose; however, they thought it could happen too. I had fever nonstop for almost 48 hrs; it was so high (101.7- highest reached). The rest of the time?at night when I was trying to sleep, obviously I could not take my temperature, I was half awake, half sleep hallucinating, shaking, cold, then hot and sweating a lot and speaking non sense in my sleep (according to my spouse)- this happened both nights. On Dec 26 I woke up feeling not great but definitely better but had a little headache and still felt somewhat nauseated. My last dose of Tylenol I took at 8 pm on Dec 25. I have been feeling better for the past two days but I still feel a little bit tired and not back to my normal self.

bells palsy; This is a spontaneous report from a Pfizer-sponsored program. A Consumer reported for herself. A 75-years-old female patient received bnt162b2 (BNT162B2) vaccine , via an unspecified route of administration on an unspecified date at single dose for covid-19 immunisation . The patient medical history and concomitant medications were not reported. The patient previously took mercury and experienced drug hypersensitivity. The patient experienced Bells palsy on an unspecified date with outcome of unknown. The patient is wondering if Bells palsy may be an adverse reaction to the vaccine. Information on the lot/batch number has been requested.

Low grade fever; fast heart rate; she sweated so much; she has body aches still; This is a spontaneous report from a contactable nurse (patient). This 25-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), (Batch/lot number: EH9899) via an unspecified route of administration on 20Dec2020 10:00 at single dose for COVID-19 immunization. There were no medical history and concomitant medications. Patient took COVID vaccine because she was exposure in hospital. Patient said she experienced reaction from the first dose of COVID vaccine. The patient got the first dose of vaccine by injection once on 20Dec2020, later clarified as COVID vaccine, and overnight she had a low grade fever on 20Dec2020, and she checked her heart rate from her Watch, and it said 108 to

like low 100s, stated not her usual resting heart rate, and she woke at 4AM and felt a fast heartbeat, other than that, she thought it was from fever. Low grade fever was right before going to bed around 10PM: she had body aches, headache, she was not feeling well, she was very hot, At 4AM, she thought to sleep it off, as her whole body ached, and she couldn't really move, and she looked at her Watch to check and her heart rate was 103 resting, and she didn't take her temperature again, but she sweated so much, and she turned down the temperature and as of today, she has body aches still, and a little bit of fast heart rate. Outcome of the events was unknown. Reporter seriousness for Low grade fever and fast heart rate was medically significant. Primary Source Reporter assessed Low grade fever and fast heart rate related by Method.; Sender's Comments: A causal association between BNT162B2 and the events pyrexia and heart rate increased cannot be excluded based on temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

Severe sore throat and tonsillitis, head ache

Vomit; Coughing; Felt like Throat was itchy; This is a spontaneous report from a Non-contactable Nurse. A 41-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EH9899) intramuscular on Left arm on 21Dec2020 16:30 at single dose for COVID-19 immunization. Medical history included allergies to medications, food, or other products. There were no concomitant medications. The patient did not receive any other medications within 2 weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 21Dec2020, 10 minutes after the vaccine the patient began to vomit, felt like throat was itchy, and began coughing. Events resulted that she was taken to the ER (Emergency room). She received Epinephrine, Dexamethasone as treatment for events. Events outcome was recovered on 21Dec2020. No follow-up attempts are possible. No further information is expected.; Sender's Comments: A causal association between BNT162B2 and the reported events vomiting, cough, and itchy throat cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

"lost vision and had intense cold sweats for about 2 minutes; Vasovagal response; had intense cold sweats for about 2 minutes until blood flow returned to normal in upper body; This is a spontaneous report from a contactable healthcare professional, the patient. A 36-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EK5730), via an unspecified route of administration in the right arm on 16Dec2020 at 09:30 as a single dose for COVID-19 immunization. Medical history included polycystic ovaries syndrome with diabetes, depression, anxiety, attention deficit hyperactivity disorder, iron deficiency anaemia, and vasovagal issues. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's received unspecified concomitant medications within 2 weeks of the vaccination. The patient did not receive any

other vaccines within four weeks prior to the vaccination. On 16Dec2020 at 10:00 AM, the patient lost vision and had vasovagal response and intense cold sweats for about 2 minutes until blood flow returned to normal in upper body. The clinical course was as follows: The patient had a vasovagal response 30 minutes after the vaccine and had to lie down. She lost vision and had intense cold sweats for about 2 minutes until blood flow returned to normal in upper body. The entire episode lasted approximately 30 minutes. She felt it coming and knew to sit down so she would not ""black out."" She was unable to elevate her feet above her heart at the time; however, she was able to walk and stand afterward without dizziness. The patient did not receive any treatment. The clinical outcome of the vasovagal response, lost vision, and cold sweats were recovered on 16Dec2020. It was also reported that since the vaccination, the patient had not been tested for COVID-19.; Sender's Comments: The reported vasovagal response with cold sweats and transient visual loss was possibly related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE) due to temporal relationship. However, it is worth noting that the patient had medical history including vasovagal issues. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

Arm soreness, 18 hours after vaccine with SOB, CP, fever 99. took Ibuprofen. Numbness to left side of face and hand approx. 36 hours post vaccine, that resolved in 10 hours approx. 48 hours after the vaccine. Lung pain resolved within 72 hours of the vaccine

broke out in hives on face and hoarseness, tightness in throat; broke out in hives on face and hoarseness, tightness in throat; broke out in hives on face and hoarseness, tightness in throat; throat pain, coughing; throat pain, coughing; This is a spontaneous report from a contactable Other HCP. This Other HCP reported for self that the 57-year-old female patient received fist dose of bnt162b2 (BNT162B2, Brand Pfizer), via unknown route of administration in Left arm on 21Dec2020 12:00 PM at single dose for covid-19 immunisation. Medical history included Known allergies to medications, food, or other products: Azithromycin Flushing, Spinach-anaphylaxis, mild allergic reactions to the Ocrevus, azure and Seasonal allergies, Multiple Sclerosis, Irritable bowel syndrome (IBS-C), post herpactic neuralgia. Concomitant medications included other medications the patient received within 2 weeks of vaccination baclophen, clozapine (KLOPIN), ocrelizumab (OCREVUS), sertraline, cetirizine hydrochloride (ZYRTEC [CETIRIZINE HYDROCHLORIDE]), mo. She is not pregnant at the time of vaccination. Facility type vaccine was Hospital. No other vaccine in four weeks. The patient experienced within 15 to twenty minutes of vaccine, broke out in hives on face and hoarseness, tightness in throat then sent to ED where hives continued to form on back the arms, throat pain, coughing, hoarseness increased from 21Dec2020 12:15 AM. AE resulted in: [Emergency room/department or urgent care]. Outcome of the events was unknown. Treatment received included Epinephrine, solumedrol, Benadryl IV. No covid prior vaccination. Covid tested post vaccination. Covid test post vaccination: covid test type post vaccination was Other, covid test name post vaccination was Nasopharyngeal Sofia2 SARS Antigen on 21Dec2020 with result of Negative. Facility where the most recent COVID-19 vaccine was administered was

Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, has the patient been tested for COVID-19. Test Name was Nasopharyngeal Sofia2 SARS Antigen. Vaccine Facility information available. Information on the lot/batch number has been requested.; Sender's Comments: Based on the close temporal relationship, the association between the reported events with BNT162b2 can not be completely excluded. Medical history of known allergies may have predisposed patient to react this way. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

I elevated heart rate to 159, I was hot, flush, sweating, elevated BP 154/94 which is high for me. I stayed 15 more minutes and everything was back to normal. The next morning I had a headache. By noon, I had vomiting. I went for a COVID 19 test.

Heart racing; Felt flushed and warm; The initial case was missing the following minimum criteria: no adverse event. Upon receipt of follow-up information on 22Dec2020, this case now contains all required information to be considered valid. This is a spontaneous report from two contactable nurses. A 46-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in right deltoid on 21Dec2020 18:30 at single dose for Covid-19 immunisation. Medical history included Graves disease, hypothyroidism and radiation from an unknown date and unknown if ongoing (all diagnosed about 12 years ago), dental infection (root canal that failed and said she had an infection) and teeth cleaning from an unknown date and unknown if ongoing. Concomitant medication included levothyroxine sodium (SYNTHROID) taking for many years for hypothyroidism, amoxicillin (500 mg tablet) from 21Dec2020 for dental infection. Prior vaccinations within 4 week was none. The patient experienced felt flushed and warm (non-serious) on 21Dec2020, heart racing (medical significant) on 22Dec2020. The patient received the COVID vaccine yesterday (21Dec2020). She called Pfizer Drug Safety yesterday and asked about if she could take amoxicillin with it for a dental infection. She got the vaccine last night (21Dec2020 18:30) and felt a little flushed and warm after receiving it, so they kept her for 15 minutes. Today (22Dec2020), her heart had been racing at 09:00. She was at rest and had not been exercising. Her heat felt like it will beat out of her chest. She had no history of anxiety. She was a little concerned since she got it at around 6pm yesterday and it has been about 18 hours ago. She would like to know if there have been any reports of any elevated heart rates issues occurring the day after. She called her doctor, but he did not have any information. She did start the amoxicillin yesterday before the vaccine. She got a teeth cleaning and had a previous root canal that failed and said she had an infection. She is not symptomatic. They said she needed another one root canal and crown. It is encapsulated and is not causing any issues, but it could down the line. Regarding the feeling warm and flushed, she said the room was warm and there were a lot of people in it, even though they were socially distanced. She said there was just some angst in the room. She did not have a history of getting anxiety. There was also no Air Conditioning on in the room. It subsided and she did not feel like it was alarming. At the facility, they were not documenting it. That went away within 15 minutes. Regarding

the racing heart, she does not know how long it could go on. She did have thyroid issues. She had not done thyroid labs. It could be her thyroid meds too. She took her Synthroid first thing when she woke up so it could be that too. She did not have a lot or expiration to provide. No emergency room or physician's office required. The outcome of felt a little flushed and warm was recovered on 21Dec2020 at 18:45, heart racing was not recovered. Information about lot and batch was requested.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine.The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

10:30am - Received the Vaccine Shot 11:30am- Warmth throughout face, then right had went all tingly, then numb and swollen. The numbness crept up the arm to the elbow. Then the nose started to get tingly and numb followed by the lips and gums. 12:00pm - Started to not be able to speak a sentence. The words were coming out of my moth very jumbled even though in my mind I knew what I was trying to say. Still numb in right hand, and on right side of face. 12:10 pm- Could not see fully out of the right peripheral of my eye as well to the other symptoms of not being able to speak a full sentence. I was able to speak less words than I had about 10 min prior. Numbness in my hand went away at this time. 1:15pm- I was able to speak mostly full sentences again. I got a pounding headache on the front to left side of my head and felt fatigues. 1:40pm- Finally able to speak full sentences again, I could feel my hand and all the parts of my face. Felt weak, still had headache and felt nauseous and dizzy. 2:15pm- Took 1 advil, fell asleep 4:00pm- Woke up, felt weak, disoriented, still had a headache. 8:00pm- Only a small headache left and a sore arm

Migraine; This is a spontaneous report from a contactable Other HCP reported for self. This 48-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 20Dec2020 via intramuscular at single dose (Lot # EH9899) for Covid 19 vaccine. None medical history and concomitant medications included. She got the first Covid 19 vaccine yesterday (20Dec2020) and got migraine one hour after on 20Dec2020. Stated that it has not gone away. Was not sure if specific course of action for headache since it did not occur until after 15 minutes. Outcome of the event was not recovered. Event assessed as serious (Other medically important condition).; Sender's Comments: The reported migraine was possibly related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE) due to temporal relationship. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Reporting on behalf of patient. He self reported to the Medication Safety Coordinator, that he was woken up from his sleep the night after receiving the vaccination, with his jaw moving side to side

uncontrollably. This lasted for a couple seconds, would stop, and then would happen again. This occurred about 3 times total. He also felt twitching in his forehead a couple times. These episodes self resolved and did not happen again.

"pancreatitis; acute lower abdominal pain; This is a spontaneous report from a contactable pharmacist. A 46-year-old non-pregnant female patient received the first dose of the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EJ1685), intramuscularly on 18Dec2020 at 08:00 (as reported) at 46-years-old at a single dose for COVID-19 immunisation. The patient medical history was not reported. The patient had no known drug allergy (NKDA). Concomitant medications included acetaminophen (MANUFACTURER UNKNOWN), propranolol (MANUFACTURER UNKNOWN), sertraline hcl (MANUFACTURER UNKNOWN), sertraline hydrochloride (ZOLOFT); all taken for an unspecified indication from an unspecified date to an unspecified date (which were received within two weeks of vaccination). On 18Dec2020 at 17:00, the patient experienced pancreatitis and acute lower abdominal pain; which required hospitalization and were assessed as medically significant. The patient was hospitalized for pancreatitis and acute lower abdominal pain for 3 days on unspecified dates. The clinical course was reported as follows: The patient received the vaccine "" at some point in the AM on 18Dec2020 (as reported)."" That evening, the patient presented to the emergency department (ED) with acute lower abdominal pain. The patient was diagnosed with pancreatitis and was admitted overnight. It was unknown if the patient received any other vaccines within four weeks prior to the COVID vaccine. Prior to the vaccination, it was unknown if the patient was diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Therapeutic measures were taken as a result of pancreatitis and acute lower abdominal pain. The clinical outcome of the events was recovering.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment. Other than a temporal association , there is no evidence or argument to suggest a causal relationship between BNT162B2 and the events pancreatitis and acute lower abdominal pain. The events are likely due to an underlying medical condition. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."

Extreme fatigue, muscle weakness

Developed vomiting, four to five times; Diarrhea; Abdominal pain; Slightly flushed face and minimum facial flowing; Numb ears/Numb body; Bleeding; Anaphylaxis; This is a spontaneous report from a contactable consumer. A 43-year-old female patient received bnt162b2, via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced anaphylaxis on 20Dec2020. Clinical course: the patient received the COVID vaccine on 19Dec2020, and since then she had developed onset of vomiting after 3 o' clock this morning on 20Dec2020, four to five times, numb ears, numb body. She also had diarrhea and bleeding. She had some abdominal pain and she also complained of having slightly flushed face and the minimum facial flowing. The outcome of events was unknown. Information for Lot/Batch number has been requested.; Sender's Comments: There is a reasonable

possibility that the event anaphylaxis was related to BNT162b2 based on known drug safety profile. Based on the close temporal relationship, the association between the event bleeding with BNT162b2 can not be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

She gained some weight and she thinks she was told she was 84 or 86 kg at the clinic. She weighs about 175 pounds; An EKG was done and she was told she had a prolonged qt interval; Her blood pressure went really high to 177/110; This is a spontaneous report from a contactable consumer. This consumer [patient] reported that the 48-year-old female patient received bnt162b2 (BNT162B2, Batch/lot number: EK5730), via intramuscular injection in left upper arm on 19Dec2020 07:30 am at single dose for covid-19 immunisation (Preventative). Medical history and concomitant medications were none. She got the Pfizer Biontech covid vaccine on the 19Dec. She was sent over to ER from the (clinic name) since her blood pressure went really high to 177/110 on 19Dec2020. Her blood pressure stayed around 170/100 and then she would rest for 10-15 minutes, the ER kept her there till her blood pressure went to about 144 or 150 and then she went home. She confirmed she was not admitted. She was told to go back to the ER if her blood pressure went up. An EKG was done and she was told she had a prolonged qt interval on 19Dec2020. She has not had an EKG since and was told to follow up with her doctor. Treatment: declines any, they just monitored her. When querying weight, states she knows she gained some weight and she thinks she was told she was 84 or 86 kg at the clinic. She weighs about 175 pounds. Reports she had some blood work done at the ER and it came back normal. She does not have any health conditions. She has an allergy to Cipro and fexofenadine. Vaccination Facility Type was Hospital. No Vaccine Administered at Facility. History of all previous immunization with the Pfizer vaccine considered as suspect (or patient age at first and subsequent immunizations if dates of birth or immunizations are not available was none. Additional Vaccines Administered on Same Date of the Pfizer Suspect was none. AE(s) required a visit to Emergency Room. No Physician Office. Prior Vaccinations (within 4 weeks) was none. AE(s) following prior vaccinations was None. The outcome of the events was unknown.

Redness, swelling and mild itching at injection site.

"sudden rapid slightly irregular heartbeat; My pulse rate was in 148 and remained in the 140's/rapid heartbeat; associated nausea; This is a spontaneous report from a contactable nurse. This nurse (patient) reported that the 45-year-old female patient received first dose of bnt162b2 (BNT162B2, Covid-19 Vaccine), on Arm left on 19Dec2020 09:30AM at single dose for covid-19 immunisation. She is not pregnant at the time of vaccination. Medical history was none. Known allergies was none. Allergies to medications, food, or other products was none. Concomitant medications were none. Facility type vaccine was other. No other vaccine in four weeks. Other medications in two weeks was none. The patient experienced ""I had just received the vaccination was pulling into the area where you sit and wait in case you have an adverse reaction, was just looking at my phone and felt a sudden rapid slightly irregular heartbeat. Came on very suddenly with associated nausea I am a ER nurse with 22 years

experience and so I began to take my pulse and record it with my phone, I wasn't sure if it was a reaction because I didn't fell like I "" couldn't breathe"" . Just a very rapid heartbeat. My pulse rate was in 148 and remained in the 140's. I beeped my horn on my car in case it was an adverse reaction. They placed a pulse ox on my finger and my heart rate then was 138 and O2 sats 98% . I sat for a bit and then it just went away. My heart rate was back down to the 70's."" The events started from 19Dec2020 09:30 AM and outcome of the events was recoverd. No treatment was received. No covid prior vaccination. No covid tested post vaccination. Facility where the most recent COVID-19 vaccine was administered was Other. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. List of any other medications the patient received within 2 weeks of vaccination was none. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. Vaccine Facility information available. Location of injection information is available for all vaccines received on the same date. Information on the lot/batch number has been requested.; Sender's Comments: A causal association between BNT162B2 and the reported events heart rate irregular, heart rate increased, and nausea cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."

left eye is getting puffy after receiving COVID-19 Vaccine today; left eye is getting itchy after receiving COVID-19 Vaccine today; This is a spontaneous report from a contactable healthcare professional (patient). A 62-year-old female patient received BNT162B2 (COVID-19 mRNA Vaccine BNT162B2), via an unspecified route of administration on 21Dec2020 at a single dose for COVID-19 immunization. The patient's medical history included allergies to a lot of antibiotics. The patient's concomitant medication included Non-specified anti-inflammatory. The patient's left eye was getting puffy and left eye was getting itchy after receiving COVID-19 Vaccine on 21Dec2020. The events were reported as serious, medically significant. She said she is wondering if her left eye getting puffy and itchy is an allergic reaction and if she needs to seek treatment. Reported she did not have a prescription for the COVID-19 Vaccine. Reported her left eye being puffy and itchy has not gotten worse, but her left eye has not improved. Declined any treatment as she thought if she called Pfizer, Pfizer could tell her if she should get treatment. Reported she took an anti-inflammatory twice in the past 2 weeks, clarifying the last time she took the anti-inflammatory was over 4 days ago. The outcome of the events was not recovered. Information on the Batch/Lot number has been requested.; Sender's Comments: The reported information is limited. Based on the close temporal relationship, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

The patient experienced diffuse rash on the upper extremities as well as a scratchy throat 16 hours after vaccination.

Blacked out; Vertigo; Diarrhea; Extreme Fatigue; sicker; This is a spontaneous report from a contactable nurse which is also the patient. A 48-year-old female patient received the first dose in the series of bnt162b2, lot number: EK5730, intramuscular in the left deltoid on 17Dec2020 at a single dose for COVID prevention. There were no medical history and concomitant medications. The patient received her COVID vaccine last Thursday evening, and she has been getting progressively sicker for the past couple of days on an unspecified date in Dec2020. On 20Dec2020, the patient experienced blacked out, vertigo, diarrhea, and extreme fatigue. The patient mentioned that she had extreme fatigue yesterday, with vertigo that started afternoon, and this morning her vertigo was so bad, that she blacked out in the shower, and the room is still spinning for her at this time. Outcome of the events blacked out and sicker was unknown, for the other events was not recovered. The seriousness of events blacked out, vertigo and diarrhea was reported as serious enough that she could not go to work, or get behind the wheel of a car so medically significant. Extreme fatigue was assessed as non-serious. The reported assessed the events extreme fatigue, vertigo, blacked out, and diarrhea as related to bnt162b2. The patient added that vertigo was worsened.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

severe back pain/ back aches; body aches; inflammatory reaction; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). A contactable female nurse (patient) of unknown age reported that she received BNT162B2 (COVID VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient got the Covid vaccine on Thursday (date not specified). She was taking ibuprofen (MOTRIN) (later clarified as ibuprofen) for anti-inflammatory. She went to a doctor visit yesterday (18Dec2020), and then her doctor told her that because ibuprofen was an anti-inflammatory, she shouldn't be taking it during, right after the vaccine because of inflammatory reaction and so patient stopped taking it and switched over to paracetamol (TYLENOL), now she was in severe back pain/ back aches and body aches, but anyways she was just going to end up taking it if this took much longer. Outcome of the events was unknown. Information about lot/batch number has been requested.; Sender's Comments: From the information provided it is unclear which event is the intended subject of this spontaneous report and what is the reporter's perceived relationship to the vaccine. In addition, the lack of critical information (e.g. immunization date) makes a global medical assessment impossible. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Patient experienced HA and dizziness approximately 40 minutes after vaccination. Patient was monitored to have diaphoresis with slightly elevated BP ranging from 138/72- 142/88 with HR98. Patient was monitored while standing and had no changes with dizziness but had an elevated HR of 114 with BP 131/84. After sitting again patient's BP 129/81 and HR went down to 88.

hypertension; tired; Headache; This is a spontaneous report from contactable nurse, the patient. A 52-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EK5730), via an unspecified route of administration on 19Dec2020 as a single dose for COVID-19 immunization. Ongoing medical history included hypothyroidism. Other relevant medical history included anxiety and menopause. Ongoing concomitant medications included estradiol (MANUFACTURER UNKNOWN) taken for menopause, progesterone (MANUFACTURER UNKNOWN) taken for menopause, and venlafaxine hydrochloride (EFFEXOR) taken for anxiety. On 19Dec2020 at 18:00, the patient had a headache. On 20Dec2020, the patient experienced hypertension and was tired. The clinical course was as follows: the patient received her vaccine on 19Dec2020. At 18:00 on 19Dec2020, she started with a headache, and it was not a big deal. In the morning of 20Dec2020, her headache was bad, and then her blood pressure was 180/100. She had a headache and she was tired. She mentioned her baseline was 115/84. She had no coffee or anything, and as the day went by it was 140/90. She reported that the hypertension basically lasted for one day and in the morning of 21Dec2020 it was 120/88. As of 21Dec2020, she did not have a headache. The clinical outcomes of the hypertension and headache were recovered on unknown dates in Dec2020; while that of the tiredness was unknown. The patient assessed the hypertension and headache as serious for being medically significant and related to the vaccine; however, the seriousness and causality assessment were not provided for the tiredness.; Sender's Comments: A causal association between BNT162B2 and the events hypertension and headache cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

The patient felt very hot around 15 min post vaccine, felt anxious. Felt her HR was racing, Watch said it was 103. Let the RN know and HR was then measured at 125 bpm. BP was 140 which is high for the patient (baseline around 100 systolic). She felt shaky. The RN said she saw a few hives on her chest and it was a bit itchy. They gave her some water and juice. She felt better and the hives resolved on their own. She then was given Zyrtec. Her HR is 85 when I spoke to her, 30 min post vaccine, and BP is 130 systolic. No wheezing, no SOB, O2 sat was normal the entire time. She still felt shaky and anxious. Called 2 hours after vaccine administration and she felt normal.

itching really bad; This is a spontaneous report from a contactable pharmacist. A 43-year-old female patient received the first dose of the bnt162b2 (BNT162B2; PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EH9899 and Expiration Date: Mar2021), intramuscularly on 17Dec2020 at 43-years-old at 0.3 mL, single for COVID-19 immunization. The vaccination was administered in a hospital. There was no history of previous immunizations with a Pfizer vaccine considered as suspect; and there were no additional vaccines administered on the same date of the Pfizer suspect; and there were no

prior vaccinations (within 4 weeks). It was unknown if the patient had adverse events (AEs) following prior vaccinations. Medical history included obesity from an unknown date and unknown if ongoing, hay fever from an unknown date and unknown if ongoing. There was no family medical history relevant to the AEs. Concomitant medications included desvenlafaxine succinate (PRISTIQ) taken for an unspecified indication from an unspecified date to ongoing, metoprolol (MANUFACTURER UNKNOWN) taken for an unspecified indication from an unspecified date to ongoing, montelukast sodium (SINGULAIR) taken for hay fever from an unspecified date to an unspecified date, omeprazole (PROTONIX [OMEPRAZOLE]) taken for an unspecified indication from an unspecified date to ongoing. On 17Dec2020, the patient experienced: itching really bad; which was assessed as medically significant. There were no visits to an emergency room or a physician office as a result of the events. The clinical course was reported as follows: The patient started itching really bad within five minutes of receiving the vaccine. The patient was given a shot of diphenhydramine hydrochloride (BENADRYL) and the itching stopped. This was the patient's first dose of COVID vaccine. It was unknown to the reporter if the patient would continue the vaccine series. Therapeutic measures were taken as a result of itching really bad (pruritus). The clinical outcome of the event, itching really bad, was recovered on 17Dec2020. The causality assessment from the Primary Source Reporter was reported as related; via the Method of assessment.; Sender's Comments: A causal association between BNT162B2 and the event pruritus cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

Approximately 4 hours after vaccine, noted hives/welts on arms, took cetirizine. Went to bed. ~8pm (4 hours later) was very itchy, swollen, discolored face, face felt cold/body hot. No difficulty breathing. Lips purplish, arms swollen. Went to ED. Given benadryl, 2 other pills, watched for 30 minutes. No epinephrine. Hives improved, released, had headache. Next day improved, but still mild headache and groggy. Hives gone completely 48 hours. Mild headache persists. No prior experience like this.

profound dizziness; This is a spontaneous report from a contactable nurse. A 54-year-old female patient received BNT162B2 (lot number: EK5730), intramuscular at the right arm on 17Dec2020 18:00 at 0.3 mL for COVID-19 immunization at a hospital. There were no medical history and concomitant medications. The patient experienced which she described as bizarre side effect of profound dizziness, almost like vertigo, states she was having to hold onto a wall, considered medically significant by the reporter on 20Dec2020 12:00. The patient recovered from the event on 21Dec2020, 10:00.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the event dizziness cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

Experiencing some stool that had a little bit of blood and kind of mucus; Experiencing some stool that had a little bit of blood and kind of mucus; This is a spontaneous report from a contactable consumer. A patient of unspecified age and gender received first dose of BNT162B2 via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. This past Friday, so on the 18Dec2020 got the first shot of the COVID 19 Vaccine and starting yesterday (19Dec2020), the patient started experiencing some stool that had a little bit of blood and kind of mucus. So, patient just wanted to know if that is a side effect of the vaccine that could happen or if anyone else have also reported symptoms like that. Events outcome was unknown. Information about lot/batch number has been requested.

freezing and could not get warm; shaking; sick; Chills; tired; lightheadedness; Redness at injection site; Believe the vaccine was given subcutaneous; This is a spontaneous report from a contactable nurse (patient). A 56-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EH9899 and expiration date: Mar2021, via subcutaneous route in the back of right arm where the fatty area far away from deltoid, first dose on 17Dec2020 18:15 at a single dose for routine vaccination. The patient's relevant medical history was none. There were no concomitant medications. The reporting nurse was reporting for herself for the covid vaccine. She received the vaccine and believed it was administered subcutaneously versus in her deltoid muscle on 17Dec2020. She had redness at injection site on 18Dec2020. She also reported chills, lightheadedness and was tired on 18Dec2020. She added that the symptoms did not happen until after Friday night (18Dec2020). She doesn't think she could have continued working as sick as she was that night. She did not know if it was medically significant though. She went between not serious and medically significant and then stated she guessed it would be medically significant. She was freezing and could not get warm and was shaking. She did not notice the redness until Friday night around 3pm. The redness has improved, but it was still there. Unknown time for when it first started, but the first that she noticed it was around 3pm. Lightheadedness started around 1pm on 18Dec2020. The tiredness started around 3pm on 18Dec2020. The chill started around 7pm on 18Dec2020. They all improved by Saturday, 19Dec2020. Part of this report is that the doctor said it was in her triceps muscle and she does not think it was. They pinched the skin and put it in. She said her muscle was not sore. As a nurse, she believed it was not in her triceps area. It was not in the deltoid area and that was suggested from Pfizer. The reporting nurse's seriousness for 'believe the vaccine was given subcutaneous' was medically significant, while non-serious for 'Redness at injection site'. The patient had no ER nor physician visit required; she had no prior vaccines within 4 weeks. The patient does not have a positive test for SARS-CoV2. She does not have SARS-CoV2 antibodies at diagnosis as she has had blood test a couple of months ago, either end of Oct2020 or beginning of Nov2020, and there were No antibodies at that time. The patient was not hospitalized nor was she admitted to an Intensive Care Unit (ICU). The patient did not display clinical signs at rest indicative of severe systemic illness. She did not have supplemental oxygen (including high flow or ECMO) nor received mechanical ventilation. She did not receive any additional therapies for COVID-19. The events did not require the initiation of new medication nor other treatment or procedure. The outcome of the events chills, lightheadedness, tired and Redness at injection was recovering while unknown for believe the vaccine was given subcutaneous, freezing and could not get

warm, shaking, and sick.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

itching; tingly feeling; face appeared more flushed; slight shortness of breath; This is a spontaneous report from a contactable pharmacist. A 63-years-old female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EK5730), intramuscularly in right arm on 18Dec2020 14:30 at single dose for Covid-19 immunisation. Medical history included allergic reactions (allergies to medications, food, or other products: Yes, numerous). No other vaccines administered in four weeks. Other medications in two weeks was numerous. Approximately 10-15 minutes after receiving COVID-19 vaccine (18Dec2020 14:45), patient reported itching, tingly feeling, face appeared more flushed. Seemed anxious due to history of allergic reactions and reported slight shortness of breath. Treated with diphenhydramine 50 mg PO and epinephrine 0.5 mg IM and transported to Emergency Department. Observed in that area and released a few hours later as symptoms resolved. The outcome of events was recovered on 18Dec2020.; Sender's Comments: A causal association between BNT162B2 and the events pruritus, paraesthesia, flushing, and dyspnea cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

Nausea and lightheadedness began about 20 minutes after administration. Lightheadedness abated after about 1 hour, nausea intensified and persisted, abated after about 26 hours. Fatigue began about 2 hours after administration. Fatigue abated after 24 hours. Severe headache (migraine) began about 2 hours after administration, still persists at 28 hours mark. Injection site tenderness, swelling and redness (2-inch diameter, bright red) noted about 8 hours after administration, tenderness persists, redness beginning to abate at 28 hours.

Face swell, Heart rate 108, Blood pressure 133/87, pregnant 35 weeks

Admitted to the hospital with hypertensive basal ganglia bleed, had a head bleed; This is a spontaneous report from a contactable consumer. A male patient of unspecified age received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in 2020 at single dose for COVID-19 immunization. Medical history included hypertension. The patient's concomitant medications were not reported. After vaccination, the patient was admitted to the hospital with hypertensive basal ganglia bleed, had a head bleed in 2020. The outcome of event was unknown. Information on the lot/batch number has been requested.

Redness around injection site, swollen, hardness at site, fatigue, hot/cold spells, chills.

resp distress; This is a spontaneous report from a non-contactable consumer (patient). An elderly male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at 16Dec2020 12:00 pm at single dose for covid-19 immunization. Vaccine location was right arm and it was the first dose. The patient medical history and concomitant medications were not reported. No known allergies. Patient was not diagnosed with COVID-19 prior to vaccination. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced respiratory distress on 19Dec2020, he was hospitalized for three days. Patient received treatment for the adverse event. Since the vaccination, the patient has been tested for COVID-19 with nasal swab on 19Dec2020, it was negative. The action taken in response to the events for BNT162B2 was not applicable. The outcome of events was unknown. The event was serious, the seriousness criteria was Caused/prolonged hospitalization. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

late Friday had sneezing, mild coughing, scratching throat, mild body ache, headache. Still have same symptoms.

blood pressure shot up to 205/112/blood pressure went down to 136/75; head hurt; couldn't hear that well; pulse 137; a heat wave go through her body up to her head; red rash and hives; red rash and hives; This is a spontaneous report from a contactable other healthcare professional (Patient). A 62-year-old female patient (not pregnant) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot number and expiration date not provided), via an unspecified route of administration on 21Dec2020 16:00 at single dose for COVID-19 immunization, vaccine location provided as Left arm. Medical history included Penicillin allergy. The patient's concomitant medications were not reported. After about 10 minutes receiving the vaccine on 21Dec2020 16:15, the patient felt a heat wave go through her body up to her head, couldn't hear that well and head hurt. Her blood pressure shot up to 205/112, pulse 137, red rash and hives. The patient was transported via parametics to the Emergency Room for observation. Her blood pressure went down to 136/75. No treatment was received for all the event. The outcome of the events was recovered on 21Dec2020. Information on the Lot/Batch number has been requested.; Sender's Comments: A causal association between BNT162B2 and the event blood pressure increased cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

Patient evaluated and monitored following vaccine. Developed nausea and lightheadedness approximately 20 minutes after dose given. Patient reports that she hadn't had anything to eat or much to drink in the hours leading up to vaccine as she and her husband were going to get lunch after the vaccination appointment. Patient has a history of syncope/presyncope after a blood draw in the past. Patient had no other stx other than very transient nausea and lightheadedness, which improved significantly in the hour that she was monitored. BP at time of discharge from clinic was 105/73; pulse 67

Pfizer. Only upper lip swelled slightly (noted by coworkers as well) for about 24 hours. Of note, I had Juvaderm filler to the upper lip only late January 2020.

elevated blood pressure/ elevation in blood pressure/ Highest BP 195/93 ranging 180s/90s/ Final BP 155/93; foggy headed/ less foggy; felt flushed/ feeling flushed; metallic taste in mouth; This is a spontaneous report from a contactable pharmacist. A 63-year-old female patient (not pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140), intramuscularly on 21Dec2020 15:30 at single dose on right arm for COVID-19 immunization. Medical history included Allergies to medications, food, or other products: IVP Dye, red ants. Concomitant medications received within 2 weeks of vaccination included celecoxib (CELEXA [CELECOXIB]) and atorvastatin calcium (STATIN [ATORVASTATIN CALCIUM]). The most recent COVID-19 vaccine was administered in Workplace clinic. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 21Dec2020 15:45, Initially patient felt flushed and foggy headed then developed metallic taste in mouth and elevated blood pressure, required extended monitoring period with continued elevation in blood pressure. Heart rate and respiratory rate stable, no respiratory distress noted. Highest BP 195/93 ranging 180s/90s, however denied need to be seen in ED. Final BP 155/93, less foggy, no dizziness or lightheadedness; feeling flushed remained. Total monitoring time: 83 mins, without significant distress. No treatment was received for the adverse events. The reporter reported the seriousness was no. It was unknown prior to vaccination, if the patient was diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The outcome of the events was recovered (pending clarification) in Dec2020.; Sender's Comments: A causal association between BNT162B2 and the event blood pressure increased and foggy feeling in head cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

About 7 minutes into my observation period my heart rate rose to 170 bpm and I felt warm and shaky. It took around 15 minutes to return to 70-80; About 7 minutes into my observation period my heart rate rose to 170 bpm and I felt warm and shaky. It took around 15 minutes to return to 70-80; About 7 minutes into my observation period my heart rate rose to 170 bpm and I felt warm and shaky. It took around 15 minutes to return to 70-80; This is a spontaneous report from a contactable nurse (patient). A 36-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at first dose right arm on 21Dec2020 11:45 am at single dose for covid-19 immunization. The patient medical history and concomitant medications were not reported. The patient previously took Zithromax and morphine both cause nausea and vomiting. Patient was not diagnosed with COVID-19 prior to vaccination nor tested for COVID-19 since the vaccination. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine nor received any other medications within 2 weeks of vaccination. About 7 minutes into patient's observation period, at 21Dec2020 11:45 am, her heart rate rose to 170 bpm and she felt warm and shaky. It took around 15 minutes to return to 70-80. Patient didn't receive treatment for the adverse events. The action taken in

response to the events for BNT162B2 was not applicable. The outcome of events was recovered. The events were non-serious.; Sender's Comments: A causal association between BNT162B2 and the event heart rate increased cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

A day after having the vaccine, I experienced eye soreness in my right eye. The next morning both my eyes were blood shot. I administered eye drops and went on about my day. Late that evening they were really red and watery and my vision was blurred. I went to the optometrist on Monday morning and was diagnosed with Primary iridocyclitis, bilateral. My iris had been attached to my lens from the inflammation, but had detached it self. I was put on steroid drops and made to keep my eyes dilated until my follow up appointment. Went to my follow up appointment today December 28, 2020. My eyes are looking better, but not back to normal yet. Advised to keep administering my steroids drops and only use the dilation drops every other day. I will follow up on Thursday.

New diagnosis of diabetes 5 days after receiving vaccine with no past medical of DM and no family history.; This is a spontaneous report from a contactable Nurse (patient). A 31-year-old female non-pregnant patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number=EJ1685), via an unspecified route of administration on 18Dec2020 14:00 at arm left at single dose for covid-19 immunization. The COVID-19 vaccine was administered at Hospital. Medical history included asthma and hypertension. The patient had no known drug allergies. Concomitant medication included cetirizine, budesonide, formoterol fumarate (SYMBICORT), escitalopram oxalate (LEXAPRO), montelukast and omalizumab (XOLAIR). No other vaccine in four weeks prior to the COVID vaccine. The patient experienced new diagnosis of diabetes 5 days after receiving vaccine with no past medical of diabetes mellitus and no family history. The event result in doctor or other healthcare professional office/clinic visit and Emergency room/department or urgent care. Adverse event start date was 19Dec2020 06:00 AM. Treatment received included fluid bolus, computerized tomogram (CT) scan and labs. The patient underwent lab tests and procedures which included computerized tomogram and laboratory test with unknown results on Dec2020. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of the event was recovered with lasting effects.; Sender's Comments: The reported diabetes was unlikely causally related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), considering the latency of the onset of the event. A possibility that the vaccination unmarked subject's diabetes cannot be completely excluded. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Nurse that fainted after the vaccine; This is a spontaneous report from a Pfizer sponsored program received from a non-contactable consumer. A patient of unspecified age and gender received BNT162B2 Pfizer-BioNTech COVID-19 Vaccine, via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was reported that the patient was a nurse who received the vaccine and did a live press conference on TV 15 minutes later and, as a result, she fainted. The event outcome was not reported. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Tightness in chest; This is a spontaneous report from a contactable nurse (patient). A 61-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Batch/lot number EH9899), intramuscular on 15Dec2020 14:35 in left deltoid at single dose for covid-19 immunization. The patient medical history and concomitant medications were not reported. The patient states that she is on day 7 today, and yesterday, 21Dec2020, she woke up with tightness in her chest, like someone had wringed her rib cage. She states that she wakes up tightness in her chest again this morning 22Dec2020, patient states that as the day continues, it gets a little better. The action taken in response to the event for bnt162b2 was not applicable. The outcome of event was reported as not recovered. The event was reported as serious and seriousness criteria was other medically important condition.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of event Tightness in chest cannot be excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Severe headache and mild nausea started ~ 3 hours after injection. Joint pain and muscle aches started ~6 hours after injection. 1000 mg of Tylenol taken twice over the next 24 hours with some relief. Work was missed the day following injection due to inability to perform daily functions. Mild residual muscle aches 2 days after injection (today).

Bell's palsy/facial paralysis; This is a spontaneous report from a contactable other Health Professional (patient). A 28-years-old female patient received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/ batch number: 33121, brand: EJ1685), via an unspecified route of administration at left arm on 18Dec2020 09:30 at single dose for covid-19 immunization at hospital. Medical history included anxiety, depression, diagnosed COVID-19 prior vaccination. No known allergies. Concomitant medication included fluoxetine hydrochloride (PROZAC) in two weeks. No other vaccine in four weeks. The patient experienced bell's palsy/facial paralysis on 21Dec2020 19:00 with outcome of not recovered. The seriousness was reported as no. The adverse event result in doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. The treatment received for the adverse event was reported as unknown.; Sender's Comments: Based on available information, a possible contributory role of the subject vaccine cannot be excluded for the reported event of Bell's palsy due to temporal relationship. However, the reported event may possibly represent intercurrent medical

condition in this patient. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Sore arm x 36 hours. 1 doses of Acetaminophen; 1 dose of Ibuprofen.

Weakness and tingling down left arm; Weakness and tingling down left arm; Lightheaded; PVC's every 3 beats; emotional too and just very tired; Can not read the vaccination card as she does not have her glasses; Palpitations; Fatigue; Slept a lot; Thready pulse and vertigo; Thready pulse and vertigo; Soreness in left arm at the injection site and down the left arm; Soreness in left arm at the injection site and down the left arm; This is a spontaneous report from a contactable nurse (patient). A 54-year-old female patient received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, reason for no lot number of COVID Vaccine: Can not read the vaccination card as she does not have her glasses, Expiry Date unknown), via an unspecified route of administration in the left arm on 18Dec2020 at single dose for 'Work with COVID patients'. Medical history included none. There were no concomitant medications. The patient experienced weakness and tingling down left arm (hospitalization) on 22Dec2020, lightheaded (hospitalization) on 22Dec2020, PVC's every 3 beats (hospitalization) on 22Dec2020, soreness in left arm at the injection site and down the left arm on 18Dec2020, thready pulse and vertigo on 19Dec2020, fatigue on 20Dec2020, slept a lot on 19Dec2020, palpitations on 21Dec2020. Details as follows: Caller says she received the vaccine, she is a nurse. She got the vaccine on Friday, 18Dec2020. She had soreness in her arm and at the injection site on Friday but that was it. On Saturday (19Dec2020) she noticed a thready pulse, but went on with her day with only a little arm pain. Sunday (20Dec2020) she was fatigued and the thready pulse continued. She slept a lot on Saturday (19Dec2020) and Sunday (20Dec2020). Yesterday (21Dec2020) she felt a little better, but had palpitations here and there. This morning (22Dec2020) she went into work, was very lightheaded, had tingling down her left arm, and had palpitations. So she hooked herself up to a monitor. Her pulse ox was between 97-99%. Her heart rate would be in the 90s and then drop to 48, so she went down to the ED. She has had a CT, and she is throwing PVC's every 3 beets. She has not been admitted as they are still waiting for results. She is still in the ED. They did a CT to see if there was a possible clot. On 18Dec2020 she received the vaccine around 2 PM. She had soreness at the injections site and down the left arm, which went away by Sunday (20Dec2020). She now (22Dec2020) has weakness and tingling down the left arm. It was never red or anything at the injection site. Saturday, 19Dec2020, she had thready pulse and Vertigo which lasted until Sunday 20Dec2020. She would be laying in bed and try to flip to the other side and having vertigo. When the fatigue started on Sunday (20Dec2020) she did not feel like herself. She was very emotional too and just very tired. Since she went to the ED she has had a CT scan, one with contrast and one without. She had a chest X-ray, and she is on a cardiac monitor. Results are pending. She has Trigeminy PVCs. She says she never goes to the hospital. But she is not admitted yet (pending clarification). Can not read the

vaccination card as she does not have her glasses. Unable to read off the NDC, lot, and expiration date. History: Has been on the same vitamins for two years with nothing new. Blood pressure: Normal base line is 130s/80s maybe lower. Heart rate: Currently within her normal limits of 80s-90s. Depending on what happens, it was asked if she should get the second dose. The patient underwent other lab tests and procedures which included blood pressure measurement: 163/76 on 22Dec2020, chest x-ray: unknown result on 22Dec2020 (Result: Pending), computerised tomogram (CT scan): unknown result on 22Dec2020 (Result: Pending), heart rate: 80s-90s on 22Dec2020, Pulse oximetry: 97-99 % on 22Dec2020, cardiac monitor: results are pending on 22Dec2020. The outcome of events weakness and tingling down left arm, pvc's every 3 beats, lightheaded, palpitations and fatigue was not recovered. The outcome of the event soreness in left arm at the injection site and down the left arm was recovered on 20Dec2020. The outcome of the events thready pulse and vertigo was recovered on 20Dec2020. The outcome of the event slept a lot was recovered on 20Dec2020. The outcome of other events was unknown. Information on the lot/Batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject vaccine cannot be excluded for the reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Shortness of breath; fast heart rate with just activity/increased heart rate; This is a spontaneous report from a contactable nurse. A 47-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685, expiration date: Mar2021), via an unspecified route of administration on 18Dec2020 10:00 at 0.3 mL, single (0.3ml constituted dose) on left deltoid for COVID-19 immunization. Medical history was none. The patient's concomitant medications were not reported. On 20Dec2020, the patient experienced fast heart rate with just activity, Shortness of breath. Reporter seriousness for Shortness of breath was Medically significant. This patient reported shortness of breath that resolved within hours and fast heart rate with just activity. Fast heart rate with just activity: In the morning around 08:00. It had resolved. Shortness of breath: In the morning as well. Resolved by the evening. Vaccination Facility Type was Hospital and Vaccine Administered not At Military Site. There was no additional vaccines administered on same date of Pfizer Suspect that caller was aware of. The adverse events didn't Require A Visit To. Relevant Tests: Did a COVID-19 test and it was negative. Per (website name), patient should not get a second dose. Wanted to know if this was true. Caller further reported that the patient receiving the COVID-19 vaccine experienced shortness of breath and an increased heart rate for a prolonged period, and was now stable. Caller saw recommendation from the (website name) indicating that the patient should not receive the second dose of the vaccine, and wanted to validate the information. The case safety report was considered as non-serious by the reporter in the further reported information. The outcome of the events was recovered on 20Dec2020.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a

possible contributory role of the suspect product BNT162B2 to the development of event Shortness of breath cannot be excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Developed fever and cough on 12/25/20, tested positive for Covid-19 on 12/26/20

"splotchy rash that started on both of her arms; she was not ok, and she felt weird, and stated something feels wrong; she felt dizziness and like she needed to pass out; she felt dizziness and like she needed to pass out; her knees buckled and she lost her balance; her knees buckled and she lost her balance; hyperventilating and couldn't slow her breathing from fear; hyperventilating and couldn't slow her breathing from fear; This is a spontaneous report from a contactable nurse (patient). A 30-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot no: EK5730, via an unspecified route of administration in right arm on 21Dec2020 16:30 at a single dose for COVID-19 immunization. Medical history included bilateral mastectomy, total hysterectomy, breast cancer gene 2 (brca 2), ankylosing spondylitis (AS), allergies to penicillins and latex. The patient was not pregnant at the time of report. Concomitant medications included isotretinoin, estrogens conjugated (PREMARIN), cetirizine hydrochloride (ZYRTEC), meloxicam. The patient previously took ciprofloxacin and experienced allergies. On 21Dec2020 at 16:45, the patient reported that she showed a nurse a splotchy rash that started on both of her arms. At that time, she also stated she was not ok, and she felt weird, and stated something feels wrong. Then she said that she felt dizziness and like she needed to pass out. The nurse asked if she could still breathe and she said ""I think so."" They asked her to stand then when she did her knees buckled and she lost her balance and was dizzier and more fell back into the chair she was sitting in. Then they just lift her onto the gurney. On the way to the emergency department, she began hyperventilating and couldn't slow her breathing from fear. Upon arrival she was asked for her name and birthdate and she slowly was able to say it. She was told she was given epinephrine, 2 rounds she thinks for her hives that had showed and her respiration was in the 39-49 range. Then they gave her methylprednisone (reported as ""methypedisone""), famotidine (PEPSID), and steroids, and lorazepam (ATIVAN) to calm her breathing as well as IV fluids. Then she was able to breathe 20-35 rpm. The patient was not diagnosed with COVID-19 prior to vaccination and has not been tested for COVID-19 since the vaccination. The events were reported as non-serious. The patient recovered from the events.; Sender's Comments: The patient had medical history included allergies to penicillins and latex., and to ciprofloxacin. The reported events were probably related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), due to temporal relationship. Patient's drug allergy history and nervousness may have played to contribution role to the clinical manifestations. This case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics committees and Investigators, as appropriate."

Autoimmune disorder, it just exacerbated when I got the shot; Autoimmune disorder, it just exacerbated when I got the shot; Joint pain; My immune system overreacted and it was like rash all over my body; This is a spontaneous report from a contactable Nurse for herself. A 32-year-old female patient received bnt162b2 (BNT162B2; Lot #EH9899) vaccine, intramuscular on 18Dec2020 at single dose for covid-19 immunisation. The patient medical history included autoimmune disorder. The patient's concomitant medications were not reported. The patient stated that she suffered from unknown autoimmune disorder, and it just exacerbated when she got the shot, and she had like rash all over her body and had joint pain. The patient was treated with steroids.; Sender's Comments: A possible contribution role of BNT162B2 to the aggravated autoimmune disorder, joint pain and rash cannot be excluded. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"low grade fever; Her blood pressure was high/ still really high/ blood pressure was up; headache; Fifteen to twenty minutes after she received the vaccine she became light headed and dizzy/ light headedness and dizziness; This is a spontaneous report from a contactable nurse (patient). A 36-year-old female patient received BNT162B2 (Lot#: EK5730) via an unspecified route of administration on 17Dec2020 afternoon at single dose in the left arm for COVID-19 immunization. Caller was unable to confirm the manufacturer of the vaccine that she received. It is not written on the card, and she didn't see the vial. The patient medical history was not reported. Concomitant medications included oral contraception pill, but the name was unknown. Fifteen to twenty minutes after she received the vaccine on 17Dec2020 she became light headed and dizzy. She had to catch her breath. She couldn't shake it off. The light headedness and dizziness lasted at that intensity for 10 minutes, but it never went away. They encouraged her to be admitted in the emergency room (ER). She would say that the seriousness of being light headed and dizzy was disabling. Caller didn't remember the exact numbers for her blood pressure. It was 160's over 105. Her heart rate was in the low 100's, around 105. She stayed at the first monitoring station in the vaccine area for 2 hours. They were taking her blood pressure every five minutes. She was given diphenhydramine hydrochloride (BENADRYL) there and lots of water. After 3 hours and she was not improving they called a ""code medic"" that got the medical director and nursing supervisor to come. They encouraged her to go to the ER for continual monitoring. She stayed in the ER for4 hours and was given meds to help with the blood pressure. She was discharged from the ER home. She was nervous because of all this stemming from the vaccine. She had a low grade fever on 18Dec2020 (Friday) night. Caller stated her work had already reported her reaction. Occupational safety and the medical director are aware. Caller does not have reference number to provide. On 18Dec2020 (Friday) she was not overly concerned because it was the next day. Her blood pressure was high and her heart rate was in the 100's. They monitored her for a couple of hours and she was given a diphenhydramine hydrochloride (BENADRYL). She went to the emergency room (ER) for a few more hours and received additional treatment. They sent her home to be monitored at home. She has been taking her blood pressure every day since and it had not come down. It was still really high. She called her primary care doctor. He was wanting her to start blood pressure for medication it. She was concerned about starting

it with the assumption that it was related to the vaccine. She would like to know the right thing to do. It seems safe to take the medicine, but it was unknown that whether it was going to mask the blood pressure and something else be going on. On 18Dec2020 she still had a headache and didn't feel well, but she thought she needed to give it some time. She had been anticipating not to feel well on 18Dec2020 (Friday). On 19Dec2020 she felt better considering she didn't have a headache. On 19Dec2020 (Saturday) her blood pressure was 138/90 and she felt good. Then on 20Dec2020 she had the bad headache and her blood pressure was up. On 20Dec2020 (Sunday) she had a bad headache and her blood pressure was 156/100. She came to work today and her blood pressure had been high all day. She still had a headache and the light headedness continued. The outcome of the event low grade fever was unknown, of other remain events was not recovered.; Sender's Comments: A causal association between BNT162B2 and the event dizziness cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."

Soreness at injection site, severe fatigue

within 5 minutes of vaccination recipient felt lightheaded, pounding HR, and general weakness. recipient laid down, drank some water after 25 minutes, then proceeded to leave. Checked in with recipient at 2:30 PM and the recipient is back to normal no issues

101.5 Fever, HR 155, SOB

"Patient was experiencing congestion and was taking Zyrtec prior to Vaccine. He also states his ""stomach was off"" then night shift before his vaccine. States that his stomach started to feel better so he went ahead with the vaccine. After the vaccine he developed diarrhea in which he had about 6 episodes of, a head ache, nausea, and a dry cough. States he was feeling a little better this morning, but started having diarrhea again and had to take Tylenol for his head ache. States arm is sore from the injection."

Associate returned 45 minutes after receiving the vaccine. She was flush and had already taken 8 puffs of her inhaler. Difficulty breathing. Given two doses of orally Benadryl 25 mg each. Taken to the ER. Stated, She did not take her oral steroid that morning per patient

the following morning after receving the vaccination at around 0300 the patient developed Fv TMax 101.8 F along with chils, body aches, nausea and diarrhea. These symptoms lasted around 36 hours with the patient taking acetaminophen regularly.

5 days of Diarrhea 4 days of left ear pain 4 days of constant headache 5 days of lethargy 2 days of cough 4 days of hip joint pain 4 days of muscle pain TXT: Extra Strength Tylenol & 800 ibuprofen

Arm pain and fever of 100.5 began same day as vaccination. Fever went away after several days, but return on 12/28 with fatigue.

Right arm pain (injection arm) that began at 8:35 AM. Rated pain 6/10. Vital signs: T 98.1 F, BP 145/103, HR 90, RR 18, SPO2 98%. Assessed by onsite MD. Staff also complained of feeling tired. Returned to work after injection. Staff advised to take ibuprofen 800 mg with a meal and monitor symptoms. Advised to contact PCP if not improving over next 3 days. Also advised cool compress to area by MD.

Sun: got vaccine. Tue: 4 am started to have headache. Wed: sore throat until Thu. Thu: Went to work and started to cough, still coughing. no fever. today: cough, congestion, body pain but getting a little better.

Pt. c/o facial redness, flushing, eye puffiness and facial tingling within 30 minutes to 1 hour after receiving the vaccine. States facial symptoms resolved within 1 hour after beginning. Pt. also states started vomiting 2 days after receiving vaccine and lasted for 36 hours. Pt. states went to the emergency room but was unable to be seen. Went to urgent care clinic and had bloodwork drawn and IV fluids were given on 12/28/2020. States feeling much better today on 12/28/20.

My chest was hurting, my heart was racing, I woke up with bleeding from my mouth and nose, a thick film in the roof of my mouth. I was taken by ambulance. I have a cough, headache, fever, nausea, vomiting and diarrhea.

After receiving Pfizer COVID-19 vaccine on 12/18/20, patient c/o nausea.

Raised area with hardness with discoloration to the injection site. Itching occurred on day #2 of administration. Injection site is tender upon palpation.

On day of injection arm soreness, otherwise fine. Woke up at 6:00 am the next morning with my eyes ticking to the right and extremely dizzy. Couldn?t walk down the hall without leaning on the wall. Dizziness persisted all day on the day after injection but got slightly better as the day went on. Using a pulse ox I checked my heart rate which was resting around 100 and when I walked down the hall and back it rose to 135 which is much higher than my normal resting around 85. The following day (12/28), dizziness is gone but heart rate is still higher than normal.

12/16/2020 HEADACHE AND FATIGUE, RASH ON HANDS, RASH ON TRUNK AND ALL EXTREMITIES. 12/20/2020 HA WORSENED PRIMARY AT BASE OF SKULL, DEEP, NOT MUSCULAR. BOTH SIDES. 'ATTRIBUTED TO DRUG ALLERGY; SULFA/BACTRUM' CYPRO, STEROID INJECTION STILL HAVING HA, UPSET STOMACH AND VERY WEAK. VITAL SIGNS WITHIN NORMAL LIMITS 'ROUGH NIGHTS' TELE HEALTH 12/29/2020 DR REQUESTING ANOTHER COVID TEST

Heart palpitations 12/26/20, approximately an hour after vaccine.

Headache and vomiting beginning night of vaccination on 12/24/2020 and continuing to 12/26/2020 accompanied by extreme lethargy. Patient states she was unable to do anything and stayed in bed for days. When I spoke with her today 12/28/2020 she stated she had a headache and was very fatigued still.

Patient had throat tightness and trouble swallowing within 7 minutes of injection. 30 minutes after developed tachycardia and hives. Received prednisone and Benadryl IV symptoms resolved. Patient is 16 weeks pregnant at this time

possible serum sickness 7 days after vaccine: Hand itching, angioedema to lips and face, swelling to hands and genitals, urticaria to chest, inner elbows, groin, genitals, extremities, flushing to face

Itchy throat, gulping to swallow, red eyes, flushed and diaphoresis

12/24/2020 started mild cough, still coughing, sneezing, no fever.

Moderate pain in injection arm. Muscle and joint pain. Headache

Shortness of breath, low oxygen level, cough, fatigue, nausea, vomiting, diarrhea, body aches, headache, chills

Staff received vaccine and sat in observation area at 1405. At 1420, staff complained of right arm pain (4/10) at injection site. Vital signs WNL. Patient was assessed by onsite MD at 2:35 PM and returned back to work at 2:37 PM. Advised by MD that he could use ibuprofen and he should monitor site. No redness or swelling noted at injection site. Normal range of motion

24 hours post vaccination, the patient developed hives. Patient was seen by her PCP for evaluation. Prescribed oral prednisone and OTC antihistamines.

Patient states that a few days after receiving the vaccine, she started to experience a little swelling and irritation at site. She did not report this because she experiences this with the flu shot. She is no longer having the swelling and irritation. On 12/28/2020, patient states that there is a raised, circular rash as the injection site that is similar to a ringworm. She states that is only itches when she touches it. Patient states that she is not experiencing any other symptoms.

Swelling (Lump) and discomfort to left neck area. Noticed it when I woke up Monday 12/28/2020

Experiencing throat congestion with mild tingling on tongue and chest tightness with a slight dry cough

Experiencing throat congestion with mild tingling on tongue and chest tightness with a slight dry cough

numbness below nose, outer upper lip, inner upper lip, tongue. reports symptoms occurred within 30 minutes of receiving vaccine. Took Benadryl and 40 mg of Pepcid. resolved within an hour.

Fever (101.8 - 102.3) and chills Fatigue Headache/stiff neck and pain Lasting 24 hours

I got the vaccine on Monday 12/21. The main symptom that I was having was tachycardia(HR-90?s to 130) for 3 days. Only other symptoms were injection site discomfort, myalgias, fatigue. I had lab work on Tuesday by PCP - normal. EKG showed sinus tachycardia. Resolved by Thursday 12/24.

I went to ER exp redness around the right eyebrow, rash, cheek was swollen. I was placed on Steriods and Benadryl finished the treatment on 12/26. The rash kind of came and went cheeks was swollen and

I felt jittery. I started to feel better on 12/27 and placed a call to my PCP to make sure receiving the second vaccine. My PCP is reaching out to a allergist and contacted Phizer about concerns of the second vaccine. I haven't be able to wear makeup due to my fair skin complexion and don't wont to irritate the rash on my face. I have missed 2 days of work

"Reported ""funny taste in throat."" Stated it was ""metallic"" and occurred five minutes after injection. No unusual foods in the morning prior to vaccination. No food allergies. Upon assessment by onsite MD, patient had mild heaviness in eye and frontal head area that began 15 minutes post-administration of vaccine. Had ""wooziness/lightheadedness"" 15 min after injection as well that resolved. Chest heaviness in left area that lasted 2 minutes, resolved. Reported some anxiety/nervousness. No history of cardiopulmonary disease. Negative EKG and stress test in 2006 that was conducted due to chest pain after walking. No history of GERD. Denied other signs and symptoms."

Possible itchy, red spots over torso and neck

Moderna COVID-19 vaccine EUA Developed throat, cough and throat clearing during observation period. Refused epinephrine. Code assist called and person was taken to ED where received Solumedrol, famotidine, Pepcid, and Benadryl; continued to refuse epinephrine in ED. Symptoms resolved and discharged home.

LocalizedL arm soreness, progressed to fatigue and chills, 12/27 developed severe nausea, fever 12/27 night 100.9, slept for 18 hrs,, awoke this am with a pounding headache,w/mild dizziness, no SOB,has runny nose,post nasal drip and a dry cough, right sinus tenderness

tingling in the back of the throat. Pt was flushed and sweaty. Pt vitals were 179/107, pulse 112.

Day 1-2: malaise, fatigue, muscle aches, chills, sweats, began ibuprofen Day 3 (12/24) sudden onset of severe L sided chest wall pain, lasting for several hours, other symptoms continued requiring ibuprofen. Day 4: moderate L chest wall pain, Day 5: In the AM pain was reduced, but at about noon after a 17 minute exercise program, pain was severe associated with SOB, went to ER and found to have a L pleural effusion, no pneumonia, no PE on CT angio. Due to lack of clear causative process: began augmentin, azithromycin, prednisone, aspirin and Tylenol... Day 6: Much improved, but still L chect pain with deep breathing coughing and recurrent hiccups. Day 7: a little worse in AM until prednisone 40 mg, aspirin 162 mg and 1000mg Tylenol

Muscle Pain, Nausea, Dizziness, Injection site pain

Palpitations, racing heart rate, lightheadedness

On 12/22/2020 we had 1 patient who had a severe allergic reaction to covid 19. after she was administered covid 19 vaccine at about 11 am she went in to the observation area for 15 minutes. while there under the observation of the facility staff members she reported to them that she was having some difficulty breathing and her lower throat was closing up. the staff member came over to the administration area to ask me to bring the epi-pen because they have someone with anaphylactic allergy reaction. I ran over there with a box of epi-pen and patient stated she is having difficulty

breathing and her throat is swelling up and I noticed her lips were turning blue. at that time I administered the epi-pen and asked the facility members to call 911. which the facility members did promptly. I kept her under observation with the 2nd pen ready just in case it was needed. the EMS showed up within 15 minutes and took over from there and transported her to the hospital. The staff members at the facility also called the patients doctor to inform him of the allergic reaction. I followed up with patient on 12/23/2020 at 4.37 pm. and at that time she was doing fine. she informed me that all of her symptoms of the allergic reaction have gone away and all she has is some cough and some shortness of breath. she had been discharged by the hospital and is on some steroids and under her physicians care. I talked to employee at store as he is the one charged with recording this incident and he has informed me that he talked to the facility administrator and facility administrator informed him that both patients have recovered completely and were back to work today on 12/23/2020

Sore Arm x 36 hours

Feeling foggy after vaccine Vitals PO2 100% Temp 36.6 P 85 b/p 112/76 No treatment required left after 30 min observation AMA

Developed itching and redness to bilateral arms and face approximately 20 minutes after vx admin. Admin Benadryl 25mg po x 1 per S.O. 1400-itching nearly resolved, redness decreased.

tingling of posterior tongue flushness of neck and upper arms

Body Aches, Fatigue, Soreness around injection site

Started having chest pain and shortness of breath approx. 10 hours after injection. Symptoms kept Worsening. Taken to the ER. Cardiac workup performed. It was negative. Diagnosed with Pleurisy.

The staff had the Covid vaccine in the morning 12/23/2020. In the afternoon, received a phone call from her boss saying that her boss was COVID positive. Boss only had headaches. Then the staff went to have Covid test, the result was negative. On Thursday she started to expreience headache, still having headache and mild body ache.

Sore arm x 48 hours.

Fatigue, Dizziness, Arm Pain, Redness, Swelling, Light sensitivity, Headache, Muscle Pain in arms and legs, Painful to touch the arms and legs, felt like she worked out extremely long, right knee/leg swollen. Dr. Prescribed cephalexin and Naproxen 500, helped swelling, started taking on 12/25. There was a break in between the pain, from 17th to 20th there were the first symptoms, and then a break, but muscle fatigue started on 12/23.

Received vaccine at work on 12/23/20 at 1600. No problems receiving it. No pain at site or afterwards. about 12 hours later (04am) on 12/24/20, I woke up with body aches and was especially across my shoulder blade area. Had headache. Up that morning. Spiked T-102.5 orally with horrible headache. Temp did break on 12/24/20, but did come back later that day T-101. Continued with horrible headache, body aches, became very sore at injection site. Lethargic. No appetite. Diarrhea.

approximately 3 hours after injection subject developed rapid irregular heart rate consistent with recurrence of her atrial fibrillation which she had not had for at least one year prior. Also noted chest pain and weakness. Took an extra dose of atenolol with some improvement. Symptoms completely resolved overnight without any recurrence since.

Injection site soreness, Heat flashes

Associate developed a rash and tachycardia. Received two doses of po benadryl. Symptoms resolved.

12/21 SITTING IN CHAIR, FELT TINGLING IN EAR, 'FEELING FAINT'. MOVED TO CHAIR AGAINST THE WALL, TOLD MEDICAL STAFF. FAINTED, SWEATING PROFUSELY, 'WANTED TO GO TO SLEEP'. MONITORED HR, BP. VOMITED. BP WAS STILL ELEVATED 136/100. 'FELT BETTER' AFTER VOMITING, COLOR CAME BACK, 'CAME TO'. ER: BASAL EVENT ABOUT TO DISCHARGE, TINGLING CAME BACK. NOTHING ON MONITOR INDICATED ANY PROBLEMS. EVENTUALLY DISCHARGED AS SYMPTOMS DECREASED. DIAGNOSED; SYNCOPE

The day after I received the vaccine, I developed chills, headache, fatigue. Approx. 23 hours after vaccine administration I noticed throat swelling/difficulty swallowing. I took 50 mg of benadryl and went to a local walk in clinic. O2 sat 98%, no respiratory distress, nurse practitioner reported my throat and rest of assessment were within normal limits. Instructed to continue taking benadryl and monitor symptoms. Later that evening I developed congestion, so the morning of 12/24 I called my work's COVID hotline and they instructed me to come in to be swabbed. I received negative COVID-19 results from my works Occupational Health department on the morning of 12/25. The throat swelling/difficulty swallowing has gotten better, but still not back to baseline as of 12/28. I have a appointment with my PCP, to follow up.

Soreness at Injection site

Slight headache for several days following vaccine, resolved as of 12/28. On 12/28 she had a sudden wave of severe nausea, one episode of vomiting and subsequent generalized achiness with mild residual nausea.

Warm, tingling & numbness 10 minutes post injection. Monitoring indicated elevated HR & BP. Team member released after 50 minutes. TM was driving to her clinic and developed left side numbness to her cheek, upper arm and lower left back areas. Supervisor completed incident report and had team member go to urgent care and then went to ER. TM drove herself. ER provider Dr. contacted EH and informed us that TM did not have anaphylaxis and has no known allergies. She also drew CBC, Mag, Urine pregnancy & performed a CT scan w/o contrast to rule out kidney stone. No significant findings were noted.

Patient reports symptoms following COVID-19 vaccine. Patient reports she had brief episode of heart racing, throat tightening, feeling lightheaded. Symptoms already improved within 1-2 minutes by the time this RN reached patient. Denies itching, hives, shortness of breath, or any other symptoms. Has history of anaphylaxis and anxiety attacks, was worried about having anxiety attack with vaccine today. BP and pulse normal on two repeat checks. Patient alert, oriented, speaking clearly and in no apparent

distress. Symptoms resolved and did not return by end of patient's post-vaccination waiting period. Patient works on campus in oncology with healthcare providers nearby for help if any further symptoms.

After receiving the vaccine I was immediately nauseated. I went back to my desk to work and was dizzy and felt like I would vomit. This went away after an hour or so. My arm felt totally normal right after the vaccine, but later in the evening it worsened and I had a dead arm for about 24 hours. The next morning when I awoke I felt there was an elephant sitting on my chest. I couldn't catch my breath or take in a deep breath. I tried to walk down the stairs to get my inhaler, but was so dizzy I had to hang on to the railing in order not to fall. When I got to my medication cabinet I had difficulty opening the cupboard. I took my inhaler and the chest pain seemed to ease up as the day progressed. I had such terrible body aches that I tried to open a bottle of Ibuprofen and had extreme difficulty with my fingers. Throughout the day my fingers were cramped up and I was unable to hold on to anything, even the steering wheel of my car to drive. My hands were so sore that I tried massaging them but nothing helped. I took ibuprofen and Tylenol every 4 hours to help and after about 48 hours the intense burning, aching, and cramping somewhat subsided. Over a week later, I am still struggling to use my cell phone and text messaging. My fingers are not working right so I am hoping that will go away. In addition, I have been achy with chills since the morning after getting the vaccine. I can not seem to warm up. I have tried warm baths and sleeping with hot pads, but I have terrible chills and aches. My joints and muscle hurt all over my body to the point that now I have made an appointment with a doctor to see if the vaccine caused some kind of autoimmune reaction. My fingers, hips, and knees are the areas that hurt the worst still. I am a marathon runner and was currently training and doing well. After the vaccine, my joints and muscles have been so painful that I haven't been able to maintain what I was currently doing with running. I have ended up icing or heating different parts of my body daily and gone through a lot of ibuprofen, naproxen, and Tylenol trying to find relief. My entire body is covered in Icy Hot as that seems to help a little. I am unable to sit for more than a few minutes without pain.

"Early morning hours 0100 of 12/19/2020, awoke with SOB/dizziness/polyuria/anxious/Heart palpitations/Tachycardia (no tx/went back to bed thought I was just anxious) Afternoon of 12/19/2020 Fatigue/dizziness/HA (Motrin) Early morning hours 0130 of12/22/2020 awoke with SOB/dizziness/Polyuria/anxious/Heart palpitations/Tachycardia 120-130/felt something wasn't (right) (went to Hospital ER, cardiac workup, multiple PVC's some couplets, tachycardia. Given a liter of fluids) Told it was a Large Catecholamine release related to my immune response to the vaccine, Told Heart was ""irritated"""

10 minutes after the vaccination, she began clearing her throat, within 30 minutes began coughing, which led to chest tightness. Was evaluated in the ER and admitted for observation. Given: Prednisone 40mg po, Benadryl 25mg po Duoneb x 3 and Pepcid 20mg

Intractable headache that started 1 day after the vaccine was received. Still having headache as of today, 12/28/2020. Has been taking Ibuprofen around the clock with no relief

Patient woke up the morning after the vaccine and could not get out of bed. She felt horrible and disoriented. Her husband had to help her as she could not stand, was sweaty, nauseated and dizzy. BP 170/107. Did not feel well all weekend and was extremely fatigued and dizzy with a 10 on a scale of 1-10. Patient feels better today and is able to work.

Injection site pain

Injection site pain

Redness, Swelling, Fever, Pain to injection site. Achy and diarrhea for 1 week

"two days post-vaccination on 12/25/2020, had ""COVID sxs of H/A, cough, N/V/D. COVID Swab done early on 12/25/20 was negative. Went to ED for continuing sxs, re-tested for COVID by nasal swab, negative. In ED, states Hgb was 10.1 Gms which she states was a 35% drop from previous Hgb of apprrx. 16 Gms, approx. one year previous. Cponsulted with her PCP on 12/28/2020 and repeat Hgb pending. States her PCP advised against receiving Dose #2 of vaccine ""due to dramatic drop in Hgb. which he felt was due to COVID Vaccine on 12/23/2020."" She plans to decline Dose #2 vaccination."

One day after my COVID-19 injection, I noticed a large growth on my left elbow. It is painless and feels like there is liquid inside. It is about the size of a medium sized egg. The physician at the administration site said it appears to be olecranon bursitis or symovitis.

generalized itching that started in her left hand then spread to the rest of her body. Itchy ears, throat, eyes. Slight coughing and runny nose

Moderna Inj given: 0830 Pt complaining of difficulty swallowing: 0839 Epi-Pen given: 0840 Pt sx: Original complaint of difficulty swallowing. Upon assessment, glands were noted to be swollen and red. Pt was given Epi-Pen. Pt had notable peri-orbital edema and his face was flushed. Upon assessment of vital signs pt was noted to be tachycardiac with an elevated blood pressure. No adventitious lung sounds. When pt was loaded onto EMT gurney, his BIL LE were noted to be edematous. 0845 0849 0853 0856 T: 96.9 97.5 97.5 97.9 P: 110 95 77 78 R: 24 20 20 20 BP: 151/92 169/80 137/86 137/95 O2: 99% 99% 99% 97% Ambulance arrived at 0856. Pt transported via ambulance to Hospital for assessment and treatment.

Received the vaccine and 8 hours after had nausea. Was scheduled to work and by the time I got inside I also had chills, fever, muscle aches and fatigue. I was sent home. I took Tylenol and went home and went to sleep. The next day the fever was gone but I still had some fatigue and a sore arm at injection site. The next day I only had a sore arm at injection site. No other symptoms after that day.

Soreness at injection site

Soreness at injection site

racing heart, shakiness, dizziness

After vaccine I noticed an immediate metal taste in my mouth, 30 minutes after vaccine I noticed a tingle feeling to my tongue and the metal taste, 45 min after vaccine I noticed my tongue was swollen, Vaccination clinic called and recommended taking diphenhydramine and go to ER if symptoms got worse.

Flu like symptoms, Headache, sore throat, stiff neck, mild cough, fatigue, hot flashes, (left side of face hurts for 3 days and now just tender) and no fever at this time. All the symptoms are continuous even with over the counter meds with no relief.

Pfizer-BioNTech COVID-19 Vaccine Diaphoretic, SOB, Sudden Heat, BP 90/56, 98% O2 Room Air, HR 75 Pt states - likely due to anxiety from vaccine, will continue with 2nd dose in 21 days.

Chills, asthma, fever, congestion, cough, arm pain

tachycardia, hand tremors

The day after I had little bit of soreness on my deltoid, nothing major, but 3 days later, the Saturday I felt a sore throat and by night it was significant enough, I started taking Motrin. My lynphnodes were a little swollen. I contact employee health who set me up with a covid test (negative) and about 3 weeks earlier I had a similar sore throat that prompted me to have a covid test it was negative as well.

Complained of left arm & hand tingling, feeling warm and heavy

Soreness at injection site

Patient was found slumped over in wheelchair, drooling and unable to respond/follow simple instructions; sent to ED for evaluation. CT scans and MRI NEGATIVE for new/recent stroke; resident slurred speech likely due to hypertensive urgency

Blurry vision about 20 minutes after injection when stood up, lasted about 15-20 minutes. No other symptoms noted. Resolved on own. Blood pressure, O2 saturation, and pulse all within normal limits per healthcare provider.

Rt Arm no function/ no feeling.

Pfizer-BioNTech COVID-19 Vaccine headache 5 minutes after IM injection of dose 1, did not recover after 15 minutes of observation.

Extremely tired, chills, and body aches from 3 hours after the vaccine was given, lasting for 2 days. Took ibruprophen 300mg every 8 hours and slept when I was not working.

Nausea, lightheaded, chest pain, vasovagul

Pain at injection site, sore throat

Increased heart rate for several hours following injection Ongoing significant headache - constant dull headache with occasional sharp pain on the lift side of head

Fever (highest 101.5 degrees F while taking 1,000 mg acetaminophen every 6 hours and 600 mg ibuprofen every 8 hours), body aches, joint pains in knees, severe fatigue

Employee received vaccine dose and within 10 minutes developed facial flushing, felt slightly SOB, felt lip tightness, felt like voice was hoarse, with mild lip swelling noted-- reports history of nut allergies/ATBs-- no known history of allergic reaction to a vaccine previously. Employee was brought to ED and received benadryl, epinephrine, decadron, IV fluids in ED and was discharged home.

Fever, Fatigue

""""Pfizer-Bio-Tech COVID-19 Vaccine EUA"" Client given vaccine around 11:30 am, At 11:44 client with c/o increased HR, and flushing. No rash noted , VS monitor, Post 5 minutes she states she feels better , VS stable, 11:59 client left on her own."

Palpitations, chest tightness that has been intermittent, occurring 5-6x/day and lasting 30 minutes before resolving spontaneously since she received the vaccine. She says she has had similar palpitations in the past, with a negative medical workup

Pain at site of injection the next day. Swollen glands in neck/cervical area and armpit on day 2. By day 3 I was feeling better and by day 4 i did not have any soreness at all.

Elevated heart rate and blood pressure, headache and itchiness

Elevated heart rate and blood pressure, headache and itchiness

Fatigue, body aches occurred 1 day after receiving the injection. Symptoms lasted only for that one day. Rest and fluids were the only treatment.

Headache, low grade fever, runny nose starting 6 hours after injection lasting approx 24 hours

Broke out in welts and hives all over body for 4 days.

Stomach Cramps, Diarrhea, dizzy

I felt like I was having a hot flash and felt like I was hungover, tired achey, and nausea, the next day 12/18 I couldn't sleep on my left side because my arm hurt, no rash and Saturday I had horrible itching all over my body, I called the Dr and he had me take Claritin, and it calmed down after 6 hours . I have similar symptoms with extreme stress.

Hives to bilateral arms and chest

The next morning when I woke up I started feeling short or breath like my asthma was exacerbating and used my inhaler. 3- 4 hours later I had to use my inhaler again. And it started happening more often than every 4 hours. So that is when I reached out to my PCP and he prescribed me a nebulizer solution and prednisone.

Pain at injection site, arm stiffness hard to move

10:00 pm - Severe chills 1 am - Temp of 101.1 2 am - take tylenol 3 am - fever 100.4 and excessive sweat 6:30 am - 100.0 temp 8 am - 100.4 temp 9 am - excessive sweat All this time - muscle aches, joint pain

"The employee stated that he started feeling weird. Lips tingling, flushed face, feeling ""fuzzy"" headed, dry mouth, unsteady when standing. BP 130/94 pulse 60 ; at 12:20 Lips numb again and feeling fuzzy; Took to the ER In the ER, patient presented with lip numbness, diaphoresis, leg weakness. Patient states that symptoms were alleviated by sitting down but that the lip numbness returned, Administered- Solu-

Medrol 125mg ivp once; Pepcid 20mg ivpb once ,Benadryl 25mg ivp once Discharged from ER at 13:52 with symptoms improved"

Patient had a head ache, fatigue, loss of taste and smell. Went to doctor and she is being tested for COVID-19.

Injection site sorensss

"Pt received Moderna COVID-19 vaccine at 1023. Approximately 6 hours later, she began to develop ""hives"" which were primarily around her jaw and hairline on the right side. Pt also reports swelling around her eyes. Pt took Benadryl at home with no relief of symptoms. Pt presented to local Urgent Care, they directed her to the Emergency Department. Pt arrived in ED at approximately 8PM. The Pt received 10mg IM dexamethasone, 25mg IM diphenhydramine, and 20 mg PO famotidine. Pt reports resolution of symptoms after medication administration."

I got the vaccine on Thurs and worked the following day. On Sat morning I felt sick with fever, clammy and tired went to get tested results positive. I dint think this was a reaction to the vaccine. I have missed week of work.

Hives. Given benadryl. Taken to ED

12/24/2020 arm pain at injection site, body aches, mild headache, fatigue; 12/25/2020 symptoms worsened next day; 12/26/2020 loose stools, with continued previous symptoms, dizziness, weakness.;12/27/2020 Covid Test - Negative; 12/28/2020 sore throat, head congestion -- all other symptoms continue to persists.

Itchy, feverish, elevated heart rate, light soreness

At the 36 hour I was in severe joint pain with profound myalgia, and fatigue. The pain was an 8 to 9/10 and would have caused me to seek emergency medical care if I were not a physician capable of treating myself. I laid in bed writhing in horrible pain and after analgesics did fall asleep. The next day these pains continued as I had to work and had difficulty walking and maintaining professionalism. The pain continued through Saturday at which time I took a tapering dose of steroids and it seems to finally be letting up. I will not seek the booster injection for covid 19.

Sore arm Sniffles

Soreness at injection site

I was given Moderna Vaccine on 12/26/2020. I had Muscle pain by 11pm on 12/28/2020.Muscle pain was better by Sunday. I felt fine on Saturday 12/27/2020. On 12/28/2020 around 11pm I started with chills, fever and headache. My temp was 99.9. The fever is back to normal as of about 11 am 12/28/2020, but the headache is still lingering. I have not taken any OTC medication. I am drinking a lot of water to stay hydrated and overall feeling better.

Lip tingling, swelling and itching which last approximately 2 days. Treated with 25mg once a day for 2 days. Is now resolved.

11:33 Patient arrived to the observation area with nurse at side. Nurse observed upper body twitching and stated that patient voided in the chair. áPatient looks dazed and pale and requests to lie down. áPatient placed on stretcher with head down andáfeet up. Initials vitals taken. HR 38. Call was placed to EMS. áPatient states that she felt anxious while waiting and has a history of panic attacks. á 11:40 Patient appearance has improved. á2nd set of vitals taken show improvement. áPatient states that she feels better and placed a call to her daughter. Awaiting EMS arrival. 11:45 Patient transported via EMS to ED for further treatment and follow up. 15:00 Follow up call placed to ED. áPatient stable and may be admitted for further observation

Feeling weak, lips numb and tingly progressing up face and to right ear. Hot burning sensation right side of face to right ear. Became numb and tingly from chin to eyes within 5-10 min of shot. Nurse game me Benadryl. Numbness reduced within 30 minutes. Very tired. Slept for 3 hours. Woke up with headache.

PT. REC'D VACCINE AT 2:18PM, WAITED RECOMMENDED 15 MIN. AND CHECKED OUT AT 2:33PM. T/C AT 2:42 PT CALLED AND C/O TINGLING TO LEFT SIDE OF FACE AND LIPS, AND C/O A H/A THAT PT. REPORTS COULD POSSIBLY BE D/T STRESS/ANXIETY OF THE TINGLING SENSATION. STAYED ON THE PHONE WITH HER WHILE SHE COMPLETED HER DRIVE TO THE WORK SITE. SPOKE WITH HUSBAND AND ASKED THAT HE GET BENADRYL AND ADMINISTER ASAP AND TO CALL IF SYMPTOMS WORSEN. T/C TO PT AT 3:12PM HAS TAKEN BENADRYL AND FEELS FINE.

I started with a mild headache with chills body aches and fever of 100 degrees, rash and hives and chest pains. Into the next day I had a sever headache, chest pains and BP 176/126 that caused my cardiologist to add two additional meds to try and get me out of the hypertensive episode.

Kidney Pain

Body Aches

Bruise on back formed, hard to bend over, spinal pain.. chills, muscle aches

12/23 - dry, scratchy throat 12/24 - nasal discharge (mild) 12/25. - nasal discharge 12/26. - sinus congestion 12/27 - loss of taste / smell; diarrhea

Fever and fatigue for approximately 24 hours

Thrush - taking swish and swallow

Patient states she was vaccinated at about 3PM and around 9-10PM she started to feel like she may pass out (shortness of breath, vision changes). Patient states over the next couple of days she felt fatigued and feverish. She reported these symptoms to her DON who encouraged her to report her symptoms to us. Patient has completely recovered from these symptoms.

Tingling in tongue and lips.

patient report symptoms of facial tingling and seemed to have increased secretions with a dry cough. no facial swelling. she contributed to her reflux so she took tums. She was not given any medications while monitoring. The cough and increased secretions resolved and the tingling improved. She reports she took Benadryl and Claritin at home

After receiving the vaccine the patient experienced flushed feeling and perspired under both arms for 10 minutes. Employee began to feel a sharp electrical shooting pain in the axillary/armpit area which extends into upper arm. She is experiencing it intermittently with certain types of movement. She believes that shot was given too low in the arm.

Left side facial swelling, redness, bumps. Improved within 4 hours. Left cheek bone still swollen and red after taking 2 Benadryl. (Have not had any facial filler or anything done to my face what so ever)

Pt reports red itchy rash appeared on bilateral arms approx. 4-5 hours post-vaccination. Dry red rash noted on 12/28/2020. Pt states has been taking Benadryl and using topical hydrocortisone cream. Pt states has seen slight improvement.

"Patient with a history of severe anaphylaxis was observed for 30 minutes post vaccine. Right at the 30 minute mark, patient started to look pale, started with frequent throat clearing followed by sense of shortness of breath and chest tightness. 2:37p: No wheezing, good air movement, breathing was not labored, no cyanosis, no noted lip or tongue edema, able to speak. BP 160/54. P 98, O2 sat 98%. Severity of symptoms per patients = 8/10 ""tightness"" at time of medical evaluation/medical provider response. 2:38p 911 called, 2:39p epipen, benadryl 50mg oral, and solumedrol 125mg IM administered (patient tolerated well, able to swallow) 2:42p patient reports symptoms improved to ~4/10 severity O2 sat 98%, P97 2:46p , O2 96%, P 99, BP 148/52 2:48p patient reports symptoms still at ~4/10 severity/stopped improving, O2 sat 95%, p 85; discussed option of doing 2nd epipen 2:54p EMS arrived prior to administration of second epipen. Patient transported to Emergency Department for further evaluation for possible anaphylaxix"

Pt. Administered vaccine at 1355 at 1358 she complained of throat warmth, anxiety and feeling flushed. Pt. offered Benadryl 50mg, refused but agreed to 25mg. VS's at 1358, HR 84, resp.'s 16, BP148/102. at 1410 146/102, HR 76, resp. 16 1415 states feeling worse, can feel it in throat, to ER via wheel chair.

about 10 mins after the vaccine I had hot flashes started in my feet and went through my whole body , dull headache. It didn't last but a few seconds. the headache lasted a couple hours. I went to the ER for further monitoring and checked blood pressure and vitals for two hours and released me.

Patient received the Covid 19 vaccine on 12/22/2020. On 12/23/2020 she noticed a single, blister-like rash on her right eye. The rash got worse and spread to her face bilaterally and neck. Denies any tingling or numbness of the face. No swelling of the lips noted. Denies respiratory issue or fever, chills, HAs, or fatigue. Denies taking new medications, using new soaps, detergents, fragrance, or lotion, and food allergies, No outdoor activities. She has contacted her PCP and started prednisone 60 mg x 1 on 12/23/2020 - taper to 10 mg Total of 6 days treatment. Also, taking Benadryl 25 mp po q 4-6 hours per pcp. Her facial swelling is improving but not completely resolved. Has a FU appt with PCP .

tingling around body, episodic low-grade joint pains, low-grade foot pain in left foot (resolved), moderate dizziness, pain around head, pronounced left hand weakness, difficulty with daily tasks/had to leave work.

COVID19 Pfizer vaccine given at 10:30am on 12/26 12/27: Itching to left arm and hand at 430am- no treatment Continued itching with swelling of left arm/hand- Benadryl oral at 1230pm 12/28 3:30pm observed swelling to both legs, left leg more than right- leg elevation and rest 12/29 Reduction in swelling, Itching resolved.

Fever 101.1 x 1 day headache x 1 day muscle aches x 3 days fuzzy head x 3 days

patient stayed here for 15 minutes and did well. She went back to her job and developed flushed feeling, hives on neck and tingling on tongue. She improved with no treatment.

Mild Headache remaining

SNEEZING, STUFFY NOSE, LIP SWELLING, TINGLING MOUTH, THROAT CLOSING, UVULA SWOLLEN 1. Allergic reaction (Allergy, unspecified, initial encounter) . Pt. received Moderna COVID vaccine the morning of 12/22/20 and developed angioedema reaction the afternoon of 12/23 Vaccine is only new medication reported by pt. - denies any new products, foods, etc History of hives with spironolactone 2.5 months ago; taking HCTZ now - unknown if reaction is related to this med rather than vaccine? Due to severity of her reaction and uncertainty if all attributable to vaccine versus some other culprit I would recommend Epi pen at time of discharge Has received IM epinephrine, racemic epi neb, Solu-Medrol, Benadryl, Pepcid in the ED Continue with Benadryl 25mg IV q6h, Pepcid 20mg IV q12h, and Solu-Medrol 40mg IV q6h 2. Angioedema (Angioneurotic edema, initial encounter) . Arrived to the ED with R. side lip, tongue, and uvula and oral cavity edema Airway patent, room air O2 sats WNL - monitor throughout the night for any worsening of angioedema or airway involvement Treatment as above

Recipient received her vaccine and was sitting for observation when she reported feeling light headed about 5 min after the administration. 30 seconds after recipient became unresponsive and stopped breathing for 15 seconds, legs were elevated Code blue was called, after about another 30 seconds recipient become aroused and coherent. Vitals were taken- pt. was tachycardic- 120s- came down to 80s, BP 120/80, 90% O2-eventually went up to 98%. Temp 97.3. Med cue was called and took over to evaluate Pt. Pt. did report has had hx of vasovagal syncope.

Atopic reaction. Itching to Left arm, back, head.

Person had tingling and numbness of upper and lower lips, fullness feeling 10 minutes after vaccination given. vaccine given at 1402, started feeling the tingling at 1412. Lips were not swollen. No swelling of tongue. Oxygen sat 99% throughout the event. Blood pressure 150/88. Alert and oriented, injection site not swollen or red. Given Benadryl 25 mg orally at 1415. At 1430 patient feels like the numbness and tingling are getting better.

Metallic taste and dryness in mouth and burning in tongue

Pain at Injection Site

Approximately 30 min after injection pt reported burning in her throat, numbness and swelling of her tongue. At no time did she report shortness of breath. Vital signs were acquired , pt stayed in our vaccine clinic for approximately an hour without improvement and was then taken to our ER to be further evaluated

WOKE UP SNEEZING, RUNNY NOSE, TEETH HURT; SAT/SUNDAY. MONDAY CALLED PCP. PHONE VISIT WITH DR, BROUGHT IN FOR TESTING.

hypertension, tachycardia, lightheadedness, anxiety

Patient reports severe fatigue. Reports unable to walk across room without feeling like his body was giving out.

Had mild chest tightness 10 minutes after vaccination that resolved 10 minutes later. No shortness of breath, no swelling

Nausea, Pain at injection site

Excessive Sneezing, Sore Throat, Headache, Stuffy/Runny Nose. Symptoms started around 6:30pm and have continued through Sunday to Monday and are still on going.

Patient experienced pain at deltoid injection site which extended up to neck. Also report night sweats and rigor. Symptoms have resolved by 12/28/20.

Foreign body sensation in throat. Symptoms resolved and patient was discharged from ED after Benadryl and oral steriods

Eye hurt with pressure Headache body aches Chills Freezing

Headache, arm soreness

Fever, chills, body aches, headache, fatigue, and vomiting

"Headache, lightheaded, nausea, dizziness, muscle aches, malaise, and chest ""squeezing"" prior to syncopal episodes x 3. This occurred in OR where she works. ""I don't know when I passed out."" Rapid Response called s/p sternal rub by MD not effective. Taken to ED via stretcher. In ED, had EKG, IV fluids, Benadryl, and Phenergan. Regained consciousness on arrival to ED. Cleared to return to work on 12/24 by MD in ED. Will follow up with PCP."

Redness and firm area of swelling onset few hours after vaccine, at maximum erythema 25mm, swelling 20mm diameter. Headache reported day of vaccination and 2 days after vaccination, relieved by Tylenol and Benadryl. At day of reporting VAERS, pt vaccine site remain swollen/firm, redness improved but still present.

I had some of the normal side effects: Nausea, body aches, headache, HOWEVER!! the very strange side effect was this: I received the vaccine in my right arm since I am left handed. The following day, the entire right side of my head (the scalp) was burning and painful like a had gotten a bad sunburn. This lasted for three days, with improvement on the third day and my left side of the head being very sensitive. There was absolutely NO pain or burning on the right side of my head (scalp).

Pain at injection site

Patient described feeling light headed, nauseated, dizzy. She developed hypertension and HA over time frame of 5 minutes after vaccine to 1 hour and 30 minutes after vaccine up to a BP of 201/115. Range of BP was 163/94 up to 201/115 with HR 76-89, Patient was alert, oriented, able to move all extremities, transfer to chair and respond appropriately. Major complaint was feeling dizzy and nauseated with feeling of HA emerging.

the night of the 18th my right eye was bothering me so I was itching it in my sleep, when I woke up on the 19th my eye was red and I thought I had injured it in the night and it bothered me all day but I didn't get it checked, I went to urgent care the 20th because I noticed there were vesicles on my right eye. they gave me eye drops and diagnosed me with HSV keratitis, Valtrex was also prescribed trifluridine. I feel almost completely recovered

approximately 5 hours after vaccine the patient developed chills, body aches, cough, head pressure, and the sensation of feeling flushed.

12/20/20 FEVER 102, NO APPETITE, WEAK, VOMIT ONE TIME

Patient felt a sudden severe headache around her forehead, around her eye sockets. When she stood up, the pain worsened. She also felt very weak, but not dizzy or feeling like she was going to pass out.

I woke up at 7AM having migraines, chills, nausea and severe migraine. Contacted PCP for prescription.

Syncopal episode the following morning after received the first COVID19 Moderna vaccine

12/24/2020 COVID Vaccine received (IM injection, L deltoid), 12/25/2020: started with ONE hive on the abdomen 12/26/2020: started with full-body hives (pruritic) without mucosal or face involvement, no respiratory symptoms, no fevers, no swelling - itching improved with Benadryl 12/28/2020 - contacted employee health who said to contact MD; recommending daily Zyrtec with Benadryl at night and steroids if no improvement

Emesis

Reported tightening in face/jaw after vaccine. Subsided on its own with no treatment.

itchiness around the neck

Headache, Pain at injection site

Today fever with muscle and joint pain and fatigue.. feel so run down

Patient started feeling flushed about 30 min after vaccine and developed a headache about 6 hours after vaccine. The morning following vaccine her headache continued and her blood pressure was 168/90. Day 3 168/106 . Day 4 170/106 and has stayed elevated since vaccine given. Her BP was 154/70 in office today - 5 days after vaccine. She is no longer having headache or flushing. Her normal blood pressure is 110-120/70. Last elevated BP in office was in 2012 at 140/88.

Injection at 1109. At 1135 c/o of itchiness of hands and forearms. No other complaints. Benadryl 25 mg given orally. Improved--returned to workplace. At 1250 c/o of worsening symptoms. Tonsils mildly swollen and mildly erythematous. No significant swelling fo tongue and no difficulty swallowing. No redness of skin and no rash noted. Heart rate 118. B/P 118/78 Respirations 18. Oxygen Saturation 100% on room air. I made the decision to send her to the local hospital ER at 1305 as a precaution. At 1408 in ER she received Benadryl and Epinephrine. At 1428 she received solumedrol and Pepcid. Being observed in ER for 4 more hours.

15 min after injection-flushing, heart rate increase. 30 min some lip itching that went away within 30 min. Took Tylenol in morning (12-17)because started having a few muscle aches. Around 10 am- muscles tightening and needed to stretch them most of day. Fatigue but mild. Mild nausea about 11 am . 5 pm chills started. Ibuprofen taken. Muscles aches continued overnight Dec 17 until 10 am 12-18/ Ibuprofen in morning. Mild fever Friday 12-18--99.1-normal temp 97. Next 2 days mild fever continued and normal Monday 12-22. Muscle aches declined and gone 12-21. Heart rate has remained higher than normal since 12-16--normal is low 70's and has been high 80's and low 90's.

Patient reported numbness and tingling in lips and fingers on right hand at 5 minutes post vaccination. She was taken to the Emergency Room by Employee Health Nurse (walked) where tingling/numbness in lips had resolved upon arrival to ER and was decreasing in hand. She had full resolution after 1.5 hours. She was observed for 2 hours, no interventions, symptoms resolved, and then she returned to work.

Tingling in left hand for about 30 minutes Tingling and numbness in lips. Its been a couple hours now, and it feels like it might be starting to subside.

Tingling, Facial flushing, Felt like throat was swelling, Painful in injection site.

Tightening in face/jaw after vaccine. Subsided on its own with no treatment necessary. Somewhat red cheeks.

Patient reports tingling sensation on the right side of head and transferred to the back of the head. Reports knee joint, everything on the right side. Reports right side of body is either feeling pain or tingling sensation.

96hrs following vaccine (12/25/2020)developed acute submandibular gland swelling Visited physician (12/28/2020) performed ultrasound; dx acute Sialadenitis; rx Augmentin

Started plaquenil 12/18 due to new diagnosis of undifferentiated connective tissue disease per rheumatologist. Noticed itching and slight rash. Received Covid Pfizer BioNTech vaccine on 12/22. Rash became increasing worse each day starting 12/23, facial swelling 12/25 and 12/26. Hives in throat

12/26. Hives on tongue, continues head to toe hives and extreme itching 12/29. Last dose of plaquenil was 12/22.

Pain at injections site

Moderna COVID19 Vaccine EUA Metallic taste appeared within 5 minutes of dose. Smell and other taste not affected. Very subtle metallic taste right after injection

Five hours after mild arm soreness, mild chills and day two I was lightheaded

12/21- Vaccine administration 12/22 @ 12am Sore at injection site 12/22 @ 9pm soreness at injection site subsides 12/26 @ 10am severe headache and muscle aches; not relieved with Tylenol; cough, stuffy nose 12/27- headache and muscle aches still apparent, but moderate; not relieved with Tylenol 12/28- headache and muscle aches still apparent, mild.

Heart palpitations, shaking and feeling of adrenaline rush.

12/25/2020 EE states that she started experiencing right ear pain, she has ear frequent ear infections and used her prescribed eardrops for the pain, the pain was not resolved so she took Ibuprofen which helped with the pain. 12/26/2020 EE states that the right ear pain was resolved however, she developed an itchy rash on her right ear and down the right side of her jaw. She took oral Benadryl and used Benadryl ointment to relieve the itching. EE states that she went to her ENT today, 12/28/2020 to discuss her symptoms. Her ENT stated that it may be caused by the vaccine but he was unsure. There was no infection found in either ear. ENT treated it as a fungal infection. EE received steroids for her ear and jaw rash. EE doesn?t report any other symptoms, never tested positive for Covid, never been exposed to her knowledge, no travel history.

Received vaccination early morning (around 7 am). Headache started approximately 5-6 hours post vaccination and continued off and on for 72 hours. Explosive diarrhea approximately 18 hours post vaccination.

Received vaccination early morning (around 7 am). Headache started approximately 5-6 hours post vaccination and continued off and on for 72 hours. Explosive diarrhea approximately 18 hours post vaccination.

Individual was under 18 years of age

12/25/2020 felt funny. 12/26/2020 developed fever of 102, chills and body ache.

Feeling in her arm at the injection site, the pain kept getting worse. She couldn't even move her arm. around 8pm, she started getting chills, no fever with chills. Felt really cold. On the injection side she had pain in her neck and her shoulder blades. Body Aches Feeling fatigue Headache tired Took Ibuprofen around 9pm Stomach cramping and nauseas As of the 28, she is feeling fatigue and still has pain in her arm where the injection site is.

reports rash on back of R hand that started on 12/23 and spread to L hand, face, breast area by 12/26, went to urgent care on 12/26, dx with hives, placed on prednisone, advised to f/u with PCP to document.

Developed a fine maculopapular rash along b/l anterior upper & forearms. Some scattered on posterior, on 12/23/20. Mostly non-pruritic, except after shower on the 1st day. Took Cetirizine on 12/23 with some relief. Dues to persistence on 12/27/20 repeated cetirizine. Photos available.

Patient describes pain at injection, itchiness and experiencing pain. This hasn't had pin since but it did happen within 12 hours of injection

Pain at Injection site

States bruising shortly after injection. States on Dec. 27th around 4pm, developed redness 3-4 in x 2 in with lump (approx 1/4 in diameter in center). Area painful and warm to touch which affected ROM. On 28th states that he showed to a pharmacist that he works with Dr. who said it appeared to be an injection site reaction. At 4 pm on 28th, states bruising improving, but redness is still present, maybe even increased from earlier.

Pfizer-BioNtech COVID 19 Vaccine Left arm pain, mild to moderate from the time of receiving the shot until the next morning at which time left arm pain began to improve. The following morning, woke up with a fever of 102F, intermittent fever all day ranging from 99.9 - 102F. Dulled sense of smell and taste since the injection. Decreased appetite.

Reports that within 24 hours after receiving vaccination had a splitting headache, fatigue and was barely able to lift or move his arm that the injection was administered. The injection site was red and hot to touch, very painful and swollen. After 24 hours the pain started to radiate into that side of his neck as well. He then felt feverish with chills and was very fatigued and unable to get out of bed for 2 days. Also developed diarrhea in that time frame.

After administering the vaccine the Luer Lock needle fell off of the syringe. The nurse stated that a lot of vaccine ran down my arm and was not administered.

I became nauseated and had abdominal cramps for three days.

Headache, dizziness, shortness of breath

Pain at Injection Site

42 year old female who works as a pharmacy tech developed diffuse pruritus and throat tightness, nausea during her wait time. She was given EPIPEN and transferred into the treatment area. She was given 50mg benadryl x2 followed by an additional EPIPEN. Patient reported throat tightness resolution but persistent pruritus and nausea. She was transferred to ED in stable condition with plans to follow up in Allergy.

Pfizer-BioNTech COVID-19 Vaccine: Approximately 90 minutes after receiving vaccine patient returned to clinic reporting dizziness, flushing, nausea, claminess, and hot flashes. Initial blood pressure 133/97 mmHg, other vital signs reported as stable. Patient provided with ice pack, water, and snack. Patient was observed for one hour and symptoms improved. No loss of consciousness or respiratory symptoms reported. Patient left clinic stable.

Moderna Covid-19 Vaccine Patient started vomiting 6 and half hours later, staff reported it and we are reporting it as an ADR

"December 23, 2020, at approximately, 1645 patient noted right eye numbness that tingled into right cheek. At 1730, looked in the mirror and noted no movement in muscles on right side of face. Could raise right eyebrow, but right eyebrow and below numbness and no movement. Patient spoke with physician at Public Health Department and it was recommended patient go to Primary Care to see provider NP. Then at approximately, 1920 went to the local Emergency Department and was seen by Dr. in the ER department. Dr. consulted with on call neurologist. Patient states she was diagnosed with Bells Palsy and given oral steroids (""three pills), then started a Medrol Dose Pak the next morning. As of today, December 28, 2020 patient reports ""Face and eye area feel normal. My mouth is not drooping. I have at least 50% of my movement back."" Patient continues to take Medrol Dose Pak. On day 4 of Medrol Dose Pak has 3 more days. Emergency Department recommended patient follow up with pcp in 5-7 days."

Injection site pain.

"Given vaccine at 1352 on 12/28/2020, employee reports symptoms started almost immediately. Symptoms: tongue felt ""funny"" describes as tingly and thickness feeling that extended down to throat area. Employee did not report symptoms immediately-waited about 30 minutes to notify staff. Vitals taken right away: B/P 138/80, Pulse 64, Respirations 18 at 1425. Given Benadryl 50 mg orally, employee able to swallow. Refuses Epinephrine stating she can still breathe fine, still able to swallow and knows Benadryl will be able to help. Monitored x 30 minutes longer=stayed total of 1 hr post vaccine. Started feeling improvement at 1450 and by 1510 felt significantly better, vitals stable and was released. Aware that benadryl can cause drowsiness and she should not drive. Employee stated she was ""just fine""."

Shortness of breath starting 12:50 on 12/22/20 lasting up to the 5pm hour. Shortness of breath. Monitored O2 sats and deep breathing supine on sofa. Sats stayed in 90s and only for about a 30 min period, sats dropped to 88-93 percent.

Anaphylaxis symptoms starting about 45 minutes after injection. Initial symptoms were severe light headedness and tachycardia. Epi-pen self administered 5 minutes after onset of symptoms. Symptoms resolved within 30 minutes of Epi-pen administration.

Upper shoulder tenderness, appearing days after injection site tenderness fading away, told by coworkers early sign of possible SIRVA.

Patient did not eat prior to vaccination. Felt anxious about vaccine. Felt weak and lightheaded. Patient was brought to ER for monitoring and assessment. Was released back to work without treatment required after a few hours.

Pain at injection site

I am a nurse and I received the Pfizer vaccine on 12/26 at 1030am. I do have a history of food and outdoor allergies. I once got hives on my back from the flu shot, but since have been fine with it if I take Benadryl before it. About an hour after the vaccine, I felt itchy on my upper half of my body. I took a Benadryl without relief. I had a 100.1 fever that afternoon so I took another Benadryl and ibuprofen. It broke my fever, but the itching continued. I also had a couple of hives and a red blotchy rash over my body. I took a hydroxyzine and was able to sleep that night. The next morning I once again felt flushed and itchy. I worked and came home to the same rash, almost mottled looking all over my body. I took a Benadryl and ibuprofen and woke up early this morning itching again. As I was driving into work today (Monday), I noticed my heart fluttering and having palpitations. This continued throughout the morning. My skin rash is still red like I have a bad sunburn all over and is itchy with some red spots. I went to the ER to get checked out. My ekg was normal. They advised me that this is an allergic reaction to the vaccine and to continue 50mg Benadryl q6h for a couple more days and to see a PCP for follow up if it?s not better. I never had respiratory issues or swelling. I will continue to monitor symptoms and reaction.

"Patient received Moderna COVID-19 vaccine and within 5 minutes patient complained of fast heart rate and feeling ""not right"". Patient blood pressure at time 156/88 with heart rate 114. Patient given cool rag and then complained of tingling to her arm and hands and numbness to tongue. Patient was taken to Medical Center Emergency Room and given Epinephrine 0.3 mg per Auto-injector. Patient was then given Solumedrol 125 mg and Bendaryl 25 mg slow IVP. Patient observed in the ER and didn't experience any rash or swelling of lips and/or tongue."

Student went to administer vaccine. An unknown quantity of vaccine leaked out of the hub of the needle and dripped down the patient's arm to the floor. The exact amount given is unknown. Call has been placed to Moderna and CDC for guidance in regards to redosing.

Metallic taste was reported ten minutes after vaccination. Staff reported the reaction was fleeting (seconds long). Patient reported eating dehydrated strawberries just prior to vaccination but not sure if reaction was food related or vaccine related. Onsite MD assessed patient. No angioedema, respiratory distress, or any other complaints. Staff reported being back to baseline quickly after fleeting metallic taste.

Immediately after the vaccine administration had elevated heart rate, dizziness, difficulty breathing. Given a 2 doses of albuterol to help with breathing and transported to ER. Nearly 5 hours after visit, manageable but still difficulty breathing.

Dizzy and Nausea

patient felt a thickening in her throat. Throat also felt sore. IM Benadryl administered. Patient reported feeling better quickly. Monitored for an hour post benadryl.

39 y.o. firefighter, healthy without significant past medical history. He has a hx with cashew allergy in the past (required Epi pen use). He felt light headed, flushing sensation, and mild itchiness on the arm. His light headed felt worse and laid on ground. He remained alert and without apparent distress. There was no respiratory or cardiac complains. Vital signs were normal, O2 sat 100% on RA, BP 119/77, pulse 65, EKG NSR. Paramedics and his colleagues were present and assisted. Benadryl 50 mg IM once was given around 1300 pm. An IV 18 G was placed by paramedics to his right AC and NS tko. Patient left via ambulance.

Nausea, Cold fever, upset stomach, no appetite, pain, headache, vomiting, sore arm

Generalized itchiness, intermittent trunk hives and injection site herpes zoster-like rash. Benadryl 25mg tablets q4-6 prn with moderate relief. From onset (day 2 post vaccination) until present (day 7 post-vaccination)

Reported metallic taste in mouth 5 minutes after vaccination (vaccine received at 11:07 AM). By 11:37 AM, the metallic taste was still present but improving. Staff denied unusual foods prior to vaccination. No other signs/symptoms reported or found when assessed by onsite MD.

Moderna COVID-19 Vaccine EUA Severe sinus reaction - sneezing, congestion, runny nose, chest pain from excessive sneezing.

Body chills, site pain, nausea, and severe headaches.

Patient is a 60yoF who is presenting to ED on 12/28/20 complaining of decreased sensation and itching on left side of face as well as darkening of peripheral vision on the left side. She received her initial COVID vaccine today at 11am, first began noticing symptoms at 1230 and took 2 benadryl around 1pm. In addition, she is reporting some light headedness. She states that her face feels swollen, but knows that it is not. Itching improved after benadryl but face continues to feel numb on left side.

soreness of arm, dry throat

generalized malaise, weak, body aches.

Vaccine administered 10 am 12/26/20. Post vaccine experienced headache, sore arm and fatigue. Approximately 6 hours post injection developed a hot feeling like she was sunburned, pruritis and then a pepper rash/hives started to develop inferior to injection site on right arm, spreading to left arm, chest and neck. Went to ER and treated with IV steroids, diphenhydramine, and hydroxyzine. Discharged on a 5 day course of Famotidine, Hydroxyzine Pamoate, and Prednisone with PRN Diphenhydramine.

chills, slight fever (99.5) and some muscle aches in legs.

nasuea, emesis, throat irritation, hot/cold flashes. The individual was transported to the emergency department for further observation and if necessary treatment.

Injection site pain, Head to toe muscle pain, Joint pain, general unwell feeling

Approximately 5 minutes post vaccine administration, pt reported shortness of breath and chest tightness. Vital signs remained stable BP 100/65, O2 sat 97%, HR 80-100, respirations easy and unlabored. Pt also experienced nausea without vomiting, and possible tightness in the throat, and numbness in the left arm. No swelling, no redness, no rash. EMS was called, EKG showed NSR, pt was transported to the hospital via EMS

Swelling in right axilla, called PCP, no treatment

My left are fell asleep and numb, decreased motor functions and then the tingling sensation moved to my left eye, lips and whole face, left lower leg and right hand. It progressed for an hour or two and then went away. Employee health sent me to the ED for observation. I am due 08/01/2021.

Initial sore arm with associated chills. As day progress worsening generalized myalgias, chills and sweats, mild weakness with position change on standing. Eventually with 10/10 frontal headaches and rigors. Full course lasted ~30 hours.

Headache, fatigue, body aches, sore throat, ear pressure COVID 19 Swab-Neg.

I received the Covid19 vaccine on 12/22 @ 7:00 pm. On 12/23 ~1200 pm, I had a headache that lasted for about 12 hours. I took Tylenol and Motrin and it went away the next day but came back again on 12/24 @ 6:00 pm. On 12/25, 12/26, and 12/27, I just felt unwell. No symptoms but felt unwell and had shortness of breath while walking. I usually walk about 10 miles daily without issue but on those 3 days, I had to take breaks and was not able to walk an talk at the same time.

Woke up with severe nausea 5 days after vaccination. Thereafter, developed lower abdominal pain and constipation. Took a dulcolax that relieved constipation. Then developed retching, vomiting and cramps abdominal pain

Within 2 minutes, Severe allergic reaction, with diffuse erythematous rash, throat tightening, chest discomfort, nausea, and BP240/120. (Normal BP 124/74). Had premedicated with 50 po benedry. Required 50 mg IM benedryl, ambulance ride to the ER, 125 mg of IV solumedrol.

Staff reported a mild tingling in right hand (of injection arm). The tingling lasted for a short period of time and went away once he put his hand in a neutral position. No other signs/symptoms reported when assessed by the onsite MD. Patient was advised to avoid heavy lifting and to seek medical attention if symptoms worsened. Mild to no residual tingling noted at close of observation period (30 minutes).

Weakness, headache, arm ache, back pain, unexpected heavy breakthrough bleeding and cramping LMP was 12/13/2020 not expected to bleed until 01/10/2021

Pfizer-BioNTech COVID-19 Vaccine: One day after receving vaccine patient awoke with myalgias, fatigue, fever (maximum temperature: 100 degrees Fahrenheit), headache, and rhinorrhea. Patient was

evaluated via telehealth two days after vaccine administration and denied throat pain, chest pain, chest tightness, or wheezing. No difficulty swallowing or breathing. Patient was instructed to follow-up with a health care provider immediately for worsening, persistent, or concerning symptoms.

I have history of intermittent episodes of neurological dysfunction, with probable diagnosis of FND. I was symptom-free prior to vaccination today. Within 20?30 minutes my left arm (injection site) began to ache. Shortly after that my face began tingling and my thinking began to feel ?foggy.? By one hour post injection, I was having trouble speaking and walking. These are not brand new symptoms for me, but I do feel the vaccination caused a flare of my dormant symptoms.

Patient reports 2 minute episodes of numbness to hands and feet occurring every 5 minutes s/p receiving COVID-19 vaccine. She further reports associated heart pounding and difficulty breathing General ROS: (-) chills, fever, (-) unusual fatigue or weight loss ENT ROS: (-) nasal discharge, (-) cough, (-) sore throat Respiratory ROS: (+) shortness of breath CV ROS: (-) chest pain, (+) heart pounding Gastrointestinal ROS: (-) abdominal pain Genito-Urinary ROS: (-) dysuria Musculoskeletal ROS: (-) joint/bone pain Neurological ROS: (-) headache, (+) numbness to hands and feet Dermatological ROS: (-) rash Psychiatric: ROS: (-) SI/HI, (-) psych hx Patient improved her symptoms, discharged home

Headache, itchy, joint pain, nauseated, vomiting only twice, body aches, chills, slight fever nothing over 99.3,

generalized malaise, weak, body aches

Headache, extreme fatigue

Difficulty breathing 5 minutes after receiving first dose of Covid-19 vaccine by Pfizer/BioNTech, small erythematous spots to bilateral arms.

Developed a rash on face, neck, arms, stomach ? slight sore arm at injection site

"Initially reported an ""unbrushed teeth"" taste in mouth post-vaccination and for 5 minutes afterward. Reported he did indeed brushed teeth this morning. Unusual taste lasted 10 minutes. Reported no unusual foods consumed prior to vaccination. Onsite MD assessment reported slight headache but staff had prior to vaccine injection, not worsened. However, he has had history of headaches with vaccines. Some tingling also reported in left arm (vaccinated arm). Denied other signs and symptoms. Resolved symptoms after 30 minute observation period (post-vaccination)."

On 12/23 reports feeling fatigued all day. At approximately 4:30 pm on 12/23 began having fever (100.4), body aches, and headache. These symptoms subsided at approximately 11:00 pm on 12/23. On 12/24 had no symptoms and felt fine.

"After receiving vaccination, the staff reported ""cold sweats."" He went home sick after receiving vaccination."

Injection site Pain

Became very flushed in the face. Dizzy and nauseous & felt completely out of my normal. Received a rash all over my upper body. Rash remained until 12/26/2020. Benadryl and Tylenol used. Refuse to get 2nd dose and received documentation for this. Components in vaccine are bothering me and I will not put my body through it again.

fever/chills

Flushing, heart beating fast, pulse ox 96% hr 13-114 . kept for observation 45 min felt well when left pulse ox 99% hr 110.

33 y.o.ámaleáwith no significant past medical history except for obesity who has been working as a nurse in the emergency room department in our hospital and today he received COVID-19 vaccine and 30 minutes later patient started having increased saliva, cold hands and feet, left-sided pressure-like headache and some numbness in his legs at the same time he suddenly started talking only in first language and lost his ability to speak in second language. áHe understand second language but replying first language stating that he is talking in second language. áOn exam he was alert oriented confused by people not understanding his second language stating that his numbness and cold feeling in the hands and feet have improved. áInitially patient received 10 mg of Decadron for possible allergic reaction he had a head CT scan that was negative and his labs were remarkable only for hypokalemia. áPatient had no prior history of any neurological symptoms he was advised admission to the hospital for observation á á Patient symptoms resolved next day,he is alert oriented able to communicate in second language he had a head MRI and head neck MRA that came back negative and had an EEG that showed no seizure activities. Patient was seen in neurology consultation who felt that patient most likely had an episode of migraine headache. Patient is going to be discharged home and to have a follow-up with his primary care physician next week á

Throat itching and tongue swelling

Pt c/o itching at site of injection and back. Denied SOB. Hives, redness at site. Diphenhydramine 25mg po given at vaccination site. Transferred by EMT to ER. At ER, patient given Prednisone 60mg, additional diphenhydramine 25mg and famodidine 40mg. Recommended she take Prednisone x 2 days and diphenhydramine x 24hrs. Patient was discharged to home within one hour.

I had the typical local reaction for the first 3 days following the injection: redness, soreness, swelling at injection site, occasional itchiness and occasional burning, warm to touch. It was resolved by the 4th day. Then on the 8th day, I felt a little itchy and itched the site gently. Three tiny hives appeared and became a moderate-sized red swollen area by the evening with mild pain and some burning. The 9th day it was very red, moderate-to-large sized, some burning, warm to touch. The 10th day, today, it doesn't look angry anymore, is no longer warm to touch, looks like it's resolving but still some swelling that feels like it goes around my upper arm. I had it checked by an NP today and she thinks it's all related to the injection being administered lower than my deltoid, instead went into the subcutaneous/fat area. So we will watch it but she doesn't think it's infected or any reason to not take the 2nd dose when it's time.

Pain at Injection site

Nausea, vomiting, chill, headache. Lasted more than 2hrs. Taken to ED and treated for nausea and rehydrated.

Patient had a vaso vagal event, per the ED notes. Drop in blood pressure and had a fainting spell. Quickly improved after he arrived to the ED

None

Pfizer-BioNTech COVID-19 Vaccine: Patient reported dizziness and shakiness upon arising 15 minutes after receiving vaccination. Vital signs: blood pressure: 115/78 mmHg, pulse 73 beats per minute, temperature 36.8 degrees Celcius, respiratory rate 16 breaths per minute, oxygen saturation 99% on room air. Patient waited five minutes, stated she felt much better, and left vaccine clinic in stable condition. No respiratory symptoms or loss of consciousness reported.

Heart racing (Patient reports pre-existing heart condition) Soreness Aches

Swelling of the lips

Chills Rapid heart beat dizziness Onset of symptoms was within 5 minutes but were mild and subsided after approximately 20 minutes

Nausea, Headaches, Fatigue

Started with very bad cramps which lead to diarrhea, that lasted about 1 hour. Then my SI joint started hurting so bad I couldn't stand it and went to ER. They gave me a shot of Torridol and a prescription for Naproxen. I was also nauseous, lethargic, chills, ringing in my ears, headache . I believe my SI joint started hurting due to having arthritis in the joint. The Naproxen escalated all the above. My arm also very sore, but that I could deal with. Feeling a bet better by 12/28/2020. Going to try and get into doctors on 12/.

low grade fever and sore arm

Headache, strange eye feeling, floaty, dizzy, light headed.

She began to experience body wide tingling, headache and nausea. She did not have lightheadedness, chest pain, shortness of breath, pain at the injection site, rash or wheezing. She went to urgent care in the facility to be evaluated. Patient was placed on a monitor and observed. Vital signs remained stable. She never developed rash. For her nausea she was given Zofran 4 mg as a disintegrating tablet which was helpful. She received 650 mg of Tylenol for her headache pain. Observation continued during which time she was entirely stable. She requested to go home.

Felt like she was breathing fire, flushing, pain ran up left arm to neck, clavicle, joint pain muscle ache, chill, fatigue, swelling under left armpit. Tingling to the face, ringing in ears from covid got worse, neuropathy real intense.

Headache, Tired, Injection site pain

After I received the vaccine my arm was very hot and swollen. Also felt very fatigued, dehydrated, no fever.

Started to feel very dizzy about 3 hours after vaccination. Also felt some nausea and overall head felt very off. Very lethargic and spent many hours sleeping because of the extreme lethargy and woke up a few hours later, still experiencing some dizziness but not as severe as earlier. Also have mild headache but I chronically suffer from migraines so that is nothing out of the ordinary for me. Took one meclizine and two Tylenol after onset of symptoms. Symptoms are tolerable at this time, they were more debilitating earlier. I am still experiencing them now at 6:30 pm.

Phizer-BioNTech Covid-19 Vaccine EUA Nausea and fatigue beginning about four hours after administration. Diarrhea beginning about six hours after administration. Vomiting and chills beginning about eight hours after administration.

WARM SENSATION/FLUSHING ROLLED THROUGHT BODY FROM HEAD TO TOE. FELT DISORIENTED. ABLE TO WALK. DENIES DIZZINESS. THEN FELT TINGLING TO FINGERS ON LEFT SIDE. SYMPTOMS RESOLVED AFTER 5 MINUTES.

Headache, weird eye feelin, like fuzzy headed too

"Approximately 15-20 minutes after vaccine patient reported back to adminitration area complaining of a ""lump in her throat"" with halo vision. Administered 50mg oral benadryl. Patient report nausea and felt flush and lightheaded. Approximatly 20min after benadryl administration she felt better and was able to return to work."

"Approximately 15-20 minutes after vaccine patient reported back to adminitration area complaining of a ""lump in her throat"" with halo vision. Administered 50mg oral benadryl. Patient report nausea and felt flush and lightheaded. Approximatly 20min after benadryl administration she felt better and was able to return to work."

Reported diffused rash to chest and back ~2 hours after recieving Pfizer COVID-19 vaccine on 12/18/2020. Self-medicated with famotidine40 mg, cetirizine 10 mg, and Singulair 10mg at home. Rash improved next day,

Swollen lymphnodes on same side as vaccination site

BAD HEADACHE BEHIND LEFT EAR AND TOP OF HEAD TO RIGHT EAR

Patient complained of feeling dizzy. She had blood pressure checked and it was elevated. Blood pressure did decrease after 15-20 minutes. Patient was observed by 2 local staff nurses and myself. She was counseled to speak to her primary care physician as soon as possible. She was walked to her vehicle by nursing staff. The vehicle was driven by her sister. An administrator at the facility did inform me at about 5pm that patient was at home safe and feeling better

Dec 23 started having right side facial tingling, slight numbness, decreased sensation. Headache, fatigue. This facial symptoms came and went away daily in short intervals. On 12/27 I got dizzy, weakness, blurred vision, right face numbness, slight lip drooping, high blood pressure, trouble swallowing, tongue numbness on right side, and right arm tingling. Went to the doctor on 12/28 and got steroid treatment from being diagnosed with Bell?s palsy, and a ct scan that didn?t show anything abnormal.

I received the vaccine around 7:55 am in my left arm. I waited around the appropriate time then drove home. No problems until 12:30 or so. I was resting in my bed and immediate felt my heart start to race. I checked it with my pulse oximeter and my rate had shot up to 148. I got up and tried some maneuvers to try to get it down. It then went up to 152. I told my husband to call EMS. I also contact my co-worker. She is a physician and she agreed with taking some benadryl. I took 25 mgs of benadryl. EMS arrived about 10 minutes later. they monitor my blood pressure and heart rate. it did come down but remained around 100. I then went to ER by car for evaluation.

Patient developed intense itching 10 minutes following the administration of the COVID 19 vaccination while waiting in the post vaccination recovery area. Emergency personnel present, PO Benadryl and Epipen administered. Patient sent to ER via ambulance for observation.

shortness of breath, diaphoretic, heart racing

Patient reports taking Pfizer Covid vaccine and 2 hours after that she reports feeling not well. She recorded that one of the side effects was heart arrhythmias and hence she had her coworker checked her rhythm and she reported that her heart rate was in 180s and hence she was brought to the emergency department for further evaluation. She reports at the time she had palpitations and felt mild lightheadedness and dizziness. She was found to be in SVT with heart rate in the range of 1 80-220 and she received 1 dose of 6 mg Adenoscan after which she converted to normal sinus rhythm. At the time of my evaluation she is in normal sinus rhythm with heart rate in the range of 90-100. She denies any further palpitations. She reports she had chest tightness for the last 3 days which was assumed to be secondary to asthma and for which she was prescribed prednisone. Currently with the prednisone she does not feel any further chest tightness. She denies any chest pain shortness of breath, fever or chills. She reports remote history of arrhythmia following her foot surgery in the past however does not recall what arrhythmia she had at that time.

Cold sore on lip - used OTC abreva, it is still healing. It has been years since I have had a cold sore. I am not sure if it is related to the vaccine, but thought I should report it for more information.

Vasovagal syncope episode occurred right after receiving the Pfizer COVID-19 vaccine injection, patient became pallor, not diaphoretic, no c/o CP nor SOB, patient felt dizzy, HR in the50's, BP 78/50, glucose = 91, pt given water and OJ. After fluids pulse was stronger, bounding in the 60's, color improved, patient was still feeling faint, taken to cardiac intervention area to lay down, patient refused to go to ER, RRT paged and came to pod - escorted patient to lay down. Of note the patient only had 1 egg for breakfast. Patient continued to be pale, starting shaking and was escorted to the ED for IV fluids and monitoring.

Rash, hot sensation, anxiety Localized reaction in arm, hot, red, swollen

Later in the evening once home, the Eee took Benadryl for initial rash presentation on L arms (vaccination site). Took tylenol next AM for chills, body aches. hives spread to chest. Took more tylenol for itchy, burning sensation. On 12/24 Thursday she noticed new SOB, 101.7F, hives all over the body, Went to a local ED and got solumedrol, famotidine, benadryl, tylenol, IVF. DC'ed from ED on prednisone, benadryl. Had h/o COVID 4/2020.

Dizziness

65 YEAR OLD MALE PRESENTS TO THE EMERGENCY ROOM COMPLAINING OF COUGH WITH CLEAR PHLEGM AND SHORTNESS OF BREATH ONSET 8 DAYS. HE REPORTS SOME CHEST PAIN WITH COUGH. PATIENT REPORTS HE WENT TO SEE HIS PCP ON 12-DEC AND WAS PRESCRIBED PROVENTIL AND PREDNISONE. HE HAD A NORMAL CHEST X-RAY AT THAT TIME. HE STATES HIS SYMPTOMS WORSENED ON 17-DEC AND HE WAS THEN GIVEN LEVAQUIN. PATIENT REPORTS HIS WIFE TESTED POSITIVE FOR COVID-19 ON 05-DEC, BUT HE TESTED NEGATIVE AT THAT TIME AND HAD NO SYMPTOMS.

Patient reports numbness and tingling in both feet, temporary nausea, Sore throat and loss of voice (hoarseness)

Fever and chills

facial itching, flushed. IM Benadryl admined. Patient felt better quickly.

none

Tingling and numbness back and sides of back 1/3 of tongue

Patient developed a red rash on left arm starting at injection site and moving down arm towards wrist/hand. Patient stated her palms felt clammy and numb. Patient expressed feelings of anxiety.

headache all over head, so very tired, body sore, do not want anything to eat.

Dizziness and Headache that took 25 min. to resolve.

Hives. Vitals checked and BP 134/78, pulse 95, SPO2 99. Lungs clear. hives noted on posterior neck, back, upper arms, thighs. Patient given 50mg Benadryl at 630pm. Monitored x 1 hour. Improved. Sent home with scheduled benadryl. Patient already has EpiPen on hand. Instructed to follow-up with PCP.

Pfizer-BioNTech COVID-19 Vaccine EUA

- Fever, Tmax 101.16 occurred 12 hours after injection, febrile at least 2 hours. Afebrile by AM of 12/25, resolved without antipyretics. - Right arm pain: Onset 12/24, up to 6/10. Resolved by 12/26. - Fatigue: Onset 12/25, resolved by 12/26.

Immediately felt warmth and tingling to Left Deltoid at injection site, then started to feel itching and feeling of swelling to throat and mouth. Denies any SOB. No obvious hives. Treated with Solumedrol 125 mg IV, Benadryl 25 mg IV, Pepcid20 mg IV. Given Rx for Benadryl 25 mg PO every 6 hour PRN.

Left axial lymphadenopathy

100-101F fever and chills started on 12/27 @ 945pm 100-103.0F fever, nausea, vomiting, chills and diarrhea on 12/28 @0900am 103.5F on 12/28 @ 0640pm. Advil and Tylenol have been taken

Tachycardia, warmth and flushed body esp face, mucus production (throat), scratchy throat, tingling sensations in feet, pain in R arm and radiated to neck and L arm, weakness, lethargy, dizziness, nausea, and headache.

About 10-15 min after vaccination patient began to experience left side facial numbness and tingling to include her tongue and cheek

Generalized body rash started ~24 hours later; still has 4 days later.

Extremely sore and painful injection site beginning around seven hours post injection. Painful to touch and movement. Sx lasted approx. 36hrs.

Patient presents to the emergency department 12/26 complaining of dry cough associated with fever and chills and headache associated with myalgia and diarrhea for 1 week duration. She had Covid vaccine 12/20 and the symptoms started the same night, she denied any sick contacts at home however she works at the Covid unit and reports constant exposure to sick Covid patients.

Tachycardia (heart rate 90s-110s), adrenaline rush in chest, tingly in chest and neck.. No treatment. Called employee covid HUB and they sent me to get covid swabbed today (12/28/20) . Called NP and she did not want to see me until covid swab back, symptoms worsen or she told me to go to ED.

Patient began to feel nausea after several minutes and then approx. 25 minutes after vaccine patient began to cough. Patient was transported to ER department on same location as clinic to be monitored by ER.

Became dizzy, warm, tachycardic. Lost consciousness (fainted?), quickly regained consciousness and was taken to the Emergency Department. Before transfer, Benadryl IM 25mg administered.

tiredness began the Thursday following immunization, along with sore throat and sneezing. All symptoms were gone by Friday.

He got the COVID vaccine on 12/23/20 at 11. Stayed at the facility for 30 minutes and then drove to another facility. Upon arrival at 12, he started feeling flushed. No SOB, no breathing difficulties. He started feeling itchy about 2 hours post vaccine. He took an Aleve. At home in the evening, took Benadryl with improvement of symptoms The following day also took Benadryl. On 12/25/20 & 12/26/20 he still had some itching, but not bothersome enough to take medications. On 12/27/20 he was working cutting tile and wearing protective eye wear, but the dust that landed on his face caused hives. He has been taking Benadryl since. He says this has occurred in past when his body is hypersensitive, the hives. He has seasonal allergies but no allergies to food or medications. Case discussed with Bolaris and recommendation is to take a Claritin or anti-allergy prior to next vaccine.

After injection felt immediately tingling to bilat arms, face, swelling to face and tongue, Itchy feeling to chest, feeling of palpitations and general unease. HR was 120 BPM, scattered hives over chest. No appreciable airway swelling. Treated with Epinephrine 0.3 mg IM, Solumedrol 125 mg IV, Benadryl 25 mg IV, Pepcid 20 mg IV, Ativan 0.5 mg IV. Rx given for Benadryl 25 mg every 6 hr. PRN

Red spot on arm with knot

Injection site tender to touch and with movement. Fatigue, muscle pain, joint pain, chills.

Scratchy throat. Bendadryl 25mg PO administered. Observed and discharged from vaccine clinic.

"Approximately 7 hours after receiving the vaccine patient who is a L&D Nurse return to work in her area. She describes that after finishing with a C-section she felt burning in both of her eyes (she thought this feels like an allergic reaction, but I am not sweating and haven't rubbed my eyes). She went to the restroom to get a cloth to wash her eyes; afterwards she reports her vision went totally black in both eyes. She reports feeling frustrated that no one came to help and some panic in trying to figure out how to get out of the restroom. She did make it out of the bathroom. Her Staff reports she postured and turned arms inward, head going to one side and passed out. They also report ~ 10 minutes of incoherent conversation and stating ""I got the vaccine, maybe I was given the wrong thing and now I'm blind"". Upon waking, patient vision fully restored and patient does not remember incoherent conversation. Differential diagnosis- TIA vs. CVA > seizure disorder>>> complex migraine"

Injection site pain and headache Tylenol 1000mg taken

Tachycardia 160-170bpm, anxious, carpal pedal spasm. States she took Zyrtec and inhaler this morning (for asthma). Transferred to outpatient clinic for assessment.

"Patient received the covid vaccine on 12/23/2020. She reported that she had chills (temp was 98.0), sore throat, nasal congestion, sneezing, started on 12/25/2020. Chills (shivering lasted for 1 day and ""broke out in sweats""). Still has sore throat., stuffy nose, sneezing as of 12/28/2020. Denies rhinorrhea, cough, or fever. Had negative covid test on 12/28/2020."

"Pt received Moderna COVID on 12/28/2020 without event. She returned 45 minutes later complaining of chest tightness and ""feeling weird"". A code A was called and she was triaged by anesthesia. No angioedema noted. She was moved to nurse stat bay and 911 was called."

Left flank and back pain thats increasing in severity. It is now interfering with acts of daily living such as driving, bending down etc

Symptoms include, hot flashes. palpitations and shortness of breath five minutes after vaccine administration. Patient was given oxygen and Claritin 45 minutes after. Patient was sent to hospital for further monitoring after an hour of administration.

Pt received the covid-19 vaccine from Pfizer and started to experience symptoms 6 days later. Symptoms includes hives, low appetite, wheezing, coughing, and fatigue.

B/L LEG JOINT PAIN, AND MUSCLE PAIN NAUSEA - DRY HEAVING NECK/SHOULDER PAIN ONSET 12.25.20 DURATION/END 12/.27.2020

Chest tightness and flushing. Transferred to outpatient clinic for physician assessment

"PATIENT BEGAN WITH AN ITCHY THROAT AT 15 MINUTES AFTER VACCINE ADMINISTRATION AND LATER DEVELOPED AN ""UNUSUAL SENSATION"" TO THE BACK OF THE THROAT. EPINEPHRINE 0.3MG ADMINISTERED. IV NORMAL SALINE STARTED. DIPHENHYDRAMINE 25MG IV GIVEN. PATIENT'S SYMPTOMS RESOLVED. TRANSFERRED TO ER FOR FURTHER EVALUATION. CONTACTED ER AND WAS INFOMRED PATEINT DISCHARGED WITH NO COMPLICATIONS."

Dizziness, lower left abdominal pain, flushed, heart palpitations. Lasted so long I had to be seen in the ED. New onset of bigeminy. 5 days later I am still having dizzy, feel foggy in my head, overall don?t feel my self.

SHORTNESS OF BREATH, TROUBLE BREATHING, CATATONIC STATE, POTENTIAL SEIZURE

patient noted headache which started within 15 minutes post vaccination, patient was observed for 30 minutes post vaccination and headache remained but did not worsen. Stated she did not have any dizziness of lightheadedness was going back to work. Advised she could treat with OTC pain relievers

Tingling and numb feeling at back of tongue immediately after injection Weird sensation of lump in throat without anaphylaxis that got better with time

patient reported feeling nauseous and dizzy about 15 minutes post vaccination. Was brought to exam room to lay down, was given some apple juice to drink. Vital signs were checked, patient remained onsite for about 1 hour being monitored. Stated she felt better but was still nauseous when she was released to her husband to drive her home. No history of vaccine reaction in the past

She received vaccine and was sitting waiting for 15 minutes. After 10 minutes she came over and expressed that she felt dizzy and was about to pass out. We took her over to bed where she was extremely nauseous and dry heaving repeatedly. She was also extremely flushed and hot but no temperature and no problems breathing. Blood pressure was elevated when ems came. We called 911 and had a Dr. who was at clinic check on her. Ems came after about 10 minutes and took her to hospital.

Itching and mild hives started within 10 mins of the vaccine injection. Patient was treated with antihistamine and responded well. symptoms improved after 2 hours of monitoring.

Worsening, swelling, redness with warmth and itch around injection area and a few inches below

Moderna COVID-19 Vaccine fever, chills, myalgia

Sore throat and body aches began the Saturday following immunization and ended within an hour of starting

severe intractable headache from 12nn 12/23/2020 to 1500 12/24/2020 associated with photo sensitivity, nausea, generalized body malaise, pain & tenderness on injection site. Treated with Tylenol & neurofen tablets, rest in the night & whole morning.

Chills, Fever, body aches, fatigue. Took Tylenol. Resolved in 24-36 hours.

Patient stated had some minor tickle in throat and slight heaviness in chest. Eyes than began swell bilaterally after 25 minutes after vaccine was given.

patient started having dizziness when she got up to leave from the waiting room 15 minutes post vaccination, she also mentioned headache behind her right eye. She was taken to an exam room in a wheel chair as she was unsteady on her feet. She was laid down on an exam table and vitals checked. She states no previous vaccine reactions, has history of seizures and has had them with increased frequency recently. Patient was released to her friend to be driven back to work 1 hour and 27 minutes post vaccination

Tiredness at the second day of vaccination (12/23/2020) and swollen tender left axillary lymph node started (12/26/2020) and still ongoing till the date of filing the adverse event (12/28/2020).

Tiredness at the second day of vaccination (12/23/2020) and swollen tender left axillary lymph node started (12/26/2020) and still ongoing till the date of filing the adverse event (12/28/2020).

10 minutes post-inoculation, I developed an ice cold sensation in my chest that spread throughout body and extremities. I developed a metallic taste in my mouth, nausea, tingling in my hands and feet and lightheadedness. This lasted 15 minutes, then repeated approximately 20 minutes later reccured as I was set to leave vaccinations site.

Severe itchiness with associated hives

chills at about 2:00am, headache, tiredness most of the day

Fainted within a couple minutes of recieving injection. Rapid response team activated and I was lifted onto a bed. Very low blood pressure. And ultimately felt better after 30 to 45 minutes of monitoring by medical team.

Low grade fever and site arm sore

Fever 100 degrees Chills severe Body aches mostly legs Mild soreness in injection area (nothing more than a typical shot)

12/24 ! 13:15 - 15 min after vaccine was administered p t c/o dizziness and shaking. was monitoring for further 15 minutes by vaccine staff. Then apx 06:00 pm that night started c/o chills, N/V, tremors, Fatigue, headache, and feeling flushed. continued thru 12/26. then 12/27 woke up with headache, n/v, chills, tremors and body swelling. 12/28- c/o nausea and headache. Treated with Tylenol OTC 12/24 and 12/26 only. 12/28 Completed rapid COVID 19 test- results negative. EDD 07/30/2021.

Moderate muscle ache,fatigue,sinus congestion

APPROXIMATELY 20 MINUTES AFTER VACCINATION, SHE BECAME ILL, VOMITING THEN COMPLAINING OF CLOSING THROAT, FELT WEAK. EMT AND FACILITY DOCTOR ON SITE WAS CALLED, THEY DETERMINED SHE DID NOT NEED TO BE TRANSPORTED TO THE ER. CONTINUED TO MONITOR PATIENT .

overall body weakness for 3 days and 1 day of severe right leg muscle cramping.

tachycardia, hypertension <15 min post administration

Reported headache and twitching of right cheek. Took Tylenol and headache resolved day of vaccination; twitching resolved day of vaccination (unknown duration). 12/23/20 (day after vaccination) he reported a slight headache upon awakening that worsened as the day passed. He took 2 extra strength Tylenol at 10:00 AM (12/23/20). Tylenol partially effective - headache lessened but still present. 12/28/20 update - chills, nausea, and fatigue from 12/23 - 12/28. Improvement in symptoms but symptoms are not completely resolved as of 12/28/20 per patient.

Anxiety, headache, nausea, sweating approximately 15 minutes after injection. Observed 1 hour emergency room then discharged.

1600 reported petechiae to both upper arms and abdomen 1611 took 25 mg bendryl waiting for 15 min. didn't get any worse went home

Soreness in upper left side of arm where vaccine was injected. Similar feeling to getting soreness in arm after a flu shot.

numbness tingling started in hand moved up the left arm slight numbess r hand site slightly swollen beandyl 25mg given symptoms got better

Vaccination was given at 8:25 and she began itching at 8:32. Itching that progressed from bilateral arms to trunk, bilateral legs and back. She felt wheezes starting. Given 50 mg. Benadryl po at 8:35. Symptoms were getting worse and RN gave Methprednisolone 125 mg. IM at 8:45.Alburteral Inhaler 2 puffs was given at 8:50. At 9:00 patient C/O upper lip tingling. Visual swelling observed. She was transported to ED by WC. ED administered Pepsid po and observed her for an hour. She was then discharged.

Onset of tongue numbness a few hours after vaccination, which was gone the next day. Vaccinated on 12/16 - 10 days later on 12/26/20 tongue numbness recurred & he developed (R) facial droop - seen in ER on 12/17 had normal head CT, negative work up for stroke. Seen in clinic on 12/28 - diagnosed with Bells palsy, started on Valacyclovir. Patient will hold PrEP x7 days (precautionary), no sexual activity during that time.

Onset day 10 post injection of erythema, edema over an area of 5x7cm over the injection site. Associated with mild tenderness, and moderate pruritis. Slight increase in size over first 24 hours (to present).

Chills

Pain at site with Fever (temp. 101 degrees F). Patient was sent to the local hospital ER and returned to the facility with a diagnosis of Fever post vaccination. Tylenol was given and patient received IV HEP saline at the ER.

Pt developed hives on bilateral arms, wrist and hands. Vital signs stable, no other complaints of tongue or throat swelling. No other s/s of anaphylaxis. Pt given Benadryl 50 mg po and observed for 60 minutes. Hives resolved and patient sent home.

Developed localized reaction on day 8 after 1st injection - had no location reaction prior. No intervention needed. 28 weeks gestation at time of vaccine and due date 3/10/21.

Fever, chills, body aches, headache, exhaustion, swollen lymph nodes 12 hours past vaccination to present.

I have had continued ongoing dizziness/vertigo after receiving the vaccine. It has now been a week since my vaccination and I am still feeling this. It it tolerable, but continues and is annoying.

MD Notes in ED Patient is a 35yo female who presents with complaint of allergic reaction. This AM around 0945 received COVID vaccine. Some pain to injection site throughout the day. Today around 1700 started to note dizziness and hives throughout her body. Hives are itchy. Associated with nasal congestion and sore throat. Patient felt difficulty swallowing zyrtec/pepcid. No drooling. Patient without fevers/chills, no recent illness. Denies prior allergies to immunizations. Denies food allergies. No new medications. Another part of the record states she had hives 30 minutes after the vaccine and self-medicated with Zyrtec and Pepcid without relief. Treated in the ED with Epi 0.3 IM Solumedrol 125 mg IV Pepcid 20 mg IV Benadryl 50 mg IV IV fluids Arrived in ED 1836 / Discharged home at 2015

Muscle aches, cramps, paresthesia in extremities and feeling of joint stiffness starting at 3 days after vaccination and continuing intermittently even after 1 week from vaccination. Aches/cramps in the muscles of neck, back of thigh, butt, calves, lower back. Treated with heat pack and hot showers with some temporary relief. No response to acetaminophen.

fever , chills, migrane started around 3 am 12 24 20. Migraine lasted all day. Woke up 12 25 20 with slight headache all day. Physically tired. Woke up 12 26 20 feeling fine.

Intractable nausea, vomiting, fever (101.8), chills

Complaints of gradual joint and bone pain

Angioedema, throat swelling, itching, lungs tight-unable to take a full breath, tachycardia, anxiety, face flushed. I took 75 mg of Benadryl an hour before the injection. Had some caffeine after I became symptomatic. Was monitored for 1.5 hours.

I got the vaccine at 3:30 pm. My right arm where the shot was started to itch extremely bad around 4:30. Then around 4:50 my throat was swelling up and my ear felt congested. A few minutes later it was

hard to breathe. I let my staff know (i work at urgent care) that i was not feeling so good from the vaccine. i was checked into the urgent care and i had hives and i was itching all over.

Tingling in throat, heart pounding and racing, dizziness, flushed skin, sweating, feeling hot

96 hours post injection muscle and joint pain. Injection site pain for 96 hours post injection. 4 days of insomnia.

received COVID vaccine, dose 1, Pfizer, approximately 1600. During observation, became light headed, hot, tingling in hands and feet, with onset of nausea shortly after. given ice packs and encouraged to remain in observation another 15 minutes. denied SOB, itching, no apparent hives or swelling. At approx 1700, symptoms had not resolved, was taken to ED for evaluation.

patient initially complained of headache at 1502, then at 1507 stated tingling in fingertips and toes. Shortly after, complained of dizziness and began crying. Moved patient to cart and vitals taken - BP 160/80, P 104, R 38, SpO2 99% - patient feelings like heart is racing. Patient's hands cold but vitals improved at 1520 - BP 140/78, P 74, R 28, Sp02 99%. At 1527, patient feeling better, headache gone, and tingling improved. BP 120/78, P 73, patient sipping water. Attempted elevating HOB at 1530 and dizziness returned but vitals stable. Continued to improve with slight dizziness with progressive ambulation. By 1548, no dizziness with sitting on edge of cart and ambulated to bathroom, After continued walking with no further symptoms and continued stability of vitals, patient discharged from care at 1558. Final BP 128/78, HR 78.

multiple oral aphthous ulcers and tongue sores without a clear alternative trigger

Headache, nausea, abdominal cramping, elevated blood pressure, 5 mins after vaccination. At home the above symptoms continue plus joint pain, lower back pain, chills for 3 days.

Developed extremely sore arm at site of injection within first hour after vaccination; red rash developed (3 inch diameter) with localized swelling. Mild fatigue for first two days following vaccination. Beginning on Day 3 after vaccination, developed severe fatigue, muscle pain, back pain, joint pain, hot/cold chills, abdominal pain, nausea and diarrhea. Symptoms were severe for three days (Day 3-6 after vaccination) requiring bed rest and supportive care with OTC ibuprofen, benadryl and promethazine. Rash, swelling and muscle pain at injection site persisted through Day 5 following vaccination. Fatigue, muscle and joint pain persisted at moderate intensity through Day 8 following vaccination. Moderate nausea and abdominal pain persisted through Day 8 following vaccination. Still experiencing mild to moderate fatigue on Day 12 following vaccination.

Dull headache on Day 1 of receiving vaccine. Day 2 was primarily a sore arm (moreso than with influenza shot)

Left Shoulder pain that started as ?oh I slept funny? to not going away with ice/heat or rest. Worsening in severity daily and spreading towards base of skull and eventually into clavicle. The pain became excruciating and I was unable to turn my head at all to the left. So bad I had to use my hands to lift my head up. I eventually went to the ED on 12/27/20. And overnight the pain became so unbareable and

functionality so limited I couldn?t go to work or take care of my toddler. I returned the to ED on 12/28/20. Was advised to file adverse event and contact my employee health and safety department. I was initially examined in the ER the first time with a neck spasm. Sent home with an RX which didn?t work. At all. When I returned to the ER th next day, the physician felt my entire neck, shoulder and clavicle an noted swelling and prominent spasm. He diagnosed with a trapezius strain and a vaccine reaction. Gave me an RX for Valium which seems to help take the edge off.

Onset of slight itchiness noted minutes after injection, however did not report to hospital staff because did not realize it was a possible reaction (I have history of rash and skin sensitivity). Noted approximately 2 days later, injection site was increasingly itchy. Then I noticed there was also a red patch surrounding injection site slightly raised that has not subsided since, now 4 days since injection.

Itchy throat, tongue, Numb Lips, Flush, Redness and hives

About 1 hour after getting vaccinated i noticed that my left eye got puffier and I could feel the tingling on my eye. Being little confused and not knowing the cause after reading online I noted that this could be possible from Covid-19 vaccine. At this time few hours later my puffiness is slowly going away . I do have pictures taken at the time of being vaccinated and also when I noticed the possible reaction .

Overdose administered due to improper dilluent

Nausea, Diarrhea, Extreme chills, Fatigue, Bad dreams during nap, waking up in a very excessive sweat, gradually increasing high amount of motivation despite symptoms

low BP/low HR and went to the ER for evaluation

he felt ?oozy? and tingling in feet

Redness, heat, swelling that lasted for a week. Swelling went to around 3 inches circumference around the injection site. Now a lump under the skin and the start of a bruise forming.

Feeling of swelling of the upper lip and throat; Feeling of swelling of the upper lip and throat; Brief tongue tingling; her palms felt sweaty; her throat felt dry; This is a spontaneous report from a contactable consumer (patient). A 50-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Solution for injection (lot number: EH9899 and expiry date unknown) via an unspecified route of administration at the left arm on 19Dec2020 08:45AM at a single dose (dose number: 1) for COVID-19 immunization. The patient's medical history included rare, mild exercise induced asthma with cold a few times in the past; history of pre-eclampsia; and known allergies: wheezing with iodine injected for a hysterogram in 2014. The patient had no concomitant medications. The patient did not receive any other vaccines within 4 weeks prior to BNT162B2 and has not received other medications within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. It was reported that on 19Dec2020, 09:15 the patient experienced a feeling of swelling of the upper lip and throat. There was a brief tongue tingling about a half hour after the injection. Immediately after the injection, her palms felt sweaty and her throat felt dry. Therapeutic measures were taken in response to the

events. The patient took Claritin about 9:15 and Benadryl 50 mg twice so far; the first was taken about 9:30AM. At 1:30 pm, the feeling of lip and throat swelling came back and she took 50 mg of Benadryl again. At the time of the last observation, the outcome of the events was not recovered. The events were reported as Non-serious.

received COVID Vaccine on 16Dec2020 and was asymptomatic for active COVID carrier; received COVID Vaccine on 16Dec2020 and was asymptomatic for active COVID carrier; This is a spontaneous report from a non-contactable nurse. A 35-year-old female patient started to receive bnt162b2 (reported as product=COVID 19, brand=Pfizer; lot number and expiry date unknown), via an unspecified route of administration on 16Dec2020 at 09:30 AM at single dose for COVID-19 immunization. Patient's medical history and concomitant medications were not reported. The patient reported that she received COVID Vaccine on 16Dec2020 and was asymptomatic for active COVID carrier. Covid test type post vaccination was nasal swab on 16Dec2020 with positive results. It was reported that prior to vaccination, patient was not diagnosed with COVID-19. It was further reported that since the vaccination, the patient has been tested positive for COVID-19. The outcome of the events was unknown. Information on the batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspect vaccine in this patient cannot be completely excluded.

Fatigue; moderate headache; This is a spontaneous report from a contactable Nurse reporting for herself. A 34-years-old female patient received bnt162b2 (BNT162B2; Lot # EL0140)vaccine , intramuscular in the left arm on 18Dec2020 15:15 at single dose for covid-19 immunisation . Medical history included hypersensitivity to medications including amoxicillin sodium + clavulanate potassium] (AUGMENTIN) from an unknown date. The patient's concomitant medications were not reported. On 18Dec2020 22:00 the patient experienced fatigue and headache (6/10) refractory to caffeine or hydration. The nurse did not try tylenol or NSAIDs as wanted to prevent interference with immune response. The outcome of both the event was not recovered.

lips began tingling; tongue was tingly/numb; tongue was tingly/numb; throat felt fuzzy like needed to clear it; This is a spontaneous report from a contactable nurse reporting for herself. This 36-year-old female patient (non-pregnant) received the first single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot EH9899) on 19Dec2020 at 08:25, intramuscular, in left arm, for COVID-19 immunization. No other vaccine was given within 4 weeks prior to the COVID vaccine. Medical history included rheumatoid arthritis from 2014. The patient had known allergies to adalimumab (HUMIRA). The patient did not have COVID before vaccination. Family medical history relevant to AEs: none (sister allergic to cashews, dad allergic to bees).Concomitant medications included tofacitinib citrate (XELJANZ XR) from Feb2018, at 11 mg daily, for arthritis, ibuprofen (MOTRIN) at 600 mg, as needed (every day for years 600 mg PRN), vitamins NOS (MVI) daily, for years, omega-3 fatty acids. The patient received the vaccination on 19Dec2020 at 08:25 and waited at the facility 30 minutes. On 19Dec2020 at 09:10 the patient experienced lips began tingling, tongue was tingly/numb and throat felt fuzzy like needed to clear it. Symptoms persisted but did not worsen and at 09:37 she took diphenhydramine (BENADRYL) 25mg as treatment. At 10:30 symptoms were gone at 75%. Emergency room or physician office visit were not required. COVID was not tested after vaccination. Relevant tests: none. The events resolved on an

unspecified date in Dec2020. The reporter considered there was a reasonable possibility that the event was related to suspect product.

Arm swelling; red circle size of a 50 cent piece; severe itching; This is a spontaneous report from a contactable consumer reporting for herself. A 44-year-old female patient received the 1st dose of bnt162b2 (BNT162B2) (Manufacturer Pfizer-BionTech, lot# EH9899), via an unspecified route of administration in arm left, on 16Dec2020 at 01:45 PM, at single dose, for COVID-19 immunisation. Medical history included rheumatoid arthritis, Hashimoto's thyroiditis, vitiligo and alopecia all from an unknown date and unknown if ongoing. The patient had no allergies to medications, food or other products. Concomitant medications included unspecified drugs in two weeks. The patient experienced arm swelling, red circle size of a 50 cent piece and severe itching all on 16Dec2020 at 03:00 PM with outcome of recovering. The events were considered non serious.

right sided numbness; tingling to face,lips and arm to fingertips; slight headache within 15 minutes of vaccination; This is a spontaneous report from a contactable nurse. A 55-year-old female patient (not pregnant) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, Lot number: elo140), intramuscularly on 19Dec2020 13:15 at single dose for immunization. Vaccine location provided as Right arm. Medical history included asthma. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced slight headache within 15 minutes of vaccination on 19Dec2020. On 19Dec2020 13:45, 35 minutes after vaccination reported right sided numbness, tingling to face, lips and arm to fingertips. No treatment was received for all the events. The outcome of the events was recovered in Dec2020. The events were assessed as non-serious.

Fever; chills; body aches; headache; fatigue; This is a spontaneous report from a contactable Other Health Professional (patient). A 42-year-old non-pregnant female patient received first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number=EH9899) intramuscular at arm Left on 18Dec2020 15:45 at single dose for covid-19 immunization. Medical history included seasonal allergies, eczema, and diagnosed with COVID-19 prior vaccination. Concomitant medication included fluoxetine hydrochloride (Generic Prozac), krill oil, bifidobacterium lactis (PROBIOTIC), sambucus nigra (ELDERBERRY) and multivitamin. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced fever, chills, body aches, headache, fatigue on 19Dec2020 12:00 PM, no treatment received for the events. COVID was not tested post vaccination. The outcome of the events was not recovered.

"Increased blood pressure; Rapid heart rate; Chills(shaking); Chills(shaking); Chest and neck tightness; Chest and neck tightness; Teeth tingling; This is a spontaneous report from a contactable consumer (patient). A 41-year-old female patient (not pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: Ek5730), via an unspecified route of administration on 19Dec2020 12:30 at single dose on left arm for COVID-19 immunization. Medical history included known allergies: Latex. Concomitant medications received within received within 2 weeks of vaccination included acetylsalicylic acid, caffeine, paracetamol (EXCEDRIN [ACETYLSALICYLIC

ACID; CAFFEINE; PARACETAMOL]); ibuprofen. The most recent COVID-19 vaccine was administered at Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 19Dec2020 13:00 (01:00 PM), the patient experienced rapid heart rate, Increased blood pressure, Chills (shaking), Chest and neck tightness, Teeth tingling. The adverse events result in Emergency room/department or urgent care. The patient received ER monitoring, EKG (reported as ""AE treatment"") for the adverse events. The events were non-serious. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient hadn't been tested for COVID-19. The outcome of the events was recovering."

fatigue; Fever 103.6/fever 100.3; headache; chills/chills with fever 100.3 after ibuprofen; Sore at injection site; body aches; This is a spontaneous report from a non-contactable consumer (patient). A 36-year-old female patient (not pregnant) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot number and expiration date not provided), via an unspecified route of administration on 18Dec2020 14:30 at single dose for COVID-19 immunization. Vaccine location was Left arm. Medical history included migraine, transient ischaemic attack (TIA), allergies: Penicillin, the patient had covid-19 prior to vaccination. Concomitant medication included buspirone hydrochloride (BUSPAR), cranberry, vitamin c (ascorbic acid), colecalciferol (VITAMIN D). The patient was not received other vaccine in four weeks. The patient experienced Sore at injection site, body aches, chills with fever 100.3 after ibuprofen, headache on 18Dec2020 19:00. And then the patient had Fever 103.6, headache, chills, fatigue on 18Dec2020 19:30, sore at injection site on 18Dec2020 19:00, body aches on 18Dec2020 19:00. Therapeutic measures were taken as a result of events fever and chills, no treatment was received for the other events. The outcome of the events was recovering. All events were assessed as non-serious. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

About 30 minutes after injection I suddenly felt a rush of heat throughout my body; felt dizzy, weak and a bit nauseated; felt dizzy, weak and a bit nauseated; felt dizzy, weak and a bit nauseated; tired/ fatigue; have some minor injection site pain; This is a spontaneous report from a contactable nurse reporting for herself. A 42-years-old non-pregnant female patient the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE): lot number: EJ1675, intramuscular, in the left arm on 18Dec2020 at 13:15 (at the age of 42 years-old) as a single dose for COVID-19 immunization. The patient received the vaccine at a hospital. Medical history included an allergy to cilantro. Concomitant medication included colecalciferol (VITAMIN D), zinc (ZINC) intermittently, and paracetamol (TYLENOL) once, all within 2 weeks of vaccination. The patient previously took amitriptyline and experienced swelling of eyelid and palmar erythema. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 18Dec2020, the patient experienced a rush of heat throughout her body, felt dizzy, weak and a bit nauseated and minor injection site pain. The clinical course as follows: At 13:45, about 30 minutes after injection she suddenly felt a rush of heat throughout her body, felt dizzy, weak, nauseated. This lasted about 30 minutes and then the warm feeling went away. She still felt a little dizzy, weak, nauseated and very tired. The dizziness lasted about 1.5 hours and the weakness, fatigue and mild nausea lasted about 6 hours. She reported that It felt as though she had taken diphenhydramine (BENADRYL). She stated that had she not been working (RN in an Emergency Department), she just

would have taken a nap and it would have been ok. Having to work through it was not pleasant she said. She never had a fever during this but had some minor injection site pain. She reported that she never experienced an immune response to any vaccine (has had 6 in a day before and was fine). The patient was not hospitalized for the events. The patient was treated with 600 mg of naproxen sodium. The clinical outcome for the events of a rush of heat throughout her body, felt dizzy, weak and a bit nauseated and minor injection site pain, was recovered on an unspecified date in Dec2020. It was also reported that since the vaccination, the patient had not been tested for COVID-19.

"ear infection; This is a spontaneous report from a contactable other HCP (patient). A female patient of an unspecified age received bnt162b2 (reported PFIZER-BIONTECH COVID-19 VACCINE, Covid-19 Vaccine), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. PCT asked, ""I got the Covid 19 vaccine yesterday, and this morning I woke up and went to the doctor because I had an ear infection. I was prescribed with oral antibiotics. Is it okay to take the antibiotics?"". Patient stated, ""I had a question about it actually. I got the vaccine yesterday and then today I was at the doctor, I have an ear infection and I was wondering if that would be a bad thing if I took antibiotic while still recovering from the vaccine."" The outcome of the event was unknown. Information on the lot/batch number has been requested."

Numbness on the right side of my face (jaw to just above right eye, not severe); This is a spontaneous report from a contactable consumer. A 44-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EJ1685), via an unspecified route of administration at first dose right arm on 19Dec2020 07:15 AM at single dose for covid-19 immunization. None medical history. No known allergies. Patient was not diagnosed with COVID-19 prior to vaccination nor tested for COVID-19 since the vaccination. Concomitant medications included cetirizine hydrochloride (ZYRTEC), fluticasone propionate (FLONASE). The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced numbness on the right side of her face (jaw to just above right eye, not severe) on 19Dec2020 07:45 AM. Patient didn't receive treatment for the adverse event. The action taken in response to the events for BNT162B2 was not applicable. The outcome of event was recovering. The event was non-serious.

Classic Herpes Zoster(shingles) left T5 and T6 dermatomes. Received injection at 10AM and noticed rash when I got home from the hospital at 8:00PM same day. Not likely related but felt should report any; rash; This is a spontaneous report from a contactable physician (hospital based neurologist) reporting for a himself. A 64-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot #ELO140) via an unspecified route of administration in left arm on 18Dec2020 10:00AM at single dose for COVID-19 immunization. The patient received the vaccine in hospital. Medical history included coronary artery disease (CAD), status post stent placement right marginal branch in 2015. The patient had no allergies outside of seasonal. The patient did not received any other vaccines within 4 weeks prior to the COVID vaccine. The patient received medications within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient experienced classic herpes zoster (shingles) left T5 and T6 dermatomes and noticed rash when he got home from the hospital at 20:00 on 18Dec2020, same day of vaccination. The patient started on valacyclovir (VALTREX) 1 gm every

8 hours for treatment of events. Since the vaccination, the patient had not been tested for COVID-19. The outcome of events was not recovered. The reporter considered not likely related but felt should report any.; Sender's Comments: Classic herpes zoster (shingles) /rash occurred on the same day of vaccination with BNT162B2 represents a coincidental viral infection caused by Herpes zoster, unrelated to the vaccine use.

"tired/exhaustion; cough; runny nose; fever 100 ""oral""/fever 100.3; This is a spontaneous report from a contactable consumer (patient). A 63-year-old female patient (not pregnant at the time of vaccination) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 16Dec2020 08:45 at single dose on right arm for COVID-19 immunization. The patient's medical history reported as none and no Allergies to medications, food, or other products. Concomitant medications received within 2 weeks of vaccination included exemestane, thyroid (ARMOUR THYROID), ergocalciferol (VIT D), ascorbic acid (VIT C), acetylsalicylic acid (ASPIRINE). The most recent COVID-19 vaccine was administered in Workplace clinic. It was reported that nothing on Wednesday. On 17Dec2020 19:00 (07:00 PM) (Thursday evening), the patient was very tired, cough, runny nose and fever 100 ""oral"" (as reported), Friday (18Dec2020) exhaustion and fever 100.3 with cough and runny nose. The events were non-serious and no treatment was received for the events. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient hadn't been tested for COVID-19. The outcome of the events was not recovered."

"Mild maculopapular rash across arms and facial and neck flushing. Rash did not itch; facial and neck flushing; other vaccine same date vaccine date on 17Dec2020; This is a spontaneous report from a non-contactable consumer (patient). A 56-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot/batch number and expiration date not provided), via an unspecified route of administration on 17Dec2020 at 07:30 on Right Deltoid at single dose for COVID-19 immunization. Other vaccine was received on the same date on 17Dec2020 Right Deltoid. The patient medical history included Hypertension. Prior to vaccination, patient was not diagnosed with COVID-19. The patient's concomitant medication included Lisinopril (strength: 20 mg). Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient previously took tramadol and experienced allergy. The patient experienced mild maculopapular rash across arms and facial and neck flushing on 18Dec2020 at 13:30. Rash did not itch and resolved spontaneously in 24 hours. Since the vaccination, patient had not been tested for COVID-19. No treatment was received for the events. The outcome of the events ""mild maculopapular rash across arms and facial and neck flushing"" was recovered in Dec2020 in 24 hours. The report was reported as non-serious. No follow-up attempts are possible; information about lot/batch number cannot be obtained."

"Chills; Headache; Fatigue; injection site soreness and redness; injection site soreness and redness; Shortness of breath; nausea; feeling unwell; This is a spontaneous report from a contactable other health professional (HCP) who reported for herself. A 24-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE) intramuscularly in the left arm on 19Dec2020 at 08:45 (at the age of 24-years-old) as a single dose for COVID-19 vaccination. Medical history included being diagnosed with COVID-19 prior to vaccination, on an unspecified date. Otherwise,

other medical history and known allergies to medications, food, or other products were all reported as ""no"". The patient was not pregnant at the time of vaccination. Concomitant medications were not reported. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 20Dec2020 at 00:30, the patient experienced chills, headache, fatigue, injection site soreness and redness, shortness of breath, nausea and feeling unwell. The events were reported as non-serious and the patient did not receive any treatment for the events. The clinical outcomes of the events chills, headache, fatigue, injection site soreness and redness, shortness of breath, nausea and feeling unwell were all recovering/resolving. It was also reported that since the vaccination, the patient had not been tested for COVID-19. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up."

Fever 100.5; chills; pain at injection site; muscle soreness; joint pain; very mild nausea; This is a spontaneous report from a contactable nurse (patient). A 32-year-old female patient (not pregnant) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: 5926710001), intramuscular on 19Dec2020 10:00 at single dose for COVID-19 immunization. Medical history included covid-19. Concomitant medication in two weeks included bupropion, sertraline, ascorbic acid, betacarotene, calcium sulfate, colecalciferol, cyanocobalamin, ferrous fumarate, folic acid, nicotinamide, pyridoxine hydrochloride, retinol acetate, riboflavin, thiamine mononitrate, tocopheryl acetate, zinc oxide (PRENATAL VITAMINS), cetirizine hydrochloride (ZYRTEC), ergocalciferol (VITAMIN D). The patient previously took minocycline, tetracycline and, amoxicillin; experienced drug hypersensitivity. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The COVID-19 vaccine was administered at Hospital. The patient experienced fever 100.5, chills, pain at injection site, muscle soreness, joint pain, very mild nausea on 20Dec2020 04:30 AM. The patient received paracetamol (TYLENOL) as treatment. The outcome of events was not recovered.

Muscle aches; back pain; nausea; fatigue; headache; This is a spontaneous report from a contactable nurse reporting for the patient. A 32-year-old female patient received dose 1 of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), intramuscular on 18Dec2020 at 14:15 (at the age of 32-years-old) as a single dose in the left arm for COVID-19 vaccination. Medical history included postural orthostatic tachycardia syndrome (POTS), Fibromyalgia, Migraines, Post-traumatic stress disorder (PTSD), anxiety, depression, and gastrooesophageal reflux disease (GERD), all from an unknown date. The patient did not have any allergies to medications, food or other products. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient was not tested for COVID-19 post vaccination. The patient did receive concomitant medications within 2 weeks of vaccination (unspecified). The patient did not receive any other vaccines within four weeks prior to the vaccination. On 18Dec2020, the patient experienced muscle aches, back pain, nausea, fatigue, and headache. Therapeutic measures were not given for the events. The clinical outcome of the events muscle aches, back pain, nausea, fatigue, and headache was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Felt body needed to defecate but could not; Severe lower abdominal cramping on day 3 post vaccination. Intermittent pains throughout day but increased at night.; Intermittent pains; Some nausea;

This is a spontaneous report from a contactable consumer, the patient. A 40-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration on 10Dec2020 at 10:45 (at the age of 40-years-old) as a single dose in the left arm for COVID-19 immunization. The patient previously received clindamycin and experienced allergy. The patient had no other relevant medical history or concurrent conditions. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications were not provided. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient did not receive any other medications within two weeks prior to the vaccination. On 05Dec2020 (as reported) at 16:30, the patient experienced severe lower abdominal cramping on day 3 post vaccination. The patient experienced intermittent pains throughout day but increased at night. The patient experienced some nausea. The patient felt her body needed to defecate but could not and pain persisted. The pain improved on day 4. Therapeutic measures were taken as a result of the events and included the patient received Pepto Bismol. The clinical outcome of the events severe lower abdominal cramping, intermittent pains and felt body needed to defecate but could not was recovering. The outcome of the nausea was unknown. It was also reported that since the vaccination, the patient had not been tested for COVID-19. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

Approximately 3 to 4 minutes after injection site I started to get hot with a feeling of an elevated heart rate; Approximately 3 to 4 minutes after injection site I started to get hot with a feeling of an elevated heart rate; This is a spontaneous report from a contactable consumer (patient). A 35-year-old male patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot/batch number and expiration date not provided), via an unspecified route of administration on 16Dec2020 at 12:00 on left arm deltoid at single dose for COVID-19 immunization. The patient medical history included anxiety, depression and prior to vaccination, patient was diagnosed with COVID-19. No known allergy. The patient's concomitant medications received within 2 weeks of vaccination included escitalopram oxalate (LEXAPRO) and cetirizine hydrochloride (ZYRTEC), both on 16Dec2020. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient reported that approximately 3 to 4 minutes after injection site he started to get hot with a feeling of an elevated heart rate on 16Dec2020 at 12:00. Took off his hat and noticed his hair was sweaty. Was not clammy anywhere else. Symptoms improved around minute 10 to 12. After sitting in car in parking lot for an additional five or 10 minutes started to feel more baseline. He never experienced any chest pain, shortness of breath, angioedema, hives, difficulty breathing, swelling, he had a history of anxiety, which seemed to coincide with the symptoms. Since the vaccination, patient had not been tested for COVID-19. No treatment was received for events. The outcome of the events was recovered on 16Dec2020. The report was reported as non-serious. Information on the Batch/Lot number has been requested.

had fevers and chills up to 104.7 degrees Fahrenheit for a 36-hour period; lethargy; This is a spontaneous report from a contactable Physician. A 40-year-old non-pregnant female first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number=EH9899) intramuscular at arm Left on 19Dec2020 11:00 at single dose for covid-19 immunization. The COVID-19 vaccine was administered at Hospital. Medical history included COVID-19 in Mar2020 with 10 days of fevers and chills and bilateral

interstitial pneumonia. The patient had no other medical history and no known allergies. Concomitant medication included silicon dioxide (VIVISCAL), ascorbic acid (VITAMIN C), calcium, colecalciferol (VITAMIN D) and Gummy vitamins. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was administered at 11am on 19Dec2020, fevers and chills up to 103 Fahrenheit, and lethargy were started around 11pm. It was reported that the patient have had fevers and chills for 36 hrs after getting the first shot of the vaccine. She had fevers and chills up to 104.7 degrees Fahrenheit for a 36-hour period. The patient wanted to know if this response of fevers and chills was related to her being positive last march with accompanying Pneumonia and that if it still safe for her to take the 2nd dose, if it was due to a second time being exposed to Covid which was through the vaccine, could this be a robust immune response. COVID was not tested post vaccination. Outcome of the events was not recovered.

arm soreness at injection site; Body aches; chills; sore throat; This is a spontaneous report from a contactable other health professional (patient). A 43-year-old female patient (not pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: Ek5730), intramuscularly on 17Dec2020 10:15 at single dose on left arm for COVID-19 immunization. The patient's medical history reported as none and no known- allergies. Concomitant medications received within 2 weeks of vaccination included colecalciferol (VITAMIN D [COLECALCIFEROL]), thyroid (ARMOUR THYROID), zinc vitamin, magnesium vitamin. The most recent COVID-19 vaccine was administered at Hospital. On 19Dec2020 19:00 (07:00 PM), the patient's arm soreness at injection site for 2 days. Body aches and chills and sore throat. No treatment received for the adverse events. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient hadn't been tested for COVID-19. The outcome of the events was not recovered.

"Extreme fatigue, slept for most of Saturday; Extreme fatigue, slept for most of Saturday; This is a spontaneous report from a contactable health care professional, the patient. A 27-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), intramuscularly on 18Dec2020 at 13:00 (at the age of 27-years-old) as a single dose in the left arm for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient was not pregnant at the time of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The clinical outcome of ""extreme fatigue, slept for most of Saturday"" was resolving. Information on the lot/batch number has been requested."

SOB; fever; tired; headache; chills; not feeling well; injection site pain; lymph node swollen under right arm; This is a spontaneous report from a contactable Consumer. This 55-year-old female patient received the 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on right arm on 17Dec2020 at 11:30 am at single dose (lot number: EK5730) for COVID-19 immunization. Medical history included having Covid in Jul2020 and husband had Covid prior to being vaccinated. Concomitant medications included escitalopram oxalate (LEXAPRO), estradiol,

hydrochlorothiazide in two weeks. The patient experienced SOB, fever, tired, headache, chills, not feeling well for over 24 hours than on the 19th noted lymph node swollen under right arm with severe pain along with injection site pain from 18Dec2020 03:00 AM. All events were reported as non-serious. Age at vaccination was 55 years old. Not pregnant at the time of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. No treatment was received for the events. Outcome of all events was not recovered.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020504434 same reporter/same drug/different event

feeling symptoms and that she felt like she had the flu; felling sick; This is a spontaneous report from a contactable consumer (patient). A female patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EY1685), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. Caller reported receiving Pfizer Bontech covid 19 vaccine on 18Dec2020. She was feeling symptoms and that she felt like she had the flu (Dec2020). Consumer further stated she work here at the Hospital and Friday she appeared for the shot (Covid Vaccine) and she was just felling sick (Dec2020) and she didn't know what she had to do if it was normal, she had to report it to somebody for this or be around people or can she went back to work tomorrow, she didn't know. The outcome of the events was unknown. No follow up attempts are possible. information about lot/batch number cannot be obtained.

Initially pain at injection site; headache; Next day had body aches; low grade fever 100 degrees; This is a spontaneous report from a contactable consumer. A 27-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at first dose left arm on 18Dec2020 08:00 at single dose for covid-19 immunization. None medical history. No Known allergies. Patient was not diagnosed with COVID-19 prior to vaccination nor tested for COVID-19 since the vaccination. The patient's concomitant medications were not reported. There was no other vaccine in four weeks or two weeks. The patient experienced initially pain at injection site next day had body aches, low grade fever 100 degrees, and headache on 19Dec2020 07:30 AM. Patient received acetaminophen as treatment for the adverse events. The action taken in response to the events for BNT162B2 was not applicable. The outcome of events was recovered in Dec2020. The events were non-serious. Information on the lot/batch number has been requested.

"Caller states she cant focus/She just can't focus; this is horrible/I have a hard time focusing; I'm like you know fogged; I just want to sleep/I have been sleeping all weekend that was horrible; I have some headache; I just don't feel right this is terrible; This is a spontaneous report from a contactable consumer (Patient). A 58-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), intramuscular in the arm on 18Dec2020 at single dose for covid-19 immunization. Medical history included seizure. Concomitant medication included celecoxib (CELEXA), levothyroxine sodium (SYNTHROID), phenobarbitone [PHENOBARBITAL] for seizure. The patient stated that she could not focus, this was horrible and had a hard time focusing on 18Dec2020, the patient also stated that ""like you know fogged"" on 18Dec2020, the patient just wanted to sleep and she had been sleeping all weekend that was horrible on an unspecified date in Dec2020, the patient

had some headache on an unspecified date Dec2020, she just took some Ibuprofen for the headache, the patient just didn't feel right this was terrible on an unspecified date in Dec2020. The outcome of 'could not focus' was not recovered and the outcome of the other events was unknown."

"his entire body is hurting; It's flu like symptoms but not really; feeling run down; it's like skin sensitivity/if touch his skin it kind of hurts, more like skin sensitivity versus body ache, touch his arm it hurt; a bilateral inner thigh rash to knee, that was non irritating non itchy but was uniform in pattern; a sore throat but it was like a tickle a throat tickle and then a dry cough; a sore throat but it was like a tickle a throat tickle and then a dry cough; a sore throat but it was like a tickle a throat tickle and then a dry cough; sore arm at injection site; This is a spontaneous report from a contactable nurse (CRNA anesthesia, also the patient). A 39 years old male patient received a dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration at arm on 16Dec2020 at single dose for COVID-19 immunization. The patient's medical history included psoriasis (he took biologic for pre-existing psoriasis), arthritis and that ""he thought he had direct exposure"". Concomitant medications included unspecified biologic for pre-existing psoriasis. The patient initially called because he was asking that if it was reaction to the injection or if it was possible Covid 19 because he thought he had direct exposure. The patient mentioned ""his chest and stuff"" and got received a Covid test on 11Dec2020, 02Dec2020 and 24Nov2020 and they were consecutive test and he took these test because they were few of his coworkers down to Covid so he just wanted to be sure that he was not infected with them, these are all negative. So last result he had for Covid was 14Dec2020 and that's two days before he got the vaccine and they were all negative and ""it started like all his activities, it was like going to work, going to get food like at the grocery store or other places for takeout"". He had not been in a situation where he have been gathering with a lot of people or having dinner or lunch and sort of anything like that, just the point that he was not in the one of high risk people. For the possible ""side effects similar to covid 19 from vaccine"", the symptom presentation/progression per patient were are as follows: the patient initially had sore arm at injection site on the day of injection which was Wednesday (16Dec2020) and then the following day (17Dec2020) he started having a sore throat but it was like a tickle a throat tickle and then a dry cough. On Friday (18Dec2020) he had a bilateral inner thigh rash to knee, that was non irritating non itchy but it was uniform in pattern. And then on Saturday (19Dec2020), he continued to have a dry cough and said he did apply some steroid cream that he has for his psoriasis and the rash is going away/almost gone and reported feeling run down, has skin sensitivity, he said that if touch his skin it kind of hurts, it's more like skin sensitivity versus body ache, when he touch his arm it hurt, it's like skin sensitivity. And then on Sunday (20Dec2020, the date of reporting), he still has cough and his entire body is hurting. It's flu like symptoms but not really. The patient's weight was around 175 pounds on an unspecified date. Therapeutic measures were taken as a result of the events included some steroid cream and over the counter Zicam (its tablet for cold). The outcome of the event dry cough was not recovered, bilateral inner thigh rash to knee was recovering, for the other events was unknown. When probed for the causality between events and the suspect product, the patient said ""hope it is not from that"" ."

chills; low grade fever to 38.4; body aches; felt very tired; This is a spontaneous report from a contactable nurse (patient). A 57-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-

19 VACCINE, lot number EK5730), intramuscularly on left arm at 18:15 on 18Dec2020 at single dose for COVID-19 immunization. Medical history included COVID-19 (Prior to vaccination, the patient was diagnosed with COVID-19). There were no concomitant medications (No other vaccine in four weeks, no other medications in two weeks). The patient had chills, low grade fever to 38.4, body aches and felt very tired at 15:00 on 19Dec2020. All events were reported as non-serious. The patient did not receive any treatment for all events. The outcome of events was recovering. COVID was not tested post vaccination.

1.5 hours after the vaccine, one eye vision was down to light perception only. The event lasted 15 minutes and resolved completely. ER eval and Ophthololgy eval did not find a cause for the event.; This is a spontaneous report from a contactable physician. A 66-year-old male patient received bnt162b2 (reported as COVID 19, Covid vaccine, lot/batch number and expiry date were not provided), via an unspecified route of administration from 17Dec2020 12:30 at single dose for covid-19 immunisation. Medical history included gout, abnormal glucose, hyperlipidemia, hypertension. Prior to vaccination, the patient was not diagnosed with COVID-19. No Known allergies. Concomitant medications the patient received within 2 weeks of vaccination included atorvastatin, prednisone, lisinopril, allopurinol, famotidine (PEPCID). The patient experienced 1.5 hours after the vaccine, one eye vision was down to light perception only. The event lasted 15 minutes and resolved completely. ER eval and Ophthololgy eval did not find a cause for the event. CT and labs done. Event onset date was on 17Dec2020 14:00. The patient not received any other vaccines within 4 weeks prior to the COVID vaccine. Since the vaccination, the patient has not been tested for COVID-19. No treatment received for the adverse event. Case was non-serious. Facility where the most recent COVID-19 vaccine was administered at Hospital. The adverse event result in the following: Doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. The outcome of event was recovered on 17Dec2020 14:15. Information on the Batch/Lot number has been requested.

Mild injection site reaction- red, firm, swollen, tender; Mild injection site reaction- red, firm, swollen, tender; Mild injection site reaction- red, firm, swollen, tender; Mild injection site reaction- red, firm, swollen, tender. Most noticeable day 3 after injection. Note that I had COVID dx 21Apr; This is a spontaneous report from a contactable consumer reporting for herself. This 33-year-old female patient (non-pregnant) received the first single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot EJ1685) on 17Dec2020 at 07:45, in left arm, for COVID-19 immunization. No other vaccine was given within 4 weeks prior to the COVID vaccine. Medical history included immune thrombocytopenia 2/2, COVID from 21Apr2020, chronic B12 deficiency, ADHD, depression, anxiety and migraine. Allergies to medications, food, or other products: none. Concomitant medications included sertraline HCl (ZOLOFT), lisdexamfetamine mesilate (VYVANSE), lorazepam (ATIVAN), ondansetron (ZOFRAN) and sumatriptan succinate (IMITREX). On 17Dec2020 the patient experienced mild injection site reaction- red, firm, swollen, tender. It was most noticeable on day 3 after injection. No treatment was given. COVID was not tested after vaccination. The events were resolving.

"experienced severe insomnia/some serious felt of insomnia, he did not get a lot of sleep/ tossing and turning all night; This is a spontaneous report from a contactable consumer (patient). A 63-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot

number and expiration date not provided), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. Medical history included bipolar disorder. Concomitant medication included quetiapine fumarate (SEROQUEL) for bipolar disorder, levothyroxine. The patient received the first dose of the vaccine 17Dec2020 and then last night on 19Dec2020 he experienced severe insomnia. Specifically, it was reported that the patient worked at the front desk and on the Thursday of the 17Dec2020, he received the vaccine from the company and he was fine, he had no real side effects until last night on 19Dec2020 and he was not sure whether it's due to vaccine or not but he did experience some serious felt of insomnia, he did not get a lot of sleep. After about 1'oclock in the morning when he was unable to achieve sleep, he took a ""cup"" ZzzQuil and that usually helps to go sleep but it did not work yesterday (19Dec2020) and the patient was tossing and turning all night. The patient wondering whether it is due to vaccine or not. The patient also tried 10 mg Melatonin and both of the medications didn't work. The patient didn't take them together. He took them separate. He took the Melatonin first and it did not work and then he took ZzzQuil by an hour later and the ZzzQuil did not work either. Neither of them worked. Therapeutic measures were taken as a result of insomnia. The outcome of the event was recovering. Information on the Lot/Batch number has been requested."

muscle aches, pain, and chills that were minor but not fever. He is now experiencing loss of muscle tone in his left foot and feels as if his foot is dropping.; it's hard to walk; muscle aches, pain, and chills that were minor but not fever. He is now experiencing loss of muscle tone in his left foot and feels as if his foot is dropping.; muscle aches, pain, and chills that were minor but not fever. He is now experiencing loss of muscle tone in his left foot and feels as if his foot is dropping.; muscle aches, pain, and chills that were minor but not fever. He is now experiencing loss of muscle tone in his left foot and feels as if his foot is dropping.; This is a spontaneous report from a contactable consumer (patient). A 62-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization, carbamazepine (TEGRETOL), via an unspecified route of administration from an unspecified date to an unspecified date at unknown dose and frequency for an unspecified indication. Medical history included ongoing diabetes; ongoing congestive heart problems; ongoing blood pressure high; ongoing mild kidney disease; ongoing gastroparesis; peripheral neuropathy, pain. Concomitant medication included hydrocodone bitartrate, paracetamol (NORCO) for pain, insulin glargine (LANTUS) for diabetes, insulin lispro (HUMALOG) for diabetes, carvedilol (COREG) for congestive heart problem, lisinopril for high blood pressure, spironolactone for high blood pressure, furosemide for high blood pressure, insulin for diabetes. The patient received the Covid-19 vaccine on 18Dec2020. After receiving the vaccine he had muscle aches, pain, and chills on 18Dec2020 that were minor but not fever. He was now experiencing loss of muscle tone in his left foot and feels as if his foot is dropping. The patient noticed on 20Dec2020 that his left foot it's not muscle tone it's kind of flopping there, it's hard to walk. The patient just took Tylenol and took his normal Narcan and Tylenol nothing in addition and one hot shower but it was more of nuisance. The patient stated that the main thing was that the loss of muscle tone in his left foot, that's what bothers him more than chills and everything like that because it was making difficult to walk and he want to walk around. The patient also stated that one of his health problems was peripheral neuropathy and that was what it just seem to make it why he can't feel his foot at all or he can do was move his big toe just a little bit and it was just kind of due to that. The patient just concerned whether that was

supposed to go away in a couple of days. The outcome of the events was unknown. Information on the lot/batch number has been requested.

nausea/sick to stomach; vomiting; sore arm; might be having a Gall bladder issue; This is a spontaneous report from a contactable consumer (patient). A 53-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EJ1685, Expiry Date: Mar2021), via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunization. There was no medical history. There were no concomitant medications. The patient experienced nausea, vomiting, sore arm on 19Dec2020. She was feeling better today. She might be having a gall bladder issue, she started feeling sick to stomach yesterday evening (19Dec2020). It had been several hours after she got the vaccine. No treatment received for events. The outcome of events was recovering.

"headaches, weakness, and ""some coughing.""; headaches, weakness, and ""some coughing.""; headaches, weakness, and ""some coughing.""; This is a spontaneous report from a contactable other hcp. A 56-year-old female patient (wife) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730), via an unspecified route of administration on 17Dec2020 at single dose for covid-19 immunization. The patient was working in hospital, they provided the vaccine and the nurse gave her the vaccine. Next shot will be 3 weeks after that on 07Jan2021. The reporter thought that the patient was the height of the patient was 5 (feet) 6 (inches) and the weight was 68 kg. The patient had no other medical condition or concomitant medication. On the 2nd day on 18Dec2020, the patient experienced headaches, weakness, and ""some coughing."" The patient was taking acetaminophen (Tylenol) 500 mg every 6/8 hours as treatment. The reporter wanted to know if there was anything his wife can do to get rid of these side effects, how long it would last, and what kind of precautions she has to do. The patient was still have them. Just not getting worst or not getting better somehow. She had test for COVID 19 around 09Dec2020 and she was negative. The outcome of the events was not recovered."

Day after the vaccine, I started experiencing throbbing pain on shoulder/arm opposite to the vaccinated arm. Pain became more intense at night and after 48 hours, started experiencing decreased range; Day after the vaccine, I started experiencing throbbing pain on shoulder/arm opposite to the vaccinated arm. Pain became more intense at night and after 48 hours, started experiencing decreased range; decreased range of motion; heaviness on shoulder/arm area all the way to the elbow; This is a spontaneous report from a contactable pharmacist (patient). A 51-years-old non-pregnant female patient the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, lot number=EK5730, intramuscular in left arm on 17Dec2020 at 17:15 (at the age of 51 years-old) as a single dose for COVID-19 immunization. The patient received the vaccine in a hospital. Prior to the vaccination, the patient was not diagnosed with COVID-19 nor was tested. There were no other vaccines within four weeks. Medical history included: hypothyroid, endometriosis, low blood pressure history, anxiety and H pylori. Concomitant medication included sarecycline (SARECYCLINE) for acne, take for 3 days levothyroxine (LEVOTHYROXINE), vitamin c [ascorbic acid] (VITAMIN C [ASCORBIC ACID]), colecalciferol (VITAMIN D [COLECALCIFEROL]), ginkgo biloba (GINGKO BILOBA), and camellia sinensis extract (GREEN TEA [CAMELLIA SINENSIS EXTRACT]). On 18Dec2020 at 0700, the patient experience throbbing pain on shoulder/arm opposite to the vaccinated arm. The clinical course as follows: At 0700, the day after

receiving the vaccine, she started experiencing throbbing pain on shoulder/arm opposite to the vaccinated arm. The pain became more intense at night and after 48 hours, started experiencing decreased range of motion and heaviness on shoulder/arm area all the way to the elbow. The patient was not hospitalized for the events. The patient was treated with OTC obuprofen 400 mg and acetaminophen (TYLENOL). The clinical outcomes of throbbing pain on shoulder/arm opposite to the vaccinated are, decreased range of motion and heaviness on shoulder/arm area all the way to the elbow was not recovered.

24 hours after I received the vaccine I began experiencing terrible body aches all over (muscle aches in my limbs, back, feet, hands, everywhere); 24 hours after I received the vaccine I began experiencing terrible body aches all over (muscle aches in my limbs, back, feet, hands, everywhere); 24 hours after I received the vaccine I began experiencing terrible body aches all over (muscle aches in my limbs, back, feet, hands, everywhere); 24 hours after I received the vaccine I began experiencing terrible body aches all over (muscle aches in my limbs, back, feet, hands, everywhere); fever that reached 101.1 degrees F; chills followed by waking up in a pool of sweat at 6AM on 12/20/20; chills followed by waking up in a pool of sweat at 6AM on 12/20/20; This is a spontaneous report from a contactable health care professional. A 26-years-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), lot number-EH9899, intramuscular in left arm on 18Dec2020 at 19:30 (at the age of 26 years-old) as a single dose for COVID-19 immunization. There was no medical history nor concomitant medications. The patient received the vaccine in a hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. There were no other medications received within 2 weeks of the vaccination. On 19Dec2020 24 hours after receiving the vaccination, the patient experienced terrible body aches all over (muscle aches in limbs, back, feet, hands, everywhere), a fever that reached 101.1 degrees F and eventually, chills followed by waking up in a pool of sweat at 0600 on 20Dec2020. She mentioned that she hadn't felt this ill since she was very little. She was a very healthy person, normal BMI, work out every day, eat healthy, have no health conditions. The patient had not been tested for COVID-19 prior to the vaccine and has not been tested after vaccination. The clinical outcomes for experienced terrible body aches all over (muscle aches in limbs, back, feet, hands, everywhere), a fever that reached 101.1 degrees F and eventually, chills followed by waking up in a pool of sweat, was recovering. The patient was not hospitalized for the events. It was noted that the patient had not been tested for COVID-29 prior to vaccination nor after vaccination. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

"Soreness; redness; tenderness just outside of the injection site (not at the site); On my anterior shoulder next to where my arm sits by my armpit. A large red and swollen mark approx 2 on in height, 1 1/2in wide; This is a spontaneous report from a contactable consumer (patient). This 35-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number EH9899) via an unspecified route of administration in the left arm on 19Dec2020 at 11:45 at single dose for COVID-19 immunisation. Vaccination facility type was hospital. The patient did not receive other vaccines in four weeks. Relevant medical history included Graves' disease, hyperthyroidism and chronic spine pain. Concomitant medications included pregabalin (LYRICA), hydroxyzine and buprenorphine hydrochloride/naloxone hydrochloride (SUBOXONE). On 20Dec2020 at 08:00, the patient experienced

soreness, redness, tenderness just outside of the injection site (not at the site). ""On her anterior shoulder, next to where her arm sits by her armpit, a large red and swollen mark approximately 2 on in height, 1 1/2 in wide"" appeared. The events resulted in Doctor or other healthcare professional office/clinic visit. The patient did not receive corrective treatments. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, she had not been tested for COVID-19. The patient had not recovered from the events."

"the rash on her back, more on the flank area/ the upper arms, she got this rash too; had fever, a low grade fever; 24 hour chills; chills was off and on; This is a spontaneous report from a contactable nurse (patient). A 48-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 17Dec2020 03:40 at single dose for COVID-19 immunization. Medical history (Other medications and other medical conditions) reported as no. The patient's concomitant medications were not reported. Caller initially called to ""report some side effects after getting covid."" Investigation Assessment was No. Consumer (Registered Nurse) further stated Just calling to report side effects because she guessed the data might be needed for study and everything. She went for the vaccine last Thursday (17Dec2020) around 3:40. The first night was the day that she had 24 hour chills (Dec2020). So, just round the clock, Tylenol was taken for that. Then she knew, the rash on her back, more on the flank area that was less than 24 hours that was Friday. And that's in her lower back and now she had more on that lower back and the upper arms, she got this rash too. Chills was off and on. The date when started experiencing rashes was 18Dec2020 and was still experiencing. The patient experienced chills and had fever, a low grade fever (Dec2020), and for chills she took Tylenol. For lab text, the patient stated ""About 2 weeks no, after the COVID vaccine no"". Due date for the next vaccine shot: Consumer believed the due date for the next vaccine shot was 07Jan2021. The outcome of the event ""the rash on her back, more on the flank area/ the upper arms, she got this rash too"" was not recovered, of the other events was unknown."

allergic reaction; dizzy/lightheaded; blood pressure and heart rate skyrocketed; blood pressure and heart rate skyrocketed; fever; sweats; This is a spontaneous report from a contactable consumer reporting for him/herself. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for covid-19 immunisation. The patient medical history and concomitant medications were not reported. On unknown date the patient experienced a mild allergic reaction with unknown outcome. About an hour after getting the shot the patient got dizzy, lightheaded, and her blood pressure and heart rate skyrocketed. She was given 50mg of diphenhydramine hydrochloride (BENADRYL) in the ED and still felt bad. On unspecified date the patient had a fever and sweats but the day after she was feeling good. The patient wanted to know if she could get the second dose. Information on the lot/batch number has been requested.

vomiting; diarrhea; myalgia; headache; face swelling; pain at the injection site; This is a spontaneous report from a contactable physician reporting for one of her patients. A 43-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: Unknown via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient received the COVID-19 vaccine

yesterday (on 19Dec2020) and was experiencing vomiting, diarrhea, face swelling, myalgia, headache, and pain at the injection site on an unspecified date. Expressed being concerned about an anaphylactic reaction and wanted to know how her patient's symptoms compare to it. Then the physician asked for the timing of the anaphylactic symptoms onsets reported in the clinical trials. The event outcome was unknown. Information on the lot/batch number has been requested.

fever; headache; body aches; chills; This is a spontaneous report from a contactable consumer (patient). A 56-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730 and expiration date: Mar2021), via an unspecified route of administration on 19Dec2020 at single dose for covid-19 immunization. It was the first dose. Medical history included the patient was Cancer survivor and the patient was not taking any chemo or any radiation. In 2003 the patient took chemo radiation. Concomitant medications included anastrozole, citalopram, alendronate sodium (ALENDRONATE). The patient stated she was having a couple symptoms including fever, headache, body aches, and chills on an unknown date in Dec2020. Treatment included the patient had been taking Excedrin, It had aspirin in it and Tylenol in it and Tylenol is 250 mg and Aspirin is 250 (unit was not specified). The patient was wondering how long her symptoms are going to last. The patient thought the lab test has been about a month. The outcome of the events was unknown.

I felt my left ear become hot and then felt paresthesia of my left ear, side of cheek and jaw, and down side of neck; Felt like numbness after dental procedure; left ear become hot; This is a spontaneous report from a contactable consumer (patient). This 37-year-old female consumer received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Lot number EH9899, at single dose on 20Dec2020 18:45 on left arm for COVID-19 immunisation. Medical history was none. Concomitant medication was not reported. The consumer had no other vaccine in four weeks. The consumer had no covid prior vaccination. The consumer had no covid tested post vaccination. The consumer had no known allergies. The consumer was not diagnosed with COVID-19 Prior to vaccination. The consumer had not been tested for COVID-19 since the vaccination. Approx 12-15 min after injection (20Dec2020 19:00) the consumer felt her left ear become hot and then felt paresthesia of her left ear, side of cheek and jaw, and down side of neck. She felt like numbness after dental procedure. Waxed and waned over the course of 30-45 minutes. She had mostly resolved after 1.75 hours, though slight abnormal feeling still remained. No treatment was received for all events. The outcome of the events was resolving.

Headache, chills and body was warm; Headache, chills and body was warm; Headache, chills and body was warm; This is a spontaneous report from a contactable consumer reporting for himself. A 37-years-old male patient received bnt162b2 (BNT162B2) , via an unspecified route of administration on 17Dec2020 13:15 at single dose for COVID 19 immunisation. The patient medical history included pre-diabetes. There were no concomitant medications. On 18Dec2020 early in the morning (at about 6-7a.m.) the patient experienced headache, with outcome of not recovered , chills with outcome of recovered and body was warm with outcome of recovered. The patient underwent lab tests and procedures which included blood cholesterol: unknown results on Dec2020 , blood glucose: pre-diabetic but not yet on Dec2020 , body temperature: his body was warm but he did not measure his fever, glycosylated haemoglobin: 5. something, not even 6. on Dec2020 , weight: between 180-190. Information about Lot/batch no has been requested.

felt her heart pounding and took her pulse and it was 158; took her pulse and it was 158; feels fatigued currently; took her blood pressure (BP) and it was 151/113; This is a spontaneous report from a contactable other healthcare professional. A 64-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EH9899), intramuscularly in right arm on 18Dec2020 14:05 at single dose for Covid-19 immunisation. Medical history included allergies to penicillin, allergy to mussels (bronco constriction and itch), figs allergy (nausea, vomiting, dizziness, elevated heart rate), allergy to grass (welts), ongoing asthma (asthma environmental triggers (Flowers, perfume, chemicals, soil, grass)), breast cancer left (had radiation and tamoxifen) from 2005 and ongoing, radiotherapy from an unknown date and unknown if ongoing. Concomitant medication included vitamin b complex (VITAMIN B), vitamin C, calcium (CA), Zinc, albuterol [salbutamol] and multivatamins. The patient previously took ampicillin and experienced allergy-rash, previously vaccinated with influenza and experienced weakness in 2010, and previously received tamoxifen for breast cancer female. After one hour later (18Dec2020 15:00), she felt her heart pounding and took her pulse and it was 158 and no other symptoms. Denies chest pain. Staff took her blood pressure (BP) and it was 151/113 on a machine. Recheck 10 minutes later BP 151/112, P 126. EE was brought to the Occupational Medicine Dept, Recheck at 20 min BP 125/68 and an apical pulse of 88. Heart rate (HR) regular, rate and rhythm. Employee states she feels fatigued currently, denies shortness of breath, chest pain, itching, swelling on oral cavity. The outcome of events was recovered on 18Dec2020.

low grade temperature (not fever) within first 24 hours of vaccine; Myalgia resolved with medication; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age (reported as 28) and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced myalgia resolved with medication, low grade temperature (not fever) within first 24 hours of vaccine on an unspecified date. The outcome of the event myalgia was resolved on an unspecified date, outcome of the other event was unknown. No follow-up attempts are possible. Information about lot/Batch number cannot be obtained. No further information is expected.

itching all over/bottom of his feet were itching too/he was scratching all over, his back, legs everywhere; This is a spontaneous report from a contactable consumer (patient). A 53-year-old male patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EK5730), intramuscular in left arm on 18Dec2020 12:45 at single dose for Covid-19 immunisation. Medical history included hypertension and anemia (he only has anemia and hypertension) from 2018 to an unknown date. Concomitant drug included other medications, but he didn't have the list in front of him. Prior vaccinations within 4 weeks was none. He just got the COVID vaccine today (18Dec2020). He started itching about 2 hours ago, once he got home. He was just itching all over. He had a hairbrush just scratching himself because he was itching all over, he was scratching all over, his back, legs everywhere. He confirmed this was his first dose of the COVID vaccine. He was supposed to go back in three weeks to get the second dose. He had not been to an emergency room or physician office yet, but he's getting ready to go. The bottom of his feet were itching too. The itching was everywhere. That was the only symptoms that he had his body was itching. He worked at a hospital, supply them with mask, he was supply technician. He worked

closely with may not be the patient everyday. He was on an esophagogastroduodenoscopy (EGD) done where they put tube down through throat and colonoscopy and EGD, they found some information and they removed it, about a month ago. The outcome of event was not recovered.

Dazed look with nausea; Dazed look with nausea; dry heaving; she looked green; This is a spontaneous report from a contactable consumer. A 61-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot Number: EH9899), intramuscular in the left arm on 18Dec2020 07:00 at single dose for covid-19 immunisation. The patient was not pregnant at time of vaccination. Medical history included some metals cause rash, ongoing rheumatoid arthritis and ongoing hypertension. The patient's concomitant medications were not reported. On 18Dec2020 at 08:00 the patient experienced dazed look with nausea and dry heaving: staff standing near her said she looked green. The patient Went to ER at the hospital; EKG done and result normal; seen by ER MD given ondansetron (ZOFRAN); Cleared to return to work same day. The patient recovered from the adverse events.

Numbness in left thumb; Left arm felt heavy and slightly numb; Left arm felt heavy and slightly numb; This is a spontaneous report from a contactable consumer. A 50-year-old female patient received the 1st dose of bnt162b2 (BNT162B2, Manufacturer Pfizer-BionTech) (lot# EH9899), intramuscular in the left arm, on 17Dec2020 at 02:00 PM, at single dose, for Covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient hasn't ever had an adverse event following any previous vaccine administered for immunization. The patient experienced numbness in left thumb on 17Dec2020 at 02:05 PM with outcome of recovered within 30 minutes and left arm felt heavy and slightly numb on 17Dec2020 at 02:05 PM with outcome of recovered within 30 minutes.

joint pain; Dizzy; tired; weak; nausea; This is a spontaneous report from a contactable Other HCP. A 28-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number # EJ1685) on 18Dec2020 at 08:30 AM at single dose via intramuscular on left arm for COVID-19 immunization. Relevant medical history included cancer in 2018 and allergy reaction to bee sting. Concomitant medications were not reported. Prior to vaccination patient wasn't diagnosed with COVID-19 and was not already tested for COVID-19. On 18Dec2020 at 08:45 AM patient experienced dizzy, tired, weak, nausea, and joint pain. At the time of the reporting the patient was recovering. No follow-up attempts are needed. No further information expected.

Sore arm; loss of appetite; nausea; headache; fatigue; This is a spontaneous report from a contactable other health care professional (Other HCP, patient herself). A female patient of unspecified age (reported as 31 also reported as 61) received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot number EH9899) on 16Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient experienced side effects reported as sore arm, loss of appetite, nausea, headache, fatigue. All side effects occurred two days after first dose of vaccine (18Dec2020). The outcome of the events was unknown.

Severe pain at site in left arm extending to whole arm, unable to lift arm or do things.; Severe pain at site in left arm extending to whole arm, unable to lift arm or do things.; Severe pain at site in left arm

extending to whole arm, unable to lift arm or do things.; This is a spontaneous report from a contactable nurse (patient herself). A 39-year-old female patient (no pregnancy) received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at site of right arm at 16:00 on 19Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced severe pain at site in left arm extending to whole arm, unable to lift arm or do things on 20Dec2020. No treatment received for events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of events was not recovered. Information on Lot/Batch number has been requested.

Dizziness; nausea; dry mouth; felt hot; chest tightness; sour taste in mouth; rapid heart rate; tingling on same arm vaccinated (L arm); some numbness in same arm left arm; felt shaky; Blood pressure elevated; This is a spontaneous report from a contactable healthcare professional. A 39-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EH9899), intramuscularly in the left arm on 17Dec2020 02:25 at a single dose for COVID-19 immunization. The patient had no significant medical history and no concomitant medications. Other illnesses at the time of vaccination and up to one month prior was none. The patient had no allergies to medications, food or other products. On 17Dec2020 02:32, the patient experienced dizziness, nausea, dry mouth, felt hot, chest tightness, sour taste in mouth, rapid heart rate, tingling on same arm vaccinated (L arm), some numbness in same arm left arm, felt shaky and blood pressure elevated. The patient was taken to emergency department and oxygen was provided. The patient underwent lab tests and procedures on 17Dec2020 which included blood pressure measurement: elevated and heart rate: rapid. Therapeutic measures were taken as a result of the events as aforementioned. The patient was observed and discharged to home after 40 min. The outcome of the events was recovered on 17Dec2020.

panic attacks; This is a spontaneous report from a Non-contactable physician. A 30-year-old female patient received bnt162b2 (BNT162B2) at single dose on an unspecified date for immunisation. Medical history included anaphylactic reaction, panic attack and 12 unspecified comorbid conditions. The patient's concomitant medications were not reported. The patient experienced panic attacks on an unspecified date. The action taken in response to the event for bnt162b2 was not applicable. The outcome of event was unknown. According to MD, they are not sure if was a true adverse reaction or a panic attack. No follow-up attempts are possible, information about lot/batch cannot be obtained.

anaphylactic reactions; throat and lip swelling; throat and lip swelling; mild chest pain; This is a spontaneous report from a non-contactable pharmacist. A 34-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration, on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient previously took terbinafine (MANUFACTURER UNKNOWN) and experienced allergy. The patient experienced anaphylactic reactions, throat and lip swelling, and mild chest pain on an unspecified date. The patient was observed for five hours. The clinical outcome of anaphylactic reactions, throat and lip swelling, and mild chest pain was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's

Comments: There is a reasonable possibility that the events anaphylactic reactions, throat and lip swelling, and mild chest pain were related to BNT162b2 based on known drug safety profile. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

About 30 mins after injection felt brain fog and had a hard time finding words/ like we were having to concentrate more than usual to do routine stuff; About 30 minutes after injection felt brain fog and had a hard time finding words. Another nurse that got vaccinated at the same time felt the same way. It's like we were having to concentrate more t; About 30 mins after injection felt brain fog and had a hard time finding words/ like we were having to concentrate more than usual to do routine stuff; This is a spontaneous report from a contactable consumer. This consumer reported similar events for 2 patients. This is the 2nd of 2 reports. A patient of unspecified age and gender started to receive (PFIZER-BIONTECH COVID-19 VACCINE, Lot number Ej1685), intramuscularly, as first single dose on 20Dec2020 for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. On 20Dec2020, about 30 minutes after injection felt brain fog and had a hard time finding words. Another nurse that got vaccinated at the same time felt the same way. It's like we were having to concentrate more than usual to do routine stuff. Outcome of the events about 30 mins after injection felt brain fog and had a hard time finding words/ like we were having to concentrate more than usual to do routine stuff was unknown.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020503261 same drug, same event and different patient

"soreness at the injection site; This is a spontaneous report from a non-contactable consumer. A 59-year-old female patient (reporter's mother) received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot EH9899) on 18Dec2020 at a single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient used to receive unspecified vaccines and experienced pain at the injection site. After 8 hours of taking bnt162b2 and into the next day patient reported soreness at the injection site on 19Dec2020. She described it as ""normal"" and like pain felt after other vaccines she has received. The outcome of the event was unknown."

anaphylactic reaction upon receipt of the vaccine; This is a spontaneous report from contactable pharmacist via a Pfizer Sales Representative. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration, in Dec2020 at a single dose for COVID-19 immunization. The patient was reported as a healthcare worker. Medical history included latex allergy. The patient's concomitant medications were not reported. The patient experienced an anaphylactic reaction upon receipt of the vaccine in Dec2020. The reporter called to confirm to confirm the lack of latex in the vaccine and also to inquire about the latex content of the 0.9% sodium chloride (NaCl) used to dilute the vaccine. The clinical outcome of anaphylactic reaction upon receipt of the vaccine was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and has been requested during follow up.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylactic reaction cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect

product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

rash; itchiness; Severe joint pain; nausea; stomach pain; This is a spontaneous report from a contactable Other HCP reported for herself. This 32-year-old female (no pregnant) patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular at left arm on 19Dec2020 18:45 at single dose for COVID-19 immunization. Medical history included Auto immune disorder, high-risk medications, asthma, and allergies: Spectrum hand sanitizer. Concomitant medication included adalimumab (HUMIRA) received within 2 weeks of vaccination. No Covid prior vaccination, No Covid tested post vaccination. No other vaccine in four weeks. On 19Dec2020 11:00 PM, the patient experienced severe joint pain, nausea, stomach pain the same day as vaccine. The next day (on 20Dec2020) patient experienced rash and itchiness. No treatment received for the events. The outcome of events was unknown. Information on the lot/batch number has been requested.

A 28-year-old female patient received BNT162B2 (Lot# EH9899) via intramuscular on 20Dec2020 08:00 AM (anatomical location: arm left, dose number: 1) at single dose for COVID-19 immunization. Medical history and concomitant medications were none. The patient did not have allergies to medications, food, or other products. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine, and did not have any other medications within 2 weeks of vaccination. The patient was not diagnosed with COVID-19 prior to vaccination. Since the vaccination, the patient has not been tested for COVID-19. It was reported that at around 17:00 on 20Dec2020, patient started having really bad headaches. She took a two-hour nap and when she woke up she kept having chills and a mild fever (on 20Dec2020 19:00). She hasn't been able to sleep because of feel warm yet cold and her body aches. No treatment received for the adverse events. Outcome of events was not recovered.

"Tingling throat; This is a spontaneous report from a contactable physician. This physician reported same event for two patients. This is second of two reports. A patient of unspecified age and gender started to receive bnt162b2 (BNT162B2; also reported as COVID-19 vaccine; unknown lot number, NDC number and expiration date), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was reported that it was unknown if other products were received or if an investigation assessment was performed. On 16Dec2020, the patient experienced tingling throat (non-serious). The physician called regarding COVID 19 vaccine since they had two events that happened yesterday (16Dec2020), however, the physician stated that she needs to ask a question before speaking with DSU and reporting the events. the physician mentioned that two patients complained of tingling in their

throat during the observation period after the vaccine was administered. The physician thought ""they just panicked and overreacted "" and she did not think they had a reaction. The patients did go the ER (emergency room) and were discharged the same day. The physician wanted to be able to give the second dose. The physician wants to ask about the side effects of the vaccine. The outcome of the event was unknown. The following information on the lot/batch number has been requested; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020502608 same reporter/event, different patient"

Fever; Chill; whole muscle ache; Headache; Runny nose; This is a spontaneous report from a contactable Other HCP reported for herself. This 32-year-old female (no pregnant) patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EH9899), intramuscular at left arm on 20Dec2020 11:00 at single dose for COVID-19 immunization. None medical history reported. The patient's concomitant medications were not reported. No Covid prior vaccination, No Covid tested post vaccination. No other vaccine in four weeks. On 20Dec2020 02:00 PM, the patient experienced fever, chill, whole muscle ache, headache, runny nose. No treatment received for the events. The outcome of events was unknown.

Itchiness and small rash on forehead; Itchiness and small rash on forehead; This is a spontaneous report from a contactable nurse (Patient). A 35-year-old female patient received bnt162b2 (lot number: EJ1685), intramuscularly at left arm, 1st dose on 20Dec2020 08:00 AM, at single dose, for COVID-19 immunization. No COVID prior vaccination, COVID tested post vaccination, known allergies, or other medical history. No other vaccines within 4 weeks prior to the COVID vaccine. No other medications the patient received within 2 weeks of vaccination. The patient was not diagnosed with COVID-19, prior to vaccination and after vaccination. Not pregnant at the time of vaccination. There were no concomitant medications. The patient experienced itchiness and small rash on forehead on 21Dec2020 01:00. The event was reported as non-serious. Therapeutic measures were taken as a result of itchiness and small rash on forehead, treatment included: allergy medicine PO (Oral). The outcome of the events was unknown.

Joint pain; Muscle pain; Headache; Fever (100.7 F); Fatigue; This is a spontaneous report from a non-contactable Other Healthcare professional (HCP). A 61-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot # EK5730), intramuscular, on 18Dec2020 at 12:30 PM at single dose for COVID-19 immunisation. Vaccine location was right arm. The patient was vaccinated at hospital, age at vaccination was 61-years-old. Medical history included the patient diagnosed with COVID 19 before vaccination. On 19Dec2020 at 06:00 PM, the patient experienced joint pain, muscle pain, headache, fever (100.7 F) and fatigue. No treatment was administered for the events. The patient recovered from the events on an unknown date in Dec2020. No follow-up attempts are possible. No further information is expected.

Bitter taste with food and drink for 2 hours post injection; This is a spontaneous report from a contactable other Healthcare Professional (HCP, patient). A 49-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot # ej1685), intramuscular, on 19Dec2020 at single dose for COVID-19 immunisation. Vaccine location was left arm. The patient was vaccinated at hospital, age at vaccination was 49-years-old. No other vaccines were administered within 4 weeks prior

to the COVID vaccine. Medical history included allergies to iodine, migraine, and gastrooesophageal reflux disease (GERD). Concomitant medications included duloxetine, erenumab aooe (AIMOVIG), and ubrogepant (UBRELVY) The patient experienced bitter taste with food and drink for 2 hours post injection on 19Dec2020 at 05:30 PM, reported as non-serious. No treatment was received for the event. The patient recovered from the event on an unknown date in Dec2020.

feeling tingling in my lips & face.& tongue; feeling tingling in my lips & face.& tongue; This is a spontaneous report from a contactable nurse (patient). A 61-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot:EL0140) via an unspecified route of administration at the right arm on 19Dec2020 08:30 at a single dose for covid-19 immunisation. Medical history included allergies to medications: sulfa drugs. Concomitant medication included zinc, magnesium, calcium phosphate, colecalciferol (CALCIUM+D), ascorbic acid (VITAMIN C) and clarithromycin (CLARITIN). On 20Dec2020 21:00, the patient felt tingling in her lips, face and tongue. The patient reported that she took diphenhydramine (BENADRYL) orally, 25mg when she got home as treatment. Outcome of events recovered on an unspecified date in Dec2020.

nausea; Headache; This is a spontaneous report from a contactable Nurse (patient). This 60-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot # EK5730), via an unspecified route of administration, on 17Dec2020 at 09:30 AM at single dose for COVID-19 immunisation. Vaccine location was left arm. The patient was vaccinated at hospital, age at vaccination was 60-years-old. No other vaccine was received in four weeks. Medical history included colorectal cancer in 2008, and idiopathic thrombocytopenic purpura (ITP) in 1991 recovered on an unknown date. Concomitant medications included gabapentin, omeprazole, duloxetine. On 17Dec2020 at 01:00 PM, the patient experienced headache and nausea the first day, severe nausea the second and third day, nausea continuing but not as severe as the second and third day. The patient was treated with Zofran. Outcome was not recovered.

headache on left side of head which was similar to migraine; This is a spontaneous report from a contactable other healthcare professional reported for herself. A 43-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EJ1685, expiry date unknown) intramuscular on left arm on 19Dec2020 11:30 at single dose for COVID-19 immunization. Medical history included penicillin allergies, allergies to sulfa drugs and allergies to cephalosporins. Concomitant medication included vitamin D3 and amylase, ascorbic acid, cellulase, folic acid, lipase, protease nos (JUICE PLUS); both from unspecified date for unspecified indication. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 19Dec2020 13:00, the patient experienced headache on left side of head which was similar to migraine and went away on Dec2020 by taking 2 Aleve. The event was considered non-serious and did not results in death, not life threatening, did not caused/prolonged hospitalization, not disabling/incapacitating, not a congenital anomaly/birth defect.

dizziness; weakness; loss of balance; brain fog; lethargy; Dizziness and loss of balance led to a fall where an injury was sustained (leg weakness, loss of balance led to a fall down a flight of stairs with injury to right shoulder); Dizziness and loss of balance led to a fall where an injury was sustained (leg weakness, loss of balance led to a fall down a flight of stairs with injury to right shoulder); Dizziness and loss of balance led to a fall where an injury was sustained (leg weakness, loss of balance led to a fall down a

flight of stairs with injury to right shoulder); This is a spontaneous report from a contactable nurse. This 41-year-old female nurse (patient) reported for herself that she received the first dose of BNT162B2 (Lot# EH9889) intramuscularly at left arm at single dose for COVID-19 ((PFIZER-BIONTECH COVID-19 VACCINE) immunisation on 17Dec2020. Relevant history was unknown. Relevant concomitant drug included multivitamin and ergocalciferol (VIT D). No known allergies. No allergies to medications, food, or other products. Relevant medical history was none. After receiving first dose, the patient experienced dizziness, weakness, loss of balance, brain fog, lethargy on 18Dec2020, 07:00 AM. The dizziness and loss of balance led to a fall where an injury was sustained (leg weakness, loss of balance led to a fall down a flight of stairs with injury to right shoulder). No treatment was received. The patient resolved with sequel from the events. No covid prior vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The events were considered as non-serious.

headache; chills; fatigue; This is a spontaneous report from a non-contactable nurse. This nurse reported for a 32-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number=EK5730) Intramuscularly at Left arm at single dose for COVID-19 immunisation on 19Dec2020 (02:30 PM). Relevant history and concomitant drugs were unknown. The patient experienced had chills, fatigue, headache in the morning of 20Dec2020 at 7:00 am. The patient received Tylenol as treatment and the outcome of events was resolved in unknown date of Dec2020. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible. No further information is expected.

"amount of blood on his Band-Aid after the injection; This is a spontaneous report from a contactable pharmacist. A male patient unknown age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose for COVID-19 immunisation on 20Dec2020. Relevant history and concomitant drugs were unknown. The patient had a significant (then rephrased to ""small"") amount of blood on his Band-Aid after the injection on 20Dec2020. Outcome of the event was unknown. The information on the lot/batch number has been requested."

feeling kind of bad; low grade fever; chills; muscle aches; Arm is still sore at the injection site. It's sore to touch and can tell it's still sore with movement.; swollen lymph nodes; spontaneous report from a contactable nurse. This 47-year-old nurse reported for self that she received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) intramuscularly at right arm at single dose for COVID-19 immunisation on 18Dec2020. Relevant history included gestational diabetes history; Her daughter was 14 years old and she had never had diabetes. No signs of diabetes after birth of daughter. The patient was not a smoker/former smoker. The patient had tested positive with COVID antibodies probably in Apr2020, both she and her husband and both wound up getting symptomatic with COVID symptoms about the 14Mar2020. They were unable to get tested and just kind of figured they had it. Her husband also had pneumonia. They both recovered in Apr and decided to get the antibody test done and it was positive for the antibodies and they had also given blood since then and that was also positive for antibodies. The patient considered wondering with this being the first vaccine dose was considered as a

good immune response. Relevant concomitant drug was unknown. The patient reported having the Pfizer-BioNTech COVID-19 Vaccine 685 on Fri and was having some symptoms. Got it about 12:45 Fri (18Dec2020) and around 11PM that evening she was feeling kind of bad, low grade fever, chills, and muscle aches. This was only the first vaccine she had. The symptoms ended up lasting up to 24 hours and the fever went away the next morning, but she still had chills. Only thing she had was the swollen lymph nodes at right axillary, the same side of the site of the injection. The patient mentioned she didn't feel very good Sat, but at the reporting time she could work today. The patient clarified that her husband did not have the Pfizer-BioNTech COVID19 Vaccine 685 vaccine. And she did not test positive for COVID and didn't have the actual testing done because they didn't have the test available it was only for if someone were hospitalized. The patient's arm was still sore at the injection site. It's sore to touch and could tell it's still sore with movement. There was no pre-existing diseases worsened during the SARS-CoV2 infection. The patient was not treated with immunomodulating or immunosuppressing medications or received any other vaccines around the time of COVID-19 vaccination. The patient did not have a positive test for SARS-CoV2. The patient did not display clinical signs at rest indicative of severe systemic illness. The patient did not taking any medications routinely prior to the event being reported. The outcome of event feeling kind of bad, low grade fever and muscle aches was resolved, the outcome of events swollen lymph nodes, chills and sore at the injection site was not resolved. The events were assessed as non-serious. The patient stated she had been positive with Covid in Mar, which may have caused her to be more symptomatic with the vaccine, but was unsure if that was the case. She also heard a lot of people had the first dose, never exposed to Covid, and had no symptoms after receiving the vaccine. The patient asked if she should still take the second dose even though she has been positive with Covid before. Information on the lot/batch number has been requested.

arm started to feel sore; injection site pain; This is a spontaneous report from a contactable consumer (patient). A 76-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number E9899, expiry date Mar2021) intramuscular on left arm on 17Dec2020 at single dose for COVID-19 immunization. The patient has no prior vaccinations within 4 weeks. Medical history included and concomitant medications were none. The patient got the COVID vaccine on Thursday (17Dec2020), her arm was still really sore (17Dec2020). The patient asked on how long will this last and was referred to healthcare professional. Full EUA PI, discussed incidence of injection site pain. No information on duration after 1st dose. The patient received the Covid vaccine around 10:30 on Thursday morning and her arm started to feel sore Thursday evening. The patient clarified that the vaccine was administered around 10:30AM to 11:00AM. The patient was advised to follow up with healthcare professional. The patient did not receive treatment for the events. The outcome of the events arm started to feel sore and injection site pain was recovering. The reporter informed that the vaccination facility type was a hospital and was not administered at a military facility.

"Making me just kind of loopy too kind of light headed; Weakness; Ringing in ears; Headache; pain at the injection site; I could not even turn onto my other side last night from pain; pain at the injection site; I could not even turn onto my other side last night from pain; Chills; fatigue/Tiredness; low grade temperature; I couldn't even sleep; Extreme muscle and joint pain generalized; Extreme muscle and joint pain generalized; This is a spontaneous report from a contactable nurse. A female patient of an

unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EH9899, via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunization. Medical history was reported as none. There were no concomitant medications. The patient stated, ""I am a Registered Nurse, an RN here in (city name) and I received your Pfizer vaccine (Covid 19 Vaccine) yesterday morning. I just wanted to report some issues with the vaccine. All through the night in Dec2020, I had the muscle pains, generalized muscle pain all over, even Tylenol (later clarified as Ibuprofen 200 mg, lot number: 9FE3019A and expiry date: Mar2021) wouldn't even work. I have a low grade temperature, headache, and real pain at the site of the injection, some chills earlier yesterday on 19Dec2020. So, I am afraid to get the next Pfizer one because to get some more side effects. This one is making me just kind of loopy too kind of light headed, and I am just really tired, really fatigue on 20Dec2020. With this Pfizer vaccine, I thought it was approved by the certain drug and (Center Name) and according to your message that I just got on another phone number has not been approved. But it was rushed out just for emergency use. Is that correct?"". When informed about the role of Pfizer Medical Information and offered the number, the patient stated, ""Well one number that I got, it was all loopy. I mean it was just all over the page, I couldn't leave a message. They gave me so much information that. So, which number you are talking about?"". The due date for the next shot: 06Jan2021. I am a healthcare provider and I also go into the COVID unit probably in January sometimes. So, I wanted, I am kind of one of your guinea pig. ""When I initially got it on 19Dec2020, of course I had pain at the injection site. I could not even turn onto my other side last night from pain at the injection site. Yesterday on 19Dec2020, I got some chills, I got a low grade temperature, feeling fatigue after a while. At first, I didn't feel that other than injections site. Through the whole night I had low grade temperature, extreme muscle and joint pain generalized, which I couldn't even sleep, I had insomnia. Tylenol wouldn't even help with that. Of course tiredness but I couldn't sleep. So I can't really feel okay, not a very good sleep yesterday. Low grade temp when I got up in the morning and dizziness and weakness this morning definitely and ringing in my ears kind of like.Yes I am generally, but the dizziness and the weakness is kind of new one. I had Tylenol during the night because I couldn't sleep, because I had such muscle and joint pain all over my joint in Dec2020."" The outcome of the events was unknown."

headache; had soreness/pain at the injection site between 24-48 hours; muscle aches; fatigue; malaise; low grade fever; This is a spontaneous report from a contactable consumer (patient). A 28-year-old non-pregnant female patient received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot number: 1703), via an unspecified route of administration at left arm on 18Dec2020 10:00 at a single dose for COVID-19 immunization, and second dose of hepatitis b vaccine, via an unspecified route of administration at left arm on 11Dec2020 at unknown dose for an unspecified indication. The patient received COVID-19 vaccine in a hospital facility. Medical history was not reported. The patient has no known allergies. The patient's concomitant medication included birth control. The patient previously received first dose of hepatitis b vaccine on unspecified date. Since the vaccination, the patient has not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was fine the morning she received the vaccine (up until the evening). Then she started to feel muscle aches, fatigue, malaise, and had a low grade fever on 18Dec2020 19:00. This persisted for about 48 hours. She also had soreness/pain at the injection site between 24-48 hours

(started on 19Dec2020). The 3rd day (today, 21Dec2020), she had a slight headache, but that could be unrelated. The patient did not receive any treatment for the adverse events. The outcome of the events was recovering. The report was considered non-serious.

fatigue; chills; arm soreness; This is a spontaneous report from a contactable pharmacist. This 34-year-old female pharmacist (patient) reported that she received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via intramuscular on left arm on 18Dec2020 at 12:45 PM at single dose for COVID-19 immunization. Facility where the most recent COVID-19 vaccine administered was hospital. Prior to vaccination, the patient was not diagnosed with COVID-19. Medical history and concomitant medications were not reported. It was reported patient had no other vaccine in four weeks; she had oral contraceptive in two weeks. Since the vaccination, the patient had not been tested for COVID-19. The patient experienced fatigue, chills, arm soreness on 18Dec2020 at 03:00 PM. No treatment was received. Outcome of events was recovered in Dec2020.

arm pain; low grade fever of 100; This is a spontaneous report from a contactable nurse. A 46-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), intramuscularly at the left arm on 20Dec2020 10:30 at a single dose for COVID-19 immunization at a hospital. Medical history included migraine and asthma. Allergy with only certain nausea medications (unspecified). There were concomitant medications but were unspecified which the patient received within 2 weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination and was not tested for it since the vaccination. On 20Dec2020, 22:00, after almost 12 hours, patient had a low grade fever of 100 (unit unspecified) and had an arm pain with no treatment while fever responded to acetaminophen (TYLENOL). The patient recovered from the events on an unknown date.

redness and swelling to right wrist; redness and swelling to right wrist; Itching to left side neck and back.; This is a spontaneous report from a contactable nurse. A 25-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EJ1685, first dose via intramuscular in left arm on 21Dec2020 09:30 at SINGLE DOSE for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced redness and swelling to right wrist and itching to left side neck and back on 21Dec2020 09:45. The facility where the most recent COVID-19 vaccine was administered was in the hospital. The events resulted in emergency room or department or urgent care. The case was reported as non serious by the reporter, and did not result in death, not life threatening, did not cause prolonged hospitalization, not disabling or incapacitating and no congenital anomaly or birth defect. The outcome of the events was unknown.

Injection site was very painful and it's blowing and my whole arm was hurting; Injection site was very painful and it's blowing and my whole arm was hurting; I have swelling in my whole arm; Weakness; Muscle soreness; Headache; This is a spontaneous report from a contactable consumer (patient, nurse's assistant). A 48-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on Friday 18Dec2020 at about 09:58 at 0.3 ml, single for covid-19 immunization. This was the first dose. None medical history. There were no concomitant medications. In 2020, the patient stated the injection site itself, was very painful and it's blowing and in fact her whole

arm, the whole arm was hurting and she has swelling in her whole arm and also she had like muscle soreness and weakness. The only other thing she felt was like headache and that's it. The patient was given aspirin for treatment. The action taken in response to the events for bnt162b2 was not applicable. The outcome of events was unknown. Information on the lot/batch number has been requested.

"numbness and tingles in armed or pant in all my fingers; numbness and tingles in armed or pant in all my fingers; This is a spontaneous report from a contactable consumer. A 44-year-old female patient received the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EK5730 and Expiration Date: Mar2021), via an unspecified route of administration on 18Dec2020 at 44-years-old at a single dose for COVID-19 immunization. The patient's medical history was reported as none. Concomitant medications included estradiol (MANUFACTURER UNKNOWN), misoprostol (MANUFACTURER UNKNOWN); both taken for an unspecified indication from an unspecified date to an unspecified date. On 19Dec2020, the patient experienced: ""numbness and tingles in armed or pant in all my fingers."" The patient stated, ''I got my shot (COVID Vaccine) at work yesterday around 3 pm. Since 1 O 'clock this morning I have numbness and tingles in armed or pant in all my fingers, can won't go away.'' There was no treatment received. The patient reported that she worked in an emergency department as a technician. The patient underwent lab tests and procedures which included body weight: about 190 on an unspecified date. The clinical outcome of the events was not recovered."

Woke up in middle of night; severe muscle pain entire body; chills/fever; chills/fever; debilitating headache; This is a spontaneous report from a contactable nurse (patient). A 61-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date were not provided) solution for injection, intramuscular (left arm) on 20Dec2020 10:00 at a single dose for COVID-19 immunisation. Medical history was reported as none. Concomitant medication included aspirin [acetylsalicylic acid] (ASPIRIN [ACETYLSALICYLIC ACID]), hydrochlorothiazide, losartan potassium (LOSARTAN HCTZ), metoprolol succinate (METOPROLOL SUCCINATE), and estrogens conjugated (PREMARIN). The patient reported she woke up in middle of night, had severe muscle pain on entire body, chills/fever, and debilitating headache on 21Dec2020 02:00. No treatment was received. The events were reported as non-serious. The patient was not pregnant. The patient has not been diagnosed of Covid-19 prior to vaccination and has not been tested. Outcome of the events was recovering. Information about lot/batch no has been requested.

Back pain radiating down to the L buttocks, down the L leg and ending at the ankle.; Back pain radiating down to the L buttocks, down the L leg and ending at the ankle. Rating 5/10 pain.; Back pain radiating down to the L buttocks, down the L leg and ending at the ankle.; Back pain radiating down to the L buttocks, down the L leg and ending at the ankle.; Back pain radiating down to the L buttocks, down the L leg and ending at the ankle.; This is a spontaneous report from a contactable nurse (patient). A 29-year-old female patient received 1 dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899) intramuscular on right arm on 19Dec2020 10:00 AM, single dose for COVID-19 immunization at 29-year-old. Medical history included: COVID-19 diagnosed prior to vaccination. No known allergies. Concomitant medications included: drospirenone, ethinylestradiol betadex clathrate (YAZ); ibuprofen; cetirizine hydrochloride (ZYRTEC); diphenhydramine hydrochloride (BENADRYL); melatonin. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On

20Dec2020, 10:00 AM, the patient experienced back pain radiating down to the L buttocks, down the L leg and ending at the ankle, rating 5/10 pain. No treatment received for the adverse events. Lab data included: COVID-19 (positive) diagnosed prior to vaccination; pain 5/10 on 20Dec2020. Since the vaccination, the patient had not been tested for COVID-19. Action taken for BNT162B2 was not applicable. Outcome of the events was not resolved. It was reported as non-serious.

feeling light headed; blotchy spots on neck and chest; tingling to the back of the throat; This is a spontaneous report from a contactable nurse. A 42-year-old female patient received 1 dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685) intramuscular on left arm on 21Dec2020 10:15 AM, single dose for COVID-19 immunization at 42-year-old. Medical history and concomitant medication were not reported. On 21Dec2020 10:30 AM, the patient was reported feeling light-headed, blotchy spots on neck and chest, and tingling to the back of the throat. Emergency room/department or urgent care visited. Action taken for BNT162B2 was not applicable. Outcome of the events was unknown. It was reported as non-serious.

"lips tingling and ""on fire""/tingling ""8/10"", ""2/10""; lips tingling and ""on fire""/tingling ""8/10"", ""2/10""; This is a spontaneous report from a contactable other healthcare professional. A 39-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular on 18Dec2020 at single dose for COVID-19 immunization at hospital. The patient's medical history and concomitant medications were not reported. It was reported that the patient received first dose of Pfizer COVID-19 vaccine. After ""10:00 minutes"" of observation phase, patient complained Of (c/o) lips tingling and ""on fire"". Lips not swollen, denies short of breath (SOB), ""skin WNLs"", denies difficulty swallowing. The Medical Emergency Response Team (MERT) was called. Patient was assessed, stated tingling 8/10, no other symptoms. Patient was given bottle of water and was tolerating that fine. Allegra 60mg was ordered and administered at 8:52 A.M. Patient stated was at a 2/10, 10 minutes after getting the Allegra. Patient was drinking water without difficulties. Patient remained without further symptoms, lips still 2/10 with tingling. Outpatient lab work was ordered. Patient left at 10:00 A.M ambulatory to outpatient lab. MERT educated her to notify administrator of her symptoms prior to her second vaccine. The outcome of the event was reported as recovered (in Dec2020). No follow-up attempts are possible; information about lot/batch number cannot be obtained."

incontinence (urine); Tiredness/ exhausted; woke early; numbness down her arm/ numbness went up to her neck/ numbness on the tip of her fingers; soreness on her neck; both her arms since she was so sore; both her arms since she was so sore/ sore at the injection site; sweats; extremely hot; headache; lightheadedness; This is a spontaneous report from a contactable consumer (patient). A 44-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685) intramuscular on left arm on 19Dec2020 18:00, single dose for COVID-19 immunization at 44-year-old. Medical history was not reported. Concomitant medications included: meloxicam (15mg tablet) oral 15mg once a day for arthritis. The patient had not taken any other medications today (21Dec2020) or yesterday (20Dec2020). The patient experienced numbness down her arm the first day she received the injection (19Dec2020), stated it was like someone was holding her hand tight, stated she thought this was normal. The numbness went up to her neck on 19Dec2020. By Sunday (20Dec2020) she had the

numbness on the tip of her fingers in both hands. The patient stated she also had soreness on her neck on 19Dec2020. The patient stated that when she woke up it felt like someone pulled down on both her arms since she was so sore on 19Dec2020. Treatment received, the patient took paracetamol (TYLENOL), no visit to emergency room or physician office. Currently (21Dec2020), the patient was still sore at the injection site, but she did not have any pain or numbness. The patient had the sweats on 19Dec2020, stated she was extremely hot (19Dec2020). Her back was so wet. She was warm. The patient woke up incontinent (urine) this morning (21Dec2020). The patient stated it was not that she fully emptied her bladder, but she woke up wet this morning. The patient found it odd she did not wake to use bathroom, when she woke up she still went to empty her bladder. She felt like she had recovered completely from the incontinence, she only had it when she woke up. The first night after she took the vaccine (19Dec2020) the patient woke early, like 6 am which she didn't usually wake up so early. The patient stated for two nights she slept and did not move, she woke up the way she fell asleep laying down. It didn't look she changed position, woke up as if the patient did not sleep at all. The patient stated she must have been exhausted because she did not move at all. The patient started to experience the tiredness by the time she left work around 8 pm on 19Dec2020. The patient stated she was regularly tired, not overly tired but she worked two 12-hour shifts. The tiredness was better today (21Dec2020) than the first two days. The patient had a headache, lightheadedness (in Dec2020). Action taken for BNT162B2 was not applicable. Outcome of the event numbness down her arm/ numbness went up to her neck/ numbness on the tip of her fingers was resolved on 21Dec2020; outcome of the events soreness on her neck, both her arms since she was so sore, sore at the injection site was resolving; outcome of the event sweats was resolved on 19Dec2020; outcome of the event incontinent (urine) was resolved on 21Dec2020; outcome of the event tiredness was resolving; outcome of the other events was unknown.

severe dizziness; horrible nausea and vomiting; horrible nausea and vomiting; muscle soreness; headache; This is a spontaneous report from a contactable nurse (patient). A 40-year-old female nurse received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899) via unspecified route in left lower deltoid on 17Dec2020 10 am, single dose for COVID-19 immunization at 40-year-old. Medical history included: surgery and lipoma removed from upper deltoid in Nov2020. Family medical history included: Her mother had colorectal cancer at age 40. When the patient turned 40, she had colonoscopy earlier this year (2020) and it was negative. Concomitant medication included: levothyroxine 100ug daily from 2001. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. She had pretty severe muscle soreness Thursday night (17Dec2020) and the next two days. On 19Dec2020 it was not as severe. It was mild and it started to dissipate on 19Dec2020. The only thing she had been taking was acetaminophen 650mg that night for the muscle soreness. The patient awoke at 3:00 am on 20Dec2020 out of a dream with severe dizziness that turned into horrible nausea and vomiting. She had vomiting for a little while the third night (20Dec2020) into the fourth day. The patient (nurse) considered the muscle soreness and dizziness was non-serious and not medically significant. She didn't feel the need to go to the hospital because it did improve. After she threw up, the dizziness kind of went way. Even today (21Dec2020) she felt fine and no more nausea, but still felt kind of off and dizziness, lingering dizziness. It wasn't extreme dizziness but when texting she could feel, and it was hard to focus. She was not one hundred percent her normal self. She was not sure if it was related to the

vaccine. She was eating and drinking normally. The night that she received the vaccine, she had one beer and one margarita at dinner. She did have alcoholic beverages, a beer and a margarita. It was nothing excessive with dinner. She was not overly drunk. She didn't know if alcohol could have contributed. She had never had that kind of reaction before from drinking. That was very odd. She just wouldn't drink any alcohol. She took acetaminophen for a headache (in Dec2020) that she was experiencing. She was pretty healthy. All of this was so new with the COVID vaccine. That night into this morning she started her menstrual period as well. She had never had any horrible side effects like migraines or cramping when getting her menstrual cycle. It could have been the alcohol or her period. No visit to emergency room or physician office. Action taken for BNT162B2 was not applicable. Outcome of the event muscle soreness was resolved on 19Dec2020; outcome of the event severe dizziness was resolving; outcome of the other events was unknown. Causality assessment between the event muscle soreness and the suspect product BNT162B2 per the patient was reported as related.

Headache; body aches; chills; low grade fever 100 degrees Fahrenheit; Soreness to the right arm where vaccine was administered.; This is a spontaneous report from a contactable consumer. A 60-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via unspecified route on right arm on 18Dec2020 03:00 PM, single dose for COVID-19 immunization at 60-year-old. Medical history included: COVID-19 diagnosed prior to vaccination. Concomitant medication was not reported. No other vaccine received within 4 weeks prior to the COVID vaccine. On 19Dec2020 12:00 PM, the patient had headache, body aches, chills and low-grade fever 100 degrees Fahrenheit. At the same time (19Dec2020 12:00 PM), the patient had soreness to the right arm where vaccine was administered. No treatment received for above adverse events. Lab data included: COVID-19 (positive) diagnosed prior to vaccination; 100 degrees Fahrenheit low-grade fever on 19Dec2020. Since the vaccination, the patient had not been tested for COVID-19. Action taken for BNT162B2 was not applicable. Outcome of the events was resolved in Dec2020. It was reported as non-serious. Information on the lot/batch number has been requested.

swelling of eyelids and cheeks; swelling of eyelids and cheeks; swelling of hands; This is a spontaneous report from a contactable pharmacist. A 58-year-old female patient received 1 dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730) intramuscular on left deltoid on 16Dec2020 11:00 AM, single dose for COVID-19 immunization at 58-year-old. Medical history included: Sulfa allergy; diabetes, hypertension, high cholesterol. Prior to vaccination, the patient was not diagnosed with COVID-19. Concomitant medications included: metformin, valsartan and pantoprazole. No other vaccine received within 4 weeks prior to the COVID vaccine. On 17Dec2020 morning, 06:00 AM, the patient had swelling of hands and then 18Dec2020 morning, the patient had swelling of eyelids and cheeks. Doctor or other healthcare professional office/clinic visit. Treatment received as: Diphenhydramine 50mg and prednisone 40mg orally. Since the vaccination, the patient had not been tested for COVID-19. Action taken for BNT162B2 was not applicable. Outcome of the events was resolved in Dec2020. It was reported as non-serious.

Diarrhea, dizziness, swollen tongue and lips. Sore joints for multiple days, headache; Diarrhea, dizziness, swollen tongue and lips. Sore joints for multiple days, headache; Diarrhea, dizziness, swollen tongue and lips. Sore joints for multiple days, headache; Diarrhea, dizziness, swollen tongue and lips. Sore joints for

multiple days, headache; Diarrhea, dizziness, swollen tongue and lips. Sore joints for multiple days, headache; Diarrhea, dizziness, swollen tongue and lips. Sore joints for multiple days, headache; This is a spontaneous report from a non-contactable consumer (patient). A 34-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration on left arm at 08:30 AM.on 18Dec2020 at single dose for COVID-19 immunization. Medical history reported as none, no known allergies. The patient's concomitant medications were not reported. The patient experienced diarrhea, dizziness, swollen tongue and lips. Sore joints for multiple days and headache in Dec2020 (reported as 11Dec2020 at time 08:45 AM). All events were reported as non-serious. The patient self administered Benadryl. Acetaminophen and ibup (ibuprofen) as treatment. The outcome of events was resolved with sequel. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible. information about lot/batch number cannot be obtained.

urticaria on inside of both arms; This is a spontaneous report from a contactable Physician. This physician reported for a female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose for covid-19 immunization. Medical history was urticaria. Physician stated that I have a female patient in good health with a history of urticaria. She got the vaccine and developed urticaria on inside of both arms - looking for information on whether this patient should receive the 2nd dose. Outcome of the event was unknown. Information about batch/lot number has been requested.

"I woke up and my left eye is swollen and my face is kind of swollen; I woke up and my left eye is swollen and my face is kind of swollen; rash/ rash on and off on my back and on my arm and around my face; allergic symptoms; kind of like itchiness on my ears and my scalp and also like on and off on my back and also on both of my arms like my wrist area on both arms/All night I was up with scratching my face; The initial case was missing the following minimum criteria: unspecified product. Upon receipt of followup information on 20Dec2020, this case now contains all required information to be considered valid. This is a spontaneous report from a contactable physician (patient). A 30-years-old female patient received first dose bnt162b2 (BNT162B2), intramuscular on 2020 at single dose for covid-19 immunisation. Medical history included On nose, had prior to getting the vaccine, was experiencing some kind of she got through the contact dermatitis rash like her arms and behind her ears and it was all over her neck (she thought it was related to mat because she was getting it on neck and ears taking medication for that it just allergy medication and it had gotten better). There were no concomitant medications. The physician reported she have been experiencing some allergic symptoms following it since Dec2020, she had itchiness, it was like a rash on and off on back and on arm and around face and itchiness on calp and face/ experiencing kind of like itchiness on ears and scalp and also like on and off on back and also on both of arms like wrist area on both arms and then in the morning like 20Dec2020, it was kind of all night she was up with scratching face,; In the morning 20Dec2020, she woke up with some mild facial swelling, noticed like eyes swollen and little bit droopy. The events were still going on, she just took medicine for it. It's kind of persistent. Physician stated, ""I guess I can report the worsening of my symptoms that was in the morning of reporting date like 8 AM."" Treatment included just took medicine, Prednisone, Benadryl and Zyrtec. Weight: About 103. The event outcome was not recovered. Information on lot/batch number has been requested."

flushed; warm face and ears; This is a spontaneous report from a non-contactable other health care professional. A 57-year-old female patient received bnt162b2 (BNT162B2; lot number: HE9899), intramuscular on arm (reported as left arm) dose number 1 on 17Dec2020, SINGLE DOSE for COVID-19 immunization. Medical history included mild history of anxiety, and panic attack. She has medication to treat this at home if needed. The patient's concomitant medications were not reported. She was given the Pfizer vaccination in the right deltoid muscle (pending clarification). During her 15 minute waiting period after the injection, the patient began to experience flushed, warm face and ears. She denied rash, difficulty breathing, difficulty swallowing, wheezing, throat tightness, lightheadedness, lip swelling and tongue swelling. This APP was notified of patient reaction and she was then assessed in the emergency bay area. (Name withheld) was observed x 35 minutes after receiving vaccination. All symptoms resolved within 20 minutes. No treatment was required. The outcome of the events was recovered. No follow-up attempts are possible. No further information is expected.

feeling nauseated, hot; feeling nauseated, hot; headache; difficulty breathing; itchy all over the body, with redness and blotchiness in the face, neck and arms; itchy all over the body, with redness and blotchiness in the face, neck and arms; itchy all over the body, with redness and blotchiness in the face, neck and arms; Blood pressure elevated along with heart rate.; Blood pressure elevated along with heart rate.; This is a spontaneous report from a contactable other healthcare professional (HCP), who is also the patient. This 34-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunisation. Vaccination facility type was hospital. Relevant medical history included polycystic ovaries, gastrooesophageal reflux disease, Hashimoto's disease and allergy to sulfa, penicillin, latex and hornets. Concomitant medications included thyroid (ARMOUR THYROID), omeprazole and vitamin D3. On 19Dec2020 at 12:15, 10 minutes after the injection, the patient started feeling nauseated, hot and developed a headache. A couple of minutes after that, she started experiencing difficulty breathing and itchy all over the body, with redness and blotchiness in the face, neck and arms and blood pressure elevated along with heart rate. The events resulted in emergency room/department visit or urgent care. Corrective treatments taken as a result of the events included methylprednisolone sodium succinate (Solu-medrol), diphenhydramine hydrochloride (BENADRYL) and famotadine along with intravenous (IV) fluids. The patient recovered with sequel from the events on an unspecified date. The information on the lot/ batch number has been requested.

Soreness at the injection site; This is a spontaneous report from a contactable nurse (patient). A 62-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EJ1685), intramuscular on the left arm on 18Dec2020 13:00 at a single dose for covid-19 immunization. The patient's medical history included hypertension (HTN) and elevated triglycerides. The patient was not pregnant. The patient have no allergies to medications, food, or other products. It was unknown if the patient was diagnosed with COVID-19 prior to vaccination. The patient had not been tested for COVID-19 since the vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Concomitant medications included metoprolol and fenofibric acid. The patient experienced soreness at the injection site on 19Dec2020 05:00. No treatment was received for the adverse event. Outcome of the event was recovered on Dec2020.

Minor headache; chills; This is a spontaneous report from a contactable other healthcare professional (patient). A 31-year-old male patient received the first dose of bnt162b2 (BNT162B2, lot no. and expiration date were unknown), via an unspecified route of administration on 18Dec2020 23:45 on the left arm at single dose for COVID-19 immunization. Medical history included heart stent. The patient had no known drug allergies. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. On 19Dec2020 01:00 AM, the patient experienced minor headache and chills. No treatment received for the events. The events recovered on unspecified date in Dec2020. Information on the lot/batch number has been requested.

"When they put the shot it's been hurting me ever since then; This is a spontaneous report from a contactable consumer. A 40-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration on an unspecified date as single dose for COVID-19 immunization. Medical history included diabetes and headache from an unknown date. Concomitant medication included metformin (MANUFACTURER UNKNOWN) for diabetes. On an unspecified date, the patient reported that "" when they put the shot it's been hurting me ever since then "" with outcome of unknown. Details were as follows: Patient indicated that when he got the shot, everything was good but when they put the shot it's been hurting ever since then. There were no lab tests, or treatment given for the event. The outcome of "" when they put the shot it's been hurting me ever since then "" was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up ."

Heart palpitations and severe fatigue for 48 hours; Heart palpitations and severe fatigue for 48 hours; This is a spontaneous report from a contactable other healthcare professional (patient herself). A 37-year-old female patient received bnt162b2 (BNT162B2 also reported as COVID 19 brand Pfizer, lot EK5730), intramuscularly in the left arm on 18Dec2020 10:30 at single dose (dose number 1) for immunisation. Medical history was none. There were no concomitant medications. The patient experienced heart palpitations and severe fatigue for 48 hours on 18Dec2020 18:00. The events were reported as non-serious. No treatment was given. The outcome of events was recovered on unknown date in Dec2020.

my arm hurt for 4 Hours later and peaked that evening; headache; tiredness; lethargic/pretty lethargic.; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). Contactable Physicians (one was patient) reported that a 72-years-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899, Expiry Date: Mar2021) on 18Dec2020 at single dose for covid-19 immunization. Medical history and concomitant drug were not reported. The caller is a MD. He had the vaccine on Friday. His arm hurt 4 hours later, and then peaked that evening. It was very painful. It hurt and was painful. By Sunday it was 95 % gone. Today (21Dec2020) the pain is completely gone. He received the vaccine Friday. He is supposed to get an MRI Wednesday morning. He will be getting Gadolinun. He wanted to know if there was any adverse reaction with that. Will this material interfere with the immune response of COVID vaccine? He is considering canceling his MRI. The caller confirmed the details provided by the transferring agent. He

doesn't have a prescribing doctor. He was looking at his CDC vaccination record log. He was given 0.3cc. He received the injection, and the pain started 4 hours later. It peaked in the evening. It was the worst arm pain he has ever had from a shot. He couldn't elevate his arm from pain. It was interesting because there was very little heat at the injection site. The amount of arm pain was not proportionate to a local reaction. He did take Tylenol that night. He got up the next day, Saturday, and it was painful but a little less painful. Then on Sunday 20Dec2020, it was 95% essentially. He started to get lethargic that Friday at about 9-12 hours later. Then he had a headache about 11 hours later that lasted 5-10 minutes. He was surprised but it went away. Saturday, he was pretty lethargic. He felt more lethargic from the shingles shot. No details on the shingles shot provided by the caller. He said the tiredness may have been a placebo effect because everyone says you will get tired. He was fine yesterday and today. He is glad he got it. He has recovered completely from all side effects he had. He never had a fever. His question about the MRI was escalated by the Medical information associate. Follow-up attempts have been completed and no further information is expected.

left eye was irritated; left eye was sensitive to light; left eye was painful weeping and red.; left eye was red; left eye weepy; entire left side was sore, achy, including her jaw and stuff; entire left side was sore, achy, including her jaw and stuff; This is a spontaneous report from a contactable consumer. A female patient of unspecified age (reported as 59 with no unit) received BNT162B2 (Pfizer-Biontech COVID-19 Vaccine), via an unspecified route of administration on right arm on 16Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. It was painless on 16Dec2020. On 17Dec2020, her entire left side was sore, achy, including her jaw and stuff, 18Dec2020 evening, her left eye was irritated, sensitive to light, painful weeping and red (left eye was painful, red, and weepy). She called her doctor on 19Dec2020 and he gave her some eye drops. On 20Dec2020, the eye drops seemed to irritate her eye more. She woke up in the morning and it was seeming to get better as she had been taking Excedrin. She was supposed to wait 6 hours between drops, then her eye again was sensitive to light and painful, so she took another Excedrin, which helped again. She was trying to see an eye specialist the day after the time of the report. She had asked around at work and nobody else had any issues. She was wondering if this was vaccine related. She wanted to get tested for COVID, not that she thought she had it now, but might be she had it before she got the vaccine. She had not even talked to her workplace about this or anything. They asked everyone the first day after, if there were any issues and to report them to HR/Employee Health. She had not done so yet, so she wanted to do that first. Outcome of the events left eye was irritated, sensitive to light, painful weeping and red, and left eye weepy was resolving, and of other events was unknown. Lot/batch number has been requested.

Nausea; headache; fatigue; This is a spontaneous report from a contactable healthcare professional. A 31-year-old male patient received BNT162B2 (Lot number: EJ1685), intramuscularly on right arm on 20Dec2020 07:00 at single dose for COVID-19 immunization. Medical history was not reported. Concomitant medications in two weeks included emtricitabine/tenofovir disoproxil fumarate (TRUVADA), bupropion hydrochloride (WELLBUTRIN), lamotrigine (LAMICTAL), and valaciclovir (VALACYCLOVIR). Patient experienced nausea, headache, and fatigue on 21Dec2020 07:00. No treatment received for these events. Outcome of the events was not resolved.

headache; take BP. My usual normal is 125/80. 164/93 just mow; This is a spontaneous report from two contactable pharmacists. A 53-year-old female patient received BNT162B2 (lot number: EJ1685), via an unspecified route of administration on left arm on 21Dec2020 07:00 at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient began getting a headache (H) on 21Dec2020 09:00 (around 9:30), felt like a different kind of headache that progressed. At 2:30, patient went back to monitoring area and asked them to take blood pressure (BP). Her usual normal was 125/80, but 164/93 just now (21Dec2020 09:00). COVID-19 vaccine was administered in the hospital. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Outcome of the events was resolving.

anaphylaxis; This is a spontaneous report from a non-contactable consumer. This consumer reported similar events for six patients. This is the first of six reports. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: AK 5730, EG 1685), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced anaphylaxis in Dec2020. The clinical outcome of anaphylaxis was unknown. Rash on throat, chest, back and legs; This is a spontaneous report from a contactable healthcare professional. A 38-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), intramuscular on the left arm on 19Dec2020 07:45 at single dose for COVID-19 immunisation. Medical history included known allergies: penicillin. The patient's concomitant medications were not reported. The patient experienced rash on throat, chest, back and legs on 19Dec2020 11:30. Patient does not receive any treatment. The outcome of the events was recovering.

gut pain; headache; cramping; diarrhea/7 bouts of diarrhea over 3 hours; facial flushing; This is a spontaneous report from contactable nurse. A 58-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration, at the left arm on 19Dec2020 10:30 at a single dose for COVID-19 immunization at a hospital. Medical history included hypertension and obesity. The patient has no known allergies. The patient was not tested for it since the vaccination. The patient's concomitant medications were not reported. Adverse event: On 21Dec2020, 12:00, patient experienced gut pain, headache, cramping, 7 bouts of diarrhea over 3 hours, and 3/7 also coincided with facial flushing with no treatment. The patient did not recover from the events.

itching on back; hives in a small area; This is a spontaneous report from two contactable consumers (patient and patient's mother). A 22-year-old female patient received BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot number: EH9899, expiry date: 31Mar2021), intramuscular in left arm on 21Dec2020 (about 9:45 -09:50 a.m. this morning) at a single dose for COVID-19 immunization. The patient has no other patient history, no concomitant medications, and no investigation assessment provided. The patient has no previous immunizations. The patient received the COVID vaccine about 9:45 -09:50 a.m. this morning (21Dec2020). She noticed just recently that she was starting to itch on her back and has hives and did not know if it was a side effect. Time of onset of itching on back was around 15:00-15:30 (estimated at within past 30 minutes), while the hives started around 5 minutes later than the itching. No ER or physician's office required. She is a nursing student, so it was recommended she receive the vaccine by the college of nursing. She received it at the hospital. They put Neosporin on her back, and it helped. She does not feel the itching. When asked to provide outcome of the hives, she stated it looks like the hives are getting smaller, but they are still there. The outcome of the events was recovering.

Nasal swab for COVID 19 test; Sore throat. First noticed Saturday morning and not to the point where it's painful to swallow.; Burning from the back of left nostril and down throat; This is a spontaneous report from a contactable healthcare professional (patient). A 40-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730, expiry date was not provided) solution for injection, via an unspecified route of administration (on left arm) on 17Dec2020 17:00 at a single dose for Covid-19 immunisation. Medical history was reported as none. Patient had no known allergies. Concomitant medication included ibuprofen. The patient experienced sore throat, he first noticed it Saturday morning (19Dec2020 04:45) and not to the point where it's painful to swallow. Patient reported there was burning from the back of left nostril and down the throat (19Dec2020 04:45). No treatment was administered. The patient underwent nasal swab for Covid 19 test on 21Dec2020 with pending result. Outcome of the event Suspected COVID-19 was unknown while for the other events was recovering.; Sender's Comments: The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

I felt slight dizziness immediately after injection/dizziness increased; feel my heart beating quickly; achiness in my joints; soreness at the injection site; feeling strange; remain uncomfortable; This is a spontaneous report from a nurse (patient herself). A 57-year-old female patient (not pregnant) received bnt162b2 (BNT162B2 also reported as COVID 19 brand Pfizer, lot EH9899), via an unspecified route of administration in the left arm on 21Dec2020 14:45 at single dose, for immunisation. Medical history included rheumatoid arthritis, osteoarthritis, anaemia, bipolar disorder II, hypertension, and GERD. She had no Covid/ Covid test prior to vaccination. She had other medications in two weeks. The patient previously took hydrocodone and experienced drug allergy. The patient felt slight dizziness immediately after injection. When she walked to the 15 min. waiting area, the dizziness increased and she began to feel her heart beating quickly. She drank 8 oz. of water and told the attendant she was feeling strange.

She took a pulse and oximetry reading - 110 and 95%. A nurse came over to check on her. The patient wanted to sit where the patient was for a few minutes longer. After about 20 mins. the dizziness immediately subsided and patient felt her pulse decreased. She got her things and left. After a few minutes, the patient began to feel achiness in her joints and felt soreness at the injection site. She had taken two Acetaminophen and remain uncomfortable. She planned to go home and rest. The events were reported as non-serious. No treatment was reported for dizziness and increased heart rate. The outcome of events Dizziness, Heart rate increased was recovered on 21Dec2020; for other events was unknown.

Employee reported thickness of tongue and dry mouth.; Employee reported thickness of tongue and dry mouth.; This is a spontaneous report from a contactable nurse. A 55-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), Batch/lot number: EJ1685, intramuscular in the right arm on 21Dec2020 12:30 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The employee reported thickness of tongue and dry mouth on 21Dec2020 12:30. The events resulted in emergency room/department or urgent care. The outcome of the events was unknown.

hypoglycemia; dizziness; This is a spontaneous report from a non-contactable Other HCP. A 33-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number HE9899, intramuscularly in the left arm on unspecified date at single dose for COVID-19 immunization. Patient medical history and concomitant medications were not reported. The patient previously took spironolactone and experienced drug allergy. During her 15-minute waiting period after the vaccination, the patient began to experience feelings of hypoglycemia. She checked her blood glucose with her own monitor and had 77 at 11:04. She chewed 1 glucose tab that she had in her purse. She noted some difficulty with swallowing it and notified clinic staff. The patient also experienced dizziness and was escorted by clinic staff to the emergency bay. This provider was notified of patient reaction and she was then assessed in the emergency bay area. She denied difficulty breathing and chest pain, history of adverse reactions with prior vaccinations or allergies to medications with the exception of spironolactone. Patient had already been given a bottle of water by clinic staff and reported that the glucose tablet went down easier following the water. She took a second glucose tab sometime before 11:13. The event was assessed as non-serious. Outcome of the events hypoglycemia and dizziness was unknown. No follow-up attempts are possible. No further information is expected.

thin red line on back of neck/redness at her right eyebrow and in the midline of her forehead/reddened area above eyebrow along with puffiness, redness on nose, cheeks and left hand; Rash; dot markings on her left hand and redness which is where she received vaccine in her left arm; dot markings on her left hand and redness which is where she received vaccine in her left arm; reddened area above eyebrow along with puffiness, redness on nose, cheeks; This is a spontaneous report from a contactable nurse (patient). A 62-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EK5730, via intramuscular in left deltoid on 19Dec2020 10:30 at single dose for COVID-19 immunization. Medical history included hypertension diagnosed when she was 47, hypothyroidism diagnosed 20 years ago and allergic to penicillin and sulfur; all ongoing. Concomitant medication included ongoing metoprolol succinate for hypertension. The patient received her first dose of vaccine

on Friday 19Dec2020 at her job. Stated that she woke up Saturday with redness at her right eyebrow and in the midline of her forehead between her eyebrows and nose. Stated that she had dot markings on her left hand and redness which is where she received vaccine in her left arm. Stated that she had went to ER and was put on Prednisone 60mg for 5 days and Benadryl 50mg prn. Stated that a few people said few different things. Stated that she is allergic to penicillin and sulfur. No further details provided. The patient wanted to know if sulfur is in the vaccine to know if in three weeks should she take the second vaccine. On 19Dec2020, states she had a rash when she woke up. The patient had reddened area above eyebrow along with puffiness, redness on nose, cheeks and left hand. The patient went to the emergency department and an HCP saw a thin red line on back of neck. The patient was prescribed prednisone and benadryl and now symptoms have resolved. The patient was asking about more information regarding this type of reaction. The outcome of the event rash was recovered on unspecified date and the remaining events was recovered on 20Dec2020. The events were reported as non serious.

"a funny metallic taste in her mouth; she felt like she had cotton mouth; This is a spontaneous report from a contactable consumer (patient). A 62-year-old female patient received the first dose of bnt162b2 (COVID 19 vaccine) lot no: EH9899, via an unspecified route of administration in left arm on 21Dec2020 08:00 at a single dose for COVID-19 immunization. Medical history included diabetic type 2 and allergic to metal, both from an unknown date and unknown if ongoing. Concomitant medication included ongoing metformin hydrochloride (METFORMIN ER) for diabetes, taking for a couple of years. The patient received the vaccine on 21Dec2020 8am at her hospital, and by 10:30AM or 11:00AM she noticed ""a funny metallic taste in her mouth."" She stated it was like a metal cup a tin taste like that and she wanted ice water. The patient is a phlebotomist, she continued with her patients and asked a co-worker did you taste/experience that, coworker stated ""I've had covid""; she didn't get the vaccine taste metal in your mouth. The reported wanted to know if that is an expected side effect of the vaccine. She can smell everything. She still has taste buds. It was still there but not as strong. She stated that she felt fine, and doesn't feel anything. She doesn't feel bad. She was just wondering about the side effects. She drank a lot of water. The patient added that all of the sudden her mouth was tasting funny like nickel. She added that she is allergic to metal; stated she can taste the tin in a tin can. She was working in the ER after having received the first dose injection at 8:00AM on 21Dec2020. She started to taste the funny taste about two hours later, 10:30AM or 11:00AM. She drank some ice water and it kind of rinsed her mouth out then she only tasted it a tiny bit. Then she felt like she had cotton mouth. It has improved but not gone away. She received the injection in her left arm. She is scheduled 11Jan2021 for the next dose. The patient was recovering from the events. The sample of the product is not available to be returned."

she started with ringing in her ears and it has not gone away; This is a spontaneous report from a contactable nurse (patient). A 57-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date were not provided) solution for injection, intramuscular (left deltoid) on 19Dec2020 18:00 at a single dose for COVID-19 immunisation. Medical history was reported as none. There were no concomitant medications. The patient reported it was nothing severe, but she had the first dose of the vaccine on Saturday evening at 6pm and about 6 hours after, she

started with ringing in her ears and it has not gone away. She would like to know if that was one of the side effects. It was not listed on the sheet that was given to her; will it go away and should. She was just concerned. She does not want it to progress. It was like a ringing. It was not like a headache but was a steady discomfort from ear to temple. She works at a hospital and got invited to take it. It was just an annoyance since it was still there. Outcome of the event was not recovered. Information on Lot/Batch has been requested.

she started getting really bad body aches; she got really dizzy; nauseous; throw it up; her arm was sore where they gave the vaccination; The initial case was missing the following minimum criteria: no adverse effect. Upon receipt of follow-up information on (21Dec2020), this case now contains all required information to be considered valid. This is a spontaneous report from a contactable nurse (patient reporting for herself). A 21-year-old female patient received bnt162b2 (also reported as PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 19Dec2020 18:00 on the left arm at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient stated that she got the vaccine, the Covid-19 vaccine, Saturday 19Dec2020 around 6PM. On Sunday 20Dec2020, she went about her day and around mid day, about 5PM she started getting really bad body aches and then after she showered she got really dizzy, states she would try to eat and she would get nauseous and throw it up. She wanted to know how fast the symptoms are showing after vaccination. She went to get a COVID test today as well because she is not sure if this is due to the vaccine or what. She took Ibuprofen 400mg around 10PM last night 20Dec2020 because the body aches are so bad. States she took a shower last night and got really dizzy but that has resolved and has not happened since. On 21Dec2020, she ate some breakfast and at 11AM she got very nauseous and threw up. Initially (in Dec2020), her arm was sore where they gave the vaccination which she was expecting and then it started going all over her body, states it is like menstrual cramps but like all over. The events did not require a visit to Emergency Room and Physician Office. The event dizzy recovered on 20Dec2020. The outcome of her arm was sore where they gave the vaccination was unknown and the rest of the events was not recovered.

aching/he is feeling a little achy/ he feels achy; he has not slept well; he is just tired; His arm did hurt for 2 days after; This is a spontaneous report received from a contactable consumer (patient). A 50-year-old male patient started received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730, expiry date: 31Mar2021), via an unspecified route of administration in left arm, on 16Dec2020, at single dose, for COVID-19 immunization. There were no medical history and concomitant medications. The patient reported he got the COVID Vaccine on 16Dec2020 (Wednesday) and now he is feeling a little achy. He is wondering if that is a side effect. He said it is not a big deal and that maybe he is just tired. He also reported he has not slept well so maybe he could just be tired. Although it could be a side effect. He clarified he did not start feeling achy until 21Dec2020 (today). He reported his arm did hurt after for 2 days. The outcome of the event vaccination site pain was recovered on an unspecified date in Dec2020, pain was not recovered, and the remaining events was unknown.

Cough; congestion/stuffed nose; runny nose; chills; sore arm; decreased sense of smell; decreased sense of taste; This is a spontaneous report from a contactable physician. A 49-year-old female patient receive first dose of bnt162b2 (BNT162B2), intramuscular on left arm on 17Dec2020 10:15 SINGLE DOSE for

COVID-19 immunization. Medical history included Cough variant of asthma, prediabetes. The patient's concomitant medications were not reported. On 18Dec2020 10:00, the patient experienced Cough, congestion, runny nose, chills, sore arm, stuffed nose, decreased sense of smell, decreased sense of taste. No COVID prior vaccination. The patient has been tested for COVID-19 post vaccination. The patient underwent lab tests and procedures which included nasal swab test: pending on 21Dec2020. The outcome of the events was recovering.

broke out in hives on my chest and upper back.; This is a spontaneous report from a contactable other healthcare professional (patient). A 25-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot: EJ1685) intramuscularly on 18Dec2020 10:45 at a single dose for covid-19 immunisation. Medical history included moyamoya disease, asthma and allergies to crustaceans. Concomitant medication included acetylsalicylic acid (ASPIRIN (E.C.) and azithromycin. The patient previously took prochlorperazine maleate (COMPAZINE) and experienced drug allergy. On 18Dec2020 23:59, the patient reportedly broke out in hives on the chest and upper back. Outcome of the event recovered on an unspecified date on Dec2020.

102.5 F fever; Chills; Headache; Dizziness; Body aches; Fatigue; Nausea; This is a spontaneous report from a contactable Other HCP (patient). This 24-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 19Dec2020 12:00 at single dose on left arm for COVID-19 immunization. Medical history was not reported. Concomitant medications included vortioxetine hydrobromide (TRINTELLIX) and levothyroxine, both received within 2 weeks of vaccination. Facility that the most recent COVID-19 vaccine was administered in Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient hasn't been tested for COVID-19. The patient experienced 102.5 F fever, chills, headache, dizziness, body aches, fatigue, nausea on 19Dec2020 23:00. The outcome of 102.5 F fever, chills, headache, dizziness, body aches, fatigue was recovering, of nausea was unknown. No treatment received for the adverse event. The events were assessed non-serious. Information about lot/batch number has been requested.

arm pain; Fever; body aches; fatigue; This is a spontaneous report from a contactable other HCP (patient). This 29-years-old female patient started to receive BNT162B2, on 17Dec2020 09:15 at single dose for COVID-19 immunisation. The patient medical history and the concomitant medications were not reported. Multi vitamins received in in two weeks. Prior to vaccination, the patient was not diagnosed with COVID-19. Facility that the most recent COVID-19 vaccine was administered is Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced Fever, body aches, fatigue, arm pain on 18Dec2020. The outcome was not recovered. The patient underwent lab tests and procedures which included sars-cov-2 test (Nasal Swab): negative on 11Dec2020. The events were assessed non-serious. No treatment received for the adverse event. Information on the Lot/Batch number has been requested.

Flushing and Dizziness within 10 minutes of administration that resolved after drinking water.; Flushing and Dizziness within 10 minutes of administration that resolved after drinking water.; Injection site tenderness; Tiredness; headaches/headaches were markedly increased; muscle aches; fever to 101.1;

Slight chest discomfort; chest pain/chest pain and headaches were markedly increased; This is a spontaneous report from a contactable nurse. This nurse reported for a 35-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), (Lot number: EK5730) via intramuscular route on 20Dec2020 10:30 at single dose on the right arm for COVID-19 immunization. Medical history included COVID in Apr2020, post COVID syndrome and migraines. No allergies to medications, food, or other products. Concomitant medications included topiramate (TOPAMAX), topiramate (TROKENDI), gabapentin, magnesium, vitamin b complex (VITAMIN B), all received within 2 weeks of vaccination. Facility that the most recent COVID-19 vaccine was administered in Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was diagnosed with COVID-19. Since the vaccination, the patient hasn't been tested for COVID-19. On 20Dec2020 10:30, the patient experienced flushing and dizziness within 10 minutes of administration that resolved after drinking water. Injection site tenderness. Tiredness, headaches, muscle aches, fever to 101.1. Slight chest discomfort (patient had COVID in April 2020. She had all these symptoms with in the acute phase and still have intermittent chest pain/headaches. With the vaccine, the chest pain and headaches were markedly increased on the day after receiving it). Outcome of the events was recovered in Dec2020. No treatment received for the adverse events. The events were assessed non-serious.

sore at site of injection; had a knot there where it was given; This is a spontaneous report from a contactable consumer (patient). This 67-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), on unknown date in Dec2020 at single dose for COVID-19 immunisation. The patient medical history and the concomitant medications were not reported. The patient received vaccine last Wednesday, didn't have any side effects. It was sore at site of injection. Same day, it had a knot there where it was given. The outcome was unknown. Information on the lot/ batch number has been requested.

sore throat; runny nose; This is a spontaneous report from a contactable consumer (patient). A 20-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EL0140) via an unspecified route of administration on left arm on 18Dec2020 at single dose for COVID-19 vaccination. There was no medical history. There were no concomitant medications. The patient is asking if this is part of the documented side effects of the vaccine. She received the Covid19 vaccine last Friday (18Dec2020), at noon, the first in the series of two. She says on Saturday (19Dec2020) she woke up with a runny nose, and then on Sunday night (20Dec2020) she had a sore throat. She says she would like to know if her body fighting is fighting something off or building antibodies. She received the vaccine from work and it was optional, not prescribed. She has her vaccine card and all it has on the back is the name Pfizer and the LOT. She didn't take any new medications or receive any other injections at the time of the COVID-19 vaccine. She didn't do any treatments for the sore throat and runny nose. Events outcome was unknown.

nodule formed at the injection site; the injection along with localized pain; reddened, warm area remained around the injection site; reddened, warm area remained around the injection site; This is a spontaneous report from a contactable nurse (patient). A 42-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EH9899) intramuscular on right arm

on 18Dec2020 17:30 at single dose for COVID-19 immunization. Medical history included hypertension. Concomitant medication included the medications the patient received within 2 weeks of vaccination: Amlodipine, hydochlorathiazide, bupropion hydrochloride (WELLBUTRIN), zolpidem tartrate (AMBIEN). The patient previously took albuterol sulfate and experienced drug hypersensitivity. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 19Dec2020, a nodule formed at the injection site about 12 hours after the injection along with localized pain. The nodule started to disappear, but a reddened, warm area remained around the injection site. The reddened area is about the diameter of an egg. It has been about 72 hours since the injection. No treatment was received for the adverse event. Events outcome was not recovered.

test positive post vaccination; test positive post vaccination; This is a spontaneous report from a contactable Nurse (patient). A male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient got the Pfizer Covid-19 vaccine on the 17Dec2020. He would like to how likely is he to test positive post vaccination. He wants to know if the test results would be a false positive post vaccination. He is going to get tested at two different facility. Event outcome was unknown.; Sender's Comments: Based on the current available information and the consistency with the known safety profile of the suspect product BNT162B2, a possible contributory role of the suspect product to the development of Drug ineffective and COVID-19 cannot be excluded. The case will be reassessed if additional information becomes available.

sweating; itching palms; elevated HR; headache that lasted 24 hrs; fatigue; foggy feeling that also lasted 24 hrs; This is a spontaneous report from a contactable nurse (patient). A 39-year-old female patient received the first dose of BNT162B2 (lot number: EJ1685) intramuscular on right arm on 19Dec2020 14:45 at single dose for COVID-19 immunization. Medical history included DM type 2, irritable bowel syndrome, restless legs syndrome, insomnia. Other unspecified concomitant medications received in two weeks. The patient previously took thiomersal and experienced drug hypersensitivity. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 19Dec2020, within 10 minutes of the reaction she experienced sweating and itching palms with elevated HR. Within 1 hr of the vaccine she had a headache that lasted 24 hrs with fatigue and a foggy feeling that also lasted 24 hrs. No treatment received for events. Events outcome was recovered. No follow-up attempts are possible. No further information is expected.

felt hot; felt achy; Chills; generalized myalgias; high fever/her highest recorded temperature was 102.5; Deltoid soreness; This is a spontaneous report from a contactable Other HCP. This other hcp (patient) reported for herself that the 32-year-old female patient received bnt162b2 (BNT162B2, Solution for injection, Covid-19 Vaccine manufacturer: Pfizer BioNTech), intramuscular into her left deltoid on 17Dec2020 07:30 at single dose for covid-19 immunisation (Prophylaxis). Medical history included Hypothyroidism, mood and sleep. Concomitant medications included Levothyroxine at 100mcg daily by mouth ongoing for Hypothyroidism started taking at 19 years old, escitalopram oxalate (LEXAPRO) at 10mg once a day by mouth from Dec2020 started it about 2 weeks ago ongoing for mood, zolpidem tartrate (AMBIEN) at 10mg as needed by mouth for sleep and was not taking this at the time. The

patient experienced Deltoid soreness from 17Dec2020 to 18Dec2020, Chills from 20Dec2020 to 21Dec2020, generalized myalgias from 20Dec2020 to 21Dec2020, high fever from 20Dec2020 to 21Dec2020. The outcome of the events was recovered. Her vaccination cared is at her house. She received the product at the hospital she works at. The causality of the events Deltoid soreness, Chills, generalized myalgias and high fever was related. Caller is a nurse practitioner that reported that she wanted to report a possible side effect for herself with the Covid-19 vaccine. She said that she herself got vaccinated on Thursday 17Dec2020. She was doing fine except for the deltoid soreness that showed up about 12 hours after receiving the vaccine and lasted for about 12 hours and then it went away. On Sunday, she had sudden onset of chills, generalized myalgias, and a high fever. Caller said that her highest recorded temperature was 102.5. Her symptoms started at about 1430 and she said she had no other symptoms aside from what she reported. She said that her chills went away after about 3 hours and then she felt hot, and then she just felt achy and had the generalized myalgias. All were subsided by 0900 this morning. She said that she also had a low grade fever of 99.8 this morning, but it was all gone by 0900. Caller said that she is a emergency room employee and was given the vaccine at the hospital and they was no prescribing physician. Caller said that she has never had a reaction like this to a vaccine before. Vaccination Facility Type was hospital. Vaccine Administered at Military Facility was No. Additional Vaccines Administered on Same Date of the Pfizer Suspect was none. No AE(s) was require a visit to ER or physician office. Prior Vaccinations (within 4 weeks) was none. AE(s) following prior vaccinations was none. Family Medical History Relevant to AE(s) was none. Relevant Tests was None. Information on the lot/ batch number has been requested.

Headache, muscle and joint pain,Chills and Fever-102.9 day after; Headache, muscle and joint pain,Chills and Fever-102.9 day after; Headache, muscle and joint pain,Chills and Fever-102.9 day after; Headache, muscle and joint pain,Chills and Fever-102.9 day after; Headache, muscle and joint pain,Chills and Fever-102.9 day after; This is a spontaneous report from a contactable Nurse (patient). A 66-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EJ1685) intramuscular on arm left on 18Dec2020 12:45 at single dose for COVID-19 immunization. Medical history included osteoarthritis. The patient was not allergic to medications, food, or other products. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Concomitant medication received within 2 weeks of vaccination included Atorvastatin, Ibuprofen, sambucus nigra (ELDERBERRY), Krill Oil, One A Day VitaCraves Women's, ergocalciferol (VITAMIN D), ascorbic acid (VITAMIN C). On 19Dec2020 08:00, the patient experienced headache, muscle and joint pain, chills and Fever-102.9 day after, gradually went down over night. No treatment received for the adverse event. There was no Covid prior vaccination, received COVID tested post vaccination via nasal swab on 20Dec2020 with result of negative. Events outcome was recovered.

tested (nasal swab done) on Sunday; received positive test result; Patient had COVID, did not know she had COVID and got the vaccine; This is a spontaneous report from a Pfizer-sponsored program Pfizer First Connect via a contactable pharmacist (patient). This 41-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), (lot number: EH9899) via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunization. There were no medical history and concomitant medications. Patient had COVID, did not know she had COVID and got the vaccine. Patient

received vaccine on Saturday, tested (nasal swab done) on Sunday. Patient received positive test result on 21Dec2020. Outcome of the event was unknown.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded.

R sided facial numbness; tingling; muscle weakness; This is a spontaneous report from a contactable pharmacist reporting for herself. This 32-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via intramuscular route at right arm on 21Dec2020 at single dose (lot number: EJ1685) for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient reported R sided facial numbness, tingling, and muscle weakness roughly 20 minutes after receiving the COVID-19 vaccine on 21Dec2020. The sensation was improving over the next 10-15 minutes. The patient was asked to monitor her signs and symptoms and report to her doctor if no improvement/worsening. Events were reported as non-serious. No treatment was received for events. Outcome of the events was recovering. Information about lot/batch number has been requested.

Having a lot of bone pain in the arm that I got the injection at; Having a lot of bone pain in the arm that I got the injection at; This is a spontaneous report from a contactable consumer (patient). This patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose in the arm for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient stated it was the COVID-19 Vaccine. Patient was having a lot of bone pain in the arm that patient got the injection at. It was not 'muscle' (not clarified). The outcome of events having a lot of bone pain in the arm that patient got the injection at was unknown. Information on the Lot/Batch number has been requested.

"bleeding coming from the injection site after the needle was removed his arm; This is a spontaneous report from a contactable other HCP (anesthesiologist) reported for himself. This male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose on the arm for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient stated after receiving COVID vaccine on an unspecified date (reported as ""today"") he noticed bleeding coming from the injection site after the needle was removed his arm. Patient said he had the vaccine he took the needle out he bleed a little bit he said he was afraid he was injected wrong possible into a vein nothing was swollen nothing was bruised red. Patient stated he was unsure if the vaccine was administered intravenously or intramuscularly. Outcome of the event was unknown. The report was assessed as non-serious. Information on the Lot/Batch number has been requested."

patient received BNT162B2 vaccine that had been through a temperature excursion; patient received BNT162B2 vaccine that had been through a temperature excursion; This is a spontaneous report from a contactable healthcare professional. This healthcare professional reported similar events for ninety patients. This is one of ninety reports. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration in Dec2020 as a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. In Dec2020, the patient received BNT162B2 vaccine that had been through a temperature excursion. This was further elaborated as the patient received the vaccine that had been

exposed to -50 degrees Celsius for about 20 minutes before being transferred to the refrigerator and then administered within 5 days. The clinical outcome of patient received BNT162B2 vaccine that had been through a temperature excursion was unknown.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020502898 same reporter reporting similar events in different patients with the same vaccine

severe headache with nausea; severe headache with nausea; This is a spontaneous report from a contactable nurse (patient) who reported for herself that a 56-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899) via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. Medical history included pulmonary sarcoidosis, thyroid, mild depression. Concomitant medication included famotidine, ibuprofen (DUEXIS). Nurse called in to report side effects, she got her shot on 17Dec2020 and she had a severe headache with nausea about 45 minutes after getting the shot. When probed if still experiencing the event, nurse stated, about 15 minutes it was gone on 17Dec2020. She just took Ibuprofen (MOTRIN) for treatment. Outcome of severe headache with nausea was recovered on 17Dec2020.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events,headache with nausea, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Headache; malaise; diarrhea; This is a spontaneous report from a contactable nurse (patient). A 38-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: Ek5730), intramuscular on the right arm on 19Dec2020 16:15 at a single dose for covid-19 immunization. The patient's medical history included reflux and anxiety. The patient had no known allergies to medications, food, or other products. Concomitant medications included sertraline hydrochloride (ZOLOFT), spironolactone, loratadine (CLARITIN), ascorbic acid, betacarotene, calcium sulfate, colecalciferol, cyanocobalamin, ferrous fumarate, folic acid, nicotinamide, pyridoxine hydrochloride, retinol acetate, riboflavin, thiamine mononitrate, tocopheryl acetate, zinc oxide (PRENATAL VITAMINS), vitamin d3, and famotidine (PEPCID). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination and had not been tested for COVID-19 since the vaccination. The patient experienced headache, malaise, and diarrhea on Dec2020 (reported as 18Dec2020 19:00, pending clarification). No treatment was received for the adverse events. Outcome of the events was recovered on Dec2020.

He has a temperature of 100.1 but a lot of muscles aches and pain; He has a temperature of 100.1 but a lot of muscles aches and pain; He has a temperature of 100.1 but a lot of muscles aches and pain; This is a spontaneous report from a non-contactable Nurse. This Nurse reported for a male patient (Son) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 19Dec2020 at 08:20 at single dose for covid-19 immunisation. Medical history was not provided Concomitant medications included Lisinopril for a little hypertensive. He received a shot (COVID Vaccine) yesterday (19Dec2020 at 08:20), today he called on for work, and he says that he has a temperature of 100.1 but a lot of muscles

aches and pain. Outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Tiredness; Pain injection site; Headache; muscle pain; Joint pain; Nausea; just isn't feeling good; feels like face and around eyes are swollen; feels like face and around eyes are swollen; This is a spontaneous report from a contactable consumer reported for self. This 53-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 17Dec2020 in her right arm at single dose for required to at work. None medical history and concomitant medications. She is at work right now. She doesn't have a prescribing doctor. She works at the ER, and they were provided to employees. There is pain at the injection site, which she expected. She has had tiredness, headache, muscle, and joint pain. No chills. She has had nausea. She just wasn't feeling good. She feels like her face is swollen. Like around her eye lids is swollen, but she asked her kids, and they said it doesn't look swollen. She can feel it, but not see it. She got the vaccine on 17Dec2020. She started having all the side effects on the 18Dec2020. They have just persisted. She took something for nausea. She took Ibuprofen for pain, Headache, muscle pain, Joint pain. Outcome of the events was not recovered. Information on the lot/batch number has been requested.

She does have a significant muscle ache and joint ache; She does have a significant muscle ache and joint ache; This is a spontaneous report from a contactable physician (Patient's husband). A female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 19Dec2020 at single dose (Lot # EH9899) for covid-19 immunisation. Medical history, concomitant medications or past drug history were not provided. She has received the first injection of the Covid 19 Vaccination, she received it 24 hours ago (19Dec2020) and she doesn't have a fever but she does have a significant muscle ache and joint ache. So the question if it is okay for the patient to take anti-inflammatory medication like non-steroidal. Outcome of the event was unknown.

tested positive for Corona Virus/ symptomatic and has been sick; tested positive for Corona Virus/ symptomatic and has been sick; This is a spontaneous report from a Pfizer-sponsored program by a contactable other HCP reported for self. This 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on an 18Dec2020 10:45 am on left arm at single dose (Lot # EK5730) for routine vaccination. No additional vaccines received on the same date. Vaccination facility type was hospital. None medical history, concomitant medications or past drug history. She has a patient on the line who got the COVID vaccine on Friday (18Dec2020 10:45), and on Sunday (20Dec2020) she tested positive for the Corona Virus. The main reason she called is to figure out what to do about the booster. There is not really enough data to determine this at this point. There was no prescriber. She just received it at the hospital. She is symptomatic and has been sick on 18Dec2020 all weekend. Saturday (19Dec2020) is when she began to have more significant symptoms and on Sunday (20Dec2020) as well. Today, she is better, but still symptomatic. She became symptomatic on Friday night 18Dec2020, and experienced loss of smell, extreme fatigue, mild cough, nasal congestion. She states all were related to COVID. This all started around 7:30 pm. Relevant test included Positive for Corona Virus on Sunday, 20Dec2020. Relevant test included Positive for COVID test (Corona Virus) on Sunday, 20Dec2020. Outcome of the events was unknown.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded.

arm tingled; a little pain around the injection site; This is a spontaneous report from a contactable consumer. This female consumer (patient) of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular on 20Dec2020 at 4:00 pm at single dose for COVID-19 immunisation in her left arm. The medical history and concomitant medications were not reported. At 4:00 pm a nurse placed the vaccine in her left arm. When she placed the medication the patient felt a zing and a burning sensation with a tingle down her arm. She didn't say anything, she thought maybe the medication was just a thicker consistency like Betamethasone, which can sometimes burn when injected in the muscle. The patient's arm tingled for about 3 to 5 minutes and then it stopped. The patient felt the medication go in and felt burning and tingling. It's 6pm and the patient feel fine, just a little pain around the injection site. The skin surrounding the injection site was normal in color and cool to the touch. No visible swelling. She personally think she placed the vaccine a little too high and hit a nerve. The outcome of the events was recovered on 20Dec2020 6pm. Information about Lot/Batch number has been requested.

Muscle ache; Fatigue; Headache; feels Achy; This is a spontaneous report from a contactable Physician. A female patient started to receive started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 17Dec2020 at single dose for covid-19 immunisation. This is unknown to her, but she would imagine the second dose is around 07Jan2021. Medical history, concomitant medications or past drug history were not provided. The patient was experiencing that she was referring to is muscle aches, fatigue, and headache. She doesn't feel sickly but feels achy. It is unknown if the patient ever test positive for Covid, or had antibodies prior to the vaccine. Outcome of the events was unknown. Information about Batch/Lot number has been requested.

entire tongue began to itch; entientire tongue began to itch, tingle; A small bruise-like spot appeared on the tip of her tongue; This is a spontaneous report from a contactable Nurse reported for self. This 65-year-old female patient (not pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on an 19Dec2020 14:30 on Arm left at single dose (Lot # EKS730) for covid-19 immunisation. Facility where the most recent COVID-19 vaccine was administered: hospital. Medical history included Gastrooesophageal reflux disease. Concomitant medications included omeprazole. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Past drug history included Allergies to medications, food, or other products: Bactrim, Ceftin. On 20Dec20200 8:30 AM, 18 hours after receiving the vaccine her entire tongue began to itch, tingle. No swelling noted. A small bruise-like spot appeared on the tip of her tongue. 5 hours later the itching stopped (20Dec2020 13:30) and the bruise-like spot began to fade. The spot was completely gone the next morning. There was no trauma to the tongue at any point that would account for the spot. Prior to vaccination, was the patient did not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. No treatments were received for the events. Outcome of the event tongue itching was recovered on 20Dec2020 13:30. Outcome of the event a small bruise-like spot appeared on the tip of her tongue was recovered on 21Dec2020. Outcome of the event tingling tongue was recovered in Dec2020. Events assessed as non serious.

developed a slight cough; This is a spontaneous report from a contactable nurse reported for herself. This 25-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an

unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient received the COVID Vaccine on 19Dec2020. The following day she developed a slight cough on 20Dec2020, and she felt completely fine otherwise. Outcome of the event was recovered. Information on the Batch/Lot number has been requested.

feeling ok not perfect; This is spontaneous report from a contactable nurse reporting for herself. This female patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 21Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient got the Pfizer Covid-19 vaccine on 21Dec2020 and wanted to know if she was contagious. She stated she knew it's not a live vaccine and it's an MRNA vaccine. Her pharmacist told that she was not contagious, but she just wanted to make sure. The patient was feeling ok not perfect. The patient did not state any side effects. Outcome of the event was unknown. Information about lot/batch number has been requested.

heaviness in the chest; trembling of the mouth like teeth went on chatter like it is real cold; This is a spontaneous report from a contactable consumer (patient). This 57-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 17Dec2020 at single dose (lot number: EJ1685) for COVID-19 immunization. Medical history included blood pressure abnormal. Concomitant medications included cetirizine hydrochloride (ZYRTEC) and acetylsalicylic acid (ASPIRIN 81) as blood pressure pills. The patient was informing the side effect that she had when she had got the vaccine (Unspecified vaccine). The patient experienced heaviness in the chest and also trembling of the mouth like teeth went on chatter like it was really cold on 17Dec2020. When probed for the lot number, EJ1685 with Pfizer was reported. The patient worked at the hospital. It was just happened between the first 4 hours after receiving. It was not still experiencing. No treatment received for the problem because they left like within the first 4 hours and after that the patient didn't feel anything. Outcome of both events was recovered in Dec2020.

Some chills, temperature; Some chills, temperature; Soreness in the administration site; This is a spontaneous report from a contactable nurse reported for himself. This 51-year old male patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 20Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. On 21Dec2020, the patient experienced some chills, temperature, and soreness in the administration site. The patient was vaccinated at 51 years old. The patient wanted to know if he should isolate himself again, and if he will get Covid again after receiving the vaccine. Outcome of the events was unknown. Information about lot/batch number has been requested.

Runny nose; Congestion; Malaise; Fever; Chills; This is a spontaneous report from a Pfizer-sponsored program from a contactable consumer (patient). This male patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient received the vaccination on Friday, 18Dec2020. The patient was experiencing fever and chills Friday night on 18Dec2020. Then he proceeded to receive a runny nose and

congestion still at the time of reporting along with a little bit of malaise. He was wondering if he should get tested for COVID-19 due to the symptom or if the symptoms were due to the vaccination. Outcome of the events runny nose, congestion and malaise was not recovered. Outcome of the events fever and chills was unknown. Information on the Lot/batch number has been requested.

left deltoid hurt a lot for a while; got left actual swelling like in his armpit; This is a spontaneous report from a contactable consumer (patient). This 49-year-old male patient received the 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration at left deltoid on 18Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient received the COVID vaccine Friday morning as part of work. The patient had a lot of, kind of significant actual swelling in the (incomplete sentence). The patient was too much concerned about this, but it was out of the ordinary enough that the patient felt it was worth reporting. So the patient got the vaccine in his left deltoid and the left deltoid hurt a lot for a while but currently the patient got left actual swelling like in his armpit it's, where the lymph nodes were, the patient got a very significant swelling. The patient stated he was experiencing it on 20Dec2020. So his age was 49 years. The patient was assuming it was a normal immune response, but he never had it with the flu vaccine or anything, so the patient wanted to report it. It's a COVID-19 Vaccine. No treatment was received for events. Outcome of the events was unknown. Information about lot/batch number has been requested.

sore and heaviness on the injection site; heaviness on the injection site; This is a spontaneous report from a contactable Nurse (patient) via Pfizer sales representative. This female patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient posted on Social Media that she was injected with COVID 19 vaccine. As per her comment, after 8 hours she experienced sore and heaviness on the injection site. Outcome of the events was unknown. Information on Lot/Batch number has been requested.

mild COVID symptoms; front line nurse and received it because of that; This is a spontaneous report from a contactable nurse. A female patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at single dose for treating COVID patients. Medical history included COVID. Concomitant medications were unknown. The patient had COVID previously, received the vaccine, and was currently experiencing mild COVID symptoms. The patient received vaccine from the hospital, so there was no prescriber. Patient was a front line nurse and received it because of that. Outcome of the events was unknown. Information about batch/lot number has been requested.

"Cough; Got a COVID test; positive; 4 hours after, my arm became sore; body aches; Still feel sick but not as sick as I was; shortness of breath; fever; Developed like pretty bad symptoms; This is a spontaneous report from a contactable nurse reported for himself. This 38-year-old male patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration at arm on 16Dec2020 at single dose (lot number: PAA156051) for vaccinated against COVID 19. Medical history included HIV. Concomitant medications included bictegravir sodium/emtricitabine/tenofovir

alafenamide fumarate (BIKTARVY) for HIV. The patient had received the Pfizer vaccine for COVID 19 on 16Dec2020 (Wednesday). And then the patient developed like pretty bad symptoms. Then, when the patient went to get tested because he suddenly started having like a cough at night on 16Dec2020 and got a COVID test and it was positive on Dec2020. The patient was a nurse in the emergency room and just wanted to report that. The patient knew scientifically it couldn't give him the virus. The patient didn't have any symptoms of COVID. So, after the patient got the shot, 4 hours after, his arm became sore and then 12 hours after, he had body aches, fever, cough, shortness of breath on Dec2020. About Lab Work, the patient stated, ""Just the COVID one."" And the patient got positive results for COVID test. Due date for the next shot was 06Jan2021. When asked if he was still experiencing cough, the patient stated he still felt sick but he was not as sick as he was. The first 2 or 3 days were really bad. About treatment, the patient stated, ""Nothing for the cough but I took Tylenol."" Outcome of the events was unknown. Information about batch/lot number has been requested."

Hives; felt itching to her scalp; This is a spontaneous report from a contactable other hcp (patient). This 38-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EK5730), intramuscularly on 21Dec2020 06:40 at single dose on left deltoid for COVID Prevention. Medical history included Polycystic ovarian syndrome, was diagnosed with this in her early 20's and ongoing, Hypothyroidism from 2015 and ongoing, Corneal abrasion from 2020 and ongoing (Patient got a corneal abrasion to her right eye, about a week ago and is currently using eye drops for prophylaxis against infection), and anaphylaxis. Concomitant medication included metformin tablet oral at 750mg, once daily for Polycystic ovarian syndrome, she has been taking the product on and off since being diagnosed with PCOS and ongoing, thyroid (ARMOUR THYROID) oral at 60 (unsure if the product is MG or MCG) once daily for Hypothyroidism, started product four or five years ago and ongoing, moxifloxacin hydrochloride (VIGAMOX) at 1 drop to right eye, three times daily for Infection prophylaxis from Dec2020 and ongoing, patient got a right corneal abrasion last week and is using the product as infection prophylaxis. The patient was a Physician Assistant, who works in the ER, who just received the COVID vaccine at work. The patient stated that she got hives after her injection. The patient received the vaccine today at about 6:40AM. She stated that she was instructed to wait 30 minutes after receiving the vaccine because she does have a history of anaphylaxis, but not to vaccines. So it was about 5 to 10 minutes before her 30 minute wait time was up, that she started getting the hives on 21Dec2020. She stated that the hives she got started on her left wrist, and then they worked to bilateral upper arms, and then she also felt itching to her scalp but states she did not feel a rash on her scalp. She took 50mg of Benadryl orally for treatment. It was stated that the hives have resolved at this time, but patient was unsure as far as outcome goes, because she took Benadryl and the hives are gone now, but she does not know if they will return or not. She stated that she only had to take Benadryl and she declined checking in to the ER, so she considers this, not serious. The outcome of hives was recovered, of felt itching to her scalp was unknown.

fatigue; This is a spontaneous report from a non-contactable consumer (patient) via Pfizer sales representative. This patient of unspecified age and gender received first dose of BNT162B2, from an unspecified date at single dose for COVID-19 immunisation. The patient medical history and the concomitant medications were not reported. The patient experienced fatigue the day after the first

dose. The outcome was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

body aches; pregnant patient received BNT162B2 for COVID Prevention; pregnant patient received BNT162B2 for COVID Prevention; pregnant patient received BNT162B2 for COVID Prevention; This is a spontaneous report from a contactable physician (patient). This 35-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EH9899), intramuscularly on 19Dec2020 at single dose in right upper arm for COVID Prevention. Medical history was none. Concomitant drug included unspecify drugs. The patient got the vaccine on 19Dec2020, and then that evening she had body aches. She stated that she took 1000mg of Tylenol by mouth because she was really achy, but she was fine by the next day. She was pregnant. Patient last menstrual period date was 08Sep2020. She does take another medication but she does not think it was associated with the body aches she experienced. The outcome of Body aches was recovered on 20Dec2020, of other events were unknown. Primary Source Reporter assessed Body aches related by Method of assessment.

Weakness; Lightheadedness; fast heart beat/heart rate is 101; coughing a little bit; panic attack; he was not acting well and his blood pressure was 158/98; he feels silly then has nervousness; he feels silly then has nervousness; feeling tired; not feeling well; This is a spontaneous report from a Contactable consumer (patient). This 52-years-old male patient received first dose of BNT162B2(PFIZER-BIONTECH COVID-19 VACCINE) (lot number: AK5730), on 20Dec2020 at single dose on left arm for COVID-19 immunisation. Medical history included Blood pressure high. The patient's concomitant medications were not reported. He had one injection given in his left arm around 08:30 or 08:40 in the morning on 20Dec2020, before 9 o clock. He says that they let him rest for 15 minutes after his injection, and it is a delayed reaction that just started this morning and he tried to go to work and had to go home. The patient got the vaccine on yesterday morning then tried to come to work on this morning but he was feeling weak and having light headedness, and his heart beat is so fast. He did go home to try to relax. He said he experienced a panic attack at some other times where his heart beat fast and he was quite light headed at some other times gone from rest and get up to walk or try to do something, and that's why he had gone home after he reported to work earlier. He says just now also trying to have something to do he is feeling it. He says that he took Tylenol and some cough syrup for feeling lightheaded and weak. He clarifies that he took Tylenol yesterday and then after he took vaccine and this morning the nurse gave him Tylenol also. He says he told them he was not feeling well, he felt silly and weak. They told him to go home because he told them he was not acting well and his blood pressure was 158/98. He has been doing Lisinopril 20mg for his high blood pressure, and he has been on it for a long time. He says that the label says discard after 01Oct2021. He says he takes 20mg once a day by mouth, and he keeps refilling it every 30 days. The patient took the cough syrup because he was coughing a little bit. He says that the EXP date on the Tylenol he took that he has at home is Mar2022. He provides EA013 as LOT and dose strength as 500mg. He says he took this last night and this morning at the facility they gave him the 500mg dose too. He says that he took vitals with his nurse, and his heart rate is 101. The patient asks what can he do since he is worried about reading side effects of vaccine so now he is feeling fine, then some other times it comes like first time this morning at work he feels silly then has nervousness or something and a panic attack, so they let him go home. He says he got home, and was

feeling fine again. He says he tries to go to the bathroom, or tries to do something in his garage, and feels light headed and is feeling tired. He says he would like to know if that is normal, should he take anything. Lab data on 21Dec2020 included Blood pressure was 158/98, Heart rate was 101. The outcome was unknown.

rigors; This is a spontaneous report from contactable physician via Pfizer sales representative. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), on an unspecified date at single dose for COVID-19 immunisation. The patient medical history and the concomitant medications were not reported. The patient had rigors that subsided in 12 hours after receiving the Pfizer-BioNTech COVID vaccine. The outcome was recovering. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

"General weakness; body ache; Muscle ache; Headache; This is a spontaneous report from a contactable Nurse (patient). A 56-years-old female patient received first doe of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (LOT#: EK5730), on 17Dec2020 at single dose for COVID-19 immunisation. Medical history was none. There were no concomitant medications. The patient received a Pfizer's Covid vaccine on 17Dec2020 and have got some side effects which is general weakness, headache and it just started second day after received the Vaccine on 18Dec2020. The patient had done Covid test several times and all the time it was negative. The patient stated, ""You mean is it worsened from the start date, it's the same when it started on the second day it continued with the headache and body ache, muscle ache and I am taking some Tylenol 500 every 6 hour but not all the time after that."" The outcome was not recovered.P rimary Source Reporter assessed General weakness; body ache, Muscle ache, Headache were related."

"she has almost a sinus headache; the injection site was very, very sore; Chills/She couldn't get warm; cold; body aches; This is a spontaneous report from a contactable consumer (patient). This 64-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EK5730) on 19Dec2020 15:15 at single dose on Left Arm for COVID-19 immunisation. Medical history included She had COVID on 10Nov2020. There were no concomitant medications. The patient received the COVID vaccine on 19Dec2020, the first dose. She didn't have much side effects or feel symptoms except the next morning on 20Dec2020, the injection site was very, very sore. As the day progressed, she had chills. No fever, but chills. She couldn't get warm. This morning when she woke up she has almost a sinus headache on 21Dec2020. It's not really a headache, but around her eyes. ""Injection site was very, very sore"" didn't really start until yesterday after lunch. She has not had chills this morning, just body aches. She feels like she is about to get a cold. She had COVID on 10Nov2020. She wasn't as cold this morning like she was when she went to bed last night. She thinks the chills stopped some time in the night. When she went to get in the shower this morning she felt the headache. She still has the sensation around the eyes. She took some Tylenol about 11AM on 19Dec2020. The outcome of the injection site was very, very sore was recovering, of other events were unknown."

tachycardiac; Low grade like a 99.8; This is a spontaneous report from a contactable nurse (patient). A 32-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), via an unspecified route of administration on 17Dec2020 at single dose at the left deltoid for

immunization. Medical history included tachycardia heart condition (had an underline heart condition that was a tachycardia heart condition). There were no concomitant medications. Patient got Pfizer vaccine on 17Dec2020. Patient really had not had any side effects except had a low grade like a 99.8 yesterday (in Dec2020). Which was probably just the vaccine patient was assuming probably just the vaccine had to do like kid when they get in then they get a little fever. On 19Dec2020, though however patient had tachycardia. Like right now patient was in 130 and blood pressure didn't read when went to stand. And patient had drink plenty fluids all day on 18Dec2020. Patient previously did have an underline heart condition that was a tachycardia heart condition. Patient had not had any issues with heart for about. Because the last time had it was about 2 years ago. Patient had a cardiac condition that caused her to be tachy-cardiac. But it was usually only when she was pregnant. But patient was not pregnant and it had been about 2 years since last episode of this. And the only this that changed was this on 17Dec2020. So, this was the first time patient had had anything that changed after getting that vaccine. Patient did not take any medication. She used to be on a beta blocked but she was recently taken off of that (She don't know 3 months ago). Outcome of events was unknown.

Tingling down entire left side of body, from face to foot.; Numbness and tingling of left side of face.; Had headache temporarily (resolved). Mostly on right side behind eye; This is a spontaneous report from a contactable Other HCP. This Other HCP reported for herself that the 48-year-old female patient received fist dose of bnt162b2 (BNT162B2, Batch/lot number: EK5730), via unknown route of administration in left arm on 21Dec2020 07:45 PM at single dose for covid-19 immunisation. She is not pregnant at the time of vaccination. Medical history included History of breast cancer. Past drug event included Known Allergies to medications, food, or other products: Codeine. Concomitant medications included tamoxifen. Facility type vaccine Hospital. No other vaccine in four weeks. Other medications the patient received within 2 weeks of vaccination included Tamoxifen, multi-vitamins, hair, skin and nails. The patient experienced Tingling down entire left side of body, from face to foot. Numbness and tingling of left side of face. Feel like I got Novocain shot in face. Had headache temporarily (resolved). Mostly on right side behind eye from 21Dec2020 08:00 PM. Outcome of the events was not recovered. No covid prior vaccination. No covid tested post vaccination. Facility where the most recent COVID-19 vaccine was administered was Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No treatment was received for the adverse event. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, has the patient has not been tested for COVID-19. Vaccine Facility information available. Location of injection information is available for all vaccines received on the same date.

"I have had an excruciating back and hip pain; I have had an excruciating back and hip pain; I can barely walk around; This is a spontaneous report from a contactable consumer. This consumer (Respiratory therapist) reported that the 64-year-old male patient received bnt162b2 (BNT162B2, Pfizer BioNTech Covid 19 Vaccine), via unknown route of administration on 16Dec2020 at single dose for covid-19 immunisation (""It helps so that I won't get Covid.""). Medical history included Blood pressure. Consumer stated, ""I need it to report that I have had an excruciating back and hip pain. This is the fifth day and I still have pain but its slightly better but I don't think I am going to work today or tomorrow. I can barely walk around."" Consumer stated, ""It was given to me by a nurse at hospital."" Consumer

stated, ""I take a high blood pressure medicine."" Consumer stated, ""I didn't take any Lab work."" Treatment was received and consumer stated, ""Yes I tried Ibuprofen."" The outcome of the events was unknown. Information about lot/batch number has been requested."

arm pain; fatigue; severe nausea; This is a spontaneous report from contactable Physician via Pfizer Sales Representative. This Physician (patient) reported that the patient of unknown age and gender received bnt162b2 (BNT162B2, reported as Pfizer-BioNTech COVID vaccine), via unspecified route of administration on arm on unknown date at single dose for covid-19 immunisation. Medical history was none. Concomitant medications were unknown. Physician reported arm pain, fatigue and severe nausea after receiving the Pfizer-BioNTech COVID vaccine. Patient is a HCP with no prior medical history. The outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

"Headache; shivers; coldness; body aches; mouth hurts; feel very weak; This is a spontaneous report from a Pfizer-sponsored program Pfizer First Connect. A contactable consumer reported for self that the female patient of unknown age received bnt162b2 (BNT162B2, reported as PFIZER-BIONTECH COVID-19 VACCINE), via unspecified route of administration on 18Dec2020 at single dose for covid-19 immunisation. Medical history and concomitant medications were unknown. She had a COVID vaccine shot on Friday, on 18Dec2020, now she is experiencing a headache. She would like to know if headache is normal or if she should go to a doctor. Upon callback, consumer states she received the Covid19 vaccine on Friday 18Dec2020, and is experiencing ""shivers, coldness, body aches, headache, mouth hurts, I feel very weak"". Consumer wants to know if these things are normal, and if she needs the second dose. She wants to ""make sure she's not dying"". ""Can I use antipyretics before or after vaccination with the Pfizer-BioNTech COVID-19 vaccine?"" Response: The interim ACIP guidelines note that, "" Antipyretic or analgesic medications (e.g., acetaminophen, nonsteroidal anti-inflammatory drugs) may be taken for the treatment of post-vaccination local or systemic symptoms, if medically appropriate. However, routine prophylactic administration of these medications for the purpose of preventing post-vaccination symptoms is not currently recommended, as information on the impact of such use on Pfizer-BioNTech COVID-19 vaccine-induced antibody responses is not available at this time.& quot; If you are a patient, you should discuss this with your healthcare provider. The outcome of the events was unknown. Information about Batch/Lot number has been requested."

She woke up miserable and is still miserable now; she has had a fever of 101.6/It spiked to 103.1; Dry cough; neck pain; swollen lymph node and glands; headache; napped a lot; hot flash; sweaty; off balance and shaky; felt tired all day; joints felt a bit achy/achy joints/shoulder pain; This is a spontaneous report from a contactable Nurse (patient). A 43-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: E10140) intramuscular in her left deltoid on 20Dec2020 08:25 at single dose for COVID-19 immunization. There was no other additional vaccines administered on same date of the pfizer suspect. Medical history included had COVID from Aug2020 to an unknown date and had a pulse-ox. The patient did not have any other medical history. She has had no reactions to any other vaccines before. Her father died of heart attack but with no other medical history prior to that. Her mom died of a brain tumor. In her extended family there is high blood pressure and high cholesterol. She has not personally be diagnosed with any of these conditions. She is healthy.

She has no history of any allergies and again repeats she has never had this side effect with anything. Concomitant medications included over the counter vitamins regularly. The patient has had a fever of 101.6 about 24 hours after getting the shot. It spiked to 103.1. She has had a dry cough and all the other common sides effects reported with the vaccine. There is nothing to do but treat the symptoms. She has let her primary care doctor know via email but he is out of the office through today so she hasn't heard back. She had a Fever of 101.6 that was noticed at 2am after the shot, on 21Dec2020. When she woke up about 10 minutes ago is when she noticed a fever that spiked to 103.1, it is about 1:20pm where she is located. The dry cough started around 8am 21Dec2020, she took cough medication and has used her inhaler to stay on top of the cough. Her pulse-ox readings have been fine and she is at 97-98%. She has a pulse-ox because she had COVID Aug2020 and was out of work 6 weeks and on home oxygen. She felt if she got COVID again she would die so she would rather have the vaccine. She notes that about 15 minutes after getting the shot while they were monitoring her, she was joking with the nurse, she experienced what felt like a hot flash and was sweaty on 20Dec2020. She was off balance and shaky on 20Dec2020. This lasted about 15- 20 minutes and then she was fine. Afterward, she did notice she felt tired all day on 20Dec2020 and napped a lot. Also it was reported that her joints felt a bit achy throughout the day. She has never had a reaction to a vaccine before. Other events experienced were neck pain, swollen lymph node and glands, neck and shoulder pain, headache on 21Dec2020, and achy joints on 20Dec2020. All the events have gotten worse since starting. The fever, neck pain, swollen lymph node and glands, neck and shoulder pain, and headache were noticed about 2am. She woke up miserable and is still miserable now. The patient received Tylenol, Benadryl, Advil, cough medication and an inhaler as treatment for events. No any event required a visit to emergency room or physician office. Seriousness criterial for events fever, dry cough, neck pain, swollen lymph node and glands, Aching joints, Headache, felt tired all day, hot flash and was sweaty, off balance and shaky was medically significant. Events outcome of fever, dry cough, neck pain, swollen lymph node and glands, aching joints, headache, felt tired all day was not recovered (reported as worsened), events outcome for hot flash and was sweaty, off balance and shaky was recovered on 20dec2020, while for other events was unknown. Relatedness of drug to reactions for fever, dry cough, neck pain, swollen lymph node and glands, aching joints, headache, felt tired all day was related per primary source reporter.

Arm is getting redder today and sore. Was not red or sore yesterday after the injection.; Arm is getting redder today and sore. Was not red or sore yesterday after the injection.; This is a spontaneous report from a contactable Nurse. This Nurse reported for self that the 59-year-old female patient received first dose of bnt162b2 (BNT162B2), via unspecified route of administration on Left arm on 20Dec2020 07:45 AM at single dose for covid-19 immunisation. She is not pregnant at the time of vaccination. Medical history included known allergies to medications, food, or other products: PCN, cedar, mold and Hashimotos disease. Concomitant medications included other medications the patient received within 2 weeks of vaccination:ibuprofen (ADVIL [IBUPROFEN]), Levothyroxine and ergocalciferol (VIT D). Facility type vaccine was Hospital. No other vaccine in four weeks. The patient experienced Arm is getting redder today and sore. Was not red or sore yesterday after the injection from 20Dec2020 07:45 AM. The outcome of the event was not recovered. No treatment received. No Covid prior vaccination. Covid tested post vaccination. Covid test type post vaccination was Nasal Swab on 15Dec2020 with result of Negative. Facility where the most recent COVID-19 vaccine was administered was Hospital. The patient

did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has been tested for COVID-19. Vaccine Facility information available. Information on the lot/batch number has been requested.

"I was achy and tired; I was achy and tired; I was really, severely dizzy, like vertigo. My head was swimming; I was really, severely dizzy, like vertigo. My head was swimming; This is a spontaneous report from a contactable consumer. This consumer reported for self that the 56-year-old female patient received bnt162b2 (BNT162B2, reported as Pfizer-Biontech Covid-19 Vaccine, Batch/lot number: EJ1685, Expiry Date of COVID Vaccine: Mar2021), via unspecified route of administration on 18Dec2020 12:30 at single dose for covid-19 immunisation. Medical history was none. Concomitant medications included cyanocobalamin (VITAMIN B12 [CYANOCOBALAMIN]) Injections. She is a respiratory therapist. She states she got the vaccine on 12:30 PM on Friday. She states that Friday night by 09:30 pm was really bad. Her head was swimming. She said by Saturday she was achy, tired. Also, on Friday night she was severely dizzy and felt like she has vertigo. She is better now."" Consumer stated, ""It was just a shot."" Th outcome of the events was recovering. Treatment was received and consumer stated, ""The only thing I took was 800 mg Ibuprofen Friday evening."" Consumer further added, ""I was, just like in chart second vaccination I guess I am okay to take it. I talked to my doctor."" Consumer stated ""I got the covid vaccine on Friday and it was a bad night. I was really, severely dizzy, like vertigo. My head was swimming. I got the shot at 12:30 that day, but the symptoms didn't start until 9:30 that night. On Saturday I was achy and tired. But I'm better now."" Consumer questioned if dizziness was a reported side effect."

"My arm is sore; I have really weird red like bump blister that formed on my right hand on my index finger; This is a spontaneous report from a contactable Physician. This Physician(patient) reported that the 48-year-old female patient received bnt162b2 (BNT162B2, Batch/lot number: EJ1685), via unknown route of administration on arm on 19Dec2020 01:30 at single dose for covid-19 immunisation. Medical history was none. Concomitant medications were unknown. Physician stated, ""I took the Pfizer Vaccine (COVID Vaccine) yesterday at 1:30 and I am fine. My arm is sore, but I have really weird red like bump blister that formed on my right hand on my finger, on my index finger. I don't have any 'trauma to it'. I don't why it's there? I haven't seen it but its unusual looking."" No treatment received. The causality was assessed by Physician stated, ""No, I don't know. I have no idea if this it is just a rare coincidence."" The outcome of the events was unknown."

"felt more like a burning especially in my neck; Minutes after shot some sweating, first thought perhaps it is some anxiety related to having a vaccination. After monitoring period went back to the office. Started to get severe nausea; Minutes after shot some sweating, first thought perhaps it is some anxiety related to having a vaccination. After monitoring period went back to the office. Started to get severe nausea; Minutes after shot some sweating, first thought perhaps it is some anxiety related to having a vaccination. After monitoring period went back to the office. Started to get severe nausea; muscle pain that started in my neck, shoulder and then moved on to both legs; felt weak and had to go home; pain in my neck; leg pain; arm pain; This is a spontaneous report from a contactable Nurse. This Nurse reported for self that the 50-year-old female patient received first dose of bnt162b2 (BNT162B2, reported as PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730), via Intramuscular on left arm on

18Dec2020 03:15 PM at single dose for covid-19 immunisation. She is not Pregnant at the time of vaccination. Medical history included Known allergies to medications, food, or other products: Dust mites, nickel and recent iron deficiency anemia, esophageal ulceration, reactive airway disease. Concomitant medications included other medications the patient received within 2 weeks of vaccination included Omeprazole 40 mg BID (Twice a day), colecalciferol (VITAMIN D [COLECALCIFEROL]) and Albuterol. Facility type vaccine was Hospital. No other vaccine in four weeks. No other vaccine in two weeks. The patient experienced ""Minutes after shot some sweating, first thought perhaps it is some anxiety related to having a vaccination. After monitoring period went back to the office. Started to get severe nausea and muscle pain that started in my neck, shoulder and then moved on to both legs. I felt weak and had to go home. The muscle pain was not like exercise pain - it felt more like a burning especially in my neck. The pain in my neck got better after Tylenol , the leg pain continued until 10 pm. The nausea was severe until 7:30 and was gone by 10 pm. I had to leave work 2 hours early because of side effects. The arm pain continued for two days, locally, minor and was gone on day three (21Dec2020)"". The event started from 18Dec2020 03:30 PM. The outcome of the events was recovered. No treatment received. No covid prior vaccination. No covid tested post vaccination. Facility where the most recent COVID-19 vaccine was administered was Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The events were assessed non-serious."

left arm started to feel numb first, and then she started to feel it in her face/numbness on the side of her face; worried; This is spontaneous report from a contactable other healthcare professional (patient). A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection) via an unspecified route of administration on 21Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was having a side effect after taking the COVID vaccine today (21Dec2020). The patient experienced numbness on the side of her face on 21Dec2020. The patient added that she had to wait for 15 minutes and didn't have anything. The patient when driving on the way home, she started to feel numbness on her face. The patient clarified within 20 minutes of receiving the vaccine her left arm started to feel numb first, and then she started to feel it in her face. The patient has been trying to exercise it and move it because she was worried it would become weak. The patient was unsure what to do or if this is expected. The patient, while providing contact information she stated she was really worried (21Dec2020), and she can't finish the report at this time. The full report details were unable to be obtained. The outcome of the events was unknown. Follow-up activities are possible, information on the batch number has been requested.

moderate myalgia; This is a spontaneous report from a non-contactable consumer. A 30-year-old female patient (daughter of a friend) received bnt162b2 ((Pfizer-BioNTech COVID-19 mRNA vaccine) lot number and expiration date were not reported, via an unspecified route of administration on 17Dec2020 at a single dose for COVID vaccination. The patient's medical history and concomitant medications were not reported. The patient experienced moderate myalgia following her COVID vaccination last Thursday on

17Dec2020 with outcome of recovering. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

"Injection site pain; Tiredness; Headache; Muscle pain; Chills; I have fever 100.3; Injection site is swelling; injection site have redness; feeling unwell; This is a spontaneous report from a contactable Nurse (patient). The patient received first dose of bnt162b2 (BNT162B2, lot number: EH9899, Expiry Date: Mar2021), unknown on 19Dec2020 18:00 at single dose for covid-19 immunisation. Medical history was reported as Patient History: No. There were no concomitant medications. Nurse stated, ""I have received the vaccine, the Pfizer COVID vaccine yesterday at 06:00 PM. I have side effects is injection site pain, tiredness, headache, muscle pain, chills and I have fever 100.3 (I got the fever after 24 hours of receiving the vaccine) and injection site is swelling, injection site have redness and feeling unwell. I would like to know how long it takes to, the side effects is going to be gone."" The outcome of the events was unknown."

"Dizzy; I felt really weak; Shortness of breath in getting up the stairs; The shortness of breath freaks me out, I think that's where the anxiety comes in; I think the midsternal chest pain was my anxiety but like a little bit; started feeling very like flu; Headache; Weakness; Fatigue; Muscle ache; I also have like really swollen lymph nodes, my lymph nodes feels like draining right now; The shortness of breath must have pain and issue for me; This is a spontaneous report from a contactable nurse (patient). A 32-years-old female patient received bnt162b2 (BNT162B2), via an unspecified route of administration on 19-DEC-2020 07:30 at single dose for covid-19 immunisation. The patient medical history was not reported. Concomitant medication included buspirone hydrochloride (BUSPAR), omeprazole (OMEPRAZOLE), lithium (LITHIUM), doxycycline (DOXYCYCLINE) for infection right now in her toe. The lithium cause 'sinus' reflux asthma. Nurse reported an adverse effect, was kind of confuse if it is related or not. She felt good for first 15 minutes and when she was about to leave. she was not afraid of shot. she felt dizzy and then she had to go upstairs and she felt really weak and Shortness of breath getting up the stairs, to get to her car. The shortness of breath freaks her out, she think that's where the anxiety comes in. she started driving home and she had bad shortness of breath. she think the midsternal chest pain was her anxiety but like a little bit. she am not sure. In '12' hours later she went to work she started feeling very like flu, she started flu like with headache, weakness, fatigue, muscle ache. she was working in ER and it is hard to work and then 20Dec2020 she was still feeling bad but little bit better than first day and shortness of breath that was still there like all day the day before. she also had like really swollen lymph nodes, her lymph nodes feels like draining right now. Nurse stated she was taking Omeprazole. That was wired because she have 'sinus' (Further not clarified, hence not captured in tab) reflux asthma, so the shortness of breath must have pain and issue for her but Omeprazole have stopped it, so before taking the vaccine she thought she was completely fine but then after taking the vaccine, it was like she have the issue again like it was controlled before the vaccine. Result of lab test: TSH was 8. So it was elevated but that was because of lithium and then she reduced the dose so it should be better now. So every result was normal."" Results of tests and procedures for investigation of the patient: Test: CBC, CMP, Lithium level, TSH: Thyroid panel unknown result."

generalized weakness; headache; right sides numbness/bilateral hand numbness/bilateral face numbness; This is a spontaneous report from a contactable other healthcare professional reported for

herself. A 43-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EH9899, expiry date unknown) via an unspecified route of administration at the right arm on 18Dec2020 10:00 at single dose for COVID-19 immunization. The patient medical history was none. The patient was not diagnosed with COVID-19 prior vaccination. Concomitant medication included influenza vaccine inact split 3v (FLULAVAL, lot number 542MY, expiry date unknown) on 20Nov2020 for immunization. On 18Dec2020 at 16:00 (day 1), the patient experienced headache and right sides numbness. On day 2 (19Dec2020), patient has headache. On day 3 (20Dec2020), the patient has overall improvement. On day 4 (21Dec2020), the patient experienced generalized weakness, at 1300 bilateral hand numbness, at 1540 bilateral face numbness that has persisted into the afternoon (pm). The outcome of the events headache, right sides numbness/bilateral hand numbness/bilateral face numbness and generalized weakness was not recovered.

Headache; Chills; Body ache and little bit congested; Body ache and little bit congested; This is a spontaneous report from a contactable consumer (patient). A 50-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for immunization. Medical history included high blood pressure, seizure disorder. Concomitant medication included metoprolol, aripiprazole (ABILIFY). The patient experienced headache, chills, body ache and little bit congested on an unspecified date with outcome of unknown. No treatment was received for events. Information about Lot/Batch number has been requested.

a little bit of chill; like a slight bit of dizziness; This is a spontaneous report from a contactable consumer. A patient of unspecified age and gender received bnt162b2 (BNT162B2, Batch/lot number: EH9899), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunisation. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient experienced a little bit of chill and like a slight bit of dizziness on Dec2020 with outcome of unknown.

really uncomfortable, my stomach is alarming; This is a spontaneous report from a contactable consumer (patient). A 57-year-old female patient received BNT162B2 (COVID Vaccine, manufacturer not clarified), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunisation. Medical history included hypertension, diabetes, atrial fibrillation. The patient had some concomitant medications. When probed for any concomitant, patient stated, that was her other concern. She was seeing there was an issue with if you won't blood thinner (further not clarified). Patient stated, she got her own injection (COVID Vaccine) on Friday and It was not been major but she had been to the bathroom since Friday and she was change her diet or anything. This was really uncomfortable, her stomach was alarming. Patient asked if that was normal. Outcome of the event was not reported. Pfizer is a marketing authorization holder of COVID Vaccine in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of COVID Vaccine has submitted the same report to the regulatory authorities. Information on the lot/batch number has been requested.

fatigue, nasal congestion and body aches/tested positive with infection; fatigue, nasal congestion and body aches/tested positive with infection; This is a spontaneous report from a contactable physician. A

male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 16Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. On 15Dec2020, the patient reported possible personal exposure (close contact / dinner with friend who tested positive on 18Dec2020, both unmasked) and received Covid vaccine on 16Dec2020. The patient reported fatigue on 17Dec2020, nasal congestion and body aches on 18Dec2020. He tested positive with infection control MD and had monoclonal Ab administered same day (18Dec2020). He wanted to know, what this means for his scheduled second vaccine and if needs to wait 90 days from positive Covid. The outcome of the events was unknown. Information on the lot/ batch number has been requested.; Sender's Comments: The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

"Arm was a little sore; a little dizziness; This is a spontaneous report from a non-contactable consumer (sister). A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration from Dec2020, at an unknown single dose for an unspecified immunization. The patient's medical history and concomitant medications were not reported. The patient works as an RN in (Place name), received the Pfizer vaccines (COVID-19 vaccine) on Saturday; she stated that her arm was a little sore and experienced a little dizziness ""but otherwise just fine"". Outcome of events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained."

I have good and bad side effects, first of all I have trouble, pain in my knees and today I relieved from much pain in knees,; Pain in the arm; Headache; Diarrhea; started with a feel and now it was more, it was a pain, it was like a crack in her abdominal; This is a spontaneous report from a contactable consumer (patient). A 52-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 08:15 at single dose for COVID-19 immunization. The relevant medical history included thyroid disease and arthritis (have problem with her knees and they said it arthritis). Concomitant medications included vitamin c, vitamin d3 and vitamin e, all from an unspecified date for thyroid disease. The patient stated that first moment it was okay, not feeling much just the pain in the arm on 17Dec2020 and in the next day she had good and bad side effects, first of all she had trouble, pain in her knees on 18Dec2020 and at the time of the report she relieved much from pain in knees, they came back but that was okay. She had a little headache, not much on 17Dec2020. But at the time of the report like an hour prior to the report she started with diarrhea in Dec2020. Diarrhea was getting worse, it started with a feel and now it was more, it was a pain, it was like a crack in her abdominal, she had gone to the bathroom few minutes prior to the report and almost she felt like she had to go again. The patient did not ask the dose and stated that they were supposed to give her a one dose, it was her first dose, her second dose coming on 07Jan. The outcome of the event pain in the arm was unknown, for event arthralgia was recovering, while the other events were not recovered. Information about Lot/Batch number has been requested.

"Lost weight; Achiness; Tired; Headache; her daughter was tested positive for COVID/ she was around her daughter; Blurriness; I could hardly see; A little bit of vision changes; eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit; eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit; eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit; Nauseous; This is a spontaneous report from a contactable Nurse (patient). A 54-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. The relevant medical history included blood cholesterol and sinus problem. Concomitant medications included pravastatin for cholesterol. The patient stated that she received the immunization on Thursday at the hospital that she worked at and Saturday and then at the time of the report her eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit on 19Dec2020. Today they were too this morning. So, that got better than yesterday because she cold compresses on them. For the next shot, the patient stated that she was not so sure, it was within 21 days. An appointment was set-up, she just had to look. It was during work, so she was working. She went downstairs, she got the show. She sat there while they watch her for several hour, observation time and she got on her phone and scanned in something. Maybe appointment but she got to work. She didn't write it down. The patient stated that her daughter was tested positive for COVID on Monday. And they said her to get test it because she was around her daughter. And then they weren't so sure whether or not to give her the vaccine. But they said it was okay so they did. She was negative at that time. The patient stated Friday at work, she didn't feel anything because she was working around, almost 3:30 or 4 O' clock on Thursday. She was nauseous all day at work on 18Dec2020. And just the minor ones that they had. That was to be expected, the achiness, felt a little swollen, tired, headache. But she was okay to work. But then at the time of the report after her eyes been swollen yesterday. She got up to get ready for work but her eyes were like. At that time in the morning on 19Dec2020 she could hardly see out of them. But they were much better at the time of the report. The patient had this mask that was a gel pack. So, it was bit of like a cold compress. And put Vaseline and they told her to get another COVID test. The patient had some vision. Some blurriness and just a little bit of vision changes on 19Dec2020. That she had not noticed at the time of the report. So that was resolved she thought. The patient underwent lab test included COVID test on an unspecified date which showed negative; weight on an unspecified date which showed about 186 pounds (she lost weight, so she might be a little more, she just hadn't checked). Therapeutic measures were taken as a result of the events ""eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit"". The outcome of the events ""eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit"" was recovering, for the event ""Blurriness; I could hardly see; A little bit of vision changes"" was recovered on an unspecified date, the other events were unknown. Information on Lot /Batch Number has been requested."

"I was not feeling well and I actually was like feeling really sick; I was feeling really like weak; I was not feeling well and I actually was like feeling really sick; I was feeling really like weak; I was not feeling well and I actually was like feeling really sick; I was feeling really like weak; I had to throw up; I ended up falling on floor; Arm started hurting; I was getting like crampy; I had to throw up; I ended up falling on floor; This is a spontaneous report from a Contactable consumer. This consumer (patient) reported that the 59-year-old female patient received (BNT162B2), via an unspecified route of administration on

18Dec2020 (yesterday morning about 6:30) at single dose for covid-19 immunization. Medical history included Allergy and consumer stated, ""No, I take Zyrtec D for my allergies. But I have not taken any because I was feeling better from it. So, my doctor said you don't need to take it all the time, just take as you needed."" Concomitant medications included cetirizine hydrochloride/pseudoephedrine hydrochloride (ZYRTEC-D) for Allergy. The patient experienced ""I was not feeling well and I actually was like feeling really sick, I had to throw up, I was getting like crampy. And usually when I throw away I lie down but I didn't and I ended up falling on floor, I was feeling really like weak, Arm started hurting, I was getting like crampy"". No Investigation Assessment. Consumer stated, ""Actually I was just calling to report because I have taken the COVID shot, yesterday morning about 6:30 and I got some side effects from it. So, I was just calling, I guess it is just pamphlet and stuff."" Consumer stated, ""Yes I called off my work because I rescheduled my job today but I couldn't go because I was not feeling well and I actually was like feeling really sick. And I had to throw up. And then I was getting like crampy. And usually when I throw away I lie down but I didn't and I ended up falling on floor. So, I am okay but I didn't go to work because I was feeling really like weak."" Consumer stated, ""Actually they had it done it with the hospital. So, I didn't go to the doctor. They just had a, had to just go on the computer and go to that setup. And then I had an appointment yesterday at 6:30, that's when I got the shot taken at 6:30 in the morning. Consumer stated, ""What is that for? They gave me an envelope, I don't know they gave me a card too. Is that on that card? They schedule me my other appointment, I mean to get my other shot. When I have to get the other one I guess. I don't know why I can't find it. We found the card. It says dose COVID-19, it's Pfizer and then it's looks like E and then it's a J or a T, looks like a J or a T the way wrote it, we'll just go ET1685, I guess. Due date for next shot is 08Jan2021 at 9:15 am."" Consumer stated, ""That's the vaccine because I work around, I work in Intensive Care Unit. And it is pretty much second floor and in COVID unit. So, that's why I wanted to get it for my safety. Consumer stated, I did get them like 2 O' Clock this morning. My arm started hurting towards later in this evening and then I woke up and it didn't help me."" Consumer stated, ""No I feel better when I got up because I didn't go to work because I was a little not, you know weak and kind of. So, I called off my job because I don't want to be going over there and. Yeah I feel better, my stay close to bed because I fell."" No treatment was received. The outcome of the events was unknown. Information on the Batch/Lot number has been requested."

Hives around the injection site; This is a spontaneous report from a contactable consumer (patient). A 38-year-old male patient received the 1st dose of bnt162b2, Pfizer vaccine, lot number: EK5730, expiry date: Mar2021, via an unspecified route of administration in the right arm (deltoid) on 20Dec2020 11:10 at a single dose for COVID-19 immunization. Medical history included hypertension and diabetes mellitus. Concomitant medications included metformin since diabetic, aspirin [acetylsalicylic acid] on 20Dec2020, and ongoing zinc. The patient experienced hives around the injection site on 21Dec2020 05:30. The event was described as follows: after getting the vaccine, he woke up with hives around the injection site. It is itchy, crater-ish like. If you touch it is tough and it feels like one was bit by ants. This on the arm and head. It is bigger on the head. It is like huge bumps. He has been calling his HCP all morning, but has not heard anything back from the doctor. He is calling to see if there were any recommendations, ointments, or anything he can take. He mentioned he took Benadryl this morning for it. He went on to further explain when he woke up 5:30 am this morning he had a bunch of bumps that

were itchy, like ants or mosquitoes biting. They were pretty big. He has one on his collar bone. It is stiff and hard. The bumps are spreading towards the back of his back. He also has it on his left shoulder as well. He provided the hives as the same to worse. He added on his arm near the injection site is a lot worse compared to his forearm. Near the injection site it is also warm to touch. He stated this was typical symptom from what he read. He received the vaccine at 11:10 am. The patient is scheduled to get the second dose on 10Jan2021. The event did not require patient to visit the Emergency Room and the Physician Office. The reporter stated he has been trying to contact his physician to determine if his events are severe enough to go to the ER. He was informed that his doctor has been booked all day. He may have to go to the night clinic if does not get better. Outcome of the event was not recovered.

urticaria to bilateral upper extremity (BUE); This is a spontaneous report from a contactable nurse (patient). A 33-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number not provided), via an unspecified route of administration on 19Dec2020 21:00 at SINGLE DOSE for COVID-19 immunization at the hospital. Medical history included diabetes mellitus (DM), hypertension (HTN), depression, obesity, hyperlipidaemia (HLD), migraines, and degenerative disk disease (IDD). The patient also had allergies with sulfa, oyesters, and adhesives. Concomitant medication included insulin aspart (NOVOLOG), bupropion hydrochloride (WELLBUTRIN), metformin (METFORMIN), sumatriptan (SUMATRIPTAN), and losartan potassium (LOSAR) for unknown dates and indications. Prior to vaccination, the patient was not diagnosed with COVID-19 and had not been tested for COVID-19 since vaccination. On 19Dec2020 17:00, the patient experienced urticaria to bilateral upper extremity (BUE). The patient did not received any treatment for the event. The patient was recovering from the event. Information on the Lot/batch number has been requested.

Soreness in left upper arm; This is a spontaneous report from a non-contactable consumer. A 28-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiration date were not reported), via an unspecified route of administration on the left arm on 20Dec2020 at a single dose for covid-19 immunization. There were no medical history and concomitant medications. The patient had no known allergies to medications, food, or other products. The patient was not pregnant. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination and had not been tested for COVID-19 since the vaccination. The patient experienced soreness in left upper arm starting several hours after administration on 20Dec2020. Soreness was worst the next morning. No treatment was received for the adverse event. However, the outcome of the event was recovering. The event was considered non-serious. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

lightheadedness for 2 hours after vaccine; Flushing and tongue numbness within 2-3 minutes of vaccine administration; Flushing and tongue numbness within 2-3 minutes of vaccine administration; This is a spontaneous report from a contactable Physician (patient) A 42-year-old female patient received,at hospital, the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) intramuscular on arm left on 17Dec2020 (reported as at 01:15 PM) at a single dose for COVID-19 immunization .Medical history prior history of allergies requiring allergy shots, GERD , GERD and Sulfa and environmental/food allergies , food allergy .Concomitant medication included ibuprofen and cetirizine hydrochloride (ZYRTEC). No

Covid prior vaccination and no covid test vaccination provided . On17Dec2020 at 01:15 PM , the patient experienced Flushing and tongue numbness within 2-3 minutes of vaccine administration and lightheadedness for 2 hours after vaccine.All events were reported as non-serious. Patient received treatment with Benadryl 25 mg PO (per oral).The outcome of the events was recovered in Dec2020. Information on the lot/batch number has been requested.

a few blisters near the injection site; Arm soreness; This is a spontaneous report from a contactable consumer. A 29-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 19Dec2020 at single dose for immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient experienced a few blisters near the injection site in addition to arm soreness on 20Dec2020. Outcome of events was unknown. information about lot/batch number has been requested.

Dizziness; Fatigue; got the injection his left arm was a little sore/Severe left arm pain, soreness, throbbing; intermittent kind of dyslexia; This is a spontaneous report from a contactable consumer (respiratory therapist - patient himself). A 52-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number EK5730) via an unspecified route of administration on the left arm on 17Dec2020 at SINGLE DOSE for COVID-19 immunization (also reported as vaccination). Ongoing medical history included type 2 diabetes mellitus since Dec2003, renal disorder (reported as kidney prevention) and blood cholesterol abnormal (cholesterol was not high, but because of Type II Diabetes his doctor wanted to keep it at bay). Ongoing concomitant medications included metformin (METFORMIN) since Jan2004 for type II Diabetes, lisinopril (LISINOPRIL) since May2020 for kidney prevention and atorvastatin (ATORVASTATIN) since May2020 for cholesterol. On 17Dec2020, the patient had first dose administered of BNT162B2. When he got the injection, his left arm was a little sore (like if he leaned against his left arm or rubbed it he would notice the soreness). About mid-morning on 20Dec2020, his left arm just started throbbing like he had just blocked a lacrosse ball shot, severe left arm pain, and soreness. He also had onset of dizziness and fatigue as well on 20Dec2020. He went on, did a heating pad and ibuprofen and all that stuff and all that went on. He found it odd because these events did not start until around like 3 days after the injection was administered though the paperwork showed that these kind of events are expected in the first couple of days after product administered. On 21Dec2020 when he woke up around 11:30am, the throbbing went away, he was not as dizzy as before but still super fatigued and tired (then further stated that maybe a little bit better because he does not have that constant pain constantly draining him). The patient also mentioned that he wondered if there was an intermittent kind of dyslexia that he has because he will transpose words and just last week learned how to spell received without having to tell himself 'i before e except after c'. He also mentioned that he was tested like 4 times for COVID-19 and was negative every time in 2020. The outcome of the event of dyslexia was unknown while recovering for the remaining events.

Tiredness throughout the day; slight lightheadedness; slight headache; This is a spontaneous report from a contactable pharmacist (reporting for himself). A 38-year-old male patient received the first dose of bnt162b2 (BNT162B2, lot number and expiry date were unknown), intramuscular on 21Dec2020 09:30 on the left arm at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. Prior to vaccination, the patient was not diagnosed with

COVID-19. Since the vaccination, the patient has not been tested for COVID-19. On 21Dec2020, the patient experienced tiredness throughout the day, slight lightheadedness and slight headache. There was no treatment that was received for the events. The events were considered non-serious. The most recent COVID-19 vaccine was administered in the hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of the events was recovering. Information about Batch/Lot number has been requested.

Soreness in the arm more than any other vaccine in the past; This is a spontaneous report from a contactable Other Health Professional (patient). A 31-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EJ1685, via an unspecified route of administration in the left arm, first dose on 19Dec2020 14:15 at a single dose for immunisation. The patient's medical history and concomitant medications were not reported. The patient is not pregnant. She had not had other vaccines within four weeks prior to vaccine and she had no other medications in 2 weeks. Adverse event reported was soreness in the arm more than any other vaccine in the past. The onset was on 20Dec2020 with outcome of recovered in Dec2020. She took an over the counter ADVIL. She did not have covid prior vaccination nor had she tested post vaccination. The event was reported as non-serious.

"Chills; I felt like I am getting a fever; like flu like symptoms; nausea and that is why my voice is like this; nausea and that is why my voice is like this; felt like fatigued and tired; Numbness; This is a spontaneous report received from a contactable consumer (patient). A 41-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration, on 18Dec2020, at single dose, for COVID-19 immunization. Medical history included hypertension (also reported as borderline hypertension, which was before, and the patient got better). The patient reported exercising, he was heavier, but he is losing weight now. There were no concomitant medications. The patient reported, ""I got my COVID vaccine last Friday, that would be on the 18Dec2020. So I feel like I see the side effect of having it, (voice incomprehensible). The day that I got it, when I got back, on 18Dec2020, I felt like fatigued and tired. And then on Saturday (19Dec2020), which I was off, I felt a little better. But then, you know, I had a little numbness (Dec2020) but it disappeared. And then on Sunday, I went to work and last night (20Dec2020), I just woke up and I had chills and I felt like I am getting a fever, like flu like symptoms like nausea and that is why my voice is like this. Is it normal to feel after 3 days this side effect? I mean actually I was reading the paper that I got it because I need to, because I have work today, I need to inform my manager that I cannot go to work because I am feeling this side effect and I don't want him to think that you know."" The patient did not have lab work done and did not receive treatment for the events. The outcome of fatigue was recovering, numbness was recovered on an unspecified date in Dec2020, and the outcome of the remaining events was unknown."

"Woke up 2 days later with painful swelling under both eyes and pain around my chin. these are all areas, and the only areas that I have had dermal filler injections; Woke up 2 days later with painful swelling under both eyes and pain around my chin. these are all areas, and the only areas that I have had dermal filler injections; Woke up 2 days later with painful swelling under both eyes and pain around my chin. these are all areas, and the only areas that I have had dermal filler injections; This is a

spontaneous report from a contactable physician. A 45-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), intramuscular on the left arm on 16Dec2020 10:45 at single dose for COVID-19 immunisation. Medical history included hypertension and dermal filler injections. Concomitant medication included losartan. The patient stated, ""woke up 2 days later with painful swelling under both eyes and pain around my chin. These are all areas, and the only areas that I have had dermal filler injections. I started steroids and pain and swelling resolved in 3 days"". The outcome of the events was recovered on Dec2020."

she was running a temperature of 100.3 degrees Fahrenheit/highest her temperature got up to last night was 101.9 degrees Fahrenheit; Left arm sore; Left arm was just a little swollen; A little swollen in her left underarm and armpit; Started getting hot and cold and hot and cold; Achy; Nauseous/Feeling like she was going to throw up; This is a spontaneous report from a contactable consumer (patient). A 50-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number and expiration date were not reported, via an unspecified route of administration in the left arm, first dose on 19Dec2020 07:30 at a single dose for vaccination. Medical history included ongoing colitis ulcerative when she was 23 years old (1993), POTS (Postural Orthostatic Tachycardia Syndrome) from 2017 and ongoing, had thyroid problem, with heart medication. Concomitant medication included prednisone, levothyroxine sodium (SYNTHROID), irbesartan, bisoprolol fumarate, fluticasone and potassium. The patient stopped prednisone about 4-5 days before COVID-19 Vaccine administered. She talked to her doctor about prednisone use and getting COVID-19 Vaccine, doctor told her to go ahead and get COVID-19 Vaccine. The patient is a Certified Nursing Assistant who received the Pfizer COVID-19 Vaccine at her place of employment on 19Dec2020. This was her first dose of 2 dose series of the vaccine. She reported after she received the vaccine injection, she had onset of 'achy, nauseous, left arm sore, left arm was just a little swollen, a little swollen in her left underarm and armpit, she started getting hot and cold and hot and cold, feeling like she was going to throw up and was running a temperature. She added that at the night of 19Dec2020 she felt achy and a little nauseous but it was not bad so she took some TYLENOL and she was feeling fine. She stayed at work Saturday. Starting morning of 20Dec2020 she woke up and her left arm felt like she had gotten a tetanus shot, left arm was sore and just a little swollen and she was a little swollen in her left underarm and armpit; she felt achy all over again; so she took some more TYLENOL and went to work and was feeling fine until about lunch time on 20Dec2020. Around lunch time on 20Dec2020, she started getting hot and cold and hot and cold, feeling like she was going to throw up; by about 4:30pm on 20Dec2020 she was running a temperature of 100.3 degrees Fahrenheit. The highest her temperature got up to last night was 101.9 degrees Fahrenheit. She took a Tylenol PM to knock her out to sleep because she was achy. The outcome of the events achy, nauseous, left arm sore, left arm was just a little swollen, a little swollen in her left underarm and armpit, started getting hot and cold and hot and cold, feeling like she was going to throw up, and she was running a temperature of 100.3 degrees Fahrenheit/highest her temperature got up to last night was 101.9 degrees Fahrenheit was recovering. Information about Batch/Lot number has been requested.

headache; fever of 100/mild fever 99.5; fatigue; non productive cough; tested Covid 19 positive; tested Covid 19 positive; This is a spontaneous report from contactable consumer. A 23-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via unspecified route of administration on

unspecified date at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. It was reported that the patient was a 23 years old nurse and received the Covid 29 vaccine on Saturday morning. Sunday she developed a headache fever of 100 and fatigue. Monday she developed a non productive cough as well as mild fever 99.5, fatigue, and the headache was reduced. It was also reported that the patient was tested Covid 19 positive on 22Dec2020. The outcome of the events were unknown. Information on the lot/batch number has been requested.

Diarrhea; she could feel her stomach again; This is a spontaneous report from a contactable consumer. A 64-year-old female patient received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA Vaccine BNT162B2; lot number: EH9899), via an unspecified route of administration on 17Dec2020 at a single dose by injection once so she doesn't get COVID. The patient's medical history was not reported. There were no concomitant medications. The patient experienced diarrhea on 19Dec2020. The patient just thought about it, she had diarrhea, she had said everything is good, but she didn't think about it when answering the questions, when she eats the food, she notices, she got the COVID vaccine. She doesn't know how to change responses to the questions. She answered no to them, but this could be tied together. Every time she eats, she gets diarrhea. Patient got the COVID test. She wanted to change answers, but it wouldn't let her. Patient could feel her stomach again in Dec2019, but she hasn't eaten. This was the first time she received the vaccine. The outcome of the events was unknown.

mild rash around the injection site; This is a spontaneous report from a non-contactable consumer. A 50-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number not provided), via an unspecified route of administration in 2020 at SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. In 2020 (five days after vaccination), the patient experienced mild rash around the injection site. Outcome of the event as unknown. Information about lot/batch number cannot be obtained. No further information is expected.

Rash/rash did have a pretty discreet or distinct area around the injection site; She says it was pretty red and you could tell the area was swollen at first, and it has faded; She says it was pretty red and you could tell the area was swollen at first, and it has faded; She says that the rash this morning has spread to her left chest wall and breast area, and she was looking at her body in other places and saw the reaction was on the rest of her body too/rash had maybe a little mild itch; injection site may bleed longer which was the only thing notable; This is a spontaneous report from a contactable physician (patient). A 28-year-old female patient received single dose of BNT162B2 (lot number: EK5730, exp date not reported), via an unspecified route of administration (one injection to left deltoid) on 18Dec2020 07:00 for primary prevention. Medical history included rare bleeding disorder from 2016, and seasonal allergies. She says she had no effects from it but knows of it from genetic testing. Patient did not receive any other vaccines at the same time as this one, or any other medications. Patient was a resident doctor at the hospital and was calling as consumer. She received her first dose of the Pfizer BioNTech COVID-19 vaccine on 18Dec2020 (Friday morning at 07:00AM). She had gotten sort of a whole body generalized rash which the morning of reporting was worse nearer the site and left chest wall area. She says she would like to see if this has happened to and been reported by others. The vaccine was offered by her employer to any staff who wanted to get it, and she was in phase one. She says that there wasn't a

specific provider who prescribed it. She has the card that they gave her following the injection and says that it doesn't have an expiration date on it, just the date given and the name of the clinic site. She says it just says Pfizer on this part, on the card. She says on the other form it says Pfizer BioNTech COVID-19 vaccine. She says that there was no dose information provided for the injection. Patient further reported that the rash did have a pretty discreet or distinct area around the injection site up through probably the day before reporting (onset date: Dec2020). It was pretty red, and you could tell the area was swollen at first, and it has faded. She says that the rash the morning of reporting had spread to her left chest wall and breast area, and she was looking at her body in other places and saw the reaction was on the rest of her body too. She says that the rash had maybe a little mild itch, she hadn't noticed if there was anything, just a mild itch, not significant. She didn't do any treatment for the rash specifically, she did take loratadine (CLARITIN) the morning of reporting, but not for that reason, as it was for seasonal allergies, not because of the rash. She provides potential LOT 9HE36498, and says there was no UPC, she got the loratadine and it could have been in original package as one of two, there was no bar code on the label. She provides a second potential LOT 61282ZYF3, and EXP May2021. She says she was told the injection site may bleed longer, due to rare bleeding disorder, which was the only thing notable. No investigation assessment performed. The patient recovered from site swollen on Dec2020. The outcome of other events was unknown.

Fever of 102.4; chills; full body muscle aches; fatigue; nausea; injection site pain; swollen lymph nodes; This is a spontaneous report from a contactable healthcare professional. A 21-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), Batch/lot number: ek5730, intramuscular in the left arm on 21Dec2020 08:45 at single dose for COVID-19 immunization. Medical history included COVID-19 diagnosed prior vaccination. The patient has no known allergies. The patient was not pregnant at the time of vaccination. The patient's concomitant medications were not reported. The patient experienced fever of 102.4, chills, full body muscle aches, fatigue, nausea, injection site pain, and swollen lymph nodes on 21Dec2020 at 19:00. No treatment was given for the events. The vaccine was administered at the hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine and no other medications was received within 2 weeks of vaccination. Since the vaccination, the patient has not been tested for COVID-19. The outcome of the events was not recovered.

"Cold sensation down her right arm; Began ""seeing stars""; Metallic taste in her mouth; This is a spontaneous report from a contactable pharmacist. A 40-year-old female patient received the first dose of bnt162b2 (Pfizer Biontech COVID 19 vaccine), Lot number: EJ1685, intramuscular at the right arm on 21Dec2020 09:00 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was not pregnant at the time of vaccination. On 21Dec2020 09:00, the patient experienced cold sensation down her right arm, began ""seeing stars"", followed by a metallic taste in her mouth. The patient was not hospitalized for the events but required emergency room/department or urgent care visit. The patient did not receive any treatment for the events. The events were reported as non-serious. The vaccine was administered in a workplace clinic. It was unknown if the patient has received any other vaccines within 4 weeks prior to the COVID

vaccine. Prior to the vaccination the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of the events was unknown."

Severe ear and eye pain; Severe ear and eye pain; This is a spontaneous report received from a contactable nurse. A 51-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date not reported), intramuscular in left arm, on 21Dec2020 15:15, at single dose, for COVID-19 immunization. Medical history included hypertension, depression, and known allergies to eggs, latex, nuts and codeine. The patient is not pregnant. Concomitant medication included aspirin (ASPIRIN), ascorbic acid (VITAMIN-C), hydrochlorothiazide, lisinopril (ZESTORETIC), venlafaxine and zinc. The patient previously took codeine and experienced allergy. The patient experienced severe ear and eye pain on 21Dec2020 at 18:30. It was also reported that the patient did not receive any vaccines within 4 weeks prior to BNT162B2. The patient was not diagnosed with COVID-19 prior to vaccination. The patient has not been tested for COVID-19 since vaccination. Treatment included ibuprofen and rest. The outcome of the events was recovering. Information on the Batch/Lot number has been requested.

was up and down all night; Nausea; so out of breath/was having some shortness of breath; feeling bad; low grade fever, with the highest temperature being 99.8 degrees; Abdominal cramping; pooped in her pants/did another poo right after/a little more diarrhea; This is a spontaneous report from two contactable nurses (patient and daughter). A 65-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EH9899, expiry date unknown) intramuscular at right deltoid on 17Dec2020 (10:30) at single dose for COVID-19 immunization. The patient did not have any other vaccines on the same day as receiving the COVID vaccine. Medical history was none. The patient's concomitant medications were not reported. The patient on this past Thursday (17Dec2020), around 10:30 AM, the caller had her COVID vaccine. The patient informed that she lives 20 minutes (address), and on the way home after getting the vaccine that morning, the patient started having abdominal cramping (17Dec2020 17:15) like she needed to go to the bathroom. Due to construction and traffic, she was unable to stop to use the bathroom anywhere and by the time she got home, she had pooped in her pants and when she got inside the house and looked, it looked like a cow patty. The patient got the bathroom and did another poo right after that. The patient that night, she had a little more diarrhea, but then she was okay on Friday and went to work. The patient informed that on Saturday (19Dec2020), after lunch, she started feeling bad and was having diarrhea again, but it was sporadic. The patient informed that yesterday (21Dec2020) afternoon, she got diarrhea again. The patient informed that last night (20Dec2020) she was up and down all night, and also had associated nausea and a low grade fever, with the highest temperature being 99.8 degrees. The patient's daughter informed that the low grade fever started Saturday (19Dec2020) and was on Saturday and Sunday evenings, but daughter informed that the patient has not had fever this morning so far. The patient did not go to work today (21Dec2020). The patient informed that over the weekend (20Dec2020), she had gotten a ham into her daughter's (nurse too) refrigerator, and the daughter asked the patient why she was so out of breath. The patient informed that she was having some shortness of breath as well. The patient would say it was not ongoing but she also was still in bed at this time so she was unsure. The reporter informed that the patient was not specifically prescribed the vaccine, but was given the

product as part of a hospital policy. The patient did provide her Primary Care's name and phone number but did not have address or email address to provide at this time. The outcome of the events abdominal cramping was recovering, pooped in her pants/did another poo right after/a little more diarrhea and Nausea was not recovered, feeling bad, was up and down all night, so out of breath/was having some shortness of breath was unknown, low grade fever, with the highest temperature being 99.8 degrees was recovered on Dec2020.

sore throat before she got the shot, but it made it worse; sore throat before she got the shot, but it made it worse; Body aches; She couldn't swallow; This is a spontaneous report from a non-contactable consumer (patient's coworker). A female patient of an unspecified age received bnt162b2 (BNT162B2, lot no. and expiry date were not reported), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient medical history included sore throat. The patient's concomitant medications were not reported. The patient got the shot on Tuesday and on Thursday (unspecified date) she got sore throat and body aches. She gargled with salt water and drank tea and felt better the next day. It was clarified that the patient had the sore throat before she got the shot, but it made it worse. She said she couldn't swallow. The outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

she felt a little more local soreness than she did with the regular seasonal influenza shot; This is a spontaneous report from a non-contactable consumer (patient's husband). A female patient in her mid 30s received her first BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine), via an unspecified route of administration on 20Dec2020 at a single dose for COVID-19 immunization. The patient's medical history was not reported. The patient's concomitant medications were not reported. The patient noted that she felt a little more local soreness than she did with the regular seasonal influenza shot on an unknown date in Dec2020. The outcome of the event was unknown. No follow-up attempts are possible, information about lot/batch cannot be obtained. No further information is expected.

"hot flash; itchy throat; This is a spontaneous report from a non-contactable pharmacist. A female patient of an unspecified age received first dose of BNT162B2 (COVID-19 mRNA Vaccine BNT162B2), via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced a ""hot flash"" 5 minutes after COVID-19 vaccination and then ""itchy throat"" 30 minutes after vaccination on an unspecified date. They would liked to know if patient should receive the second dose. She is otherwise fine with all symptoms resolved and never had respiratory distress of any kind. The outcome of the events was recovered on an unknown date. No follow-up attempts are possible; information about lot/batch number cannot be obtained."

she felt dizzy; This is a spontaneous report from a contactable Nurse (patient). A 50-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), on unknown date via unknown route of administration at unknown dose for unknown indication. Medical history and concomitant medications were not reported. Patient received the COVID vaccine. Later in the day she felt dizzy. The outcome of the event was unknown. Information on the lot/batch number has been requested.

"Pain in upper two shoulders and neck/upper body joint pain, both sides; Generalized weakness; Pain in upper two shoulders and neck; This is a spontaneous report from a contactable physician reporting for herself. This 63-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot/batch number not provided) on the morning of 20Dec2020, intramuscularly in the left arm at a single dose, for COVID-19 immunization. The patient's medical history included arthritis, esophagitis and esophageal ulcer, from unspecified date and unspecified if ongoing. The patient's concomitant medications were not reported. On 20Dec2020, the patient (physician) called to report two side effects: pain in upper two shoulders and neck, generalized weakness. She developed an upper body joint pain, both sides. She got the injection on the left but both her shoulders had joint pain and weakness. She did not receive treatment for the events. She had the COVID test on 19Dec2020 or 18Dec2020 (reported as ""yesterday"" and ""2 days ago"") but the results were not back as of 20Dec2020. The outcome of the events was unknown. The reporter assessed the events as related to the vaccine. Information on the lot/batch number has been requested."

Facial swelling; Low grade fever around a 100; Got my eye supposedly my eye lids like little swelling and they looks like they are bruised and they itch like crazy; Got my eye supposedly my eye lids like little swelling and they looks like they are bruised and they itch like crazy; I have swelling in both of my eyes; It is getting pretty bad actually, it has got worse; This is a spontaneous report from a contactable nurse (reporting for herself). A 41-year-old female patient received bnt162b2 (BNT162B2 also reported as Covid vaccine by Pfizer, lot EJ1685), via an unspecified route of administration on 17Dec2020 at single dose for immunisation. Medical history included depression and anxiety. The patient's concomitant medications were not reported. The patient got the COVID vaccine on Thursday of last week (17Dec2020) and had low grade fever around a 100. On Friday (18Dec2020) she started getting little bit of facial swelling not a whole bunch. After the weekend, her eye lids had little swelling and they look like they were bruised and they itch like crazy. She does not have any drainage like conjunctivitis or anything like that but it looks like she have swelling in both of my eyes and that doesn't happens to her. She does not have any but was probably going in today because it was getting pretty bad actually, it has got worse. The outcome of events was not recovered.

Headache- lasted 12 hours; 24hrs after injection Tachycardia at rest (hr 106); chest pain; flushing/feeling very warm; flushing/feeling very warm; elevated BP 136/96; This is a spontaneous report from a contactable Nurse reporting for himself. A 52-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), intramuscular on 17Dec2020 10:45 AM at single dose for covid-19 immunization. Vaccine location was Right arm and it was the first dose. The COVID-19 vaccine was administered at Hospital. Medical history included mild coronary artery disease (CAD), Migraine, Psoriasis, and allergy to Sulfa Medications. Concomitant medication included atorvastatin (LIPITOR), finasteride, cetirizine hydrochloride (ZYRTEC]), aspirin, melatonin, biotin, zinc, ergocalciferol (VIT D), ascorbic acid (VIT C), ubidecarenone (COQ10), fremanezumab (AJOVY), and adalimumab (HUMIRA). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced headache- lasted 12 hours, 24hrs after injection tachycardia at rest (heart rate (HR) 106), chest pain, flushing/feeling very warm, elevated blood pressure (BP) 136/96 on 18Dec2020 10:30. Symptoms lasted for about 2 hours. No treatment received for the events. Prior to vaccination,

the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of the event headache was recovered on 18Dec2020 22:30 (lasted 12 hours), the outcome of the other events tachycardia at rest (heart rate (HR) 106), chest pain, flushing/feeling very warm, elevated blood pressure (BP) 136/96 was recovered on 18Dec2020 (lasted about 2 hours).

Severe rigors and fevers; Severe rigors and fevers; other vaccine same date product; other vaccine same date product; This is a spontaneous report from a contactable physician (patient). An adult male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in arm left on 21Dec2020 08:00 at single dose for COVID-19 immunisation. Facility where the most recent COVID-19 vaccine was administered was hospital. Medical history included covid (if Covid prior vaccination: Yes/Prior to vaccination, was the patient diagnosed with COVID-19?: Yes). No allergies to medications, food, or other products. Concomitant medications the patient received within 2 weeks of vaccination included gabapentin (NEURONTIN), ibuprofen (MOTRIN), other vaccine same date product=Pfizer, other vaccine same date vaccine location was left arm. The patient experienced severe rigors and fevers on 22Dec2020 02:00. The patient not received any other vaccines within 4 weeks prior to the COVID vaccine. Since the vaccination, the patient has not been tested for COVID-19. Therapeutic measures were taken as a result of severe rigors and fevers (Tylenol). This case was non-serious. The outcome of events severe rigors and fevers was not recovered. The outcome of other events was unknown. Information on the lot/batch number has been requested.

I had severe body rigors/Chills; I threw up; I had a 101.8 fever; I was pretty much out all day yesterday, like I was out sleeping with a fever; pretty much out; This is a spontaneous report from a contactable Nurse. A 59-year-old female patient started to receive first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number: EJ1685, Expiry Date: 31Mar2021) intramuscular on 19Dec2020 at 0.3 mL, single for covid-19 immunization from her work. Patient history was reported as no. The patient didn't have really anything. Concomitant medication included paracetamol (TYLENOL), the patient had been taking some Tylenol. The patient had a vaccination Saturday morning on 19Dec2020 and had a very bad reaction during the night. The patient had severe body rigors and chills. She threw up. She had a 101.8 fever. She was pretty much out all day yesterday, like was out sleeping with a fever. Investigation assessment was no. The patient just would like to know if she can get the second injection. Outcome of the events was unknown. The events were considered as related by the reporter via global introspection (Method of assessment).

anaphylactic reaction; This is a spontaneous report from a contactable physician via a sales representative. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiration date not provided), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced an anaphylactic reaction 8 hours after receiving the Covid-19 vaccine. The outcome of the event was unknown. Information about Batch/Lot number has been requested.; Sender's Comments: Based on the compatible temporal association and the drug's known safety profile, the Company considers the anaphylactic reaction is possibly related to BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE)

vaccination. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"Runny nose; Headache; Joint pain I guess kind of, small moderate pain; Really bad sore throat; This is a spontaneous report from a contactable consumer (patient). A 31-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EKS730), intramuscular on 17Dec2020 at single dose for COVID-19 immunization at hospital. The patient's medical history included seasonal allergy (Seasonal allergies he guess, that's it). Concomitant medications were not reported. The patient previously took cetirizine hydrochloride (ZYRTEC) from an unspecified date to Sep2020, not currently, he had not been taken it since summer but he had not currently taken it, he have stopped taking it, three months before the vaccine. The patient was a paramedic (further not clarified) and received the vaccination at a hospital, not a pharmacy. Patient guessed that they vaccinated there whole front line staff. The patient got the vaccine on Thursday (17Dec2020), Pfizer vaccine, Covid 19 vaccine and he was just having side effects mostly sore throat, he was having a really bad sore throat and he was expecting. He knew they said fever, chills, headache, joint pain was normal and things like that they are normal. But he just wasn't sure of this sore throat part of it and was also wondering if he was able to take like, anything to help with the symptoms. He also had other symptoms, on 20Dec2020 (started yesterday by the time of reporting), he experienced runny nose, headache, ""joint pain he guessed kind of, small moderate pain"" and really bad sore throat. As a treatment to the events, he took DayQuil on 20Dec2020 and was not sure what that dosage was. The events were quite persisting, which started yesterday. The patient had general lab work of Cholesterol on date that he didn't remember and did not know the result of it. The outcome of the events was not recovered."

Pain at injection site; Tachycardia like 120 heart rate; Dizziness; Fatigue; Fever; Stressing; Threw up; This is a spontaneous report from a contactable Other healthcare professional (Nurse Practitioner, also the patient). A 32-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot number: EK5730), intramuscularly on 20Dec2020 at single dose on right deltoid for COVID-19 immunization. Medical history reported as none. There were no concomitant medications. The patient experienced tachycardia, dizziness, fatigue, fever, stressing, threw up on an unspecified date in Dec2020, and pain at injection site on 20Dec2020. The patient received Covid vaccine yesterday on 20Dec2020 and he woke up and he threw up twice and he have fever 102 and tachycardia like 120 heart rate and some dizziness and he took some Tylenol (taken as treatment) and just drinking water. Feeling a little better right now. Tylenol was taken this morning as a treatment for fever of 102. For Causality, consumer stated, he believed so, because like he hasn't been around, he obviously worked around people who were sick, but he was fully gown and fully PPE. He was fine until this morning. Last night the only symptom he was having was pain at injection site which was expected. Of course, he can expect a low grade fever or maybe just some fatigue, he thought he was just stressing, he had fever went to 102 and he developed tachycardia and dizziness which was getting better after medicine and drinking fluid.

Therapeutic measures were taken as a result of tachycardia, dizziness, fever. The outcome of the events tachycardia, dizziness, fever was recovering, the outcome of the other events was unknown.

Left arm soreness, myalagias and low grade temp 100.5 the morning after the dose.; Left arm soreness, myalagias and low grade temp 100.5 the morning after the dose.; Left arm soreness, myalagias and low grade temp 100.5 the morning after the dose.; This is a spontaneous report from a contactable physician (patient). A 44-year-old female patient received the first single dose of BNT162B2 (Lot number: EH9899, exp date not reported), intramuscular (Anatomical Location: Arm Left) on 21Dec2020 13:45 for immunization. The COVID-19 vaccine was administered at the hospital. The patient was diagnosed with COVID-19 prior to vaccination. The patient had no known drug allergies (NKDA). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. There were no other medications the patient received within 2 weeks of vaccination. The patient experienced left arm soreness, myalagias and low grade temp 100.5 the morning after the doses (22Dec2020, 04:30 AM). Treatment received for the adverse events included paracetamol (TYLENOL) and naproxen (ALLEVE). The event was considered as non-serious by the reporter. Since the vaccination, the patient had not been tested for COVID-19. The outcome of the events was not recovered.

""""sweaty feeling""; Developed headache; flushing after injection; redness; This is a spontaneous report from a contactable nurse. A 24-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number=EJ1685), intramuscularly on left arm at 12:00 PM on 21Dec2020 at single dose for COVID-19 immunization. Medical history included exercise-induced asthma. The patient's concomitant medications were not reported. The patient experienced headache, redness and flushing after injection, also reported ""sweaty feeling"" at 12:15 PM on 21Dec2020. Ae resulted in: Emergency room/department or urgent care. All events were reported as non-serious. The outcome of events was unknown."

Soreness at injection site; Soreness at injection site The night of vaccine being given, noted fever, chills, malaise, and fatigue. Resolved next morning.; Soreness at injection site The night of vaccine being given, noted fever, chills, malaise, and fatigue. Resolved next morning.; Soreness at injection site The night of vaccine being given, noted fever, chills, malaise, and fatigue. Resolved next morning.; Soreness at injection site The night of vaccine being given, noted fever, chills, malaise, and fatigue. Resolved next morning.; This is a spontaneous report from a non-contactable Physician. A 25-years-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number:9899), intramuscularly on 21Dec2020 12:00 PM at left arm, single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced fever, chills, malaise, and fatigue from 21Dec2020 16:00. Resolved next morning on 22Dec2020. No treatment was received for the adverse event. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No seriousness criteria: no Results in death, no Life threatening, no Caused/prolonged hospitalization, no Disabling/Incapacitating, no Congenital anomaly/birth defect. No follow-up attempts are possible. No further information is expected.

Moderate left arm pain, radiating into upper back; Moderate left arm pain; This is a spontaneous report from a non-contactable nurse (patient). A 36-year-old male patient received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), via an unspecified route of administration at left arm on 21Dec2020 10:45 at single dose for covid-19 immunization at hospital. Medical history included allergy to penicillin (PCN). Concomitant medication included fish oil, cetirizine hydrochloride (ZYRTEC), fluticasone propionate within 2 weeks of vaccination. The patient experienced moderate left arm pain, radiating into upper back on day 2 (22Dec2020), the adverse event start time was 21Dec2020 08:00 PM. No treatment received for the adverse event. No COVID prior vaccination, no COVID tested post vaccination. The event outcome was not recovered. The was not reported as a serious report. No follow-up attempts are possible. No further information is expected.

Mild soreness left arm at injection site for 1 day, no redness or swelling; This is a spontaneous report from a contactable other healthcare professional (patient). A 56-year-old male patient received the first dose of bnt162b2 (Pfizer Biontech COVID 19 vaccine), Lot number: EH9899, intramuscular in the left arm on 18Dec2020 14:15 at a single dose for COVID-19 immunization. Medical history included Psoriatic Arthritis, HTN, HLD and known allergies: Sulfa. Concomitant medication included losartan and gabapentin. On 18Dec2020 14:15, the patient experienced mild soreness left arm at injection site for 1 day, no redness or swelling. The patient was not hospitalized for the event and did not receive any treatment for the event. The event was reported as non-serious. The vaccine was administered in a hospital. The patient has not received any other vaccines within 4 weeks prior to the COVID vaccine. Since the vaccination, the patient has not been tested for COVID-19. The event recovered on an unspecified date in Dec2020.

Headache; Soreness; Exhaustion; This is a spontaneous report from a contactable healthcare professional. A 45-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration at the right arm on 21Dec2020 08:15 at a single dose for COVID-19 immunization at a hospital. Medical history included breast cancer, blood pressure abnormal, blood cholesterol abnormal. Concomitant medication included hydrochlorothiazide (HCTZ) and unspecified medications for blood pressure, cholesterol. The patient experienced headache, soreness, and exhaustion on 21Dec2020, 10:15. with no treatment The patient was recovering from the events.

started getting severe abdominal cramping; This lead to diarrhea, nausea with vomiting; This lead to diarrhea, nausea with vomiting; This lead to diarrhea, nausea with vomiting; Afterwards, was feeling tired, but ok.; This is a spontaneous report from a contactable Pharmacist reported for herself. A 51-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), intramuscular on 21Dec2020 15:45 at single dose for covid-19 immunization. Vaccine location was Arm Right and it was the first dose. The COVID-19 vaccine was administered at Hospital. Medical history included Hypertension, asthma, obesity and Seasonal allergies - mold/dust etc.. Concomitant medications included losartan, indapamide, omeprazole, montelukast. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. About 9pm on 21Dec2020, the patient started getting severe abdominal cramping. This lead to diarrhea, nausea with vomiting. This lasted about 60-90 minutes of not being able to leave the restroom. Afterwards, she was feeling tired, but ok. No lingering

effects this morning (22Dec2020). No treatment was received for the adverse events. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of the events was recovered on 22Dec2020.

Fever, nausea/covid test result= Positive; Fever, nausea/covid test result= Positive; This is a spontaneous report from a contactable nurse (patient). A 24-year-old female (no pregnant) patient received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date were not provided), via an unspecified route of administration in arm Left on 17Dec2020 02:30 at single dose for COVID-19 immunisation. Facility where the most recent COVID-19 vaccine was administered was hospital. The patient's medical history and concomitant medications were not reported. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient experienced fever, nausea on 20Dec2020 12:00. Since the vaccination, has the patient been tested for COVID-19. The patient underwent lab tests and procedures which included PCR: positive on 21Dec2020, POCT: positive on 21Dec2020, Nasal Swab: positive on 21Dec2020. (reported as '[{covid test type post vaccination= Nasal Swab, covid test name post vaccination= PCR, covid test date= 21Dec2020, covid test result= Positive}, {covid test date= 21Dec2020, covid test type post vaccination= Nasal Swab, covid test name post vaccination= POCT, covid test result= Positive}]'). No treatment received for the adverse event. The patient not received any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of events was not recovered. Information on the Batch/Lot number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded.

Fever 99.9f, arm soreness, malaise; Fever 99.9f, arm soreness, malaise; Fever 99.9f, arm soreness, malaise; This is a spontaneous report from a contactable nurse (patient). A 32-year-old female patient (not pregnant) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), Intramuscularly on 21Dec2020 11:45 AM in left arm at single dose for COVID-19 immunization. The COVID-19 vaccine was administered at hospital. Medical history included COVID prior vaccination. Concomitant medication in two weeks included minerals nos, vitamins nos (PRENATAL VITAMINS), probiotics, levothyroxine. It was unknown if the patient received any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient experienced fever 99.9f, arm soreness, malaise on 22Dec2020 04:00 AM. The patient received paracetamol (TYLENOL) as treatment. The outcome of events was unknown.

Arm soreness for 48 hour; Fatigue; muscle aches; chills; This is a spontaneous report from a contactable physician (patient). A 62-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number:20201216-830), via an unspecified route of administration on 16Dec2020 15:00 at arm left at single dose for covid-19 immunization. The COVID-19 vaccine was administered at Hospital. No other vaccine in four weeks. Medical history included hypothyroidism and hyperlipidaemia. The patient had no known allergies. Concomitant medication included levothyroxine, atorvastatin, ergocalciferol (Vitamin D) for an unspecified indication. The patient experienced arm soreness for 48 hour then fatigue, muscle aches and chills on 3rd and 4th days after vaccination on 19Dec2020 at 08:00 AM. No treatment was received for the event. Prior to vaccination, the patient was

not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. Outcome of the event was recovered.

muscle aches; Chills; This is a spontaneous report from a contactable other health professional (reported for himself). A 56-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number not provided) (Pfizer EH 9899), intramuscularly on 21Dec2020 10:30 at single dose on right arm for COVID-19 immunization. Medical history included hypertension (HTN) and No known drug allergies (NKDA). The patient's concomitant medications were not reported. The most recent COVID-19 vaccine was administered at Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced chills and muscle aches on 22Dec2020 02:30. The events were non-serious and no treatment received per the reporter. The outcome of the events was recovered on 22Dec2020. Information on the Batch/Lot number has been requested.

Arm pain; This is a spontaneous report from a contactable other health care professional. A 38-year-old female patient received bnt162b2 (BNT162B2; lot number: EJ1685), via an unspecified route of administration on 22Dec2020 09:15 in left arm for COVID-19 immunization. Medical history included allergic rhinitis. Concomitant medication included oseltamivir phosphate (TAMIFLU), meloxicam (MOBIC). The patient previously took dexilant and experienced drug hypersensitivity. No COVID prior vaccination. The patient has not been tested for COVID-19 post vaccination. On 22Dec2020 09:30, the patient experienced arm pain. The event was assessed as non-serious. The outcome of the event was recovering.

Neck also sore muscles; Neck also sore muscles; nausea; very bad HA, almost migraine; This is a spontaneous report from a contactable nurse (patient). A 45-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number=EL0140), intramuscularly on left arm at 05:30 AM on 21Dec2020 at single dose for COVID-19 immunization. Medical history reported as none. There were no concomitant medications (No other-vaccine-in-four weeks, no other-medications-in-two weeks). 21 hours post injection (02:45 AM) on 22Dec2020, the patient experienced very bad HA (headache), almost migraine. Then added nausea. HA was bad for 3 hours, then slowly better. Neck also sore muscles. All events were reported as non-serious. Excedrine and advil taken intermittently. Slept/rested in dark for 8 hours. Prior to vaccination, it was unknown if the patient was diagnosed with COVID-19. Since the vaccination, the patient had been tested for COVID-19. The outcome of events was recovering.

PVCs developed about 20 mins after administration of vaccine; This is a spontaneous report from a contactable Pharmacist. A 35-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/ lot number: EL0140), intramuscularly on 21Dec2020 13:45 at right arm, at SINGLE DOSE for covid-19 immunization. Medical history included ongoing chronic back pain. Concomitant medication included escitalopram oxalate (LEXAPRO), amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL). The patient was not pregnant at the time of vaccination. The patient experienced PVCs about 20 mins after administration of vaccine. Placed on Zoll cardiac monitor on 21Dec2020. Vitals to include BP, heart rate, respiratory, pulse ox

several times during additional monitoring period. No respiratory distress or other issues during this monitoring period. No treatment was received for the adverse event. It was unknown if the patient was diagnosed with COVID-19 prior to vaccination. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of the event was recovered in Dec2020.No seriousness criteria: no Results in death, no Life threatening, no Caused/prolonged hospitalization, no Disabling/Incapacitating, no Congenital anomaly/birth defect.

feeling hot and diaphoretic; diaphoretic/ sweaty; massive headache; sleep 13 hours; swollen face; joint pain; chills; start wheezing with a dry cough; start wheezing with a dry cough; 101.8 fever/ mild fever 99.6; swelling in my lymph nodes happened immediately/ swelling; some chest tightness; hard to breathe it was like breathing through a straw; Unable to go to work; uncomfortable; Never shown allergic reaction to vaccines before this; This is a spontaneous report from a contactable other Health Professional (Patient). A 26-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 08:00 at single dose for covid-19 immunization in hospital. Medical history included polycystic ovary syndrome (PCOS) and possibly rheumatoid arthritis. No Known Drug Allergies. Concomitant medications in two weeks included birth control and iron supplements. The patient got the vaccine at 8:00 am on 17Dec2020 Thursday and experienced swelling in her lymph nodes happened immediately and some chest tightness. It was never hard to breathe it was like breathing through a straw. At 10:00 am hits and she got joint pain, chills, start wheezing with a dry cough and a 101.8 fever. Unable to go to work. She sleep and wake up 18Dec2020 Friday with a mild fever 99.6 and some chest tightness/swollen Lymphnodes but nothing else. On 19Dec2020 Saturday she took antihistamines to see if that would help her swelling and go to bed. The patient wake up with a swollen face which was a new reaction to this medicine I've taken before. Chest tightness was gone/ lympnodes still swollen. On 20Dec2020 Sunday she sleep 13 hours. On 21Dec2020 Monday happened and she awake to feeling hot and diaphoretic. She drank water and remove clothes/blankets go back to sleep. Wake up still sweaty with a massive headache but no fever. Lymphnodes still swollen and uncomfortable currently. Never shown allergic reaction to vaccines before this. No COVID prior vaccination, no COVID tested post vaccination. Therapeutic measures were taken as a result of swelling in lymph nodes and included antihistamines, no treatment received for the other adverse event. The outcome of the event fever was recovered in Dec2020; of the event sweaty was not recovered; of unable to work, swollen face, headache, sleep 13 hours, uncomfortable, shown allergic reaction was unknown; of the other events was recovered/resolved with sequel. The seriousness was reported as no. The information on the batch number has been requested.

Pink eye,eye drainage; Pink eye,eye drainage; Chills; Muscle Aches; This is a spontaneous report from a contactable nurse reported for herself. A 50-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: Ek5230), intramuscular on 17Dec2020 16:00 at single dose for covid-19 immunization. Vaccine location was at Right arm and it was the first dose number. The COVID-19 vaccine was administered at Workplace clinic. The patient's medical history was not reported. Concomitant medications included fluoxetine hydrochloride (PROZAC), atorvastatin, buspirone hydrochloride (BUSPAR). The patient did not receive any other vaccines within 4 weeks prior to the

COVID vaccine. Patient's known allergies included Erythromycin. The patient experienced Chills, Muscle Aches, pink eye, eye drainage on 21Dec2020 19:00. Adverse event result in Doctor or other healthcare professional office/clinic visit. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of the events was unknown.

I experienced slight heaviness and then a tingling parasthesia in the feet that traveled up to my knees. I stayed for one hour, it began to feel like a cold sensation. I was able to walk and did not f; I experienced slight heaviness and then a tingling parasthesia in the feet that traveled up to my knees. I stayed for one hour, it began to feel like a cold sensation. I was able to walk and did not f; I experienced slight heaviness and then a tingling parasthesia in the feet that traveled up to my knees. I stayed for one hour, it began to feel like a cold sensation. I was able to walk and did not f; anxiety; This is a spontaneous report from a contactable nurse (patient). A 32-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EK5730), intramuscularly on 15Dec2020 07:45 at single dose for covid-19 immunization. Vaccine location was left arm and it was the first dose. None medical history. No known allergies. Patient was not diagnosed with COVID-19 prior to vaccination nor tested for COVID-19 since the vaccination. There were no concomitant medications. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine nor received any other medications within 2 weeks of vaccination. At 22Dec2020 07:45 am, the patient experienced slight heaviness and then a tingling parasthesia in the feet that traveled up to her knees. She stayed for one hour, it began to feel like a cold sensation. She was able to walk and did not feel dizzy and left work. The patient reported them to the MD who said it could be a coincidence and anxiety. Patient didn't receive any treatment for the adverse events. The action taken in response to the events for BNT162B2 was not applicable. The outcome of events was unknown. The events were non-serious.

had a sudden lightheadedness/a bit lightheaded; slurred speech; extreme sleepiness; feeling like was under anesthesia and unable to move the legs; unable to move the legs; Blood pressure dropped to 80/60mmHg and pulse was at 50; Blood pressure dropped to 80/60mmHg and pulse was at 50; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received a dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization in their facility. The patient's medical history and concomitant medications were not reported. It was reported that patient (doctor) in their facility received the vaccine and had a sudden lightheadedness, slurred speech and extreme sleepiness. Feeling like was under anesthesia and unable to move the legs. Blood pressure dropped to 80/60 mmHg and pulse was at 50. The episode lasted 2h and then became alert but a bit lightheaded and was normal next day. The outcome of the events was recovered. Information on the lot/batch number has been requested.

migraine; Vomiting; low grade fever and headache; headache; chills; light sensitivity; This is a spontaneous report from a contactable Nurse (patient). A 54-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration on 18Dec2020 around 07:45 at single dose for COVID-19 immunization. Anatomical location of administration provided as left upper arm; deltoid. Medical history included migraines

(Hasn't had one in a while). There were no concomitant medications. There were no prior vaccinations within 4 weeks. The patient previously took FLU VACCINE and had a low grade fever. The patient experienced low grade fever and chills on 19Dec2020, Headache with Light sensitivity: Woke up in the night with the headache after going to bed on Saturday, 19Dec2020. The patient has been vomiting off and on since Sunday, 20Dec2020. Caller stated she got the vaccine on Friday the 18Dec2020 and now has a low grade fever and headache and asked if she can take Tylenol or Ibuprofen for her symptoms. She also asked if she is allowed to take these before her next dose. Caller asked since she was experiencing symptoms with first dose is it likely she will experience them for second dose or it would be worse. Specifically, it was reported that late Saturday, the patient started running a fever and chills between 4PM and 5PM on 19Dec2020. She knew it was a potential side effect and minor. Got a headache since then and with light sensitivity. She wasn't sure what she could do to break it. Turned into a migraine on an unspecified date and has had vomiting. Vomiting occurs with her migraines, but hasn't had a migraine in a long time. The patient wasn't sure if she could take Ibuprofen or Tylenol with the vaccine. The light fever and chills is listed on the potential side effects she received. She can't focus with the headache she has. Called in to work. The patient knew COVID Vaccine could cause headaches. Think the headache started and ballooned into a migraine. Has been vomiting off and on since Sunday, 20Dec2020. Thinks the vomiting is from the headache and not the vaccine. Not due for next dose of COVID Vaccine until 08Jan2021. Wants to know if she is likely to experience the same symptoms with the second dose. Or if the symptoms will worsen. The outcome of the events was unknown. The seriousness provided as between not serious and medically significant. The causality assessment for events fever and chills, headache with light sensitivity with suspect vaccine provided as Related by Primary Source Reporter via Method of assessment Global Introspection.

Joint pain and swelling 3 days after the first dose. Affected joints: right elbow, right wrist and right third interdigital joint; Joint pain and swelling 3 days after the first dose. Affected joints: right elbow, right wrist and right third interdigital joint; This is a spontaneous report from a contactable consumer (patient). A 60-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number=EK5730), via an unspecified route of administration on left arm on 17Dec2020 at single dose for COVID-19 immunization. Medical history included wasp venom with anaphylaxis. There were no concomitant medications (No other-vaccine-in-four weeks, no other-medications-in-two weeks). The patient previously Stage 4 breast cancer in remission on Xeloda. The patient experienced joint pain and swelling 3 days after the first dose. Affected joints: right elbow, right wrist and right third interdigital joint on 20Dec2020. All events were reported as non-serious. The patient did not receive treatment for the adverse events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The outcome of events was not recovered.

dizziness/lightheadedness; severe nausea; rash/hives on chest and back and forearms; rash/hives on chest and back and forearms; severe chills/shivering; This is a spontaneous report from a contactable nurse (patient). A 28-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly on 18Dec2020 11:30 AM at Left arm, at SINGLE DOSE for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The

patient was not pregnant at the time of vaccination. The patient experienced dizziness, lightheadedness, severe nausea, rash/hives on chest and back and forearms, severe chills/shivering on 18Dec2020 11:45 AM. The patient received treatment fluids, pepcid, Benadryl for these events. There events resulted in: Emergency room. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of the events was recovered in Dec2020. No seriousness criteria: no Results in death, no Life threatening, no Caused/prolonged hospitalization, no Disabling/Incapacitating, no Congenital anomaly/birth defect. Information on the lot/batch number has been requested.

maculo-papular rash on neck and trunk with itchy skin; maculo-papular rash on neck and trunk with itchy skin; This is a spontaneous report from a contactable physician reported for herself. A 52-years-old female patient received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), via an unspecified route of administration at left arm on 18Dec2020 20:00 at single dose for covid-19 immunzation at workplace clinic. Medical history included seasonal and dust allergies, allergies to medications doxycycline and erythromycin. Concomitant medication included acetaminophen and ibuprofen. The patient experienced maculo-papular rash on neck and trunk with itchy skin on 19Dec2020 10:00 with outcome of recovered in Dec2020. No treatment received for the adverse events. No COVID prior vaccination, no COVID tested post vaccination. The was seriousness was reported as no.

reports getting the vaccine on Friday and then tested positive for for covid infection on the following Monday; reports getting the vaccine on Friday and then tested positive for for covid infection on the following Monday; This is a spontaneous report from a contactable other healthcare professional (HCP) reported for herself. A 60-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 (Friday) at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient got the vaccine on Friday (18Dec2020) and then tested positive for covid infection on the following Monday (21Dec2020). She asked if this would interfere with getting the second dose and if she should or could get the second dose of the covid vaccine after testing positive for covid infection. The outcome of the events was unknown. Information about lot/batch number has been requested.; Sender's Comments: Based on the current available information and the consistency with the known safety profile of the suspect product BNT162B2, a possible contributory role of the suspect product to the development of Drug ineffective and COVID-19 cannot be excluded. The case will be reassessed if additional information becomes available.

Patient felt lethargic and lightheaded (starting 18Dec, more significant 19Dec-20Dec) post-vaccine administration; Patient felt lethargic and lightheaded (starting 18Dec, more significant 19Dec-20Dec) post-vaccine administration; This is a spontaneous report from a non-contactable pharmacist. A 52-year-old male patient received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730), intramuscular on 17Dec2020 14:30 at single dose for COVID-19 immunisation. Facility where the most recent COVID-19 vaccine was administered was hospital. The patient medical history was not reported. Concomitant medications the patient received within 2 weeks of vaccination included budesonide (PULMICORT), cetirizine hydrochloride (ZYRTEC). The patient experienced 'Patient felt

lethargic and lightheaded (starting 18Dec, more significant 19Dec-20Dec) post-vaccine administration' on 18Dec2020. It was unknown if the patient received any other vaccines within 4 weeks prior to the COVID vaccine. It was reported unknown whether treatment received for the adverse event. The case was non-serious. The outcome of the events was reported as unknown. No follow-up attempts are possible. No further information is expected.

Dry mouth and throat; Dry mouth and throat; This is a spontaneous report from a contactable nurse (patient). A 24-year-old female patient (not pregnant) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EJ1685), via an unspecified route of administration on 22Dec2020 08:15 in left arm at single dose for COVID-19 immunization. The patient medical history was not reported. Concomitant medication in two weeks included venlafaxine, famotidine. There was no other vaccine in four weeks. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Facility type vaccine was hospital. The patient experienced dry mouth and throat on 22Dec2020 at time of 08:30 AM. No treatment received for the adverse event. The outcome of event was recovering. No follow-up attempts are possible. No further information is expected.

itching skin; injection site immediately red and hot; injection site immediately red and hot; could not locate hives or welts; This is a spontaneous report from a contactable pharmacist. A 36-year-old female patient (pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), intramuscularly on 21Dec2020 13:15 at single dose on left arm for COVID-19 immunization. Medical history included anaphylactic reaction to food, Anaphylaxis to sesame and lidocaine, had never had anaphylactic reaction to vaccines in past. The patient's concomitant medications were not reported. The most recent COVID-19 vaccine was administered at Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 21Dec2020 13:15 (01:15 PM), the patient experienced itching skin, could not locate hives or welts, injection site immediately red and hot, no wheezing observed, no tachycardia observed. Treatment included observed for an hour, ice pack on injection site x2, 50mg diphenhydramine hydrochloride (BENADRYL), 1 10mg cetirizine hydrochloride (ZYRTEC), 20mg famotidine (PEPCID). Advised to pre-medication prior to booster dose and alert vaccinator of this reaction to be prepared. The events were non-serious. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient hadn't been tested for COVID-19. The outcome of the events was recovered in Dec2020.

"congestion; throat hurts, she has a sore throat; a sore arm where it was administered. It is not swollen or red but hurts to the touch; diarrhea and has gotten a little worse since starting/having to get up and go to the bathroom often; uncomfortable; This is a spontaneous report from a contactable consumer (patient). A 25-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number unknown because the patient was sent a picture of the paper provided for vaccine administration but it did not include any product details), via an unspecified route of administration at arm on 21Dec2020 at single dose for COVID-19 immunization at hospital. The patient's medical history included seasonal allergy, she had no allergies other than season allergies. She had no reactions to any vaccines previously. Prior Vaccinations within 4 weeks was reported as none, and no events following prior vaccinations. Concomitant medications included unspecified medication for birth control daily and

has been on this for a couple months. No additional vaccines administered on same date of the Pfizer suspect. The patient is a medical assistant, an employee at a hospital. She received the vaccine at work yesterday (21Dec2020) around 10 or 10:30 and she was having side effects. She had contacted her employer but wanted to know if it is ok to go to work or should she stay home and treat the symptoms. Afterward she experienced diarrhea which started last night and has gotten a little worse since starting. She also has congestion and her throat hurts, she has a sore throat, that started this morning, on 22Dec2020. There had been no treatment for above symptoms. After getting the shot she had a sore arm where it was administered. It is not swollen or red but hurts to the touch. This started 30 minutes after administration and she had to take pain medication. It was worse on 22Dec2020 (today). She did not require a visit to the doctor at the point when reporting, it was just uncomfortable having to get up and go to the bathroom often. No emergency room or physician visit due to the event. No relevant tests. The outcome of the event ""uncomfortable"" was unknown, and for the rest of events was not recovered. Information on the lot/batch number has been requested."

Increased heart rate; Increased heart rate and blood pressure; Feeling hot; Cold fingers; This is a spontaneous report from a contactable nurse (patient). A 48-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number EH9899), intramuscular on the left arm on 22Dec2020 08:00 at SINGLE DOSE as COVID-19 immunization at the workplace clinic. The patient had no medical history and no allergies to medications, food, or other products. The patient previously had COVID-19 test on 24Aug2020 and showed negative. Concomitant medication included levothyroxine (LEVOTHYROXINE). On 22Dec2020 08:00, the patient experienced increased heart rate and blood pressure, feeling hot and cold. Since the vaccination, the patient had been tested for COVID-19 in Dec2020 with unknown results. The patient did not receive any treatments for the events. The patient was recovering from the events.

tingling in hands and feet; This is a spontaneous report from a non-contactable other healthcare professional. A 48-year-old female patient receives first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: HE9899), intramuscularly on 18Dec2020 12:45 at single dose for immunization. vaccine location provided as Right arm. Medical history included fibromyalgia, rheumatoid arthritis. The patient's concomitant medications were not reported. No history of vaccine or medication reaction previously. During her 15-minute waiting period after the injection, the patient began to experience tingling in hands and feet on 18Dec2020. She denied rash, hives, difficulty breathing, difficulty swallowing, wheezing, throat tightness, hoarseness, lightheadedness, dizziness and tongue swelling This provider was notified of patient reaction and she was then assessed in the emergency bay area. Review of Systems included: Constitutional: Negative for chills and fatigue. HENT: Negative for congestion, facial swelling, rhinorrhea, sinus pain, sneezing, sore throat and trouble swallowing. Respiratory: Negative for cough and shortness of breath. Musculoskeletal: Negative for back pain, myalgias and neck stiffness. Skin: Negative for rash. Neurological: Tingling in hands and feet bilaterally. The outcome of the event was unknown. All events reported as non-serious. No follow-up attempts are possible. No further information is expected.

"Feeling under the weather; Nausea; Headache; Muscle ache; This is a spontaneous report from a contactable other healthcare professional (HCP), who is also the patient. This 63-year-old female patient

received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number EL0140) via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunisation. Relevant medical history included hypertension (hypertensive for years and takes medication for that), muscle aches (she got muscle aches once in a while) and headaches (she got some headaches from wearing a mask). Concomitant medications included unspecified drugs for hypertension. On 21Dec2020, the patient experienced nausea; in Dec2020 she experienced headache and muscle ache and on 22Dec2020 she experienced feeling under the weather. The patient specified that she has had light symptoms of nausea, headache, and muscle ache. Nausea was the most prevalent symptom. She said she got some headaches from wearing a mask, and the headaches she has experienced since receiving the COVID-19 Vaccine could be related to her mask wearing, and not the vaccine. She said she was at the age where muscle aches are not uncommon, and she got muscle aches once in a while, so she was unsure if her muscle aches were from receiving the COVID-19 Vaccine. She further specified that the she had a little nausea, saying the nausea was not very noticeable. The nausea was a little heavier at the time of the report, and she had some toast and some things to help settle her stomach. She said she was feeling ""blah."" She clarified she was feeling under the weather, like she just wanted to get in bed and sleep. The patient reported that the symptoms she was experiencing could be stress, and she just wanted to get the rapid COVID test to make sure she doesn't have the virus. She would take the rapid test as a requirement for travel. Treatment: the patient took 2 Extra Strength Tylenol 500mg (Lot Number: SHA086, and Expiration Date: Jun2024). The patient had not recovered from nausea and feeling unwell; the outcome of the headache and muscle ache was unknown."

"Day after vaccine, developed itchiness; Then I began breaking out in hives throughout my body; Also suffered from bouts of nausea and have trouble keeping things down; This is a spontaneous report from a contactable other HCP (patient) . This 24-year-old female patient received,at hospital, the first dose of BNT162B2 (also reported as Pfizer-BioNTech COVID-19) intramuscular on arm left on 20Dec2020 (reported as at 02:30 PM) at a single dose for COVID-19 immunization.No Allergies to medications, food, or other products; No other Medical history Concomitant medication Omeprazole, Terbinafine. No Covid prior vaccination and no covid test vaccination provided . Day after vaccine, on 21Dec2020 at 12:00 PM, the patient developed itchiness. Then she reported ""I began breaking out in hives throughout my body. Also suffered from bouts of nausea and have trouble keeping things down"". The adverse events resulted in Doctor or other healthcare professional office/clinic visit. The patient was tretated with Steroid shot and was prescribed with medication for nausea.All events were reproted as non serious.The outcome of the events was recovering at the time of the report. Information about lot/batch number has been requested."

Bloody nose; Blood in urine (slight tinged); This is a spontaneous report from a contactable pharmacist. A 48-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EK5730, first dose via intramuscular in left arm on 17Dec2020 10:30 at single dose for COVID-19 immunisation. Medical history was reported as none. Concomitant medication included atorvastatin (LIPITOR) and estradiol (ESTROGEN). On 18Dec2020 07:00 AM, the patient experienced bloody nose and blood in urine this morning (slight tinge) and has not exhibited any other side effects at the time of this report. Noted in afternoon on 18Dec2020, the patient urinated and no blood present. It was unknown if

patient received treatment for the events. It was unknown if patient had COVID and tested COVID prior vaccination. The patient had no known allergies. The case was reported as non serious as it did not resulted in death, not life threatening, no prolonged hospitalization, not disabling/Incapacitating and no congenital anomaly/birth defect. The outcome of the events was unknown.

Headache fever 100.0 body aches fatigue nausea; Headache fever 100.0 body aches fatigue nausea; Headache fever 100.0 body aches fatigue nausea; Headache fever 100.0 body aches fatigue nausea; Headache fever 100.0 body aches fatigue nausea; This is a spontaneous report from a contactable nurse reported that a 46-year-old female patient received bnt162b2 (BNT162B2 also reported as Covid 19 vaccine), intramuscular in the right arm on 17Dec2020 12:00 at single dose for immunisation. It was in the hospital where the most recent COVID-19 vaccine was administered. Medical history included Hep B chronic carrier. She had no other vaccine/ medications in four weeks, no covid tested post vaccination, no known allergies. The patient's concomitant medications were not reported. The patient experienced headache, fever 100.0, body aches, fatigue and nausea on 20Dec2020. No treatment was given. The outcome of events was recovered on unknown date in Dec2020. Information on the Lot/Batch has been requested.

Feeling tiredness/unwell; Feeling tiredness/unwell; Arm pain/soreness at injection site (expected); Arm pain/soreness at injection site (expected); This is a spontaneous report from a contactable nurse, who is also the patient. A 31-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration in the left arm on 21Dec2020 at 10:30 at single dose for COVID-19 immunisation. Vaccination facility type was hospital. The patient had no relevant medical history. Concomitant medications were not reported. On 22Dec2020, the patient experienced feeling tiredness/unwell and arm pain/soreness at injection site (expected). The patient did not receive corrective treatments. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination she has not been tested for COVID-19. The outcome of the events was unknown. The information on the lot/batch number has been requested.

Headache; Nausea; Ear ache; Injection site pain that started 7 hours after injection and has continued to now; This is a spontaneous report from a contactable nurse (patient herself). A 26-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on right arm on 21Dec2020 at 10:45 AM at single dose for COVID-19 immunization. The patient medical history was not reported. Concomitant medication included vitamin D3 and progesterone, both listed as other medications the patient received within 2 weeks of vaccination. The patient experienced injection site pain that started 7 hours (onset on 22Dec2020 at 17:45 AM) after injection and has continued to now. Pain was lessening as time went on. Tylenol had helped. Headache, nausea and ear ache all started this morning on 22Dec2020 at 07:00 AM. Headache was continuous; nausea and ear ache were intermittent. The patient did not receive any treatment for these events. All events were reported as non-serious. The outcome of event vaccination site pain was recovering. The outcome of rest events was not recovered. Information on the lot/batch number has been requested.

dizziness; tachycardia; fatigue; This is a spontaneous report from a contactable other health professional (patient). A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19

VACCINE), via an unspecified route of administration on an unspecified date at SINGLE DOSE for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced reported dizziness, tachycardia, and fatigue after taking the COVID vaccine on an unspecified date. The patient's symptoms didn't seem severe. Information on the lot/batch number has been requested.

Redness of skin, especially on face; itching of head and arms; some swelling in feet; This is a spontaneous report from a contactable nurse (patient). A 58-year-old non-pregnant female patient received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot number: EH9899), intramuscular at arm left on 21Dec2020 at 12:30 at a single dose for COVID-19 immunization. The patient received COVID-19 vaccine in a hospital facility. The patient has allergies to medications, food, or other products. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The patient is receiving unspecified concomitant medications within 2 weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 21Dec2020 at 01:00 PM, the patient experienced redness of skin, especially on face, itching of head and arms, some swelling in feet. The patient received Benadryl 50 mg PO as treatment. The outcome of the events was recovering.

Nauseous; I got a really strong headache; Really intense headache right no/ headache was on her left side of her head; something weird going on with right eye/ very blurry for like 3 minutes/ really blurred up/ blurriness was the right corner of her right eye; This is a spontaneous report from a contactable consumer (patient). A 57-years-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. On Saturday 19Dec2020, the patient had something weird going on with her right eye. It was very blurry for like 3 minutes, she kind of let it go. But she got a headache afterwards on 19Dec2020. And it happened again at night, same night around 10 o' clock. Not on 20Dec2020, but 21Dec2020, she just got it really blurred up again and she got a really strong headache. But the headache was on her left side of her head whereas the blurriness was the right corner of her right eye. And she just came on very hard headache and she was just very nauseous on an unspecified date. The patient just was in a really intense, she didn't know why she was having such trouble. She just had a little trouble. The patient just wanted to know if this was something normal to get a bad headache like this. The headache outcome was not recovered, of the other evens was unknown. The information on the batch number has been requested.

body aches; fever; This is a spontaneous report from a contactable Other Healthcare Professional (HCP, an x-ray tech who is the patient). A male patient of unknown age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration, on 21Dec2020 (reported as ''yesterday'') at single dose for COVID-19 immunisation. Medical history included he had coronavirus in May2020, treated with plasma infusion, and still had detectable antibodies in his system based on lab test administered last month. Concomitant medications were unknown. On 21Dec2020, the patient received the vaccine and has had body aches and a fever. He wanted to know if this was expected after being vaccinated. The reporter asked if there are precautions in patients getting the vaccine who have had

coronavirus previously and been treated with plasma infusions. Outcome was unknown. Information on the Lot/Batch number has been requested.

general malaise; Ringing in both ears; headache; dizziness; nausea; This is a spontaneous report from a contactable Nurse (patient). This 62-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot # EH9899), intramuscular, on 18Dec2020 07:30 AM at single dose for COVID-19 immunisation. Vaccine location was left arm. The patient was vaccinated at hospital, age at vaccination was 62-years-old. No other vaccine was received in four weeks. Medical history included hyperlipidemia, Coronary artery disease (CAD), Barrett's Esophagus. Concomitant medications included unspecified medications the patient received within two weeks of vaccination. On 18Dec2002 at 02:00 PM, the patient experienced ringing in both ears, headache, dizziness, nausea, general malaise, started 5 hours after injection, it still continues 4 days post injection, all reported as non-serious. The adverse event resulted in Doctor or other healthcare professional office/clinic visit. No treatment was received for the events. Outcome of the events was not recovered.

Chills; Muscle aches and pain; joints hurt (her body aching); Muscle aches and pain; joints hurt (her body aching); Muscle aches and pain; joints hurt (her body aching); She has a headache; Sleeping the whole morning. She didn't get up; Doesn't want to eat; Fever; Temperature of 100.4; Doesn't feel good; Little soreness at injection site; This is a spontaneous report from a contactable nurse (patient). A 52-year-old female patient started to received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number not provided), via an unspecified route of administration on the right arm on 21Dec2020 15:00 at SINGLE DOSE as COVID-19 vaccination at the hospital. It was reported that the patient had COVID-19 in May2020 (until 2020). Then had COVID-19 test again in Jul2020 and still tested positive. The patient did have COVID-19 test last week (Dec2020) and it was negative. The patient also had the flu shot every year as immunization and never has a side effect. The patient was also on unspecified supplement. On 21Dec2020 at 15:00, the patient received COVID-19 vaccine. Around 20:00-21:00 (8-9 o'clock), she felt nothing and perfectly fine. Didn't feel anything until 23:00-24:00 (11-12 o'clock), she felt injection site hurting and started to have fever up to 100.4. She doesn't feel good. She was also was afraid to touch the injection site hard or rub it. On 22Dec2020 (that morning), she has chills, muscle aches and pains, and her joints were hurting (her body aching). The patient previously took erythromycin and experienced drug allergy. The patient experienced headache only on 22Dec2020 10:00. Clinical outcome of the event was recovering."

Fever 102, shakes, chills, headache and nausea; Fever 102, shakes, chills, headache and nausea; Fever 102, shakes, chills, headache and nausea; Fever 102, shakes, chills, headache and nausea; Fever 102, shakes, chills, headache and nausea; This is a spontaneous report from a contactable Nurse reporting for herself. A 55-years-old female patient received bnt162b2 (BNT162B2; Lot # EJ1685) vaccine , via an unspecified route of administration in the left arm on 18Dec2020 09:15 at single dose for covid-19 immunisation . Medical history included , coeliac disease from an unknown date and hypertension from an unknown date. Concomitant medication included progesterone (PROGESTERONE), nebivolol hydrochloride (BYSTOLIC), vitamin d3 (VITAMIN D3). The patient previously took codeine and experienced drug hypersensitivity. The patient experienced fever 102¦F, shakes, chills, headache and nausea on 18Dec2020 19:15 with outcome of recovered.

Fatigue beginning the night of the vaccine into early morning. Severe fatigue inability to get out of bed in the morning.; This is a spontaneous report from a contactable Nurse. A 25-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot # EL0140) on 21Dec2020 at 10:00 via intramuscular on left arm for COVID-19 immunization. The patient hd no relevant history. Concomitant medications included unspecified vitamins. The patient reported fatigue beginning the night of the vaccine (about 11:45) into early morning, described as severe fatigue inability to get out of bed in the morning. The patient was recovering from the event.

her throat hurts; She reported that her mouth is raw.; her chest is a little heavy/feels like a chest cold is coming on in her chest; She has a little bit more of a cough; severe joint; achiness; felt a little bit tired, but reported that she has felt increasingly tired and out of it/more fatigue; got possibly exposed to covid from a patient who tested positive after getting random swabbed; like all of her lymph nodes are swollen; she felt like she was getting the flu; the throat pain is throwing her though; The throat pain is up to her ears; She stated her mouth is a little red.; This is a spontaneous report from a contactable nurse, who is also the patient. This 56-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number EK5730; expiration date 01Mar2021) intramuscular in the left deltoid on 19Dec2020 at 15:00 at 0.3 mL single for COVID-19 immunisation. Vaccination facility type was hospital. Relevant medical history included hypertension, breast cancer, obesity, high cholesterol and ex-tobacco user (former, quit over 10 years ago). Concomitant medications included atorvastatin calcium (LIPITOR), amlodipine, losartan and ubidecarenone (CO Q10). The patient got possibly exposed to COVID from a patient who tested positive after getting random swabbed in Dec2020 with outcome of unknown; she also experienced felt a little bit tired, but reported that she has felt increasingly tired and out of it/more fatigue on 20Dec2020 with outcome of not recovered, severe joint (arthralgia) on 21Dec2020 with outcome of not recovered, achiness on 21Dec2020 with outcome of not recovered, her throat hurts on 22Dec2020 with outcome of not recovered, like all of her lymph nodes were swollen on Dec2020 with outcome of unknown, she reported that her mouth was raw on 22Dec2020 with outcome of not recovered, she has a little bit more of a cough on 21Dec2020 with outcome of not recovered, her chest was a little heavy/feels like a chest cold was coming on in her chest on 22Dec2020 with outcome of not recovered, she felt like she was getting the flu on Dec2020 with outcome of unknown, the throat pain was throwing her though on Dec2020 with outcome of unknown, the throat pain was up to her ears on Dec2020 with outcome of unknown and she stated her mouth was a little red on Dec2020 with outcome of unknown. She said that the vaccine was administered on Saturday 19Dec2020. She was at work the next day and felt a little bit tired, but reported that she has felt increasingly tired and out of it. On Monday, she felt very tired and took it easy. She said that she woke up with no fever, but had severe joint and achiness, more fatigue, and her throat hurts, like all of her lymph nodes are swollen. She reported that her mouth was raw. She had a little bit more of a cough and said that her chest was a little heavy. She did not feel like herself. Just spoke to a colleague and one of the people she was working with tested positive for COVID. She was working with her on Sunday 20Dec2020. Caller said that she received the vaccine at the hospital. She was able to work, but felt disconnected and tired. She said that she slept great the night before. Attributed the way she was feeling to the shot or maybe working. She said that she felt like she was getting the flu. She felt like she was hit by a bus. She said that the throat pain was throwing her though. It was throat pain right side. The throat pain was up to her ears. She said

that she was taking 1 gram Tylenol every 6 hours with a lot of water. She stated her mouth was a little red. She said that it was like a thrushy feeling like when you take antibiotics. It was that kind of sensation. She said that she almost felt like a chest cold was coming on in her chest. She had no shortness of breath, just an awareness when you get a chest cold. She used to get bronchitis all of the time. She said that she was speaking to a friend from work and a girl that she works with tested positive on a random swab for COVID-19. Caller said that the girl was asymptomatic and she did not receive the vaccine.

vertigo; dizziness; nausea; This is a spontaneous report from a contactable physician. A 41-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular, on 21Dec2020 at 10:00 AM at single dose for COVID-19 immunisation. Vaccine location was left arm. The patient was vaccinated at hospital, age at vaccination was 41-years-old. Medical history and concomitant medications were unknown. On 22Dec2020 at 12:30 PM, the patient experienced abrupt onset vertigo, dizziness nausea - self resolved but then second wave of similar symptoms also self resolved. Th events were reported as non-serious. No treatment was received for the events. Information on the lot/batch number has been requested.

Headache over the front of the head; This is a spontaneous report from a contactable unspecified healthcare professional reporting for herself. This 60-year-old female patient received on 22Dec2020 11:15 first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot EH9899) at single dose intramuscular in the right arm for COVID-19 immunization. Medical history and concomitant medications were not reported. She denied any history of previous adverse reactions to vaccines. On 22Dec2020, during her 15 minutes waiting period after the injection, the patient began to experience headache over the front of the head. The event required an emergency room visit. Outcome was unknown. Neurogical examination was positive on an unknown date. No follow-up attempts are possible. No further information is expected.

Headache; This is a spontaneous report from a contactable nurse. A 38-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE, lot number: EK5730), via an unspecified route of administration the right arm on 22Dec2020 12:30 at a single dose for COVID-19 immunisation. Medical history was not reported. Concomitant medications included amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL). The patient experienced headache on 22Dec2020 14:30. No therapeutic measure was taken as a result of the event. Clinical outcome of the event was recovered on an unspecified date.

slight nasal congestion; This is a spontaneous report from a contactable other healthcare professional (patient). A 53-year-old male patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EJI685), intramuscularly in left arm on 22Dec2020 13:45 at single dose for Covid-19 immunisation. The patient's medical history and concomitant medications were not reported. No Covid prior vaccination. No Covid tested post vaccination. No known allergies. The patient experienced slight nasal congestion (non-serious) on 22Dec2020 14:30 with outcome of recovering. No treatment received for the event.

Fever of approx 101 F; body chills; injection site pain; This is a spontaneous report from a contactable unspecified healthcare professional reporting for himself. This 45-year-old male patient received on 21Dec2020 13:00 first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose in the left arm for COVID-19 immunization. Medical history included allergies to penicillin and sulfa drugs and hypertension. Prior to vaccination, the patient was diagnosed with COVID 19. Concomitant medications were not reported. On 22Dec2020 03:00 am, the patient had fever of approximately 101 F, body chills, injection site pain. No treatment was provided. Outcome was not recovered. Information on the batch number has been requested.

headache; pain in arm; dizziness; This is a spontaneous report from a contactable consumer. A female patient (wife) of unknown age received on 21Dec2020 11:15 BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. In Dec2020, she reported headache, pain in arm and dizziness. Outcome was unknown. Information on the batch number has been requested.

Severe crushing headache in bilateral temporal lobes; Severe fatigue day after; This is a spontaneous report from a contactable nurse which is also the patient. A 36-year-old non-pregnant female patient received 1st dose of bnt162b2, intramuscular in the left arm on 18Dec2020 12:00 at a single dose for COVID-19 immunization at the hospital. Medical history included polycystic ovaries (PCOS), anxiety, depression and attention deficit hyperactivity disorder (ADHD). The patient has no known allergies. Concomitant medications included amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL), bupropion hydrochloride (WELLBUTRIN), and escitalopram oxalate (LEXAPRO). It was reported that the morning after vaccine, 19Dec2020 08:00, the patient awoke with severe crushing headache in bilateral temporal lobes that resolved in a couple hours with acetaminophen (TYLENOL) and rest. The patient also had severe fatigue day after. Added that there's also fatigue on 2nd day after vaccine but much more mild than 1st day. All symptoms resolved at 48hrs. The patient was not diagnosed with COVID-19 prior to vaccination and since the vaccination. The events were assessed as non-serious. Therapeutic measures were given for the events. Outcome of the events was recovered in Dec2020 after 48hrs. Information on the lot/batch number has been requested.

Tingling in lower arm and hand that lasted from time of vaccine until the following morning.; This is a spontaneous report from a non-contactable other health care professional. A 30-year-old female patient received bnt162b2 (BNT162B2), via an unspecified route of administration on 20Dec2020 13:00 at SINGLE DOSE at right arm for COVID 19 immunization. Medical history included allergies: sulfa drugs. The patient's concomitant medications were not reported. On 20Dec2020 13:00, the patient experienced Tingling in lower arm and hand that lasted from time of vaccine until the following morning. The patient did not receive treatment. No COVID prior vaccination. The patient has not been tested for COVID-19 since the vaccination. The event was assessed as non-serious. The outcome of the event was recovered. No follow-up attempts are possible. Information about lot/batch number cannot be obtained.

Injection site pain; headache; body aches; feeling generally unwell; joint pain; This is a spontaneous report from a contactable other-hcp reporting for herself. A 35-years-old non-pregnant female patient

received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EH 9899), via an unspecified route of administration in the left arm on 21Dec2020 14:00 at single dose for covid-19 immunisation. The patient medical history was not reported. Concomitant medication included celecoxib (CELEXA, 20mg). The patient previously took thimerosal and experienced drug hypersensitivity. The patient experienced injection site pain, headache, body aches, feeling generally unwell and joint pain all on 22Dec2020 03:00 with outcome of recovering. No treatment was performed. The patient did not have COVID prior to vaccination nor COVID test post vaccination.

"Strange brain fog; forgotten her medications at home, she forgot to do something with her dogs that she usually does; was pretty sure she forgot to brush her teeth; Right arm soreness; This is a spontaneous report from a contactable nurse (patient). A 31-year-old female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EJ1685), intramuscularly in right arm on 18Dec2020 11:00 at single dose for Covid-19 immunisation. Medical history included ulcerative colitis from 2018 and ongoing, birth control from 2018 and ongoing, seasonal allergies from an unknown date and unknown if ongoing, multivitamin (supplementation therapy) from an unknown date and unknown if ongoing. Concomitant medication included HPV vaccine on 11Dec2020, mesalazine (LIALDA, exp: 29Sep2021, Manufacturer: Zydus) from 2018 and ongoing for ulcerative colitis, cetirizine hydrochloride (WAL ZYR, exp: Dec2021, NDC: 0363049547) from 2018 and ongoing for seasonal allergies, probiotics (lot# 20540N0, exp: Apr2022, Company: Seed.) from 2018 and ongoing, fluticasone propionate (Nasal spray, strength: 50 ug, lot# RR7350, exp: Apr2022) from 2018 and onoging for seasonal allergies, ascorbic acid, biotin, calcium pantothenate, calcium phosphate dibasic, colecalciferol, cupric oxide, cyanocobalamin, ferrous fumarate, folic acid, manganese sulfate, nicotinamide, phytomenadione, potassium iodide, pyridoxine hydrochloride, retinol acetate, riboflavin, selenium, thiamine mononitrate, tocopheryl acetate, zinc oxide (FORVIA, tablet, lot# B0115, exp: May2023, UPC: 835134000202) from 2018 and ongoing for multivitamin, ethinylestradiol, ferrous fumarate, norethisterone acetate (LO LOESTRIN FE, exp: Nov2021, barcode:04300420149) from 2018 and ongoing for birth control, and turmeric (exp: Feb2023, barcode #:074312803673) at 1000 mg daily from 2018 and ongoing. The patient previously received tetanus vaccine 10 years ago. The patient experienced right arm soreness on 18Dec2020,""strange brain fog"" on 21Dec2020, she was not sure if it was a reaction to the vaccine, because it was not in the packet that it has been reported; but she wanted to ask if brain fog had been reported. She further described that the brain fog included having forgotten her medications at home, having had a really weird day, she forgot to do something with her dogs that she usually does; was pretty sure she forgot to brush her teeth; and she had a needle stick at work with Heparin after administration of Heparin to patient (little mark on her left middle finger from the needle stick). She had already given the patient the Heparin, then the needle stick to her left middle finger happened after dose to patient was administered the full dose on 21Dec2020. She did not think there was any Heparin left when she got the needle stick; if so it was very very small amount. She washed the needle stick site out really vigorously for 5 minutes, wrapped the site, it was not bleeding or anything; She reported having recovered completely from this event probably 21Dec2020; but clarified that the only lasting effect she has had from this event was since yesterday there is a little mark on her left middle finger from the needle stick; but there is no pain, no swelling and no redness. The hospital drew her blood and the Heparin patient's blood 21Dec2020. She did not notice any of the brain fog or related events on

20Dec2020, not until onset on 21Dec2020. She did not know if these brain fog related events were a side effect of the COVID-19 Vaccine. She felt fine otherwise. She knew that the actual COVID-19 virus had brain fog. She received the tetanus vaccine 10 years ago. The patient received the HPV vaccine a week before the COVID one. She planned on getting the second dose as scheduled, no changes made. Brain fog: She thought she recovered completely by about 21Dec2020. It was better. She had not really done much as of report date. Forgotten her medications at home: These medications were her concomitant products. The outcome of right arm soreness was recovered on 20Dec2020, the other events was recovered on 21Dec2020."

Nausea and diarrhea; Nausea and diarrhea; This is a spontaneous report from a contactable nurse (patient). A 36-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 19Dec2020 at 08:45am at single dose in left arm for COVID-19 immunization. No known allergy to medications, food or other products. Concomitant medications included Multivitamin (unspecified) received within 2 weeks of vaccination. On 21Dec2020 at 02:00 am the patient experienced nausea and diarrhea. Patient was treated with unspecified medication.The outcome of the events was recovering. Information about lot/batch number are requested.

positive test to the COVID-19 infection; This is a spontaneous report from a contactable Other HCP reporting for herself. A 35-years-old female patient received bnt162b2 (BNT162B2; Lot# EL0140) vaccine , via an unspecified route of administration in the left upper arm on 21Dec2020 at single dose for covid-19 immunisation . The patient medical history and concomitant medications were not reported. The patient resulted positive to the test to the Covid-19 infection on the same day she got the vaccine 21Dec2020 with outcome of unknown. The patient was wondering if her symptoms could worsened and if she could receive the second shot as scheduled.

have a really bad headache; This is a spontaneous report from a contactable consumer (patient). A 22-year-old female patient received the first dose BNT162B2 (Pfizer-BioNTech COVID-19 Vaccine, Batch/lot number: EL1284), via an unspecified route of administration on 21Dec2020 at single dose for covid-19 immunization. Medical history included GERD (Gastrooesophageal reflux disease), obsessive-compulsive disorder. Concomitant medication included omeprazole at 40 mg for GERD, fluoxetine at 40 mg for obsessive-compulsive disorder. The patient had a really bad headache in Dec2020. The reporter stated she was a 22 years old pharmacy intern working in a hospital. She received the covid vaccine yesterday (21Dec2020) and she had a really bad headache. The patient further described this as a 'very, very bad headache.' The patient didn't receive treatment for headache. She was wondering if she could take Tylenol for headache. The outcome was unknown.

COVID-19 confirmed by positive COVID-19 test; COVID-19 confirmed by positive COVID-19 test; This is a spontaneous report from a contactable other health professional (reported for himself). A 30-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 17Dec2020 10:00 at single dose on left arm for COVID-19 immunization. Medical history known allergies: PCN (Penicillin). The patient's concomitant medications were not reported. The most recent COVID-19 vaccine was administered at Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to

vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has been tested for COVID-19 via Nasal Swab and the test name was PCR with the result of positive on 22Dec2020 (12:00). This wasn't really an adverse event but the reporter thought it may be useful for studies taking place. On 22Dec2020 12:00 PM, the patient was diagnosed with COVID-19 5 days after vaccination and was currently self-isolating. The adverse event result in Emergency room/department or urgent care. No treatment was received for the adverse events. The events were considered as non-serious by the reporter. The outcome of the events was recovering.; Sender's Comments: Based on the current available information and the consistency with the known safety profile of the suspect product BNT162B2, a possible contributory role of the suspect product to the development of Drug ineffective and COVID-19 cannot be excluded.

substantial back pain in her mid back and spine; substantial back pain in her mid back and spine; This is a spontaneous report from a non-contactable Nurse (patient). A female patient of an unspecified age received bnt162b2 (BNT162B2) at single dose on 21Dec2020 for immunisation. The patient medical history and concomitant medications were not reported. The patient experienced substantial back pain in her mid back and spine on an unspecified date. The outcome of events was unknown. No follow up attempts are possible; information about lot/batch number cannot be obtained.

Severe headache; This is a spontaneous report from a contactable pharmacist, who is also the patient. This 37-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EK 5730; expiration date Mar2021) intramuscular in the left arm on 21Dec2020 at 17:30 at the age of 37 years at single dose for COVID-19 immunisation. Vaccination facility type was hospital. Relevant medical history included Major Depressive Disorder (MDD), anxiety and foramen ovale patent. Concomitant medications were not reported. Past drug history included allergy with sulfamethoxazole/trimethoprim (BACTRIM) and aripiprazole (ABILIFY). On 22Dec2020 at 06:00, the patient experienced severe headache resistant to butalbital/caffeine/paracetamol (FIORICET) and ibuprofen, which were taken as treatments. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, she had not been tested for COVID-19. The patient was recovering from the event.

Diarrhea; Body ache; Spike fever of 99; not a low grade fever; Headache; This is a spontaneous report from a contactable consumer (patient). A 58-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), via an unspecified route of administration on 18Dec2020 at single dose for immunization. When probed for the due date for the next shot, consumer stated it was on 08Jan2021. Medical history included anxiety, acid reflux and eyes just not really great. Concomitant medication included topiramate (TOPAMAX) at 25 mg, daily for weight loss, fluoxetine for anxiety, omeprazole (PRILOSEC) for acid reflux. The patient experienced body aches, spikes fever of 99, it was not a low grade fever, headache on 18Dec2020, and diarrhea on 19Dec2020. Patient received acetylsalicylic acid (EQUATE, lot number: think it was 0B3076C, Expiry Date of Equate: Dec2022, NDC# 4903552378) for events body aches and the headache and the spike fever. It's Equate pain reliever, a (Company name) brand and it was 325 mg. Outcome of events body ache and headache was not recovered, and outcome of other events was unknown.

Nausea; Chills; This is a spontaneous report from a contactable consumer via a Pfizer-sponsored program,. A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration on 19Dec2020 at a single dose for COVID-19 immunisation. Medical history and concomitant medications were not reported. The patient experienced nausea and chills on an unspecified date. Clinical outcome of the events was unknown. Information about lot/batch number has been requested.

she is better but still not good; not to be able to breath; sore right arm; This is a spontaneous report from a contactable nurse (patient herself). A 62-year-old female patient received bnt162b2 (BNT162B2, lot EK5730), intramuscular on 18Dec2020 at single dose for immunisation. Medical history included asthma (hospitalized on Jan2020 and has not had any issues since that time, referring to her asthma) diabetes, high blood pressure, swelling, sciatica, blood cholesterol abnormal, rosacea, reflux, allergies, sinus congestion, shingles and post carpal tunnel surgery. Concomitant medications included lisinopril, hydrochlorothiazide, gabapentin, rosuvastatin, metformin, glipizide, doxycycline, sucralfate, cetirizine hydrochloride (ZYRTEC), pseudoephedrine, ascorbic acid, ergocalciferol, nicotinamide, retinol, riboflavin, thiamine hydrochloride (VITAMINS) and tramadol. The patient reported that she not to be able to breath (seriousness criteria-life threatening) on 22Dec2020. She woke up this morning and could not breathe and there was no reason for her to not be able to breath. She thought she may have had a reaction to the COVID vaccine. It was the only thing she could think of that might have caused her not to be able to breathe this morning. As treatment for not to be able to breath, she used Budesonide and Levosalbutamol in her nebulizer. She had sore right arm on 18Dec2020. She informed that she had done everything she can and she was better but still not good. She planned to take the second dose of the COVID Vaccine because she thought it was more important to be protected. She suspected that the vaccine was related to the events sore right arm and could not breathe. The outcome of the event not to be able to breath was recovering; for sore right arm was recovered on unknown date in Dec2020; for she is better but still not good was unknown.; Sender's Comments: Severe allergic reaction including anaphylaxis is the known risk factor; a possible causal association between administration of BNT162B2 and the onset of not being able to breath cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Headache; pain in her arm; Dizziness; This is a spontaneous report from a contactable consumer (patient's husband). A 45-year-old female patient started to receive bnt162b2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE, lot number: N9899, expiry date: 01Jan2021), via an unspecified route of administration on the right arm on 21Dec2020 at a single dose for COVID-19 immunisation. Medical history included ongoing high blood pressure. Concomitant medication included ongoing alprazolam for high blood pressure. On 22Dec2020, the patient experienced headache, pain in her arm and dizziness. Clinical outcome of the events was not recovered.

positive COVID-19 test with symptoms; positive COVID-19 test with symptoms; Soreness at injection site; This is a spontaneous report from a contactable nurse (patient). A 40-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 17:30 in the left arm at single dose for COVID-19 immunization. There was no medical history or concomitant medications. The patient experienced soreness at injection site, cough, body aches on 19Dec2020; sore throat, voice changes from coughing on 20Dec2020; tested positive for covid on 21Dec2020; mild low congestion, loss of taste and smell on 22Dec2020. The nurse stated that he got the vaccine on Friday (18Dec2020). The next day (19Dec2020) he had common side effects: Soreness at the injection site and body aches, which were expected. He also had a cough on top of that, which progressed to the next day. His body aches and coughing were infrequent. The afternoon of Sunday (20Dec2020), he developed sore throat. Yesterday(21Dec2020), he said he could not work because he was still coughing and had a sore throat. His voice was also changing due to the coughing. He was getting better now. The doctor from Employee Heath said that the cough was concerning so he got a COVID swab test yesterday(21Dec2020), and today (22Dec2020) it came back positive. This morning (22Dec2020) he had loss of taste and smell. He no longer had sore throat or cough. He had the vaccine before the test. He wanted to know where they were at with information on this. Was this being monitored? How did this happen? Was it possible that the test was a false positive because he had the vaccine prior? He would like someone to give him an answer, if the test was a false positive due to the vaccine? His doctor could not tell if the test was legit a positive because of the vaccine. He was not able to work right now. He did not even know if the COVID was from the vaccine or not. Will he get compensation for this? Will his workplace cover his absences? In the case he went to the hospital, will this be considered a work related or vaccine related issue? The outcome of event soreness at injection site was recovered on 21Dec2020. The outcome of event tested positive for COVID was not recovered. The nurse considered the cough was disabling as this was not part of the symptoms to watch for after getting the vaccine. All of the symptoms currently besides the cough are not serious as of now, but it has put him out of work. The nurse considered all other events as non-serious except for cough (disabling). Information on the lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded.

hands were tingly and both hands were tingly; lips got numb; both hands were tingly and kind of numb feeling; both hands were tingly and kind of numb feeling and then became itchy; This is a spontaneous report from a contactable nurse (patient). A 58-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date unknown), via an unspecified route of administration on 18Dec2020 17:13 at single dose for covid-19 immunization. Patient history was no. There were no concomitant medications. The patient didn't notice anything until the Saturday on 19Dec2020, at about the same time at 24 hours later, it was noticed that hands were tingly and both hands were tingly and kind of numb feeling and then became itchy and lips got numb during that time frame, the patient just took anti-histamines, only one dose Loratadine on 20Dec2020. Issue still persisting, it's not as bad on 21Dec2020 but it still as numb, fingers were especially numb. The outcome of the events was not recovered. No investigation assessment. When asking the causality, the patient

said it was fine until, that's what she was presuming, the Covid shot. Information on Lot/Batch number has been requested.

Severe headache; photophobia; eye pain; myalgia; diarrhea; skin sensitivity; lesions and blisters around mouth and lips, oral lesions; lesions and blisters around mouth and lips, oral lesions/intra-oral lesions/Buccal lesion; inflammation; pharyngitis; lymph node inflammation in neck; BL earache; nausea; diaphoresis; fatigue; This is a spontaneous report from a contactable consumer (patient). A 50-years-old female patient received first dose of BNT162B2 (Lot# EH9899), via an unspecified route of administration, in right arm, on 18Dec2020 15:00 at single dose for COVID -19 immunization. The patient was not pregnant at the time of vaccination. Facility where the most recent COVID-19 vaccine was administered was workplace clinic. Medical history was none, good health. No allergies to medications, food, or other products. Prior to vaccination, patient was not diagnosed with COVID-19. Since the vaccination, patient had not been tested for COVID-19. No other vaccines was received within 4 weeks prior to the COVID vaccine. The other medication that the patient received within 2 weeks of vaccination was amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL) at 30 mg orally daily. The patient experienced severe headache, photophobia and eye pain, myalgia, diarrhea, skin sensitivity, lesions and blisters around mouth and lips, oral lesions and inflammation, intra-oral lesions, buccal lesions, pharyngitis, lymph node inflammation in neck, BL earache, nausea, diaphoresis, fatigue, all on 19Dec2020 05:00 AM. The events were reported as non-serious. No treatment was received for the events. The outcome of the events was recovering.

Hives all over his body, on his tummy, his legs, his wrist; did a cold compress, it seemed to work but it came back again; This is a spontaneous report from a contactable consumer (patient's wife). A 47-year-old male patient received BNT162B2 (Lot# EK5730), via an unspecified route of administration on an unspecified date at single dose for COVID -19 immunization. Medical history included type 1 diabetic, blood pressure high and cholesterol. Concomitant medication included insulin. The patient got the vaccine on Friday. On 21Dec2020, the patient had hives all over his body, on his tummy, his legs, his wrist. He started getting it at midnight and the reporter wondering do she need to take him in or can she just give him Benadryl. she was looking at the documents trying to find a number to call. He got the COVID Vaccine on Friday and no trouble till this morning, now at midnight. The treatment included he did a cold compress on it, it seemed to work but it came back again. It's still the same. Cold compress last night or this morning, it seemed to help. The outcome of the event was not recovered.

"Soreness at the site for the first 24 hours; Swelling underneath my right arm; Inflammatory response or immune response from the vaccine; Right breast had swollen areas in it almost being at lymph nodes; Right breast had swollen areas in it almost being at lymph nodes; Around nipple was very swollen and had about three knots; This is a spontaneous report from a contactable Nurse (patient). A 34-year-old female patient received first dose of BNT162B2 (lot number not provided), via an unspecified route of administration on an unspecified date at single dose for COVID -19 immunization. Medical history and concomitant medication were reported as none. The nurse stated she had received the first dose of the Pfizer Covid Vaccine on Thursday. It didn't really had anything other than some soreness at the site for the first 24 hours but on the Saturday, she started noticing a bit of swelling like underneath her right arm. She didn't think anything of like that was probably just the inflammatory response or immune

response from the vaccine. So, she thought it was all a normal side effect. The next morning, next Sunday morning, she woke up and her right breast had swollen areas in it almost being at lymph nodes and that's kind of where she just thought - Okay the breasts have lymph drainage and vessels and all these things. And she could palpate it like from her arm pits, she could palpate and can find out another one that was the area but it was around her nipple that was the concern because it was very swollen and had about three knots and again she was like probably it's just the lymph nodes. She reported ""But they wanted us to report anything. You are at Hospital, like little health area and I was told that you need to call Pfizer too. I am saying that is something out of the ordinary because I am like they are not ordinary, they are in the breast area. don't want to call it as nothing, it might be something else as it is kind of hard to tell if it related to the vaccine or is it not or something I need to talk to my OB-GYN about. I didn't know if that was something else did anybody else is experiencing"". The event onset date was unspecified. The treatment of the events included Motrin. The outcome of the events was unknown. Information on the Batch/Lot number has been requested."

Severe headache; headache was very bad; it was so much that I am scared to take the second dose; Muscle pain; joint pain; This is a spontaneous report from a contactable nurse (patient). A 55-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730, Expiry Date: 31Mar2021) via an unspecified route of administration on 18Dec2020 at single dose to prevent Covid 19, to get antibodies; folic acid via an unspecified route of administration from an unspecified date at 1 mg, daily for Thalassaemia minor; levothyroxine sodium via an unspecified route of administration from an unspecified date at 50 mg, daily for an unspecified indication; zinc oxide via an unspecified route of administration from an unspecified date at 50 mg, daily for an unspecified indication; nifedipine (NIFEDIPINE XL) via an unspecified route of administration from an unspecified date at 60 mg, daily for blood pressure high; valsartan via an unspecified route of administration from an unspecified date at 80 mg, daily (one morning one in the evening) for blood pressure high; paroxetine via an unspecified route of administration from an unspecified date at 10 mg, daily for an unspecified indication; cyanocobalamin (VIT B12) via an unspecified route of administration from an unspecified date at 1000 mg, daily for an unspecified indication; ascorbic acid (VIT C) via an unspecified route of administration from an unspecified date at 1000 daily for an unspecified indication; acetylsalicylic acid (ASPIRIN) via an unspecified route of administration from an unspecified date at 81 mg (once in week or every other day) for an unspecified indication. Medical history included hyperthyroidism; anxiety; Thalassaemia minor; Blood pressure high; patient was diagnosed with Covid-19 earlier, she stated she was a survivor, she recovered on 06Apr2020, she was sick on 21Mar2020 and she was ruled out positive on 25Mar2020 when they bought out the test first time, she said she might have been positive before but they did not have the test. The patient's concomitant medications were not reported. Patient stated she took the vaccination (Pfizer Covid 19 vaccine) in the hospital, she worked there she was a nurse, and she got the side effect, she got severe headache. She had headache but her mistake she did not take Tylenol that time but it got eased after may be 5 hours but the problem was (statement incomplete), and then she started having muscle pain, joint pain and that was okay but headache was very bad, out of all this. Her question was she was a survivor Covid-19 but this one took on her, the headache and she was on blood pressure medications too (further not appropriately paraphrased and clarified hence captured as unspecified medications) so she didn't know what were the ingredients which caused her

such a severe headache. So now her question was that was it okay for her to take the second dose after 3 weeks. The start date of headache was not even half an hour within 15 minutes of taking vaccine. For headache, patient was okay now, that time it was so much that she was scared to take the second dose, the booster dose, so that was why she want to check with them that it was okay or not because she had severe headache. After 5 hour it was improved without taking anything, it subsided on it's on. No treatment received. The action taken in response to the events for folic acid, levothyroxine sodium, zinc oxide was unknown. The outcome of the event Headache was recovered on 18Dec2020, of the other events was recovering. Pfizer is a marketing authorization holder of [folic acid, levothyroxine sodium, zinc oxide] in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of [folic acid, levothyroxine sodium, zinc oxide] has submitted the same report to the regulatory authorities.

Fever; injection site mild pain; This is a spontaneous report from a non-contactable other healthcare professional (patient) via a Pfizer sales representative. A 51-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiration date were not reported), via an unspecified route of administration on an unspecified date at a single dose for covid-19 immunization. There were no medical history. Concomitant medications were not reported. The patient experienced fever and injection site mild pain on an unspecified date. Outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

rash; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). A contactable consumer (patient) reported that a 64-years-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EJ1685) , via an unspecified route of administration on 20Dec2020 at single dose for covid-19 immunisation . Medical history reported as none. There were no concomitant medications. The patient experienced rash on 20Dec2020 about an hour after receiving the vaccine. The patient did put some lotion on rash. The outcome of event was not recovered.

headache; soreness on injection site; hives; This is a spontaneous report from a contactable nurse (patient). A 47-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EK5730), intramuscular on the left arm on 20Dec2020 10:30 at a single dose for covid-19 immunization. The patient's medical history included chronic cough, post nasal drip, asthma, sinusitis, and allergies to sulfa. The patient was not pregnant. Concomitant medications included levocetirizine dihydrochloride (XYZAL), amoxicillin, clavulanic acid (AUGMENTIN), omeprazole (PROTONIX), fluticasone propionate, salmeterol xinafoate (ADVAIR), budesonide (PULMICORT), albuterol [salbutamol] (ALBUTEROL [SALBUTAMOL]), and guaifenesin. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 20Dec2020 16:00, the patient experienced headache, soreness on injection site, hives started on the day of injection in the afternoon until current day. The patient underwent lab tests and procedures which included COVID-19 Nasal Swab was negative on 13Nov2020. The patient was not diagnosed with COVID-19 prior to vaccination and had been tested for COVID-19 on Dec2020 since the vaccination. No treatment was received for the adverse events. Outcome of the events was recovering. The events was considered non-serious.

coughing; chills; cold; This is a spontaneous report from a contactable consumer (patient). A 76-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot EJ1685, Expiration Date 31Mar2021, via unspecified route of administration, on unspecified date, at single dose for COVID-19 immunization. The patient medical history included blood pressure high. Concomitant medications included unspecified medication for high blood pressure. The patient experienced coughing, chills, and cold on 20Dec2020. The events were non serious. The outcome of the event coughing was unknown. The outcome of the events chills, and cold was not resolved.

"muscle soreness; This is a spontaneous report from a contactable physician. A male patient of an unspecified age (age: 43; Unit: unknown) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 16Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient had muscle soreness for about 24 hours after the shot. The patient stated, ""I received the Pfizer vaccine on 16Dec at my hospital, (Institute Name Withheld). I think our hospital management wanted to first vaccinate some key clinicians who felt very comfortable with it - I personally wanted it as soon as possible since I see patients with COVID-19 every day. Twelve hours before I received the vaccine, I took information survey and signed the consent form. At my appointment, I was asked to confirm that I was feeling OK, was given the injection, and then waited about 15 minutes to make sure I didn't experience any side effects. I had a little muscle soreness, sort of like a punch to the arm, for about 24 hours. Other than a little muscle soreness that felt similar to a punch, I felt perfectly fine. The hospital administrator said they'd be in touch to schedule the second dose, which will be within a 96-hour window about three weeks later. I believe the science behind this type of vaccine - the messenger RNA platform - is strong. Understanding the basic science of it, I have very few concerns about the efficacy of the vaccine or the long-term complications. As a mechanism, there is no live COVID -19 virus in the vaccine: It's just giving you the code for spike protein so that your immune system will be able to make antibodies. To me, it's an even safer platform than many previous types of vaccines. Many infectious diseases are managed through vaccines. Infectious diseases that we don't think of as being a big issue anymore, like polio, even chickenpox, have been all but wiped out in the US thanks to vaccines that most people now get as babies. One or two people are not going to stop the COVID-19 pandemic. It's really when we get a good majority of the population fully vaccinated that we'll start to see a major effect. Until then, I plan to still wear my face mask, practice social distancing, and observe safety and sanitary precautions. The outcome of the event was unknown. Information on the lot/batch number has been requested."

Fatigue; Dizziness; Tachycardia/heart rate is 115 laying down and her heart rate is 123 walking around; patient may be having an allergic reaction; This is a spontaneous report from a contactable other healthcare professional (hcp). A 31-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 Vaccine, lot number: EL0140, NDC number: 59267-1000-1, Expiry Date: 31Mar2021), via intramuscular on 21Dec2020 09:15 at 0.3 mL, single (0.3ml intramuscular injection in arm) for preventative (COVID-19 immunization). There were no medical history or concomitant medications. The patient did not receive any other vaccines prior vaccinations (within 4 weeks) or on the same date. The reporter worried the patient may be having an allergic reaction. The patient experienced dizziness, tachycardia, and fatigue, all on 21Dec2020, started about 45 minutes after receiving the injection

around 10:00 am. The patient's heart rate is 115 laying down and her heart rate is 123 walking around on 21Dec2020. It is not life threatening and is kind of minor. The patient does get motion sickness easily. The reporter also received an injection from the same lot number. The patient she was reporting on is the only patient she has had that had an adverse reaction. There had not been any issues with any of her other patients. Treatment: The patient took Advil pm last night and it did not help, states Advil PM has benadryl in it. States it did not help. The outcome of events was not recovered. The causality between events dizziness, fatigue, tachycardia and BNT162B2 is considered related by Primary Source Reporter per Global Introspection.

hives all over her body; Itching; This is a spontaneous report from a contactable Pharmacist. A 32-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot EH9899, Expiration Date Mar2021, via intramuscular route of administration in right arm, on 18Dec2020 15:55, at single dose for COVID-19 immunization. The vaccine was administered at Hospital Facility. The patient medical history and concomitant medications were not reported. The patient experienced hives all over her body and itching on 18Dec2020 at 19:00. The events required visit to Emergency Room. The patient was treated with Benadryl PO and Prednisone 60mg PO. The patient did not have any respiratory distress or anything. They said this was related to the vaccine. The events were non serious. The outcome of the events was unknown.

tingling in her arm at the injection site; hand turned red; soon after had tingling up and down her entire arm; This is a spontaneous report from a contactable consumer. A 27-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration, on 24Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced tingling in her arm at the injection site, hand turned red, and soon after had tingling up and down her entire arm. Therapeutic measures were taken as a result of the events, which included diphenhydramine hydrochloride (BENADRYL). The clinical outcome of tingling in her arm at the injection site, hand turned red, and tingling up and down her entire arm was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

migraine; This is a spontaneous report from a contactable consumer. An adult female patient (middle-aged) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration in Dec2020, at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced migraine in Dec2020. The patient was not responding to their usual migraine medicines. The clinical outcome of migraine was unknown. No follow-up attempts are possible; information about batch/lot number cannot be obtained.

he felt very achy and tired with a sore arm; he felt very achy and tired with a sore arm; he felt very achy and tired with a sore arm; This is a spontaneous report from a contactable physician (patient) via Pfizer Sales Representative. A male patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Batch/Lot number unknown, via an unspecified route of administration on 21Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant

medications were not reported. The patient reported he felt very achy and tired with a sore arm on 21Dec2020. The events were non serious and the patient completely recovered from the events on 22Dec2020. Information about batch/lot number has been requested.

Sore left arm at injection site. Pain started 8-10 hours after injection; resolved by 3 days after injection; This is a spontaneous report from a contactable physician (patient). A 49-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot EH9899) intramuscular in left arm on 18Dec2020 at 07:45 am at single dose for COVID-19 immunization. Medical history included Cluster headaches, Osteoarthritis of right shoulder and gastrooesophageal reflux disease (GER). No Known allergies to medications, food or other products. Concomitant medication included ascorbic acid (VITAMIN-C), omeprazole and fish oil. The patient experienced sore left arm at injection site on 18Dec2020 at 04:00 pm; pain started 8-10 hours after injection and resolved by 3 days after injection. Patient was treated with ibuprofen and recovered from the event in Dec2020. Case is non serious.

Mild arm soreness; This is a spontaneous report from a contactable physician. A 34-years-old female patient started to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), lot number: EJ1685, intramuscularly on 22Dec2020 14:00 (at the age of 34-years-old) as a single dose in the left arm for COVID-19 immunization. Medical history included allergies to medications, food, or other products: shellfish from an unknown date and unknown if ongoing. Concomitant medication included clomifene citrate (CLOMID), folic acid (FOLATE). The most recent COVID-19 vaccine was administered in the hospital. It was unknown if the patient was pregnant at the time of vaccination. On 23Dec2020, the patient experienced mild arm soreness. The event mild arm soreness did not result in death, was not life-threatening, did not cause/prolonged hospitalization, was not disabling/incapacitating and did not cause congenital anomaly/birth defect. No treatment was received for the event. Outcome of the event mild arm soreness was recovering. Since the vaccination, the patient has not been tested for COVID-19.

He is sleeping a lot of side effect, I mean all day; This is a spontaneous report from a contactable consumer (patient's wife). A 52-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: AJ1685), via an unspecified route of administration on 17Dec2020 at single dose for covid-19 immunization. Medical history was none. There were no concomitant medications. The patient got his first shot on 17Dec2020 and he was sleeping a lot of side effect, all day. No treatment received and he just slept all day. Due date of next short was 08Jan2021 to 10Jan2021. The outcome of the event was unknown.

throat tightness; sore throat; This is a spontaneous report from a contactable consumer (patient herself). A 61-year-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in Dec2020 at single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient reported that 4 hours later she started to have throat tightness that lasted through the night. Caller reported during the call that the tightness was no longer present but she now had a sore throat. Outcome of event throat tightness was recovered in Dec2020, and outcome of event sore throat was unknown. Information on the lot/batch number has been requested.

"basically thought she had COVID all over again; basically thought she had COVID all over again; Pain at the injection site; Joint pain; Feeling unwell; This is a spontaneous report from a contactable physician (patient). A 45-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730), via an unspecified route of administration on an unspecified date in Dec2020 at single dose for COVID-19 immunization. Medical history included COVID a month ago in 2020. There were no concomitant medications. The patient experienced pain at the injection site, headache, myalgia, joint pain, chills, nausea, feeling unwell, fatigue in Dec2020. The patient basically thought she had COVID all over again. The patient stated, ""I was calling because I just had the COVID vaccine which has caused so many adverse reactions which is the side effects? I am experiencing all the side effects but it is calming down because today is day three. Pain at the injection site, headache, myalgia, joint pain, fatigue, chills, nausea, feeling unwell. Basically I had COVID a month ago and I had vaccine three days ago (Dec2020) and I basically thought I have COVID all over again. I took the vaccine on Friday started with the symptoms pretty much on Saturday."" The patient received ibuprofen (ADVIL) as treatment. The outcome of events was unknown. The physician assessed events pain at the injection site, headache, myalgia, chills, nausea, feeling unwell, fatigue was related with vaccine.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient cannot be completely excluded."

I have like muscle pain; I am having like chest pain, pain in my chest; This is a spontaneous report from a contactable consumer (patient). A 47-year-old female patient received BNT162B2 (Pfizer-BioNTech COVID-19 Vaccine, lot number EJ1685) on 21Dec2020 for COVID-19 immunization. The patient's medical history included high blood pressure and asthma. Concomitant medications were not reported. On 21Dec2020, the patient reported that she had like muscle pain, and had like chest pain/ pain in her chest. The outcome of the events was unknown.

chronic cough; Itchy welt in the lower of my back, its more like swell; whelps; This is a spontaneous report from a contactable nurse reported for herself. This 66-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot number: EJ1685, Expiry Date: 31Mar2021) via an unspecified route of administration at single dose in the right deltoid on 22Dec2020 08:00am for Covid-19 immunisation. Medical history included stage 0 breast cancer, she had a lumpectomy and radiation in 2016, she also just her Zyrtec for her seasonal allergies a few minutes. Concomitant medications were not reported. The patient experienced whelps on 22Dec2020 02:00pm with outcome of not recovered, chronic cough on an unspecified date with outcome of unknown, itchy welt in the lower of my back, its more like swell on an unspecified date with outcome of unknown. The events were described as follows: After getting the vaccine she noticed raised whelps on her lower back. They are about 1-2 cm in length and that was the largest and the smaller ones are about 1/2 a centimeter long. There are 4-5 on her lower back and there is one right around her upper scapula area. She describes them as itchy, red, and raised. She has never had this happen to her before and so she immediately took Benadryl. The patient also reported that she has a chronic cough which has been described as a combination of things. It is an asthma variant cough, she has drainage and a hyper-reactive airway but doesn't not have asthma technically. The vaccine was administered at Hospital Facility. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine.

left arm soreness; extreme fatigue for 4 days; severe headache day 3,4; This is a spontaneous report from a contactable physician, who is also the patient. This 44-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration in the left arm on 18Dec2020 at 07:00 at single dose for COVID-19 immunisation. Vaccination facility type: hospital. Relevant medical history included penicillin allergy. There were no concomitant medications. On 18Dec2020 at 15:00, the patient experienced left arm soreness and extreme fatigue for 4 days and in Dec2020 she experienced severe headache day 3, 4. The patient did not receive corrective treatments. She recovered from the events in Dec2020. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, she had not been tested for COVID-19. No follow-up attempts are possible, information about batch number cannot be obtained.

I had a fever last night; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), via an unspecified route of administration on 21Dec2020 at a single dose for Covid-19 immunization. The patient's medical history was and concomitant medications were not reported. The patient had the Pfizer vaccine yesterday (on 21Dec2020) and had a fever at night. The patient asked if patient has to quarantine because of that. The outcome of the event was unknown. Information on the lot/ batch number has been requested.

severe headache; This is a spontaneous report from a non-contactable consumer (patient husband). A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient experienced severe headache on an unspecified date with outcome of unknown. No follow-up attempts are possible, information about lot/batch cannot be obtained.

she woke up this morning with vomiting, loose stool and her chest wall muscles are extremely painful; she woke up this morning with vomiting, loose stool and her chest wall muscles are extremely painful; she woke up this morning with vomiting, loose stool and her chest wall muscles are extremely painful; nausea; This is a spontaneous report from a contactable consumer (patient). A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient wanted to know about her symptoms after receiving the covid 19 vaccine. The patient reported that she woke up this morning (an unspecified date) with vomiting, loose stool and her chest wall muscles were extremely painful, and she wanted advice on what to do about her nausea. The outcome of the events was unknown. Information on the lot/batch number has been requested.

metallic taste in mouth; general malaise; This is a spontaneous report from a contactable other HCP (Nurse anesthetist) reporting for himself. A 42-year-old male patient received bnt162b2 (BNT162B2, Batch/lot # EL0140) at single dose at left deltoid on 21Dec2020 08:30 for immunisation. Medical history and concomitant medications were none. On 22Dec2020 he was feeling just some general malaise that has since improved. On 23Dec2020, he woke up with a metallic taste in his mouth around 6:30 am and it

is persisting. The patient stated he felt fine, he was afebrile, could still smell, went for a 7 mile run, but still had this metallic taste in his mouth. The outcome of malaise was recovering, of metallic taste in mouth was not recovered.

intractable vomiting; This is a spontaneous report from a contactable physician (patient). A 38-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number EK5730), intramuscular on 22Dec2020 at 13:00 at single dose in right deltoid for covid-19 immunization. There were no medical history or concomitant medications. The patient experienced intractable vomiting on 22Dec2020. The reporter was a physician, she received the Covid-19 vaccine on 22Dec2020 at 1:00 pm. At night on 22Dec2020, she started experiencing intractable vomiting, it was less frequent at time reporting, happening every 2-3 hours. The outcome of the event was resolving.

"dry throat; arm feeling sore; This is a spontaneous report from a contactable consumer. This consumer reported similar events for two patients. This is the first of two reports. A 43-year-old female patient received bnt162b2 (BNT162B2; lot number: EH9899), via an unspecified route of administration on 21Dec2020 at SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On 21Dec2020, it was reported that she had a ""weird very dry throat 3 hours after the vaccine at the same time that my arm started feeling sore."" She also commented that her coworker also had a dry throat 2-3 hours after the shot and thought it was just talking to his student too much. The outcome of the event was unknown.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020510803 same reporter, suspect drug, event, different patient"

"dry throat; This is a spontaneous report from a contactable consumer. This consumer reported similar events for two patients. This is the second of two reports. A male patient of an unspecified age received bnt162b2 (BNT162B2), via an unspecified route of administration on an unspecified date at SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On an unspecified date, it was reported that the patient experienced dry throat 2-3 hours after the shot and thought it was just talking to his student too much. The outcome of the event was unknown. Information on the lot/ batch number has been requested.; Sender's Comments: Agree with the reporting consumer, the reported dry throat reported as "" just talking to his student too much"" is considered unrelated to the administration of BNT162B2 for COVID-19 immunization,Linked Report(s) : US-PFIZER INC-2020510790 same reporter, suspect drug, event, different patient"

fatigue; headache; sore throat; feeling crummy; This is a spontaneous report from a contactable physician (patient). A 32-year-old male patient received first dose of BNT162B2, via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced fatigue, headache, sore throat, feeling crummy all on an unspecified date with outcome of unknown. Caller stated that he got the COVID vaccine on Saturday, got fatigue, headache and sore throat, kind of feeling crummy. Wanted to know if this was a side effect of the vaccine. Wanted to know if it was worth getting a test. Wanted to know will the test come up positive due to the vaccine. Wanted to know if he needed to quarantined. Wanted to know if what he got was good. Stated that this was his first dose. Information on lot/batch number has been requested.

chills; body aches; runny nose; This is a spontaneous report from a contactable consumer (patient himself). A male patient of an unspecified age received BNT162B2 (Pfizer-BioNTech COVID-19 vaccine), via an unspecified route of administration on an unspecified date at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced chills, body aches and runny nose on an unspecified date. All events were reported as non-serious. Outcome of events were unknown. Information on the lot/batch number has been requested.

Feeling a bit unwell/I am not feeling good; Chills; little weak; Little bit tired; This is a spontaneous report from a contactable consumer (patient herself). A 56-year-old female patient received the first dose of (Pfizer-BioNTech COVID-19 vaccine, lot# EK5730), via an unspecified route of administration on 20Dec2020 at single dose for covid-19 immunization. Medical history included allergy. Consumer stated, she guessed its environmental allergies. Concomitant medication included cetirizine hydrochloride (ZYRTEC) for allergy. Patient had the vaccine on Sunday and was feeling a bit unwell on 22Dec2020. Consumer further stated, because she had the vaccine the first shot on Sunday and today (22Dec2020) she was not feeling good, she was wondering it could be a side effect. When probed for the adverse events, Consumer stated, she was feeling like little bit like chills, little bit tired and a little weak. Consumer stated she got it from work at the hospital. Outcome of events were unknown.

"Developed sore muscle pain after the injection; Little more tired than normal/had to go to bed earlier than usual, around 10-10:30pm instead of midnight to 1am; This is a spontaneous report from a contactable other healthcare professional. A 46-year-old female patient received bnt162b2, via an unspecified route of administration on 21Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was asked that if patients develop sore muscle pain at site of injection, did that mean the body was mounting an immune response to the vaccine? The patient developed sore muscle pain after the injection on 21Dec2020, it continued 22Dec2020, but it is gone and better on 23Dec2020. It was also reported that the last few nights, she had been a ""little more tired than normal"". She had to go to bed earlier than usual, around 10-10:30 pm instead of midnight to 1am. The outcome of event tiredness was unknown; of another event was recovered on 23Dec2020. Information on the lot/batch number has been requested. ."

back pain has been getting worse; This is a spontaneous report from a contactable other healthcare professional (patient herself). A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. Medical history included back pain. The patient's concomitant medications were not reported. The patient back pain had been getting worse on 20Dec2020. The outcome of event was unknown. Information on the lot/batch number has been requested.

he felt weakness; fever/100.1 degrees; chills; nausea; tiredness; headache; This is a spontaneous report from a contactable consumer (patient himself). A 25-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140), via an unspecified route of administration at site of left arm (reported left shoulder) at 11:00 on 22Dec2020 at single dose for COVID-19 immunization. Before vaccination, patient was recently COVID-19 positive by a nasal swab COVID-19 test and had

ended his quarantine period a few days before receiving the COVID-19 vaccine. There were no concomitant medications. After vaccination, he had chills, fever, nausea, tiredness, and headache around 10:00 PM on 22Dec2020, and throughout today, he had been experiencing these side effects. The side effects all hit at once. He felt weakness this morning on 23Dec2020, and then had a severe headache and chills. He had a headache and fever of 100.1 degrees. he had taken a generic dextromethorphan hydrobromide guaifenesin paracetamol pseudoephedrine hydrochloride (DAYQUIL, liqui-gels for his symptoms. and about 30 minutes later, his symptoms dissipated, and he was good for 3 hours until the symptoms came back. The outcome of event 'felt weakness' was unknown, of rest events was not recovered.

sore throat and L ear pain about 22 hours after vaccination; sore throat and L ear pain about 22 hours after vaccination; This is a spontaneous report from a contactable pharmacist. A 48-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# eL1284), intramuscular from 22Dec2020 15:45 to 22Dec2020 15:45, single for COVID-19 immunisation. Medical history was none. The patient's concomitant medications were not reported. Vaccine location was left arm. No other vaccine was received in four weeks. The patient experienced sore throat and left ear pain about 22 hours after vaccination on 23Dec2020 13:30. No treatment was administered. The action taken in response to the events for bnt162b2 was not applicable. The events outcome was unknown.

Muscle aches; Chills; Fever little over 100; This is a spontaneous report from a contactable nurse. A female patient of an unspecified age received bnt162b2 (BNT162B2, lot number and expiry date were not reported), via an unspecified route of administration on Dec2020 at a single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient experienced muscle aches, chills and fever little over 100 on Dec2020 with outcome of unknown. Information on the lot/batch number has been requested.

"metallic taste in my mouth; tongue feels like it's being coated with something; This is a spontaneous report from a contactable consumer reported for himself. This 52-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot number: EL0140), via an unspecified route of administration at single dose on 22Dec2020 for Covid-19 immunisation. Medical history included cholesterol. Concomitant medication included colecalciferol (VITAMIN D [COLECALCIFEROL]). The patient stated, ""I get the vaccine about an hour ago and I didn't see anything stating with the side effects but I have got the metallic taste in my mouth and now my tongue feels like it's being coated with something"" on 22Dec2020 with outcome of unknown. No treatment was performed."

fatigued; disoriented; This is a spontaneous report from a contactable physician (patient) via a Pfizer sales representative. A male patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiration date were not reported), via an unspecified route of administration on Dec2020 at a single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. On Dec2020, the patient was fatigued and disoriented for 3 days. He felt fine now. Outcome of the event was recovered on Dec2020. Information on the lot/batch number has been requested.

when they were drawing the needle back out of her arm there was unusual amount of blood that came out; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs), by a contactable pharmacist. A male patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at 0.3 mL, single on 22Dec2020 for Covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient experienced that when they were drawing the needle back out of her arm there was unusual amount of blood that came out on 22Dec2020 with outcome of unknown. We don't know if we needed to re-dose or revaccinate her since it was unusual amount that came out. Information on the Lot/Batch number has been requested.

Headache; Muscle pain; Chills; This is a spontaneous report from a contactable consumer (healthcare medical assistant) reporting for herself. This 39 years old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot EK5730, expiry date 03Jan2021) on 21Dec2020, at single dose, for COVID-19 immunization. Medical history included thyroid (no other information reported). The patient was exposing herself to patients with COVID, she worked in a health care. Concomitant medication included an unspecified thyroid medication. The patient experienced headache, muscle pain and chills on an unspecified date in Dec2020. The reporter asked if she could take like paracetamol (TYLENOL). Events outcome was unknown.

general body aches; discomfort; This is a spontaneous report from a contactable physician reporting for himself, received via a Pfizer sales representative. This healthy 31-year-old male patient received the first single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 19Dec2020, for COVID-19 immunization. Medical history and concomitant medications were not reported. On 22Dec2020 the patient experienced general body aches during the day. Aches may have begun a day or two before 22Dec2020. Aches caused discomfort but did not interfere with ability to perform normal tasks / activities. Events outcome was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

her tongue felt a little weird; she got nervous; her arm was really sore; something about her tongue was like feeling lazy or heavy or something like that; she had like a taste of metal, like a lingering taste of metal; she was starting to feel a little weird, overall she was getting weird; This is a spontaneous report from a non-contactable consumer. An approximately 47 years old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on an unspecified date in Dec2020, at single dose, for COVID-19 immunization. Medical history and concomitant medications were not reported. On an unspecified date in Dec2020 the patient experienced her tongue felt a little weird, she got nervous, her arm was really sore, something about her tongue was like feeling lazy or heavy or something like that, she had like a taste of metal, like a lingering taste of metal and she was starting to feel a little weird, she just said overall she was getting weird. Last night, on 21Dec2020, the reporter was speaking to her sister who took the COVID vaccine and she said her tongue felt a little weird and she was starting to feel a little weird and she got nervous and she got up and started walking around just to like clear herself and just to make sure there was nothing going on. She said it took about half an hour, it happened about half an hour but sure went ahead. No treatment was given. Events outcome was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

sinus infection; This is a spontaneous report from a non-contactable consumer. A 52-years-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced sinus infection in Dec2020. The patient wanted to know the efficacy of the covid vaccine after getting the first dose. The outcome of the event was unknown. No follow-up attempts are possible. Information about lot/batch number cannot be obtained. No further information is expected.

anaphylaxis; This is a spontaneous report from a contactable physician reporting on behalf of patient. A patient of unspecified age and gender received single dose of BNT162B2 (batch/lot number and exp date not reported), via an unspecified route of administration on an unspecified date for immunisation. The patient's medical history and concomitant medications were not reported. On an unspecified date, the patient experienced anaphylaxis with a very protracted course requiring an epi dose for 4.5 days and was still in the ICU (date/s unspecified) following administration of the COVID vaccine. The physician would like to use a drop of leftover vaccine from one of the vials to do a future skin test after the patient is stable. They were unsure if they needed permission as this was standard practice in allergy to test afterwards but wanted to check in with the company. The outcome of event was unknown. Information about batch/lot number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylaxis cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Had a sore arm after receiving Pfizer's Covid 19 vaccine; This is a spontaneous report from contactable consumer received via a sales representative. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient experienced sore arm after receiving Pfizer's COVID-19 VACCINE. The patient outcome of the event was unknown. No follow-up attempts are possible, information about batch number cannot be obtained.

mild injection site soreness; This is a spontaneous report from a contactable nurse received via a Pfizer sales representative. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 22Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient experienced mild injection site soreness on Dec2020. The patient outcome of the event was unknown. Information about Lot/Batch number has been requested.

Sense of taste is gone; This is a spontaneous report from a contactable nurse reporting for himself. A 49-year-old male patient received the 1st dose of bnt162b2 (BNT162B2, Manufacturer Pfizer-BionTech), via an unspecified route of administration, on 20Dec2020, at single dose, for COVID-19 immunisation.

Medical history included asthma from an unknown date and unknown if ongoing. Concomitant medication included procaterol hydrochloride (PRO-AIR) as needed (inhaler) for asthma. The patient experienced sense of taste is gone on 21Dec2020 with outcome of unknown. The information on the lot/batch number has been requested.

Tongue feel tingly; This is a spontaneous report from a contactable consumer reporting for herself. A 27-year-old female patient received bnt162b2 (BNT162B2) (lot# EK5730), via an unspecified route of administration, on 22Dec2020, at single dose, for COVID-19 immunisation. Medical history and concomitant medications were none. The patient experienced tongue feel tingly on 22Dec2020 1 hour after vaccination with outcome of unknown. Therapeutic measures were taken as a result of the event and included treatment with Tylenol.

Sore throat; Headache; Left arm pain; This is a spontaneous report from a contactable nurse. A 39-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), intramuscular on the left arm on 22Dec2020 18:15 at single dose for COVID-19 immunisation. Medical history included she was COVID positive a few months ago. There were no concomitant medications. The patient previously got flu vaccine in Oct2020 for immunisation. The patient experienced sore throat and headache on 23Dec2020 and left arm pain on 22Dec2020. The outcome of sore throat and headache were recovering and left arm pain was not recovered.

Substantial back pain; This is a spontaneous report from a contactable consumer (the patient) A patient of unspecified age and gender received bnt162b2 (BNT162B2; Lot # EK5730) vaccine , via an unspecified route of administration on 21Dec2020 at single dose for Covid-19 immunisation . The patient medical history and concomitant medications were not reported. The patient experienced substantial back pain on an unspecified date with outcome of unknown.

experienced loss of taste; Cannot taste or smell red wine vinegar or bleach respectively.; This is a spontaneous report from a contactable other healthcare professional. A male patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 20Dec2020 at a single dose for COVID-19 immunization. The patient's medical history includes wears a CPAP (ongoing). Concomitant medications were not reported. The patient received vaccine 20Dec2020 and experienced loss of taste. He wears a CPAP. He went to the doctor on 21Dec2020 and was prescribed amoxicillin. The patient cannot taste or smell red wine vinegar or bleach respectivel. Outcome of the events was unknown. Information on Lot/Batch has been requested.

"threw up about 3 hours ago; fever which started last night; This is a spontaneous report from a contactable other healthcare professional (reporting for herself). A female patient (Age: 22; Units: unknown) received bnt162b2 (also reported as PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date were unknown), via an unspecified route of administration on 23Dec2020 11:30 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient got Covid vaccine yesterday at around 1130 am and had fever which started last night (23Dec2020) and ""threw up"" about 3 hours ago this morning (24Dec2020) and mentioned that it

was just on 1 occasion, but it was a lot. She wanted to know if it's normal. The outcome of the events was unknown. Information on the lot/batch number has been requested."

I had a headache quite severe and arm pain; I had a headache quite severe and arm pain; Dizziness; Hot flashes; This is a spontaneous report from a contactable consumer for herself. A 55-years-old female patient started to receive bnt162b2 (BNT162B2; Lot # EJ1685) vaccine , via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunisation . The patient medical history was not reported. Concomitant medication included liraglutide (VICTOZA). The patient had a headache quite severe, arm pain, dizziness and hot flashes on 19Dec2020 with outcome of recovered. The patient also stated that everything was fine by Sunday.

fever; This is a spontaneous report from a contactable other health professional received via Medical Information Team. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 23Dec2020 at 09:00 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient experienced fever on 23Dec2020. The patient outcome of the event was unknown. Information about Lot/Batch number has been requested.

lymphadenopathy in her cervical area; This is a spontaneous report from a contactable consumer (parent). A female patient of an unspecified age (reported as 59, unit unknown) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 22Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was reported that patient noticed lymphadenopathy in her cervical area yesterday (23Dec2020). Outcome of event was unknown. Follow-up attempts are completed. The following information on the batch number has been requested.

slight fever; cold; This is a spontaneous report from a contactable other health professional received via Medical Information Team. A 24-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 23Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient experienced slight fever and cold on Dec2020. The patient outcome of the events was unknown. Information on the lot/batch number has been requested.

Flushing after an hour of receiving the vaccine; This is a spontaneous report from a contactable consumer (patient). A patient of an unspecified age and gender received BNT162B2 (Pfizer-Biontech Covid-19 Vaccine) on 21Dec2020, at single dose, for COVID-19 immunisation. Relevant medical history and concomitant medications were unknown. On 21Dec2020, the patient experienced flushing after an hour of receiving the vaccine and on 22Dec2020, the episode was lasting quite a bit longer. Clinical outcome of the adverse event was unknown at time of this report. Information on the lot/batch number has been requested.

the injection site is extremely painful; bleed a lot; there was lot of blood, it was more than usual; I could barely move; Rest of the arm feels cold like really cold; This is a spontaneous report from a contactable nurse (patient). This 48-year-old female patient (weight 68.04 kg, height 160 cm) received BNT162B2

(Pfizer-Biontech Covid-19 Vaccine) on 22Dec2020, at single dose, for COVID-19 immunisation. Relevant medical history included asthma and allergy from an unspecified date and ongoing. Concomitant medications were none. On 22Dec2020, the injection site was extremely painful and bleed a lot; there was lot of blood, it was more than usual. She could barely move and rest of the arm felt cold like really cold. Patient put 3 band aids on injection site. Clinical outcome of the events was unknown at time of this report. Information on the lot/batch number has been requested.

Swelling reported around mouth and eyes; Swelling reported around mouth and eyes; rash; This is a spontaneous report from a contactable consumer (patient). A female patient of an unspecified age received bnt162b2 (Pfizer-BIONTECH COVID-19 vaccine), via an unspecified route of administration on 22Dec2020 16:30 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient previously took doxycycline in 2019 and experienced swelling reported around mouth and eyes and rash. On an unspecified date in Dec2020, the patient experienced swelling reported around mouth and eyes and rash. The outcome of the events was unknown. Information on the lot/Batch number has been requested.

"Armpit is swollen; This is a spontaneous report received from a contactable consumer (patient). A 45-year-old male patient (also reported as female, pending clarification) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number reported as ""It is hard to read this handwriting EIP5730. This one it might be A or K, EK5730"" (clarification pending), expiry date not reported), via an unspecified route of administration in gluteus, on 18Dec2020, at single dose, for COVID-19 immunization. Medical history included sexually transmitted disease (STD). There were no concomitant medications. The patient reported, ""I took vaccine shot (COVIDvaccine) on 18th and I noticed my, yesterday (20Dec2020), my armpit is swollen is like big hill, it is like swollen."" The patient stated, ""Armpits, under my arm is swollen."" The patient underwent lab tests and procedures which included blood work (unspecified date) with unknown results, the patient reported that this was for his STD. The outcome of the event was unknown. Information about lot/batch number has been requested."

body aches and fever; body aches and fever; This is a spontaneous report from a contactable nurse. A patient of unspecified age and gender received bnt162b2 (BNT162B2), via an unspecified route of administration on an unspecified date at SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On an unspecified date, it was reported that the patient was having body aches and fever. The outcome of the events was unknown. Information on the batch/lot number has been requested.

"ear ringing; This is a spontaneous report from a contactable consumer. A male patient of an unspecified age (age: 63; Unit: unknown) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 20Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received vaccine on Sunday 20Dec2020 and indicated experiencing ear ringing started Monday 21Dec2020 that has been persistent. The patient's blood pressure was ""fine"". The outcome of the event was not recovered. Information on lot/batch number has been requested."

I had body hives for 24 hours; This is a spontaneous report from contactable nurse (patient). A female patient of an unspecified age received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 16Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On an unspecified date in Dec2020, the patient had body hives for 24 hours. The patient recovered from the event on an unspecified date in Dec2020. Information on the lot/Batch number has been requested.

headache; nausea; cough; fatigue; This is a spontaneous report from a contactable nurse. A male patient of an unspecified age received bnt162b2 (BNT162B2, lot number and expiry date were not reported), via an unspecified route of administration on 18Dec2020 at a single dose for immunization. The patient's medical history and patient's concomitant medications were not reported. On 22Dec2020, the patient experienced cough and fatigue. On 23Dec2020, the patient got severe nausea, severe headache that continued through the night. The outcome of the events was recovering. Information on the lot/batch number has been requested.

"sore throat; This is a spontaneous report received from a contactable other healthcare professional (who is also the patient). A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date not reported), via an unspecified route of administration, on 21Dec2020, at single dose, for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient reported, ""I received my vaccine on Monday the 21st and on Tuesday (22Dec2020) I had a sore throat. I don't see on the fact sheet this as a commonly reported side effect. Should I get tested?"" The outcome of the event was unknown. Information about Lot/Batch number has been requested."

hurts to breathe or move; severe pleuritic pain at the right ribcage; abdominal pain; This is a spontaneous report from a contactable consumer. A female patient of an unspecified age received bnt162b2 (BNT162B2), via an unspecified route of administration on left arm on an unspecified date at SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. She experienced abdominal pain 14 hours after receiving the vaccine (went away after 6 hours). At 26 hours after she experienced severe pleuritic pain at the right ribcage (vaccine was injected on her left arm), saturation is at mid 90s, and it hurts to breathe or move. The outcome of the event abdominal pain was recovered, while unknown for the other events. Information about lot/batch number has been requested.

"flu like symptoms; fever 99.5 this morning; feel weak; fatigue; injection site pain; upper arm pain; breathing heavier now; This is a spontaneous report from a contactable consumer (patient). A 27-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at a single dose for covid-19 immunization. Medical history included COVID-19 in Jul2020. The patient's concomitant medications were not reported. On 24Dec2020, the patient experienced flu like symptoms, fever 99.5 this morning, feel weak, fatigue, injection site pain, upper arm pain and was breathing heavier. The patient took paracetamol (TYLENOL) for the events injection site pain and upper arm pain. Outcome of the events ""upper arm pain"" and ""injection site pain"" was recovering while the outcome of the events ""flu like symptoms"", ""fever

99.5 this morning"", ""feel weak"", ""fatigue"" and ""breathing heavier"" was unknown. Information on the lot/batch number has been requested."

Sore arm; This is a spontaneous report from a contactable nurse, the patient. A 39-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, lot number El0140), via an unspecified route of administration in the left arm on 23Dec2020 at 19:15 (at the age of 39-years-old) as a single dose for Covid-19 vaccination. Medical history included Fibromyalgia from an unknown date. The patient did not have any allergies to medications, or other products, was allergic to milk. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient was not tested for COVID-19 post vaccination. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 24Dec2020 at 09:30, the patient experienced sore arm. Therapeutic measures were not taken for the sore arm. The clinical outcome of the event sore arm was recovering.

Swollen painful axillary lymph node, malaise, constant headache, nausea for several days; Swollen painful axillary lymph node, malaise, constant headache, nausea for several days; Swollen painful axillary lymph node, malaise, constant headache, nausea for several days; Swollen painful axillary lymph node, malaise, constant headache, nausea for several days; Swollen painful axillary lymph node, malaise, constant headache, nausea for several days; This is a spontaneous report from a contactable consumer, the patient. A 50-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE) solution for injection in the left arm on 18Dec2020 at 09:00 (at the age of 50-years-old) as a single dose for COVID-19 vaccination. The patient was not pregnant at the time of vaccination. Medical history included celiac disease and hypothyroidism. Concomitant medications included levothyroxine sodium (SYNTHROID) and paroxetine hydrochloride (PAXIL). Past drug history included known allergies: minocycle, tetracycline and acetylsalicylic acid (ASPIRIN). The patient did not receive any other vaccine within 4 weeks prior to the vaccine. Prior to the vaccination, the patient was not diagnosed with COVID-19. On 22Dec2020, the patient experienced swollen painful axillary lymph node, malaise, constant headache, nausea for several days. No treatment was provided for the events swollen painful axillary lymph node, malaise, constant headache, nausea. The outcome of the events swollen painful axillary lymph node, malaise, constant headache, nausea was not recovered. Since the vaccination, the patient has not been tested for COVID-19. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

get hot with a feeling of an elevated heart rate /she also experienced similar reactions to her vaccine; get hot with a feeling of an elevated heart rate/she also experienced similar reactions to her vaccine; This is a spontaneous report from a contactable consumer (nephew of the patient). A female patient of unknown age received BNT162B2 on unknown date at single dose for COVID-19 immunisation. Medical history and concomitant medications were unknown. Approximately 3 to 4 minutes after injection site, the patient started to get hot with a feeling of an elevated heart rate. The action taken with BNT162B2 was not applicable. The outcome of the event swas unknown. Information for Lot/Batch number has been requested.

Diarrhea; Nausea; This is a spontaneous report from a contactable Other health care professional (HCP) (patient). A 20-year-old female patient, not pregnant, received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 23Dec2020 at 06:00 PM at single dose in Right arm for COVID-19 immunization, Lot number: EK9231. Medical history included covid. No known allergy to medications, food or other products. Concomitant medications included amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL) and trazodone. On 23Dec2020 patient experienced diarrhea and nausea. Patient received anti diarrheal as treatment. Since the vaccination patient had not been tested for COVID-19. Patient was recovering from the events.

hives all over her arms and legs; This is a spontaneous report from a contactable nurse. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 21Dec2020 at single dose COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient reported on Monday 21Dec2020 that she got the COVID-19 vaccine. Last night 23Dec2020, she got hives all over her arms and legs. The doctor was thinking of putting her on Prednisone and she wants to check to make sure that won't decrease the effectiveness of the vaccine. It was not provided if a sample of the product was available to be returned, if requested and if packaging was sealed and intact. The outcome of the event was unknown. Information on lot/batch number has been requested.

Right lower quadrant pain; back of throat tight and full and moved to tongue; fullness in ears; some itching and fullness on the right side near the back of her tongue; This is a spontaneous report from a contactable nurse (patient). A 50 years old female patient (weight 81.65 kg and height 173 cm) received BNT162B2 (Pfizer-Biontech covid-19 vaccine, Lot. EL1284) on 22Dec2020, at single dose, for COVID-19 immunisation. Relevant medical history and concomitant medications were none. It was reported that she had no allergies to anything. On 22Dec2020, the patient experienced a sharp pain in her lower right quadrant of her abdomen, then her ears started getting full, then the back of her throat started getting tight and full and moved to her tongue. It was also reported that she started feeling some itching and fullness on the right side near the back of her tongue. Her airway was intact. Nurse clarified that her reaction last night after the vaccination all happened within 12 minutes of receiving the shot. She went to the emergency room for observation and was treated with epi and Benedryl. She went home after a couple of hours. Clinical outcome of the events was recovering at time of this report. The adverse event, right lower quadrant pain, was assessed as serious (medically significant).; Sender's Comments: By close temporal relationship ('within 12 minutes of receiving the shot') and absence of factors which may provide an alternative cause, the company cannot exclude a contributory role of the BNT162B2 administration in the development of the serious event reported as 'sharp pain in her lower right quadrant of her abdomen'. The impacts of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Itching - injection site and left side of body, throat, back and neck Slight soreness off & on - inj site. Sore body, tired, headache

Fatigue x 3 days, SOB x 4 days (history of asthma; used inhaler multiple time daily). Headache - motrin/Tylenol x 7 days. Upset stomach x couple of days. Arm, red swollen, hard, painful with some itching x 1 wek.

Started feeling unwell Monday night and sick by Tuesday night. Extreme fatigue Tuesday AM, nausea & fatigue & headache. By Tuesday night, very sore throat and extreme fatigue. Wednesday very congested, sore throat, swollen and painful lymph nodes. Went to urgent care & swabbed for COVID and strep. Both negative (tests were rapid and PCR). Since Wednesday continuing through today 12-28-20 - congestion, sore throat, coughm, swollen painful lymph nodes, some GI issues, headache, and fatigue. Return to PCP on 12-29-20

- light headedness, headache started later Some itchiness but did not last BP - 118/84 Headache not resolved

itchiness around vaccine 5-10 mins - resolved with cold compress intermittent dizziness (did resolve) + headache (did not resolve) at 15 mins - 60 mins

On December 23rd, around 5:30-6:00 p.m. I received the Moderna COVID-19 Vaccine EUA at the Vaccination Site. I did not have any adverse symptoms until the night of December 24th around 11:30 p.m. It started that night with nausea. I initially thought it was something I had eaten. I went to bed feeling nauseous but fell asleep. I slept through the night, and work up the next morning, December 25th, still nauseous. I did not ever vomit, even though I very much thought I would. As the day progressed, I developed chills and a low-grade fever. This continued through the day. The nausea was terrible! I could not eat anything because the mere thought of food made me feel sicker. I drank very little as well. I also developed flu like symptoms. I could not stand to be touched, as my skin was highly sensitive to touch. (The same feeling you get if you have a bad case of the flu.) I used a cold wet washcloth all day, as I felt hot, but my fever never went over 99.7 degrees. I eventually fell asleep that night, but I was restless. I woke up several times to noises in my home. Each time it felt like my body was trembling or my heart was racing or fluttering, but these episodes did not last long, nor could I tell you for sure that was exactly what it was. I just felt shaky. Each time I fell back asleep. The next morning, December 26th, I awoke, and the nausea was gone, but the chills and the fever were still hanging on. I just felt bad! I used a cold wet washcloth on my forehead, face, and neck all day. I did eat maybe 5-10 dry saltine crackers and drank a glass or two of sprite. As the day progressed, I felt worse!! The nausea came and went all afternoon and into the night. I eventually fell asleep around 10-11:00 p.m. I slept all night. I awoke the next morning, December 27th, initially feeling nauseous again. I made it a point to drink a lot of Gatorade and sprite throughout the day. I found that I felt some better when I sat up but felt worse when I laid down. So, I sat for about an hour on the side of my bed. I eventually got up and walked around my house. I began to feel better and thought I might be able to shower and possibly eat. So, I did? and it was like my body did a 180! I quickly felt so much better. I ate some soup and drank some sprite. I didn?t completely go back to my normal routine, but I did stay up the remainder of the day and did not get sick. The next day, December 28th, I felt like myself again and pretty much went back to my normal routine. The most interesting side effects that I had that are not mentioned in the CDC COVID-19 Vaccine common side effects are: *My feet were ice cold, but they were wet with sweat

(I put on socks to try to warm them up, but it did not help as my socks would get damp thus making my feet colder) *My tongue became coated white (I did not lose my sense of taste or smell) *My skin felt hot to me, even though it was not hot to the touch (I used a cold wet washcloth for 2-3 days straight)

1 hour after vaccination, itchy eyes, swollen lip, tickle/scratchy throat. Went to ED. Took 25mg benadryl. Observed x 5 hours. Symptoms improved.

Headache the evening after , migraine overnight, soreness at the injection site, fatigue the next day, mild myalgia

Dizziness, itching of entire arm for days, migraine and nausea, sore muscles and fatigue for days, sinus pressure and pain, small rash at site

Started with lower back pain in the morning when I woke up. Then my back and hamstring muscles tighten up. All that went away as the day went on. Just a lingering discomfort remained. That night I was awaken by 10/10 dull pain in both my hips. I don?t have arthritis, but I imagine that is what the pain must feel like. That eventually subsided over the course of the night and then the following morning I woke up with a stronger lower back pain and major stiffness in my hamstrings, but the hip pain was gone. Throughout the day the pain would come and go and move up and down my back and along my spine. It was the strongest on the night of the 22 and has since gotten weaker and the tightens in my back and hamstrings has since left. Now I just get random aches throughout my back that come and go during the day. Yesterday, the 27th, I was hiking down a hill and the impact from that caused instant discomfort in my spine, it felt like it was compressing like an accordion. Never had this happen before. After that my back was sore for hours. Today, the 28th, I tried jogging and the spinal discomfort was instantly there. Went about thirty yards before I stopped and my back has been aching down my spine for hours. Also been experiencing a couple mild headaches through the day since the 22nd. This also has fired up the endothelial dysfunction in my heart which causes some strong chest pain throughout the day. I?ve gone back in my heart medication, so hopefully that will fix that issue. I will be contacting my cardiologist in regards to this and seeing if the vaccine can affect that.

Fever, chills, bodyaches

Burning eyes bilateral one hour after injection. Sore throat 4hours after injection.

Hives on neck. Swollen throat. Nausea.

Numbness and tingling all the way from injection site to the pinky and ring fingers foe few days. Nausea since injection off and on.

Fever and body aches. It feels like when I had covid a month and a half ago.

About 24 hours after the vaccine moderate soreness/pain in the area of the injection on the left upper arm. It disappeared 48 later without treatment. Also, 48 hours after the vaccine, a slight pain in the right ear/upper right mandible, especially when chewing, presented itself. it disappeared without treatment three days later, about five days after the vaccination.

I recieved vaccine on 12/22 at 1500 and awoke 12/24 at 0500 with a broken blood vessel in my R eye that did not involve pain, blurred vision or irritation.

headaches, severe myalgia, fatigue for over 24 hours

fever, nausea, vomiting fatigue starting 12/25 2 hrs after vaccination, fever 100.8 starting 12/26 at 2 pm, improved with acetaminophen, emesis x 1 around 9 pm, symptoms resolved by 12/27 9 am

Headache, lightheadedness, nausea, pain at injection site

Tiredness first thru day 5 Injection site soreness next for 24 hours Fever and chills at 12 hours thru day 6, highest fever 101.5 at day 5. Sweating and skin paleness day 4 thru 5. Headache at 12 hours thru currently, piercing behind right eye day 3 thru 6, eye watering on day 5 during worst fever, occasional nausea when headache is worst. Fatigue at 12 hours thru day 6.

Malaise, persistent fever 99.3-101.8 defF. Chills, diarrhea, body aches. All since the vaccination day to present.

The day after getting the vaccine I started having an intermittent tremor in my lower lip. This has continued through 12/29/20.

Within minutes of receiving my first vaccination, I developed a metallic type taste in my mouth. Currently experiencing altered smell and greatly reduced or altered taste.

Numbness and swelling of left upper lip

Fever 101 the first night , achy muscles and occasional dry cough

Woke up from being asleep with moderate pain in injection site, mild headache that has rapidly intensified into a moderate headache, body aches and chills began around 130 am and have continued. Took advil around 1 am for headache and has not helped. Low grade temp was recorded at 150 am of 99.9.

Presyncopal with hypertension and tachycardia . Resolved after observation . Was given oral Benadryl

Mild Bell's Palsy affecting right side of face. Mild assymetry noted, mild decreased muscle strength and tone, and slight right eye irritation. Symptoms with minimal progression by day 2. Started course of Prednisone on day 3 (12/28/20.) Currently symptoms persist but early in treatment course.

Left arm soreness, Chills since around 1:30pm on 12/28/2020, nausea around 4:00 am, low temp fever 99.1

Patient experienced a syncopal episode after receiving the COVID-19 vaccine. Patient transferred to the emergency department. Upon arrival to the emergency department, patient was awake and alert with GCS of 15. Patient did state she felt a little dizzy. Patient denied any nausea, vomiting, or abdominal pain. Patient received IV fluids. Patient was reassessed and stated she felt significantly improved. Patient discharged at 1300 on 12/23/2020.

Moderna COVID?19 Vaccine EUA 10 minutes after vaccine : injection site pain, feeling warming of entire body. 1 hour after vaccine: fatigue, worsening injection site pain. 15 hours after vaccine: woken up to mild head ache, mild body ache, moderate chills, restlessness. General malaise. Worse injection site pain

Within a couple minutes I had a metallic taste. Within about 15 minutes of vaccine my lips started feeling tingly and numb, after 20 minutes it spread to my mouth, nose area and eventually my whole face. My face felt numb. My eyelids felt like they were turning in. I was advised to take a Benadryl. I took one and within 20mins symptoms improved. After about 40mins the numbess started to come back. I then realized my Benadryl had expired in July 2020. I went back to vaccine site and they gave me pepcid & advised to take more Benadryl. I took pepicid & went to pharmacy & got new Benadryl. Within about 20 mins my symptoms improved. I was advised to take another pecid and did so that evening. I stayed with the metallic taste for another day. Symptoms have not returned.

Slurred speech, crooked walking, slow thought process, unable to spell words that I've never had a problem with before.

Patient reported flushing in the face, tingling on the left side down the left arm and then began to break out into hives on their chest. The individual also had a rapid heart rate and needed a wheel chair due to feeling slightly faint.

start time 03:00 am 12/29/2020: headache, neck pain, fatigue, injection site pain - treating with over the counter ibuprofen and rest

Headache, body aches, chills

Cold sore

Generalized Warm sensation x 3 min

"5 to 10 minutes after receiving vaccine started feeling ""drunk"", anxious, paranoid. Muscles became mildly tense and teeth clenched. The physical aspects only lasted a short time (10-15 minutes)the anxiousness paranoia and ""drunk"" feeling lasted approximately another hour. An hour after receiving vaccine started experiencing nausea and vomiting with extreme muscle soreness that was generalized and fatigue. After napping the nausea and vomiting resolved. Woke up shivering in cold sweats and shivering. Began experiencing forgetfulness and having problems thinking correctly. Issues with finding words, conversing and conveying information to other people. Shortly after waking up began experiencing severe back pain in lower to mid left back. Pain was shooting and it did not seem to matter on positioning. Back pain has resolved. Day 2 still experiencing severe fatigue, extreme muscle soreness, forgetfulness and not thinking correctly. Having issues finding words to use and communicate. Thinking process seems slow. Occasional cold sweats and shivering. Day 3 still feeling of forgetfulness, unable to find words and communicate correctly, slow thinking process, occasional cold sweats and shivering, occasional bouts of anxiety (lasts only 2-3 minutes at a time), short bouts of shortness of breath with exertion resolved quickly. Some muscle soreness seems to be resolving."

shanking chills (fever taken = 101.9), body aches, fatigue, nausea & vomiting

very bad palpitations for a short time frame

Parathesia in left foot. Did not seek medical treatment yet.

swelling and tingling sensation of left eyelid

Injection sight began to become sore around 6:30pm on 12/28, which kept me up all night with the soreness worsening. Throughout the night, I had severe chills, which is not normal for me.

3 Hours after injection left arm swollen from shoulder to elbow. 2 days after injection arm still swollen and rash on 20 percent of left arm

Pt c/o mottling of palms, tingle in arm; pt became hypertensive with headache within 15 minutes of vaccine; symptoms resolved and pt dc from ED

12/24 @3pm - tingling and heat sensations throughout body, tingling in mouth. Sore arm. 12/25 @5am - total body aches, joints, bone pain , mild headache, increased heat and tingling sensation to face, bright red cheeks. Body temp normal to low-grade 99F. Fatigue. Self-treated with Tylenol x3 doses. 12/26 - body pain resolved, heat and tingling sensation continued until late morning. Arm was red/hard/itchy 12/24 through 12/26.

40 min after vaccine was given my face turned red and tight on left side. Then something happened next day. Face on left side felt weird like tight skin and a little numbness on left side that comes and goes on left side since and a little swelling on left side of face.

Feels extremely fatigued, body weakness, and a migraine.

Lumbar back pain for 12-14 hours

Pt experience leg cramps post vaccination.

loss of smell

Pt became diaphoretic, tachycardic, nauseous 10 minutes after vaccination; juice given; symptoms resolved

Around 2pm, developed itchy, blotchy, red rash on left elbow, spreading to neck and face, lips began to tingle, went to ED, ED provide PO Benadryl, discharged home, symptoms resolved.

C/O of right sided numbness and tingling. No SOB, NO Diaphoresis, No Chest pain. Pt transferred to the ED in no distress.

HEADACHE, NAUSEA, VOMITING, FATIGUE

Pt had tachycardia later in the evening after vaccination and tachycardia next morning

Worsening itchy rash on the belly (20cm x 13cm). loratadine 10mg Bid, triamcinolone 0.1% cream applied QID. Limited efficacy. Affecting sleep and daily activities.

Lightheadedness and fatigue. The following afternoon nausea, chills, body aches, severe headache and fever of 101F which lasted till Sunday night 12/20/2020. Monday 12/21/2020 the patient started experiencing hot rash all over the body, and burning Itching two days afterwards and lasted Friday 12/25/2020

DIZZINESS

At 30 minutes after vaccination patient informs she felt palpitations, blurry vision and headache. The day after she noticed a lump on her left supraclavicular area, no other swelling noted.

1 hour after administration the left side of my face is numb, specifically my cheek

Patient stated she felt tingling/scratchiness in throat. BP 96/65, Pulse 71 , Pulse Ox 99%. Shortly afterwards, patient stated that her throat was feeling a little more swollen but that she did not want to go to convenient care. Patient stated she was fine and she didn't want conveneint care doctor to come see her. Patient was talking and no dyspnea noted throughout. Kept for 30 minutes to monitor. At end of 30 minutes, patient started to itch and wanted to go to convenient care. Went to convenient care, received methylprednisolone 125 mg IM x 1 and diphenhydramine 50 mg PO x 1. Stayed for 20 minutes and reprted relief from treatment. Discharged to home.

Pfizer-BioNTech COVID-19 Vaccine Soreness at injection site, generalized body aches and malaise, headache/neck ache, low grade fever (99.3), mild chills.

Awoke with Flu-like symptoms: nausea, vomitting, fatigue, muscle soreness

Received SARS-CoV-2 Moderna vaccine in left deltoid. Pain at injection site and developed stiff/sore trapezius about 12 hours after injection. Got worse for about 12 hours after that before starting to get better. Fully recovered after 3 days.

localized reaction at site of injection redness and itching

On 12/26, I woke up with a headache, nausea, and feverish without a temp. They resolved by 12/28. I was tested for Covid on 12/26, results pending

throat tightness

Pain, burning, redness and heat at injection side and upper arm to shoulder

Extreme fatigue, headaches, and body aches since day of vaccination given. Taken Tylenol. Symptoms go away for couple hours and then come back.

"I had tingling/swelling in tongue and body itching for 30 minutes post vaccine, then felt light headed/dizzy and almost passed out. Then about 8 hours later I noticed my arm was swollen, hard, red, puffy and hot at injection site. It continued to get worse the next day. I was extremely tired and felt "" like I was hit by a truck "" for almost 2 days later. Pain in arm continued for a couple days later."

After having covid 4 weeks ago, I got the covid vax. After an hour, arm was sore. I went through my work day. Got home and was tired, showered, and was tired. I woke up at 1am and was shivering and shaking . It was intense. I had a better reaction with the actual virus. The CDC stated that I should be 10 days out from having covid, to get the vaccine, and I did so. My arm is swollen, there is a lump where the injection was. I did not take any thing for pain or symptoms.

Extreme fatigue. I slept close to 24 hours, woke for about 10 min and had horrible muscle/joint aches. Returned to bed for another 5 hours. Had a lingering headache (pain behind my eyes) for about 2 days afterwards.

Received vaccine on 12/28/2020 at 12:30 PM. Experienced injection site soreness by 6:00 PM. Experienced fever and chills in the night at 02:00 AM. On 12/29/2020 @ 06:00 AM I experienced perfuse sweating. At that time I took (2) Tylenol 500 mg tablets PO. Shortly thereafter the symptoms resolved.

Pt received injection in left arm. Pt had no initial pain. Approximately 5 minutes after injection became flushed, started seeing spots, felt like he may black out, felt numbness and tingling in the left arm that radiated up into the left side of the face and jaw.

Began with feeling fatigued around 6pm, had chills, palpitations and severe body aches with 101.3 fever. Fever resolved with Tylenol . Woke up then next morning (24 hours later) still with low grade 99 fever with weakness and fatigue. Fever spike again at 1pm 101F. Tylenol resolved fever again. The next day (48 hours after) fever free still with general aches and fatigue.

About 9 hours post vaccine, started to get extreme fat. 12 hours post vaccine, started getting chills and body aches. About 15 hours post vaccine, woke up with worsening body aches, headache, chills, nausea and a fever of 101.4. Took 600mg Ibuprofen at this time. 22 hours post vaccine, still having body aches, headache, nausea and temp 100.2. Took another 600mg Ibuprofen. 23 hours post vaccine, I feel exactly how I felt when I was infected with Covid-19 a few weeks ago. Temp 100.5.

dry cough, headache, body ache, feverish the following morning

rash all over chest to neck and lower face, started resolving on own, but took allergy med before bed. Mostly gone in am

Employee reported feeling shortness of breath and chest discomfort. Employee was taken to ED for evaluation.

Noted to have difficulty swallowing approximately 1-2 minutes after injection. Palpitations noted as well as being shaky. This lasted about 1-2 hours after. Difficulty swallowing did not worsen. Became light headed for about 1/2 hr after above symptoms subsided. Then all symptoms disappeared. Towards evening soreness in right arm started... throughout night soreness increased to the point of alternating Tylenol and naproxen. Soreness continue to increase throughout 2nd day... 3rd day soreness lessened and today(day4) almost nonexistent

I received my vaccine on 12/22 around noon. I woke up at 4am this morning 12/25 with tingling in my lips and tongue, in addition to the left side of my face being swollen. Not entirely sure what these side effects are from exactly but thought it best to report my experiences I was hospitalized on 12/25 to 12/26 because my reaction did get worse. I was experiencing numbness on the left side of my body and swelling, numbness, and redness on the left side of my face as well. The hospital didn?t really give any explanations but I?m only now have mild swelling and numbness on the left side of my face. Everything else has resolved at this point in time.

Slight lip swelling sensation, scratchy throat, her skin felt itchy (no visible hives).

muscle pain in both arms, R worse than L. Slight dizziness for first 4 hours after vaccine. On and off minor headaches for the first 48 hours post vaccine

tiredness, extreme nausea, pain in arm of injection, horrible headache

At 1234 am I developed fever, chills, severe night sweats and whole body aches. It lasted approx. 6-630 hours. I also have had increase in GERD/acid reflux since about 2 hours after the injection.

Achy body Extreme tachycardia (HR in the 180s). Unable to get below 90. Uncontrollable shaking Migraine

whole body hives, responsive to diphenhydramine

Became diaphoretic a few minutes after receiving the vaccine. Said his throat was 'scratchy' and was dizzy when he stood up. Sent to ED for evaluation. Discharged from ED without incident.

chills, achiness, diarrhea, fatigue

Moderna COVID-19 Vaccine EUA Experienced injection site soreness, Body and Joint aches, Fatigue, Sleeplesness

"Two minutes after vaccine was give to left arm was painful and swelled about 1"" diameter at injection site 2-3 mm out from skin. No redness present."

body hives

Left upper additional pain and left shoulder pain. Palpable mass under left anterior ribs. Tiredness.

Patient experienced episode of severe leg cramping on 12/22/2020 that began in early AM and lasted until noon. Patient experienced another episode on 12/24/4040 of cramping that began in the legs and went up to the head that felt like muscle tension. This episode also began in the early AM and lasted until noon. However, patient did have residual minor leg cramping. Patient did follow-up with his PCP, who obtained bloodwork on patient. On 12/28/2020, patient states all symptoms have been resolved.

58 y/o female with history of severe seafood allergy presented to ED on 12/24 at 933am with hoarseness, sensation of throat closing. Stated received Covid vaccine at 0730 this morning. Patient took claritin and prednisone prior to vaccine and 20 minutes prior to arrival to ED took benadryl. Symptoms

have improved since arrival to ED. Presenting with symptoms of difficulty swallowing. No difficulty breathing, no itching, no rash, no swelling and no wheezing. One dose of Prednisone 40mg tablet given orally at 0955am. Patient monitored and then discharged to home at 1027am with prescription for Prednisone 20 mg by mouth daily for 4 days and to follow-up with primary physician.

waited 20min. got up to leave and while walking out had a little side step/unbalance moment. thought nothing of it and got to car. waiting in car for an extra 10 min. left hand started tingling. same tingling like if it was asleep and was waking up. started to drive home, on the way home, noticed tingling in left foot and left side of face. neck on left side felt like someone had hit it. about 50 min after receiving injection, was at home, injection site and whole deltoid was numb. left side of face, left foot and left ear all felt numb but with tingles. I had stopped timer after 2 hours. tingling and numbness subsided sometime after 2 hour of receiving vaccine. Today, everything feels fine. Injection site just feels like I got a shot, can barely notice it.

Pain at time of administration, right upper arm, continued throughout day. Nauseated appprox, 0100 29 December. Still Nauseated at 0815, Pain in upper arm increased.

Cold Chills Muscle aches Heart rate 110-150BPM for 5-6 hours that started approx 36hrs after the vaccine was administered Axillary swelling the size a baseball, swelling was also noted in left pectoral muscle and in left shoulder blade

Dose given was 1mL vs. 0.5mL

Pain at injection site, trouble sleeping.

"Tingling tongue and numbness and tingling on R cheek and jaw; R jaw line pain and R sided teeth pain--pain rated 8/10 initially; Provided 50 mg of Benadryl orally; tingling tongue symptom resolved; after 45 minutes pain 2/10 with ""mild"" jaw and teeth pain and R-cheek numbness and tingling"

headache, lower back pain, inject local site achiness.

I received the covid vaccine on 12/23. Since then I have had a fever, chills, body aches, sore throat, headaches, sinus pressure and have been very fatigued. My symptoms seem to come and go, they are currently less severe, but last night a had a fever of 103.2 with chills and shakes.

Patient became dizzy / weak a few minutes after getting the dose. Had slight flushing on chest and rapid heart rate. ER physician feels it is likely vaso vagal response and not a medication reaction. Patient recovered quickly.

The employee's primary care provider's office contacted our office this morning saying that she received the vaccine on 12/22/2020, on 12/26/2020 she began experiencing facial drooping, came into their office on 12/28/2020, had MRI performed (that was negative), and was diagnosed with Bell's Palsy.

Intermittent Fever, cold sweat, cough, congestion, fatigue, stomach upset, loss of appetite, and diarrhea resolved with Tylenol, PO fluids, and light diet of soup and saltine crackers

Already did: 2:30 p.m. until about 6:30 p.m., leg cramps and unusual joint pain in hip and knees. Subsided. From about 10 pm to 8 am, localized discomfort at injection site, on upper left arm.

1mL was given instead of 0.5mL

headache feeling unwell pain and swelling at injection site muscle pain fatigue fatigue

Patient presented to the ED ~ 14 hours post dose. Chest discomfort, dyspnea, fatigue, and malaise. Had prolonged covid hospitalization April-May. Had some sinus tachycardia between 110 and 117. Administered methylprednisolone 40 mg IV. Was discharged from the ED with no outpatient prescriptions.

pt was given 1mL instead of 0.5mL

Vomiting and diarrhea for 2 days. Chills, body aches, sore throat on left side only, ear ache left side only, low grade temps up to 99.9 F taken temporal, lasting 4 days.

Around 4:30 pm on day if vaccination I started feeling nauseous and had the chills. Then around 8 pm my arm became extremely sore to the point where I could not lift it without 10/10 pain and when I touched it my pain was also 10/10. As the night progressed my body not only had the chills but I got a temperature of 102 and I was on fire. I could not cool down until my significant other put cold compresses on my forehead chest and arm. I felt all of those symptoms until about 5am when my fever finally broke. The next day I continued to have a headache and mild soreness in my arm. Then that night I had mild chills and night sweats and a mild temperature. I was therefore out of work for two days following the vaccine.

Alergi

Throat tightness and tingling , itchy mouth within 15 minutes post-vaccination. Received diphenhydramine 50 mg PO and hydrocortisone 20mg PO. VS stable throughout observation period with O2 Sat at 99%. D/C'd in stable condition. Will be evaluated by Allergy Clinic for Dose #2 recommendations.

Extreme fatigue; intermittent episodes of vertigo; intermittent episodes of tachycardia - all started on 12/28 at approximately 7 p.m. The tachycardia appears to be resolving today; the vertigo remains and the fatigue continues. Localized reaction has lessened.

MUSCLE PAIN, CHILLS, LOW GRADE TEMPERATURE, TIREDNESS, HEADACHE

Ibuprofen

Ibuprofen

Patient woke up in the night, walked downstairs to get water, walked back upstairs and became nauseous, laid down and became unresponsive. Eyes were open but not focused, breathing was irregular and snoring-like. this lasted less than a minute and he regained consciousness.

red, raised, hard, swollen. painful area at the site of injection. Area of swelling was approximately 3 inch circular shape. Treated with ice pack and Tylenol for pain After about 2 days, the pain and swelling gradually subsided

I received the injection at 11:00am and around 4:00p, I began to feel like my heart was racing. It continued until about 7p. At one point I thought I should go to the Emergency room but I began to feel better. That was about an hour and a half later but then it started again increasing but by 7p, it went away.

Swollen and discomfort left armpit lymph nodes

Day of injection uncontrollable diarrhea for 36 hours Saturday and Sunday night- nausea , abdominal pain, Sunday I starting vomiting Monday went to the hospital

Day 1: Arm pain 5/10, neck stiffness, tension headache 5/10 (occipital and temporal) Day 2: Arm pain 5/10, neck stiffness, throbbing headache 5/10 (occipital and temporal) Day 3: Arm pain 1/10 Day 4: no symptoms

I broke out in hives Sunday morning. The convenient Care would not see me and sent me to the ED. I was given a muscle relaxer and benadryl. I was prescribed prednisone and benadryl. It took 3 days for the hives to go away. I still have spots and swelling.

Moderate muscle pain/soreness of left arm- started approximately 6 hours post injection and present even after 24 hours

Nurse at vaccine clinic injected subcutaneously and did not reach the muscle. Did not have information to know what to do. Observed patient who was asymptomatic.

Panic attack following, both cheeks red. symptoms left. 6 hours after L side of face started swelling, pain at cheek bone followed by numbness of entire left side of face. numbness lasted for 5 hours. Today face is still swollen. I went to the ER and was kept for two hours for observation, no intervention

After I received the vaccine. Approx 24 hours after the shot, I started having a headache. As my headache got worse, the ache muscle and joint pain came. When the headache started, I started feeling really tired. I was feeling like I was having flu symptoms. I started taking IB prophen on Wednesday morning. It lasted aprox 2 days, and I started feeling better on Saturday morning. Symptoms lasted about 3 days. Symptoms got better with IBprophen.

12/24- fatigue, joint aches, cough, diarrhea, headache 12/25- fatigue, less cough and aches, headache, some diarrhea 12/26- same 12/27 slightly better 12/28 loss of taste and smell. Positive Covid nasal swab test 12/29 headache, cough, fatigue, diarrhea

7:48 am hot, difficulty swallowing, numbness/tingling lips, raspy/hoarse, 50mg benadryl given- symptoms did not resolve so sent to ER, Initial Blood pressure 166/117 Given 50mg IV benadryl, IV dexa

methasone, and IV pepcid Difficulty swallowing resolved in about 1 1/2 hours, numbness and tingling lips resolved approximately 8 pm 12/28/2020 continued raspy/hoarse and day 2

30 minutes after receiving the vaccine I developed pain in my left upper gumline, swelling started and over the next 12 hours included my entire left cheek. I sought medical treatment and 12/24/2020 was prescribed prednisone 50mg PO daily for five days. The swelling has decreased but not resolved, the pain has resolved.

Dizziness/Headache Swollen right elbow (tender to touch) Fatigue High Temperature

12/27/2020 joint pain, body aches, sinus congestion, chest and throat soreness; . l cheek numb, sluggish.; left eyelid more raised and sluggish than other 12/28/2020; l armpit swollen armpit.

Nausea; vomiting; diarrhea; fatigue; headache

She was vaccinated 12/23. Initially she had some soreness, nausea, diarrhea, extreme fatigue, but no fever. Two days later, she developed a diffuse erythematous rash on her bilateral arms, chest and neck with sharply delineated white patches. She also describes that her hands were purple, almost cyanotic appearing. The rash was not itchy or painful and lasted about 6 hours before going away completely.

Vaccine administered via SubQ pinching technique in upper left posterior arm, midway between shoulder and elbow. NOT an IM injection. Site red, swollen and tender. Concern raised for less immune response. No training given to administration staff by hospital clinic.

paresthesia along ipsilateral arm (ulnar nerve distribution) a few minutes after vaccination soreness at injection site, mild headache, & lightheadedness 1-2 hours after vaccination chills 4 hours after vaccination (but no fever) * most symptoms improved/resolved 8 hours after vaccination

Moderna COvid-19 vaccine eua

6 days after receiving my initial covid vaccine, I began to develop an itchy rash. The rash started in the morning of 12/28/2020, beginning with itchy, red ankles. Progressed over the next 8 hours over my whole body. Red, raised, itchy patches. No other associated symptoms and no other means of explaining allergic reaction (no new meds, foods, clothing, detergents). Left work, took Benadryl and a shower. Rash subsided. I feel fine today.

Developed headache rated 9/10, feeling hot and light headed.

Pain both right and left arms and left side of neck with tingling of the lips, palms of hand and soles of the feet. Mild headache. Mild chest pains at 1900 same day. Performed breathing exercises and yoga. Took a 1.5 mile walk. Took 1000mg of Tylenol and 12.5mg of Benadryl at 1900. Pain was relieved but tingling around the mouth persist even today 12/29/20 with leg muscle tingling and stiffness in the left neck . I had to take off work 12/28/20 due to severe pain left neck. Same symptoms I have when I take the tetany vaccine.

Moderate arm pain and swelling at site of injection.

Patient reports freezing and sweating for 2 days after immunization 12 days ago. Body aches and headaches have persisted since then. Also reports numbness going down left arm to all fingertips since vaccine.

2-3 minutes after injection, experienced what felt like a drop in blood pressure, tachycardia, tongue tingling and taste, and for a few seconds, my nose stuffed up but then all symptoms went away within a few minutes. I felt completely fine 5 minutes later.

Went to hair appointment and water aerobics after vaccination. Arm started to hurt a lot. Went to bed at 10pm and at 12am was feeling really hot with a headache, chills, and shivering. Temp was 99.4.

trouble breathing

ON THE THIRD DAY I FEEL LIKE PINS ON MY BACK AND A SLOPE CAME OUT OF MY NOSE AND ON MY LIP. I TAKE BENADRYL TABLETS 50MG TWO TIMES.

muscle pains, shakes, 100.3 temp, headache, nausea

Fever, body weakness, headache, sinus drainage

Drooping of the Right side of her face. Started 12/26/20. MRI to rule out Stroke negative. Diagnosed with Bell's Palsy. RX with a Prednisone taper and Valtrex.

called to observation area 10:50 - report that patient passed out, was on stretcher, reported did not fall, 'came to' in less than 1 minute. 108/68, P 70 and strong, alert and oriented. states feels anxious about flu shots. felt lightheaded, hot, sweaty, skin pale and warm. at 1052 rapid response arrived. states feeling better, had had food/fluids today. assessed that not allergic response - vaso/vagel. 1055 sat up and feeling good, skin pink. 1100 to chair. 1115 left area walking.

Patient felt lightheaded, flushed and nauseous.

Approximately 1 and 1/2 hours after the injection, her tongue became thick, lips swelled, chest pain, short of breath and headache. Injections site was red and swollen. She was traveling out of town and called an urgent care and was advised to take 50 mg of Benadryl q 4 hours till swelling was gone. She took it for 4 days. She saw here PCP on 12/21/2020.

Didnt feel good, soreness on arm Monday I had chills , Unconformable at work Took Antibiotics Chills Possible UTI the following Wednesday I discovered a cold sore on lip

Called and spoke with patient, the received her COVID vaccine yesterday. Since the vaccine she had a temp of 99.9 last night, has not checked today, feeling a little warm today but not as warm as last night. The area is hot and red and swollen in the size of a golf ball, was bigger yesterday. Her entire body feels itchy. She did take benadryl approx 5 hours ago, it helped a little bit right away but now she feels no relief again. She states she has small little bumps that have slowly been spreading from the arm of injection to back and now onto other arm. á Does report she felt like she needed her inhalers, now denies and swelling or itching of mouth throat or tongue. No difficulty breathing at this point.

RASH AND HIVES TO NECK. BENEDRYL AND PREDNISONE. SYMPTOMS STARTED AT 4:00 VACCINE ADMINISTERED AT 1:00

5 hours after injection my legs from the knee to the ankle joint became very itchy, I wrapped them both in a cool wet towel to keep the itching down. This lasted for 48 hours and then went away.

5 hours after injection my legs from the knee to the ankle joint became very itchy, I wrapped them both in a cool wet towel to keep the itching down. This lasted for 48 hours and then went away.

During first few minutes after the vaccination, the client began to cough repeatedly. She stated that her throat was tingling and she was noted to be diaphoretic, with Shortness of breath, an increased heart rate and hives. Epinephrine 0.3 mg IM given to client. Client responded with less diaphoresis and cough subsided. However, noted in 5 more minutes that the symptoms progressed. (As we were in a hospital area administering the vaccine), a rapid response team was activated and she was sent to the ER for further evaluation monitoring and treatment.

intermittent itching, some blotchy rednesss no hives or raised rash that lasted about 3 hours, went away on its own without any treatment

Employee reported numbness and tingling in upper lip 10 minutes after receiving vaccine. Employee was transported to Emergency Department for evaluation.

low grade fever- 99.9 sore arm

Hot flush Dull headache

Day 1-after immunization covid 19 moderna vaccine-headache, sneezing, low grade temp 99 when she arrived home Day 2-102F-took tylenol as needed, she continue to experience headaches, body aches Day 3- No signs or symptoms, temp 97.6F with out tylenol

Local reaction: Pain and swollen arm in the injection spot for over 2 days

14 hours after injection woke up with swollen upper lip and extreme systemc itching. Took 50 mg Benadryl. 12/26/2020 at 0900 continued itching took claritin 10mg and 25 mg Benadryl lip still swollen.12/26/2020 @2000 took 25mg benadryl for itching lip no longer swollen. 12/27/2020 itching has now become burning sensation systemically took 25 mg benadryl and 10mg Claritin. Upper lip swollen 12/27/2020 @ 2000 took 25 mg benadryl for continue burning and itching Lip no longer swollen. 12/28/2020 @ 0600 took 10 mg claritin till itching no burning. 12/28/2020 at 2100 took benadryl 25 mg for continued itching. 12/29/2020 0600 took claritin 10 mg for itching.

Vomiting within 15 minutes Fever 1 hr post vaccination Continued vomiting

Rash on chest

Scratchy throat within minutes. Left thigh pain and spasms, left arm pain. The next morning I can't lift my arm above shoulder, thigh pain not as bad, diarrhea at 9:30 am.

Erythematous rash over anterior torso, groin, flexor aspect of elbows/knees/hips

12/28/2020 weakness, fatigue, chills, tongue swollen, left arm pain at injection site 12/29/2020 fever 101.00 headache, loss of appetite, weakness, fatigue, dizziness, throat swollen

Injection site swelling (~6 cm across), redness, and tenderness beginning 12/28, resolved when patient took benadryl

developed raised red bumps on arms and legs several hours after receiving vaccine.

Debilitating, severe neck and shoulder pain the next day that continued for a week Stiff neck, spread to back pain Unable to work/left work early Still have stiff neck and feel strain doing my normal day-to-day tasks

Day 1-after Covid 19-Moderna injection-employee experienced an extreme pounding headache, her blood pressure was elevated 161/93. Evening hours employee reported fatigue, rash to chest/back no itching, along with fever 102F Day 2-Employee continued with fever 100.2 F and rash to chest/back no itching-taking Motrin and Tylenol Day 3-No fever, no rash, pain to injection site and generalized body aches Day 4-No symptoms

38 y.o. female who arrived by Clinic/physician office presented to the emergency department for Concern for possible allergic reaction. Patient was receiving the Covid vaccine today and while waiting during the observation. She felt some palpitations and was found to have some tachycardia. She was sent here for further evaluation. Currently she says she feels fine and denies any swelling, rashes, difficulty breathing or wheezing. She has not had any allergic reactions in the past and has never had any issues with shots or vaccinations before. She does not have any pain or swelling at the injection site. She was initially heart rate in the 120s but during exam is 100-105. She denies any shortness of breath, chest pain, lightheadedness and does not think she is feeling anxious at all. o ECG (My read): Sinus tachycardia, normal intervals, no ST elevations or depressions and no T wave inversions or signs of right heart strain o Patient did start to feel palpitations again, her heart rate periodically drops into the 90s and then jumps back up into the 1 teens. Considering this, did obtain basic labs all of which were completely normal. Her heart rate has improved, did order Zio patch for monitoring over the next 7 days and recommend she follow-up with her PCP for results on this. Otherwise appears well with no signs of allergic reactions or other emergent concerns. Discharged in stable condition with return precautions given

Developed a severe headache around 1 PM of the day she received her vaccine, some general tingling non-specific; sever headache lasted until 9 PM that evening, relieved with medication but in the morning continued to have headache although more mild then previously. Was better by the 3rd day.

Pain at injection site

Numbness in nose tip of tongue; earlobes warm

Severe right arm soreness inability to have range of motion cannot pick up items over 5 lbs numbness and tingling and cooler fingers in rt hand

Fatigue, chills, body aches, mild cough, headache, sweats for 36 hours Arm soreness for 5 days

Injection site pain

Approximately 5 minutes after administration of vaccine, patient felt nauseated and vomited with some relief. Blood pressure was checked (171/94). Approximately 50 minutes @09:20am after administration of vaccine, patient complained of mild headache. Blood pressure was checked (148/96). At 09:35am, patient reports no nausea. Continues with mild headache. Patient clinically stable. No medications administered. At 10:05am patient reports headache still present but is gradually subsiding. Patient was released at 10:10am.

2 minutes after injection patient c/o head heaviness, nose tightness. VS: BP 159/88, HR 101, O2 SAT 99%, RR 24

Approximately 15 minutes after administration of vaccine, patient experienced twitching on left upper eyelid off-and-on for approximately 10 minutes. Twitching resolved. Blood pressure was checked at 09:50am (161/109). HR=76. Patient clinically stable. No medications were administered. Patient was advised to follow-up with PCP regarding blood pressure concerns and released at 10:10am.

Injection Site Pain

Experienced fever, chills, sweats, joint pain and soreness in Right arm

Fever, chills, headache, arm soreness

After receiving the vaccination, I experienced slight soreness at the site of the injection and a mild headache every day until Friday 12/25. Starting Friday evening 12/25 I started to experience tingling around my jaw after flossing my teeth. It continued when I woke up the next day and spread to my chin and around my lips. I now feel the sensation on my forehead as well. In addition to this I have been having chills, runny nose, pressure in my face, head, and ears, had diarrhea X1 and have been nauseous . I tested COVID negative on 12/28 and had my electrolytes checked along with CBC which all came back normal. Today 12/29 I took 2 Benadryl in the event it could help an allergic reaction.

Patient began with muscle/body aches and chills on 12/24. Highest temperature recorded was 99.8, took ibuprofen. On 12/25, lymph nodes near right clavicle and right axilla swollen and stiffness in neck and shoulder. Right foot also became swollen. Employee received vaccine, c/o shortness of breath, throat tightness, difficulty swallowing, difficulty breathing and hoarseness. METS team called and Employee taken to Emergency Room.

about an hour afterward began experiencing diarrhea up to 6 times that day. around 11:30PM at work I began feeling a whole body tingling/pins and needles sensation along with muscle/joint pain in my back, neck, and hands. The tingling lasted about 3 hours then subsided, on the 19th night again I felt the tingling for about an hour. patient replied yes, she had MIS as result of Covid vaccine.

Injection site redness and increase skin temp at site which occurred 8 days after 1st dose of vaccination. No itching present. Slightly tender and no swelling at this time.

Headache Fever Body aches Fatigue

I had three days of fatigue, chills, aches, and intermittent night sweats. 1 day after the vaccine was administered I developed a rash (red bumps/itchy) over my chest, back, and inner ankles. The chest rash was relieved with Benadryl administration and lasted 2 days, I still have a very mild rash within my inner ankles 6 days later (tiny red itchy bumps).

Fatigue, Body aches

Vaccine error: Vaccinator administered COVID 19 vaccine however some of the liquid of vaccine splashed onto the patients arm and thus the patient did not receive full first dose. The vaccinator likely

did not secure the needle to the syringe well enough. Incident was filed on the date of occurence. Patient did not have any symptoms.

throat tightening and scratchy

Modern a COVID-19 Vaccine. Swelling in the right eye lid. Muscle pain. Headache. Injection site throbbing in pain. Labored breathing (with burning discomfort). Fatigued.

Hives and itching to left bicep on Morning of 12/28, Hives spreadin to all four extremeties by 0500 on 12/29. Mild Shortness of breath

states she had nausea and diarrhea afternoon that she received the vaccine and into the following day with lack of appetite; had not eaten anything

Severe Headache

Moderna COVID-19 Vaccine EUA Fever (99.8 - 100.4 F over course), body aches, chills - took 2 tylenol (650mg each) about 1-2 hours after onset, symptoms resolved within 2 hours, temperature back down to 98.6F.

Tuesday, rash started on Wed with no new meds/food/lotion/soap/detergent. Rash is raised, wide-spread to left arm, abdomen and upper back/shoulders. + Itching/irritation. Denies blistering, SOB, cough, fever, chills. Using topical triamcinolone which helps with itching START ON Prednisone for 9 days, Claritin 10mg AM for 7 days,Benadryl 25-50mg PM for 7 days.

After injection, within 1 hour, started having left arm muscle tightening, up to left shoulder. Following morning: facial numbnes/decreased sensation; mild facial droop. Onset 9am on 12/28/2020. Went to ED for evaluation. Sensation started to resolve, continues to be slightly diminished on left side of face. Droop has since resolved.

Pt came in for vaccination for COVID-19 at 4:03 . She received Moderna vaccine at 4:15. She experienced palpitation, worsening chills, headache, and presyncope. No loss of consciousness. Denies chest pain, shortness of breath but feels heavy to push air in and pulse OX 100%, No angioedema, No rash, No pruritus, No throat swelling, denies hoarse voice, or difficulty breathing. She traveled to MD on 12/14/20 to receive antibiotics. She was treated with Erythromycin dose for 6 days from MD. á The patient was +COVID19 on 12/11/20 with fever, scratchy throat, congestion, cough, and SOB and was seen in urgent care on 12/13/20 where was DX + for COVID19. She was quarantine for 10 days when she was returned to work on 12/22/20. Her Chest X-ray was negative on 12/13/20. She was negative for nausea, vomiting, diarrhea. She denies any recent vaginal bleeding, or abdominal pain. Denies any history of cardiac disease, or history of arrhythmias. Denies any history of prolonged immobility, or history of clots.

Headache for 48 hours, fever x 12 hours, fatigue x 5 days, severely enlarged lymph nodes to left arm started Monday 12/28, continues today 12/29

Employee reported by bedtime of 12/28/2020 which was the date she received her 1st dose of the COVID-19 vaccine she had the following symptoms: Arm was sore as a boil and she had upper respiratory symptoms similar to a cold, drainage, nasopharyngeal irritation and cough lasting a good while.

Pt. received vaccine, at 640pm... at 705 pm, c/o throat tightness, nausea, mouth tasting like chemical. METS team called, taken to Emergency Room

Pfizer-BioNTech COVID-1 Vaccine Patient presented to ED 10 minutes after receiving COVID vaccine with mild redness around injection site and some chest tightness that may be attributed to being nervous and anxious over vaccination. no erythema or swelling noted around injection site. Patient had just worked 14 hours night shift. 0823 redness improved along with chest tightness. IM dexamethasone 8 mg given in ED 0837 significantly improved after ED observation and stable for discharge Prescription for hydroxyzine 50 mg po TID x 7 days Follow up with PCP

Sore Throat, Coughing, started 16hrs after injection

Uterine/pelvic cramping, nausea. Third pregnancy, EDD 6/8/21, 16 weeks pregnant

Hives, angioedema, and periorbital edema.

hand tingling, itching all over, chest feels hot or flushed, nausea, rash Went to the ER after advised by staff -treated with benadryl 50 mg IV solu medrol 125 mg IV/zofran 4mg IV/Pepcid 20 mg IV/Tylenol 975 mg po stable after IV meds, discharged home with epi pen and steroid dose pack

"Woke up the morning after vaccination and had ""blisters"" in mouth and itching all over. States wife saw some ""red spots"" on his back but no other place. Also immediately after injection felt the need to take inhaler. Itching to hands and ""all over"" continues as of 12/28/2020 without evidence of hives or rash."

Vomiting at 10:30. Watery diarrhea until about 1:00 am

Injected into tricep instead of deltoid

Runny Nose, No smell

Patient c/co - lightheadedness, tingling on L side of jaw, w/ peripheral tingling in bilateral feet. Pt given water for hydration, VS taken: 121/75 BG of 105 HR of 85 w/ O2 sat. of 98%. ED (Dr.) contacted, assessed for anaphylactic events - none noted. After 20 mins, patient reported relief w/ only dry mouth remaining. Pt believes it may have been an anxiety attack. Continuous monitoring applied. Patient washed face w/ water and relayed he was feeling fine and will now get something to eat. Pt released w/ no s/s reported.

headache backache neck ache dizzy about 30 min. after vaccine

heart rate of 40; dizzy; really tired; This is a spontaneous report from a non-contactable consumer (patient's friend). A male patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date were not reported), via an unspecified route of administration on 16Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was having some symptoms that wanted to check out. On Dec2020, he was really dizzy, he was really tired, and he had a heart rate of 40. No questions, they just want to make sure that he was not going to die. Outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

immediate chills, shaking, low BP (82/60), low grade fever (99.8) when covered with blanket in following 48 hrs - fever 102.7 before meds. chills, shaking, severe diarrhea, abdominal cramping, nausea

Chills, body aches, dizzy, migraine, vomiting, low grade fever, neck pain. Took Tylenol and Advil to relieve the pain.

Diaphoretic, felt like she was going to pass out. Lost pulse momentarily, stopped breathing momentarily. Spontaneously recovered.

Left side of face Numbness, Gone after 24 hrs

Injection into tricep instead of deltoid. Discovered next day by patient based upon pain location.

I was being monitored for 30 minutes. At 20 minutes after the vaccination, I began having difficulty swallowing and within minutes of that began experiencing numbness around my mouth, including my lips, with minimal swelling wound my lips and mouth. Then I had a tingling sensation as if pins were sticking me in my face, especially around my eyes and forehead. I immediately ported my symptoms to the nurse standing next to me for observation. My entire body felt as if it was on fire, with a burning and itching sensation. I was administered 25 mg of Benadryl IM and was transported to the Emergency Department, where I was given oral prednisone. I left the Emergency Department is about 2 hours. At 24 hours after the, I still have itching around my scalp, back and lips.

7:30PM flu like symptoms with severe shaking and fever ranging from 102 to 104 the first night. At approximately the same time for the next two nights fever ranging from 101 to 103 and flu like symptoms . These symptoms lasted 3 days during the evening hours only.

Sore arm, Joint Aches

Sore arm, Joint Aches

The vaccine was administered on the following date: 12/28/20áand at approximately the following time: 12:20pm á The symptoms began 5 min after administration of the vaccine.á The symptoms were: 5 min after vaccine had hives, felt itchy and warm. Symptoms were on chest, face and scalp. Tingling in her arm and left jaw tingling. She did not have swelling, wheezing, SOB, dysphagia, GI symptoms. She went to the ER- given IV benadryl, pepcid, solumedrol. 30 min it felt much better By the time she left 2 h later, she felt much better. She had some blotchiness and itcihng on her skin this AM (24h later) so she took

allegra. She was prescribed prednisone but has not yet picked it up. The treatment of the reaction was:áá o Antihistamines:ábenadryl 25mg, famotidine 20mg o Steroids:ámethylprednisolone 125mg in the ER o Epinephrine:ánone á Other medications taken on day of reaction:áázoloft and MVI- taken for years. Other possible exposures (e.g.áfoods):ánone Was this the first dose of the vaccine?: yes Location of injection site:áLeft upper arm Other pertinent past medical history: noneá History of COVID infection: no History of systemic allergic reactions to drugs, foods, vaccine:ánone Other pertinent medications:ánone

Extreme arm soreness, pain with any/all arm movement > 24 hours

First I had a really bad muscle ache , chills, fatigue headache, fever, ear ache , sore throat

Chills,Lightheaded, Nauseated, Left leg pain and body aches.

Soreness of Arm, cold like symptoms for 3hrs day after, joint pain

Developed hives on face and both arms. Released after 30 minutes of monitoring with no further progression of symptoms. Returned one hour later reporting scratchy throat and feeling of being swollen all over. Also presented with increased redness on face (blushing). No difficulty with shortness of breath. Escorted to ER for monitoring.

Moderna Covid-19 Vaccine EUA Swollen lymph node in right arm pit: starting 12/27/20 at 11:00 pm

severe vertigo

When I got the vaccine, I observed redness on both arms immediately and severe itching all over my body. I had nausea, I vomitted, I felt like I was drowning, I had tightness left side of my body from neck to foot, The Director of Nursing observed that rashes reached up to my neck, BP was elevated as well

Became hot, flushed and felt dizzy,. Had slight weakness in rt face

Hives 4 hours post-vaccine. Improved with diphenhydramine. Resolved by the following day

Adverse reaction post Covid vaccine. Waited for 20 min post vaccine. Experienced S/S Heart palpitations, shortness of breath, tingling in extremities, diaphoretic after leaving clinic observation. Drove back to hospital, escorted by pre surgical testing hospital staff and taken by wheelchair to ED.

Body Chills, Joint pain

major confusion 9 hours after first administration continuing on to the next day, pain at wound site, itchy feeling

"Patient reported developing a ""butterfly rash"" across the bridge of nose and cheeks approximately 24 hours after COVID-19 vaccine. Rash resolved without treatment within 10 days. Also experienced some fatigue."

Within 1 hr of receiving shot felt heaviness and pain in lungs, gradually getting worse then swollen face and clearing of throat constantly by hr 4. By hr 7 gradual lung pain and face swelling reduced. Today 12/29 still have some lung pain little face swelling but still have trouble breathing while walking and talking.

Throbbing, constant pain with burning from L) shoulder joint to fingertips plus shoulder joint up to left neck; nausea, dizziness, headache, joint pain (all body), muscle aches, throwing up, loss of appetite

headache

Achiness, chills and fatigue for 2 days. Better for 1 day, worked and went for a run, then woke up in middle of night going into 4th day post vaccine with severe aches. Got Covid tested on day 4, came back negative on day 5. I am now on day 11 post vaccine and am still having aches in my hip joints. I?m unsure if it?s related to the vaccine but I haven?t been able to run (I am a regular runner) without pain. I did not have any pain from running prior to the vaccine.

Injection site soreness in the AM 12/23. Later in the day on 12/23, body aches and general malaise. On 12/24 continued malaise and painful headache.

Low grade fever and body aches onset approx 14-16 hours post vaccine

Lightheaded, body aches, hot flashes, chills, developed a 101 fever, shortness of breath

Almost a week later after the first dose, still experiencing intense shaking / chills at night. Fatigue during the day with headaches.

The patient was given the Moderna vaccine. She then felt very hot around 15 min post vaccine, felt anxious. Felt her HR was racing, so she looked at her Apple Watch, which said it was 103bpm. She let the RN know and it went up to 125 bpm. BP was 140 which is high for the patient, baseline is around 100 systolic. She then felt shaky. The RN said she saw a few hives on her chest and it was a bit itchy. They gave her some water and juice. She felt better and the hives resolved on their own. She then was given

Zyrtec 10mg. About 30 min post-vaccine, her HR was 85 and BP was 130 systolic. No wheezing, no SOB, O2 sat was normal the entire time. She still feels shaky and anxious. 2 h later she felt asymptomatic.

Low grade fever to 100.1 the morning after receiving the vaccine, mild body aches and headache. Symptoms dramatically improved within 12hrs and by the following morning (48hrs post receipt of vaccine), I was symptom free.

Experienced numbing of right face and jaw for half a day 2 days post vaccination. Took ibuprofen 400mg and symptoms eventually resolved.

Arm soreness Feverish Chills Body Aches

Pt felt lightheaded. Pt did not eat breakfast or lunch prior to vaccine. Pt commonly becomes nauseated after flu shots with no additional adverse effects. Pt was positioned in supine and given Sprite and crackers. After eating, symptoms resolved.

Red itchy spots/hives across abdomen and chest. Have used topical anti-itch cream, taken over the counter benadryl and zyrtec. Topical cream and benadryl did not seem to have any effect. Just took zyrtec this morning so results tbd.

within 2 minutes after receiving vaccine I became flush, tightness in base of my throat and chest and heart starting racing faster and faster. A few nurses came over and saw my fit bit heart rate going higher (max 136 BPM) my fingertips started to get numb. They quickly injected me with .05 epinephrine. They brought me up to the emergency room and put me on a heart monitor. The racing heart subsided after approx. 7 min then started again. It happened 3 times in the emergency room. They ran a few EKG's to try to catch the tachycardia episodes. They started an IV and ran fluids. After 2 hours the symptoms stopped and they released me from the hospital.

Mild rash all over the body the evening post-vaccination. Alleviated by diphenhydramine. Heart palpitations for 2 days post-vaccination

Sore arm, body aches that are as bad as when I had covid, chills, stomach ache.

12am I woke up with a headache chills body aches and sore arm

Sore arm, Heart skipping Beats, Body pain

Itching, redness, hives to right side of face and neck, abd pain. Right upper back pain started almost immediately after vaccination. Continued through the night. Itching, redness, and hives resolved in approximately 2 hours with administration of dexamethasone. Abd pain continues today. Right upper back pain is full today, instead of sharp, and is intermittent today.

The employee reported difficulty breathing. She transferred to the Emergency Department for elevated heart rate and possible syncopal episode. Symptoms self resolve with no medications required.

Received vaccine on 12/28/2020 @ 930am. By 7:00pm left deltoid was tender to touch. Redness , swelling at site. on 12/29/2020 the redness and swelling had increased to 1 inch wide x 3 inch like a band across my deltoid , It is tender to touch and itchy.

Facial numbness,redness

terrible headache, pain in the joints, chest tightness.

Sweating then chills. Back to back. Two days.

Swelling redness and soreness at injection site

Swelling redness and soreness at injection site

Soreness in arm immediately. 13 hours after injection- sweats, chills, increased arm pain, body aches, extremity pain, palm sensitivity, nausea, trouble sleeping. 14 hours after injection- fever, shortness of breath, fatigue, redness in arm, swelling in injection site. 18 hours after injection- stiffness in injection site, extreme fatigue, increased nausea.

6 hours post vaccine: sore arm, chills 24 hours post vaccine: fever (101-102), chills, myalgias, headache, severe soreness at injection site (no other symptoms). All symptoms resolved by 48 hours post vaccine.

cough and a little difficulty breathing rash in the torso (of abdomen and back

Red circle about 3 inches wide and 3 inches long bruising itching, swelling, dizzy headache

Headache and injection site pain, Nausea

shingles

Moderna has an EUA from the FDA for patients aged 18 and older. This vaccine was used inappropriately to vaccinate a 17 year old staff member at a clinic hosted by Pharmacy. Patient experienced no adverse effects, but this improper usage of the vaccination requires reporting to VAERS.

hives down bilateral exposed skin - Benadryl oral tab provided with relief. Hives disappeared by 12:45PM

elevated blood pressure to 156/92 following injections. Experienced dizziness. BP checked 5 hours after vaccine: 143/88.

lightheaded, left lower arm pain chest pain with burning sensation , increase heart rate to over 190 and High blood pressure lasting for 2-3 hours

Fever, Nausea, Diarrhea, covid test was negative

On December 27th I began to have uticaria on my chest, back, legs and neck that respond to oral diphenhydramine but return after 6-8 hours. This is ongoing for three days so far.

Anaphylaxis requiring epinephrine

Body aches, low grade fever 99.5

Injection sight soreness

Body aches, chills, slight fever

a couple days after the vaccine, I developed a rash on the bottom of my abdomen, my neck, and my elbow creases. The rash was worst along my abdomen especially the right hip. The rash is red and looks like tiny red circles.

Patient presented five days after first COVID vaccine with complaints of tingling running down her arm (peripheral paresthesias per MD report) and also swelling and redness at injection site. She does also complain of feeling a little achy the day following her vaccination. She was given prednisone and diphenyhdramine while in the ED. She was prescribed prednisone (20 mg x 3 days) upon discharge.

Fatigue, joint pain, muscle aches, headache, nausea and vomiting for three days. Treated at home with over the counter pain relievers.

Neck swelling, labored breathing

Fatigue, Muscle pain and redness at injection site

moderate rash to left arm, mild to right arm. Also rash to trunk and legs. Benadryl was taken

Hives to face for 1.5 hours - improved after 1 course of Benadryl

5 minutes after the injection I developed tinnitus in both ears. This has continued on since the injection. It varies in intensity but is constantly there. I had never experienced tinnitus prior to the shot.

Vaccine recipient received vaccine on 12/17/2020. Reported that they felt tired the next day. Three days after receiving the vaccine, reported to develop headache and neck/should pain. This was still bothering the vaccine recipient. Directed to follow-up with occupation health.

Rapid heart rate, achy, fever 101, flu like symptoms started about 7 hours after vaccine. She did have Covid on 11/1/2020. She is going to give it today and see how she feels and will let me know if she goes to the DR or ER.

Pain at injection site, muscle pain, redness around injection site

Fever, shortness of breath, headache, myalgias

itching, face and eye swelling, wheezing, H/A. Treated successfully with Epi X 2 and Benadryl.

Anaphylaxis requiring epinephrine

tenderness in armpit, specifically upon touch

Patient received the covid vaccine on 12/20/2020. She reported that she started to have chills (temp reading were in 98.0s), headache, bodyaches, and swelling of the Right groin on 12/21/2020. She was evaluated by her PCP (in person) and treated with Ampicillin x 7 days . She did NOT inform her PCP about her covid vaccination status. HAs, bodyaches, chills, and R groin swelling resolved by 12/26/2020. On 12/28/2020 she c/o new onset of nasal congestion. Denies fevers or cough. She tested positive for covid on 12/28/2020 at Employee Health. Has FU appt with PCP in one week and EH on on 1/7/2021.

Hives on abdomen, back, and ankles; associate reports taking loratadine 10 mg PO from personal stock

Fell light headed, muffled hearing, flush, warm.

Jittery, Increase heart rate with 20 min after shot.

Light Headed, Cold, burning sensation inside, nausea, felt like she was going to pass out, rash on chest/neck, she could hear people talking but felt she didn't feel like she was present - elevated BP 200/110. Staff member took Metoprolol 25mg. 1/2 hour took medication feels better but feels foggy

Rash on the upper chest and neck

Increased heart rate and blood pressure, syncope, nausea, sore throat, fever

I received the Pfizer EK5730 shot at about 11:30 am on 12/28/2020. When I walked out of the office from getting the shot I started feeling like I had walked mile but I was ok. At about 4:00 PM I started feeling some tightness on my chest and some aching like a pulsing aching on my chest. I felt like I had some energy but I also felt I was paying to mush attention to my symptoms. I lay down at 8:30 PM and I fallen to sleep on the couch. When I got up this morning as stood up from my bed my legs were hurting and I feel exhausted. I just want to cuddle and go back to sleep. I force myself to make it to work but I am dealing with leg pain and very very tired with a slight headache and chills.

"My temperature, it is 100.6; I was feeling chills; I am having body aches/full blown body aches; I was starting to feel achiness/achiness was not going away; I am congested all of a sudden; I felt like I was developing a headache that just got worse as the day progressed/now I woke up this morning and my head is hurting; I was not feeling well; This is a spontaneous report from a contactable nurse who reported for herself. A 56-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot #: EH9899; Expiry Date: Mar2021) via an unspecified route of administration on 18Dec2020 at 09:59 (at the age of 56-years-old) as a single dose for COVID-19 vaccination. Medical history was reported as none. The patient reported ""no, I do not have any health issues."" Concomitant medications included estradiol taken as hormone therapy from an unspecified date at 0.1 mg, once daily. The patient experienced ""I felt like I was developing a headache that just got worse as the day progressed/now I woke up this morning and my head is hurting"" and ""I was not feeling well"" on 18Dec2020, ""I was starting to feel achiness/achiness was not going away"" on 18Dec2020 at 18:00, ""I was feeling chills"" and ""I am having body aches/full blown body aches"" on 18Dec2020 at 19:00, ""I am congested all of a sudden"" on 18Dec2020 and ""my temperature, it is 100.6"" on 19Dec2020. It was reported that the ""symptomatology began immediately after I got the vaccine (COVID Vaccine)"". The

clinical course was reported as follows: ""I received a vaccine (COVID Vaccine) at work. I am a nurse, I received a vaccine at 09:59 today morning and within probably 5 or 10 minutes, I felt like I was developing a headache that just got worse as the day progressed. By the time, I got home, I get off at 6 O'clock, I started to feel achiness and then eventually I was feeling chills and I was congested all of a sudden as well. So, I took a 1000 mg of acetaminophen last night probably around 9 PM. Initially, I thought it was just side effects from the shot and I would ride it out, but the achiness was not going away. So, I took the acetaminophen and went to bed. When I took the acetaminophen within about two hours the symptoms improved, the achiness had diminished, but I woke up this morning and my head was hurting, I am having chills, I am having body aches. I just took my temperature, it was 100.6."" The nurse stated that she took acetaminophen as treatment for the side effects. When asked about the primary/prescribing Healthcare Professional details the patient stated ""well, it was not a doctor it was a nurse at our hospital, it was a room full of people giving the shot."" The patient also stated ""I read correctly under side effects that the vaccine cannot cause you to contract COVID. Is that true?"" The nurse was informed about Pfizer Medical Information department. When asked about the dosage, the patient stated ""No, I don't think that is on here."" When asked about the causality, the patient stated ""I think it is possible, but it is also possible I mean I just got the vaccine yesterday, I mean we test patients for COVID in my department. My department is responsible for testing all procedures on surgical patients at the hospital and there is always a chance that I have contact with COVID but it is odd that the symptomatology began immediately after I got the vaccine (COVID vaccine), I mean within 10 minutes, I was not feeling well. When I woke up yesterday I was having no symptoms whatsoever and then almost immediately after I took the vaccine it seemed that I had a headache again and it just lasted the entire day, all day until I got home it was so bad and I still have not taken anything because I thought it was just the side effects and like 7 O'clock I was having full blown body aches and chills."" (as reported). The clinical outcome of the event ""I felt like I was developing a headache that just got worse as the day progressed/now I woke up this morning and my head is hurting"" was not recovered/not resolved; the outcome of the event ""I was starting to feel achiness/achiness was not going away"" was recovering/resolving; while the outcomes of the events ""I was feeling chills"", ""I am congested all of a sudden"", ""my temperature, it is 100.6"", ""I was not feeling well"" and ""I am having body aches/full blown body aches"" were all unknown."

parasthesia in injected arm including ring and pinky fingers; parasthesia in injected arm including ring and pinky fingers; weakness in injection arm up to the tricep muscle; He also experienced mild weakness; This is a spontaneous report from a contactable nurse (patient). A 33-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EK5930), via an unspecified route of administration in left arm on 21Dec2020 09:00 at a single dose in TB size syringe for COVID-19 immunization. The patient has no medical history. There were no concomitant medications. The patient is a nurse anesthetist calling about himself, stating that he thinks he has had a reaction to the Pfizer COVID Vaccine. He took a dose about 9am this morning and about 2.5 hours later he experienced paresthesia in his injected arm including his ring and pinky fingers. He also experienced mild weakness. The symptoms lasted about 45 minutes. Stated that the symptoms lasted about 45 minutes and has completely resolved thus far; however, he cannot attest if these symptoms will return or not. Stated that it was given with a TB size syringe and so assumes that it was the standard dose that

he received, but does not know for sure. No treatment was received for the symptoms. He just monitored himself. Caller wants to know if he should move forward with the second dose. He heard about Bells Palsy. If he had paresthesia with his first dose in the injected arm, could the paresthesia come to his face next? He wants to know if he is in the normal category to advance with the second dose. The events were reported as not serious. The events recovered on 21Dec2020.

Severe heartburn; abdominal pain; Agita; swelling; chest tightness; generalized redness; itching; sore throat; severe weakness; fatigue; headache; muscle pain; nausea; malaise/feeling unwell; increased temp but not febrile; This is a spontaneous report from a contactable nurse, the patient. A 63-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), intramuscular in the left arm on 18Dec2020 at 14:15 (at the age of 63-years-old) as a single dose for COVID-19 immunization. Medical history included chronic pain, hypertension, diabetes, depression, and broken vertebra. The patient was allergic to many antibiotics and benzodiazepines which caused dystonia. The patient also had an allergy to all anti-emetics except ondansetron (ZOFRAN) in the form of dystonia. Prior to the vaccination, the patient was not diagnosed with COVID-19. Ongoing concomitant medications included diclofenac (MANUFACTURER UNKNOWN) from an unknown date for an unknown indication, esomeprazole magnesium (MANUFACTURER UNKNOWN) from an unknown date for an unknown indication, fentanyl (MANUFACTURER UNKNOWN) for a broken vertebra from an unknown date, gabapentin (MANUFACTURER UNKNOWN) from 2019 for an unknown indication, misoprostol (MANUFACTURER UNKNOWN) from an unknown date for an unknown indication, oxycodone hydrochloride/paracetamol (PERCOCET) from an unknown date for an unknown indication, and fentanyl (FENTANYL PATCH) from an unknown date for an unknown indication. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 18Dec2020 at 14:30, the patient experienced generalized redness, itching, swelling, and chest tightness; which required her to go the emergency room for 6 hours and was treated with epinephrine (MANUFACTURER UNKNOWN), diphenhydramine hydrochloride (BENADRYL), and fluids. On an unknown date in Dec2020 (reported as later), the patient had sore throat, severe weakness, fatigue, headache, muscle pain, nausea, malaise/feeling unwell, and increased temperature but not febrile. On 22Dec2020, the patient had severe heartburn, abdominal pain, and agita. Since the vaccination, the patient had not been tested for COVID-19. The clinical outcomes of generalized redness, itching, swelling, chest tightness, sore throat, severe weakness, fatigue, muscle pain, nausea, malaise/feeling unwell, and increased temperature but not febrile were recovering; while that of the headache, severe heartburn, abdominal pain, and agita were not recovered. The events were reported as non-serious and assessed as possibly related to the vaccine. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: The patient was allergic to many antibiotics and benzodiazepines and had an allergy to all anti-emetics except ondansetron (ZOFRAN) in the form of dystonia. Based on information available, the reported chest tightness and swelling together with generalized redness and itching were possibly related to the BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), considering temporal relationship and clinical course. This case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any

appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Severe headache woke me from sleep approx. 6 hrs later, continued till the next day; Severe headache woke me from sleep approx. 6 hrs later, continued till the next day; severe neck and back stiffness, just did not feel well; severe neck and back stiffness, just did not feel well; This is a spontaneous report from a contactable nurse (patient). A 47-year-old female patient received bnt162b2 (Pfizer Biontech COVID 19 vaccine), lot number: EJ1685, via an unspecified route of administration at the left arm on 20Dec2020 06:30 at a single for COVID-19 immunization. Prior to vaccination the patient was diagnosed with COVID-19. Concomitant medication included levothyroxine sodium (SYNTHROID), carvedilol (COREG), ergocalciferol (VIT D), vitamin b complex (VIT B COMPLEX) and bupropion hydrochloride (WELLBUTRIN). On 20Dec2020, the patient experienced severe headache that woke her from sleep approximately 6 hours later and continued till the next day. She started having severe neck and back stiffness and just did not feel well. The patient was not hospitalized for the events and did not receive any treatment for the events. The events were reported as non-serious. The vaccine was administered in a hospital. The patient has not received any other vaccines within 4 weeks prior to the COVID vaccine. Since the vaccination, the patient has not been tested for COVID-19. The events recovered on an unspecified date in Dec2020.

Her BP went down to 80/60 with a pulse of 50.; sudden light headiness/light headedness; pulse of 50; Slurred speech; extreme sleepiness/sleepiness that there was no other focal deficit; felt like she was under anesthesia, was unable to move her legs/felt like she was under general anesthesia trying to wake up but unable to open her eyes or move her arms or legs; This is a spontaneous report from a contactable pharmacist. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number and expiration date were not reported, via an unspecified route of administration on unspecified date at a single dose for immunization. Medical history was none. The patient's concomitant medications were not reported. It was reported that the patient (a doctor) received the vaccine and had a sudden light headiness, slurred speech, and extreme sleepiness with outcome of recovered. She felt like she was under anesthesia, and was unable to move her legs. Her BP went down to 80/60 with a pulse of 50. All of these episode lasted about 2 hours. The patient became alert, but she still felt a bit light headed. She felt normal the next day. The patient said that at the sudden onset of the side effects: light headedness, slurred speech, and sleepiness that there was no other focal deficit. She felt like she was under general anesthesia trying to wake up but unable to open her eyes or move her arms or legs. The outcome of the events Her BP went down to 80/60 with a pulse of 50, sudden light headiness/light headedness, Slurred speech, extreme sleepiness/sleepiness that there was no other focal deficit and felt like she was under anesthesia, was unable to move her legs/felt like she was under general anesthesia trying to wake up but unable to open her eyes or move her arms or legs was recovered on an unknown date. Information about lot/batch number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of low blood pressure/ low pulse with dizziness cannot be excluded, considering the plausible temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for

adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate

Midbottom of foot to toes is completely numb; tingling in toes of both feet; paresthesias (numbness, tingling) right arm; paresthesias (numbness, tingling) right arm; This is a spontaneous report from a contactable nurse practitioner, the patient. A 56-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EK5730), intramuscular in the left arm on 18Dec2020 (at the age of 56-years-old) as a single dose for COVID-19 immunization. The patient did not have any relevant medical history. Ongoing concomitant medications included levothyroxine sodium (SYNTHROID) and unspecified vitamins. On 18Dec2020, the patent experienced paresthesia (numbness, tingling) in right arm. On 19Dec2020, the patient had tingling in the toes of both feet. On 21Dec2020, the mid bottom of foot to toes was completely numb. The clinical course was as follows: The patient received the vaccine in the left arm on 18Dec2020 and 9 hours later, she had paresthesias (tingling/numbness) in right arm. It was stemming from her shoulder down her arm. Around mid-morning on 19Dec2020, she had started having tingling in the toes of both feet. On 21Dec2020, the mid bottom of foot to toes was completely numb. The patient reported that the paresthesias (tingling/numbness) in right arm was getting better and was more intermittent and the tingling in the toes was only in the left foot as of 22Dec2020. The clinical outcome of the paresthesia (numbness/tingling) in the right arm was recovering; while that of the numbness in mid foot to toes and tingling in the toes were not recovered. The reporter assessed the events as serious for being medically significant and assessed the events as related to the suspect vaccine.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported paresthesia (numbness, tingling) in right arm, tingling in the toes of both feet, the mid bottom of foot to toes was completely numb, and the administration of the BNT162B2 for COVID-19 immunization, based on the plausible temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified, as appropriate.

Hypotensive (diastolic 43, sistolic 103); neurological tingling -upper spine/between shoulder blades; felt crummy; This is a spontaneous report from a contactable consumer. A female patient of an unspecified age received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in left arm on 21Dec2020 15:45 at single dose for Covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced hypotensive (diastolic 43,sistolic 103), neurological tingling - upper spine/between shoulder blades and generally felt crummy on 21Dec2020 at 15:45 (also reported as occurred within 5 minutes of shot). The patient underwent lab tests and procedures which included blood pressure measurement: 103/43 on 21Dec2020. Event resulted in emergency room and physician's room visit. Treatment received intravenous (IV) fluid replacement, lab tests (unspecified), 6 hour observation. The outcome of events was unknown. Information on the lot/batch number has been requested.

"Immunocompromised; Flushing; This is a spontaneous report from a contactable other healthcare professional which is also the patient. A 37-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration not provided), via an unspecified route of administration on 21Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the COVID-19 vaccine yesterday (21Dec2020) and experienced flushing since Dec2020. Added that patient was also immunocompromised. The events were reported as non-serious. Outcome of the events was unknown. Information on the Batch/Lot number has been requested.; Sender's Comments: Limited information was provided for the mentioned ""immunocompromised"". Based on the information currently available, pending further clarification, the Company deems the reported ""immunocompromised"" unlikely related to the administration of BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate."

chills all night and syncope; chills all night and syncope; This is a spontaneous report from a contactable other health professional (patient). A 39-year-old male patient received the first dose of the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number and Expiration Date: Unknown), intramuscularly in the left arm (also reported as the right arm) on 22Dec2020 at 15:00 at 39-years-old at a single dose for COVID-19 immunization. The facility where the most recent COVID-19 vaccine was administered was reported as: other. Medical history included Penicillin allergy from an unknown date and unknown if ongoing. Concomitant medications included estrogens conjugated (PREMARIN), progesterone (MANUFACTURER UNKNOWN), estradiol (MANUFACTURER UNKNOWN), montelukast (MANUFACTURER UNKNOWN); all taken for an unspecified indication from an unspecified date to an unspecified date (all of which were received within two weeks of vaccination). The patient did not receive any other vaccines within four weeks prior to the COVID vaccine. On 23Dec2020 at 00:00, the patient experienced: chills all night and syncope. The event syncope was considered medically significant; and the event chills was non-serious. There was no treatment received due to the adverse events. It was reported that prior to vaccination, the patient was not diagnosed with COVID-19; and since the vaccination, the patient had not been tested for COVID-19. The clinical outcome of the events, chills all night and syncope, was recovering. The batch/lot numbers for the vaccine, bnt162b2, were not provided and will be requested during follow up.; Sender's Comments: Based on temporal association, a possible contributory role of suspect BNT162B2 vaccine cannot be excluded for reported event syncope. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"vomiting; nausea/felt like she was going to vomit; headache/bad headache was reported as worsened; arm and joint pain in injection arm/Joint pain; arm and joint pain in injection arm; arm and joint pain, mostly in the left arm where she received the COVID vaccine/left arm pain at injection site; had a history of a pain conditions in her back/ but got worse after the shot""; This is a spontaneous report from a

contactable nurse (reported for herself). A 26-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 22Dec2020 11:30 at single dose at arm for COVID-19 immunization. Medical history included complex regional pain syndrome from Dec2019 and ongoing, back pain ongoing. Concomitant medications included naproxen sodium (ALEVE) ongoing, duloxetine hydrochloride (CYMBALTA) from 20Dec2020 and ongoing. Caller wanted to know if she should receive the second dose of the Covid vaccine. She received the vaccine yesterday (22Dec2020) at 11:30 (11:30 a.m.) by 21:30 (9:30 p.m.) she was experiencing side effects of vomiting, nausea, headache, arm and joint pain in injection arm, and continued to feel as if she was going to throw up. HCP was called to get Zofran prescribed. Caller further reported that she got the COVID Vaccine yesterday, 22Dec2020, at 11:30 (11:30am). At 21:30 (9:30 pm) last night (22Dec2020), she started vomiting and has had nausea since that time. Caller also stated that she had a really bad headache. Caller stated that she also had arm and joint pain, mostly in the left arm where she received the COVID vaccine. She went to sleep at 8:30 last night and woke up vomiting at 9:30pm and then had had nausea and a headache since then. If she tried to get up, she felt like she was going to vomit. She had a history of a pain conditions in her back and ""let"" (as reported, pending clarification). Stated that she cannot say that this was entirely due to the shot, but got worse after the shot (Dec2020). Caller reported that last night, she took Zofran which help the vomiting. The vomiting stopped around 3 o'clock this morning (23Dec2020 03:00), but she was still having nausea that made her feel like she was going to throw up. She could not stop vomiting for a few hours during the night. Caller asked how she know if she should be taking the 2nd dose of the COVID vaccine. Events Vomiting, Nausea, bad headache, left arm pain at injection site, Joint pain all reported as started from 22Dec2020 (21:30). Patient recovered from vomiting with lasting effects of nausea which made her feel like she was going to vomit, started on 23Dec2020. Reporter seriousness for Vomiting, Nausea, bad headache was Medically significant and bad headache was reported as worsened. Reporter seriousness for left arm pain at injection site and Joint pain was not serious. No Investigation Assessment. The reporter considered events Vomiting, Nausea, bad headache, left arm pain at injection site, Joint pain were related to the suspect product. The outcome of the event vomiting was recovered on 23Dec2020 03:00. The outcome of ""had a history of a pain conditions in her back/ but got worse after the shot"" was unknown. The outcome of the other events was not recovered.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the vomiting, nausea, headache and other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

hypertensive emergency; felt like the swelling was progressing into the back of her throat; swallowed harder; she felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt; she felt like she was hot in her face and felt like something was squeezing her neck

like a tight collar on her shirt; shivering on and off; This is a spontaneous report from a contactable pharmacist. This pharmacist reported similar events for two patients. This is the first of two reports. A 67-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EH9899), intramuscularly in an unspecified arm on 21Dec2020 14:30 at 0.3 mL single for COVID-19 immunization. Medical history included sulfa allergy. The patient's concomitant medications were not reported. There were no prior vaccinations within 4 weeks prior to the first administration of the suspect vaccine. The patient did not have a history of reactions to any other vaccines. On 21Dec2020, the patient experienced hypertensive emergency, which was reported as being medically significant. On 21Dec2020, the patient also felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt, shivering on and off, felt like the swelling was progressing into the back of her throat and she swallowed harder. Clinical details were reported as follows: the patient received the vaccine on 21Dec2020 at 14:30 and fairly quickly the patient started saying she felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt. She was given 25mg of diphenhydramine hydrochloride (BENADRYL), orally. The patient was shivering on and off and patient said she felt like the swelling was progressing into the back of her throat. She was having to clear her throat and swallow harder. She was taken to the emergency department around 15:11 and given intravenous (IV) famotidine (PEPCID) 20mg at 15:27. The patient did not have issues oxygenating. It was noticed that the patient's blood pressure was 232/100 on 21Dec2020 and they started treating her for the hypertensive emergency with amlodipine (MANUFACTURER UNKNOWN) 5mg orally, one time of IV labetalol (MANUFACTURER UNKNOWN), 10mg , IV labetalol (MANUFACTURER UNKNOWN) 20mg once, Clonidine (MANUFACTURER UNKNOWN) 0.1mg, orally. The patient was sent home around midnight and was not admitted to the hospital. The outcome of hypertensive emergency was recovering and of patient also felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt, shivering on and off, felt like the swelling was progressing into the back of her throat and she swallowed harder was unknown. When querying causality, the reporter stated this patient did not have a history of hypertension, so she thinks it is suspicious.; Sender's Comments: The 67-year-old female patient had sulfa allergy medical history. Throat swelling and hypertensive emergency were possibly related to the BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), considering temporal relationship and clinical course. This case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.,Linked Report(s) : US-PFIZER INC-2020510772 Same reporter/different patient/similar events

had a patient receive COVID vaccine and 3 days later developed bilateral pulmonary embolisms; This is a spontaneous report from a contactable physician. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at single dose on an unspecified date for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The physician had a patient receive COVID vaccine and 3 days later developed bilateral pulmonary embolisms on an unspecified date with outcome of unknown. Have there

been any similar reports of such events within short time frame of receiving the vaccine? Information about lot/batch number has been requested.; Sender's Comments: The information provided is limited and doesnot allow a full medically meaningful assessment. This case will be reassessed should additional information, especially patient age, relevant medical history, concomitant drugs and clinical course, become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

facial itching; throat swelling; lump in throat; hoarse voice; This is a spontaneous report from a contactable nurse. A 37-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: ELO140), via intramuscular on left arm on 23Dec2020 at 09:45 at single dose for COVID-19 immunization. The relevant medical history and concomitant medications were not reported. The patient experienced facial itching, throat swelling, lump in throat and hoarse voice, all at 11:30 on 23Dec2020. The most recent COVID-19 vaccine was administered at hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The events resulted in doctor or other healthcare professional office/clinic visit for the patient. The patient received IV benadryl and Epi pen as the treatment for the events. Prior to vaccination, the patient was unknown if diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The outcome of the events was recovered on an unspecified date in Dec2020.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events pruritus, pharyngeal swelling, sensation of foreign body and dysphonia cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

Exaggerated immune response and rigors; Exaggerated immune response and rigors; Fever and night sweats; Fever and night sweats; Sustained tachycardia between 100-105; This is a spontaneous report from a Pfizer sponsored program. A contactable 31-year-old male physician reported that he received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number EH9899) via an unspecified route of administration in the right deltoid on 19Dec2020 at 10:30 at single dose for COVID-19 immunisation. Vaccination facility type: hospital. Relevant medical history included COVID-19 (recently had COVID prior to receiving the COVID-19 Vaccine). There were no concomitant medications. Five minutes after the COVID-19 Vaccine, on 19Dec2020, the patient experienced sustained tachycardia between 100-105 that lasted about 40 minutes and then dissipated by itself; the patient recovered from tachycardia on 19Dec2020. Early morning on 20Dec2020 at 03:30, he had an exaggerated immune response and rigors, which lasted about 30minutes to 40minutes, followed by fever and night sweats, which continued for 30 minutes and then it was all over. Reactions were spontaneously over. The patient recovered from the events exaggerated immune response and rigors, fever and night sweats on

20Dec2020. The physician believed that it was a hyper immune response. Recently, he had COVID prior to receiving the COVID-19 Vaccine and he wanted to know whether he should have waited after experiencing COVID to have received the first dosage of the COVID-19 Vaccine. The physician considered the reported events related to the COVID-19 Vaccine.; Sender's Comments: Based on available information, a possible contributory role of the subject product cannot be excluded for the tachycardia and other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including EKG at baseline and during subject drug therapy, echocardiogram, electrolytes, chemistry panel, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

patient's anaphylactic reaction persisted longer than expected; This is a spontaneous report from a contactable pharmacist. A 45-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient's anaphylactic reaction persisted longer than expected in Dec2020. The outcome of the event was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.; Sender's Comments: The causal relationship between BNT162B2 and the event anaphylactic reaction cannot be excluded as the information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

heart racing/her heart beat was 140 BPM; felt flush, hot; tired; soreness at the injection site; This is a spontaneous report from a contactable consumer. An adult female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 22Dec2020 at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient received the vaccine and with 10 minutes felt flush, hot, and her heart racing on 22Dec2020. At one point she looked at her watch and her heart beat was 140 BPM. She was sent immediately to the ER (emergency room). Since then she was tired and had soreness at the injection site. She would have to see an allergist before getting the 2nd shot. The outcome of the events was recovered on unspecified date in Dec2020. Information about batch/lot number has been requested.

tunnel vision; Shortness of breath; headache; couldn't move arms/legs; This is a spontaneous report from a contactable other health professional via a Pfizer sales representative. A patient of unspecified

age and gender received bnt162b2 (BNT162B2), via an unspecified route of administration, on an unspecified date, at single dose, for Covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced tunnel vision, shortness of breath, headache and couldn't move arms/legs all on an unspecified date with outcome of unknown. The information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of tunnel vision, shortness of breath, headache and couldn't move arms/legs due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including eye examination at baseline and during subject drug therapy, Head CT/MRI, chemistry panel and chest x-ray , counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

hallucinations; pain in right arm; headache; fever; chills; This is a spontaneous report from a contactable pharmacist via Regulatory Authority (Regulatory Authority report number not provided). A 35-year-old female received the 1st dose of bnt162b2 (BNT162B2, Manufacturer Pfizer-BionTech), intramuscular, on 18Dec2020 morning, at single dose, for Covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient has never had an adverse event following any previous vaccine. On 18Dec2020 afternoon, 12 hours after receiving vaccine, the patient experienced hallucinations, pain in right arm, headache, fever and chills. The patient underwent lab tests and procedures which included body temperature: fever (18Dec2020). The events recovered in Dec2020, 36 hours after. The information on the lot/batch number has been requested.

She woke up with a burst blood vessel in her eye; This is a spontaneous report from a contactable other healthcare professional (hcp) (patient). A 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 Vaccine), via an unspecified route of administration on an unspecified date in 2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. After receiving the Covid-19 vaccine in 2020, she woke up with a burst blood vessel in her eye. There was blood throughout the white portion of her left eye. The outcome of event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject vaccine cannot be excluded for the reported event of eye hemorrhage due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including including eye examination at baseline and during subject drug therapy, Head CT/MRI, chemistry panel, CBC and coagulation panel, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events.

Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

tenderness when pressure applied under left arm pit

Elevated temp 1?.2, chills, aches, nausea

Throat tightness, hoarse voice

Patient stated her throat felt tight and she was having trouble swallowing and her heart was racing. She was given diphenhydramine 50 mg IM and taken to the emergency room for observation. She was not given any additional medication in the emergency room and was discharged to home approximately 3 hours later.

nausea, headache, pain and swelling in arm, and weakness

Felt dizzy/faint and heart pounding. Given ice water and cool wash cloth, rest. Monitored, blood pressure 102/76. After 30 minutes continued to feel faint and dizzy with heart pounding feeling. Brought to Emergency Department for further evaluation.

Mild generalized, erythematous rash noted on patient's abdomen and back. The rash is pruritus.

Near Syncope

swollen gland in left armpit? tenderness to touch

Dry Cough

Client complained of numbness in arm, SOB, throat closing per onsite party, medical rendered by ambulance service, client given a Benadryl, condition improved, client released to self and drove self from the waiting parking lot.

Chills, body aches. He did have Covid on 11/11/2020

When rec'd injection on 12/23, it hurt more than any I've ever had and expected discomfort for several hours. By evening on 23rd my upper arm and shoulder were very painful and deltoid area swollen. By 24th, the pain was affecting entire left arm, shoulder, left back and neck. Then had pain/discomfort throughout body through the 25th, Ibuprofen taken as needed, by end of 26th I was feeling a bit better, and the 27th near all symptoms resolved. I do still have a good sized bruise around injection site.

7 AM - severe arm pain and swelling (for about 24 hours) 12:00 PM - 10 PM: chills, fever, fatigue, malaise

Patient reports elevated heart rate of 147 (normal: 70-120) and dizziness about 20 minutes after receiving vaccine.

shoulder pain with movement.

Patient was vaccinated for COVID-19 on 12/27/20 at 11am. 2 days later, upon waking up she developed pain at the injection site (left deltoid), and a rash on her right hand and right side of her stomach, not itching reported. The patient reported to employee health the reaction, she was seen in urgent care and given prednisone, benadryl, and famotidine.

Golf ball size swelling lymph nodes. Swelling in shoulder, chest, N/V.

Throat swelling, hard to breath, wheezing, went to employer ER. Prescribe a steroid and antihistamine.

"Patient reports that at about 30 minutes after she received her vaccine, her lips began feeling numb and tingling, mouth dry. She reports her face starting itching and developed a red rash, her face felt like it was ""on fire"". She denied any shortness of breath or difficulty breathing. She walked back into the clinic office at 1240, a set of vitals were taken and at 1250 25mg of PO benadryl was administered. Patient was held for observation and at 1325 she reported that the itching had improved. She did have an itching sensation in her through but no feelins of constriction or difficulty breathing. She stated that she did not feel drowsy and was okay to drive herself home. Her husband would be at home with her for the remainder of the day and she was told that if she developed any new or worsening symptoms to report to the ED immediatley."

Vaccine recipient received vaccine on 12/18/2020 at 7:30 am and at 9:00 am reported their bottom lip had swelling and around the chin had tingling that lasted 1.5 hours. At the occupational health follow-up visit on 12/28/20, the vaccine recipient reported that the injection site has been soar with occasional numbness and weakness that has not changed in intensity. Pfizer-BioNTech COVID-19 Vaccine

Received vaccination 12/23/20. On 12/28/20 began having fever 102+ and shortness of breath. Decided to go to ED for evaluation and COVID tested. Discharged from ED.

Back started itching, noticed huge red spot warm to the touch, hives. Neck and face become blotchy looking. Called NP, took 50mg of diphenhydramine. The hives and rash subsided by the end of the day on December 24th.

minutes after had flushed feeling all over body (similar to when I had dye injected for a cat scan).. felt lightheaded and extreme dry mouth.. lasted for about an hour. blood pressure when check on floor had a high diastolic number (120/94)

Approx 25 minutes after vaccination, client developed mild, red, raised rash with itching on lateral left wrist distal to injection site. Client denies any other adverse signs/symptoms of angioedema or anaphylaxis 1 hour after administration of vaccine.

Fever (102): body aches, chills, nausea, lightheaded (vertigo) All symptoms have subsided EXCEPT Vertigo/dizziness

Severe arm pain the following day. Resolved after about one day.

"Dizziness, warmth, ""just not normal"", scratchy throat. Resolved in about 1 hour."

Dizziness and nausea 10 minutes after injection, continued to wax and wane over approx 90 minutes. No vitals taken. Patient ambulated back to work at 1800.

tenderness to touch under right arm/armpit area. pain pressure felt when running.

Swelling of palate approx. 5 minutes post COVID Vaccine Dose #1. VS normal and stable. Received diphenhydramine 50mg PO with symptom resolution within 20 minutes. Observed for 40 minutes and D/C'd in stable condition with no sxs present.

Rash developed on forehead. Felt itch on other part of body. Felt hot and prickly. Took diphenhydramine and subsided within 45 minutes.

Weird rash to both lower legs, chest and neck area about 2 hours after administration.

Patient describes a tingling feeling all over the body, especially in the hands in face and it came in 2 waves lasting not more than a few seconds. She no longer is having these symptoms

Symptoms started 2 days after I got my injection. I had a massive migraine, body aches, chills, fever with temperature reaching 102. Symptoms lasted 24 hours. The following day I felt fine again.

Soreness in the arm achness around injection site itchy around the ears, in ears and itchy spots in throat around lips and face body felt numb

Near Syncope, dizziness

Near Syncope, dizziness

While, receiving the Covid vaccine with the needle still inserted, felt a significant amount of liquid drip down my arm and unsure how much of vaccine was administered.

Extremely stiff joints and joint pain.

Ipsilateral (to side of vaccination, i.e. left) supraclavicular adenopathy (painful, swollen, very tender to palpation for 3 days) Itchy throat Congestion Left arm soreness (this was immediately after, resolved after 3 days around the time the adenopathy began)

On December 25th developed a rash that started on the stomach, spread down legs then up the back on December 26th, all over body by the December 28th. Started off as a blistery area then turned to dry flakey skin, on the 28th started itching. by December 29th the itching had started to subside. Rash did not occur on the face but was in the scalp area. Patient took diphenhydramine but it die not help. As of the time this report is being filed has not contacted any healthcare provider.

facial swelling and hives; hives to right arm - zyrtec and prilosec taken. Ice administered. subsided by next day.

About 7 hrs after the vaccination I've experienced the side effect of tense pain on neck, lower back, thighs, calves and got more intense with time throughout the night and in the morning, daytime (now

12:34pm). Hard to sleep, kept waking up at night. I took Advil and Tylenol and couldn't tell if one was helpful then the other. The pain was still there but not as intense.

metallic taste in mouth

sore arm, chills, body aches; lasted 2 days after the vaccine date

Chills, joint pain, and headache starting 4 hours after the covid vaccine. S/S have yet to subside.

Patient received the covid vaccine on 12/19/2020. C/O new onset on sore throat and diarrhea on 12/28/2020. Sore throat is worsening. Hx of colitis by well controlled with Xeljanz. Diarrhea is unusual this time. Last diarrhea was almost 1 year ago. Denies fever, cough, loss of smell, rhinorrhea, nasal congestion, abdominal pain Awaiting PCP at medical center for evaluation and testing. Declined Employee Health Service

Systemic reaction. 3 days after injection. Severe, worsening macular-papular rash. Started on Abdomen and groin area. Now diffuse and encompasses chest, neck, and both legs. Very pruritic/itchy. Been taking daily Claritin and Benadryl. Not improving after >4 days.

Severe, disabling myalgias of lower back, flank, then lower abdomen resulting in extreme difficulty with standing and ambulatory.

"tingling in fingers approx 5 minutes after injection which resolved approximately 2 minutes later. At 0954, complaint of feeling ""clammy"", 1001 states feeling ""weak"" overall, denies lightheadedness, dizziness while sitting up on cart with HOB elevated. At 1011 no complaints and discharged from care."

Recipient reported to Employee Health Nurse: Pain at injection site, severe fatigue, headache, muscle pain, severe chills, joint pain, fever exceeding 101.0 for 2 days, increased heart rate, rash, dizziness, weakness, tightness in throat, difficulty breathing, nausea, swelling of face/lips.

8PM: Extremely nauseous 4AM: 101.5 fever 11AM: 100.3 fever 11AM: extreme body pain

12/29 c/o fatigue, heavy eyes, and numbness, tingling and swelling to left arm. Also numbness, tingling to left leg and foot. She was seen in ED , prescribed naproxen and sent home.

24 hours after receiving vaccine, Patient started to experience fever, tachycardia, chest pressure, excessive sweating, cough. Patient presented to ER for evaluation. Patient received EKG, blood tests and Covid Rapid antigen test. Patient tested positive for Covid on Rapid Antigen test in ER. Patient was having no symptoms of covid and reported no exposure to covid on pre-vaccine questionnaire the day prior. Patient released from ER to home in stable condition with instructions to call physician immediately if condition worsens.

On 12/28, start getting a really bad headache. Within two hours, I started developing aches all over my body. Developed chills for a few hours. Chills were gone by morning, but headache and some of the aches remained by noon.

Was given the vaccine and about 5 minutes later started having swelling and my eyes and face. It was watched for a few minutes and was assessed by EMS and taken to the emergency department. I was given epinephrine, Benadryl, Solu-Medrol, Pepcid, IV fluids, DuoNebs and observed overnight. I was given multiple rounds of Benadryl, steroids, Pepcid, DuoNebs

She arrived at 12:30 and was vaccinated shortly after while waiting 15 for observation within the 1st 10 min she C/O tingling of her throat and lower lips, felt palpitation. No chills, No headache, + palpitations, and No presyncope. Tells me that she did not experience any loss of consciousness. Never had any chest pain, shortness of breath, or angioedema, rash, pruritus, throat swelling, hoarse voice, or difficulty breathing. The patient has had no recent illnesses, fevers, chills, nausea, vomiting, diarrhea, or flu-like illnesses. She has had no cough, rhinorrhea, or congestion. She denies any recent vaginal bleeding, or abdominal pain. Denies any history of cardiac disease, or history of arrhythmias. Denies any history of prolonged immobility, recent travels, or history of clots. In ED:32 year old female with PMHx as listed in HPI presents with concern for allergic reaction to mod chair and a COVID-19 vaccine, felt tingling in the back of her throat and lower lip, no swelling, wheezing, shortness of breath, throat tightening, rash, nausea vomit or dizziness. Vitals reviewed found to be within normal limit. Physical exam as per above, no signs of mucosal or oral swelling, no hives or rash and no wheezing on exam. Given above findings, low suspicion for allergic reaction this time but plan to observe patient in the ED for any delayed reaction. á

Nausea 10-15 mins after dose. Pain at injection site ~10 hours later. Generalized severe myalgia (thighs and buttocks), chills & rigors ~12 hours after. Headaches, mild nasal congestion and persistent myalgia 24 hours post vaccine with fevers of 38.7 C max 36 h post vaccine. Now ~48h post vaccine and continue with headaches and myalgia especially of lower limbs. However, now also feeling fatigued.

C/o itching and redness to arms and face approx. 20 minutes post vaccine administration.á Admin Benadryl 25mg po x1 per S.O.á 1400-Pt reports itching is nearly resolved; redness improving.

extreme arm soreness, extreme body ache

Fever, chills, recently was positive for Covid on 11/29/2020

Myalgia Dizziness Nausea Fatigue Fever

Pressure in ears that started approximately 3 hours and 40 minutes after vaccination. Pressure is reported in both ears but more prominent in the left ear. Patient came back to immunization clinic under direct observation for additional 30 minutes after symptoms started. Symptoms still present.

Tachycardic, flushing

"Dizzy, nausea at 1 hour Throat tightness, felt ""swollen"" Worked x 2 1/2 hours then reported to nurse, sent to ER"

Around 4am exactly a week after getting the vaccine; I woke up in a sweat, went to the bathroom with extreme nausea thought I may throw up. No throw up came but severe nausea persisted. Along with a

lot of dizziness and light headedness. My balance feels off. My body feels strange, very sensitive to touch. Extreme exhaustion. No motivation. Head ache that seems to not go away with Tylenol. Stomach pain. And my body hurts on the inside my joints. I have metal in my back and it seems to be increased in pain. I had to take the day off and could not work. I feel miserable. Very flu like.

12hours after shot -mild to moderate pain at injection site (no redness or swelling). 12/27/20 (day 5) Skin reaction to few mosquito bite (1 inch red spot around bites). Its the first time I react to mosquito bites. Resolved overnight. 12/28/20 (day 6) Dark reddening around both eyes (specially in eyelids) when removing my makeup. Same routine/products as always. Also resolved overnight.

Dizziness. Light-headed. Given water & mint candy. Took blood pressure. Reading normal. Offered opportunity to lie down. Refused. Sat in chair until about 11:00 AM when felt better to drive.

Dizziness. Light-headed. Given water & mint candy. Took blood pressure. Reading normal. Offered opportunity to lie down. Refused. Sat in chair until about 11:00 AM when felt better to drive.

Dizziness. Light-headed. Given water & mint candy. Took blood pressure. Reading normal. Offered opportunity to lie down. Refused. Sat in chair until about 11:00 AM when felt better to drive.

12 hours after vaccination I started chilling and had intense body aches, terrible joint pain. I do have arm soreness but nothing worse than with other vaccinations. These symptoms have continued for 24 hours after the injection

"Vasovagal response. Pt requested to lie down following vaccination. Reported feeling faint, nauseous and ""seeing stars."" Team applied cool compresses, patient instructed to lie on the floor with feet on a chair. Vitals were BP: 124/82, hr 53, o2 97% at 1200. Pt moved to sitting shortly thereafter. Then, at approximately 1210 requested to lie down 2/2 ringing in ears, sweating, and feeling nauseous again. At 1212 vitals were bp 124/78, hr 58, o2 97%. At approximately 12:25 symptoms abated, pt moved to sitting. Continued to monitor until 12:50 with no recurrence of symptoms."

12/23/2020 - VACCINATION 12/24/2020 - WOKE UP AT 6AM WITH HEADACHE. LASTED 12 HOURS; NO RELIEF WITH TYLENOL (TOOK 2 BRANDS); NAUSEOUS. 'WAS NOT THE NORM'. FELT BETTER AFTER THE 12 HOURS. PREGNANCY HISTORY; 12 WEEKS,; DUE DATE JULY 11/12TH 2021.

About 45 minutes post injection I experiences the sensation of heat all over my body, my heart rate increased rapidly and I had tingling in my mouth. This passed after about 10 minutes, since then I have been experiencing exhaustion and feeling foggy. No additional reactions at this time.

Feeling of wanting to pass out, dizziness and fell at home, severe headache, body aches, scratchy throat and SOB.

Localized urticaria on day 7 post vaccine with generalized swelling, itching, and tenderness. No prior reaction until day 7.

"She arrive at 3:43 and she was nervous before the vaccination for COVID19 (Morena) because has had anaphylactic reactions to Flonase. She was feeling well up to 15 min post vaccination when she felt she is going to pass out w/o loosing consciousness. She felt weak and feeling fainted when we transferred her to the stretcher. Her BP was 163/106 P=112, Pulse Ox 100% at 16:09. She was resting, received O2 lit per min, she was feeling chest tightness when she used her inhaler Albuterol 2 puffs X2 within 5 min. She was feeling weak and stating ""I am going to pass out."" Her repeat BP=152/110, P=94 with pulse Ox 100% at 16:12 repeat at 16:30 BP=139/100, P=99 pulse OX 100% She then C/O chills later. Paramedics were called and transferred in to ED. She takes AMLODIPINE 5 MG DAILY FOR HTN. She has family HX of HTN. Negative for headache, + palpitations, + presyncope, + shortness of breath, slight difficulty brathing. She did not experience any loss of consciousness. Never had any chest pain, angioedema, rash, pruritus, throat swelling, hoarse voice. The patient has had no recent illnesses, fevers, chills, nausea, vomiting, diarrhea, or flu-like illnesses. She has had no cough, rhinorrhea, or congestion. She denies any recent vaginal bleeding, or abdominal pain. Denies any history of cardiac disease, or history of arrhythmias. Denies any history of prolonged immobility, recent travels, or history of clots. á In ED: 36 year old female presents with dizziness and presyncopal like symptoms approximately 15 minutes after receiving the Medina vaccine at this hospital the patient who is mildly tachycardic mildly hypertensive but otherwise normal and stable vital signs and is overall nontoxic appearing. Of note the patient's oxygen saturation was 97% while I was in the room and not the 2% that is documented here. á EKG notable for a rate of 87 normal axis normal sinus rhythm T-wave inversion in V1 otherwise no evidence of Brugada interval abnormality or evidence of electrolyte abnormality that would require further workup at this time. Patient counseled to follow up with her primary care. Patient given EpiPen given her EpiPen has expired. Patient requested to go back to work I feel this is fair given patient will be on campus and can return to the emergency department should she develop any further symptoms. á Patient states her symptoms have completely resolved and she has normal vital signs currently heart rate in the 80s blood pressure 138 systolic feeling well and requesting to be discharged."

Upon registration, pt informed staff she normally gets hives and itching with flu vaccine. Pt received COVID vaccine at 1205. Pt sat down in monitor area at 1209. At 1221, pt stated she started to feel slight itching. At 1230, pt stated itching had increased. RN also noted redness to neck. Pt denied any SOB, difficulty breathing, tingling in mouth, or any other anaphylactic symptoms. At 1234, RN gave 25mg Benadryl orally. Pt requested to receive smaller dose instead of the entire 50mg. Pt stayed to be monitored until 1255. No other symptoms noted. Pt educated to monitor for further signs of anaphylaxis.

Immediately injection site was itchy, but no distress. within 10 minutes, throat became very dry; back of tongue started to tingle and feel as if it were swelling. No shortness of breath noted.

Full body hives approximately 12 hours after injection, resolved with oral diphenhydramine

Shortness of breath, wheezing, throat tighness, body aches without fever beginning 3 days ago lasting 2 days resolved spontaneously overnight

reported throat closing

She stated she had hives appear on her face and had to take Benadryl.

Large red lump that was very sore to the touch, the site is warm and 7 days later a bruise has formed. Lump appears to be very slowly getting smaller.

I woke up on the morning of Dec 26th with significant eye swelling. It was somewhat relieved with loratidine anithistimine 10 mg po daily x 3 days . The swelling was bilateral, symmetrical and was not accompanied by significant reddening of the eyes. Swelling was above and below the eyes. Swelling is slowly resolving but still present today 12/29. A small amount of skin sloughing occurred below the eyes and on the eyelids. Swelling was accompanied by watery eyes, itching with foreign body sensation.

Fever- Started in the middle of the night around 1:00 am and dizziness felt like I was going to pass out. Woke up at 8 with a slight cough, dizziness and faint feeling.

Patient felt lightheaded and dizzy about 5-10 minutes after receiving his first COVID vaccine. His blood pressure was elevated (160/96 mmHg) and he was tachycardic (143 bpm). He said he felt some tingling in his arm. The injection site appeared normal. The patient sat for 30 minutes and his blood pressure and pulse normalized (134/86 mmHg and 84 bpm). He said he began to feel better and eventually left the building.

Approximately 2 and a half hours after vaccine administration, I had the sudden onset of abdominal cramping, multiple episodes of diarrhea, nausea, and tingling in my hands and lips. I recognized these symptoms as a potential allergic reaction and took cetirizine 20 mg and famotidine 20 mg. These symptoms subsided approximately one hour after onset. Approximately 4 hours later, I experienced moderate fatigue and mild muscle soreness of my left arm (where the vaccine was administered). The fatigue and soreness persisted into the next day and gradually subsided.

Sudden onset. Chills, low-grade fever. Myalgia, arthralgia I did have the Covid virus in June. I still have adequate IgG. This began while I was seeing patients today. I do not feel very good. No cough, nasal congestion, no fear of contamination.

Redness of both arms, mild cough, temp 99F

12/22/2020 Received vaccination at approximately 1000 in left deltiod area. Approximately 1700 12/22/2020 developed parethesia 3rd, 4th and 5th fingers diagonally to ulnar area of left palmar surface. 12/23/2020 noted paresthesia alone vertebrea with outward extension to all areas of back.

None stated.

c/o tingling in nose/throat, dizziness, Chills administered 25mg Benedryl PO @ 1225 v/s 98% RA HR 81 126/82 c/o Cough and itching of throat @ 1246 93% RA, 124/84, HR 83 c/o Tightness in R/chest, symmetrical chest, diminished throughout, with wheezes and faint crackes on RUL clears with cough. 1306 1306 called EMS - sent to ER for Eval

Very tired the first day; pain in my arm for two days; sporadic palpitations; This is a spontaneous report from a contactable nurse (patient). A 28-year-old female received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: Ek5730, via an unspecified route of administration in the left arm, first dose on 18Dec2020 08:15 at a single dose for immunization. Medical history included hypothyroidism. Concomitant medication included levothyroxine sodium (SYNTHROID). The patient previously took oral aspirin but had intolerance. The patient was not pregnant. The patient did not receive any other vaccines within 4 weeks prior to the vaccine. The patient was not diagnosed with covid-19 prior to vaccination and she has not been tested since the vaccination. The patient was very tired the first day, she had pain in her arm for two days and sporadic palpitations that continued. The events started on 18Dec2020 at 10:30 AM. The outcome of the events 'very tired the first day, she had pain in her arm for two days and sporadic palpitations' was unknown. The patient did not receive any treatment for the events.

Numbness and swelling of the right side of the face; Numbness and swelling of the right side of the face; This is a spontaneous report from a contactable pharmacist. A 39-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899) via intramuscular on 15Dec2020 12:45 on left arm at a single dose for COVID-19 immunization. The patient has no medical history and not allergy to medications, food, or other products. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine and did not receive any other medications within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient has not been tested for COVID-19. The patient experienced numbness and swelling of the right side of the face on 22Dec2020 12:30. The adverse events result in emergency room/department or urgent care. There is unknown whether treatment received for the adverse events. The outcome of the events was unknown.

High Blood pressure; tachycardia; This is a spontaneous report from a contactable nurse (patient). A 36-year-old male patient received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot number: EK 5730) intramuscular in the left arm on 18Dec2020 17:00 at a single dose for COVID-19 immunization. The patient received COVID-19 vaccine in a hospital facility. Medical history included asthma, high blood pressure, and allergy to seafood. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The patient is taking unspecified concomitant medications. The patient previously had allergies to acetylsalicylic acid (ASPIRIN) and iodine (IODO). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced high blood pressure and tachycardia then 2 minutes after receiving the vaccine. The patient did not receive treatment for the adverse events. The outcome of the events was recovered in Dec2020. The report is considered non-serious.

Pain and numbness in the left arm, from the shoulder to the fingers.; Pain and numbness in the left arm, from the shoulder to the fingers.; Pain and numbness in the left arm, from the shoulder to the fingers.; Cannot raise arm, nor leave it down.; This is a spontaneous report from a contactable pharmacist. A 55-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), intramuscular on 17Dec2020 14:15 at single dose for covid-19 immunization. Vaccine location was left arm and it was the first dose. The COVID-19 vaccine was administered at Hospital. Medical

history included Right breast cancer. Concomitant medication included vitamin Vitamin C, Vitamin D, anastrozole (ARIMIDEX). The patient experienced pain and numbness in the left arm, from the shoulder to the fingers. Can not raise arm, nor leave it down on 19Dec2020. Relief with a sling. Also, to manage pain she was taking Tylenol every four hours. By medical order she started diclofenac potassium 50 mg tablet. Adverse events resulted in: Doctor or other healthcare professional office/clinic visit. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, it was unknown if the patient was been tested for COVID-19. The outcome of the events was unknown.

Nausea; colic; diarrhea; This is a spontaneous report from a contactable pharmacist. A 51-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EK5730), intramuscular at left arm on 21Dec2020 11:15 at single dose for COVID-19 immunization at a hospital. The patient's medical history and concurrent conditions was reporter as none. The patient had no known allergy (NKA) to medications, food, or other products. There were no concomitant medications (no any other vaccines within 4 weeks prior to the COVID vaccine, no any other medications received within 2 weeks of vaccination). The patient was not diagnosed with COVID-19 prior to vaccination, and had not been tested for COVID-19 since the vaccination. On 21Dec2020 15:00, the patient experienced nausea, colic, and diarrhea. The events lead to doctor or other healthcare professional office/clinic visit. No treatment was received for the events. The outcome of the events was recovered in Dec2020.

joint pain in both knees and elbows/pain in both hips/some joint pain on the right knee and hip; This is a spontaneous report from a contactable physician(patient). A 35-year-old male patient received the first dose of BNT162B2 (lot number: EKS730), via intramuscular in left arm, on 18Dec2020 09:45 AM at single dose for COVID-19 immunization. Facility where the most recent COVID-19 vaccine was administered was hospital. The patient was not diagnosed with COVID-19 prior to vaccination. Since the vaccination, the patient was not tested for COVID-19. Relevant medical history was none. No allergies to medications, food, or other products. No other vaccines were received within 4 weeks prior to the COVID vaccine. The medications received within 2 weeks of vaccination included CBD oil drops. On Monday 21Dec2020 06:00 AM the patient started experiencing joint pain in both knees and elbows. Pain was moderate and fluctuating, the patient took some Tylenol and intensity of pain improved. On Tuesday, 22Dec2020 pain intensity decreased, however at night time the patient started experiencing pain in both hips, mostly on the right side. Today 23Dec2020 pain has disappeared from both elbows, left hip and left knee. The patient was still experiencing some joint pain on the right knee and hip, mostly when he was walking, if he was sitting down or not moving at all, pain is not present. Treatment Tylenol 500 mg P.O. (oral) q (every) 8 hours and CBD oil was received for the events. The outcome of the event was recovering.

Bell's Palsy; This case has been considered invalid as non-serious event was not reportable in clinical study. This is a report from an interventional study. A 51-year-old female non-pregnant subject received blinded therapy (BNT162; PLACEBO) first dose on 24Aug2020 at 13:15 and second dose on 15Sep2020, via an unspecified route of administration on left arm at single dose for COVID-19 immunization. Medical history included allergy to some foods. No other vaccine in four weeks and no other medications in two weeks. The subject experienced bell's palsy on 03Dec2020 which considered as non-

serious by investigator. Clinical course was as follows: on 03Dec2020, the subject had a diagnosis of bell's palsy post 2nd vaccine. The subject had no COVID prior vaccination. A nasal swab post vaccination on 30Nov2020 was negative. After visit 3 (13Oct2020), the subject reported the Bell's Palsy. She went to her doctor, but mot hospitalized. The investigator did not think this was an SAE and was not considered life threatening. The action taken in response to the event for blinded therapy was not applicable. Event treatment included an unspecified medication. The outcome of the event was not recovered. The investigator assessment with blinded therapy, concomitant drugs and clinical trial procedure not reported. Follow-up (21Dec2020): New information received from site included: updated report type, patient ID, event seriousness (non-serious).

Headache for 4 days now; 10 hours post vaccination, patient's entire arm (not injection site) hurt horribly, unable to lift; 10 hours post vaccination, patient's entire arm (not injection site) hurt horribly, unable to lift; At times her face will feel tight; 30 min post starting itching very bad; Have experienced insomnia since the injection, followed by exhaustion; Have experienced insomnia since the injection, followed by exhaustion; eyes itch and have been red; eyes itch and have been red; This is a spontaneous report from a contactable nurse. A 45-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration (left arm) from 18Dec2020 09:45 at a single dose for COVID-19 immunization. Medical history included migraine, depression, anxiety, allergies, poly cystic ovary syndrome, asthma, different food allergy and sensitivity to all antibiotics. It was reported that 30 min post vaccination, patient started itching very bad and none of her allergy meds would calm it. Have experienced insomnia since the injection, followed by exhaustion. The itching decreases daily but even 10 hours post vaccination, patient's entire arm (not injection site) hurt horribly, unable to lift. She had headache for 4 days now. At times her face will feel tight. She added that she has allergies and sensitivity to many medications/ environmental/ scents. Outcome of events was recovering. No treatment was received due to events. Follow-up attempts are completed. The following information on the batch/lot number has been obtained.

Muscle aches in legs; This is a spontaneous report from a contactable nurse. A 50-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular from 18Dec2020 07:45 to 18Dec2020 07:45 at a single dose for COVID-19 immunisation. Medical history included sinusitis, HLD, and penicillin (PCN) allergy. Concomitant medication included vitamin c [ascorbic acid], tocopheryl acetate (VITAMIN-E), ergocalciferol (VIT D), magnesium and calcium. The patient experienced muscle aches in legs from 2 to 12 hours post vaccine administration (18Dec2020 10:00). Outcome of event was reported as recovered. No treatment was received due to the event.

redness above eyebrow, nose and cheek and left hand had few reddened marks on skin, neck had a thin red line; right eyebrow was swollen and neck had a thin red line; The initial case was missing the following minimum criteria: unspecified event. Upon receipt of follow-up information on 23Dec2020, this case now contains all required information to be considered valid. This is a spontaneous report from a contactable nurse. A 62-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EK5730), intramuscularly in the left deltoid on 18Dec2020 10:30 at a single dose for COVID-19 immunization. Medical history included hypertension (diagnosed at 47 years old), hypothyroidism, Hashimoto's disease from 2000 to an unknown date (diagnosed 20 years ago), anxious

person and weight loss. Concomitant medication included hydrochlorothiazide (MANUFACTURER UNKNOWN), taken for blood pressure from 2000 to an unspecified date, levothyroxine sodium (SYNTHROID), taken for hypothyroidism and Hashimoto's disease from 2015 to an unspecified date, rosuvastatin calcium (CRESTOR), taken prophylactically from 2010 to an unspecified date and semaglutide (OZEMPIC) taken for weight loss from May2020 to an unspecified date. Family history included; the patients mother had an allergy to Sulfa and allergy to penicillin and the patients father had unspecified allergies and hay fever. There were no prior vaccinations within 4 weeks. On 19Dec2020, the patient experienced redness above eyebrow, nose and cheek and left hand had few reddened marks on skin, neck had a thin red line and right eyebrow was swollen. The reporter considered the events to be non-serious. The patient was worried about anaphylaxis, so they went to the emergency room (ER) for the reported events but was not admitted. The patient was treated in the ER for the events with diphenhydramine hydrochloride (BENADRYL), prednisone (MANUFACTURER UNKNOWN) and famotidine (PEPCID). Relevant tests were none. The outcome of the events was recovering. The reporter stated that there was a reasonable possibility that the events were related to the suspect product.

left arm began having generalized weakness and difficulty holding pen.; Mild tremors of left hand and fingers.; This is a spontaneous report from a contactable pharmacist. An adult female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EJ1685), intramuscular on 18Dec2020 at a single dose for COVID-19 immunization. The vaccine was administered in the hospital. The patient's medical history and concomitant medications were not reported. Around 6 hours post-administration on 18Dec2020, patient's left arm began having generalized weakness and difficulty holding pen. Mild tremors of left hand and fingers. Lasted approximately 2-3 hours and resolved spontaneously. No other symptoms. No treatment was given. The events were reported as non-serious. Outcome of the events was recovered in Dec2020.

Was exposed to someone positive and then 2 days later tested positive; Was exposed to someone positive and then 2 days later tested positive; Was exposed to someone positive and then 2 days later tested positive; This is a spontaneous report from a contactable pharmacist. A male patient of an unspecified age received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the first COVID-19 vaccine last week in Dec2020, then was exposed to someone positive and then 2 days later, patient tested positive. Reporter inquired whether they can vaccinate patient on schedule 3 weeks after the first dose or if they have to wait 90 days. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Extreme dizziness that is still ongoing; This is a spontaneous report from a contactable nurse (patient). A 54-year-old female patient received the first dose of bnt162b2 (Pfizer Biontech COVID 19 vaccine), Lot number: EK5730, via an unspecified route of administration at the left arm on 18Dec2020 15:15 at a

single dose for COVID-19 immunization. The patient medical history includes migraine and known allergies to Latex and sulfa drugs. Concomitant medication included levothyroxine, gabapentin, calcium, colecalciferol (CALCIUM & VITAMIN D). On 05Dec2020 03:00 (pending clarification), the patient experienced extreme dizziness that is still ongoing. The patient was not hospitalized for the event, did not receive any treatment for the event and event was reported as non-serious. The vaccine was administered in the workplace clinic. The patient has not received any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination the patient was not diagnosed with COVID-19. Since the vaccination, the patient has been tested for COVID-19 (Dec2020-unknown results). On 14Dec2020, Nasal Swab (COVID 19) Result was Negative. The outcome of the event was not recovered.

tightness in throat; This is a spontaneous report from a non-contactable Other Health Professional. A 51-year-old female patient started to receive bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: HE9899, intramuscular in the right arm, first dose on 16Dec2020 10:21 at a single dose for immunisation. The patient's medical history and concomitant medications were not reported. The patient is not pregnant. The patient had been escorted from observation area to emergency area with complaints of tightness in throat. The patient was eupneic, p/w/d, ambulatory, NAD. Vitals #: P72, 100% pulse ox, RA Vitals #: P72, 98% pulse ox on RA, 112/78 seated. She was administered with 25mg diphenhydramine PO per verbal order (VO)/D. (Name) PA #, pt swallowed with water. Vitals #: 98% pulse ox on RA, P74, denies shortness of breath or pain. She was presented to vaccination clinic. Patient received her vaccination at approximately 1021. Patient reported symptoms onset at approximately 1038 with tightness of the throat. The outcome of tightness in throat was recovered on an unknown date. No follow-up attempts are possible. Information about lot/batch number cannot be obtained. No further information is expected.

tongue tingling and swelling specific to the left side of her tongue; tongue tingling and swelling specific to the left side of her tongue; This is a spontaneous report from a non-contactable other hcp. A 57-year-old female patient received 1st dose of bnt162b2, lot number: HE9899, intramuscular in the right deltoid muscle on 16Dec2020 13:30 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was seen at the clinic today for her first dose of the COVID 19 vaccination. She denied any history of previous adverse reactions to vaccines. She reports that she also had shingles and pneumonia vaccination on Monday, 14Dec2020. She was given the Pfizer vaccination in the right deltoid muscle. During her 15 minute waiting period after the injection, the patient began to experience tongue tingling and swelling specific to the left side of her tongue. She denied rash, difficulty breathing, difficulty swallowing, wheezing, throat tightness, dizziness and lip swelling. She reports similar reactions after receiving other vaccinations. States that those symptoms always resolved with time and never required any treatment. Outcome of the events was recovered. The events was assessed as non-serious. No follow up attempts are possible. No further information is expected.

Red itchy rash around injection site; Red itchy rash around injection site; Red itchy rash around injection site; This is a spontaneous report from a contactable nurse. A 38-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: Eh9899), intramuscular (Arm Left) from 18Dec2020 18:45 at a single dose for COVID-19 immunisation. Medical history included hypothyroidism

and pre diabetes. Patient had no known drug allergies (NKDA). Concomitant medication included levothyroxine. On 20Dec2020 23:45, the patient experienced red itchy rash around injection site. The patient underwent lab tests and procedures on 16Dec2020 which included nasal swab with negative result. Outcome of events was recovered. No treatment was required/involved. Follow-up attempts are completed. Information on the batch/lot number has been obtained.

lymphadenopathy/I was having reaction of lymphedema; This is a spontaneous report from a contactable consumer (medical dosimetrist and patient herself - pending clarification). A female patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number EJ1685), via an unspecified route of administration in Dec2020 at SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. In Dec2020, the patient was having reaction of lymphedema/ lymphadenopathy and was wondering how long it last generally. The patient also inquired if she would get the next vaccine in different arm. Outcome of the event was unknown. No follow-up attempts are possible. No further information is expected.

Left sided lip numbness; Left hand and foot tingling; This is spontaneous report from a contactable physician (patient). A 29-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EH9899) intramuscular in left arm on 20Dec2020 17:45 at single dose for COVID-19 immunization. There was no medical history. The patient was not allergic to medications, food, or other products. There were no concomitant medications. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced left sided lip numbness, left hand and foot tingling on 20Dec2020 18:00. No treatment was received for the adverse events. Events outcome was not recovered.

Itching and tingling to right arm that traveled to elbow; Itching and tingling to right arm that traveled to elbow/itching to flank area; Itching and tingling to right arm that traveled to elbow; Itching and tingling to right arm that traveled to elbow; This is a spontaneous report from a contactable nurse. A 30-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), intramuscular at the right arm on 22Dec2020 07:45 to 22Dec2020 07:45 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On 22Dec2020 8AM, the patient experienced itching and tingling to right arm that traveled to elbow, employee reported sensation was 'easing up' 5 minutes after it started. She also reported itching to flank area, no rash was noted. The patient was not hospitalized for the events but had an emergency room/department or urgent care visit because of the events. The events were reported as non-serious. The vaccine was administered in a hospital. The outcome of the events was recovering.

throat tightness; This is a spontaneous report from a non-contactable other healthcare professional. A 36-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number HE9899, intramuscular Right arm (right deltoid muscle) from 18Dec2020 12:45 to 18Dec2020 12:45 as single dose for COVID-19 immunization. Medical history included mild anxiety. The patient's concomitant medications were not reported. Patient was given the Pfizer vaccination in the right deltoid muscle. During her 15-minute waiting period after the injection, the patient began to experience throat

tightness. She denied rash, hives, difficulty breathing, hoarseness, lightheadedness, dizziness, facial swelling, lip swelling and tongue swelling. Review of Systems Constitutional: Negative for activity change, appetite change and fever. HENT: Negative for congestion, facial swelling, rhinorrhea and trouble swallowing. Initially with some throat tightness. Resolved within 10 min Respiratory: Negative for cough and shortness of breath. Neurological: Negative for dizziness, weakness, light-headedness and headaches. The outcome of the event was recovered on 18Dec2020. No follow-up attempts are possible, information about batch number cannot be obtained.

bumps; This is a spontaneous report from a contactable consumer. A 58-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685 & expiration date: 30Dec2069), via an unspecified route of administration at the left arm on 17Dec2020 15:30 at a single dose for COVID-19 immunization. Medical history included border line diabetic, ovarian cancer over 25 years ago, high blood pressure, depression, all under control. The patient has no known allergies. Concomitant medications included metformin, sertraline, lisinopril, ibuprofen, vitamin c, and ergocalciferol (VITAMIN D). Sunday of 20Dec2020, around 16:00, patient noticed bumps on her arms, then the next day more came out and some on her upper legs, which were not painful or red, just bumps. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination and was not tested for it since the vaccination. The patient has not recovered from the event.

tachycardia; This is a spontaneous report from a contactable nurse. A 25-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EL0140, expiry date: 31Mar2021), intramuscular on the left deltoid on 17Dec2020 13:22 at 0.3 mL, single for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient had tachycardia on 17Dec2020 13:25, post vaccine but it went away quickly. Reporter stated that she didn't know if patient was anxious. Outcome of the event of tachycardia was recovered on 17Dec2020. The reporter assessed the event as non-serious.

diarrhea; shortness of breath; tachycardia; elevated blood pressure; flushing; chills; 101F fever; weakness; fatigue; muscle aches; This is a spontaneous report from a contactable nurse. A 24-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EJ1685, expiration date unknown) via an unspecified route of administration on 19Dec2020 ast 14:15 at a single dose for COVID-19 immunization in the hospital. The patient has no medical history. There are no known allergies. Concomitant medication included ethinylestradiol, ferrous fumarate, norethisterone acetate (JUNEL FE) for birth control. The patient was not diagnosed with COVID-19 prior to vaccination. The patient experienced diarrhea, shortness of breath, tachycardia, elevated blood pressure, flushing, chills, 101F fever, weakness, fatigue, muscle aches all on 20Dec2020 at 10:00. No treatment was received in response to the events. The patient has not been tested for COVID-19 since vaccination. The patient recovered from diarrhea, shortness of breath, tachycardia, elevated blood pressure, flushing, chills, 101F fever, weakness, fatigue, muscle aches all on an unspecified date.

diagnosed with COVID-19; diagnosed with COVID-19; This is a spontaneous report from a contactable physician, the patient. A male patient of an unspecified age received the first dose of BNT162B2 (PFIZER-

BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration on 21Dec2020 as single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On 22Dec2020, the patient was diagnosed with COVID-19. The clinical outcome of diagnosed with COVID-19 was unknown. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: The patient was diagnosed with COVID-19 one day after he received vaccination with BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE). There was not a reasonable possibly that the event was related to vaccination considering the temporal gap between the vaccination and the event onset.

hives; she had an achy left arm (injection arm); fatigue; This is a spontaneous report from a contactable nurse (patient). A 67-years-old female patient started to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), Batch/lot number was not provided, unspecified route on 17Dec2020 (at the age of 67-years-old) as a single dose in the left arm for COVID-19 vaccination. Medical history and concomitant medication were not reported. On unspecified date in Dec2020, the patient experienced she had an achy left arm (injection arm) and fatigue which she states that she expected. On 22Dec2020, the patient experienced hives. She woke up and had hives. Outcome of the event fatigue was recovered in Dec2020. Outcome of the events hives and she had an achy left arm (injection arm) were unknown.

rash to both forearms, thigh and private area/developed a rash on both arms, thighs, and kind of near the private area. Areas are red and bumpy/rash now is flat, red, and pinkish; rash to both forearms, thigh and private area/developed a rash on both arms, thighs, and kind of near the private area. Areas are red and bumpy/rash now is flat, red, and pinkish; rash to both forearms, thigh and private area/developed a rash on both arms, thighs, and kind of near the private area. Areas are red and bumpy/rash now is flat, red, and pinkish; This is a spontaneous report received from a contactable nurse (who is also the patient). A 62-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685, expiry date unknown), intramuscular in left deltoid, on 19Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient reported she received the COVID-19 vaccine on Saturday (19Dec2020). Everything was fine all day on Saturday and when she took a shower on Sunday morning (20Dec2020), she noticed she developed a rash on both arms, thighs, and kind of near the private area. Areas are red and bumpy, and she still has the rash on the arms. She called her primary care provider and was instructed to use Benadryl at bedtime and Zyrtec in the morning to help. She was wondering because in 20 some odd days she is to get the second shot and wants to know if she should expect this type of adverse reaction. She mentioned that the rash now is flat, red, and pinkish. She stated she has never had COVID-19 testing or symptoms. Just this rash from the vaccine. The reporter assessed the events as non-serious. The outcome of the events was not recovered (reported as ongoing).

Patient woke up with forehead and back of hand rash; she had swelling in the morning after being vaccinated; This is a spontaneous report from a contactable pharmacist. A 29-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: unknown, via an unspecified route of administration on 21Dec2020 at a single dose for immunization. The patient's medical history and concomitant medications were not reported. It was reported that the patient woke up with forehead and back of hand rash and she had swelling in the morning after being vaccinated. She took a

BENADRYL and went to the ED (Emergency Department). Event onset date was on 22Dec2020. The event was reported as non-serious. The outcome of forehead and back of hand rash and she had swelling was unknown. Information on Lot/Batch number has been requested.

my lt. arm felt like lead , so heavy and very sore; my lt. arm felt like lead , so heavy and very sore/felt soreness if she lifted up her arm; This is a spontaneous report from a contactable healthcare professional (patient). A 58-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EUA), intramuscular in the left arm on 21Dec2020 16:45 at single dose for COVID-19 immunization. Medical history included the patient being pre-diabetic. The patient's concomitant medications were not reported. The patient previously took epinephrine, norethindrone, and comtrex cold medicine and experienced drug allergy. The patient didn't have anything until around 2:00am on 22Dec2020 - her lt. arm felt like lead, so heavy and very sore. Her arm felt better after getting up - having shower around 6:30am. By 2 pm she only felt soreness if she lifted up her arm. No treatment was given for the events. The patient was not diagnosed with COVID-19 prior to vaccination and was not tested for COVID-19 post vaccination. The patient also did not receive any other vaccines within 4 weeks prior to the COVID vaccine and have not received any other medication within 2 weeks of vaccination. The outcome of the events was recovering. Information on the Lot/batch number has been requested.

achiness; Fatigue; patient was administered 0.3ml of undiluted covid vaccine intramuscularly.; patient was administered 0.3ml of undiluted covid vaccine intramuscularly.; This is a spontaneous report from a Pfizer-sponsored program, IBCC (Inbound Call Center for HCPs). A contactable pharmacist reported that a 28-year-old female patient received bnt162b2 (BNT162B2; lot number: EH9899; NDC number of Covid vaccine: 59267-1000-1 Expiry Date of Covid vaccine: Mar2021), intramuscular on right deltoid on 18Dec2020 at 0.3 mL for COVID-19 immunization. There were no medical history and concomitant medications. On 18Dec2020, a patient was administered 0.3ml of undiluted covid vaccine intramuscularly. The patient experienced achiness, fatigue. The patient received the covid vaccine injection Friday afternoon. When querying seriousness regarding the patient receiving the undiluted dose, he states she has not had very many side effects from it thus far. Clarifies that achiness and fatigue were her main side effects which started Friday night and continued into Saturday. Treatment: She received IV fluids this weekend in the ER as a precautionary measure He does not have time to continue with report and requested to be transferred. No further details. The outcome of the events was unknown.

localized tingling at the injection site that radiated into her 4th and 5th digits and proximally along the sternomastoid muscle; localized tingling at the injection site that radiated into her 4th and 5th digits and proximally along the sternomastoid muscle; This is a spontaneous report from a non-contactable healthcare professional. A 45-year-old female patient received bnt162b2 (BNT162B2; lot number: EH9899; expiration date: unknown), intramuscularly left arm on 22Dec2020 11:15 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. During her 15-minute (22Dec2020 11:30) waiting period after the injection, the patient began to experience localized tingling at the injection site that radiated into her 4th and 5th digits and proximally along the sternomastoid muscle. The patient denied rash, hives, difficulty breathing, difficulty

swallowing, wheezing, throat tightness, hoarseness, stridor, itching, dizziness, facial swelling, lip swelling and tongue swelling. This reporter was notified of patient reaction and she was then assessed in the emergency bay area. Monitored patient for severe reaction symptoms, including rapid progression of symptoms, vomiting, hypotension and chest pain. The patient was observed for approximately 30 minutes post injection with no evolution of symptom. Injection site tingling that extended along the ulnar nerve distribution was improving at the time of discharge. The outcome of the events was recovering. No follow-up attempts are possible, information about batch number cannot be obtained. No further information is expected.

Hives torso, abdomen, neck and leg; This is a spontaneous report from a contactable nurse. A 50-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EH9899), intramuscular on the right arm on 22Dec2020 08:30 at a single dose for COVID-19 immunization. The patient's medical history included penicillin allergy. The patient was not pregnant. There were no concomitant medications. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination and had not been tested for COVID-19 since the vaccination. The patient experienced hives torso, abdomen, neck and leg on 22Dec2020 12:00. Therapeutic measures were taken as a result of hives and included treatment with oral antihistamine. Outcome of the event was recovered on 22Dec2020. The event was considered non-serious.

Severely swollen, hard and painful lymph nodes in the L axillary region. / other swollen glands; fever; muscle aches; chills; headache; This is a spontaneous report from a contactable nurse (patient). A 52-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ 1685, expiry date was not provided) solution for injection, via an unspecified route of administration on left arm on 17Dec2020 12:00 at a single dose for Covid-19 immunisation. Medical history included Covid-19. Concomitant medication included sertraline hydrochloride (ZOLOFT). Prior to vaccination, patient was diagnosed with COVID-19. The patient received the vaccine at a workplace clinic and experienced severely swollen, hard and painful lymph nodes in the L axillary region, other swollen glands; fever; muscle aches; chills; and headache, all on 18Dec2020 12:00. It was unknown if patient received treatment for the events. The events were reported as non-serious. Outcome of the events was not recovered. No follow-up activities are needed. No further information is expected.

"BNT162B2 was given to the patient subcutaneously instead of intramuscular; upset; crying; This is a spontaneous report from a contactable nurse via medical information team. A 42-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via subcutaneous on 19Dec2020 at single dose for COVID-19 immunization. Medical history included deep vein thrombosis (DVT) from 3 years ago and unknown if ongoing. Concomitant medication included acetylsalicylic acid (ASPIRIN (E.C.) for DVT and multivitamins. The patient stated ""BNT162B2 was given to me subcutaneously instead of intramuscular (IM)."" She stated she works at (Name withheld) and it was administered by an employee and her hospital employee health will not talk to her and she was being brushed off. The patient asked what's needed to do moving forward. She stated she does not know the efficacy for subcutaneous administration. After providing information in attached document the patient asked what should her next steps be since the hospital will not answer do anything about this incorrect administration.

BNT162B2 was administered her incorrectly. The patient was little upset and was crying about it in Dec2020. The outcome of the events was unknown. Information on the lot number/batch number has been requested."

Having some raised bumps in the back of the hand, multiple small bumps very very small/The bumps are very very small, like an 8th of a centimeter; almost like hives and chicken pox; almost like hives and chicken pox; This is a spontaneous report from a contactable nurse (patient). A female patient of an unspecified age received BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot number: EJ1685, expiry date: Mar2021), intramuscular in the left deltoid on 21Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced a mild side effect after receiving the COVID Vaccine yesterday on 21Dec2020. The patient is having multiple raised bumps, almost like hives and chicken pox, on the back of her hand. The bumps are very very small, like an 8th of a centimeter. dizziness; throat dryness; nausea; This is a spontaneous report from a non-contactable healthcare professional . A 23-year-old male patient received bnt162b2 (BNT162B2, lot number:EH9899), intramuscularly in his left arm on 22Dec2020 11:00 at a single dose for covid-19 immunization (reported as covid-19 vaccination). The patient's medical history included GI symptoms that he was currently being worked up for. Patient reported onset of similar signs around time of vaccine injection. The patient's concomitant medications were not reported. During his 15 minute waiting period after the injection, the patient began to experience dizziness, throat dryness, and nausea. He denied rash, hives, difficulty breathing, difficulty swallowing, throat tightness, hoarseness, stridor, itching, facial swelling, lip swelling and tongue swelling. The provider was notified of patient reaction and he was then assessed in the emergency bay area. Monitored patient for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with stridor, vomiting, abdominal pain and hypotension. Outcome of the events was unknown. No follow-up attempts are possible; information about batch number cannot be obtained.

I feel weird, kind of spacey; metallic taste; Blood pressure 133/90.; This is a spontaneous report from a contactable nurse. A 53-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number: EJ1685), intramuscular on the left arm on 22Dec2020 14:15 at SINGLE DOSE as COVID-19 vaccination at the hospital. Medical history included reactive airway disease, attention deficit hyperactivity disorder (ADD) and asthma. The patient also had allergies to sulfa. Concomitant medications included losartan potassium (LOSARTA), methylphenidate hydrochloride (CONCERTA) and unspecified inhaler for asthma. On 22Dec2020 14:25 (10 minutes after injection), the patient felt weird, kind of spacey and had metallic taste. The patient also had blood pressure of 133/90 (unit of measure not reported) on 22Dec2020 but denies urticaria, itching, pain, shortness of breath, and chest pain. The patient was brought to the emergency room/department or urgent care further evaluation due to the events. It was unknown if treatments were received for the events. Outcome of the events were unknown. No follow-up attempts are possible. No further information is expected.

Fatigue; The initial case was missing the following minimum criteria: No adverse effect. Upon receipt of follow-up information on (23Dec2020), this case now contains all required information to be considered

valid. This is a spontaneous report from a contactable healthcare professional. A 23-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), first dose via intramuscular on 22Dec2020 15:00 in left arm at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The facility where the most recent COVID-19 vaccine was administered in a hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The patient experienced fatigue on 22Dec2020 18:00. The outcome of the event was unknown. The event was considered non serious as it did not results in death, was not life threatening, did not cause/prolonged hospitalization, was not disabling/Incapacitating and had no congenital anomaly/birth defect.

now COVID positive with symptoms; now COVID positive with symptoms; This is a spontaneous report from a contactable consumer(patient). A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 16Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient received the vaccine on 16Dec2020 and now COVID positive with symptoms as of 19Dec2020. The patient asked that should he (she) still get the second vaccine. The outcome of event was unknown. Information on lot/batch number has been requested.

my lymph node is really swollen/and it hurts; headache/a mild headache; had a little bit of dizziness; sick for a little bit; had a little bit of chills; soreness in my arm; This is a spontaneous report from a contactable other hcp (patient). A 40-year-old female patient received 1st dose of bnt162b2 (Pfizer-Biontech Covid-19 Vaccine, lot number: EH9899), via an unspecified route of administration into the left arm on 19Dec2020 at a single dose for COVID-19 immunization. Medical history included high cholesterol diagnosed in maybe 2016 or 2017, but stated that she has the hereditary type, so she can never get rid of it. Concomitant medication included acetylsalicylic acid (BABY ASPIRIN) for high cholesterol; the patient started taking this last year, but then she stopped for a while because her cholesterol was ok, and then her cholesterol went back up and she started taking this again 3-4 months ago. The patient had the COVID vaccine on Saturday and 20 min in, she had a headache and didn't think much of it, had a little bit of dizziness and they gave her Tylenol and she was fine. She was sick for a little bit and just a mild headache. She had a little bit of chills and soreness in her arm. The next day she woke up and notice her neck, between her shoulder and collar bone and woke up and said 'oh that hurts me' and looked and her lymph node was really swollen. It does not bother her but she took a Tylenol and that seems to help with the swelling and it swells up again after the Tylenol. The caller asked if that was a normal side effect or adverse side effect and should she take the next dose 09Jan2021. She also asked if this is a serious adverse reaction or just a side effect. The patient has an appointment today at the time of report with her doctor. The reporter further added that she is a healthcare worker and she took the COVID vaccine this last Saturday; she received the vaccine in her left arm, and on the left side of her body, where she got the vaccine, she is having a reaction. She was fine right after she got the vaccine, like maybe within 20 minutes of getting it she had a headache a little bit of dizziness, and so she was kept in observation for an hour, but she took some Tylenol and was fine. Then, the next day, the caller woke up and on the left side of her body, she has a lymph node that is swollen, and still has not gone

down, and she is wondering if that is normal for the product. She does not really have the headache anymore, but the dizziness is still coming and going, not as bad as it was on that first day, but it comes and goes. She also did have the chills for a bit the day she got the vaccine, but it was just for a few hours and then it went away. The headache she had, was a different type of headache, it was not severe, but it was like a wave where it would come on strong, but not where she couldn't tolerate it, and then the dizziness would come at the same time, and then it would all just go away, and then come back like a wave; caller states that it was weird. The swollen lymph node started the next day, and it hurts. It was pretty swollen when she found it, but she took Tylenol and with the Tylenol, the swelling went down a little bit, but when the Tylenol works its way out of her system, the lymph node swells back up. The patient stated that the lymph node hurts and is painful. The patient does not know the actual dosage amount she received, she just knows it was the first dose in the series. The patient confirms that she did not take any other vaccines on the same day as the COVID vaccine. The patient is due for her second dose of the COVID vaccine next month, and she is wondering if the swollen lymph node would be something that would disqualify her from getting the second dose. Therapeutic measures were taken as a result of headache, dizziness, lymph node is really swollen and it hurts. Outcome of the events headache and chills recovered in Dec2020, for the events dizziness, sick, and soreness in arm was unknown; and for the event node is really swollen/and it hurts was not recovered.

Diarrhea; This is a spontaneous report from a contactable other healthcare professional (patient). A 46-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EL0140, expiry date unknown) intramuscular at the left arm on 21Dec2020 13:30 at single dose for COVID-19 immunization. The patient received Covid vaccine in a hospital. Medical history included high blood pressure, penicillin allergies. Concomitant medications included clonidine, bupropion hydrochloride (WELLBUTRIN XL), pantoprazole, topiramate, alprazolam (XANAX), cetirizine hydrochloride (ZYRTEC [CETIRIZINE HYDROCHLORIDE]), ascorbic acid (VIT C), fish oil, lactobacillus nos (CULTURELLE), ox bile; all from unspecified date for unspecified indication. The patient previously took ceftriaxone and experienced allergies. The patient did not receive other vaccine in four weeks. The patient has no diagnosis of Covid-19 prior to vaccination. On 22Dec2020 07:00 AM, the patient experienced diarrhea. The patient was not Covid tested post vaccination. No treatment was administered due to diarrhea. The outcome of the event diarrhea was not recovered. The reporter considered the event non-serious.

Allergic reaction; full body rash; fatigue; This is a spontaneous report from a contactable nurse. A 48-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EK5730, intramuscular, first dose on 20Dec2020 at a single dose for immunization. Medical history included diabetes mellitus (DM), depression, gastrooesophageal reflux disease (GERD) and hypercholesterolaemia. The patient had no known allergies. The patient have unspecified concomitant medications. She had other vaccines in two weeks (unspecified). The patient experienced allergic reaction- full body rash, fatigue on 21Dec2020 with outcome of not recovered. Treatment received for the events included steroid and antihistamines. The events are reported as non-serious. The patient had doctor or other healthcare professional office/clinic visit. She had no covid prior vaccination. She was tested for covid post vaccination through nasal swab on 21Dec2020 with negative result.

Body aches; fatigue; headache; not feeling well; Muscle aches; elevated temperature; This is a spontaneous report from a contactable nurse (patient herself). A 43-year-old female patient received the first dose of bnt162b2 (BNT162B2 also reported as Covid-19 vaccine by Pfizer, lot EK5730), intramuscular 20Dec2020 15:15 at single dose in left arm for Covid-19 immunisation. Medical history included High blood pressure and interstitial cystitis interstitial. Concomitant medications included losartan and hyoscyamine sulfate, methenamine, methylthioninium chloride, phenyl salicylate, phosphoric acid sodium (URIBEL). The patient previously took doxycycline and experienced drug allergy. The patient experienced body aches, fatigue, headache, was not feeling well, muscle aches, elevated temperature, all on 21Dec2020 12:00. The events were reported as non-serious. Prior to vaccination, patient was not diagnosed with COVID-19 and since the vaccination, the patient was been tested for COVID-19 via nasal swab on 22Dec2020 with pending results. The outcome of events was unknown. No follow-up attempts are possible. No further information is expected.

headache; body aches; chills; fatigue; fever of 102; This is a spontaneous report from a contactable nurse (patient). A 28-year-old male patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE; lot/batch number unknown), via an unspecified route of administration on the left arm on 21Dec2020 07:30 at a single dose for covid-19 immunization. Medical history included anxiety and Covid-19. Prior to vaccination (covid-19 vaccine), patient was diagnosed with COVID-19 (Covid prior vaccination: Yes). The patient has no known allergies. No allergies to medications, food, or other products. Concomitant medications received within 2 weeks of vaccination included sertraline hydrochloride (ZOLOFT), ascorbic acid (VITAMIN C), zinc and colecalciferol (VITAMIN D). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 21Dec2020 at 18:00 hour, the patient experienced headache, body aches, chills, fatigue and fever of 102 around 6pm the same day receiving vaccine. The events were considered non-serious by the reporter. Since the vaccination, the patient has not been tested for COVID-19 (Covid tested post vaccination: No). No treatment was received for the events. The outcome of the events was recovering. Information on the lot/batch number has been requested.

Moderate to severe lower back pain; This is a spontaneous report from a contactable physician (patient). A 38-year-old male patient started to receive BNT162B2 (Solution for injection, lot number and expiry date unknown), via an unspecified route of administration on 18Dec2020 08:30 at single dose in the left arm for COVID-19 immunization. The patient's medical history was not reported. Concomitant medication included vitamin C and multivitamins. The patient was not diagnosed with COVID-19 prior to vaccination and since the vaccination, the patient has not been tested for COVID-19. On 18Dec2020 19:00, the patient experienced moderate to severe lower back pain approximately 9-10 hours after receiving vaccine. He was feeling well prior to that, no strenuous activity. Symptoms progressed over 1-2 hours, then resolved over 4 days with tylenol/motrin use. Therapeutic measures were taken as a result of moderate to severe lower back pain. The outcome of the event was recovered on an unspecified date. The following information on the batch number has been requested.

runny nose; sore throat; This is a spontaneous report from a Pfizer-sponsored program. A contactable consumer (patient) reported that a 44-year-old male patient started to receive BNT162B2 (Solution for injection, lot number and expiry date unknown), intramuscular on 18Dec2020 at single dose in the left

deltoid for COVID Prevention. There were no medical history and concomitant medications. The patient called and stated that he took the COVID vaccine first dose, on Monday, and now he is getting the side effects of running nose and sore throat. Stated that the running nose and sore throat starting this morning on 22Dec2020, right as he woke up, and then it went away, and now it just seems to have gotten worse. He wondered if those are common side effects because he couldn't find them on the facts sheet. He stated that he is just trying to gather more information because he knows that it is currently cold and flu season, and it could also just be allergies. Also he wanted to make sure this is a common side effect, because if not, he has family coming to town to visit him for the holiday and he wants to be safe if he is sick. The outcome of the events was not recovered. The following information on the batch number has been requested.

Tachycardia; This is a spontaneous report from a contactable physician (patient). A 41-year-old male patient started to receive BNT162B2 (Solution for injection, lot number and expiry date unknown), via an unspecified route of administration on 21Dec2020 12:30 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was not diagnosed with COVID-19 prior to vaccination and since the vaccination, the patient has not been tested for COVID-19. The patient experienced tachycardia on 22Dec2020 02:30. No treatment received for the event. The outcome of the event was not recovered. The following information on the batch number has been requested.

Fever (39.1 C); chills; headache; body aches; nausea; This is a spontaneous report from a non-contactable nurse. A 37-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), intramuscular at the left arm on 21Dec2020 10:45 at a single dose for COVID-19 immunization. Medical history included COVID-19 prior to vaccination. The patient has no known allergies. There were no concomitant medications. The patient experienced fever (39.1 C), chills, headache, body aches, nausea on 21Dec2020 20:00 with no treatment. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not tested for it since the vaccination. The patient recovered from the events on an unknown date. No follow up attempts are possible. No further information is expected.

Nausea; body aches; night sweats; headache; tired; This is a spontaneous report from a contactable other healthcare professional (patient). A 37-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EJI685), intramuscular on the arm (reported as location was in the left and right arm, pending clarification) on 21Dec2020 15:30 at a single dose for COVID-19 immunization. The patient's medical history included celiac disease and wheat, gluten, chicken, nightshades, yeast allergy. The patient was not pregnant. Concomitant medication included vortioxetine hydrobromide (TRINTELLIX). The patient previously took chlorhexidine (CHLORAPREP) and experienced allergies to chlorhexidine. The patient was not diagnosed with COVID-19 prior to vaccination and had not been tested for COVID-19 since the vaccination. On 21Dec2020 17:00, the patient experienced nausea, body aches, night sweats, headache, and tired. Therapeutic measures were taken as a result of the events and included treatment with ondansetron (ZOFRAN) and paracetamol (TYLENOL). Outcome of the events was not recovered.

Diarrhea; Vomiting; dry heaves; This is a spontaneous report from a contactable nurse (patient). A 48-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), intramuscular (left arm) on 21Dec2020 17:00 at single dose for Covid-19 immunization. The patient's medical history included high blood pressure. Concomitant medications were not reported. The patient was not diagnosed with COVID-19 prior to vaccination. The patient has no allergies to medications, food, or other products. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced diarrhea, vomiting, and dry heaves on 22Dec2020 (06:00 AM). There was no treatment received for the adverse events. The patient has been tested with COVID-19 since the vaccination. The patient had nasal swab (test) on 22Dec2020 with pending result. The outcome of events was unknown.

"positive COVID-19 test with symptoms; positive COVID-19 test with symptoms; This is a spontaneous report from a contactable physician (patient). A male patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced tested positive for COVID in Dec2020. The patient got the first dose of the vaccine on the day before the date of this report, started coughing on the day before the date of this report and tested positive for COVID on the date of this report. Caller requested guidance regarding whether he should receive the second vaccine dose, specifically will it be effective. Caller stated that he was ""an ER doc"" and understand that he did not get COVID from the vaccine. The patient underwent lab tests and procedures which included tested positive for COVID in Dec2020. The outcome of events was unknown. Information about lot/batch number has been requested.; Sender's Comments: Considering the temporal gap between the vaccination and the event onset, there was not a reasonable possibility that the COVID-19 infection was related to vaccination with BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE)."

"""pins and needles type tingling"" of the face; Chills; malaise; fever (101F); scratchy throat; headache; lack of appetite; pain of entire body; my feet hurt as soon as they hit the ground; This is a spontaneous report from a Pfizer Sponsored Program IBCC (Inbound Call Center for HCPs) from a contactable physician reported for herself. A female patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via unspecified route of administration on 21Dec2020 at single dose for COVID-19 immunization. Patient medical history and concomitant medications were not reported. Patient reported that she received vaccine yesterday, 21Dec2020. Approximately 24 hours later, on 22Dec2020, she started experiencing ""pins and needles type tingling"" of the face, chills, malaise, fever (101F), ""scratchy throat"", headache, lack of appetite, ""pain of entire body"" and feet also hurt as soon as they hit the ground. She asked with the reaction that she was having, when do she seeks help and how long does it lasts. ""With the reaction that I'm having, when do I seek help? How long does this last? Are there any reports of fever? Are these common side effects?"" Outcome of the events was unknown. Information about lot/batch number has been requested."

Sore arm within an hour; Chills; body aches; fatigue overnight and throughout the next day; slight headache; This is a spontaneous report from a contactable nurse (patient). A 24-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: Eh9899, via intramuscular route

in the right arm, first dose on 21Dec2020 11:00 at a single dose for immunization. Medical history was none. The patient's concomitant medications were not reported. The patient is not pregnant. She has no known allergies. The patient did not have Covid prior vaccination and was not tested post vaccination. She did not receive other vaccines with 4 weeks prior to covid vaccine. The patient experienced sore arm within an hour on 21Dec2020 with outcome of recovering. She also had chills, body aches, fatigue overnight and throughout the next day with outcome of recovering. Almond with slight headache which was recovering. No treatment received for the events. The seriousness of the events was reported as non-serious.

12 minutes after vaccination, pt experienced jaw discomfort on left side and sharp intermittent pain in L ear.; 12 minutes after vaccination, pt experienced jaw discomfort on left side and sharp intermittent pain in L ear.; This is a spontaneous report from a contactable pharmacist. A 44-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EL0140), intramuscular at the left arm on 22Dec2020 at a single dose for COVID-19 immunization. The patient medical history was not reported. The patient was not pregnant at the time of vaccination. Concomitant medications included baclofen, vitamin d3 and pitavastatin. The patient previously took tramadol and experienced drug allergies. On 22Dec2020, 12 minutes after vaccination, the patient experienced jaw discomfort on left side and sharp intermittent pain in L ear. The patient was not hospitalized for the events. It was unknown if patient receive any treatment for the events. The events were reported as non-serious. The patient has not received any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination the patient was not diagnosed with COVID-19. Since the vaccination, it was unknown if the patient has been tested for COVID-19. The outcome of the events was unknown.
