She received vaccine and was sitting waiting for 15 minutes. After 10 minutes she came over and expressed that she felt dizzy and was about to pass out. We took her over to bed where she was extremely nauseous and dry heaving repeatedly. She was also extremely flushed and hot but no temperature and no problems breathing. Blood pressure was elevated when ems came. We called 911 and had a Dr. who was at clinic check on her. Ems came after about 10 minutes and took her to hospital.

Itching and mild hives started within 10 mins of the vaccine injection. Patient was treated with antihistamine and responded well. symptoms improved after 2 hours of monitoring.

Worsening, swelling, redness with warmth and itch around injection area and a few inches below

Moderna COVID-19 Vaccine fever, chills, myalgia

Sore throat and body aches began the Saturday following immunization and ended within an hour of starting

severe intractable headache from 12nn 12/23/2020 to 1500 12/24/2020 associated with photo sensitivity, nausea, generalized body malaise, pain & tenderness on injection site. Treated with Tylenol & neurofen tablets, rest in the night & whole morning.

Chills, Fever, body aches, fatigue. Took Tylenol. Resolved in 24-36 hours.

Patient stated had some minor tickle in throat and slight heaviness in chest. Eyes than began swell bilaterally after 25 minutes after vaccine was given.

patient started having dizziness when she got up to leave from the waiting room 15 minutes post vaccination, she also mentioned headache behind her right eye. She was taken to an exam room in a wheel chair as she was unsteady on her feet. She was laid down on an exam table and vitals checked. She states no previous vaccine reactions, has history of seizures and has had them with increased frequency recently. Patient was released to her friend to be driven back to work 1 hour and 27 minutes post vaccination

Tiredness at the second day of vaccination (12/23/2020) and swollen tender left axillary lymph node started (12/26/2020) and still ongoing till the date of filing the adverse event (12/28/2020).

Tiredness at the second day of vaccination (12/23/2020) and swollen tender left axillary lymph node started (12/26/2020) and still ongoing till the date of filing the adverse event (12/28/2020).

10 minutes post-inoculation, I developed an ice cold sensation in my chest that spread throughout body and extremities. I developed a metallic taste in my mouth, nausea, tingling in my hands and feet and lightheadedness. This lasted 15 minutes, then repeated approximately 20 minutes later reccured as I was set to leave vaccinations site.

Severe itchiness with associated hives

chills at about 2:00am, headache, tiredness most of the day

Fainted within a couple minutes of recieving injection. Rapid response team activated and I was lifted onto a bed. Very low blood pressure. And ultimately felt better after 30 to 45 minutes of monitoring by medical team.

Low grade fever and site arm sore

Fever 100 degrees Chills severe Body aches mostly legs Mild soreness in injection area (nothing more than a typical shot)

12/24 ! 13:15 - 15 min after vaccine was administered p t c/o dizziness and shaking. was monitoring for further 15 minutes by vaccine staff. Then apx 06:00 pm that night started c/o chills, N/V, tremors, Fatigue, headache, and feeling flushed. continued thru 12/26. then 12/27 woke up with headache, n/v, chills, tremors and body swelling. 12/28- c/o nausea and headache. Treated with Tylenol OTC 12/24 and 12/26 only. 12/28 Completed rapid COVID 19 test- results negative. EDD 07/30/2021.

Moderate muscle ache,fatigue,sinus congestion

APPROXIMATELY 20 MINUTES AFTER VACCINATION, SHE BECAME ILL, VOMITING THEN COMPLAINING OF CLOSING THROAT, FELT WEAK. EMT AND FACILITY DOCTOR ON SITE WAS CALLED, THEY DETERMINED SHE DID NOT NEED TO BE TRANSPORTED TO THE ER. CONTINUED TO MONITOR PATIENT .

overall body weakness for 3 days and 1 day of severe right leg muscle cramping.

tachycardia, hypertension <15 min post administration

Reported headache and twitching of right cheek. Took Tylenol and headache resolved day of vaccination; twitching resolved day of vaccination (unknown duration). 12/23/20 (day after vaccination) he reported a slight headache upon awakening that worsened as the day passed. He took 2 extra strength Tylenol at 10:00 AM (12/23/20). Tylenol partially effective - headache lessened but still present. 12/28/20 update - chills, nausea, and fatigue from 12/23 - 12/28. Improvement in symptoms but symptoms are not completely resolved as of 12/28/20 per patient.

Anxiety, headache, nausea, sweating approximately 15 minutes after injection. Observed 1 hour emergency room then discharged.

1600 reported petechiae to both upper arms and abdomen 1611 took 25 mg bendryl waiting for 15 min. didn't get any worse went home

Soreness in upper left side of arm where vaccine was injected. Similar feeling to getting soreness in arm after a flu shot.

numbness tingling started in hand moved up the left arm slight numbess r hand site slightly swollen beandyl 25mg given symptoms got better

Vaccination was given at 8:25 and she began itching at 8:32. Itching that progressed from bilateral arms to trunk, bilateral legs and back. She felt wheezes starting. Given 50 mg. Benadryl po at 8:35. Symptoms were getting worse and RN gave Methprednisolone 125 mg. IM at 8:45.Alburteral Inhaler 2 puffs was given at 8:50. At 9:00 patient C/O upper lip tingling. Visual swelling observed. She was transported to ED by WC. ED administered Pepsid po and observed her for an hour. She was then discharged.

Onset of tongue numbness a few hours after vaccination, which was gone the next day. Vaccinated on 12/16 - 10 days later on 12/26/20 tongue numbness recurred & he developed (R) facial droop - seen in ER on 12/17 had normal head CT, negative work up for stroke. Seen in clinic on 12/28 - diagnosed with Bells palsy, started on Valacyclovir. Patient will hold PrEP x7 days (precautionary), no sexual activity during that time.

Onset day 10 post injection of erythema, edema over an area of 5x7cm over the injection site. Associated with mild tenderness, and moderate pruritis. Slight increase in size over first 24 hours (to present).

Chills

Pain at site with Fever (temp. 101 degrees F). Patient was sent to the local hospital ER and returned to the facility with a diagnosis of Fever post vaccination. Tylenol was given and patient received IV HEP saline at the ER.

Pt developed hives on bilateral arms, wrist and hands. Vital signs stable, no other complaints of tongue or throat swelling. No other s/s of anaphylaxis. Pt given Benadryl 50 mg po and observed for 60 minutes. Hives resolved and patient sent home.

Developed localized reaction on day 8 after 1st injection - had no location reaction prior. No intervention needed. 28 weeks gestation at time of vaccine and due date 3/10/21.

Fever, chills, body aches, headache, exhaustion, swollen lymph nodes 12 hours past vaccination to present.

I have had continued ongoing dizziness/vertigo after receiving the vaccine. It has now been a week since my vaccination and I am still feeling this. It it tolerable, but continues and is annoying.

MD Notes in ED Patient is a 35yo female who presents with complaint of allergic reaction. This AM around 0945 received COVID vaccine. Some pain to injection site throughout the day. Today around 1700 started to note dizziness and hives throughout her body. Hives are itchy. Associated with nasal congestion and sore throat. Patient felt difficulty swallowing zyrtec/pepcid. No drooling. Patient without fevers/chills, no recent illness. Denies prior allergies to immunizations. Denies food allergies. No new medications. Another part of the record states she had hives 30 minutes after the vaccine and self-medicated with Zyrtec and Pepcid without relief. Treated in the ED with Epi 0.3 IM Solumedrol 125 mg IV Pepcid 20 mg IV Benadryl 50 mg IV IV fluids Arrived in ED 1836 / Discharged home at 2015

Muscle aches, cramps, paresthesia in extremities and feeling of joint stiffness starting at 3 days after vaccination and continuing intermittently even after 1 week from vaccination. Aches/cramps in the muscles of neck, back of thigh, butt, calves, lower back. Treated with heat pack and hot showers with some temporary relief. No response to acetaminophen.

fever , chills, migrane started around 3 am 12 24 20. Migraine lasted all day. Woke up 12 25 20 with slight headache all day. Physically tired. Woke up 12 26 20 feeling fine.

Intractable nausea, vomiting, fever (101.8), chills

Complaints of gradual joint and bone pain

Angioedema, throat swelling, itching, lungs tight-unable to take a full breath, tachycardia, anxiety, face flushed. I took 75 mg of Benadryl an hour before the injection. Had some caffeine after I became symptomatic. Was monitored for 1.5 hours.

I got the vaccine at 3:30 pm. My right arm where the shot was started to itch extremely bad around 4:30. Then around 4:50 my throat was swelling up and my ear felt congested. A few minutes later it was

hard to breathe. I let my staff know (i work at urgent care) that i was not feeling so good from the vaccine. i was checked into the urgent care and i had hives and i was itching all over.

Tingling in throat, heart pounding and racing, dizziness, flushed skin, sweating, feeling hot

96 hours post injection muscle and joint pain. Injection site pain for 96 hours post injection. 4 days of insomnia.

received COVID vaccine, dose 1, Pfizer, approximately 1600. During observation, became light headed, hot, tingling in hands and feet, with onset of nausea shortly after. given ice packs and encouraged to remain in observation another 15 minutes. denied SOB, itching, no apparent hives or swelling. At approx 1700, symptoms had not resolved, was taken to ED for evaluation.

patient initially complained of headache at 1502, then at 1507 stated tingling in fingertips and toes. Shortly after, complained of dizziness and began crying. Moved patient to cart and vitals taken - BP 160/80, P 104, R 38, SpO2 99% - patient feelings like heart is racing. Patient's hands cold but vitals improved at 1520 - BP 140/78, P 74, R 28, Sp02 99%. At 1527, patient feeling better, headache gone, and tingling improved. BP 120/78, P 73, patient sipping water. Attempted elevating HOB at 1530 and dizziness returned but vitals stable. Continued to improve with slight dizziness with progressive ambulation. By 1548, no dizziness with sitting on edge of cart and ambulated to bathroom, After continued walking with no further symptoms and continued stability of vitals, patient discharged from care at 1558. Final BP 128/78, HR 78.

multiple oral aphthous ulcers and tongue sores without a clear alternative trigger

Headache, nausea, abdominal cramping, elevated blood pressure, 5 mins after vaccination. At home the above symptoms continue plus joint pain, lower back pain, chills for 3 days.

Developed extremely sore arm at site of injection within first hour after vaccination; red rash developed (3 inch diameter) with localized swelling. Mild fatigue for first two days following vaccination. Beginning on Day 3 after vaccination, developed severe fatigue, muscle pain, back pain, joint pain, hot/cold chills, abdominal pain, nausea and diarrhea. Symptoms were severe for three days (Day 3-6 after vaccination) requiring bed rest and supportive care with OTC ibuprofen, benadryl and promethazine. Rash, swelling and muscle pain at injection site persisted through Day 5 following vaccination. Fatigue, muscle and joint pain persisted at moderate intensity through Day 8 following vaccination. Moderate nausea and abdominal pain persisted through Day 8 following vaccination. Still experiencing mild to moderate fatigue on Day 12 following vaccination.

Dull headache on Day 1 of receiving vaccine. Day 2 was primarily a sore arm (moreso than with influenza shot)

Left Shoulder pain that started as ?oh I slept funny? to not going away with ice/heat or rest. Worsening in severity daily and spreading towards base of skull and eventually into clavicle. The pain became excruciating and I was unable to turn my head at all to the left. So bad I had to use my hands to lift my head up. I eventually went to the ED on 12/27/20. And overnight the pain became so unbareable and

functionality so limited I couldn?t go to work or take care of my toddler. I returned the to ED on 12/28/20. Was advised to file adverse event and contact my employee health and safety department. I was initially examined in the ER the first time with a neck spasm. Sent home with an RX which didn?t work. At all. When I returned to the ER th next day, the physician felt my entire neck, shoulder and clavicle an noted swelling and prominent spasm. He diagnosed with a trapezius strain and a vaccine reaction. Gave me an RX for Valium which seems to help take the edge off.

Onset of slight itchiness noted minutes after injection, however did not report to hospital staff because did not realize it was a possible reaction (I have history of rash and skin sensitivity). Noted approximately 2 days later, injection site was increasingly itchy. Then I noticed there was also a red patch surrounding injection site slightly raised that has not subsided since, now 4 days since injection.

Itchy throat, tongue, Numb Lips, Flush, Redness and hives

About 1 hour after getting vaccinated i noticed that my left eye got puffier and I could feel the tingling on my eye. Being little confused and not knowing the cause after reading online I noted that this could be possible from Covid-19 vaccine. At this time few hours later my puffiness is slowly going away . I do have pictures taken at the time of being vaccinated and also when I noticed the possible reaction .

Overdose administered due to improper dilluent

Nausea, Diarrhea, Extreme chills, Fatigue, Bad dreams during nap, waking up in a very excessive sweat, gradually increasing high amount of motivation despite symptoms

low BP/low HR and went to the ER for evaluation

he felt ?oozy? and tingling in feet

Redness, heat, swelling that lasted for a week. Swelling went to around 3 inches circumference around the injection site. Now a lump under the skin and the start of a bruise forming.

Feeling of swelling of the upper lip and throat; Feeling of swelling of the upper lip and throat; Brief tongue tingling; her palms felt sweaty; her throat felt dry; This is a spontaneous report from a contactable consumer (patient). A 50-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Solution for injection (lot number: EH9899 and expiry date unknown) via an unspecified route of administration at the left arm on 19Dec2020 08:45AM at a single dose (dose number: 1) for COVID-19 immunization. The patient's medical history included rare, mild exercise induced asthma with cold a few times in the past; history of pre-eclampsia; and known allergies: wheezing with iodine injected for a hysterogram in 2014. The patient had no concomitant medications. The patient did not receive any other vaccines within 4 weeks prior to BNT162B2 and has not received other medications within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. It was reported that on 19Dec2020, 09:15 the patient experienced a feeling of swelling of the upper lip and throat. There was a brief tongue tingling about a half hour after the injection. Immediately after the injection, her palms felt sweaty and her throat felt dry. Therapeutic measures were taken in response to the

events. The patient took Claritin about 9:15 and Benadryl 50 mg twice so far; the first was taken about 9:30AM. At 1:30 pm, the feeling of lip and throat swelling came back and she took 50 mg of Benadryl again. At the time of the last observation, the outcome of the events was not recovered. The events were reported as Non-serious.

received COVID Vaccine on 16Dec2020 and was asymptomatic for active COVID carrier; received COVID Vaccine on 16Dec2020 and was asymptomatic for active COVID carrier; This is a spontaneous report from a non-contactable nurse. A 35-year-old female patient started to receive bnt162b2 (reported as product=COVID 19, brand=Pfizer; lot number and expiry date unknown), via an unspecified route of administration on 16Dec2020 at 09:30 AM at single dose for COVID-19 immunization. Patient's medical history and concomitant medications were not reported. The patient reported that she received COVID Vaccine on 16Dec2020 and was asymptomatic for active COVID carrier. Covid test type post vaccination was nasal swab on 16Dec2020 with positive results. It was reported that prior to vaccination, patient was not diagnosed with COVID-19. It was further reported that since the vaccination, the patient has been tested positive for COVID-19. The outcome of the events was unknown. Information on the batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspect vaccine in this patient cannot be completely excluded.

Fatigue; moderate headache; This is a spontaneous report from a contactable Nurse reporting for herself. A 34-years-old female patient received bnt162b2 (BNT162B2; Lot # EL0140)vaccine , intramuscular in the left arm on 18Dec2020 15:15 at single dose for covid-19 immunisation . Medical history included hypersensitivity to medications including amoxicillin sodium + clavulanate potassium] (AUGMENTIN) from an unknown date. The patient's concomitant medications were not reported. On 18Dec2020 22:00 the patient experienced fatigue and headache (6/10) refractory to caffeine or hydration. The nurse did not try tylenol or NSAIDs as wanted to prevent interference with immune response. The outcome of both the event was not recovered.

lips began tingling; tongue was tingly/numb; tongue was tingly/numb; throat felt fuzzy like needed to clear it; This is a spontaneous report from a contactable nurse reporting for herself. This 36-year-old female patient (non-pregnant) received the first single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot EH9899) on 19Dec2020 at 08:25, intramuscular, in left arm, for COVID-19 immunization. No other vaccine was given within 4 weeks prior to the COVID vaccine. Medical history included rheumatoid arthritis from 2014. The patient had known allergies to adalimumab (HUMIRA). The patient did not have COVID before vaccination. Family medical history relevant to AEs: none (sister allergic to cashews, dad allergic to bees).Concomitant medications included tofacitinib citrate (XELJANZ XR) from Feb2018, at 11 mg daily, for arthritis, ibuprofen (MOTRIN) at 600 mg, as needed (every day for years 600 mg PRN), vitamins NOS (MVI) daily, for years, omega-3 fatty acids. The patient received the vaccination on 19Dec2020 at 08:25 and waited at the facility 30 minutes. On 19Dec2020 at 09:10 the patient experienced lips began tingling, tongue was tingly/numb and throat felt fuzzy like needed to clear it. Symptoms persisted but did not worsen and at 09:37 she took diphenhydramine (BENADRYL) 25mg as treatment. At 10:30 symptoms were gone at 75%. Emergency room or physician office visit were not required. COVID was not tested after vaccination. Relevant tests: none. The events resolved on an

unspecified date in Dec2020. The reporter considered there was a reasonable possibility that the event was related to suspect product.

Arm swelling; red circle size of a 50 cent piece; severe itching; This is a spontaneous report from a contactable consumer reporting for herself. A 44-year-old female patient received the 1st dose of bnt162b2 (BNT162B2) (Manufacturer Pfizer-BionTech, lot# EH9899), via an unspecified route of administration in arm left, on 16Dec2020 at 01:45 PM, at single dose, for COVID-19 immunisation. Medical history included rheumatoid arthritis, Hashimoto's thyroiditis, vitiligo and alopecia all from an unknown date and unknown if ongoing. The patient had no allergies to medications, food or other products. Concomitant medications included unspecified drugs in two weeks. The patient experienced arm swelling, red circle size of a 50 cent piece and severe itching all on 16Dec2020 at 03:00 PM with outcome of recovering. The events were considered non serious.

right sided numbness; tingling to face,lips and arm to fingertips; slight headache within 15 minutes of vaccination; This is a spontaneous report from a contactable nurse. A 55-year-old female patient (not pregnant) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, Lot number: elo140), intramuscularly on 19Dec2020 13:15 at single dose for immunization. Vaccine location provided as Right arm. Medical history included asthma. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced slight headache within 15 minutes of vaccination on 19Dec2020. On 19Dec2020 13:45, 35 minutes after vaccination reported right sided numbness, tingling to face, lips and arm to fingertips. No treatment was received for all the events. The outcome of the events was recovered in Dec2020. The events were assessed as non-serious.

Fever; chills; body aches; headache; fatigue; This is a spontaneous report from a contactable Other Health Professional (patient). A 42-year-old non-pregnant female patient received first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number=EH9899) intramuscular at arm Left on 18Dec2020 15:45 at single dose for covid-19 immunization. Medical history included seasonal allergies, eczema, and diagnosed with COVID-19 prior vaccination. Concomitant medication included fluoxetine hydrochloride (Generic Prozac), krill oil, bifidobacterium lactis (PROBIOTIC), sambucus nigra (ELDERBERRY) and multivitamin. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced fever, chills, body aches, headache, fatigue on 19Dec2020 12:00 PM, no treatment received for the events. COVID was not tested post vaccination. The outcome of the events was not recovered.

"Increased blood pressure; Rapid heart rate; Chills(shaking); Chills(shaking); Chest and neck tightness; Chest and neck tightness; Teeth tingling; This is a spontaneous report from a contactable consumer (patient). A 41-year-old female patient (not pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: Ek5730), via an unspecified route of administration on 19Dec2020 12:30 at single dose on left arm for COVID-19 immunization. Medical history included known allergies: Latex. Concomitant medications received within received within 2 weeks of vaccination included acetylsalicylic acid, caffeine, paracetamol (EXCEDRIN [ACETYLSALICYLIC

ACID; CAFFEINE; PARACETAMOL]); ibuprofen. The most recent COVID-19 vaccine was administered at Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 19Dec2020 13:00 (01:00 PM), the patient experienced rapid heart rate, Increased blood pressure, Chills (shaking), Chest and neck tightness, Teeth tingling. The adverse events result in Emergency room/department or urgent care. The patient received ER monitoring, EKG (reported as ""AE treatment"") for the adverse events. The events were non-serious. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient hadn't been tested for COVID-19. The outcome of the events was recovering."

fatigue; Fever 103.6/fever 100.3; headache; chills/chills with fever 100.3 after ibuprofen; Sore at injection site; body aches; This is a spontaneous report from a non-contactable consumer (patient). A 36-year-old female patient (not pregnant) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot number and expiration date not provided), via an unspecified route of administration on 18Dec2020 14:30 at single dose for COVID-19 immunization. Vaccine location was Left arm. Medical history included migraine, transient ischaemic attack (TIA), allergies: Penicillin, the patient had covid-19 prior to vaccination. Concomitant medication included buspirone hydrochloride (BUSPAR), cranberry, vitamin c (ascorbic acid), colecalciferol (VITAMIN D). The patient was not received other vaccine in four weeks. The patient experienced Sore at injection site, body aches, chills with fever 100.3 after ibuprofen, headache on 18Dec2020 19:00. And then the patient had Fever 103.6, headache, chills, fatigue on 18Dec2020 19:30, sore at injection site on 18Dec2020 19:00, body aches on 18Dec2020 19:00. Therapeutic measures were taken as a result of events fever and chills, no treatment was received for the other events. The outcome of the events was recovering. All events were assessed as non-serious. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

About 30 minutes after injection I suddenly felt a rush of heat throughout my body; felt dizzy, weak and a bit nauseated; felt dizzy, weak and a bit nauseated; felt dizzy, weak and a bit nauseated; tired/ fatigue; have some minor injection site pain; This is a spontaneous report from a contactable nurse reporting for herself. A 42-years-old non-pregnant female patient the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE): lot number: EJ1675, intramuscular, in the left arm on 18Dec2020 at 13:15 (at the age of 42 years-old) as a single dose for COVID-19 immunization. The patient received the vaccine at a hospital. Medical history included an allergy to cilantro. Concomitant medication included colecalciferol (VITAMIN D), zinc (ZINC) intermittently, and paracetamol (TYLENOL) once, all within 2 weeks of vaccination. The patient previously took amitriptyline and experienced swelling of eyelid and palmar erythema. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 18Dec2020, the patient experienced a rush of heat throughout her body, felt dizzy, weak and a bit nauseated and minor injection site pain. The clinical course as follows: At 13:45, about 30 minutes after injection she suddenly felt a rush of heat throughout her body, felt dizzy, weak, nauseated. This lasted about 30 minutes and then the warm feeling went away. She still felt a little dizzy, weak, nauseated and very tired. The dizziness lasted about 1.5 hours and the weakness, fatigue and mild nausea lasted about 6 hours. She reported that It felt as though she had taken diphenhydramine (BENADRYL). She stated that had she not been working (RN in an Emergency Department), she just

would have taken a nap and it would have been ok. Having to work through it was not pleasant she said. She never had a fever during this but had some minor injection site pain. She reported that she never experienced an immune response to any vaccine (has had 6 in a day before and was fine). The patient was not hospitalized for the events. The patient was treated with 600 mg of naproxen sodium. The clinical outcome for the events of a rush of heat throughout her body, felt dizzy, weak and a bit nauseated and minor injection site pain, was recovered on an unspecified date in Dec2020. It was also reported that since the vaccination, the patient had not been tested for COVID-19.

"ear infection; This is a spontaneous report from a contactable other HCP (patient). A female patient of an unspecified age received bnt162b2 (reported PFIZER-BIONTECH COVID-19 VACCINE, Covid-19 Vaccine), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. PCT asked, ""I got the Covid 19 vaccine yesterday, and this morning I woke up and went to the doctor because I had an ear infection. I was prescribed with oral antibiotics. Is it okay to take the antibiotics?"". Patient stated, ""I had a question about it actually. I got the vaccine yesterday and then today I was at the doctor, I have an ear infection and I was wondering if that would be a bad thing if I took antibiotic while still recovering from the vaccine."" The outcome of the event was unknown. Information on the lot/batch number has been requested."

Numbness on the right side of my face (jaw to just above right eye, not severe); This is a spontaneous report from a contactable consumer. A 44-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EJ1685), via an unspecified route of administration at first dose right arm on 19Dec2020 07:15 AM at single dose for covid-19 immunization. None medical history. No known allergies. Patient was not diagnosed with COVID-19 prior to vaccination nor tested for COVID-19 since the vaccination. Concomitant medications included cetirizine hydrochloride (ZYRTEC), fluticasone propionate (FLONASE). The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced numbness on the right side of her face (jaw to just above right eye, not severe) on 19Dec2020 07:45 AM. Patient didn't receive treatment for the adverse event. The action taken in response to the events for BNT162B2 was not applicable. The outcome of event was recovering. The event was non-serious.

Classic Herpes Zoster(shingles) left T5 and T6 dermatomes. Received injection at 10AM and noticed rash when I got home from the hospital at 8:00PM same day. Not likely related but felt should report any; rash; This is a spontaneous report from a contactable physician (hospital based neurologist) reporting for a himself. A 64-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot #ELO140) via an unspecified route of administration in left arm on 18Dec2020 10:00AM at single dose for COVID-19 immunization. The patient received the vaccine in hospital. Medical history included coronary artery disease (CAD), status post stent placement right marginal branch in 2015. The patient had no allergies outside of seasonal. The patient did not received any other vaccines within 4 weeks prior to the COVID vaccine. The patient received medications within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient experienced classic herpes zoster (shingles) left T5 and T6 dermatomes and noticed rash when he got home from the hospital at 20:00 on 18Dec2020, same day of vaccination. The patient started on valacyclovir (VALTREX) 1 gm every

8 hours for treatment of events. Since the vaccination, the patient had not been tested for COVID-19. The outcome of events was not recovered. The reporter considered not likely related but felt should report any.; Sender's Comments: Classic herpes zoster (shingles) /rash occurred on the same day of vaccination with BNT162B2 represents a coincidental viral infection caused by Herpes zoster, unrelated to the vaccine use.

"tired/exhaustion; cough; runny nose; fever 100 ""oral""/fever 100.3; This is a spontaneous report from a contactable consumer (patient). A 63-year-old female patient (not pregnant at the time of vaccination) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 16Dec2020 08:45 at single dose on right arm for COVID-19 immunization. The patient's medical history reported as none and no Allergies to medications, food, or other products. Concomitant medications received within 2 weeks of vaccination included exemestane, thyroid (ARMOUR THYROID), ergocalciferol (VIT D), ascorbic acid (VIT C), acetylsalicylic acid (ASPIRINE). The most recent COVID-19 vaccine was administered in Workplace clinic. It was reported that nothing on Wednesday. On 17Dec2020 19:00 (07:00 PM) (Thursday evening), the patient was very tired, cough, runny nose and fever 100 ""oral"" (as reported), Friday (18Dec2020) exhaustion and fever 100.3 with cough and runny nose. The events were non-serious and no treatment was received for the events. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient hadn't been tested for COVID-19. The outcome of the events was not recovered."

"Mild maculopapular rash across arms and facial and neck flushing. Rash did not itch; facial and neck flushing; other vaccine same date vaccine date on 17Dec2020; This is a spontaneous report from a non-contactable consumer (patient). A 56-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot/batch number and expiration date not provided), via an unspecified route of administration on 17Dec2020 at 07:30 on Right Deltoid at single dose for COVID-19 immunization. Other vaccine was received on the same date on 17Dec2020 Right Deltoid. The patient medical history included Hypertension. Prior to vaccination, patient was not diagnosed with COVID-19. The patient's concomitant medication included Lisinopril (strength: 20 mg). Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient previously took tramadol and experienced allergy. The patient experienced mild maculopapular rash across arms and facial and neck flushing on 18Dec2020 at 13:30. Rash did not itch and resolved spontaneously in 24 hours. Since the vaccination, patient had not been tested for COVID-19. No treatment was received for the events. The outcome of the events ""mild maculopapular rash across arms and facial and neck flushing"" was recovered in Dec2020 in 24 hours. The report was reported as non-serious. No follow-up attempts are possible; information about lot/batch number cannot be obtained."

"Chills; Headache; Fatigue; injection site soreness and redness; injection site soreness and redness; Shortness of breath; nausea; feeling unwell; This is a spontaneous report from a contactable other health professional (HCP) who reported for herself. A 24-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE) intramuscularly in the left arm on 19Dec2020 at 08:45 (at the age of 24-years-old) as a single dose for COVID-19 vaccination. Medical history included being diagnosed with COVID-19 prior to vaccination, on an unspecified date. Otherwise,

other medical history and known allergies to medications, food, or other products were all reported as ""no"". The patient was not pregnant at the time of vaccination. Concomitant medications were not reported. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 20Dec2020 at 00:30, the patient experienced chills, headache, fatigue, injection site soreness and redness, shortness of breath, nausea and feeling unwell. The events were reported as non-serious and the patient did not receive any treatment for the events. The clinical outcomes of the events chills, headache, fatigue, injection site soreness and redness, shortness of breath, nausea and feeling unwell were all recovering/resolving. It was also reported that since the vaccination, the patient had not been tested for COVID-19. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up."

Fever 100.5; chills; pain at injection site; muscle soreness; joint pain; very mild nausea; This is a spontaneous report from a contactable nurse (patient). A 32-year-old female patient (not pregnant) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: 5926710001), intramuscular on 19Dec2020 10:00 at single dose for COVID-19 immunization. Medical history included covid-19. Concomitant medication in two weeks included bupropion, sertraline, ascorbic acid, betacarotene, calcium sulfate, colecalciferol, cyanocobalamin, ferrous fumarate, folic acid, nicotinamide, pyridoxine hydrochloride, retinol acetate, riboflavin, thiamine mononitrate, tocopheryl acetate, zinc oxide (PRENATAL VITAMINS), cetirizine hydrochloride (ZYRTEC), ergocalciferol (VITAMIN D). The patient previously took minocycline, tetracycline and, amoxicillin; experienced drug hypersensitivity. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The COVID-19 vaccine was administered at Hospital. The patient experienced fever 100.5, chills, pain at injection site, muscle soreness, joint pain, very mild nausea on 20Dec2020 04:30 AM. The patient received paracetamol (TYLENOL) as treatment. The outcome of events was not recovered.

Muscle aches; back pain; nausea; fatigue; headache; This is a spontaneous report from a contactable nurse reporting for the patient. A 32-year-old female patient received dose 1 of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), intramuscular on 18Dec2020 at 14:15 (at the age of 32-years-old) as a single dose in the left arm for COVID-19 vaccination. Medical history included postural orthostatic tachycardia syndrome (POTS), Fibromyalgia, Migraines, Post-traumatic stress disorder (PTSD), anxiety, depression, and gastrooesophageal reflux disease (GERD), all from an unknown date. The patient did not have any allergies to medications, food or other products. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient was not tested for COVID-19 post vaccination. The patient did receive concomitant medications within 2 weeks of vaccination (unspecified). The patient did not receive any other vaccines within four weeks prior to the vaccination. On 18Dec2020, the patient experienced muscle aches, back pain, nausea, fatigue, and headache. Therapeutic measures were not given for the events. The clinical outcome of the events muscle aches, back pain, nausea, fatigue, and headache was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Felt body needed to defecate but could not; Severe lower abdominal cramping on day 3 post vaccination. Intermittent pains throughout day but increased at night.; Intermittent pains; Some nausea;

This is a spontaneous report from a contactable consumer, the patient. A 40-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration on 10Dec2020 at 10:45 (at the age of 40-years-old) as a single dose in the left arm for COVID-19 immunization. The patient previously received clindamycin and experienced allergy. The patient had no other relevant medical history or concurrent conditions. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications were not provided. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient did not receive any other medications within two weeks prior to the vaccination. On 05Dec2020 (as reported) at 16:30, the patient experienced severe lower abdominal cramping on day 3 post vaccination. The patient experienced intermittent pains throughout day but increased at night. The patient experienced some nausea. The patient felt her body needed to defecate but could not and pain persisted. The pain improved on day 4. Therapeutic measures were taken as a result of the events and included the patient received Pepto Bismol. The clinical outcome of the events severe lower abdominal cramping, intermittent pains and felt body needed to defecate but could not was recovering. The outcome of the nausea was unknown. It was also reported that since the vaccination, the patient had not been tested for COVID-19. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

Approximately 3 to 4 minutes after injection site I started to get hot with a feeling of an elevated heart rate; Approximately 3 to 4 minutes after injection site I started to get hot with a feeling of an elevated heart rate; This is a spontaneous report from a contactable consumer (patient). A 35-year-old male patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot/batch number and expiration date not provided), via an unspecified route of administration on 16Dec2020 at 12:00 on left arm deltoid at single dose for COVID-19 immunization. The patient medical history included anxiety, depression and prior to vaccination, patient was diagnosed with COVID-19. No known allergy. The patient's concomitant medications received within 2 weeks of vaccination included escitalopram oxalate (LEXAPRO) and cetirizine hydrochloride (ZYRTEC), both on 16Dec2020. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient reported that approximately 3 to 4 minutes after injection site he started to get hot with a feeling of an elevated heart rate on 16Dec2020 at 12:00. Took off his hat and noticed his hair was sweaty. Was not clammy anywhere else. Symptoms improved around minute 10 to 12. After sitting in car in parking lot for an additional five or 10 minutes started to feel more baseline. He never experienced any chest pain, shortness of breath, angioedema, hives, difficulty breathing, swelling, he had a history of anxiety, which seemed to coincide with the symptoms. Since the vaccination, patient had not been tested for COVID-19. No treatment was received for events. The outcome of the events was recovered on 16Dec2020. The report was reported as non-serious. Information on the Batch/Lot number has been requested.

had fevers and chills up to 104.7 degrees Fahrenheit for a 36-hour period; lethargy; This is a spontaneous report from a contactable Physician. A 40-year-old non-pregnant female first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number=EH9899) intramuscular at arm Left on 19Dec2020 11:00 at single dose for covid-19 immunization. The COVID-19 vaccine was administered at Hospital. Medical history included COVID-19 in Mar2020 with 10 days of fevers and chills and bilateral

interstitial pneumonia. The patient had no other medical history and no known allergies. Concomitant medication included silicon dioxide (VIVISCAL), ascorbic acid (VITAMIN C), calcium, colecalciferol (VITAMIN D) and Gummy vitamins. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was administered at 11am on 19Dec2020, fevers and chills up to 103 Fahrenheit, and lethargy were started around 11pm. It was reported that the patient have had fevers and chills for 36 hrs after getting the first shot of the vaccine. She had fevers and chills up to 104.7 degrees Fahrenheit for a 36-hour period. The patient wanted to know if this response of fevers and chills was related to her being positive last march with accompanying Pneumonia and that if it still safe for her to take the 2nd dose, if it was due to a second time being exposed to Covid which was through the vaccine, could this be a robust immune response. COVID was not tested post vaccination. Outcome of the events was not recovered.

arm soreness at injection site; Body aches; chills; sore throat; This is a spontaneous report from a contactable other health professional (patient). A 43-year-old female patient (not pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: Ek5730), intramuscularly on 17Dec2020 10:15 at single dose on left arm for COVID-19 immunization. The patient's medical history reported as none and no known- allergies. Concomitant medications received within 2 weeks of vaccination included colecalciferol (VITAMIN D [COLECALCIFEROL]), thyroid (ARMOUR THYROID), zinc vitamin, magnesium vitamin. The most recent COVID-19 vaccine was administered at Hospital. On 19Dec2020 19:00 (07:00 PM), the patient's arm soreness at injection site for 2 days. Body aches and chills and sore throat. No treatment received for the adverse events. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient hadn't been tested for COVID-19. The outcome of the events was not recovered.

"Extreme fatigue, slept for most of Saturday; Extreme fatigue, slept for most of Saturday; This is a spontaneous report from a contactable health care professional, the patient. A 27-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), intramuscularly on 18Dec2020 at 13:00 (at the age of 27-years-old) as a single dose in the left arm for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient was not pregnant at the time of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. On 19Dec2020 at 09:00, the patient experienced extreme fatigue and slept for most of Saturday (as reported). Treatment was not received for the events. Since the vaccination, the patient had not been tested for COVID-19. The clinical outcome of ""extreme fatigue, slept for most of Saturday"" was resolving. Information on the lot/batch number has been requested."

SOB; fever; tired; headache; chills; not feeling well; injection site pain; lymph node swollen under right arm; This is a spontaneous report from a contactable Consumer. This 55-year-old female patient received the 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on right arm on 17Dec2020 at 11:30 am at single dose (lot number: EK5730) for COVID-19 immunization. Medical history included having Covid in Jul2020 and husband had Covid prior to being vaccinated. Concomitant medications included escitalopram oxalate (LEXAPRO), estradiol,

hydrochlorothiazide in two weeks. The patient experienced SOB, fever, tired, headache, chills, not feeling well for over 24 hours than on the 19th noted lymph node swollen under right arm with severe pain along with injection site pain from 18Dec2020 03:00 AM. All events were reported as non-serious. Age at vaccination was 55 years old. Not pregnant at the time of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. No treatment was received for the events. Outcome of all events was not recovered.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020504434 same reporter/same drug/different event

feeling symptoms and that she felt like she had the flu; felling sick; This is a spontaneous report from a contactable consumer (patient). A female patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EY1685), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. Caller reported receiving Pfizer Bontech covid 19 vaccine on 18Dec2020. She was feeling symptoms and that she felt like she had the flu (Dec2020). Consumer further stated she work here at the Hospital and Friday she appeared for the shot (Covid Vaccine) and she was just felling sick (Dec2020) and she didn't know what she had to do if it was normal, she had to report it to somebody for this or be around people or can she went back to work tomorrow, she didn't know. The outcome of the events was unknown. No follow up attempts are possible. information about lot/batch number cannot be obtained.

Initially pain at injection site; headache; Next day had body aches; low grade fever 100 degrees; This is a spontaneous report from a contactable consumer. A 27-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at first dose left arm on 18Dec2020 08:00 at single dose for covid-19 immunization. None medical history. No Known allergies. Patient was not diagnosed with COVID-19 prior to vaccination nor tested for COVID-19 since the vaccination. The patient's concomitant medications were not reported. There was no other vaccine in four weeks or two weeks. The patient experienced initially pain at injection site next day had body aches, low grade fever 100 degrees, and headache on 19Dec2020 07:30 AM. Patient received acetaminophen as treatment for the adverse events. The action taken in response to the events for BNT162B2 was not applicable. The outcome of events was recovered in Dec2020. The events were non-serious. Information on the lot/batch number has been requested.

"Caller states she cant focus/She just can't focus; this is horrible/I have a hard time focusing; I'm like you know fogged; I just want to sleep/I have been sleeping all weekend that was horrible; I have some headache; I just don't feel right this is terrible; This is a spontaneous report from a contactable consumer (Patient). A 58-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), intramuscular in the arm on 18Dec2020 at single dose for covid-19 immunization. Medical history included seizure. Concomitant medication included celecoxib (CELEXA), levothyroxine sodium (SYNTHROID), phenobarbitone [PHENOBARBITAL] for seizure. The patient stated that she could not focus, this was horrible and had a hard time focusing on 18Dec2020, the patient also stated that ""like you know fogged"" on 18Dec2020, the patient just wanted to sleep and she had been sleeping all weekend that was horrible on an unspecified date in Dec2020, the patient

had some headache on an unspecified date Dec2020, she just took some Ibuprofen for the headache, the patient just didn't feel right this was terrible on an unspecified date in Dec2020. The outcome of 'could not focus' was not recovered and the outcome of the other events was unknown."

"his entire body is hurting; It's flu like symptoms but not really; feeling run down; it's like skin sensitivity/if touch his skin it kind of hurts, more like skin sensitivity versus body ache, touch his arm it hurt; a bilateral inner thigh rash to knee, that was non irritating non itchy but was uniform in pattern; a sore throat but it was like a tickle a throat tickle and then a dry cough; a sore throat but it was like a tickle a throat tickle and then a dry cough; a sore throat but it was like a tickle a throat tickle and then a dry cough; sore arm at injection site; This is a spontaneous report from a contactable nurse (CRNA anesthesia, also the patient). A 39 years old male patient received a dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration at arm on 16Dec2020 at single dose for COVID-19 immunization. The patient's medical history included psoriasis (he took biologic for pre-existing psoriasis), arthritis and that ""he thought he had direct exposure"". Concomitant medications included unspecified biologic for pre-existing psoriasis. The patient initially called because he was asking that if it was reaction to the injection or if it was possible Covid 19 because he thought he had direct exposure. The patient mentioned ""his chest and stuff"" and got received a Covid test on 11Dec2020, 02Dec2020 and 24Nov2020 and they were consecutive test and he took these test because they were few of his coworkers down to Covid so he just wanted to be sure that he was not infected with them, these are all negative. So last result he had for Covid was 14Dec2020 and that's two days before he got the vaccine and they were all negative and ""it started like all his activities, it was like going to work, going to get food like at the grocery store or other places for takeout"". He had not been in a situation where he have been gathering with a lot of people or having dinner or lunch and sort of anything like that, just the point that he was not in the one of high risk people. For the possible ""side effects similar to covid 19 from vaccine"", the symptom presentation/progression per patient were are as follows: the patient initially had sore arm at injection site on the day of injection which was Wednesday (16Dec2020) and then the following day (17Dec2020) he started having a sore throat but it was like a tickle a throat tickle and then a dry cough. On Friday (18Dec2020) he had a bilateral inner thigh rash to knee, that was non irritating non itchy but it was uniform in pattern. And then on Saturday (19Dec2020), he continued to have a dry cough and said he did apply some steroid cream that he has for his psoriasis and the rash is going away/almost gone and reported feeling run down, has skin sensitivity, he said that if touch his skin it kind of hurts, it's more like skin sensitivity versus body ache, when he touch his arm it hurt, it's like skin sensitivity. And then on Sunday (20Dec2020, the date of reporting), he still has cough and his entire body is hurting. It's flu like symptoms but not really. The patient's weight was around 175 pounds on an unspecified date. Therapeutic measures were taken as a result of the events included some steroid cream and over the counter Zicam (its tablet for cold). The outcome of the event dry cough was not recovered, bilateral inner thigh rash to knee was recovering, for the other events was unknown. When probed for the causality between events and the suspect product, the patient said ""hope it is not from that"" ."

chills; low grade fever to 38.4; body aches; felt very tired; This is a spontaneous report from a contactable nurse (patient). A 57-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-

19 VACCINE, lot number EK5730), intramuscularly on left arm at 18:15 on 18Dec2020 at single dose for COVID-19 immunization. Medical history included COVID-19 (Prior to vaccination, the patient was diagnosed with COVID-19). There were no concomitant medications (No other vaccine in four weeks, no other medications in two weeks). The patient had chills, low grade fever to 38.4, body aches and felt very tired at 15:00 on 19Dec2020. All events were reported as non-serious. The patient did not receive any treatment for all events. The outcome of events was recovering. COVID was not tested post vaccination.

1.5 hours after the vaccine, one eye vision was down to light perception only. The event lasted 15 minutes and resolved completely. ER eval and Ophthololgy eval did not find a cause for the event.; This is a spontaneous report from a contactable physician. A 66-year-old male patient received bnt162b2 (reported as COVID 19, Covid vaccine, lot/batch number and expiry date were not provided), via an unspecified route of administration from 17Dec2020 12:30 at single dose for covid-19 immunisation. Medical history included gout, abnormal glucose, hyperlipidemia, hypertension. Prior to vaccination, the patient was not diagnosed with COVID-19. No Known allergies. Concomitant medications the patient received within 2 weeks of vaccination included atorvastatin, prednisone, lisinopril, allopurinol, famotidine (PEPCID). The patient experienced 1.5 hours after the vaccine, one eye vision was down to light perception only. The event lasted 15 minutes and resolved completely. ER eval and Ophthololgy eval did not find a cause for the event. CT and labs done. Event onset date was on 17Dec2020 14:00. The patient not received any other vaccines within 4 weeks prior to the COVID vaccine. Since the vaccination, the patient has not been tested for COVID-19. No treatment received for the adverse event. Case was non-serious. Facility where the most recent COVID-19 vaccine was administered at Hospital. The adverse event result in the following: Doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. The outcome of event was recovered on 17Dec2020 14:15. Information on the Batch/Lot number has been requested.

Mild injection site reaction- red, firm, swollen, tender; Mild injection site reaction- red, firm, swollen, tender; Mild injection site reaction- red, firm, swollen, tender; Mild injection site reaction- red, firm, swollen, tender. Most noticeable day 3 after injection. Note that I had COVID dx 21Apr; This is a spontaneous report from a contactable consumer reporting for herself. This 33-year-old female patient (non-pregnant) received the first single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot EJ1685) on 17Dec2020 at 07:45, in left arm, for COVID-19 immunization. No other vaccine was given within 4 weeks prior to the COVID vaccine. Medical history included immune thrombocytopenia 2/2, COVID from 21Apr2020, chronic B12 deficiency, ADHD, depression, anxiety and migraine. Allergies to medications, food, or other products: none. Concomitant medications included sertraline HCl (ZOLOFT), lisdexamfetamine mesilate (VYVANSE), lorazepam (ATIVAN), ondansetron (ZOFRAN) and sumatriptan succinate (IMITREX). On 17Dec2020 the patient experienced mild injection site reaction- red, firm, swollen, tender. It was most noticeable on day 3 after injection. No treatment was given. COVID was not tested after vaccination. The events were resolving.

"experienced severe insomnia/some serious felt of insomnia, he did not get a lot of sleep/ tossing and turning all night; This is a spontaneous report from a contactable consumer (patient). A 63-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot

number and expiration date not provided), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. Medical history included bipolar disorder. Concomitant medication included quetiapine fumarate (SEROQUEL) for bipolar disorder, levothyroxine. The patient received the first dose of the vaccine 17Dec2020 and then last night on 19Dec2020 he experienced severe insomnia. Specifically, it was reported that the patient worked at the front desk and on the Thursday of the 17Dec2020, he received the vaccine from the company and he was fine, he had no real side effects until last night on 19Dec2020 and he was not sure whether it's due to vaccine or not but he did experience some serious felt of insomnia, he did not get a lot of sleep. After about 1'oclock in the morning when he was unable to achieve sleep, he took a ""cup"" ZzzQuil and that usually helps to go sleep but it did not work yesterday (19Dec2020) and the patient was tossing and turning all night. The patient wondering whether it is due to vaccine or not. The patient also tried 10 mg Melatonin and both of the medications didn't work. The patient didn't take them together. He took them separate. He took the Melatonin first and it did not work and then he took ZzzQuil by an hour later and the ZzzQuil did not work either. Neither of them worked. Therapeutic measures were taken as a result of insomnia. The outcome of the event was recovering. Information on the Lot/Batch number has been requested."

muscle aches, pain, and chills that were minor but not fever. He is now experiencing loss of muscle tone in his left foot and feels as if his foot is dropping.; it's hard to walk; muscle aches, pain, and chills that were minor but not fever. He is now experiencing loss of muscle tone in his left foot and feels as if his foot is dropping.; muscle aches, pain, and chills that were minor but not fever. He is now experiencing loss of muscle tone in his left foot and feels as if his foot is dropping.; muscle aches, pain, and chills that were minor but not fever. He is now experiencing loss of muscle tone in his left foot and feels as if his foot is dropping.; This is a spontaneous report from a contactable consumer (patient). A 62-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization, carbamazepine (TEGRETOL), via an unspecified route of administration from an unspecified date to an unspecified date at unknown dose and frequency for an unspecified indication. Medical history included ongoing diabetes; ongoing congestive heart problems; ongoing blood pressure high; ongoing mild kidney disease; ongoing gastroparesis; peripheral neuropathy, pain. Concomitant medication included hydrocodone bitartrate, paracetamol (NORCO) for pain, insulin glargine (LANTUS) for diabetes, insulin lispro (HUMALOG) for diabetes, carvedilol (COREG) for congestive heart problem, lisinopril for high blood pressure, spironolactone for high blood pressure, furosemide for high blood pressure, insulin for diabetes. The patient received the Covid-19 vaccine on 18Dec2020. After receiving the vaccine he had muscle aches, pain, and chills on 18Dec2020 that were minor but not fever. He was now experiencing loss of muscle tone in his left foot and feels as if his foot is dropping. The patient noticed on 20Dec2020 that his left foot it's not muscle tone it's kind of flopping there, it's hard to walk. The patient just took Tylenol and took his normal Narcan and Tylenol nothing in addition and one hot shower but it was more of nuisance. The patient stated that the main thing was that the loss of muscle tone in his left foot, that's what bothers him more than chills and everything like that because it was making difficult to walk and he want to walk around. The patient also stated that one of his health problems was peripheral neuropathy and that was what it just seem to make it why he can't feel his foot at all or he can do was move his big toe just a little bit and it was just kind of due to that. The patient just concerned whether that was

supposed to go away in a couple of days. The outcome of the events was unknown. Information on the lot/batch number has been requested.

nausea/sick to stomach; vomiting; sore arm; might be having a Gall bladder issue; This is a spontaneous report from a contactable consumer (patient). A 53-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EJ1685, Expiry Date: Mar2021), via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunization. There was no medical history. There were no concomitant medications. The patient experienced nausea, vomiting, sore arm on 19Dec2020. She was feeling better today. She might be having a gall bladder issue, she started feeling sick to stomach yesterday evening (19Dec2020). It had been several hours after she got the vaccine. No treatment received for events. The outcome of events was recovering.

"headaches, weakness, and ""some coughing.""; headaches, weakness, and ""some coughing.""; headaches, weakness, and ""some coughing.""; This is a spontaneous report from a contactable other hcp. A 56-year-old female patient (wife) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730), via an unspecified route of administration on 17Dec2020 at single dose for covid-19 immunization. The patient was working in hospital, they provided the vaccine and the nurse gave her the vaccine. Next shot will be 3 weeks after that on 07Jan2021. The reporter thought that the patient was the height of the patient was 5 (feet) 6 (inches) and the weight was 68 kg. The patient had no other medical condition or concomitant medication. On the 2nd day on 18Dec2020, the patient experienced headaches, weakness, and ""some coughing."" The patient was taking acetaminophen (Tylenol) 500 mg every 6/8 hours as treatment. The reporter wanted to know if there was anything his wife can do to get rid of these side effects, how long it would last, and what kind of precautions she has to do. The patient was still have them. Just not getting worst or not getting better somehow. She had test for COVID 19 around 09Dec2020 and she was negative. The outcome of the events was not recovered."

Day after the vaccine, I started experiencing throbbing pain on shoulder/arm opposite to the vaccinated arm. Pain became more intense at night and after 48 hours, started experiencing decreased range; Day after the vaccine, I started experiencing throbbing pain on shoulder/arm opposite to the vaccinated arm. Pain became more intense at night and after 48 hours, started experiencing decreased range; decreased range of motion; heaviness on shoulder/arm area all the way to the elbow; This is a spontaneous report from a contactable pharmacist (patient). A 51-years-old non-pregnant female patient the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, lot number=EK5730, intramuscular in left arm on 17Dec2020 at 17:15 (at the age of 51 years-old) as a single dose for COVID-19 immunization. The patient received the vaccine in a hospital. Prior to the vaccination, the patient was not diagnosed with COVID-19 nor was tested. There were no other vaccines within four weeks. Medical history included: hypothyroid, endometriosis, low blood pressure history, anxiety and H pylori. Concomitant medication included sarecycline (SARECYCLINE) for acne, take for 3 days levothyroxine (LEVOTHYROXINE), vitamin c [ascorbic acid] (VITAMIN C [ASCORBIC ACID]), colecalciferol (VITAMIN D [COLECALCIFEROL]), ginkgo biloba (GINGKO BILOBA), and camellia sinensis extract (GREEN TEA [CAMELLIA SINENSIS EXTRACT]). On 18Dec2020 at 0700, the patient experience throbbing pain on shoulder/arm opposite to the vaccinated arm. The clinical course as follows: At 0700, the day after

receiving the vaccine, she started experiencing throbbing pain on shoulder/arm opposite to the vaccinated arm. The pain became more intense at night and after 48 hours, started experiencing decreased range of motion and heaviness on shoulder/arm area all the way to the elbow. The patient was not hospitalized for the events. The patient was treated with OTC obuprofen 400 mg and acetaminophen (TYLENOL). The clinical outcomes of throbbing pain on shoulder/arm opposite to the vaccinated are, decreased range of motion and heaviness on shoulder/arm area all the way to the elbow was not recovered.

24 hours after I received the vaccine I began experiencing terrible body aches all over (muscle aches in my limbs, back, feet, hands, everywhere); 24 hours after I received the vaccine I began experiencing terrible body aches all over (muscle aches in my limbs, back, feet, hands, everywhere); 24 hours after I received the vaccine I began experiencing terrible body aches all over (muscle aches in my limbs, back, feet, hands, everywhere); 24 hours after I received the vaccine I began experiencing terrible body aches all over (muscle aches in my limbs, back, feet, hands, everywhere); fever that reached 101.1 degrees F; chills followed by waking up in a pool of sweat at 6AM on 12/20/20; chills followed by waking up in a pool of sweat at 6AM on 12/20/20; This is a spontaneous report from a contactable health care professional. A 26-years-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), lot number-EH9899, intramuscular in left arm on 18Dec2020 at 19:30 (at the age of 26 years-old) as a single dose for COVID-19 immunization. There was no medical history nor concomitant medications. The patient received the vaccine in a hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. There were no other medications received within 2 weeks of the vaccination. On 19Dec2020 24 hours after receiving the vaccination, the patient experienced terrible body aches all over (muscle aches in limbs, back, feet, hands, everywhere), a fever that reached 101.1 degrees F and eventually, chills followed by waking up in a pool of sweat at 0600 on 20Dec2020. She mentioned that she hadn't felt this ill since she was very little. She was a very healthy person, normal BMI, work out every day, eat healthy, have no health conditions. The patient had not been tested for COVID-19 prior to the vaccine and has not been tested after vaccination. The clinical outcomes for experienced terrible body aches all over (muscle aches in limbs, back, feet, hands, everywhere), a fever that reached 101.1 degrees F and eventually, chills followed by waking up in a pool of sweat, was recovering. The patient was not hospitalized for the events. It was noted that the patient had not been tested for COVID-29 prior to vaccination nor after vaccination. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

"Soreness; redness; tenderness just outside of the injection site (not at the site); On my anterior shoulder next to where my arm sits by my armpit. A large red and swollen mark approx 2 on in height, 1 1/2in wide; This is a spontaneous report from a contactable consumer (patient). This 35-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number EH9899) via an unspecified route of administration in the left arm on 19Dec2020 at 11:45 at single dose for COVID-19 immunisation. Vaccination facility type was hospital. The patient did not receive other vaccines in four weeks. Relevant medical history included Graves' disease, hyperthyroidism and chronic spine pain. Concomitant medications included pregabalin (LYRICA), hydroxyzine and buprenorphine hydrochloride/naloxone hydrochloride (SUBOXONE). On 20Dec2020 at 08:00, the patient experienced

soreness, redness, tenderness just outside of the injection site (not at the site). ""On her anterior shoulder, next to where her arm sits by her armpit, a large red and swollen mark approximately 2 on in height, 1 1/2 in wide"" appeared. The events resulted in Doctor or other healthcare professional office/clinic visit. The patient did not receive corrective treatments. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, she had not been tested for COVID-19. The patient had not recovered from the events."

"the rash on her back, more on the flank area/ the upper arms, she got this rash too; had fever, a low grade fever; 24 hour chills; chills was off and on; This is a spontaneous report from a contactable nurse (patient). A 48-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 17Dec2020 03:40 at single dose for COVID-19 immunization. Medical history (Other medications and other medical conditions) reported as no. The patient's concomitant medications were not reported. Caller initially called to ""report some side effects after getting covid."" Investigation Assessment was No. Consumer (Registered Nurse) further stated Just calling to report side effects because she guessed the data might be needed for study and everything. She went for the vaccine last Thursday (17Dec2020) around 3:40. The first night was the day that she had 24 hour chills (Dec2020). So, just round the clock, Tylenol was taken for that. Then she knew, the rash on her back, more on the flank area that was less than 24 hours that was Friday. And that's in her lower back and now she had more on that lower back and the upper arms, she got this rash too. Chills was off and on. The date when started experiencing rashes was 18Dec2020 and was still experiencing. The patient experienced chills and had fever, a low grade fever (Dec2020), and for chills she took Tylenol. For lab text, the patient stated ""About 2 weeks no, after the COVID vaccine no"". Due date for the next vaccine shot: Consumer believed the due date for the next vaccine shot was 07Jan2021. The outcome of the event ""the rash on her back, more on the flank area/ the upper arms, she got this rash too"" was not recovered, of the other events was unknown."

allergic reaction; dizzy/lightheaded; blood pressure and heart rate skyrocketed; blood pressure and heart rate skyrocketed; fever; sweats; This is a spontaneous report from a contactable consumer reporting for him/herself. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for covid-19 immunisation. The patient medical history and concomitant medications were not reported. On unknown date the patient experienced a mild allergic reaction with unknown outcome. About an hour after getting the shot the patient got dizzy, lightheaded, and her blood pressure and heart rate skyrocketed. She was given 50mg of diphenhydramine hydrochloride (BENADRYL) in the ED and still felt bad. On unspecified date the patient had a fever and sweats but the day after she was feeling good. The patient wanted to know if she could get the second dose. Information on the lot/batch number has been requested.

vomiting; diarrhea; myalgia; headache; face swelling; pain at the injection site; This is a spontaneous report from a contactable physician reporting for one of her patients. A 43-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: Unknown via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient received the COVID-19 vaccine

yesterday (on 19Dec2020) and was experiencing vomiting, diarrhea, face swelling, myalgia, headache, and pain at the injection site on an unspecified date. Expressed being concerned about an anaphylactic reaction and wanted to know how her patient's symptoms compare to it. Then the physician asked for the timing of the anaphylactic symptoms onsets reported in the clinical trials. The event outcome was unknown. Information on the lot/batch number has been requested.

fever; headache; body aches; chills; This is a spontaneous report from a contactable consumer (patient). A 56-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730 and expiration date: Mar2021), via an unspecified route of administration on 19Dec2020 at single dose for covid-19 immunization. It was the first dose. Medical history included the patient was Cancer survivor and the patient was not taking any chemo or any radiation. In 2003 the patient took chemo radiation. Concomitant medications included anastrozole, citalopram, alendronate sodium (ALENDRONATE). The patient stated she was having a couple symptoms including fever, headache, body aches, and chills on an unknown date in Dec2020. Treatment included the patient had been taking Excedrin, It had aspirin in it and Tylenol in it and Tylenol is 250 mg and Aspirin is 250 (unit was not specified). The patient was wondering how long her symptoms are going to last. The patient thought the lab test has been about a month. The outcome of the events was unknown.

I felt my left ear become hot and then felt paresthesia of my left ear, side of cheek and jaw, and down side of neck; Felt like numbness after dental procedure; left ear become hot; This is a spontaneous report from a contactable consumer (patient). This 37-year-old female consumer received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Lot number EH9899, at single dose on 20Dec2020 18:45 on left arm for COVID-19 immunisation. Medical history was none. Concomitant medication was not reported. The consumer had no other vaccine in four weeks. The consumer had no covid prior vaccination. The consumer had no covid tested post vaccination. The consumer had no known allergies. The consumer was not diagnosed with COVID-19 Prior to vaccination. The consumer had not been tested for COVID-19 since the vaccination. Approx 12-15 min after injection (20Dec2020 19:00) the consumer felt her left ear become hot and then felt paresthesia of her left ear, side of cheek and jaw, and down side of neck. She felt like numbness after dental procedure. Waxed and waned over the course of 30-45 minutes. She had mostly resolved after 1.75 hours, though slight abnormal feeling still remained. No treatment was received for all events. The outcome of the events was resolving.

Headache, chills and body was warm; Headache, chills and body was warm; Headache, chills and body was warm; This is a spontaneous report from a contactable consumer reporting for himself. A 37-years-old male patient received bnt162b2 (BNT162B2) , via an unspecified route of administration on 17Dec2020 13:15 at single dose for COVID 19 immunisation. The patient medical history included pre-diabetes. There were no concomitant medications. On 18Dec2020 early in the morning (at about 6-7a.m.) the patient experienced headache, with outcome of not recovered , chills with outcome of recovered and body was warm with outcome of recovered. The patient underwent lab tests and procedures which included blood cholesterol: unknown results on Dec2020 , blood glucose: pre-diabetic but not yet on Dec2020 , body temperature: his body was warm but he did not measure his fever, glycosylated haemoglobin: 5. something, not even 6. on Dec2020 , weight: between 180-190. Information about Lot/batch no has been requested.

felt her heart pounding and took her pulse and it was 158; took her pulse and it was 158; feels fatigued currently; took her blood pressure (BP) and it was 151/113; This is a spontaneous report from a contactable other healthcare professional. A 64-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EH9899), intramuscularly in right arm on 18Dec2020 14:05 at single dose for Covid-19 immunisation. Medical history included allergies to penicillin, allergy to mussels (bronco constriction and itch), figs allergy (nausea, vomiting, dizziness, elevated heart rate), allergy to grass (welts), ongoing asthma (asthma environmental triggers (Flowers, perfume, chemicals, soil, grass)), breast cancer left (had radiation and tamoxifen) from 2005 and ongoing, radiotherapy from an unknown date and unknown if ongoing. Concomitant medication included vitamin b complex (VITAMIN B), vitamin C, calcium (CA), Zinc, albuterol [salbutamol] and multivatamins. The patient previously took ampicillin and experienced allergy-rash, previously vaccinated with influenza and experienced weakness in 2010, and previously received tamoxifen for breast cancer female. After one hour later (18Dec2020 15:00), she felt her heart pounding and took her pulse and it was 158 and no other symptoms. Denies chest pain. Staff took her blood pressure (BP) and it was 151/113 on a machine. Recheck 10 minutes later BP 151/112, P 126. EE was brought to the Occupational Medicine Dept, Recheck at 20 min BP 125/68 and an apical pulse of 88. Heart rate (HR) regular, rate and rhythm. Employee states she feels fatigued currently, denies shortness of breath, chest pain, itching, swelling on oral cavity. The outcome of events was recovered on 18Dec2020.

low grade temperature (not fever) within first 24 hours of vaccine; Myalgia resolved with medication; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age (reported as 28) and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced myalgia resolved with medication, low grade temperature (not fever) within first 24 hours of vaccine on an unspecified date. The outcome of the event myalgia was resolved on an unspecified date, outcome of the other event was unknown. No follow-up attempts are possible. Information about lot/Batch number cannot be obtained. No further information is expected.

itching all over/bottom of his feet were itching too/he was scratching all over, his back, legs everywhere; This is a spontaneous report from a contactable consumer (patient). A 53-year-old male patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EK5730), intramuscular in left arm on 18Dec2020 12:45 at single dose for Covid-19 immunisation. Medical history included hypertension and anemia (he only has anemia and hypertension) from 2018 to an unknown date. Concomitant drug included other medications, but he didn't have the list in front of him. Prior vaccinations within 4 weeks was none. He just got the COVID vaccine today (18Dec2020). He started itching about 2 hours ago, once he got home. He was just itching all over. He had a hairbrush just scratching himself because he was itching all over, he was scratching all over, his back, legs everywhere. He confirmed this was his first dose of the COVID vaccine. He was supposed to go back in three weeks to get the second dose. He had not been to an emergency room or physician office yet, but he's getting ready to go. The bottom of his feet were itching too. The itching was everywhere. That was the only symptoms that he had his body was itching. He worked at a hospital, supply them with mask, he was supply technician. He worked

closely with may not be the patient everyday. He was on an esophagogastroduodenoscopy (EGD) done where they put tube down through throat and colonoscopy and EGD, they found some information and they removed it, about a month ago. The outcome of event was not recovered.

Dazed look with nausea; Dazed look with nausea; dry heaving; she looked green; This is a spontaneous report from a contactable consumer. A 61-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot Number: EH9899), intramuscular in the left arm on 18Dec2020 07:00 at single dose for covid-19 immunisation. The patient was not pregnant at time of vaccination. Medical history included some metals cause rash, ongoing rheumatoid arthritis and ongoing hypertension. The patient's concomitant medications were not reported. On 18Dec2020 at 08:00 the patient experienced dazed look with nausea and dry heaving: staff standing near her said she looked green. The patient Went to ER at the hospital; EKG done and result normal; seen by ER MD given ondansetron (ZOFRAN); Cleared to return to work same day. The patient recovered from the adverse events.

Numbness in left thumb; Left arm felt heavy and slightly numb; Left arm felt heavy and slightly numb; This is a spontaneous report from a contactable consumer. A 50-year-old female patient received the 1st dose of bnt162b2 (BNT162B2, Manufacturer Pfizer-BionTech) (lot# EH9899), intramuscular in the left arm, on 17Dec2020 at 02:00 PM, at single dose, for Covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient hasn't ever had an adverse event following any previous vaccine administered for immunization. The patient experienced numbness in left thumb on 17Dec2020 at 02:05 PM with outcome of recovered within 30 minutes and left arm felt heavy and slightly numb on 17Dec2020 at 02:05 PM with outcome of recovered within 30 minutes.

joint pain; Dizzy; tired; weak; nausea; This is a spontaneous report from a contactable Other HCP. A 28-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number # EJ1685) on 18Dec2020 at 08:30 AM at single dose via intramuscular on left arm for COVID-19 immunization. Relevant medical history included cancer in 2018 and allergy reaction to bee sting. Concomitant medications were not reported. Prior to vaccination patient wasn't diagnosed with COVID-19 and was not already tested for COVID-19. On 18Dec2020 at 08:45 AM patient experienced dizzy, tired, weak, nausea, and joint pain. At the time of the reporting the patient was recovering. No follow-up attempts are needed. No further information expected.

Sore arm; loss of appetite; nausea; headache; fatigue; This is a spontaneous report from a contactable other health care professional (Other HCP, patient herself). A female patient of unspecified age (reported as 31 also reported as 61) received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot number EH9899) on 16Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient experienced side effects reported as sore arm, loss of appetite, nausea, headache, fatigue. All side effects occurred two days after first dose of vaccine (18Dec2020). The outcome of the events was unknown.

Severe pain at site in left arm extending to whole arm, unable to lift arm or do things.; Severe pain at site in left arm extending to whole arm, unable to lift arm or do things.; Severe pain at site in left arm

extending to whole arm, unable to lift arm or do things.; This is a spontaneous report from a contactable nurse (patient herself). A 39-year-old female patient (no pregnancy) received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at site of right arm at 16:00 on 19Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced severe pain at site in left arm extending to whole arm, unable to lift arm or do things on 20Dec2020. No treatment received for events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of events was not recovered. Information on Lot/Batch number has been requested.

Dizziness; nausea; dry mouth; felt hot; chest tightness; sour taste in mouth; rapid heart rate; tingling on same arm vaccinated (L arm); some numbness in same arm left arm; felt shaky; Blood pressure elevated; This is a spontaneous report from a contactable healthcare professional. A 39-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EH9899), intramuscularly in the left arm on 17Dec2020 02:25 at a single dose for COVID-19 immunization. The patient had no significant medical history and no concomitant medications. Other illnesses at the time of vaccination and up to one month prior was none. The patient had no allergies to medications, food or other products. On 17Dec2020 02:32, the patient experienced dizziness, nausea, dry mouth, felt hot, chest tightness, sour taste in mouth, rapid heart rate, tingling on same arm vaccinated (L arm), some numbness in same arm left arm, felt shaky and blood pressure elevated. The patient was taken to emergency department and oxygen was provided. The patient underwent lab tests and procedures on 17Dec2020 which included blood pressure measurement: elevated and heart rate: rapid. Therapeutic measures were taken as a result of the events as aforementioned. The patient was observed and discharged to home after 40 min. The outcome of the events was recovered on 17Dec2020.

panic attacks; This is a spontaneous report from a Non-contactable physician. A 30-year-old female patient received bnt162b2 (BNT162B2) at single dose on an unspecified date for immunisation. Medical history included anaphylactic reaction, panic attack and 12 unspecified comorbid conditions. The patient's concomitant medications were not reported. The patient experienced panic attacks on an unspecified date. The action taken in response to the event for bnt162b2 was not applicable. The outcome of event was unknown. According to MD, they are not sure if was a true adverse reaction or a panic attack. No follow-up attempts are possible, information about lot/batch cannot be obtained.

anaphylactic reactions; throat and lip swelling; throat and lip swelling; mild chest pain; This is a spontaneous report from a non-contactable pharmacist. A 34-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration, on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient previously took terbinafine (MANUFACTURER UNKNOWN) and experienced allergy. The patient experienced anaphylactic reactions, throat and lip swelling, and mild chest pain on an unspecified date. The patient was observed for five hours. The clinical outcome of anaphylactic reactions, throat and lip swelling, and mild chest pain was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's

Comments: There is a reasonable possibility that the events anaphylactic reactions, throat and lip swelling, and mild chest pain were related to BNT162b2 based on known drug safety profile. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

About 30 mins after injection felt brain fog and had a hard time finding words/ like we were having to concentrate more than usual to do routine stuff; About 30 minutes after injection felt brain fog and had a hard time finding words. Another nurse that got vaccinated at the same time felt the same way. It's like we were having to concentrate more t; About 30 mins after injection felt brain fog and had a hard time finding words/ like we were having to concentrate more than usual to do routine stuff; This is a spontaneous report from a contactable consumer. This consumer reported similar events for 2 patients. This is the 2nd of 2 reports. A patient of unspecified age and gender started to receive (PFIZER-BIONTECH COVID-19 VACCINE, Lot number Ej1685), intramuscularly, as first single dose on 20Dec2020 for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. On 20Dec2020, about 30 minutes after injection felt brain fog and had a hard time finding words. Another nurse that got vaccinated at the same time felt the same way. It's like we were having to concentrate more than usual to do routine stuff. Outcome of the events about 30 mins after injection felt brain fog and had a hard time finding words/ like we were having to concentrate more than usual to do routine stuff was unknown.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020503261 same drug, same event and different patient

"soreness at the injection site; This is a spontaneous report from a non-contactable consumer. A 59-year-old female patient (reporter's mother) received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot EH9899) on 18Dec2020 at a single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient used to receive unspecified vaccines and experienced pain at the injection site. After 8 hours of taking bnt162b2 and into the next day patient reported soreness at the injection site on 19Dec2020. She described it as ""normal"" and like pain felt after other vaccines she has received. The outcome of the event was unknown."

anaphylactic reaction upon receipt of the vaccine; This is a spontaneous report from contactable pharmacist via a Pfizer Sales Representative. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration, in Dec2020 at a single dose for COVID-19 immunization. The patient was reported as a healthcare worker. Medical history included latex allergy. The patient's concomitant medications were not reported. The patient experienced an anaphylactic reaction upon receipt of the vaccine in Dec2020. The reporter called to confirm to confirm the lack of latex in the vaccine and also to inquire about the latex content of the 0.9% sodium chloride (NaCl) used to dilute the vaccine. The clinical outcome of anaphylactic reaction upon receipt of the vaccine was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and has been requested during follow up.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylactic reaction cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect

product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

rash; itchiness; Severe joint pain; nausea; stomach pain; This is a spontaneous report from a contactable Other HCP reported for herself. This 32-year-old female (no pregnant) patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular at left arm on 19Dec2020 18:45 at single dose for COVID-19 immunization. Medical history included Auto immune disorder, high-risk medications, asthma, and allergies: Spectrum hand sanitizer. Concomitant medication included adalimumab (HUMIRA) received within 2 weeks of vaccination. No Covid prior vaccination, No Covid tested post vaccination. No other vaccine in four weeks. On 19Dec2020 11:00 PM, the patient experienced severe joint pain, nausea, stomach pain the same day as vaccine. The next day (on 20Dec2020) patient experienced rash and itchiness. No treatment received for the events. The outcome of events was unknown. Information on the lot/batch number has been requested.

she kept having chills and a mild fever; she kept having chills and a mild fever; really bad headaches; She hasn't been able to sleep because of feel warm yet cold and her body aches.; She hasn't been able to sleep because of feel warm yet cold and her body aches.; She hasn't been able to sleep because of feel warm yet cold and her body aches.; She hasn't been able to sleep because of feel warm yet cold and her body aches.; This is a spontaneous report from a contactable healthcare professional. A 28-year-old female patient received BNT162B2 (Lot# EH9899) via intramuscular on 20Dec2020 08:00 AM (anatomical location: arm left, dose number: 1) at single dose for COVID-19 immunization. Medical history and concomitant medications were none. The patient did not have allergies to medications, food, or other products. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine, and did not have any other medications within 2 weeks of vaccination. The patient was not diagnosed with COVID-19 prior to vaccination. Since the vaccination, the patient has not been tested for COVID-19. It was reported that at around 17:00 on 20Dec2020, patient started having really bad headaches. She took a two-hour nap and when she woke up she kept having chills and a mild fever (on 20Dec2020 19:00). She hasn't been able to sleep because of feel warm yet cold and her body aches. No treatment received for the adverse events. Outcome of events was not recovered.

"Tingling throat; This is a spontaneous report from a contactable physician. This physician reported same event for two patients. This is second of two reports. A patient of unspecified age and gender started to receive bnt162b2 (BNT162B2; also reported as COVID-19 vaccine; unknown lot number, NDC number and expiration date), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was reported that it was unknown if other products were received or if an investigation assessment was performed. On 16Dec2020, the patient experienced tingling throat (non-serious). The physician called regarding COVID 19 vaccine since they had two events that happened yesterday (16Dec2020), however, the physician stated that she needs to ask a question before speaking with DSU and reporting the events. the physician mentioned that two patients complained of tingling in their

throat during the observation period after the vaccine was administered. The physician thought ""they just panicked and overreacted "" and she did not think they had a reaction. The patients did go the ER (emergency room) and were discharged the same day. The physician wanted to be able to give the second dose. The physician wants to ask about the side effects of the vaccine. The outcome of the event was unknown. The following information on the lot/batch number has been requested; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020502608 same reporter/event, different patient"

Fever; Chill; whole muscle ache; Headache; Runny nose; This is a spontaneous report from a contactable Other HCP reported for herself. This 32-year-old female (no pregnant) patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EH9899), intramuscular at left arm on 20Dec2020 11:00 at single dose for COVID-19 immunization. None medical history reported. The patient's concomitant medications were not reported. No Covid prior vaccination, No Covid tested post vaccination. No other vaccine in four weeks. On 20Dec2020 02:00 PM, the patient experienced fever, chill, whole muscle ache, headache, runny nose. No treatment received for the events. The outcome of events was unknown.

Itchiness and small rash on forehead; Itchiness and small rash on forehead; This is a spontaneous report from a contactable nurse (Patient). A 35-year-old female patient received bnt162b2 (lot number: EJ1685), intramuscularly at left arm, 1st dose on 20Dec2020 08:00 AM, at single dose, for COVID-19 immunization. No COVID prior vaccination, COVID tested post vaccination, known allergies, or other medical history. No other vaccines within 4 weeks prior to the COVID vaccine. No other medications the patient received within 2 weeks of vaccination. The patient was not diagnosed with COVID-19, prior to vaccination and after vaccination. A 40-year-old male patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: ek5730), intramuscular on the left arm on 20Dec2020 12:00 at a single dose for COVID-19 immunization. The patient's medical history included irritable bowel syndrome (IBS), attention deficit hyperactivity disorder (ADD), and lactose intolerance. Concomitant medications included hyoscyamine and amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 20Dec2020 12:00, the patient experienced got hot, flushed, weakness, few minutes of itchy throat and back, lips tingling, and a lump in the throat feeling. No treatment received for the adverse events. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient had not been tested for COVID-19. Outcome of the events was recovering. The events were considered non-serious.

Low grade temp; headache; achy; diarrhea; tiredness; This is a spontaneous report from a contactable nurse (patient). A 41-year-old female patient received the first dose of bnt162b2 (Pfizer Biontech COVID 19 vaccine), Lot number: EJ1685, via an unspecified route of administration on the left arm on 19Dec2020 11:30 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was not pregnant. The patient has no allergies to medications, food, or other products. On 20Dec2020 11:00, the patient experienced low grade temp, headache, achy, diarrhea and tiredness. The patient did not receive any treatment for the events and were reported as non-serious. The vaccine was administered in a hospital. The patient has not received

any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of events low grade temp, headache, achy, diarrhea and tiredness was recovered on an unspecified date in Dec2020.

lymphadenopathy; joint pain; muscle pain; chills; fatigued; sore, pain at site normal for vaccine admin; This is a spontaneous report from a contactable pharmacist. An adult female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot: EJ1685) intramuscularly on 17Dec2020 at a single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. On 17Dec2020 21:00, the patient was fatigued and had sore pain at the site of vaccine administration. On 18Dec2020, the patient experienced joint pain, muscle pain and chills. On 19Dec2020, the patient developed lymphadenopathy. The events were reported as non-serious. Outcome of events recovered on an unspecified date on Dec2020.

purple discoloration to her right arm and right fingers; chills; redness across her chest and stomach; cap refill was sluggish; This is a spontaneous report from a contactable nurse. A 37-year-old female patient received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 vaccine, lot# EJ1685), via intramuscular on 18Dec2020 11:00 in right arm at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The most recent COVID-19 vaccine was administered in hospital. Prior to vaccination, the patient was not diagnosed with COVID-19. Employee reported purple discoloration to her right arm and right fingers. She reported her cap refill was sluggish. She stated she had chills and redness across her chest and stomach on 18Dec2020 at 16:00. The events result in Emergency room/department or urgent care. The patient received the treatment for the events. Outcome of events were unknown.

My arm pit is swollen and a little painful; My arm pit is swollen and a little painful; This is a spontaneous report from a contactable consumer (patient). A male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient noticed that his arm pit was swollen and a little painful on 20Dec2020. The outcome of the events was unknown. Information about the lot/batch number has been requested.

not being able to smell anything/Cannot smell anything; Sinus issues; Cough; Congestion; Feels hot; backache; fatgue; headache; This is a spontaneous report received from a contactable other health professional (who is also the patient). A 41-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration in left arm, on 15Dec2020, at single dose, for COVID-19 immunization. There was no medical history. The patient's concomitant medications were not reported. The patient reported that she got the COVID vaccine last Tuesday, on 15Dec2020. She is a psychologist and works close with patients all the time. She has had symptoms since last Wednesday (16Dec2020). She clarified that her symptoms were back ache shortly after the vaccine, fatigue, headache, sinus issues and cough. Then her backache went away. She also had congestion and felt hot on 16Dec2020. She had an appointment last Friday (18Dec2020) and they took her temperature, but she did not have a fever. And then since yesterday (20Dec2020), she

cannot smell anything. She has a baby and cannot smell the dirty diapers. She cannot smell her perfume. She asked other people who received the vaccine if they experienced this, and they did not. She was wondering if this is the vaccine or does she possibly have some other infection or should she get tested for COVID or is it possible this is from the vaccine? The patient clarified that at first her back ache went away but it is still ongoing now. It has persisted at the same level as well as all of the other symptoms. The outcome of the events was not recovered.

Sore arm at injection site and headache at bedtime.; Sore arm at injection site and headache at bedtime.; This is a spontaneous report from a contactable nurse (patient). A 62-year-old female patient (non-pregnant) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EH9899) via unspecified route of administration on 20Dec2020 at single dose for COVID-19 immunization. Patient medical history and concomitant medications were not reported. The patient experienced sore arm at injection site and headache at bedtime on 20Dec2020. Outcome of the event was recovered on unspecified date in Dec2020. No treatment received for the events. The events were assessed as non-serious.

fever; body malaise; Body aches; muscles hurt; sharp eye pain/If she turns her eyes to the right or to the left; chills; This is a spontaneous report from a contactable consumer. A 24-year-old female patient (daughter) received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration at 18:00 on 17Dec2020 at single dose for COVID-19 immunization. Medical history included asthma and anxiety. Concomitant medication included sertraline hydrochloride (ZOLOFT) for anxiety. The patient experienced fever, body malaise, body aches, muscles hurt, sharp eye pain/if she turned her eyes to the right or to the left, and chills on 18Dec2020. At time of reporting, the outcome of events was not recovered.

Rash spreading started at the neck slowly progress to the entire neck, then the scalp, torso, legs and arms. Started within 4 hours over night then at 0830 am started getting worse.; This is a spontaneous report from a contactable nurse reporting for herself. A 40-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in the left arm on 20Dec2020 16:15 at single dose for COVID-19 immunization. Medical history included hyperlipidaemia, antiphospholipid syndrome and migraine. Concomitant medication included metronidazole benzoate (FLAGYL), butalbital, caffeine, paracetamol (FIORICET), iron (IRON) and multivitamin. The patient experienced rash spreading started at the neck slowly progress to the entire neck, then the scalp, torso, legs and arms on 20Dec2020 21:30 with outcome of not recovered. On21Dec2020 at 08:30 am it started getting worse. The outcome of the events was not recovered. The patient took Benadryl as treatment for the events. The patient did not undergo COVID test and did not have COVID prior to vaccination. Information on the lot/batch number has been requested.

tingling on roof of mouth, watery eyes, and itchy throat; tingling on roof of mouth, watery eyes, and itchy throat; tingling on roof of mouth, watery eyes, and itchy throat; This is a spontaneous report from a contactable nurse. A 34-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EJ1685), intramuscular in the left arm at hospital on 18Dec2020 09:00 at single dose for COVID-19 immunization. The patient medical history and

concomitant medications were not reported. On 18Dec2020 at 09:15 the patient experienced tingling on roof of mouth, watery eyes, and itchy throat with outcome of unknown. The events required emergency room visit and the patient received treatment.

sore arm following vaccination; This is a spontaneous report from a Pfizer sponsored program, Pfizer First Connect, received from a contactable consumer (patient). A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date were not provided) solution for injection, via an unspecified route of administration on 20Dec2020 at a single dose for COVID-19 immunisation. Medical history included bone pain and arthritis (patient received a prescription of Prednisone today for bone pain and arthritis). The patient's concomitant medications were not reported. The patient reported receiving the first dose of the COVID-19 vaccine yesterday morning (20Dec2020). She mentioned experiencing a sore arm following vaccination. She then explained receiving a prescription of Prednisone today for bone pain and arthritis, after consulting with her foot doctor. She asked if she should she take this steroid treatment, and also asked if she should receive her second dose of the Shingle vaccine while being on the COVID-19 treatment. Outcome of the event was unknown. Information on lot/batch number has been requested.

Tachycardia, heart rate remained higher than 100 bpm throughout the day at rest. Readings ranged from 110-117; This is a spontaneous report from a contactable Nurse. This 25-years-old female Nurse reported for herself (pregnant: No) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899) on 18Dec2020 01:00 PM at Right arm at single dose for covid-19 immunization. Medical history was allergy to ham. Concomitant drug was Omeprazole. No other vaccine in four weeks. Adverse event reported as Tachycardia, heart rate remained higher than 100 bpm throughout the day at rest (non-serious). Readings ranged from 110-117 on 19Dec2020 09:00 AM with outcome of Recovered. No treatment. No COVID prior vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Follow-up attempts have been completed and no further information is expected.

"elevated heart rate of 113; Itching to roof of her mouth; numbness to right side of her throat; This is a spontaneous report received from a contactable nurse. A 24-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), intramuscular in right arm, on 18Dec2020 10:45, at single dose, for COVID-19 immunization. The patient medical history and concomitant medications were not reported. It was unknown if the patient was pregnant. It was reported that the patient experienced itching to roof of her mouth, numbness to right side of her throat and had elevated heart rate of 113 on 18Dec2020 at 11:00. The adverse events resulted in ""Emergency room/department of urgent care"". It was unknown if the patient received treatment for the events. The outcome of the events was unknown."

dizziness; weakness; loss of balance; brain fog; lethargy; Dizziness and loss of balance led to a fall where an injury was sustained (leg weakness, loss of balance led to a fall down a flight of stairs with injury to right shoulder); Dizziness and loss of balance led to a fall where an injury was sustained (leg weakness, loss of balance led to a fall down a flight of stairs with injury to right shoulder); Dizziness and loss of balance led to a fall where an injury was sustained (leg weakness, loss of balance led to a fall down a

flight of stairs with injury to right shoulder); This is a spontaneous report from a contactable nurse. This 41-year-old female nurse (patient) reported for herself that she received the first dose of BNT162B2 (Lot# EH9889) intramuscularly at left arm at single dose for COVID-19 ((PFIZER-BIONTECH COVID-19 VACCINE) immunisation on 17Dec2020. Relevant history was unknown. Relevant concomitant drug included multivitamin and ergocalciferol (VIT D). No known allergies. No allergies to medications, food, or other products. Relevant medical history was none. After receiving first dose, the patient experienced dizziness, weakness, loss of balance, brain fog, lethargy on 18Dec2020, 07:00 AM. The dizziness and loss of balance led to a fall where an injury was sustained (leg weakness, loss of balance led to a fall down a flight of stairs with injury to right shoulder). No treatment was received. The patient resolved with sequel from the events. No covid prior vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The events were considered as non-serious.

headache; chills; fatigue; This is a spontaneous report from a non-contactable nurse. This nurse reported for a 32-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number=EK5730) Intramuscularly at Left arm at single dose for COVID-19 immunisation on 19Dec2020 (02:30 PM). Relevant history and concomitant drugs were unknown. The patient experienced had chills, fatigue, headache in the morning of 20Dec2020 at 7:00 am. The patient received Tylenol as treatment and the outcome of events was resolved in unknown date of Dec2020. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible. No further information is expected.

"amount of blood on his Band-Aid after the injection; This is a spontaneous report from a contactable pharmacist. A male patient unknown age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose for COVID-19 immunisation on 20Dec2020. Relevant history and concomitant drugs were unknown. The patient had a significant (then rephrased to ""small"") amount of blood on his Band-Aid after the injection on 20Dec2020. Outcome of the event was unknown. The information on the lot/batch number has been requested."

feeling kind of bad; low grade fever; chills; muscle aches; Arm is still sore at the injection site. It's sore to touch and can tell it's still sore with movement.; swollen lymph nodes; spontaneous report from a contactable nurse. This 47-year-old nurse reported for self that she received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) intramuscularly at right arm at single dose for COVID-19 immunisation on 18Dec2020. Relevant history included gestational diabetes history; Her daughter was 14 years old and she had never had diabetes. No signs of diabetes after birth of daughter. The patient was not a smoker/former smoker. The patient had tested positive with COVID antibodies probably in Apr2020, both she and her husband and both wound up getting symptomatic with COVID symptoms about the 14Mar2020. They were unable to get tested and just kind of figured they had it. Her husband also had pneumonia. They both recovered in Apr and decided to get the antibody test done and it was positive for the antibodies and they had also given blood since then and that was also positive for antibodies. The patient considered wondering with this being the first vaccine dose was considered as a

good immune response. Relevant concomitant drug was unknown. The patient reported having the Pfizer-BioNTech COVID-19 Vaccine 685 on Fri and was having some symptoms. Got it about 12:45 Fri (18Dec2020) and around 11PM that evening she was feeling kind of bad, low grade fever, chills, and muscle aches. This was only the first vaccine she had. The symptoms ended up lasting up to 24 hours and the fever went away the next morning, but she still had chills. Only thing she had was the swollen lymph nodes at right axillary, the same side of the site of the injection. The patient mentioned she didn't feel very good Sat, but at the reporting time she could work today. The patient clarified that her husband did not have the Pfizer-BioNTech COVID19 Vaccine 685 vaccine. And she did not test positive for COVID and didn't have the actual testing done because they didn't have the test available it was only for if someone were hospitalized. The patient's arm was still sore at the injection site. It's sore to touch and could tell it's still sore with movement. There was no pre-existing diseases worsened during the SARS-CoV2 infection. The patient was not treated with immunomodulating or immunosuppressing medications or received any other vaccines around the time of COVID-19 vaccination. The patient did not have a positive test for SARS-CoV2. The patient did not display clinical signs at rest indicative of severe systemic illness. The patient did not taking any medications routinely prior to the event being reported. The outcome of event feeling kind of bad, low grade fever and muscle aches was resolved, the outcome of events swollen lymph nodes, chills and sore at the injection site was not resolved. The events were assessed as non-serious. The patient stated she had been positive with Covid in Mar, which may have caused her to be more symptomatic with the vaccine, but was unsure if that was the case. She also heard a lot of people had the first dose, never exposed to Covid, and had no symptoms after receiving the vaccine. The patient asked if she should still take the second dose even though she has been positive with Covid before. Information on the lot/batch number has been requested.

arm started to feel sore; injection site pain; This is a spontaneous report from a contactable consumer (patient). A 76-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number E9899, expiry date Mar2021) intramuscular on left arm on 17Dec2020 at single dose for COVID-19 immunization. The patient has no prior vaccinations within 4 weeks. Medical history included and concomitant medications were none. The patient got the COVID vaccine on Thursday (17Dec2020), her arm was still really sore (17Dec2020). The patient asked on how long will this last and was referred to healthcare professional. Full EUA PI, discussed incidence of injection site pain. No information on duration after 1st dose. The patient received the Covid vaccine around 10:30 on Thursday morning and her arm started to feel sore Thursday evening. The patient clarified that the vaccine was administered around 10:30AM to 11:00AM. The patient was advised to follow up with healthcare professional. The patient did not receive treatment for the events. The outcome of the events arm started to feel sore and injection site pain was recovering. The reporter informed that the vaccination facility type was a hospital and was not administered at a military facility.

"Making me just kind of loopy too kind of light headed; Weakness; Ringing in ears; Headache; pain at the injection site; I could not even turn onto my other side last night from pain; pain at the injection site; I could not even turn onto my other side last night from pain; Chills; fatigue/Tiredness; low grade temperature; I couldn't even sleep; Extreme muscle and joint pain generalized; Extreme muscle and joint pain generalized; This is a spontaneous report from a contactable nurse. A female patient of an

unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EH9899, via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunization. Medical history was reported as none. There were no concomitant medications. The patient stated, ""I am a Registered Nurse, an RN here in (city name) and I received your Pfizer vaccine (Covid 19 Vaccine) yesterday morning. I just wanted to report some issues with the vaccine. All through the night in Dec2020, I had the muscle pains, generalized muscle pain all over, even Tylenol (later clarified as Ibuprofen 200 mg, lot number: 9FE3019A and expiry date: Mar2021) wouldn't even work. I have a low grade temperature, headache, and real pain at the site of the injection, some chills earlier yesterday on 19Dec2020. So, I am afraid to get the next Pfizer one because to get some more side effects. This one is making me just kind of loopy too kind of light headed, and I am just really tired, really fatigue on 20Dec2020. With this Pfizer vaccine, I thought it was approved by the certain drug and (Center Name) and according to your message that I just got on another phone number has not been approved. But it was rushed out just for emergency use. Is that correct?"". When informed about the role of Pfizer Medical Information and offered the number, the patient stated, ""Well one number that I got, it was all loopy. I mean it was just all over the page, I couldn't leave a message. They gave me so much information that. So, which number you are talking about?"". The due date for the next shot: 06Jan2021. I am a healthcare provider and I also go into the COVID unit probably in January sometimes. So, I wanted, I am kind of one of your guinea pig. ""When I initially got it on 19Dec2020, of course I had pain at the injection site. I could not even turn onto my other side last night from pain at the injection site. Yesterday on 19Dec2020, I got some chills, I got a low grade temperature, feeling fatigue after a while. At first, I didn't feel that other than injections site. Through the whole night I had low grade temperature, extreme muscle and joint pain generalized, which I couldn't even sleep, I had insomnia. Tylenol wouldn't even help with that. Of course tiredness but I couldn't sleep. So I can't really feel okay, not a very good sleep yesterday. Low grade temp when I got up in the morning and dizziness and weakness this morning definitely and ringing in my ears kind of like.Yes I am generally, but the dizziness and the weakness is kind of new one. I had Tylenol during the night because I couldn't sleep, because I had such muscle and joint pain all over my joint in Dec2020."" The outcome of the events was unknown."

headache; had soreness/pain at the injection site between 24-48 hours; muscle aches; fatigue; malaise; low grade fever; This is a spontaneous report from a contactable consumer (patient). A 28-year-old non-pregnant female patient received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot number: 1703), via an unspecified route of administration at left arm on 18Dec2020 10:00 at a single dose for COVID-19 immunization, and second dose of hepatitis b vaccine, via an unspecified route of administration at left arm on 11Dec2020 at unknown dose for an unspecified indication. The patient received COVID-19 vaccine in a hospital facility. Medical history was not reported. The patient has no known allergies. The patient's concomitant medication included birth control. The patient previously received first dose of hepatitis b vaccine on unspecified date. Since the vaccination, the patient has not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was fine the morning she received the vaccine (up until the evening). Then she started to feel muscle aches, fatigue, malaise, and had a low grade fever on 18Dec2020 19:00. This persisted for about 48 hours. She also had soreness/pain at the injection site between 24-48 hours

(started on 19Dec2020). The 3rd day (today, 21Dec2020), she had a slight headache, but that could be unrelated. The patient did not receive any treatment for the adverse events. The outcome of the events was recovering. The report was considered non-serious.

fatigue; chills; arm soreness; This is a spontaneous report from a contactable pharmacist. This 34-year-old female pharmacist (patient) reported that she received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via intramuscular on left arm on 18Dec2020 at 12:45 PM at single dose for COVID-19 immunization. Facility where the most recent COVID-19 vaccine administered was hospital. Prior to vaccination, the patient was not diagnosed with COVID-19. Medical history and concomitant medications were not reported. It was reported patient had no other vaccine in four weeks; she had oral contraceptive in two weeks. Since the vaccination, the patient had not been tested for COVID-19. The patient experienced fatigue, chills, arm soreness on 18Dec2020 at 03:00 PM. No treatment was received. Outcome of events was recovered in Dec2020.

arm pain; low grade fever of 100; This is a spontaneous report from a contactable nurse. A 46-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), intramuscularly at the left arm on 20Dec2020 10:30 at a single dose for COVID-19 immunization at a hospital. Medical history included migraine and asthma. Allergy with only certain nausea medications (unspecified). There were concomitant medications but were unspecified which the patient received within 2 weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination and was not tested for it since the vaccination. On 20Dec2020, 22:00, after almost 12 hours, patient had a low grade fever of 100 (unit unspecified) and had an arm pain with no treatment while fever responded to acetaminophen (TYLENOL). The patient recovered from the events on an unknown date.

redness and swelling to right wrist; redness and swelling to right wrist; Itching to left side neck and back.; This is a spontaneous report from a contactable nurse. A 25-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EJ1685, first dose via intramuscular in left arm on 21Dec2020 09:30 at SINGLE DOSE for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced redness and swelling to right wrist and itching to left side neck and back on 21Dec2020 09:45. The facility where the most recent COVID-19 vaccine was administered was in the hospital. The events resulted in emergency room or department or urgent care. The case was reported as non serious by the reporter, and did not result in death, not life threatening, did not cause prolonged hospitalization, not disabling or incapacitating and no congenital anomaly or birth defect. The outcome of the events was unknown.

Injection site was very painful and it's blowing and my whole arm was hurting; Injection site was very painful and it's blowing and my whole arm was hurting; I have swelling in my whole arm; Weakness; Muscle soreness; Headache; This is a spontaneous report from a contactable consumer (patient, nurse's assistant). A 48-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on Friday 18Dec2020 at about 09:58 at 0.3 ml, single for covid-19 immunization. This was the first dose. None medical history. There were no concomitant medications. In 2020, the patient stated the injection site itself, was very painful and it's blowing and in fact her whole

arm, the whole arm was hurting and she has swelling in her whole arm and also she had like muscle soreness and weakness. The only other thing she felt was like headache and that's it. The patient was given aspirin for treatment. The action taken in response to the events for bnt162b2 was not applicable. The outcome of events was unknown. Information on the lot/batch number has been requested.

"numbness and tingles in armed or pant in all my fingers; numbness and tingles in armed or pant in all my fingers; This is a spontaneous report from a contactable consumer. A 44-year-old female patient received the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EK5730 and Expiration Date: Mar2021), via an unspecified route of administration on 18Dec2020 at 44-years-old at a single dose for COVID-19 immunization. The patient's medical history was reported as none. Concomitant medications included estradiol (MANUFACTURER UNKNOWN), misoprostol (MANUFACTURER UNKNOWN); both taken for an unspecified indication from an unspecified date to an unspecified date. On 19Dec2020, the patient experienced: ""numbness and tingles in armed or pant in all my fingers."" The patient stated, ''I got my shot (COVID Vaccine) at work yesterday around 3 pm. Woke up in middle of night; severe muscle pain entire body; chills/fever; chills/fever; debilitating headache; This is a spontaneous report from a contactable nurse (patient). A 61-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date were not provided) solution for injection, intramuscular (left arm) on 20Dec2020 10:00 at a single dose for COVID-19 immunisation. Medical history was reported as none. Concomitant medication included aspirin [acetylsalicylic acid] (ASPIRIN [ACETYLSALICYLIC ACID]), hydrochlorothiazide, losartan potassium (LOSARTAN HCTZ), metoprolol succinate (METOPROLOL SUCCINATE), and estrogens conjugated (PREMARIN). The patient reported she woke up in middle of night, had severe muscle pain on entire body, chills/fever, and debilitating headache on 21Dec2020 02:00. No treatment was received. The events were reported as non-serious. The patient was not pregnant. The patient has not been diagnosed of Covid-19 prior to vaccination and has not been tested. Outcome of the events was recovering. Information about lot/batch no has been requested.

Back pain radiating down to the L buttocks, down the L leg and ending at the ankle.; Back pain radiating down to the L buttocks, down the L leg and ending at the ankle. Rating 5/10 pain.; Back pain radiating down to the L buttocks, down the L leg and ending at the ankle.; Back pain radiating down to the L buttocks, down the L leg and ending at the ankle.; Back pain radiating down to the L buttocks, down the L leg and ending at the ankle.; This is a spontaneous report from a contactable nurse (patient). A 29-year-old female patient received 1 dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899) intramuscular on right arm on 19Dec2020 10:00 AM, single dose for COVID-19 immunization at 29-year-old. Medical history included: COVID-19 diagnosed prior to vaccination. No known allergies. Concomitant medications included: drospirenone, ethinylestradiol betadex clathrate (YAZ); ibuprofen; cetirizine hydrochloride (ZYRTEC); diphenhydramine hydrochloride (BENADRYL); melatonin. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On

20Dec2020, 10:00 AM, the patient experienced back pain radiating down to the L buttocks, down the L leg and ending at the ankle, rating 5/10 pain. No treatment received for the adverse events. Lab data included: COVID-19 (positive) diagnosed prior to vaccination; pain 5/10 on 20Dec2020. Since the vaccination, the patient had not been tested for COVID-19. Action taken for BNT162B2 was not applicable. Outcome of the events was not resolved. It was reported as non-serious.

feeling light headed; blotchy spots on neck and chest; tingling to the back of the throat; This is a spontaneous report from a contactable nurse. A 42-year-old female patient received 1 dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685) intramuscular on left arm on 21Dec2020 10:15 AM, single dose for COVID-19 immunization at 42-year-old. Medical history and concomitant medication were not reported. On 21Dec2020 10:30 AM, the patient was reported feeling light-headed, blotchy spots on neck and chest, and tingling to the back of the throat. Emergency room/department or urgent care visited. Action taken for BNT162B2 was not applicable. Outcome of the events was unknown. It was reported as non-serious.

"lips tingling and ""on fire""/tingling ""8/10"", ""2/10""; lips tingling and ""on fire""/tingling ""8/10"", ""2/10""; This is a spontaneous report from a contactable other healthcare professional. A 39-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular on 18Dec2020 at single dose for COVID-19 immunization at hospital. The patient's medical history and concomitant medications were not reported. It was reported that the patient received first dose of Pfizer COVID-19 vaccine. After ""10:00 minutes"" of observation phase, patient complained Of (c/o) lips tingling and ""on fire"". Lips not swollen, denies short of breath (SOB), ""skin WNLs"", denies difficulty swallowing. The Medical Emergency Response Team (MERT) was called. Patient was assessed, stated tingling 8/10, no other symptoms. Patient was given bottle of water and was tolerating that fine. Allegra 60mg was ordered and administered at 8:52 A.M. Patient stated was at a 2/10, 10 minutes after getting the Allegra. Patient was drinking water without difficulties. Patient remained without further symptoms, lips still 2/10 with tingling. Outpatient lab work was ordered. Patient left at 10:00 A.M ambulatory to outpatient lab. MERT educated her to notify administrator of her symptoms prior to her second vaccine. The outcome of the event was reported as recovered (in Dec2020). No follow-up attempts are possible; information about lot/batch number cannot be obtained."

incontinence (urine); Tiredness/ exhausted; woke early; numbness down her arm/ numbness went up to her neck/ numbness on the tip of her fingers; soreness on her neck; both her arms since she was so sore; both her arms since she was so sore/ sore at the injection site; sweats; extremely hot; headache; lightheadedness; This is a spontaneous report from a contactable consumer (patient). A 44-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685) intramuscular on left arm on 19Dec2020 18:00, single dose for COVID-19 immunization at 44-year-old. Medical history was not reported. Concomitant medications included: meloxicam (15mg tablet) oral 15mg once a day for arthritis. The patient had not taken any other medications today (21Dec2020) or yesterday (20Dec2020). The patient experienced numbness down her arm the first day she received the injection (19Dec2020), stated it was like someone was holding her hand tight, stated she thought this was normal. The numbness went up to her neck on 19Dec2020. By Sunday (20Dec2020) she had the

numbness on the tip of her fingers in both hands. The patient stated she also had soreness on her neck on 19Dec2020. The patient stated that when she woke up it felt like someone pulled down on both her arms since she was so sore on 19Dec2020. Treatment received, the patient took paracetamol (TYLENOL), no visit to emergency room or physician office. Currently (21Dec2020), the patient was still sore at the injection site, but she did not have any pain or numbness. The patient had the sweats on 19Dec2020, stated she was extremely hot (19Dec2020). Her back was so wet. She was warm. The patient woke up incontinent (urine) this morning (21Dec2020). The patient stated it was not that she fully emptied her bladder, but she woke up wet this morning. The patient found it odd she did not wake to use bathroom, when she woke up she still went to empty her bladder. She felt like she had recovered completely from the incontinence, she only had it when she woke up. The first night after she took the vaccine (19Dec2020) the patient woke early, like 6 am which she didn't usually wake up so early. The patient stated for two nights she slept and did not move, she woke up the way she fell asleep laying down. It didn't look she changed position, woke up as if the patient did not sleep at all. The patient stated she must have been exhausted because she did not move at all. The patient started to experience the tiredness by the time she left work around 8 pm on 19Dec2020. The patient stated she was regularly tired, not overly tired but she worked two 12-hour shifts. The tiredness was better today (21Dec2020) than the first two days. The patient had a headache, lightheadedness (in Dec2020). Action taken for BNT162B2 was not applicable. Outcome of the event numbness down her arm/ numbness went up to her neck/ numbness on the tip of her fingers was resolved on 21Dec2020; outcome of the events soreness on her neck, both her arms since she was so sore, sore at the injection site was resolving; outcome of the event sweats was resolved on 19Dec2020; outcome of the event incontinent (urine) was resolved on 21Dec2020; outcome of the event tiredness was resolving; outcome of the other events was unknown.

severe dizziness; horrible nausea and vomiting; horrible nausea and vomiting; muscle soreness; headache; This is a spontaneous report from a contactable nurse (patient). A 40-year-old female nurse received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899) via unspecified route in left lower deltoid on 17Dec2020 10 am, single dose for COVID-19 immunization at 40-year-old. Medical history included: surgery and lipoma removed from upper deltoid in Nov2020. Family medical history included: Her mother had colorectal cancer at age 40. When the patient turned 40, she had colonoscopy earlier this year (2020) and it was negative. Concomitant medication included: levothyroxine 100ug daily from 2001. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. She had pretty severe muscle soreness Thursday night (17Dec2020) and the next two days. On 19Dec2020 it was not as severe. It was mild and it started to dissipate on 19Dec2020. The only thing she had been taking was acetaminophen 650mg that night for the muscle soreness. The patient awoke at 3:00 am on 20Dec2020 out of a dream with severe dizziness that turned into horrible nausea and vomiting. She had vomiting for a little while the third night (20Dec2020) into the fourth day. The patient (nurse) considered the muscle soreness and dizziness was non-serious and not medically significant. She didn't feel the need to go to the hospital because it did improve. After she threw up, the dizziness kind of went way. Even today (21Dec2020) she felt fine and no more nausea, but still felt kind of off and dizziness, lingering dizziness. It wasn't extreme dizziness but when texting she could feel, and it was hard to focus. She was not one hundred percent her normal self. She was not sure if it was related to the

vaccine. She was eating and drinking normally. The night that she received the vaccine, she had one beer and one margarita at dinner. She did have alcoholic beverages, a beer and a margarita. It was nothing excessive with dinner. She was not overly drunk. She didn't know if alcohol could have contributed. She had never had that kind of reaction before from drinking. That was very odd. She just wouldn't drink any alcohol. She took acetaminophen for a headache (in Dec2020) that she was experiencing. She was pretty healthy. All of this was so new with the COVID vaccine. That night into this morning she started her menstrual period as well. She had never had any horrible side effects like migraines or cramping when getting her menstrual cycle. It could have been the alcohol or her period. No visit to emergency room or physician office. Action taken for BNT162B2 was not applicable. Outcome of the event muscle soreness was resolved on 19Dec2020; outcome of the event severe dizziness was resolving; outcome of the other events was unknown. Causality assessment between the event muscle soreness and the suspect product BNT162B2 per the patient was reported as related.

Headache; body aches; chills; low grade fever 100 degrees Fahrenheit; Soreness to the right arm where vaccine was administered.; This is a spontaneous report from a contactable consumer. A 60-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via unspecified route on right arm on 18Dec2020 03:00 PM, single dose for COVID-19 immunization at 60-year-old. Medical history included: COVID-19 diagnosed prior to vaccination. Concomitant medication was not reported. No other vaccine received within 4 weeks prior to the COVID vaccine. On 19Dec2020 12:00 PM, the patient had headache, body aches, chills and low-grade fever 100 degrees Fahrenheit. At the same time (19Dec2020 12:00 PM), the patient had soreness to the right arm where vaccine was administered. No treatment received for above adverse events. Lab data included: COVID-19 (positive) diagnosed prior to vaccination; 100 degrees Fahrenheit low-grade fever on 19Dec2020. Since the vaccination, the patient had not been tested for COVID-19. Action taken for BNT162B2 was not applicable. Outcome of the events was resolved in Dec2020. It was reported as non-serious. Information on the lot/batch number has been requested.

swelling of eyelids and cheeks; swelling of eyelids and cheeks; swelling of hands; This is a spontaneous report from a contactable pharmacist. A 58-year-old female patient received 1 dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730) intramuscular on left deltoid on 16Dec2020 11:00 AM, single dose for COVID-19 immunization at 58-year-old. Medical history included: Sulfa allergy; diabetes, hypertension, high cholesterol. Prior to vaccination, the patient was not diagnosed with COVID-19. Concomitant medications included: metformin, valsartan and pantoprazole. No other vaccine received within 4 weeks prior to the COVID vaccine. On 17Dec2020 morning, 06:00 AM, the patient had swelling of hands and then 18Dec2020 morning, the patient had swelling of eyelids and cheeks. Doctor or other healthcare professional office/clinic visit. Treatment received as: Diphenhydramine 50mg and prednisone 40mg orally. Since the vaccination, the patient had not been tested for COVID-19. Action taken for BNT162B2 was not applicable. Outcome of the events was resolved in Dec2020. It was reported as non-serious.

Diarrhea, dizziness, swollen tongue and lips. Sore joints for multiple days, headache; Diarrhea, dizziness, swollen tongue and lips. Sore joints for multiple days, headache; Diarrhea, dizziness, swollen tongue and lips. Sore joints for multiple days, headache; Diarrhea, dizziness, swollen tongue and lips. Sore joints for

multiple days, headache; Diarrhea, dizziness, swollen tongue and lips. Sore joints for multiple days, headache; Diarrhea, dizziness, swollen tongue and lips. Sore joints for multiple days, headache; This is a spontaneous report from a non-contactable consumer (patient). A 34-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration on left arm at 08:30 AM.on 18Dec2020 at single dose for COVID-19 immunization. Medical history reported as none, no known allergies. The patient's concomitant medications were not reported. The patient experienced diarrhea, dizziness, swollen tongue and lips. Sore joints for multiple days and headache in Dec2020 (reported as 11Dec2020 at time 08:45 AM). All events were reported as non-serious. The patient self administered Benadryl. Acetaminophen and ibup (ibuprofen) as treatment. The outcome of events was resolved with sequel. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible. information about lot/batch number cannot be obtained.

urticaria on inside of both arms; This is a spontaneous report from a contactable Physician. This physician reported for a female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose for covid-19 immunization. Medical history was urticaria. Physician stated that I have a female patient in good health with a history of urticaria. She got the vaccine and developed urticaria on inside of both arms - looking for information on whether this patient should receive the 2nd dose. Outcome of the event was unknown. Information about batch/lot number has been requested.

"I woke up and my left eye is swollen and my face is kind of swollen; I woke up and my left eye is swollen and my face is kind of swollen; rash/ rash on and off on my back and on my arm and around my face; allergic symptoms; kind of like itchiness on my ears and my scalp and also like on and off on my back and also on both of my arms like my wrist area on both arms/All night I was up with scratching my face; The initial case was missing the following minimum criteria: unspecified product. Upon receipt of followup information on 20Dec2020, this case now contains all required information to be considered valid. This is a spontaneous report from a contactable physician (patient). A 30-years-old female patient received first dose bnt162b2 (BNT162B2), intramuscular on 2020 at single dose for covid-19 immunisation. Medical history included On nose, had prior to getting the vaccine, was experiencing some kind of she got through the contact dermatitis rash like her arms and behind her ears and it was all over her neck (she thought it was related to mat because she was getting it on neck and ears taking medication for that it just allergy medication and it had gotten better). There were no concomitant medications. The physician reported she have been experiencing some allergic symptoms following it since Dec2020, she had itchiness, it was like a rash on and off on back and on arm and around face and itchiness on calp and face/ experiencing kind of like itchiness on ears and scalp and also like on and off on back and also on both of arms like wrist area on both arms and then in the morning like 20Dec2020, it was kind of all night she was up with scratching face,; In the morning 20Dec2020, she woke up with some mild facial swelling, noticed like eyes swollen and little bit droopy. The events were still going on, she just took medicine for it. It's kind of persistent. Physician stated, ""I guess I can report the worsening of my symptoms that was in the morning of reporting date like 8 AM."" Treatment included just took medicine, Prednisone, Benadryl and Zyrtec. Weight: About 103. The event outcome was not recovered. Information on lot/batch number has been requested."

flushed; warm face and ears; This is a spontaneous report from a non-contactable other health care professional. A 57-year-old female patient received bnt162b2 (BNT162B2; lot number: HE9899), intramuscular on arm (reported as left arm) dose number 1 on 17Dec2020, SINGLE DOSE for COVID-19 immunization. Medical history included mild history of anxiety, and panic attack. She has medication to treat this at home if needed. The patient's concomitant medications were not reported. She was given the Pfizer vaccination in the right deltoid muscle (pending clarification). During her 15 minute waiting period after the injection, the patient began to experience flushed, warm face and ears. She denied rash, difficulty breathing, difficulty swallowing, wheezing, throat tightness, lightheadedness, lip swelling and tongue swelling. This APP was notified of patient reaction and she was then assessed in the emergency bay area. (Name withheld) was observed x 35 minutes after receiving vaccination. All symptoms resolved within 20 minutes. No treatment was required. The outcome of the events was recovered. No follow-up attempts are possible. No further information is expected.

feeling nauseated, hot; feeling nauseated, hot; headache; difficulty breathing; itchy all over the body, with redness and blotchiness in the face, neck and arms; itchy all over the body, with redness and blotchiness in the face, neck and arms; itchy all over the body, with redness and blotchiness in the face, neck and arms; Blood pressure elevated along with heart rate.; Blood pressure elevated along with heart rate.; This is a spontaneous report from a contactable other healthcare professional (HCP), who is also the patient. This 34-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunisation. Vaccination facility type was hospital. Relevant medical history included polycystic ovaries, gastrooesophageal reflux disease, Hashimoto's disease and allergy to sulfa, penicillin, latex and hornets. Concomitant medications included thyroid (ARMOUR THYROID), omeprazole and vitamin D3. On 19Dec2020 at 12:15, 10 minutes after the injection, the patient started feeling nauseated, hot and developed a headache. A couple of minutes after that, she started experiencing difficulty breathing and itchy all over the body, with redness and blotchiness in the face, neck and arms and blood pressure elevated along with heart rate. The events resulted in emergency room/department visit or urgent care. Corrective treatments taken as a result of the events included methylprednisolone sodium succinate (Solu-medrol), diphenhydramine hydrochloride (BENADRYL) and famotadine along with intravenous (IV) fluids. The patient recovered with sequel from the events on an unspecified date. The information on the lot/ batch number has been requested.

Soreness at the injection site; This is a spontaneous report from a contactable nurse (patient). A 62-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EJ1685), intramuscular on the left arm on 18Dec2020 13:00 at a single dose for covid-19 immunization. The patient's medical history included hypertension (HTN) and elevated triglycerides. The patient was not pregnant. The patient have no allergies to medications, food, or other products. It was unknown if the patient was diagnosed with COVID-19 prior to vaccination. The patient had not been tested for COVID-19 since the vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Concomitant medications included metoprolol and fenofibric acid. The patient experienced soreness at the injection site on 19Dec2020 05:00. No treatment was received for the adverse event. Outcome of the event was recovered on Dec2020.

Minor headache; chills; This is a spontaneous report from a contactable other healthcare professional (patient). A 31-year-old male patient received the first dose of bnt162b2 (BNT162B2, lot no. and expiration date were unknown), via an unspecified route of administration on 18Dec2020 23:45 on the left arm at single dose for COVID-19 immunization. Medical history included heart stent. The patient had no known drug allergies. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. On 19Dec2020 01:00 AM, the patient experienced minor headache and chills. No treatment received for the events. The events recovered on unspecified date in Dec2020. Information on the lot/batch number has been requested.

"When they put the shot it's been hurting me ever since then; This is a spontaneous report from a contactable consumer. A 40-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration on an unspecified date as single dose for COVID-19 immunization. Medical history included diabetes and headache from an unknown date. Concomitant medication included metformin (MANUFACTURER UNKNOWN) for diabetes. On an unspecified date, the patient reported that "" when they put the shot it's been hurting me ever since then "" with outcome of unknown. Details were as follows: Patient indicated that when he got the shot, everything was good but when they put the shot it's been hurting ever since then. There were no lab tests, or treatment given for the event. The outcome of "" when they put the shot it's been hurting me ever since then "" was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up ."

Heart palpitations and severe fatigue for 48 hours; Heart palpitations and severe fatigue for 48 hours; This is a spontaneous report from a contactable other healthcare professional (patient herself). A 37-year-old female patient received bnt162b2 (BNT162B2 also reported as COVID 19 brand Pfizer, lot EK5730), intramuscularly in the left arm on 18Dec2020 10:30 at single dose (dose number 1) for immunisation. Medical history was none. There were no concomitant medications. The patient experienced heart palpitations and severe fatigue for 48 hours on 18Dec2020 18:00. The events were reported as non-serious. No treatment was given. The outcome of events was recovered on unknown date in Dec2020.

my arm hurt for 4 Hours later and peaked that evening; headache; tiredness; lethargic/pretty lethargic.; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). Contactable Physicians (one was patient) reported that a 72-years-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899, Expiry Date: Mar2021) on 18Dec2020 at single dose for covid-19 immunization. Medical history and concomitant drug were not reported. The caller is a MD. He had the vaccine on Friday. His arm hurt 4 hours later, and then peaked that evening. It was very painful. It hurt and was painful. By Sunday it was 95 % gone. Today (21Dec2020) the pain is completely gone. He received the vaccine Friday. He is supposed to get an MRI Wednesday morning. He will be getting Gadolinun. He wanted to know if there was any adverse reaction with that. Will this material interfere with the immune response of COVID vaccine? He is considering canceling his MRI. The caller confirmed the details provided by the transferring agent. He

doesn't have a prescribing doctor. He was looking at his CDC vaccination record log. He was given 0.3cc. He received the injection, and the pain started 4 hours later. It peaked in the evening. It was the worst arm pain he has ever had from a shot. He couldn't elevate his arm from pain. It was interesting because there was very little heat at the injection site. The amount of arm pain was not proportionate to a local reaction. He did take Tylenol that night. He got up the next day, Saturday, and it was painful but a little less painful. Then on Sunday 20Dec2020, it was 95% essentially. He started to get lethargic that Friday at about 9-12 hours later. Then he had a headache about 11 hours later that lasted 5-10 minutes. He was surprised but it went away. Saturday, he was pretty lethargic. He felt more lethargic from the shingles shot. No details on the shingles shot provided by the caller. He said the tiredness may have been a placebo effect because everyone says you will get tired. He was fine yesterday and today. He is glad he got it. He has recovered completely from all side effects he had. He never had a fever. His question about the MRI was escalated by the Medical information associate. Follow-up attempts have been completed and no further information is expected.

left eye was irritated; left eye was sensitive to light; left eye was painful weeping and red.; left eye was red; left eye weepy; entire left side was sore, achy, including her jaw and stuff; entire left side was sore, achy, including her jaw and stuff; This is a spontaneous report from a contactable consumer. A female patient of unspecified age (reported as 59 with no unit) received BNT162B2 (Pfizer-Biontech COVID-19 Vaccine), via an unspecified route of administration on right arm on 16Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. It was painless on 16Dec2020. On 17Dec2020, her entire left side was sore, achy, including her jaw and stuff, 18Dec2020 evening, her left eye was irritated, sensitive to light, painful weeping and red (left eye was painful, red, and weepy). She called her doctor on 19Dec2020 and he gave her some eye drops. On 20Dec2020, the eye drops seemed to irritate her eye more. She woke up in the morning and it was seeming to get better as she had been taking Excedrin. She was supposed to wait 6 hours between drops, then her eye again was sensitive to light and painful, so she took another Excedrin, which helped again. She was trying to see an eye specialist the day after the time of the report. She had asked around at work and nobody else had any issues. She was wondering if this was vaccine related. She wanted to get tested for COVID, not that she thought she had it now, but might be she had it before she got the vaccine. She had not even talked to her workplace about this or anything. They asked everyone the first day after, if there were any issues and to report them to HR/Employee Health. She had not done so yet, so she wanted to do that first. Outcome of the events left eye was irritated, sensitive to light, painful weeping and red, and left eye weepy was resolving, and of other events was unknown. Lot/batch number has been requested.

Nausea; headache; fatigue; This is a spontaneous report from a contactable healthcare professional. A 31-year-old male patient received BNT162B2 (Lot number: EJ1685), intramuscularly on right arm on 20Dec2020 07:00 at single dose for COVID-19 immunization. Medical history was not reported. Concomitant medications in two weeks included emtricitabine/tenofovir disoproxil fumarate (TRUVADA), bupropion hydrochloride (WELLBUTRIN), lamotrigine (LAMICTAL), and valaciclovir (VALACYCLOVIR). Patient experienced nausea, headache, and fatigue on 21Dec2020 07:00. No treatment received for these events. Outcome of the events was not resolved.

headache; take BP. My usual normal is 125/80. 164/93 just mow; This is a spontaneous report from two contactable pharmacists. A 53-year-old female patient received BNT162B2 (lot number: EJ1685), via an unspecified route of administration on left arm on 21Dec2020 07:00 at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient began getting a headache (H) on 21Dec2020 09:00 (around 9:30), felt like a different kind of headache that progressed. At 2:30, patient went back to monitoring area and asked them to take blood pressure (BP). Her usual normal was 125/80, but 164/93 just now (21Dec2020 09:00). COVID-19 vaccine was administered in the hospital. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Outcome of the events was resolving.

anaphylaxis; This is a spontaneous report from a non-contactable consumer. This consumer reported similar events for six patients. This is the first of six reports. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: AK 5730, EG 1685), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced anaphylaxis in Dec2020. The clinical outcome of anaphylaxis was unknown. Rash on throat, chest, back and legs; This is a spontaneous report from a contactable healthcare professional. A 38-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), intramuscular on the left arm on 19Dec2020 07:45 at single dose for COVID-19 immunisation. Medical history included known allergies: penicillin. The patient's concomitant medications were not reported. The patient experienced rash on throat, chest, back and legs on 19Dec2020 11:30. Patient does not receive any treatment. The outcome of the events was recovering.

gut pain; headache; cramping; diarrhea/7 bouts of diarrhea over 3 hours; facial flushing; This is a spontaneous report from contactable nurse. A 58-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration, at the left arm on 19Dec2020 10:30 at a single dose for COVID-19 immunization at a hospital. Medical history included hypertension and obesity. The patient has no known allergies. The patient was not tested for it since the vaccination. The patient's concomitant medications were not reported. Adverse event: On 21Dec2020, 12:00, patient experienced gut pain, headache, cramping, 7 bouts of diarrhea over 3 hours, and 3/7 also coincided with facial flushing with no treatment. The patient did not recover from the events.

itching on back; hives in a small area; This is a spontaneous report from two contactable consumers (patient and patient's mother). A 22-year-old female patient received BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot number: EH9899, expiry date: 31Mar2021), intramuscular in left arm on 21Dec2020 (about 9:45 -09:50 a.m. this morning) at a single dose for COVID-19 immunization. The patient has no other patient history, no concomitant medications, and no investigation assessment provided. The patient has no previous immunizations. The patient received the COVID vaccine about 9:45 -09:50 a.m. this morning (21Dec2020). She noticed just recently that she was starting to itch on her back and has hives and did not know if it was a side effect. Time of onset of itching on back was around 15:00-15:30 (estimated at within past 30 minutes), while the hives started around 5 minutes later than the itching. No ER or physician's office required. She is a nursing student, so it was recommended she receive the vaccine by the college of nursing. She received it at the hospital. They put Neosporin on her back, and it helped. She does not feel the itching. When asked to provide outcome of the hives, she stated it looks like the hives are getting smaller, but they are still there. The outcome of the events was recovering.

Nasal swab for COVID 19 test; Sore throat. First noticed Saturday morning and not to the point where it's painful to swallow.; Burning from the back of left nostril and down throat; This is a spontaneous report from a contactable healthcare professional (patient). A 40-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730, expiry date was not provided) solution for injection, via an unspecified route of administration (on left arm) on 17Dec2020 17:00 at a single dose for Covid-19 immunisation. Medical history was reported as none. Patient had no known allergies. Concomitant medication included ibuprofen. The patient experienced sore throat, he first noticed it Saturday morning (19Dec2020 04:45) and not to the point where it's painful to swallow. Patient reported there was burning from the back of left nostril and down the throat (19Dec2020 04:45). No treatment was administered. The patient underwent nasal swab for Covid 19 test on 21Dec2020 with pending result. Outcome of the event Suspected COVID-19 was unknown while for the other events was recovering.; Sender's Comments: The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

I felt slight dizziness immediately after injection/dizziness increased; feel my heart beating quickly; achiness in my joints; soreness at the injection site; feeling strange; remain uncomfortable; This is a spontaneous report from a nurse (patient herself). A 57-year-old female patient (not pregnant) received bnt162b2 (BNT162B2 also reported as COVID 19 brand Pfizer, lot EH9899), via an unspecified route of administration in the left arm on 21Dec2020 14:45 at single dose, for immunisation. Medical history included rheumatoid arthritis, osteoarthritis, anaemia, bipolar disorder II, hypertension, and GERD. She had no Covid/ Covid test prior to vaccination. She had other medications in two weeks. The patient previously took hydrocodone and experienced drug allergy. The patient felt slight dizziness immediately after injection. When she walked to the 15 min. waiting area, the dizziness increased and she began to feel her heart beating quickly. She drank 8 oz. of water and told the attendant she was feeling strange.

She took a pulse and oximetry reading - 110 and 95%. A nurse came over to check on her. The patient wanted to sit where the patient was for a few minutes longer. After about 20 mins. the dizziness immediately subsided and patient felt her pulse decreased. She got her things and left. After a few minutes, the patient began to feel achiness in her joints and felt soreness at the injection site. She had taken two Acetaminophen and remain uncomfortable. She planned to go home and rest. The events were reported as non-serious. No treatment was reported for dizziness and increased heart rate. The outcome of events Dizziness, Heart rate increased was recovered on 21Dec2020; for other events was unknown.

Employee reported thickness of tongue and dry mouth.; Employee reported thickness of tongue and dry mouth.; This is a spontaneous report from a contactable nurse. A 55-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), Batch/lot number: EJ1685, intramuscular in the right arm on 21Dec2020 12:30 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The employee reported thickness of tongue and dry mouth on 21Dec2020 12:30. The events resulted in emergency room/department or urgent care. The outcome of the events was unknown.

hypoglycemia; dizziness; This is a spontaneous report from a non-contactable Other HCP. A 33-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number HE9899, intramuscularly in the left arm on unspecified date at single dose for COVID-19 immunization. Patient medical history and concomitant medications were not reported. The patient previously took spironolactone and experienced drug allergy. During her 15-minute waiting period after the vaccination, the patient began to experience feelings of hypoglycemia. She checked her blood glucose with her own monitor and had 77 at 11:04. She chewed 1 glucose tab that she had in her purse. She noted some difficulty with swallowing it and notified clinic staff. The patient also experienced dizziness and was escorted by clinic staff to the emergency bay. This provider was notified of patient reaction and she was then assessed in the emergency bay area. She denied difficulty breathing and chest pain, history of adverse reactions with prior vaccinations or allergies to medications with the exception of spironolactone. Patient had already been given a bottle of water by clinic staff and reported that the glucose tablet went down easier following the water. She took a second glucose tab sometime before 11:13. The event was assessed as non-serious. Outcome of the events hypoglycemia and dizziness was unknown. No follow-up attempts are possible. No further information is expected.

thin red line on back of neck/redness at her right eyebrow and in the midline of her forehead/reddened area above eyebrow along with puffiness, redness on nose, cheeks and left hand; Rash; dot markings on her left hand and redness which is where she received vaccine in her left arm; dot markings on her left hand and redness which is where she received vaccine in her left arm; reddened area above eyebrow along with puffiness, redness on nose, cheeks; This is a spontaneous report from a contactable nurse (patient). A 62-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EK5730, via intramuscular in left deltoid on 19Dec2020 10:30 at single dose for COVID-19 immunization. Medical history included hypertension diagnosed when she was 47, hypothyroidism diagnosed 20 years ago and allergic to penicillin and sulfur; all ongoing. Concomitant medication included ongoing metoprolol succinate for hypertension. The patient received her first dose of vaccine

on Friday 19Dec2020 at her job. Stated that she woke up Saturday with redness at her right eyebrow and in the midline of her forehead between her eyebrows and nose. Stated that she had dot markings on her left hand and redness which is where she received vaccine in her left arm. Stated that she had went to ER and was put on Prednisone 60mg for 5 days and Benadryl 50mg prn. Stated that a few people said few different things. Stated that she is allergic to penicillin and sulfur. No further details provided. The patient wanted to know if sulfur is in the vaccine to know if in three weeks should she take the second vaccine. On 19Dec2020, states she had a rash when she woke up. The patient had reddened area above eyebrow along with puffiness, redness on nose, cheeks and left hand. The patient went to the emergency department and an HCP saw a thin red line on back of neck. The patient was prescribed prednisone and benadryl and now symptoms have resolved. The patient was asking about more information regarding this type of reaction. The outcome of the event rash was recovered on unspecified date and the remaining events was recovered on 20Dec2020. The events were reported as non serious.

"a funny metallic taste in her mouth; she felt like she had cotton mouth; This is a spontaneous report from a contactable consumer (patient). A 62-year-old female patient received the first dose of bnt162b2 (COVID 19 vaccine) lot no: EH9899, via an unspecified route of administration in left arm on 21Dec2020 08:00 at a single dose for COVID-19 immunization. Medical history included diabetic type 2 and allergic to metal, both from an unknown date and unknown if ongoing. Concomitant medication included ongoing metformin hydrochloride (METFORMIN ER) for diabetes, taking for a couple of years. The patient received the vaccine on 21Dec2020 8am at her hospital, and by 10:30AM or 11:00AM she noticed ""a funny metallic taste in her mouth."" She stated it was like a metal cup a tin taste like that and she wanted ice water. The patient is a phlebotomist, she continued with her patients and asked a co-worker did you taste/experience that, coworker stated ""I've had covid""; she didn't get the vaccine taste metal in your mouth. The reported wanted to know if that is an expected side effect of the vaccine. She can smell everything. She still has taste buds. It was still there but not as strong. She stated that she felt fine, and doesn't feel anything. She doesn't feel bad. She was just wondering about the side effects. She drank a lot of water. The patient added that all of the sudden her mouth was tasting funny like nickel. She added that she is allergic to metal; stated she can taste the tin in a tin can. She was working in the ER after having received the first dose injection at 8:00AM on 21Dec2020. She started to taste the funny taste about two hours later, 10:30AM or 11:00AM. She drank some ice water and it kind of rinsed her mouth out then she only tasted it a tiny bit. Then she felt like she had cotton mouth. It has improved but not gone away. She received the injection in her left arm. She is scheduled 11Jan2021 for the next dose. The patient was recovering from the events. The sample of the product is not available to be returned."

she started with ringing in her ears and it has not gone away; This is a spontaneous report from a contactable nurse (patient). A 57-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date were not provided) solution for injection, intramuscular (left deltoid) on 19Dec2020 18:00 at a single dose for COVID-19 immunisation. Medical history was reported as none. There were no concomitant medications. The patient reported it was nothing severe, but she had the first dose of the vaccine on Saturday evening at 6pm and about 6 hours after, she

started with ringing in her ears and it has not gone away. She would like to know if that was one of the side effects. It was not listed on the sheet that was given to her; will it go away and should. She was just concerned. She does not want it to progress. It was like a ringing. It was not like a headache but was a steady discomfort from ear to temple. She works at a hospital and got invited to take it. It was just an annoyance since it was still there. Outcome of the event was not recovered. Information on Lot/Batch has been requested.

she started getting really bad body aches; she got really dizzy; nauseous; throw it up; her arm was sore where they gave the vaccination; The initial case was missing the following minimum criteria: no adverse effect. Upon receipt of follow-up information on (21Dec2020), this case now contains all required information to be considered valid. This is a spontaneous report from a contactable nurse (patient reporting for herself). A 21-year-old female patient received bnt162b2 (also reported as PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 19Dec2020 18:00 on the left arm at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient stated that she got the vaccine, the Covid-19 vaccine, Saturday 19Dec2020 around 6PM. On Sunday 20Dec2020, she went about her day and around mid day, about 5PM she started getting really bad body aches and then after she showered she got really dizzy, states she would try to eat and she would get nauseous and throw it up. She wanted to know how fast the symptoms are showing after vaccination. She went to get a COVID test today as well because she is not sure if this is due to the vaccine or what. She took Ibuprofen 400mg around 10PM last night 20Dec2020 because the body aches are so bad. States she took a shower last night and got really dizzy but that has resolved and has not happened since. On 21Dec2020, she ate some breakfast and at 11AM she got very nauseous and threw up. Initially (in Dec2020), her arm was sore where they gave the vaccination which she was expecting and then it started going all over her body, states it is like menstrual cramps but like all over. The events did not require a visit to Emergency Room and Physician Office. The event dizzy recovered on 20Dec2020. The outcome of her arm was sore where they gave the vaccination was unknown and the rest of the events was not recovered.

aching/he is feeling a little achy/ he feels achy; he has not slept well; he is just tired; His arm did hurt for 2 days after; This is a spontaneous report received from a contactable consumer (patient). A 50-year-old male patient started received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730, expiry date: 31Mar2021), via an unspecified route of administration in left arm, on 16Dec2020, at single dose, for COVID-19 immunization. There were no medical history and concomitant medications. The patient reported he got the COVID Vaccine on 16Dec2020 (Wednesday) and now he is feeling a little achy. He is wondering if that is a side effect. He said it is not a big deal and that maybe he is just tired. He also reported he has not slept well so maybe he could just be tired. Although it could be a side effect. He clarified he did not start feeling achy until 21Dec2020 (today). He reported his arm did hurt after for 2 days. The outcome of the event vaccination site pain was recovered on an unspecified date in Dec2020, pain was not recovered, and the remaining events was unknown.

Cough; congestion/stuffed nose; runny nose; chills; sore arm; decreased sense of smell; decreased sense of taste; This is a spontaneous report from a contactable physician. A 49-year-old female patient receive first dose of bnt162b2 (BNT162B2), intramuscular on left arm on 17Dec2020 10:15 SINGLE DOSE for

COVID-19 immunization. Medical history included Cough variant of asthma, prediabetes. The patient's concomitant medications were not reported. On 18Dec2020 10:00, the patient experienced Cough, congestion, runny nose, chills, sore arm, stuffed nose, decreased sense of smell, decreased sense of taste. No COVID prior vaccination. The patient has been tested for COVID-19 post vaccination. The patient underwent lab tests and procedures which included nasal swab test: pending on 21Dec2020. The outcome of the events was recovering.

broke out in hives on my chest and upper back.; This is a spontaneous report from a contactable other healthcare professional (patient). A 25-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot: EJ1685) intramuscularly on 18Dec2020 10:45 at a single dose for covid-19 immunisation. Medical history included moyamoya disease, asthma and allergies to crustaceans. Concomitant medication included acetylsalicylic acid (ASPIRIN (E.C.) and azithromycin. The patient previously took prochlorperazine maleate (COMPAZINE) and experienced drug allergy. On 18Dec2020 23:59, the patient reportedly broke out in hives on the chest and upper back. Outcome of the event recovered on an unspecified date on Dec2020.

102.5 F fever; Chills; Headache; Dizziness; Body aches; Fatigue; Nausea; This is a spontaneous report from a contactable Other HCP (patient). This 24-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 19Dec2020 12:00 at single dose on left arm for COVID-19 immunization. Medical history was not reported. Concomitant medications included vortioxetine hydrobromide (TRINTELLIX) and levothyroxine, both received within 2 weeks of vaccination. Facility that the most recent COVID-19 vaccine was administered in Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient hasn't been tested for COVID-19. The patient experienced 102.5 F fever, chills, headache, dizziness, body aches, fatigue, nausea on 19Dec2020 23:00. The outcome of 102.5 F fever, chills, headache, dizziness, body aches, fatigue was recovering, of nausea was unknown. No treatment received for the adverse event. The events were assessed non-serious. Information about lot/batch number has been requested.

arm pain; Fever; body aches; fatigue; This is a spontaneous report from a contactable other HCP (patient). This 29-years-old female patient started to receive BNT162B2, on 17Dec2020 09:15 at single dose for COVID-19 immunisation. The patient medical history and the concomitant medications were not reported. Multi vitamins received in in two weeks. Prior to vaccination, the patient was not diagnosed with COVID-19. Facility that the most recent COVID-19 vaccine was administered is Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced Fever, body aches, fatigue, arm pain on 18Dec2020. The outcome was not recovered. The patient underwent lab tests and procedures which included sars-cov-2 test (Nasal Swab): negative on 11Dec2020. The events were assessed non-serious. No treatment received for the adverse event. Information on the Lot/Batch number has been requested.

Flushing and Dizziness within 10 minutes of administration that resolved after drinking water.; Flushing and Dizziness within 10 minutes of administration that resolved after drinking water.; Injection site tenderness; Tiredness; headaches/headaches were markedly increased; muscle aches; fever to 101.1;

Slight chest discomfort; chest pain/chest pain and headaches were markedly increased; This is a spontaneous report from a contactable nurse. This nurse reported for a 35-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), (Lot number: EK5730) via intramuscular route on 20Dec2020 10:30 at single dose on the right arm for COVID-19 immunization. Medical history included COVID in Apr2020, post COVID syndrome and migraines. No allergies to medications, food, or other products. Concomitant medications included topiramate (TOPAMAX), topiramate (TROKENDI), gabapentin, magnesium, vitamin b complex (VITAMIN B), all received within 2 weeks of vaccination. Facility that the most recent COVID-19 vaccine was administered in Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was diagnosed with COVID-19. Since the vaccination, the patient hasn't been tested for COVID-19. On 20Dec2020 10:30, the patient experienced flushing and dizziness within 10 minutes of administration that resolved after drinking water. Injection site tenderness. Tiredness, headaches, muscle aches, fever to 101.1. Slight chest discomfort (patient had COVID in April 2020. She had all these symptoms with in the acute phase and still have intermittent chest pain/headaches. With the vaccine, the chest pain and headaches were markedly increased on the day after receiving it). Outcome of the events was recovered in Dec2020. No treatment received for the adverse events. The events were assessed non-serious.

sore at site of injection; had a knot there where it was given; This is a spontaneous report from a contactable consumer (patient). This 67-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), on unknown date in Dec2020 at single dose for COVID-19 immunisation. The patient medical history and the concomitant medications were not reported. The patient received vaccine last Wednesday, didn't have any side effects. It was sore at site of injection. Same day, it had a knot there where it was given. The outcome was unknown. Information on the lot/ batch number has been requested.

sore throat; runny nose; This is a spontaneous report from a contactable consumer (patient). A 20-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EL0140) via an unspecified route of administration on left arm on 18Dec2020 at single dose for COVID-19 vaccination. There was no medical history. There were no concomitant medications. The patient is asking if this is part of the documented side effects of the vaccine. She received the Covid19 vaccine last Friday (18Dec2020), at noon, the first in the series of two. She says on Saturday (19Dec2020) she woke up with a runny nose, and then on Sunday night (20Dec2020) she had a sore throat. She says she would like to know if her body fighting is fighting something off or building antibodies. She received the vaccine from work and it was optional, not prescribed. She has her vaccine card and all it has on the back is the name Pfizer and the LOT. She didn't take any new medications or receive any other injections at the time of the COVID-19 vaccine. She didn't do any treatments for the sore throat and runny nose. Events outcome was unknown.

nodule formed at the injection site; the injection along with localized pain; reddened, warm area remained around the injection site; reddened, warm area remained around the injection site; This is a spontaneous report from a contactable nurse (patient). A 42-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EH9899) intramuscular on right arm

on 18Dec2020 17:30 at single dose for COVID-19 immunization. Medical history included hypertension. Concomitant medication included the medications the patient received within 2 weeks of vaccination: Amlodipine, hydochlorathiazide, bupropion hydrochloride (WELLBUTRIN), zolpidem tartrate (AMBIEN). The patient previously took albuterol sulfate and experienced drug hypersensitivity. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 19Dec2020, a nodule formed at the injection site about 12 hours after the injection along with localized pain. The nodule started to disappear, but a reddened, warm area remained around the injection site. The reddened area is about the diameter of an egg. It has been about 72 hours since the injection. No treatment was received for the adverse event. Events outcome was not recovered.

test positive post vaccination; test positive post vaccination; This is a spontaneous report from a contactable Nurse (patient). A male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient got the Pfizer Covid-19 vaccine on the 17Dec2020. He would like to how likely is he to test positive post vaccination. He wants to know if the test results would be a false positive post vaccination. He is going to get tested at two different facility. Event outcome was unknown.; Sender's Comments: Based on the current available information and the consistency with the known safety profile of the suspect product BNT162B2, a possible contributory role of the suspect product to the development of Drug ineffective and COVID-19 cannot be excluded. The case will be reassessed if additional information becomes available.

sweating; itching palms; elevated HR; headache that lasted 24 hrs; fatigue; foggy feeling that also lasted 24 hrs; This is a spontaneous report from a contactable nurse (patient). A 39-year-old female patient received the first dose of BNT162B2 (lot number: EJ1685) intramuscular on right arm on 19Dec2020 14:45 at single dose for COVID-19 immunization. Medical history included DM type 2, irritable bowel syndrome, restless legs syndrome, insomnia. Other unspecified concomitant medications received in two weeks. The patient previously took thiomersal and experienced drug hypersensitivity. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 19Dec2020, within 10 minutes of the reaction she experienced sweating and itching palms with elevated HR. Within 1 hr of the vaccine she had a headache that lasted 24 hrs with fatigue and a foggy feeling that also lasted 24 hrs. No treatment received for events. Events outcome was recovered. No follow-up attempts are possible. No further information is expected.

felt hot; felt achy; Chills; generalized myalgias; high fever/her highest recorded temperature was 102.5; Deltoid soreness; This is a spontaneous report from a contactable Other HCP. This other hcp (patient) reported for herself that the 32-year-old female patient received bnt162b2 (BNT162B2, Solution for injection, Covid-19 Vaccine manufacturer: Pfizer BioNTech), intramuscular into her left deltoid on 17Dec2020 07:30 at single dose for covid-19 immunisation (Prophylaxis). Medical history included Hypothyroidism, mood and sleep. Concomitant medications included Levothyroxine at 100mcg daily by mouth ongoing for Hypothyroidism started taking at 19 years old, escitalopram oxalate (LEXAPRO) at 10mg once a day by mouth from Dec2020 started it about 2 weeks ago ongoing for mood, zolpidem tartrate (AMBIEN) at 10mg as needed by mouth for sleep and was not taking this at the time. The

patient experienced Deltoid soreness from 17Dec2020 to 18Dec2020, Chills from 20Dec2020 to 21Dec2020, generalized myalgias from 20Dec2020 to 21Dec2020, high fever from 20Dec2020 to 21Dec2020. The outcome of the events was recovered. Her vaccination cared is at her house. She received the product at the hospital she works at. The causality of the events Deltoid soreness, Chills, generalized myalgias and high fever was related. Caller is a nurse practitioner that reported that she wanted to report a possible side effect for herself with the Covid-19 vaccine. She said that she herself got vaccinated on Thursday 17Dec2020. She was doing fine except for the deltoid soreness that showed up about 12 hours after receiving the vaccine and lasted for about 12 hours and then it went away. On Sunday, she had sudden onset of chills, generalized myalgias, and a high fever. Caller said that her highest recorded temperature was 102.5. Her symptoms started at about 1430 and she said she had no other symptoms aside from what she reported. She said that her chills went away after about 3 hours and then she felt hot, and then she just felt achy and had the generalized myalgias. All were subsided by 0900 this morning. She said that she also had a low grade fever of 99.8 this morning, but it was all gone by 0900. Caller said that she is a emergency room employee and was given the vaccine at the hospital and they was no prescribing physician. Caller said that she has never had a reaction like this to a vaccine before. Vaccination Facility Type was hospital. Vaccine Administered at Military Facility was No. Additional Vaccines Administered on Same Date of the Pfizer Suspect was none. No AE(s) was require a visit to ER or physician office. Prior Vaccinations (within 4 weeks) was none. AE(s) following prior vaccinations was none. Family Medical History Relevant to AE(s) was none. Relevant Tests was None. Information on the lot/ batch number has been requested.

Headache, muscle and joint pain,Chills and Fever-102.9 day after; Headache, muscle and joint pain,Chills and Fever-102.9 day after; Headache, muscle and joint pain,Chills and Fever-102.9 day after; Headache, muscle and joint pain,Chills and Fever-102.9 day after; Headache, muscle and joint pain,Chills and Fever-102.9 day after; This is a spontaneous report from a contactable Nurse (patient). A 66-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EJ1685) intramuscular on arm left on 18Dec2020 12:45 at single dose for COVID-19 immunization. Medical history included osteoarthritis. The patient was not allergic to medications, food, or other products. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Concomitant medication received within 2 weeks of vaccination included Atorvastatin, Ibuprofen, sambucus nigra (ELDERBERRY), Krill Oil, One A Day VitaCraves Women's, ergocalciferol (VITAMIN D), ascorbic acid (VITAMIN C). On 19Dec2020 08:00, the patient experienced headache, muscle and joint pain, chills and Fever-102.9 day after, gradually went down over night. No treatment received for the adverse event. There was no Covid prior vaccination, received COVID tested post vaccination via nasal swab on 20Dec2020 with result of negative. Events outcome was recovered.

tested (nasal swab done) on Sunday; received positive test result; Patient had COVID, did not know she had COVID and got the vaccine; This is a spontaneous report from a Pfizer-sponsored program Pfizer First Connect via a contactable pharmacist (patient). This 41-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), (lot number: EH9899) via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunization. There were no medical history and concomitant medications. Patient had COVID, did not know she had COVID and got the vaccine. Patient

received vaccine on Saturday, tested (nasal swab done) on Sunday. Patient received positive test result on 21Dec2020. Outcome of the event was unknown.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded.

R sided facial numbness; tingling; muscle weakness; This is a spontaneous report from a contactable pharmacist reporting for herself. This 32-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via intramuscular route at right arm on 21Dec2020 at single dose (lot number: EJ1685) for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient reported R sided facial numbness, tingling, and muscle weakness roughly 20 minutes after receiving the COVID-19 vaccine on 21Dec2020. The sensation was improving over the next 10-15 minutes. The patient was asked to monitor her signs and symptoms and report to her doctor if no improvement/worsening. Events were reported as non-serious. No treatment was received for events. Outcome of the events was recovering. Information about lot/batch number has been requested.

Having a lot of bone pain in the arm that I got the injection at; Having a lot of bone pain in the arm that I got the injection at; This is a spontaneous report from a contactable consumer (patient). This patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose in the arm for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient stated it was the COVID-19 Vaccine. Patient was having a lot of bone pain in the arm that patient got the injection at. It was not 'muscle' (not clarified). The outcome of events having a lot of bone pain in the arm that patient got the injection at was unknown. Information on the Lot/Batch number has been requested.

"bleeding coming from the injection site after the needle was removed his arm; This is a spontaneous report from a contactable other HCP (anesthesiologist) reported for himself. This male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose on the arm for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient stated after receiving COVID vaccine on an unspecified date (reported as ""today"") he noticed bleeding coming from the injection site after the needle was removed his arm. Patient said he had the vaccine he took the needle out he bleed a little bit he said he was afraid he was injected wrong possible into a vein nothing was swollen nothing was bruised red. Patient stated he was unsure if the vaccine was administered intravenously or intramuscularly. Outcome of the event was unknown. The report was assessed as non-serious. Information on the Lot/Batch number has been requested."

patient received BNT162B2 vaccine that had been through a temperature excursion; patient received BNT162B2 vaccine that had been through a temperature excursion; This is a spontaneous report from a contactable healthcare professional. This healthcare professional reported similar events for ninety patients. This is one of ninety reports. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration in Dec2020 as a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. In Dec2020, the patient received BNT162B2 vaccine that had been through a temperature excursion. This was further elaborated as the patient received the vaccine that had been

exposed to -50 degrees Celsius for about 20 minutes before being transferred to the refrigerator and then administered within 5 days. The clinical outcome of patient received BNT162B2 vaccine that had been through a temperature excursion was unknown.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020502898 same reporter reporting similar events in different patients with the same vaccine

severe headache with nausea; severe headache with nausea; This is a spontaneous report from a contactable nurse (patient) who reported for herself that a 56-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899) via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. Medical history included pulmonary sarcoidosis, thyroid, mild depression. Concomitant medication included famotidine, ibuprofen (DUEXIS). Nurse called in to report side effects, she got her shot on 17Dec2020 and she had a severe headache with nausea about 45 minutes after getting the shot. When probed if still experiencing the event, nurse stated, about 15 minutes it was gone on 17Dec2020. She just took Ibuprofen (MOTRIN) for treatment. Outcome of severe headache with nausea was recovered on 17Dec2020.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events,headache with nausea, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Headache; malaise; diarrhea; This is a spontaneous report from a contactable nurse (patient). A 38-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: Ek5730), intramuscular on the right arm on 19Dec2020 16:15 at a single dose for covid-19 immunization. The patient's medical history included reflux and anxiety. The patient had no known allergies to medications, food, or other products. Concomitant medications included sertraline hydrochloride (ZOLOFT), spironolactone, loratadine (CLARITIN), ascorbic acid, betacarotene, calcium sulfate, colecalciferol, cyanocobalamin, ferrous fumarate, folic acid, nicotinamide, pyridoxine hydrochloride, retinol acetate, riboflavin, thiamine mononitrate, tocopheryl acetate, zinc oxide (PRENATAL VITAMINS), vitamin d3, and famotidine (PEPCID). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination and had not been tested for COVID-19 since the vaccination. The patient experienced headache, malaise, and diarrhea on Dec2020 (reported as 18Dec2020 19:00, pending clarification). No treatment was received for the adverse events. Outcome of the events was recovered on Dec2020.

He has a temperature of 100.1 but a lot of muscles aches and pain; He has a temperature of 100.1 but a lot of muscles aches and pain; He has a temperature of 100.1 but a lot of muscles aches and pain; This is a spontaneous report from a non-contactable Nurse. This Nurse reported for a male patient (Son) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 19Dec2020 at 08:20 at single dose for covid-19 immunisation. Medical history was not provided Concomitant medications included Lisinopril for a little hypertensive. He received a shot (COVID Vaccine) yesterday (19Dec2020 at 08:20), today he called on for work, and he says that he has a temperature of 100.1 but a lot of muscles

aches and pain. Outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Tiredness; Pain injection site; Headache; muscle pain; Joint pain; Nausea; just isn't feeling good; feels like face and around eyes are swollen; feels like face and around eyes are swollen; This is a spontaneous report from a contactable consumer reported for self. This 53-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 17Dec2020 in her right arm at single dose for required to at work. None medical history and concomitant medications. She is at work right now. She doesn't have a prescribing doctor. She works at the ER, and they were provided to employees. There is pain at the injection site, which she expected. She has had tiredness, headache, muscle, and joint pain. No chills. She has had nausea. She just wasn't feeling good. She feels like her face is swollen. Like around her eye lids is swollen, but she asked her kids, and they said it doesn't look swollen. She can feel it, but not see it. She got the vaccine on 17Dec2020. She started having all the side effects on the 18Dec2020. They have just persisted. She took something for nausea. She took Ibuprofen for pain, Headache, muscle pain, Joint pain. Outcome of the events was not recovered. Information on the lot/batch number has been requested.

She does have a significant muscle ache and joint ache; She does have a significant muscle ache and joint ache; This is a spontaneous report from a contactable physician (Patient's husband). A female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 19Dec2020 at single dose (Lot # EH9899) for covid-19 immunisation. Medical history, concomitant medications or past drug history were not provided. She has received the first injection of the Covid 19 Vaccination, she received it 24 hours ago (19Dec2020) and she doesn't have a fever but she does have a significant muscle ache and joint ache. So the question if it is okay for the patient to take anti-inflammatory medication like non-steroidal. Outcome of the event was unknown.

tested positive for Corona Virus/ symptomatic and has been sick; tested positive for Corona Virus/ symptomatic and has been sick; This is a spontaneous report from a Pfizer-sponsored program by a contactable other HCP reported for self. This 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on an 18Dec2020 10:45 am on left arm at single dose (Lot # EK5730) for routine vaccination. No additional vaccines received on the same date. Vaccination facility type was hospital. None medical history, concomitant medications or past drug history. She has a patient on the line who got the COVID vaccine on Friday (18Dec2020 10:45), and on Sunday (20Dec2020) she tested positive for the Corona Virus. The main reason she called is to figure out what to do about the booster. There is not really enough data to determine this at this point. There was no prescriber. She just received it at the hospital. She is symptomatic and has been sick on 18Dec2020 all weekend. Saturday (19Dec2020) is when she began to have more significant symptoms and on Sunday (20Dec2020) as well. Today, she is better, but still symptomatic. She became symptomatic on Friday night 18Dec2020, and experienced loss of smell, extreme fatigue, mild cough, nasal congestion. She states all were related to COVID. This all started around 7:30 pm. Relevant test included Positive for Corona Virus on Sunday, 20Dec2020. Relevant test included Positive for COVID test (Corona Virus) on Sunday, 20Dec2020. Outcome of the events was unknown.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded.

arm tingled; a little pain around the injection site; This is a spontaneous report from a contactable consumer. This female consumer (patient) of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular on 20Dec2020 at 4:00 pm at single dose for COVID-19 immunisation in her left arm. The medical history and concomitant medications were not reported. At 4:00 pm a nurse placed the vaccine in her left arm. When she placed the medication the patient felt a zing and a burning sensation with a tingle down her arm. She didn't say anything, she thought maybe the medication was just a thicker consistency like Betamethasone, which can sometimes burn when injected in the muscle. The patient's arm tingled for about 3 to 5 minutes and then it stopped. The patient felt the medication go in and felt burning and tingling. It's 6pm and the patient feel fine, just a little pain around the injection site. The skin surrounding the injection site was normal in color and cool to the touch. No visible swelling. She personally think she placed the vaccine a little too high and hit a nerve. The outcome of the events was recovered on 20Dec2020 6pm. Information about Lot/Batch number has been requested.

Muscle ache; Fatigue; Headache; feels Achy; This is a spontaneous report from a contactable Physician. A female patient started to receive started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 17Dec2020 at single dose for covid-19 immunisation. This is unknown to her, but she would imagine the second dose is around 07Jan2021. Medical history, concomitant medications or past drug history were not provided. The patient was experiencing that she was referring to is muscle aches, fatigue, and headache. She doesn't feel sickly but feels achy. It is unknown if the patient ever test positive for Covid, or had antibodies prior to the vaccine. Outcome of the events was unknown. Information about Batch/Lot number has been requested.

entire tongue began to itch; entientire tongue began to itch, tingle; A small bruise-like spot appeared on the tip of her tongue; This is a spontaneous report from a contactable Nurse reported for self. This 65-year-old female patient (not pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on an 19Dec2020 14:30 on Arm left at single dose (Lot # EKS730) for covid-19 immunisation. Facility where the most recent COVID-19 vaccine was administered: hospital. Medical history included Gastrooesophageal reflux disease. Concomitant medications included omeprazole. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Past drug history included Allergies to medications, food, or other products: Bactrim, Ceftin. On 20Dec20200 8:30 AM, 18 hours after receiving the vaccine her entire tongue began to itch, tingle. No swelling noted. A small bruise-like spot appeared on the tip of her tongue. 5 hours later the itching stopped (20Dec2020 13:30) and the bruise-like spot began to fade. The spot was completely gone the next morning. There was no trauma to the tongue at any point that would account for the spot. Prior to vaccination, was the patient did not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. No treatments were received for the events. Outcome of the event tongue itching was recovered on 20Dec2020 13:30. Outcome of the event a small bruise-like spot appeared on the tip of her tongue was recovered on 21Dec2020. Outcome of the event tingling tongue was recovered in Dec2020. Events assessed as non serious.

developed a slight cough; This is a spontaneous report from a contactable nurse reported for herself. This 25-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an

unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient received the COVID Vaccine on 19Dec2020. The following day she developed a slight cough on 20Dec2020, and she felt completely fine otherwise. Outcome of the event was recovered. Information on the Batch/Lot number has been requested.

feeling ok not perfect; This is spontaneous report from a contactable nurse reporting for herself. This female patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 21Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient got the Pfizer Covid-19 vaccine on 21Dec2020 and wanted to know if she was contagious. She stated she knew it's not a live vaccine and it's an MRNA vaccine. Her pharmacist told that she was not contagious, but she just wanted to make sure. The patient was feeling ok not perfect. The patient did not state any side effects. Outcome of the event was unknown. Information about lot/batch number has been requested.

heaviness in the chest; trembling of the mouth like teeth went on chatter like it is real cold; This is a spontaneous report from a contactable consumer (patient). This 57-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 17Dec2020 at single dose (lot number: EJ1685) for COVID-19 immunization. Medical history included blood pressure abnormal. Concomitant medications included cetirizine hydrochloride (ZYRTEC) and acetylsalicylic acid (ASPIRIN 81) as blood pressure pills. The patient was informing the side effect that she had when she had got the vaccine (Unspecified vaccine). The patient experienced heaviness in the chest and also trembling of the mouth like teeth went on chatter like it was really cold on 17Dec2020. When probed for the lot number, EJ1685 with Pfizer was reported. The patient worked at the hospital. It was just happened between the first 4 hours after receiving. It was not still experiencing. No treatment received for the problem because they left like within the first 4 hours and after that the patient didn't feel anything. Outcome of both events was recovered in Dec2020.

Some chills, temperature; Some chills, temperature; Soreness in the administration site; This is a spontaneous report from a contactable nurse reported for himself. This 51-year old male patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 20Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. On 21Dec2020, the patient experienced some chills, temperature, and soreness in the administration site. The patient was vaccinated at 51 years old. The patient wanted to know if he should isolate himself again, and if he will get Covid again after receiving the vaccine. Runny nose; Congestion; Malaise; Fever; Chills; This is a spontaneous report from a Pfizer-sponsored program from a contactable consumer (patient). This male patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient received the vaccination on Friday, 18Dec2020. The patient was experiencing fever and chills Friday night on 18Dec2020. Then he proceeded to receive a runny nose and

congestion still at the time of reporting along with a little bit of malaise. He was wondering if he should get tested for COVID-19 due to the symptom or if the symptoms were due to the vaccination. Outcome of the events runny nose, congestion and malaise was not recovered. Outcome of the events fever and chills was unknown. Information on the Lot/batch number has been requested.

left deltoid hurt a lot for a while; got left actual swelling like in his armpit; This is a spontaneous report from a contactable consumer (patient). This 49-year-old male patient received the 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration at left deltoid on 18Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient received the COVID vaccine Friday morning as part of work. The patient had a lot of, kind of significant actual swelling in the (incomplete sentence). The patient was too much concerned about this, but it was out of the ordinary enough that the patient felt it was worth reporting. So the patient got the vaccine in his left deltoid and the left deltoid hurt a lot for a while but currently the patient got left actual swelling like in his armpit it's, where the lymph nodes were, the patient got a very significant swelling. The patient stated he was experiencing it on 20Dec2020. So his age was 49 years. The patient was assuming it was a normal immune response, but he never had it with the flu vaccine or anything, so the patient wanted to report it. It's a COVID-19 Vaccine. No treatment was received for events. Outcome of the events was unknown. Information about lot/batch number has been requested.

sore and heaviness on the injection site; heaviness on the injection site; This is a spontaneous report from a contactable Nurse (patient) via Pfizer sales representative. This female patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient posted on Social Media that she was injected with COVID 19 vaccine. As per her comment, after 8 hours she experienced sore and heaviness on the injection site. Outcome of the events was unknown. Information on Lot/Batch number has been requested.

mild COVID symptoms; front line nurse and received it because of that; This is a spontaneous report from a contactable nurse. A female patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at single dose for treating COVID patients. Medical history included COVID. Concomitant medications were unknown. The patient had COVID previously, received the vaccine, and was currently experiencing mild COVID symptoms. The patient received vaccine from the hospital, so there was no prescriber. Patient was a front line nurse and received it because of that. Outcome of the events was unknown. Information about batch/lot number has been requested.

"Cough; Got a COVID test; positive; 4 hours after, my arm became sore; body aches; Still feel sick but not as sick as I was; shortness of breath; fever; Developed like pretty bad symptoms; This is a spontaneous report from a contactable nurse reported for himself. This 38-year-old male patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration at arm on 16Dec2020 at single dose (lot number: PAA156051) for vaccinated against COVID 19. Medical history included HIV. Concomitant medications included bictegravir sodium/emtricitabine/tenofovir

alafenamide fumarate (BIKTARVY) for HIV. The patient had received the Pfizer vaccine for COVID 19 on 16Dec2020 (Wednesday). And then the patient developed like pretty bad symptoms. Then, when the patient went to get tested because he suddenly started having like a cough at night on 16Dec2020 and got a COVID test and it was positive on Dec2020. The patient was a nurse in the emergency room and just wanted to report that. The patient knew scientifically it couldn't give him the virus. The patient didn't have any symptoms of COVID. So, after the patient got the shot, 4 hours after, his arm became sore and then 12 hours after, he had body aches, fever, cough, shortness of breath on Dec2020. About Lab Work, the patient stated, ""Just the COVID one."" And the patient got positive results for COVID test. Due date for the next shot was 06Jan2021. When asked if he was still experiencing cough, the patient stated he still felt sick but he was not as sick as he was. The first 2 or 3 days were really bad. About treatment, the patient stated, ""Nothing for the cough but I took Tylenol."" Outcome of the events was unknown. Information about batch/lot number has been requested."

Hives; felt itching to her scalp; This is a spontaneous report from a contactable other hcp (patient). This 38-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EK5730), intramuscularly on 21Dec2020 06:40 at single dose on left deltoid for COVID Prevention. Medical history included Polycystic ovarian syndrome, was diagnosed with this in her early 20's and ongoing, Hypothyroidism from 2015 and ongoing, Corneal abrasion from 2020 and ongoing (Patient got a corneal abrasion to her right eye, about a week ago and is currently using eye drops for prophylaxis against infection), and anaphylaxis. Concomitant medication included metformin tablet oral at 750mg, once daily for Polycystic ovarian syndrome, she has been taking the product on and off since being diagnosed with PCOS and ongoing, thyroid (ARMOUR THYROID) oral at 60 (unsure if the product is MG or MCG) once daily for Hypothyroidism, started product four or five years ago and ongoing, moxifloxacin hydrochloride (VIGAMOX) at 1 drop to right eye, three times daily for Infection prophylaxis from Dec2020 and ongoing, patient got a right corneal abrasion last week and is using the product as infection prophylaxis. The patient was a Physician Assistant, who works in the ER, who just received the COVID vaccine at work. The patient stated that she got hives after her injection. The patient received the vaccine today at about 6:40AM. She stated that she was instructed to wait 30 minutes after receiving the vaccine because she does have a history of anaphylaxis, but not to vaccines. So it was about 5 to 10 minutes before her 30 minute wait time was up, that she started getting the hives on 21Dec2020. She stated that the hives she got started on her left wrist, and then they worked to bilateral upper arms, and then she also felt itching to her scalp but states she did not feel a rash on her scalp. She took 50mg of Benadryl orally for treatment. It was stated that the hives have resolved at this time, but patient was unsure as far as outcome goes, because she took Benadryl and the hives are gone now, but she does not know if they will return or not. She stated that she only had to take Benadryl and she declined checking in to the ER, so she considers this, not serious. The outcome of hives was recovered, of felt itching to her scalp was unknown.

fatigue; This is a spontaneous report from a non-contactable consumer (patient) via Pfizer sales representative. This patient of unspecified age and gender received first dose of BNT162B2, from an unspecified date at single dose for COVID-19 immunisation. The patient medical history and the concomitant medications were not reported. The patient experienced fatigue the day after the first

dose. The outcome was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

body aches; pregnant patient received BNT162B2 for COVID Prevention; pregnant patient received BNT162B2 for COVID Prevention; pregnant patient received BNT162B2 for COVID Prevention; This is a spontaneous report from a contactable physician (patient). This 35-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EH9899), intramuscularly on 19Dec2020 at single dose in right upper arm for COVID Prevention. Medical history was none. Concomitant drug included unspecify drugs. The patient got the vaccine on 19Dec2020, and then that evening she had body aches. She stated that she took 1000mg of Tylenol by mouth because she was really achy, but she was fine by the next day. She was pregnant. Patient last menstrual period date was 08Sep2020. She does take another medication but she does not think it was associated with the body aches she experienced. The outcome of Body aches was recovered on 20Dec2020, of other events were unknown. Primary Source Reporter assessed Body aches related by Method of assessment.

Weakness; Lightheadedness; fast heart beat/heart rate is 101; coughing a little bit; panic attack; he was not acting well and his blood pressure was 158/98; he feels silly then has nervousness; he feels silly then has nervousness; feeling tired; not feeling well; This is a spontaneous report from a Contactable consumer (patient). This 52-years-old male patient received first dose of BNT162B2(PFIZER-BIONTECH COVID-19 VACCINE) (lot number: AK5730), on 20Dec2020 at single dose on left arm for COVID-19 immunisation. Medical history included Blood pressure high. The patient's concomitant medications were not reported. He had one injection given in his left arm around 08:30 or 08:40 in the morning on 20Dec2020, before 9 o clock. He says that they let him rest for 15 minutes after his injection, and it is a delayed reaction that just started this morning and he tried to go to work and had to go home. The patient got the vaccine on yesterday morning then tried to come to work on this morning but he was feeling weak and having light headedness, and his heart beat is so fast. He did go home to try to relax. He said he experienced a panic attack at some other times where his heart beat fast and he was quite light headed at some other times gone from rest and get up to walk or try to do something, and that's why he had gone home after he reported to work earlier. He says just now also trying to have something to do he is feeling it. He says that he took Tylenol and some cough syrup for feeling lightheaded and weak. He clarifies that he took Tylenol yesterday and then after he took vaccine and this morning the nurse gave him Tylenol also. He says he told them he was not feeling well, he felt silly and weak. They told him to go home because he told them he was not acting well and his blood pressure was 158/98. He has been doing Lisinopril 20mg for his high blood pressure, and he has been on it for a long time. He says that the label says discard after 01Oct2021. He says he takes 20mg once a day by mouth, and he keeps refilling it every 30 days. The patient took the cough syrup because he was coughing a little bit. He says that the EXP date on the Tylenol he took that he has at home is Mar2022. He provides EA013 as LOT and dose strength as 500mg. He says he took this last night and this morning at the facility they gave him the 500mg dose too. He says that he took vitals with his nurse, and his heart rate is 101. The patient asks what can he do since he is worried about reading side effects of vaccine so now he is feeling fine, then some other times it comes like first time this morning at work he feels silly then has nervousness or something and a panic attack, so they let him go home. He says he got home, and was

feeling fine again. He says he tries to go to the bathroom, or tries to do something in his garage, and feels light headed and is feeling tired. He says he would like to know if that is normal, should he take anything. Lab data on 21Dec2020 included Blood pressure was 158/98, Heart rate was 101. The outcome was unknown.

rigors; This is a spontaneous report from contactable physician via Pfizer sales representative. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), on an unspecified date at single dose for COVID-19 immunisation. The patient medical history and the concomitant medications were not reported. The patient had rigors that subsided in 12 hours after receiving the Pfizer-BioNTech COVID vaccine. The outcome was recovering. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

"General weakness; body ache; Muscle ache; Headache; This is a spontaneous report from a contactable Nurse (patient). A 56-years-old female patient received first doe of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (LOT#: EK5730), on 17Dec2020 at single dose for COVID-19 immunisation. Medical history was none. There were no concomitant medications. The patient received a Pfizer's Covid vaccine on 17Dec2020 and have got some side effects which is general weakness, headache and it just started second day after received the Vaccine on 18Dec2020. The patient had done Covid test several times and all the time it was negative. The patient stated, ""You mean is it worsened from the start date, it's the same when it started on the second day it continued with the headache and body ache, muscle ache and I am taking some Tylenol 500 every 6 hour but not all the time after that."" The outcome was not recovered.P rimary Source Reporter assessed General weakness; body ache, Muscle ache, Headache were related."

"she has almost a sinus headache; the injection site was very, very sore; Chills/She couldn't get warm; cold; body aches; This is a spontaneous report from a contactable consumer (patient). This 64-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EK5730) on 19Dec2020 15:15 at single dose on Left Arm for COVID-19 immunisation. Medical history included She had COVID on 10Nov2020. There were no concomitant medications. The patient received the COVID vaccine on 19Dec2020, the first dose. She didn't have much side effects or feel symptoms except the next morning on 20Dec2020, the injection site was very, very sore. As the day progressed, she had chills. No fever, but chills. She couldn't get warm. This morning when she woke up she has almost a sinus headache on 21Dec2020. It's not really a headache, but around her eyes. ""Injection site was very, very sore"" didn't really start until yesterday after lunch. She has not had chills this morning, just body aches. She feels like she is about to get a cold. She had COVID on 10Nov2020. She wasn't as cold this morning like she was when she went to bed last night. She thinks the chills stopped some time in the night. When she went to get in the shower this morning she felt the headache. She still has the sensation around the eyes. She took some Tylenol about 11AM on 19Dec2020. The outcome of the injection site was very, very sore was recovering, of other events were unknown."

tachycardiac; Low grade like a 99.8; This is a spontaneous report from a contactable nurse (patient). A 32-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), via an unspecified route of administration on 17Dec2020 at single dose at the left deltoid for

immunization. Medical history included tachycardia heart condition (had an underline heart condition that was a tachycardia heart condition). There were no concomitant medications. Patient got Pfizer vaccine on 17Dec2020. Patient really had not had any side effects except had a low grade like a 99.8 yesterday (in Dec2020). Which was probably just the vaccine patient was assuming probably just the vaccine had to do like kid when they get in then they get a little fever. On 19Dec2020, though however patient had tachycardia. Like right now patient was in 130 and blood pressure didn't read when went to stand. And patient had drink plenty fluids all day on 18Dec2020. Patient previously did have an underline heart condition that was a tachycardia heart condition. Patient had not had any issues with heart for about. Because the last time had it was about 2 years ago. Patient had a cardiac condition that caused her to be tachy-cardiac. But it was usually only when she was pregnant. But patient was not pregnant and it had been about 2 years since last episode of this. And the only this that changed was this on 17Dec2020. So, this was the first time patient had had anything that changed after getting that vaccine. Patient did not take any medication. She used to be on a beta blocked but she was recently taken off of that (She don't know 3 months ago). Outcome of events was unknown.

Tingling down entire left side of body, from face to foot.; Numbness and tingling of left side of face.; Had headache temporarily (resolved). Mostly on right side behind eye; This is a spontaneous report from a contactable Other HCP. This Other HCP reported for herself that the 48-year-old female patient received fist dose of bnt162b2 (BNT162B2, Batch/lot number: EK5730), via unknown route of administration in left arm on 21Dec2020 07:45 PM at single dose for covid-19 immunisation. She is not pregnant at the time of vaccination. Medical history included History of breast cancer. Past drug event included Known Allergies to medications, food, or other products: Codeine. Concomitant medications included tamoxifen. Facility type vaccine Hospital. No other vaccine in four weeks. Other medications the patient received within 2 weeks of vaccination included Tamoxifen, multi-vitamins, hair, skin and nails. The patient experienced Tingling down entire left side of body, from face to foot. Numbness and tingling of left side of face. Feel like I got Novocain shot in face. Had headache temporarily (resolved). Mostly on right side behind eye from 21Dec2020 08:00 PM. Outcome of the events was not recovered. No covid prior vaccination. No covid tested post vaccination. Facility where the most recent COVID-19 vaccine was administered was Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No treatment was received for the adverse event. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, has the patient has not been tested for COVID-19. Vaccine Facility information available. Location of injection information is available for all vaccines received on the same date.

"I have had an excruciating back and hip pain; I have had an excruciating back and hip pain; I can barely walk around; This is a spontaneous report from a contactable consumer. This consumer (Respiratory therapist) reported that the 64-year-old male patient received bnt162b2 (BNT162B2, Pfizer BioNTech Covid 19 Vaccine), via unknown route of administration on 16Dec2020 at single dose for covid-19 immunisation (""It helps so that I won't get Covid.""). Medical history included Blood pressure. Consumer stated, ""I need it to report that I have had an excruciating back and hip pain. This is the fifth day and I still have pain but its slightly better but I don't think I am going to work today or tomorrow. I can barely walk around."" Consumer stated, ""It was given to me by a nurse at hospital."" Consumer

stated, ""I take a high blood pressure medicine."" Consumer stated, ""I didn't take any Lab work."" Treatment was received and consumer stated, ""Yes I tried Ibuprofen."" The outcome of the events was unknown. Information about lot/batch number has been requested."

arm pain; fatigue; severe nausea; This is a spontaneous report from contactable Physician via Pfizer Sales Representative. This Physician (patient) reported that the patient of unknown age and gender received bnt162b2 (BNT162B2, reported as Pfizer-BioNTech COVID vaccine), via unspecified route of administration on arm on unknown date at single dose for covid-19 immunisation. Medical history was none. Concomitant medications were unknown. Physician reported arm pain, fatigue and severe nausea after receiving the Pfizer-BioNTech COVID vaccine. Patient is a HCP with no prior medical history. The outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

"Headache; shivers; coldness; body aches; mouth hurts; feel very weak; This is a spontaneous report from a Pfizer-sponsored program Pfizer First Connect. A contactable consumer reported for self that the female patient of unknown age received bnt162b2 (BNT162B2, reported as PFIZER-BIONTECH COVID-19 VACCINE), via unspecified route of administration on 18Dec2020 at single dose for covid-19 immunisation. Medical history and concomitant medications were unknown. She had a COVID vaccine shot on Friday, on 18Dec2020, now she is experiencing a headache. She would like to know if headache is normal or if she should go to a doctor. Upon callback, consumer states she received the Covid19 vaccine on Friday 18Dec2020, and is experiencing ""shivers, coldness, body aches, headache, mouth hurts, I feel very weak"". Consumer wants to know if these things are normal, and if she needs the second dose. She wants to ""make sure she's not dying"". ""Can I use antipyretics before or after vaccination with the Pfizer-BioNTech COVID-19 vaccine?"" Response: The interim ACIP guidelines note that, "" Antipyretic or analgesic medications (e.g., acetaminophen, nonsteroidal anti-inflammatory drugs) may be taken for the treatment of post-vaccination local or systemic symptoms, if medically appropriate. However, routine prophylactic administration of these medications for the purpose of preventing post-vaccination symptoms is not currently recommended, as information on the impact of such use on Pfizer-BioNTech COVID-19 vaccine-induced antibody responses is not available at this time.& quot; If you are a patient, you should discuss this with your healthcare provider. The outcome of the events was unknown. Information about Batch/Lot number has been requested."

She woke up miserable and is still miserable now; she has had a fever of 101.6/It spiked to 103.1; Dry cough; neck pain; swollen lymph node and glands; headache; napped a lot; hot flash; sweaty; off balance and shaky; felt tired all day; joints felt a bit achy/achy joints/shoulder pain; This is a spontaneous report from a contactable Nurse (patient). A 43-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: E10140) intramuscular in her left deltoid on 20Dec2020 08:25 at single dose for COVID-19 immunization. There was no other additional vaccines administered on same date of the pfizer suspect. Medical history included had COVID from Aug2020 to an unknown date and had a pulse-ox. The patient did not have any other medical history. She has had no reactions to any other vaccines before. Her father died of heart attack but with no other medical history prior to that. Her mom died of a brain tumor. In her extended family there is high blood pressure and high cholesterol. She has not personally be diagnosed with any of these conditions. She is healthy.

She has no history of any allergies and again repeats she has never had this side effect with anything. Concomitant medications included over the counter vitamins regularly. The patient has had a fever of 101.6 about 24 hours after getting the shot. It spiked to 103.1. She has had a dry cough and all the other common sides effects reported with the vaccine. There is nothing to do but treat the symptoms. She has let her primary care doctor know via email but he is out of the office through today so she hasn't heard back. She had a Fever of 101.6 that was noticed at 2am after the shot, on 21Dec2020. When she woke up about 10 minutes ago is when she noticed a fever that spiked to 103.1, it is about 1:20pm where she is located. The dry cough started around 8am 21Dec2020, she took cough medication and has used her inhaler to stay on top of the cough. Her pulse-ox readings have been fine and she is at 97-98%. She has a pulse-ox because she had COVID Aug2020 and was out of work 6 weeks and on home oxygen. She felt if she got COVID again she would die so she would rather have the vaccine. She notes that about 15 minutes after getting the shot while they were monitoring her, she was joking with the nurse, she experienced what felt like a hot flash and was sweaty on 20Dec2020. She was off balance and shaky on 20Dec2020. This lasted about 15- 20 minutes and then she was fine. Afterward, she did notice she felt tired all day on 20Dec2020 and napped a lot. Also it was reported that her joints felt a bit achy throughout the day. She has never had a reaction to a vaccine before. Other events experienced were neck pain, swollen lymph node and glands, neck and shoulder pain, headache on 21Dec2020, and achy joints on 20Dec2020. All the events have gotten worse since starting. The fever, neck pain, swollen lymph node and glands, neck and shoulder pain, and headache were noticed about 2am. She woke up miserable and is still miserable now. The patient received Tylenol, Benadryl, Advil, cough medication and an inhaler as treatment for events. No any event required a visit to emergency room or physician office. Seriousness criterial for events fever, dry cough, neck pain, swollen lymph node and glands, Aching joints, Headache, felt tired all day, hot flash and was sweaty, off balance and shaky was medically significant. Events outcome of fever, dry cough, neck pain, swollen lymph node and glands, aching joints, headache, felt tired all day was not recovered (reported as worsened), events outcome for hot flash and was sweaty, off balance and shaky was recovered on 20dec2020, while for other events was unknown. Relatedness of drug to reactions for fever, dry cough, neck pain, swollen lymph node and glands, aching joints, headache, felt tired all day was related per primary source reporter.

Arm is getting redder today and sore. Was not red or sore yesterday after the injection.; Arm is getting redder today and sore. Was not red or sore yesterday after the injection.; This is a spontaneous report from a contactable Nurse. This Nurse reported for self that the 59-year-old female patient received first dose of bnt162b2 (BNT162B2), via unspecified route of administration on Left arm on 20Dec2020 07:45 AM at single dose for covid-19 immunisation. She is not pregnant at the time of vaccination. Medical history included known allergies to medications, food, or other products: PCN, cedar, mold and Hashimotos disease. Concomitant medications included other medications the patient received within 2 weeks of vaccination:ibuprofen (ADVIL [IBUPROFEN]), Levothyroxine and ergocalciferol (VIT D). Facility type vaccine was Hospital. No other vaccine in four weeks. The patient experienced Arm is getting redder today and sore. Was not red or sore yesterday after the injection from 20Dec2020 07:45 AM. The outcome of the event was not recovered. No treatment received. No Covid prior vaccination. Covid tested post vaccination. Covid test type post vaccination was Nasal Swab on 15Dec2020 with result of Negative. Facility where the most recent COVID-19 vaccine was administered was Hospital. The patient

did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has been tested for COVID-19. Vaccine Facility information available. Information on the lot/batch number has been requested.

"I was achy and tired; I was achy and tired; I was really, severely dizzy, like vertigo. My head was swimming; I was really, severely dizzy, like vertigo. My head was swimming; This is a spontaneous report from a contactable consumer. This consumer reported for self that the 56-year-old female patient received bnt162b2 (BNT162B2, reported as Pfizer-Biontech Covid-19 Vaccine, Batch/lot number: EJ1685, Expiry Date of COVID Vaccine: Mar2021), via unspecified route of administration on 18Dec2020 12:30 at single dose for covid-19 immunisation. Medical history was none. Concomitant medications included cyanocobalamin (VITAMIN B12 [CYANOCOBALAMIN]) Injections. She is a respiratory therapist. She states she got the vaccine on 12:30 PM on Friday. She states that Friday night by 09:30 pm was really bad. Her head was swimming. She said by Saturday she was achy, tired. Also, on Friday night she was severely dizzy and felt like she has vertigo. She is better now."" Consumer stated, ""It was just a shot."" Th outcome of the events was recovering. Treatment was received and consumer stated, ""The only thing I took was 800 mg Ibuprofen Friday evening."" Consumer further added, ""I was, just like in chart second vaccination I guess I am okay to take it. I talked to my doctor."" Consumer stated ""I got the covid vaccine on Friday and it was a bad night. I was really, severely dizzy, like vertigo. My head was swimming. I got the shot at 12:30 that day, but the symptoms didn't start until 9:30 that night. On Saturday I was achy and tired. But I'm better now."" Consumer questioned if dizziness was a reported side effect."

"My arm is sore; I have really weird red like bump blister that formed on my right hand on my index finger; This is a spontaneous report from a contactable Physician. This Physician(patient) reported that the 48-year-old female patient received bnt162b2 (BNT162B2, Batch/lot number: EJ1685), via unknown route of administration on arm on 19Dec2020 01:30 at single dose for covid-19 immunisation. Medical history was none. Concomitant medications were unknown. Physician stated, ""I took the Pfizer Vaccine (COVID Vaccine) yesterday at 1:30 and I am fine. My arm is sore, but I have really weird red like bump blister that formed on my right hand on my finger, on my index finger. I don't have any 'trauma to it'. I don't why it's there? I haven't seen it but its unusual looking."" No treatment received. The causality was assessed by Physician stated, ""No, I don't know. I have no idea if this it is just a rare coincidence."" The outcome of the events was unknown."

"felt more like a burning especially in my neck; Minutes after shot some sweating, first thought perhaps it is some anxiety related to having a vaccination. After monitoring period went back to the office. Started to get severe nausea; Minutes after shot some sweating, first thought perhaps it is some anxiety related to having a vaccination. After monitoring period went back to the office. Started to get severe nausea; Minutes after shot some sweating, first thought perhaps it is some anxiety related to having a vaccination. After monitoring period went back to the office. Started to get severe nausea; muscle pain that started in my neck, shoulder and then moved on to both legs; felt weak and had to go home; pain in my neck; leg pain; arm pain; This is a spontaneous report from a contactable Nurse. This Nurse reported for self that the 50-year-old female patient received first dose of bnt162b2 (BNT162B2, reported as PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730), via Intramuscular on left arm on

18Dec2020 03:15 PM at single dose for covid-19 immunisation. She is not Pregnant at the time of vaccination. Medical history included Known allergies to medications, food, or other products: Dust mites, nickel and recent iron deficiency anemia, esophageal ulceration, reactive airway disease. Concomitant medications included other medications the patient received within 2 weeks of vaccination included Omeprazole 40 mg BID (Twice a day), colecalciferol (VITAMIN D [COLECALCIFEROL]) and Albuterol. Facility type vaccine was Hospital. No other vaccine in four weeks. No other vaccine in two weeks. The patient experienced ""Minutes after shot some sweating, first thought perhaps it is some anxiety related to having a vaccination. After monitoring period went back to the office. Started to get severe nausea and muscle pain that started in my neck, shoulder and then moved on to both legs. I felt weak and had to go home. The muscle pain was not like exercise pain - it felt more like a burning especially in my neck. The pain in my neck got better after Tylenol , the leg pain continued until 10 pm. The nausea was severe until 7:30 and was gone by 10 pm. I had to leave work 2 hours early because of side effects. The arm pain continued for two days, locally, minor and was gone on day three (21Dec2020)"". The event started from 18Dec2020 03:30 PM. The outcome of the events was recovered. No treatment received. No covid prior vaccination. No covid tested post vaccination. Facility where the most recent COVID-19 vaccine was administered was Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The events were assessed non-serious."

left arm started to feel numb first, and then she started to feel it in her face/numbness on the side of her face; worried; This is spontaneous report from a contactable other healthcare professional (patient). A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection) via an unspecified route of administration on 21Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was having a side effect after taking the COVID vaccine today (21Dec2020). The patient experienced numbness on the side of her face on 21Dec2020. The patient added that she had to wait for 15 minutes and didn't have anything. The patient when driving on the way home, she started to feel numbness on her face. The patient clarified within 20 minutes of receiving the vaccine her left arm started to feel numb first, and then she started to feel it in her face. The patient has been trying to exercise it and move it because she was worried it would become weak. The patient was unsure what to do or if this is expected. The patient, while providing contact information she stated she was really worried (21Dec2020), and she can't finish the report at this time. The full report details were unable to be obtained. The outcome of the events was unknown. Follow-up activities are possible, information on the batch number has been requested.

moderate myalgia; This is a spontaneous report from a non-contactable consumer. A 30-year-old female patient (daughter of a friend) received bnt162b2 ((Pfizer-BioNTech COVID-19 mRNA vaccine) lot number and expiration date were not reported, via an unspecified route of administration on 17Dec2020 at a single dose for COVID vaccination. The patient's medical history and concomitant medications were not reported. The patient experienced moderate myalgia following her COVID vaccination last Thursday on

17Dec2020 with outcome of recovering. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

"Injection site pain; Tiredness; Headache; Muscle pain; Chills; I have fever 100.3; Injection site is swelling; injection site have redness; feeling unwell; This is a spontaneous report from a contactable Nurse (patient). The patient received first dose of bnt162b2 (BNT162B2, lot number: EH9899, Expiry Date: Mar2021), unknown on 19Dec2020 18:00 at single dose for covid-19 immunisation. Medical history was reported as Patient History: No. There were no concomitant medications. Nurse stated, ""I have received the vaccine, the Pfizer COVID vaccine yesterday at 06:00 PM. I have side effects is injection site pain, tiredness, headache, muscle pain, chills and I have fever 100.3 (I got the fever after 24 hours of receiving the vaccine) and injection site is swelling, injection site have redness and feeling unwell. I would like to know how long it takes to, the side effects is going to be gone."" The outcome of the events was unknown."

"Dizzy; I felt really weak; Shortness of breath in getting up the stairs; The shortness of breath freaks me out, I think that's where the anxiety comes in; I think the midsternal chest pain was my anxiety but like a little bit; started feeling very like flu; Headache; Weakness; Fatigue; Muscle ache; I also have like really swollen lymph nodes, my lymph nodes feels like draining right now; The shortness of breath must have pain and issue for me; This is a spontaneous report from a contactable nurse (patient). A 32-years-old female patient received bnt162b2 (BNT162B2), via an unspecified route of administration on 19-DEC-2020 07:30 at single dose for covid-19 immunisation. The patient medical history was not reported. Concomitant medication included buspirone hydrochloride (BUSPAR), omeprazole (OMEPRAZOLE), lithium (LITHIUM), doxycycline (DOXYCYCLINE) for infection right now in her toe. The lithium cause 'sinus' reflux asthma. Nurse reported an adverse effect, was kind of confuse if it is related or not. She felt good for first 15 minutes and when she was about to leave. she was not afraid of shot. she felt dizzy and then she had to go upstairs and she felt really weak and Shortness of breath getting up the stairs, to get to her car. The shortness of breath freaks her out, she think that's where the anxiety comes in. she started driving home and she had bad shortness of breath. she think the midsternal chest pain was her anxiety but like a little bit. she am not sure. In '12' hours later she went to work she started feeling very like flu, she started flu like with headache, weakness, fatigue, muscle ache. she was working in ER and it is hard to work and then 20Dec2020 she was still feeling bad but little bit better than first day and shortness of breath that was still there like all day the day before. she also had like really swollen lymph nodes, her lymph nodes feels like draining right now. Nurse stated she was taking Omeprazole. That was wired because she have 'sinus' (Further not clarified, hence not captured in tab) reflux asthma, so the shortness of breath must have pain and issue for her but Omeprazole have stopped it, so before taking the vaccine she thought she was completely fine but then after taking the vaccine, it was like she have the issue again like it was controlled before the vaccine. Result of lab test: TSH was 8. So it was elevated but that was because of lithium and then she reduced the dose so it should be better now. So every result was normal."" Results of tests and procedures for investigation of the patient: Test: CBC, CMP, Lithium level, TSH: Thyroid panel unknown result."

generalized weakness; headache; right sides numbness/bilateral hand numbness/bilateral face numbness; This is a spontaneous report from a contactable other healthcare professional reported for

herself. A 43-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EH9899, expiry date unknown) via an unspecified route of administration at the right arm on 18Dec2020 10:00 at single dose for COVID-19 immunization. The patient medical history was none. The patient was not diagnosed with COVID-19 prior vaccination. Concomitant medication included influenza vaccine inact split 3v (FLULAVAL, lot number 542MY, expiry date unknown) on 20Nov2020 for immunization. On 18Dec2020 at 16:00 (day 1), the patient experienced headache and right sides numbness. On day 2 (19Dec2020), patient has headache. On day 3 (20Dec2020), the patient has overall improvement. On day 4 (21Dec2020), the patient experienced generalized weakness, at 1300 bilateral hand numbness, at 1540 bilateral face numbness that has persisted into the afternoon (pm). The outcome of the events headache, right sides numbness/bilateral hand numbness/bilateral face numbness and generalized weakness was not recovered.

Headache; Chills; Body ache and little bit congested; Body ache and little bit congested; This is a spontaneous report from a contactable consumer (patient). A 50-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for immunization. Medical history included high blood pressure, seizure disorder. Concomitant medication included metoprolol, aripiprazole (ABILIFY). The patient experienced headache, chills, body ache and little bit congested on an unspecified date with outcome of unknown. No treatment was received for events. Information about Lot/Batch number has been requested.

a little bit of chill; like a slight bit of dizziness; This is a spontaneous report from a contactable consumer. A patient of unspecified age and gender received bnt162b2 (BNT162B2, Batch/lot number: EH9899), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunisation. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient experienced a little bit of chill and like a slight bit of dizziness on Dec2020 with outcome of unknown.

really uncomfortable, my stomach is alarming; This is a spontaneous report from a contactable consumer (patient). A 57-year-old female patient received BNT162B2 (COVID Vaccine, manufacturer not clarified), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunisation. Medical history included hypertension, diabetes, atrial fibrillation. The patient had some concomitant medications. When probed for any concomitant, patient stated, that was her other concern. She was seeing there was an issue with if you won't blood thinner (further not clarified). Patient stated, she got her own injection (COVID Vaccine) on Friday and It was not been major but she had been to the bathroom since Friday and she was change her diet or anything. This was really uncomfortable, her stomach was alarming. Patient asked if that was normal. Outcome of the event was not reported. Pfizer is a marketing authorization holder of COVID Vaccine in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of COVID Vaccine has submitted the same report to the regulatory authorities. Information on the lot/batch number has been requested.

fatigue, nasal congestion and body aches/tested positive with infection; fatigue, nasal congestion and body aches/tested positive with infection; This is a spontaneous report from a contactable physician. A

male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 16Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. On 15Dec2020, the patient reported possible personal exposure (close contact / dinner with friend who tested positive on 18Dec2020, both unmasked) and received Covid vaccine on 16Dec2020. The patient reported fatigue on 17Dec2020, nasal congestion and body aches on 18Dec2020. He tested positive with infection control MD and had monoclonal Ab administered same day (18Dec2020). He wanted to know, what this means for his scheduled second vaccine and if needs to wait 90 days from positive Covid. The outcome of the events was unknown. Information on the lot/ batch number has been requested.; Sender's Comments: The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

"Arm was a little sore; a little dizziness; This is a spontaneous report from a non-contactable consumer (sister). A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration from Dec2020, at an unknown single dose for an unspecified immunization. The patient's medical history and concomitant medications were not reported. The patient works as an RN in (Place name), received the Pfizer vaccines (COVID-19 vaccine) on Saturday; she stated that her arm was a little sore and experienced a little dizziness ""but otherwise just fine"". Outcome of events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained."

I have good and bad side effects, first of all I have trouble, pain in my knees and today I relieved from much pain in knees,; Pain in the arm; Headache; Diarrhea; started with a feel and now it was more, it was a pain, it was like a crack in her abdominal; This is a spontaneous report from a contactable consumer (patient). A 52-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 08:15 at single dose for COVID-19 immunization. The relevant medical history included thyroid disease and arthritis (have problem with her knees and they said it arthritis). Concomitant medications included vitamin c, vitamin d3 and vitamin e, all from an unspecified date for thyroid disease. The patient stated that first moment it was okay, not feeling much just the pain in the arm on 17Dec2020 and in the next day she had good and bad side effects, first of all she had trouble, pain in her knees on 18Dec2020 and at the time of the report she relieved much from pain in knees, they came back but that was okay. She had a little headache, not much on 17Dec2020. But at the time of the report like an hour prior to the report she started with diarrhea in Dec2020. Diarrhea was getting worse, it started with a feel and now it was more, it was a pain, it was like a crack in her abdominal, she had gone to the bathroom few minutes prior to the report and almost she felt like she had to go again. The patient did not ask the dose and stated that they were supposed to give her a one dose, it was her first dose, her second dose coming on 07Jan. The outcome of the event pain in the arm was unknown, for event arthralgia was recovering, while the other events were not recovered. Information about Lot/Batch number has been requested.

"Lost weight; Achiness; Tired; Headache; her daughter was tested positive for COVID/ she was around her daughter; Blurriness; I could hardly see; A little bit of vision changes; eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit; eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit; eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit; Nauseous; This is a spontaneous report from a contactable Nurse (patient). A 54-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. The relevant medical history included blood cholesterol and sinus problem. Concomitant medications included pravastatin for cholesterol. The patient stated that she received the immunization on Thursday at the hospital that she worked at and Saturday and then at the time of the report her eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit on 19Dec2020. Today they were too this morning. So, that got better than yesterday because she cold compresses on them. For the next shot, the patient stated that she was not so sure, it was within 21 days. An appointment was set-up, she just had to look. It was during work, so she was working. She went downstairs, she got the show. She sat there while they watch her for several hour, observation time and she got on her phone and scanned in something. Maybe appointment but she got to work. She didn't write it down. The patient stated that her daughter was tested positive for COVID on Monday. And they said her to get test it because she was around her daughter. And then they weren't so sure whether or not to give her the vaccine. But they said it was okay so they did. She was negative at that time. The patient stated Friday at work, she didn't feel anything because she was working around, almost 3:30 or 4 O' clock on Thursday. She was nauseous all day at work on 18Dec2020. And just the minor ones that they had. That was to be expected, the achiness, felt a little swollen, tired, headache. But she was okay to work. But then at the time of the report after her eyes been swollen yesterday. She got up to get ready for work but her eyes were like. At that time in the morning on 19Dec2020 she could hardly see out of them. But they were much better at the time of the report. The patient had this mask that was a gel pack. So, it was bit of like a cold compress. And put Vaseline and they told her to get another COVID test. The patient had some vision. Some blurriness and just a little bit of vision changes on 19Dec2020. That she had not noticed at the time of the report. So that was resolved she thought. The patient underwent lab test included COVID test on an unspecified date which showed negative; weight on an unspecified date which showed about 186 pounds (she lost weight, so she might be a little more, she just hadn't checked). Therapeutic measures were taken as a result of the events ""eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit"". The outcome of the events ""eyes, both days, yesterday they were swollen, 'puffy' and draining a little bit"" was recovering, for the event ""Blurriness; I could hardly see; A little bit of vision changes"" was recovered on an unspecified date, the other events were unknown. Information on Lot /Batch Number has been requested."

"I was not feeling well and I actually was like feeling really sick; I was feeling really like weak; I was not feeling well and I actually was like feeling really sick; I was feeling really like weak; I was not feeling well and I actually was like feeling really sick; I was feeling really like weak; I had to throw up; I ended up falling on floor; Arm started hurting; I was getting like crampy; I had to throw up; I ended up falling on floor; This is a spontaneous report from a Contactable consumer. This consumer (patient) reported that the 59-year-old female patient received (BNT162B2), via an unspecified route of administration on

18Dec2020 (yesterday morning about 6:30) at single dose for covid-19 immunization. Medical history included Allergy and consumer stated, ""No, I take Zyrtec D for my allergies. But I have not taken any because I was feeling better from it. So, my doctor said you don't need to take it all the time, just take as you needed."" Concomitant medications included cetirizine hydrochloride/pseudoephedrine hydrochloride (ZYRTEC-D) for Allergy. The patient experienced ""I was not feeling well and I actually was like feeling really sick, I had to throw up, I was getting like crampy. And usually when I throw away I lie down but I didn't and I ended up falling on floor, I was feeling really like weak, Arm started hurting, I was getting like crampy"". No Investigation Assessment. Consumer stated, ""Actually I was just calling to report because I have taken the COVID shot, yesterday morning about 6:30 and I got some side effects from it. So, I was just calling, I guess it is just pamphlet and stuff."" Consumer stated, ""Yes I called off my work because I rescheduled my job today but I couldn't go because I was not feeling well and I actually was like feeling really sick. And I had to throw up. And then I was getting like crampy. And usually when I throw away I lie down but I didn't and I ended up falling on floor. So, I am okay but I didn't go to work because I was feeling really like weak."" Consumer stated, ""Actually they had it done it with the hospital. So, I didn't go to the doctor. They just had a, had to just go on the computer and go to that setup. And then I had an appointment yesterday at 6:30, that's when I got the shot taken at 6:30 in the morning. Consumer stated, ""What is that for? They gave me an envelope, I don't know they gave me a card too. Is that on that card? They schedule me my other appointment, I mean to get my other shot. When I have to get the other one I guess. I don't know why I can't find it. We found the card. It says dose COVID-19, it's Pfizer and then it's looks like E and then it's a J or a T, looks like a J or a T the way wrote it, we'll just go ET1685, I guess. Due date for next shot is 08Jan2021 at 9:15 am."" Consumer stated, ""That's the vaccine because I work around, I work in Intensive Care Unit. And it is pretty much second floor and in COVID unit. So, that's why I wanted to get it for my safety. Consumer stated, I did get them like 2 O' Clock this morning. My arm started hurting towards later in this evening and then I woke up and it didn't help me."" Consumer stated, ""No I feel better when I got up because I didn't go to work because I was a little not, you know weak and kind of. So, I called off my job because I don't want to be going over there and. Yeah I feel better, my stay close to bed because I fell."" No treatment was received. The outcome of the events was unknown. Information on the Batch/Lot number has been requested."

Hives around the injection site; This is a spontaneous report from a contactable consumer (patient). A 38-year-old male patient received the 1st dose of bnt162b2, Pfizer vaccine, lot number: EK5730, expiry date: Mar2021, via an unspecified route of administration in the right arm (deltoid) on 20Dec2020 11:10 at a single dose for COVID-19 immunization. Medical history included hypertension and diabetes mellitus. Concomitant medications included metformin since diabetic, aspirin [acetylsalicylic acid] on 20Dec2020, and ongoing zinc. The patient experienced hives around the injection site on 21Dec2020 05:30. The event was described as follows: after getting the vaccine, he woke up with hives around the injection site. It is itchy, crater-ish like. If you touch it is tough and it feels like one was bit by ants. This on the arm and head. It is bigger on the head. It is like huge bumps. He has been calling his HCP all morning, but has not heard anything back from the doctor. He is calling to see if there were any recommendations, ointments, or anything he can take. He mentioned he took Benadryl this morning for it. He went on to further explain when he woke up 5:30 am this morning he had a bunch of bumps that

were itchy, like ants or mosquitoes biting. They were pretty big. He has one on his collar bone. It is stiff and hard. The bumps are spreading towards the back of his back. He also has it on his left shoulder as well. He provided the hives as the same to worse. He added on his arm near the injection site is a lot worse compared to his forearm. Near the injection site it is also warm to touch. He stated this was typical symptom from what he read. He received the vaccine at 11:10 am. The patient is scheduled to get the second dose on 10Jan2021. The event did not require patient to visit the Emergency Room and the Physician Office. The reporter stated he has been trying to contact his physician to determine if his events are severe enough to go to the ER. He was informed that his doctor has been booked all day. He may have to go to the night clinic if does not get better. Outcome of the event was not recovered.

urticaria to bilateral upper extremity (BUE); This is a spontaneous report from a contactable nurse (patient). A 33-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number not provided), via an unspecified route of administration on 19Dec2020 21:00 at SINGLE DOSE for COVID-19 immunization at the hospital. Medical history included diabetes mellitus (DM), hypertension (HTN), depression, obesity, hyperlipidaemia (HLD), migraines, and degenerative disk disease (IDD). The patient also had allergies with sulfa, oyesters, and adhesives. Concomitant medication included insulin aspart (NOVOLOG), bupropion hydrochloride (WELLBUTRIN), metformin (METFORMIN), sumatriptan (SUMATRIPTAN), and losartan potassium (LOSAR) for unknown dates and indications. Prior to vaccination, the patient was not diagnosed with COVID-19 and had not been tested for COVID-19 since vaccination. On 19Dec2020 17:00, the patient experienced urticaria to bilateral upper extremity (BUE). The patient did not received any treatment for the event. The patient was recovering from the event. Information on the Lot/batch number has been requested.

Soreness in left upper arm; This is a spontaneous report from a non-contactable consumer. A 28-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiration date were not reported), via an unspecified route of administration on the left arm on 20Dec2020 at a single dose for covid-19 immunization. There were no medical history and concomitant medications. The patient had no known allergies to medications, food, or other products. The patient was not pregnant. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination and had not been tested for COVID-19 since the vaccination. The patient experienced soreness in left upper arm starting several hours after administration on 20Dec2020. Soreness was worst the next morning. No treatment was received for the adverse event. However, the outcome of the event was recovering. The event was considered non-serious. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

lightheadedness for 2 hours after vaccine; Flushing and tongue numbness within 2-3 minutes of vaccine administration; Flushing and tongue numbness within 2-3 minutes of vaccine administration; This is a spontaneous report from a contactable Physician (patient) A 42-year-old female patient received,at hospital, the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) intramuscular on arm left on 17Dec2020 (reported as at 01:15 PM) at a single dose for COVID-19 immunization .Medical history prior history of allergies requiring allergy shots, GERD , GERD and Sulfa and environmental/food allergies , food allergy .Concomitant medication included ibuprofen and cetirizine hydrochloride (ZYRTEC). No

Covid prior vaccination and no covid test vaccination provided . On17Dec2020 at 01:15 PM , the patient experienced Flushing and tongue numbness within 2-3 minutes of vaccine administration and lightheadedness for 2 hours after vaccine.All events were reported as non-serious. Patient received treatment with Benadryl 25 mg PO (per oral).The outcome of the events was recovered in Dec2020. Information on the lot/batch number has been requested.

a few blisters near the injection site; Arm soreness; This is a spontaneous report from a contactable consumer. A 29-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 19Dec2020 at single dose for immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient experienced a few blisters near the injection site in addition to arm soreness on 20Dec2020. Outcome of events was unknown. information about lot/batch number has been requested.

Dizziness; Fatigue; got the injection his left arm was a little sore/Severe left arm pain, soreness, throbbing; intermittent kind of dyslexia; This is a spontaneous report from a contactable consumer (respiratory therapist - patient himself). A 52-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number EK5730) via an unspecified route of administration on the left arm on 17Dec2020 at SINGLE DOSE for COVID-19 immunization (also reported as vaccination). Ongoing medical history included type 2 diabetes mellitus since Dec2003, renal disorder (reported as kidney prevention) and blood cholesterol abnormal (cholesterol was not high, but because of Type II Diabetes his doctor wanted to keep it at bay). Ongoing concomitant medications included metformin (METFORMIN) since Jan2004 for type II Diabetes, lisinopril (LISINOPRIL) since May2020 for kidney prevention and atorvastatin (ATORVASTATIN) since May2020 for cholesterol. On 17Dec2020, the patient had first dose administered of BNT162B2. When he got the injection, his left arm was a little sore (like if he leaned against his left arm or rubbed it he would notice the soreness). About mid-morning on 20Dec2020, his left arm just started throbbing like he had just blocked a lacrosse ball shot, severe left arm pain, and soreness. He also had onset of dizziness and fatigue as well on 20Dec2020. He went on, did a heating pad and ibuprofen and all that stuff and all that went on. He found it odd because these events did not start until around like 3 days after the injection was administered though the paperwork showed that these kind of events are expected in the first couple of days after product administered. On 21Dec2020 when he woke up around 11:30am, the throbbing went away, he was not as dizzy as before but still super fatigued and tired (then further stated that maybe a little bit better because he does not have that constant pain constantly draining him). The patient also mentioned that he wondered if there was an intermittent kind of dyslexia that he has because he will transpose words and just last week learned how to spell received without having to tell himself 'i before e except after c'. He also mentioned that he was tested like 4 times for COVID-19 and was negative every time in 2020. The outcome of the event of dyslexia was unknown while recovering for the remaining events.

Tiredness throughout the day; slight lightheadedness; slight headache; This is a spontaneous report from a contactable pharmacist (reporting for himself). A 38-year-old male patient received the first dose of bnt162b2 (BNT162B2, lot number and expiry date were unknown), intramuscular on 21Dec2020 09:30 on the left arm at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. Prior to vaccination, the patient was not diagnosed with

COVID-19. Since the vaccination, the patient has not been tested for COVID-19. On 21Dec2020, the patient experienced tiredness throughout the day, slight lightheadedness and slight headache. There was no treatment that was received for the events. The events were considered non-serious. The most recent COVID-19 vaccine was administered in the hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of the events was recovering. Information about Batch/Lot number has been requested.

Soreness in the arm more than any other vaccine in the past; This is a spontaneous report from a contactable Other Health Professional (patient). A 31-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EJ1685, via an unspecified route of administration in the left arm, first dose on 19Dec2020 14:15 at a single dose for immunisation. The patient's medical history and concomitant medications were not reported. The patient is not pregnant. She had not had other vaccines within four weeks prior to vaccine and she had no other medications in 2 weeks. Adverse event reported was soreness in the arm more than any other vaccine in the past. The onset was on 20Dec2020 with outcome of recovered in Dec2020. She took an over the counter ADVIL. She did not have covid prior vaccination nor had she tested post vaccination. The event was reported as non-serious.

"Chills; I felt like I am getting a fever; like flu like symptoms; nausea and that is why my voice is like this; nausea and that is why my voice is like this; felt like fatigued and tired; Numbness; This is a spontaneous report received from a contactable consumer (patient). A 41-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration, on 18Dec2020, at single dose, for COVID-19 immunization. Medical history included hypertension (also reported as borderline hypertension, which was before, and the patient got better). The patient reported exercising, he was heavier, but he is losing weight now. There were no concomitant medications. The patient reported, ""I got my COVID vaccine last Friday, that would be on the 18Dec2020. So I feel like I see the side effect of having it, (voice incomprehensible). The day that I got it, when I got back, on 18Dec2020, I felt like fatigued and tired. And then on Saturday (19Dec2020), which I was off, I felt a little better. But then, you know, I had a little numbness (Dec2020) but it disappeared. And then on Sunday, I went to work and last night (20Dec2020), I just woke up and I had chills and I felt like I am getting a fever, like flu like symptoms like nausea and that is why my voice is like this. Is it normal to feel after 3 days this side effect? I mean actually I was reading the paper that I got it because I need to, because I have work today, I need to inform my manager that I cannot go to work because I am feeling this side effect and I don't want him to think that you know."" The patient did not have lab work done and did not receive treatment for the events. The outcome of fatigue was recovering, numbness was recovered on an unspecified date in Dec2020, and the outcome of the remaining events was unknown."

"Woke up 2 days later with painful swelling under both eyes and pain around my chin. these are all areas, and the only areas that I have had dermal filler injections; Woke up 2 days later with painful swelling under both eyes and pain around my chin. these are all areas, and the only areas that I have had dermal filler injections; Woke up 2 days later with painful swelling under both eyes and pain around my chin. these are all areas, and the only areas that I have had dermal filler injections; This is a

spontaneous report from a contactable physician. A 45-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), intramuscular on the left arm on 16Dec2020 10:45 at single dose for COVID-19 immunisation. Medical history included hypertension and dermal filler injections. Concomitant medication included losartan. The patient stated, ""woke up 2 days later with painful swelling under both eyes and pain around my chin. These are all areas, and the only areas that I have had dermal filler injections. I started steroids and pain and swelling resolved in 3 days"". The outcome of the events was recovered on Dec2020."

she was running a temperature of 100.3 degrees Fahrenheit/highest her temperature got up to last night was 101.9 degrees Fahrenheit; Left arm sore; Left arm was just a little swollen; A little swollen in her left underarm and armpit; Started getting hot and cold and hot and cold; Achy; Nauseous/Feeling like she was going to throw up; This is a spontaneous report from a contactable consumer (patient). A 50-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number and expiration date were not reported, via an unspecified route of administration in the left arm, first dose on 19Dec2020 07:30 at a single dose for vaccination. Medical history included ongoing colitis ulcerative when she was 23 years old (1993), POTS (Postural Orthostatic Tachycardia Syndrome) from 2017 and ongoing, had thyroid problem, with heart medication. Concomitant medication included prednisone, levothyroxine sodium (SYNTHROID), irbesartan, bisoprolol fumarate, fluticasone and potassium. The patient stopped prednisone about 4-5 days before COVID-19 Vaccine administered. She talked to her doctor about prednisone use and getting COVID-19 Vaccine, doctor told her to go ahead and get COVID-19 Vaccine. The patient is a Certified Nursing Assistant who received the Pfizer COVID-19 Vaccine at her place of employment on 19Dec2020. This was her first dose of 2 dose series of the vaccine. She reported after she received the vaccine injection, she had onset of 'achy, nauseous, left arm sore, left arm was just a little swollen, a little swollen in her left underarm and armpit, she started getting hot and cold and hot and cold, feeling like she was going to throw up and was running a temperature. She added that at the night of 19Dec2020 she felt achy and a little nauseous but it was not bad so she took some TYLENOL and she was feeling fine. She stayed at work Saturday. Starting morning of 20Dec2020 she woke up and her left arm felt like she had gotten a tetanus shot, left arm was sore and just a little swollen and she was a little swollen in her left underarm and armpit; she felt achy all over again; so she took some more TYLENOL and went to work and was feeling fine until about lunch time on 20Dec2020. Around lunch time on 20Dec2020, she started getting hot and cold and hot and cold, feeling like she was going to throw up; by about 4:30pm on 20Dec2020 she was running a temperature of 100.3 degrees Fahrenheit. The highest her temperature got up to last night was 101.9 degrees Fahrenheit. She took a Tylenol PM to knock her out to sleep because she was achy. The outcome of the events achy, nauseous, left arm sore, left arm was just a little swollen, a little swollen in her left underarm and armpit, started getting hot and cold and hot and cold, feeling like she was going to throw up, and she was running a temperature of 100.3 degrees Fahrenheit/highest her temperature got up to last night was 101.9 degrees Fahrenheit was recovering. Information about Batch/Lot number has been requested.

headache; fever of 100/mild fever 99.5; fatigue; non productive cough; tested Covid 19 positive; tested Covid 19 positive; This is a spontaneous report from contactable consumer. A 23-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via unspecified route of administration on

unspecified date at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. It was reported that the patient was a 23 years old nurse and received the Covid 29 vaccine on Saturday morning. Sunday she developed a headache fever of 100 and fatigue. Monday she developed a non productive cough as well as mild fever 99.5, fatigue, and the headache was reduced. It was also reported that the patient was tested Covid 19 positive on 22Dec2020. The outcome of the events were unknown. Information on the lot/batch number has been requested.

Diarrhea; she could feel her stomach again; This is a spontaneous report from a contactable consumer. A 64-year-old female patient received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA Vaccine BNT162B2; lot number: EH9899), via an unspecified route of administration on 17Dec2020 at a single dose by injection once so she doesn't get COVID. The patient's medical history was not reported. There were no concomitant medications. The patient experienced diarrhea on 19Dec2020. The patient just thought about it, she had diarrhea, she had said everything is good, but she didn't think about it when answering the questions, when she eats the food, she notices, she got the COVID vaccine. She doesn't know how to change responses to the questions. She answered no to them, but this could be tied together. Every time she eats, she gets diarrhea. Patient got the COVID test. She wanted to change answers, but it wouldn't let her. Patient could feel her stomach again in Dec2019, but she hasn't eaten. This was the first time she received the vaccine. The outcome of the events was unknown.

mild rash around the injection site; This is a spontaneous report from a non-contactable consumer. A 50-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number not provided), via an unspecified route of administration in 2020 at SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. In 2020 (five days after vaccination), the patient experienced mild rash around the injection site. Outcome of the event as unknown. Information about lot/batch number cannot be obtained. No further information is expected.

Rash/rash did have a pretty discreet or distinct area around the injection site; She says it was pretty red and you could tell the area was swollen at first, and it has faded; She says it was pretty red and you could tell the area was swollen at first, and it has faded; She says that the rash this morning has spread to her left chest wall and breast area, and she was looking at her body in other places and saw the reaction was on the rest of her body too/rash had maybe a little mild itch; injection site may bleed longer which was the only thing notable; This is a spontaneous report from a contactable physician (patient). A 28-year-old female patient received single dose of BNT162B2 (lot number: EK5730, exp date not reported), via an unspecified route of administration (one injection to left deltoid) on 18Dec2020 07:00 for primary prevention. Medical history included rare bleeding disorder from 2016, and seasonal allergies. She says she had no effects from it but knows of it from genetic testing. Patient did not receive any other vaccines at the same time as this one, or any other medications. Patient was a resident doctor at the hospital and was calling as consumer. She received her first dose of the Pfizer BioNTech COVID-19 vaccine on 18Dec2020 (Friday morning at 07:00AM). She had gotten sort of a whole body generalized rash which the morning of reporting was worse nearer the site and left chest wall area. She says she would like to see if this has happened to and been reported by others. The vaccine was offered by her employer to any staff who wanted to get it, and she was in phase one. She says that there wasn't a

specific provider who prescribed it. She has the card that they gave her following the injection and says that it doesn't have an expiration date on it, just the date given and the name of the clinic site. She says it just says Pfizer on this part, on the card. She says on the other form it says Pfizer BioNTech COVID-19 vaccine. She says that there was no dose information provided for the injection. Patient further reported that the rash did have a pretty discreet or distinct area around the injection site up through probably the day before reporting (onset date: Dec2020). It was pretty red, and you could tell the area was swollen at first, and it has faded. She says that the rash the morning of reporting had spread to her left chest wall and breast area, and she was looking at her body in other places and saw the reaction was on the rest of her body too. She says that the rash had maybe a little mild itch, she hadn't noticed if there was anything, just a mild itch, not significant. She didn't do any treatment for the rash specifically, she did take loratadine (CLARITIN) the morning of reporting, but not for that reason, as it was for seasonal allergies, not because of the rash. She provides potential LOT 9HE36498, and says there was no UPC, she got the loratadine and it could have been in original package as one of two, there was no bar code on the label. She provides a second potential LOT 61282ZYF3, and EXP May2021. She says she was told the injection site may bleed longer, due to rare bleeding disorder, which was the only thing notable. No investigation assessment performed. The patient recovered from site swollen on Dec2020. The outcome of other events was unknown.

Fever of 102.4; chills; full body muscle aches; fatigue; nausea; injection site pain; swollen lymph nodes; This is a spontaneous report from a contactable healthcare professional. A 21-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), Batch/lot number: ek5730, intramuscular in the left arm on 21Dec2020 08:45 at single dose for COVID-19 immunization. Medical history included COVID-19 diagnosed prior vaccination. The patient has no known allergies. The patient was not pregnant at the time of vaccination. The patient's concomitant medications were not reported. The patient experienced fever of 102.4, chills, full body muscle aches, fatigue, nausea, injection site pain, and swollen lymph nodes on 21Dec2020 at 19:00. No treatment was given for the events. The vaccine was administered at the hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine and no other medications was received within 2 weeks of vaccination. Since the vaccination, the patient has not been tested for COVID-19. The outcome of the events was not recovered.

"Cold sensation down her right arm; Began ""seeing stars""; Metallic taste in her mouth; This is a spontaneous report from a contactable pharmacist. A 40-year-old female patient received the first dose of bnt162b2 (Pfizer Biontech COVID 19 vaccine), Lot number: EJ1685, intramuscular at the right arm on 21Dec2020 09:00 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was not pregnant at the time of vaccination. On 21Dec2020 09:00, the patient experienced cold sensation down her right arm, began ""seeing stars"", followed by a metallic taste in her mouth. The patient was not hospitalized for the events but required emergency room/department or urgent care visit. The patient did not receive any treatment for the events. The events were reported as non-serious. The vaccine was administered in a workplace clinic. It was unknown if the patient has received any other vaccines within 4 weeks prior to the COVID

vaccine. Prior to the vaccination the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of the events was unknown."

Severe ear and eye pain; Severe ear and eye pain; This is a spontaneous report received from a contactable nurse. A 51-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date not reported), intramuscular in left arm, on 21Dec2020 15:15, at single dose, for COVID-19 immunization. Medical history included hypertension, depression, and known allergies to eggs, latex, nuts and codeine. The patient is not pregnant. Concomitant medication included aspirin (ASPIRIN), ascorbic acid (VITAMIN-C), hydrochlorothiazide, lisinopril (ZESTORETIC), venlafaxine and zinc. The patient previously took codeine and experienced allergy. The patient experienced severe ear and eye pain on 21Dec2020 at 18:30. It was also reported that the patient did not receive any vaccines within 4 weeks prior to BNT162B2. The patient was not diagnosed with COVID-19 prior to vaccination. The patient has not been tested for COVID-19 since vaccination. Treatment included ibuprofen and rest. The outcome of the events was recovering. Information on the Batch/Lot number has been requested.

was up and down all night; Nausea; so out of breath/was having some shortness of breath; feeling bad; low grade fever, with the highest temperature being 99.8 degrees; Abdominal cramping; pooped in her pants/did another poo right after/a little more diarrhea; This is a spontaneous report from two contactable nurses (patient and daughter). A 65-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EH9899, expiry date unknown) intramuscular at right deltoid on 17Dec2020 (10:30) at single dose for COVID-19 immunization. The patient did not have any other vaccines on the same day as receiving the COVID vaccine. Medical history was none. The patient's concomitant medications were not reported. The patient on this past Thursday (17Dec2020), around 10:30 AM, the caller had her COVID vaccine. The patient informed that she lives 20 minutes (address), and on the way home after getting the vaccine that morning, the patient started having abdominal cramping (17Dec2020 17:15) like she needed to go to the bathroom. Due to construction and traffic, she was unable to stop to use the bathroom anywhere and by the time she got home, she had pooped in her pants and when she got inside the house and looked, it looked like a cow patty. The patient got the bathroom and did another poo right after that. The patient that night, she had a little more diarrhea, but then she was okay on Friday and went to work. The patient informed that on Saturday (19Dec2020), after lunch, she started feeling bad and was having diarrhea again, but it was sporadic. The patient informed that yesterday (21Dec2020) afternoon, she got diarrhea again. The patient informed that last night (20Dec2020) she was up and down all night, and also had associated nausea and a low grade fever, with the highest temperature being 99.8 degrees. The patient's daughter informed that the low grade fever started Saturday (19Dec2020) and was on Saturday and Sunday evenings, but daughter informed that the patient has not had fever this morning so far. The patient did not go to work today (21Dec2020). The patient informed that over the weekend (20Dec2020), she had gotten a ham into her daughter's (nurse too) refrigerator, and the daughter asked the patient why she was so out of breath. The patient informed that she was having some shortness of breath as well. The patient would say it was not ongoing but she also was still in bed at this time so she was unsure. The reporter informed that the patient was not specifically prescribed the vaccine, but was given the

product as part of a hospital policy. The patient did provide her Primary Care's name and phone number but did not have address or email address to provide at this time. The outcome of the events abdominal cramping was recovering, pooped in her pants/did another poo right after/a little more diarrhea and Nausea was not recovered, feeling bad, was up and down all night, so out of breath/was having some shortness of breath was unknown, low grade fever, with the highest temperature being 99.8 degrees was recovered on Dec2020.

sore throat before she got the shot, but it made it worse; sore throat before she got the shot, but it made it worse; Body aches; She couldn't swallow; This is a spontaneous report from a non-contactable consumer (patient's coworker). A female patient of an unspecified age received bnt162b2 (BNT162B2, lot no. and expiry date were not reported), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient medical history included sore throat. The patient's concomitant medications were not reported. The patient got the shot on Tuesday and on Thursday (unspecified date) she got sore throat and body aches. She gargled with salt water and drank tea and felt better the next day. It was clarified that the patient had the sore throat before she got the shot, but it made it worse. She said she couldn't swallow. The outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

she felt a little more local soreness than she did with the regular seasonal influenza shot; This is a spontaneous report from a non-contactable consumer (patient's husband). A female patient in her mid 30s received her first BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine), via an unspecified route of administration on 20Dec2020 at a single dose for COVID-19 immunization. The patient's medical history was not reported. The patient's concomitant medications were not reported. The patient noted that she felt a little more local soreness than she did with the regular seasonal influenza shot on an unknown date in Dec2020. The outcome of the event was unknown. No follow-up attempts are possible, information about lot/batch cannot be obtained. No further information is expected.

"hot flash; itchy throat; This is a spontaneous report from a non-contactable pharmacist. A female patient of an unspecified age received first dose of BNT162B2 (COVID-19 mRNA Vaccine BNT162B2), via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced a ""hot flash"" 5 minutes after COVID-19 vaccination and then ""itchy throat"" 30 minutes after vaccination on an unspecified date. They would liked to know if patient should receive the second dose. She is otherwise fine with all symptoms resolved and never had respiratory distress of any kind. The outcome of the events was recovered on an unknown date. No follow-up attempts are possible; information about lot/batch number cannot be obtained."

she felt dizzy; This is a spontaneous report from a contactable Nurse (patient). A 50-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), on unknown date via unknown route of administration at unknown dose for unknown indication. Medical history and concomitant medications were not reported. Patient received the COVID vaccine. Later in the day she felt dizzy. The outcome of the event was unknown. Information on the lot/batch number has been requested.

"Pain in upper two shoulders and neck/upper body joint pain, both sides; Generalized weakness; Pain in upper two shoulders and neck; This is a spontaneous report from a contactable physician reporting for herself. This 63-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot/batch number not provided) on the morning of 20Dec2020, intramuscularly in the left arm at a single dose, for COVID-19 immunization. The patient's medical history included arthritis, esophagitis and esophageal ulcer, from unspecified date and unspecified if ongoing. The patient's concomitant medications were not reported. On 20Dec2020, the patient (physician) called to report two side effects: pain in upper two shoulders and neck, generalized weakness. She developed an upper body joint pain, both sides. She got the injection on the left but both her shoulders had joint pain and weakness. She did not receive treatment for the events. She had the COVID test on 19Dec2020 or 18Dec2020 (reported as ""yesterday"" and ""2 days ago"") but the results were not back as of 20Dec2020. The outcome of the events was unknown. The reporter assessed the events as related to the vaccine. Information on the lot/batch number has been requested."

Facial swelling; Low grade fever around a 100; Got my eye supposedly my eye lids like little swelling and they looks like they are bruised and they itch like crazy; Got my eye supposedly my eye lids like little swelling and they looks like they are bruised and they itch like crazy; I have swelling in both of my eyes; It is getting pretty bad actually, it has got worse; This is a spontaneous report from a contactable nurse (reporting for herself). A 41-year-old female patient received bnt162b2 (BNT162B2 also reported as Covid vaccine by Pfizer, lot EJ1685), via an unspecified route of administration on 17Dec2020 at single dose for immunisation. Medical history included depression and anxiety. The patient's concomitant medications were not reported. The patient got the COVID vaccine on Thursday of last week (17Dec2020) and had low grade fever around a 100. On Friday (18Dec2020) she started getting little bit of facial swelling not a whole bunch. After the weekend, her eye lids had little swelling and they look like they were bruised and they itch like crazy. She does not have any drainage like conjunctivitis or anything like that but it looks like she have swelling in both of my eyes and that doesn't happens to her. She does not have any but was probably going in today because it was getting pretty bad actually, it has got worse. The outcome of events was not recovered.

Headache- lasted 12 hours; 24hrs after injection Tachycardia at rest (hr 106); chest pain; flushing/feeling very warm; flushing/feeling very warm; elevated BP 136/96; This is a spontaneous report from a contactable Nurse reporting for himself. A 52-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), intramuscular on 17Dec2020 10:45 AM at single dose for covid-19 immunization. Vaccine location was Right arm and it was the first dose. The COVID-19 vaccine was administered at Hospital. Medical history included mild coronary artery disease (CAD), Migraine, Psoriasis, and allergy to Sulfa Medications. Concomitant medication included atorvastatin (LIPITOR), finasteride, cetirizine hydrochloride (ZYRTEC]), aspirin, melatonin, biotin, zinc, ergocalciferol (VIT D), ascorbic acid (VIT C), ubidecarenone (COQ10), fremanezumab (AJOVY), and adalimumab (HUMIRA). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced headache- lasted 12 hours, 24hrs after injection tachycardia at rest (heart rate (HR) 106), chest pain, flushing/feeling very warm, elevated blood pressure (BP) 136/96 on 18Dec2020 10:30. Symptoms lasted for about 2 hours. No treatment received for the events. Prior to vaccination,

the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of the event headache was recovered on 18Dec2020 22:30 (lasted 12 hours), the outcome of the other events tachycardia at rest (heart rate (HR) 106), chest pain, flushing/feeling very warm, elevated blood pressure (BP) 136/96 was recovered on 18Dec2020 (lasted about 2 hours).

Severe rigors and fevers; Severe rigors and fevers; other vaccine same date product; other vaccine same date product; This is a spontaneous report from a contactable physician (patient). An adult male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in arm left on 21Dec2020 08:00 at single dose for COVID-19 immunisation. Facility where the most recent COVID-19 vaccine was administered was hospital. Medical history included covid (if Covid prior vaccination: Yes/Prior to vaccination, was the patient diagnosed with COVID-19?: Yes). No allergies to medications, food, or other products. Concomitant medications the patient received within 2 weeks of vaccination included gabapentin (NEURONTIN), ibuprofen (MOTRIN), other vaccine same date product=Pfizer, other vaccine same date vaccine location was left arm. The patient experienced severe rigors and fevers on 22Dec2020 02:00. The patient not received any other vaccines within 4 weeks prior to the COVID vaccine. Since the vaccination, the patient has not been tested for COVID-19. Therapeutic measures were taken as a result of severe rigors and fevers (Tylenol). This case was non-serious. The outcome of events severe rigors and fevers was not recovered. The outcome of other events was unknown. Information on the lot/batch number has been requested.

I had severe body rigors/Chills; I threw up; I had a 101.8 fever; I was pretty much out all day yesterday, like I was out sleeping with a fever; pretty much out; This is a spontaneous report from a contactable Nurse. A 59-year-old female patient started to receive first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number: EJ1685, Expiry Date: 31Mar2021) intramuscular on 19Dec2020 at 0.3 mL, single for covid-19 immunization from her work. Patient history was reported as no. The patient didn't have really anything. Concomitant medication included paracetamol (TYLENOL), the patient had been taking some Tylenol. The patient had a vaccination Saturday morning on 19Dec2020 and had a very bad reaction during the night. The patient had severe body rigors and chills. She threw up. She had a 101.8 fever. She was pretty much out all day yesterday, like was out sleeping with a fever. Investigation assessment was no. The patient just would like to know if she can get the second injection. Outcome of the events was unknown. The events were considered as related by the reporter via global introspection (Method of assessment).

anaphylactic reaction; This is a spontaneous report from a contactable physician via a sales representative. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiration date not provided), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced an anaphylactic reaction 8 hours after receiving the Covid-19 vaccine. The outcome of the event was unknown. Information about Batch/Lot number has been requested.; Sender's Comments: Based on the compatible temporal association and the drug's known safety profile, the Company considers the anaphylactic reaction is possibly related to BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE)

vaccination. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"Runny nose; Headache; Joint pain I guess kind of, small moderate pain; Really bad sore throat; This is a spontaneous report from a contactable consumer (patient). A 31-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EKS730), intramuscular on 17Dec2020 at single dose for COVID-19 immunization at hospital. The patient's medical history included seasonal allergy (Seasonal allergies he guess, that's it). Concomitant medications were not reported. The patient previously took cetirizine hydrochloride (ZYRTEC) from an unspecified date to Sep2020, not currently, he had not been taken it since summer but he had not currently taken it, he have stopped taking it, three months before the vaccine. The patient was a paramedic (further not clarified) and received the vaccination at a hospital, not a pharmacy. Patient guessed that they vaccinated there whole front line staff. The patient got the vaccine on Thursday (17Dec2020), Pfizer vaccine, Covid 19 vaccine and he was just having side effects mostly sore throat, he was having a really bad sore throat and he was expecting. He knew they said fever, chills, headache, joint pain was normal and things like that they are normal. But he just wasn't sure of this sore throat part of it and was also wondering if he was able to take like, anything to help with the symptoms. He also had other symptoms, on 20Dec2020 (started yesterday by the time of reporting), he experienced runny nose, headache, ""joint pain he guessed kind of, small moderate pain"" and really bad sore throat. As a treatment to the events, he took DayQuil on 20Dec2020 and was not sure what that dosage was. The events were quite persisting, which started yesterday. The patient had general lab work of Cholesterol on date that he didn't remember and did not know the result of it. The outcome of the events was not recovered."

Pain at injection site; Tachycardia like 120 heart rate; Dizziness; Fatigue; Fever; Stressing; Threw up; This is a spontaneous report from a contactable Other healthcare professional (Nurse Practitioner, also the patient). A 32-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot number: EK5730), intramuscularly on 20Dec2020 at single dose on right deltoid for COVID-19 immunization. Medical history reported as none. There were no concomitant medications. The patient experienced tachycardia, dizziness, fatigue, fever, stressing, threw up on an unspecified date in Dec2020, and pain at injection site on 20Dec2020. The patient received Covid vaccine yesterday on 20Dec2020 and he woke up and he threw up twice and he have fever 102 and tachycardia like 120 heart rate and some dizziness and he took some Tylenol (taken as treatment) and just drinking water. Feeling a little better right now. Tylenol was taken this morning as a treatment for fever of 102. For Causality, consumer stated, he believed so, because like he hasn't been around, he obviously worked around people who were sick, but he was fully gown and fully PPE. He was fine until this morning. Last night the only symptom he was having was pain at injection site which was expected. Of course, he can expect a low grade fever or maybe just some fatigue, he thought he was just stressing, he had fever went to 102 and he developed tachycardia and dizziness which was getting better after medicine and drinking fluid.

Therapeutic measures were taken as a result of tachycardia, dizziness, fever. The outcome of the events tachycardia, dizziness, fever was recovering, the outcome of the other events was unknown.

Left arm soreness, myalagias and low grade temp 100.5 the morning after the dose.; Left arm soreness, myalagias and low grade temp 100.5 the morning after the dose.; Left arm soreness, myalagias and low grade temp 100.5 the morning after the dose.; This is a spontaneous report from a contactable physician (patient). A 44-year-old female patient received the first single dose of BNT162B2 (Lot number: EH9899, exp date not reported), intramuscular (Anatomical Location: Arm Left) on 21Dec2020 13:45 for immunization. The COVID-19 vaccine was administered at the hospital. The patient was diagnosed with COVID-19 prior to vaccination. The patient had no known drug allergies (NKDA). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. There were no other medications the patient received within 2 weeks of vaccination. The patient experienced left arm soreness, myalagias and low grade temp 100.5 the morning after the doses (22Dec2020, 04:30 AM). Treatment received for the adverse events included paracetamol (TYLENOL) and naproxen (ALLEVE). The event was considered as non-serious by the reporter. Since the vaccination, the patient had not been tested for COVID-19. The outcome of the events was not recovered.

""""sweaty feeling""; Developed headache; flushing after injection; redness; This is a spontaneous report from a contactable nurse. A 24-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number=EJ1685), intramuscularly on left arm at 12:00 PM on 21Dec2020 at single dose for COVID-19 immunization. Medical history included exercise-induced asthma. The patient's concomitant medications were not reported. The patient experienced headache, redness and flushing after injection, also reported ""sweaty feeling"" at 12:15 PM on 21Dec2020. Ae resulted in: Emergency room/department or urgent care. All events were reported as non-serious. The outcome of events was unknown."

Soreness at injection site; Soreness at injection site The night of vaccine being given, noted fever, chills, malaise, and fatigue. Resolved next morning.; Soreness at injection site The night of vaccine being given, noted fever, chills, malaise, and fatigue. Resolved next morning.; Soreness at injection site The night of vaccine being given, noted fever, chills, malaise, and fatigue. Resolved next morning.; Soreness at injection site The night of vaccine being given, noted fever, chills, malaise, and fatigue. Resolved next morning.; This is a spontaneous report from a non-contactable Physician. A 25-years-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number:9899), intramuscularly on 21Dec2020 12:00 PM at left arm, single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced fever, chills, malaise, and fatigue from 21Dec2020 16:00. Resolved next morning on 22Dec2020. No treatment was received for the adverse event. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No seriousness criteria: no Results in death, no Life threatening, no Caused/prolonged hospitalization, no Disabling/Incapacitating, no Congenital anomaly/birth defect. No follow-up attempts are possible. No further information is expected.

Moderate left arm pain, radiating into upper back; Moderate left arm pain; This is a spontaneous report from a non-contactable nurse (patient). A 36-year-old male patient received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), via an unspecified route of administration at left arm on 21Dec2020 10:45 at single dose for covid-19 immunization at hospital. Medical history included allergy to penicillin (PCN). Concomitant medication included fish oil, cetirizine hydrochloride (ZYRTEC), fluticasone propionate within 2 weeks of vaccination. The patient experienced moderate left arm pain, radiating into upper back on day 2 (22Dec2020), the adverse event start time was 21Dec2020 08:00 PM. No treatment received for the adverse event. No COVID prior vaccination, no COVID tested post vaccination. The event outcome was not recovered. The was not reported as a serious report. No follow-up attempts are possible. No further information is expected.

Mild soreness left arm at injection site for 1 day, no redness or swelling; This is a spontaneous report from a contactable other healthcare professional (patient). A 56-year-old male patient received the first dose of bnt162b2 (Pfizer Biontech COVID 19 vaccine), Lot number: EH9899, intramuscular in the left arm on 18Dec2020 14:15 at a single dose for COVID-19 immunization. Medical history included Psoriatic Arthritis, HTN, HLD and known allergies: Sulfa. Concomitant medication included losartan and gabapentin. On 18Dec2020 14:15, the patient experienced mild soreness left arm at injection site for 1 day, no redness or swelling. The patient was not hospitalized for the event and did not receive any treatment for the event. The event was reported as non-serious. The vaccine was administered in a hospital. The patient has not received any other vaccines within 4 weeks prior to the COVID vaccine. Since the vaccination, the patient has not been tested for COVID-19. The event recovered on an unspecified date in Dec2020.

Headache; Soreness; Exhaustion; This is a spontaneous report from a contactable healthcare professional. A 45-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration at the right arm on 21Dec2020 08:15 at a single dose for COVID-19 immunization at a hospital. Medical history included breast cancer, blood pressure abnormal, blood cholesterol abnormal. Concomitant medication included hydrochlorothiazide (HCTZ) and unspecified medications for blood pressure, cholesterol. The patient experienced headache, soreness, and exhaustion on 21Dec2020, 10:15. with no treatment The patient was recovering from the events.

started getting severe abdominal cramping; This lead to diarrhea, nausea with vomiting; This lead to diarrhea, nausea with vomiting; This lead to diarrhea, nausea with vomiting; Afterwards, was feeling tired, but ok.; This is a spontaneous report from a contactable Pharmacist reported for herself. A 51-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), intramuscular on 21Dec2020 15:45 at single dose for covid-19 immunization. Vaccine location was Arm Right and it was the first dose. The COVID-19 vaccine was administered at Hospital. Medical history included Hypertension, asthma, obesity and Seasonal allergies - mold/dust etc.. Concomitant medications included losartan, indapamide, omeprazole, montelukast. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. About 9pm on 21Dec2020, the patient started getting severe abdominal cramping. This lead to diarrhea, nausea with vomiting. This lasted about 60-90 minutes of not being able to leave the restroom. Afterwards, she was feeling tired, but ok. No lingering

effects this morning (22Dec2020). No treatment was received for the adverse events. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of the events was recovered on 22Dec2020.

Fever, nausea/covid test result= Positive; Fever, nausea/covid test result= Positive; This is a spontaneous report from a contactable nurse (patient). A 24-year-old female (no pregnant) patient received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date were not provided), via an unspecified route of administration in arm Left on 17Dec2020 02:30 at single dose for COVID-19 immunisation. Facility where the most recent COVID-19 vaccine was administered was hospital. The patient's medical history and concomitant medications were not reported. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient experienced fever, nausea on 20Dec2020 12:00. Since the vaccination, has the patient been tested for COVID-19. The patient underwent lab tests and procedures which included PCR: positive on 21Dec2020, POCT: positive on 21Dec2020, Nasal Swab: positive on 21Dec2020. (reported as '[{covid test type post vaccination= Nasal Swab, covid test name post vaccination= PCR, covid test date= 21Dec2020, covid test result= Positive}, {covid test date= 21Dec2020, covid test type post vaccination= Nasal Swab, covid test name post vaccination= POCT, covid test result= Positive}]'). No treatment received for the adverse event. The patient not received any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of events was not recovered. Information on the Batch/Lot number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded.

Fever 99.9f, arm soreness, malaise; Fever 99.9f, arm soreness, malaise; Fever 99.9f, arm soreness, malaise; This is a spontaneous report from a contactable nurse (patient). A 32-year-old female patient (not pregnant) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), Intramuscularly on 21Dec2020 11:45 AM in left arm at single dose for COVID-19 immunization. The COVID-19 vaccine was administered at hospital. Medical history included COVID prior vaccination. Concomitant medication in two weeks included minerals nos, vitamins nos (PRENATAL VITAMINS), probiotics, levothyroxine. It was unknown if the patient received any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient experienced fever 99.9f, arm soreness, malaise on 22Dec2020 04:00 AM. The patient received paracetamol (TYLENOL) as treatment. The outcome of events was unknown.

Arm soreness for 48 hour; Fatigue; muscle aches; chills; This is a spontaneous report from a contactable physician (patient). A 62-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number:20201216-830), via an unspecified route of administration on 16Dec2020 15:00 at arm left at single dose for covid-19 immunization. The COVID-19 vaccine was administered at Hospital. No other vaccine in four weeks. Medical history included hypothyroidism and hyperlipidaemia. The patient had no known allergies. Concomitant medication included levothyroxine, atorvastatin, ergocalciferol (Vitamin D) for an unspecified indication. The patient experienced arm soreness for 48 hour then fatigue, muscle aches and chills on 3rd and 4th days after vaccination on 19Dec2020 at 08:00 AM. No treatment was received for the event. Prior to vaccination, the patient was

not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. Outcome of the event was recovered.

muscle aches; Chills; This is a spontaneous report from a contactable other health professional (reported for himself). A 56-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number not provided) (Pfizer EH 9899), intramuscularly on 21Dec2020 10:30 at single dose on right arm for COVID-19 immunization. Medical history included hypertension (HTN) and No known drug allergies (NKDA). The patient's concomitant medications were not reported. The most recent COVID-19 vaccine was administered at Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced chills and muscle aches on 22Dec2020 02:30. The events were non-serious and no treatment received per the reporter. The outcome of the events was recovered on 22Dec2020. Information on the Batch/Lot number has been requested.

Arm pain; This is a spontaneous report from a contactable other health care professional. A 38-year-old female patient received bnt162b2 (BNT162B2; lot number: EJ1685), via an unspecified route of administration on 22Dec2020 09:15 in left arm for COVID-19 immunization. Medical history included allergic rhinitis. Concomitant medication included oseltamivir phosphate (TAMIFLU), meloxicam (MOBIC). The patient previously took dexilant and experienced drug hypersensitivity. No COVID prior vaccination. The patient has not been tested for COVID-19 post vaccination. On 22Dec2020 09:30, the patient experienced arm pain. The event was assessed as non-serious. The outcome of the event was recovering.

Neck also sore muscles; Neck also sore muscles; nausea; very bad HA, almost migraine; This is a spontaneous report from a contactable nurse (patient). A 45-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number=EL0140), intramuscularly on left arm at 05:30 AM on 21Dec2020 at single dose for COVID-19 immunization. Medical history reported as none. There were no concomitant medications (No other-vaccine-in-four weeks, no other-medications-in-two weeks). 21 hours post injection (02:45 AM) on 22Dec2020, the patient experienced very bad HA (headache), almost migraine. Then added nausea. HA was bad for 3 hours, then slowly better. Neck also sore muscles. All events were reported as non-serious. Excedrine and advil taken intermittently. Slept/rested in dark for 8 hours. Prior to vaccination, it was unknown if the patient was diagnosed with COVID-19. Since the vaccination, the patient had been tested for COVID-19. The outcome of events was recovering.

PVCs developed about 20 mins after administration of vaccine; This is a spontaneous report from a contactable Pharmacist. A 35-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/ lot number: EL0140), intramuscularly on 21Dec2020 13:45 at right arm, at SINGLE DOSE for covid-19 immunization. Medical history included ongoing chronic back pain. Concomitant medication included escitalopram oxalate (LEXAPRO), amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL). The patient was not pregnant at the time of vaccination. The patient experienced PVCs about 20 mins after administration of vaccine. Placed on Zoll cardiac monitor on 21Dec2020. Vitals to include BP, heart rate, respiratory, pulse ox

several times during additional monitoring period. No respiratory distress or other issues during this monitoring period. No treatment was received for the adverse event. It was unknown if the patient was diagnosed with COVID-19 prior to vaccination. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of the event was recovered in Dec2020.No seriousness criteria: no Results in death, no Life threatening, no Caused/prolonged hospitalization, no Disabling/Incapacitating, no Congenital anomaly/birth defect.

feeling hot and diaphoretic; diaphoretic/ sweaty; massive headache; sleep 13 hours; swollen face; joint pain; chills; start wheezing with a dry cough; start wheezing with a dry cough; 101.8 fever/ mild fever 99.6; swelling in my lymph nodes happened immediately/ swelling; some chest tightness; hard to breathe it was like breathing through a straw; Unable to go to work; uncomfortable; Never shown allergic reaction to vaccines before this; This is a spontaneous report from a contactable other Health Professional (Patient). A 26-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 08:00 at single dose for covid-19 immunization in hospital. Medical history included polycystic ovary syndrome (PCOS) and possibly rheumatoid arthritis. No Known Drug Allergies. Concomitant medications in two weeks included birth control and iron supplements. The patient got the vaccine at 8:00 am on 17Dec2020 Thursday and experienced swelling in her lymph nodes happened immediately and some chest tightness. It was never hard to breathe it was like breathing through a straw. At 10:00 am hits and she got joint pain, chills, start wheezing with a dry cough and a 101.8 fever. Unable to go to work. She sleep and wake up 18Dec2020 Friday with a mild fever 99.6 and some chest tightness/swollen Lymphnodes but nothing else. On 19Dec2020 Saturday she took antihistamines to see if that would help her swelling and go to bed. The patient wake up with a swollen face which was a new reaction to this medicine I've taken before. Chest tightness was gone/ lympnodes still swollen. On 20Dec2020 Sunday she sleep 13 hours. On 21Dec2020 Monday happened and she awake to feeling hot and diaphoretic. She drank water and remove clothes/blankets go back to sleep. Wake up still sweaty with a massive headache but no fever. Lymphnodes still swollen and uncomfortable currently. Never shown allergic reaction to vaccines before this. No COVID prior vaccination, no COVID tested post vaccination. Therapeutic measures were taken as a result of swelling in lymph nodes and included antihistamines, no treatment received for the other adverse event. The outcome of the event fever was recovered in Dec2020; of the event sweaty was not recovered; of unable to work, swollen face, headache, sleep 13 hours, uncomfortable, shown allergic reaction was unknown; of the other events was recovered/resolved with sequel. The seriousness was reported as no. The information on the batch number has been requested.

Pink eye,eye drainage; Pink eye,eye drainage; Chills; Muscle Aches; This is a spontaneous report from a contactable nurse reported for herself. A 50-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: Ek5230), intramuscular on 17Dec2020 16:00 at single dose for covid-19 immunization. Vaccine location was at Right arm and it was the first dose number. The COVID-19 vaccine was administered at Workplace clinic. The patient's medical history was not reported. Concomitant medications included fluoxetine hydrochloride (PROZAC), atorvastatin, buspirone hydrochloride (BUSPAR). The patient did not receive any other vaccines within 4 weeks prior to the

COVID vaccine. Patient's known allergies included Erythromycin. The patient experienced Chills, Muscle Aches, pink eye, eye drainage on 21Dec2020 19:00. Adverse event result in Doctor or other healthcare professional office/clinic visit. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of the events was unknown.

I experienced slight heaviness and then a tingling parasthesia in the feet that traveled up to my knees. I stayed for one hour, it began to feel like a cold sensation. I was able to walk and did not f; I experienced slight heaviness and then a tingling parasthesia in the feet that traveled up to my knees. I stayed for one hour, it began to feel like a cold sensation. I was able to walk and did not f; I experienced slight heaviness and then a tingling parasthesia in the feet that traveled up to my knees. I stayed for one hour, it began to feel like a cold sensation. I was able to walk and did not f; anxiety; This is a spontaneous report from a contactable nurse (patient). A 32-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EK5730), intramuscularly on 15Dec2020 07:45 at single dose for covid-19 immunization. Vaccine location was left arm and it was the first dose. None medical history. No known allergies. Patient was not diagnosed with COVID-19 prior to vaccination nor tested for COVID-19 since the vaccination. There were no concomitant medications. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine nor received any other medications within 2 weeks of vaccination. At 22Dec2020 07:45 am, the patient experienced slight heaviness and then a tingling parasthesia in the feet that traveled up to her knees. She stayed for one hour, it began to feel like a cold sensation. She was able to walk and did not feel dizzy and left work. The patient reported them to the MD who said it could be a coincidence and anxiety. Patient didn't receive any treatment for the adverse events. The action taken in response to the events for BNT162B2 was not applicable. The outcome of events was unknown. The events were non-serious.

had a sudden lightheadedness/a bit lightheaded; slurred speech; extreme sleepiness; feeling like was under anesthesia and unable to move the legs; unable to move the legs; Blood pressure dropped to 80/60mmHg and pulse was at 50; Blood pressure dropped to 80/60mmHg and pulse was at 50; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received a dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization in their facility. The patient's medical history and concomitant medications were not reported. It was reported that patient (doctor) in their facility received the vaccine and had a sudden lightheadedness, slurred speech and extreme sleepiness. Feeling like was under anesthesia and unable to move the legs. Blood pressure dropped to 80/60 mmHg and pulse was at 50. The episode lasted 2h and then became alert but a bit lightheaded and was normal next day. The outcome of the events was recovered. Information on the lot/batch number has been requested.

migraine; Vomiting; low grade fever and headache; headache; chills; light sensitivity; This is a spontaneous report from a contactable Nurse (patient). A 54-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration on 18Dec2020 around 07:45 at single dose for COVID-19 immunization. Anatomical location of administration provided as left upper arm; deltoid. Medical history included migraines

(Hasn't had one in a while). There were no concomitant medications. There were no prior vaccinations within 4 weeks. The patient previously took FLU VACCINE and had a low grade fever. The patient experienced low grade fever and chills on 19Dec2020, Headache with Light sensitivity: Woke up in the night with the headache after going to bed on Saturday, 19Dec2020. The patient has been vomiting off and on since Sunday, 20Dec2020. Caller stated she got the vaccine on Friday the 18Dec2020 and now has a low grade fever and headache and asked if she can take Tylenol or Ibuprofen for her symptoms. She also asked if she is allowed to take these before her next dose. Caller asked since she was experiencing symptoms with first dose is it likely she will experience them for second dose or it would be worse. Specifically, it was reported that late Saturday, the patient started running a fever and chills between 4PM and 5PM on 19Dec2020. She knew it was a potential side effect and minor. Got a headache since then and with light sensitivity. She wasn't sure what she could do to break it. Turned into a migraine on an unspecified date and has had vomiting. Vomiting occurs with her migraines, but hasn't had a migraine in a long time. The patient wasn't sure if she could take Ibuprofen or Tylenol with the vaccine. The light fever and chills is listed on the potential side effects she received. She can't focus with the headache she has. Called in to work. The patient knew COVID Vaccine could cause headaches. Think the headache started and ballooned into a migraine. Has been vomiting off and on since Sunday, 20Dec2020. Thinks the vomiting is from the headache and not the vaccine. Not due for next dose of COVID Vaccine until 08Jan2021. Wants to know if she is likely to experience the same symptoms with the second dose. Or if the symptoms will worsen. The outcome of the events was unknown. The seriousness provided as between not serious and medically significant. The causality assessment for events fever and chills, headache with light sensitivity with suspect vaccine provided as Related by Primary Source Reporter via Method of assessment Global Introspection.

Joint pain and swelling 3 days after the first dose. Affected joints: right elbow, right wrist and right third interdigital joint; Joint pain and swelling 3 days after the first dose. Affected joints: right elbow, right wrist and right third interdigital joint; This is a spontaneous report from a contactable consumer (patient). A 60-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number=EK5730), via an unspecified route of administration on left arm on 17Dec2020 at single dose for COVID-19 immunization. Medical history included wasp venom with anaphylaxis. There were no concomitant medications (No other-vaccine-in-four weeks, no other-medications-in-two weeks). The patient previously Stage 4 breast cancer in remission on Xeloda. The patient experienced joint pain and swelling 3 days after the first dose. Affected joints: right elbow, right wrist and right third interdigital joint on 20Dec2020. All events were reported as non-serious. The patient did not receive treatment for the adverse events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The outcome of events was not recovered.

dizziness/lightheadedness; severe nausea; rash/hives on chest and back and forearms; rash/hives on chest and back and forearms; severe chills/shivering; This is a spontaneous report from a contactable nurse (patient). A 28-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly on 18Dec2020 11:30 AM at Left arm, at SINGLE DOSE for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The

patient was not pregnant at the time of vaccination. The patient experienced dizziness, lightheadedness, severe nausea, rash/hives on chest and back and forearms, severe chills/shivering on 18Dec2020 11:45 AM. The patient received treatment fluids, pepcid, Benadryl for these events. There events resulted in: Emergency room. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of the events was recovered in Dec2020. No seriousness criteria: no Results in death, no Life threatening, no Caused/prolonged hospitalization, no Disabling/Incapacitating, no Congenital anomaly/birth defect. Information on the lot/batch number has been requested.

maculo-papular rash on neck and trunk with itchy skin; maculo-papular rash on neck and trunk with itchy skin; This is a spontaneous report from a contactable physician reported for herself. A 52-years-old female patient received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), via an unspecified route of administration at left arm on 18Dec2020 20:00 at single dose for covid-19 immunzation at workplace clinic. Medical history included seasonal and dust allergies, allergies to medications doxycycline and erythromycin. Concomitant medication included acetaminophen and ibuprofen. The patient experienced maculo-papular rash on neck and trunk with itchy skin on 19Dec2020 10:00 with outcome of recovered in Dec2020. No treatment received for the adverse events. No COVID prior vaccination, no COVID tested post vaccination. The was seriousness was reported as no.

reports getting the vaccine on Friday and then tested positive for for covid infection on the following Monday; reports getting the vaccine on Friday and then tested positive for for covid infection on the following Monday; This is a spontaneous report from a contactable other healthcare professional (HCP) reported for herself. A 60-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 (Friday) at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient got the vaccine on Friday (18Dec2020) and then tested positive for covid infection on the following Monday (21Dec2020). She asked if this would interfere with getting the second dose and if she should or could get the second dose of the covid vaccine after testing positive for covid infection. The outcome of the events was unknown. Information about lot/batch number has been requested.; Sender's Comments: Based on the current available information and the consistency with the known safety profile of the suspect product BNT162B2, a possible contributory role of the suspect product to the development of Drug ineffective and COVID-19 cannot be excluded. The case will be reassessed if additional information becomes available.

Patient felt lethargic and lightheaded (starting 18Dec, more significant 19Dec-20Dec) post-vaccine administration; Patient felt lethargic and lightheaded (starting 18Dec, more significant 19Dec-20Dec) post-vaccine administration; This is a spontaneous report from a non-contactable pharmacist. A 52-year-old male patient received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730), intramuscular on 17Dec2020 14:30 at single dose for COVID-19 immunisation. Facility where the most recent COVID-19 vaccine was administered was hospital. The patient medical history was not reported. Concomitant medications the patient received within 2 weeks of vaccination included budesonide (PULMICORT), cetirizine hydrochloride (ZYRTEC). The patient experienced 'Patient felt

lethargic and lightheaded (starting 18Dec, more significant 19Dec-20Dec) post-vaccine administration' on 18Dec2020. It was unknown if the patient received any other vaccines within 4 weeks prior to the COVID vaccine. It was reported unknown whether treatment received for the adverse event. The case was non-serious. The outcome of the events was reported as unknown. No follow-up attempts are possible. No further information is expected.

Dry mouth and throat; Dry mouth and throat; This is a spontaneous report from a contactable nurse (patient). A 24-year-old female patient (not pregnant) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EJ1685), via an unspecified route of administration on 22Dec2020 08:15 in left arm at single dose for COVID-19 immunization. The patient medical history was not reported. Concomitant medication in two weeks included venlafaxine, famotidine. There was no other vaccine in four weeks. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Facility type vaccine was hospital. The patient experienced dry mouth and throat on 22Dec2020 at time of 08:30 AM. No treatment received for the adverse event. The outcome of event was recovering. No follow-up attempts are possible. No further information is expected.

itching skin; injection site immediately red and hot; injection site immediately red and hot; could not locate hives or welts; This is a spontaneous report from a contactable pharmacist. A 36-year-old female patient (pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), intramuscularly on 21Dec2020 13:15 at single dose on left arm for COVID-19 immunization. Medical history included anaphylactic reaction to food, Anaphylaxis to sesame and lidocaine, had never had anaphylactic reaction to vaccines in past. The patient's concomitant medications were not reported. The most recent COVID-19 vaccine was administered at Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 21Dec2020 13:15 (01:15 PM), the patient experienced itching skin, could not locate hives or welts, injection site immediately red and hot, no wheezing observed, no tachycardia observed. Treatment included observed for an hour, ice pack on injection site x2, 50mg diphenhydramine hydrochloride (BENADRYL), 1 10mg cetirizine hydrochloride (ZYRTEC), 20mg famotidine (PEPCID). Advised to pre-medication prior to booster dose and alert vaccinator of this reaction to be prepared. The events were non-serious. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient hadn't been tested for COVID-19. The outcome of the events was recovered in Dec2020.

"congestion; throat hurts, she has a sore throat; a sore arm where it was administered. It is not swollen or red but hurts to the touch; diarrhea and has gotten a little worse since starting/having to get up and go to the bathroom often; uncomfortable; This is a spontaneous report from a contactable consumer (patient). A 25-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number unknown because the patient was sent a picture of the paper provided for vaccine administration but it did not include any product details), via an unspecified route of administration at arm on 21Dec2020 at single dose for COVID-19 immunization at hospital. The patient's medical history included seasonal allergy, she had no allergies other than season allergies. She had no reactions to any vaccines previously. Prior Vaccinations within 4 weeks was reported as none, and no events following prior vaccinations. Concomitant medications included unspecified medication for birth control daily and

has been on this for a couple months. No additional vaccines administered on same date of the Pfizer suspect. The patient is a medical assistant, an employee at a hospital. She received the vaccine at work yesterday (21Dec2020) around 10 or 10:30 and she was having side effects. She had contacted her employer but wanted to know if it is ok to go to work or should she stay home and treat the symptoms. Afterward she experienced diarrhea which started last night and has gotten a little worse since starting. She also has congestion and her throat hurts, she has a sore throat, that started this morning, on 22Dec2020. There had been no treatment for above symptoms. After getting the shot she had a sore arm where it was administered. It is not swollen or red but hurts to the touch. This started 30 minutes after administration and she had to take pain medication. It was worse on 22Dec2020 (today). She did not require a visit to the doctor at the point when reporting, it was just uncomfortable having to get up and go to the bathroom often. No emergency room or physician visit due to the event. No relevant tests. The outcome of the event ""uncomfortable"" was unknown, and for the rest of events was not recovered. Information on the lot/batch number has been requested."

Increased heart rate; Increased heart rate and blood pressure; Feeling hot; Cold fingers; This is a spontaneous report from a contactable nurse (patient). A 48-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number EH9899), intramuscular on the left arm on 22Dec2020 08:00 at SINGLE DOSE as COVID-19 immunization at the workplace clinic. The patient had no medical history and no allergies to medications, food, or other products. The patient previously had COVID-19 test on 24Aug2020 and showed negative. Concomitant medication included levothyroxine (LEVOTHYROXINE). On 22Dec2020 08:00, the patient experienced increased heart rate and blood pressure, feeling hot and cold. Since the vaccination, the patient had been tested for COVID-19 in Dec2020 with unknown results. The patient did not receive any treatments for the events. The patient was recovering from the events.

tingling in hands and feet; This is a spontaneous report from a non-contactable other healthcare professional. A 48-year-old female patient receives first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: HE9899), intramuscularly on 18Dec2020 12:45 at single dose for immunization. vaccine location provided as Right arm. Medical history included fibromyalgia, rheumatoid arthritis. The patient's concomitant medications were not reported. No history of vaccine or medication reaction previously. During her 15-minute waiting period after the injection, the patient began to experience tingling in hands and feet on 18Dec2020. She denied rash, hives, difficulty breathing, difficulty swallowing, wheezing, throat tightness, hoarseness, lightheadedness, dizziness and tongue swelling This provider was notified of patient reaction and she was then assessed in the emergency bay area. Review of Systems included: Constitutional: Negative for chills and fatigue. HENT: Negative for congestion, facial swelling, rhinorrhea, sinus pain, sneezing, sore throat and trouble swallowing. Respiratory: Negative for cough and shortness of breath. Musculoskeletal: Negative for back pain, myalgias and neck stiffness. Skin: Negative for rash. Neurological: Tingling in hands and feet bilaterally. The outcome of the event was unknown. All events reported as non-serious. No follow-up attempts are possible. No further information is expected.

"Feeling under the weather; Nausea; Headache; Muscle ache; This is a spontaneous report from a contactable other healthcare professional (HCP), who is also the patient. This 63-year-old female patient

received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number EL0140) via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunisation. Relevant medical history included hypertension (hypertensive for years and takes medication for that), muscle aches (she got muscle aches once in a while) and headaches (she got some headaches from wearing a mask). Concomitant medications included unspecified drugs for hypertension. On 21Dec2020, the patient experienced nausea; in Dec2020 she experienced headache and muscle ache and on 22Dec2020 she experienced feeling under the weather. The patient specified that she has had light symptoms of nausea, headache, and muscle ache. Nausea was the most prevalent symptom. She said she got some headaches from wearing a mask, and the headaches she has experienced since receiving the COVID-19 Vaccine could be related to her mask wearing, and not the vaccine. She said she was at the age where muscle aches are not uncommon, and she got muscle aches once in a while, so she was unsure if her muscle aches were from receiving the COVID-19 Vaccine. She further specified that the she had a little nausea, saying the nausea was not very noticeable. The nausea was a little heavier at the time of the report, and she had some toast and some things to help settle her stomach. She said she was feeling ""blah."" She clarified she was feeling under the weather, like she just wanted to get in bed and sleep. The patient reported that the symptoms she was experiencing could be stress, and she just wanted to get the rapid COVID test to make sure she doesn't have the virus. She would take the rapid test as a requirement for travel. Treatment: the patient took 2 Extra Strength Tylenol 500mg (Lot Number: SHA086, and Expiration Date: Jun2024). The patient had not recovered from nausea and feeling unwell; the outcome of the headache and muscle ache was unknown."

"Day after vaccine, developed itchiness; Then I began breaking out in hives throughout my body; Also suffered from bouts of nausea and have trouble keeping things down; This is a spontaneous report from a contactable other HCP (patient) . This 24-year-old female patient received,at hospital, the first dose of BNT162B2 (also reported as Pfizer-BioNTech COVID-19) intramuscular on arm left on 20Dec2020 (reported as at 02:30 PM) at a single dose for COVID-19 immunization.No Allergies to medications, food, or other products; No other Medical history Concomitant medication Omeprazole, Terbinafine. No Covid prior vaccination and no covid test vaccination provided . Day after vaccine, on 21Dec2020 at 12:00 PM, the patient developed itchiness. that she was taking 1 gram Tylenol every 6 hours with a lot of water. She stated her mouth was a little red. She said that it was like a thrushy feeling like when you take antibiotics. It was that kind of sensation. She said that she almost felt like a chest cold was coming on in her chest. She had no shortness of breath, just an awareness when you get a chest cold. She used to get bronchitis all of the time. She said that she was speaking to a friend from work and a girl that she works with tested positive on a random swab for COVID-19. Caller said that the girl was asymptomatic and she did not receive the vaccine.

vertigo; dizziness; nausea; This is a spontaneous report from a contactable physician. A 41-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular, on 21Dec2020 at 10:00 AM at single dose for COVID-19 immunisation. Vaccine location was left arm. The patient was vaccinated at hospital, age at vaccination was 41-years-old. Medical history and concomitant medications were unknown. On 22Dec2020 at 12:30 PM, the patient experienced abrupt onset vertigo, dizziness nausea - self resolved but then second wave of similar symptoms also self resolved. Th events were reported as non-serious. No treatment was received for the events. Information on the lot/batch number has been requested.

Headache over the front of the head; This is a spontaneous report from a contactable unspecified healthcare professional reporting for herself. This 60-year-old female patient received on 22Dec2020 11:15 first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot EH9899) at single dose intramuscular in the right arm for COVID-19 immunization. Medical history and concomitant medications were not reported. She denied any history of previous adverse reactions to vaccines. On 22Dec2020, during her 15 minutes waiting period after the injection, the patient began to experience headache over the front of the head. The event required an emergency room visit. Outcome was unknown. Neurogical examination was positive on an unknown date. No follow-up attempts are possible. No further information is expected.

Headache; This is a spontaneous report from a contactable nurse. A 38-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE, lot number: EK5730), via an unspecified route of administration the right arm on 22Dec2020 12:30 at a single dose for COVID-19 immunisation. Medical history was not reported. Concomitant medications included amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL). The patient experienced headache on 22Dec2020 14:30. No therapeutic measure was taken as a result of the event. Clinical outcome of the event was recovered on an unspecified date.

slight nasal congestion; This is a spontaneous report from a contactable other healthcare professional (patient). A 53-year-old male patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EJI685), intramuscularly in left arm on 22Dec2020 13:45 at single dose for Covid-19 immunisation. The patient's medical history and concomitant medications were not reported. No Covid prior vaccination. No Covid tested post vaccination. No known allergies. The patient experienced slight nasal congestion (non-serious) on 22Dec2020 14:30 with outcome of recovering. No treatment received for the event.

Fever of approx 101 F; body chills; injection site pain; This is a spontaneous report from a contactable unspecified healthcare professional reporting for himself. This 45-year-old male patient received on 21Dec2020 13:00 first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose in the left arm for COVID-19 immunization. Medical history included allergies to penicillin and sulfa drugs and hypertension. Prior to vaccination, the patient was diagnosed with COVID 19. Concomitant medications were not reported. On 22Dec2020 03:00 am, the patient had fever of approximately 101 F, body chills, injection site pain. No treatment was provided. Outcome was not recovered. Information on the batch number has been requested.

headache; pain in arm; dizziness; This is a spontaneous report from a contactable consumer. A female patient (wife) of unknown age received on 21Dec2020 11:15 BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. In Dec2020, she reported headache, pain in arm and dizziness. Outcome was unknown. Information on the batch number has been requested.

Severe crushing headache in bilateral temporal lobes; Severe fatigue day after; This is a spontaneous report from a contactable nurse which is also the patient. A 36-year-old non-pregnant female patient received 1st dose of bnt162b2, intramuscular in the left arm on 18Dec2020 12:00 at a single dose for COVID-19 immunization at the hospital. Medical history included polycystic ovaries (PCOS), anxiety, depression and attention deficit hyperactivity disorder (ADHD). The patient has no known allergies. Concomitant medications included amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL), bupropion hydrochloride (WELLBUTRIN), and escitalopram oxalate (LEXAPRO). It was reported that the morning after vaccine, 19Dec2020 08:00, the patient awoke with severe crushing headache in bilateral temporal lobes that resolved in a couple hours with acetaminophen (TYLENOL) and rest. The patient also had severe fatigue day after. Added that there's also fatigue on 2nd day after vaccine but much more mild than 1st day. All symptoms resolved at 48hrs. The patient was not diagnosed with COVID-19 prior to vaccination and since the vaccination. The events were assessed as non-serious. Therapeutic measures were given for the events. Outcome of the events was recovered in Dec2020 after 48hrs. Information on the lot/batch number has been requested.

Tingling in lower arm and hand that lasted from time of vaccine until the following morning.; This is a spontaneous report from a non-contactable other health care professional. A 30-year-old female patient received bnt162b2 (BNT162B2), via an unspecified route of administration on 20Dec2020 13:00 at SINGLE DOSE at right arm for COVID 19 immunization. Medical history included allergies: sulfa drugs. The patient's concomitant medications were not reported. On 20Dec2020 13:00, the patient experienced Tingling in lower arm and hand that lasted from time of vaccine until the following morning. The patient did not receive treatment. No COVID prior vaccination. The patient has not been tested for COVID-19 since the vaccination. The event was assessed as non-serious. The outcome of the event was recovered. No follow-up attempts are possible. Information about lot/batch number cannot be obtained.

Injection site pain; headache; body aches; feeling generally unwell; joint pain; This is a spontaneous report from a contactable other-hcp reporting for herself. A 35-years-old non-pregnant female patient

received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EH 9899), via an unspecified route of administration in the left arm on 21Dec2020 14:00 at single dose for covid-19 immunisation. The patient medical history was not reported. Concomitant medication included celecoxib (CELEXA, 20mg). The patient previously took thimerosal and experienced drug hypersensitivity. The patient experienced injection site pain, headache, body aches, feeling generally unwell and joint pain all on 22Dec2020 03:00 with outcome of recovering. No treatment was performed. The patient did not have COVID prior to vaccination nor COVID test post vaccination.

"Strange brain fog; forgotten her medications at home, she forgot to do something with her dogs that she usually does; was pretty sure she forgot to brush her teeth; Right arm soreness; This is a spontaneous report from a contactable nurse (patient). A 31-year-old female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EJ1685), intramuscularly in right arm on 18Dec2020 11:00 at single dose for Covid-19 immunisation. Medical history included ulcerative colitis from 2018 and ongoing, birth control from 2018 and ongoing, seasonal allergies from an unknown date and unknown if ongoing, multivitamin (supplementation therapy) from an unknown date and unknown if ongoing. The patient previously received tetanus vaccine 10 years ago. The patient experienced right arm soreness on 18Dec2020,""strange brain fog"" on 21Dec2020, she was not sure if it was a reaction to the vaccine, because it was not in the packet that it has been reported; but she wanted to ask if brain fog had been reported. She further described that the brain fog included having forgotten her medications at home, having had a really weird day, she forgot to do something with her dogs that she usually does; was pretty sure she forgot to brush her teeth; and she had a needle stick at work with Heparin after administration of Heparin to patient (little mark on her left middle finger from the needle stick). She had already given the patient the Heparin, then the needle stick to her left middle finger happened after dose to patient was administered the full dose on 21Dec2020. She did not think there was any Heparin left when she got the needle stick; if so it was very very small amount. She washed the needle stick site out really vigorously for 5 minutes, wrapped the site, it was not bleeding or anything; She reported having recovered completely from this event probably 21Dec2020; but clarified that the only lasting effect she has had from this event was since yesterday there is a little mark on her left middle finger from the needle stick; but there is no pain, no swelling and no redness. The hospital drew her blood and the Heparin patient's blood 21Dec2020. She did not notice any of the brain fog or related events on

20Dec2020, not until onset on 21Dec2020. She did not know if these brain fog related events were a side effect of the COVID-19 Vaccine. She felt fine otherwise. She knew that the actual COVID-19 virus had brain fog. She received the tetanus vaccine 10 years ago. The patient received the HPV vaccine a week before the COVID one. She planned on getting the second dose as scheduled, no changes made. Brain fog: She thought she recovered completely by about 21Dec2020. It was better. She had not really done much as of report date. Forgotten her medications at home: These medications were her concomitant products. The outcome of right arm soreness was recovered on 20Dec2020, the other events was recovered on 21Dec2020."

Nausea and diarrhea; Nausea and diarrhea; This is a spontaneous report from a contactable nurse (patient). A 36-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 19Dec2020 at 08:45am at single dose in left arm for COVID-19 immunization. No known allergy to medications, food or other products. Concomitant medications included Multivitamin (unspecified) received within 2 weeks of vaccination. On 21Dec2020 at 02:00 am the patient experienced nausea and diarrhea. Patient was treated with unspecified medication.The outcome of the events was recovering. Information about lot/batch number are requested.

positive test to the COVID-19 infection; This is a spontaneous report from a contactable Other HCP reporting for herself. A 35-years-old female patient received bnt162b2 (BNT162B2; Lot# EL0140) vaccine , via an unspecified route of administration in the left upper arm on 21Dec2020 at single dose for covid-19 immunisation . The patient medical history and concomitant medications were not reported. The patient resulted positive to the test to the Covid-19 infection on the same day she got the vaccine 21Dec2020 with outcome of unknown. The patient was wondering if her symptoms could worsened and if she could receive the second shot as scheduled.

have a really bad headache; This is a spontaneous report from a contactable consumer (patient). A 22-year-old female patient received the first dose BNT162B2 (Pfizer-BioNTech COVID-19 Vaccine, Batch/lot number: EL1284), via an unspecified route of administration on 21Dec2020 at single dose for covid-19 immunization. Medical history included GERD (Gastrooesophageal reflux disease), obsessive-compulsive disorder. Concomitant medication included omeprazole at 40 mg for GERD, fluoxetine at 40 mg for obsessive-compulsive disorder. The patient had a really bad headache in Dec2020. The reporter stated she was a 22 years old pharmacy intern working in a hospital. She received the covid vaccine yesterday (21Dec2020) and she had a really bad headache. The patient further described this as a 'very, very bad headache.' The patient didn't receive treatment for headache. She was wondering if she could take Tylenol for headache. The outcome was unknown.

COVID-19 confirmed by positive COVID-19 test; COVID-19 confirmed by positive COVID-19 test; This is a spontaneous report from a contactable other health professional (reported for himself). A 30-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 17Dec2020 10:00 at single dose on left arm for COVID-19 immunization. Medical history known allergies: PCN (Penicillin). The patient's concomitant medications were not reported. The most recent COVID-19 vaccine was administered at Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to

vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has been tested for COVID-19 via Nasal Swab and the test name was PCR with the result of positive on 22Dec2020 (12:00). This wasn't really an adverse event but the reporter thought it may be useful for studies taking place. On 22Dec2020 12:00 PM, the patient was diagnosed with COVID-19 5 days after vaccination and was currently self-isolating. The adverse event result in Emergency room/department or urgent care. No treatment was received for the adverse events. The events were considered as non-serious by the reporter. The outcome of the events was recovering.; Sender's Comments: Based on the current available information and the consistency with the known safety profile of the suspect product BNT162B2, a possible contributory role of the suspect product to the development of Drug ineffective and COVID-19 cannot be excluded.

substantial back pain in her mid back and spine; substantial back pain in her mid back and spine; This is a spontaneous report from a non-contactable Nurse (patient). A female patient of an unspecified age received bnt162b2 (BNT162B2) at single dose on 21Dec2020 for immunisation. The patient medical history and concomitant medications were not reported. The patient experienced substantial back pain in her mid back and spine on an unspecified date. The outcome of events was unknown. No follow up attempts are possible; information about lot/batch number cannot be obtained.

Severe headache; This is a spontaneous report from a contactable pharmacist, who is also the patient. This 37-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EK 5730; expiration date Mar2021) intramuscular in the left arm on 21Dec2020 at 17:30 at the age of 37 years at single dose for COVID-19 immunisation. Vaccination facility type was hospital. Relevant medical history included Major Depressive Disorder (MDD), anxiety and foramen ovale patent. Concomitant medications were not reported. Past drug history included allergy with sulfamethoxazole/trimethoprim (BACTRIM) and aripiprazole (ABILIFY). On 22Dec2020 at 06:00, the patient experienced severe headache resistant to butalbital/caffeine/paracetamol (FIORICET) and ibuprofen, which were taken as treatments. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, she had not been tested for COVID-19. The patient was recovering from the event.

Diarrhea; Body ache; Spike fever of 99; not a low grade fever; Headache; This is a spontaneous report from a contactable consumer (patient). A 58-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), via an unspecified route of administration on 18Dec2020 at single dose for immunization. When probed for the due date for the next shot, consumer stated it was on 08Jan2021. Medical history included anxiety, acid reflux and eyes just not really great. Concomitant medication included topiramate (TOPAMAX) at 25 mg, daily for weight loss, fluoxetine for anxiety, omeprazole (PRILOSEC) for acid reflux. The patient experienced body aches, spikes fever of 99, it was not a low grade fever, headache on 18Dec2020, and diarrhea on 19Dec2020. Patient received acetylsalicylic acid (EQUATE, lot number: think it was 0B3076C, Expiry Date of Equate: Dec2022, NDC# 4903552378) for events body aches and the headache and the spike fever. It's Equate pain reliever, a (Company name) brand and it was 325 mg. Outcome of events body ache and headache was not recovered, and outcome of other events was unknown.

Nausea; Chills; This is a spontaneous report from a contactable consumer via a Pfizer-sponsored program,. A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration on 19Dec2020 at a single dose for COVID-19 immunisation. Medical history and concomitant medications were not reported. The patient experienced nausea and chills on an unspecified date. Clinical outcome of the events was unknown. Information about lot/batch number has been requested.

she is better but still not good; not to be able to breath; sore right arm; This is a spontaneous report from a contactable nurse (patient herself). A 62-year-old female patient received bnt162b2 (BNT162B2, lot EK5730), intramuscular on 18Dec2020 at single dose for immunisation. Medical history included asthma (hospitalized on Jan2020 and has not had any issues since that time, referring to her asthma) diabetes, high blood pressure, swelling, sciatica, blood cholesterol abnormal, rosacea, reflux, allergies, sinus congestion, shingles and post carpal tunnel surgery. Concomitant medications included lisinopril, hydrochlorothiazide, gabapentin, rosuvastatin, metformin, glipizide, doxycycline, sucralfate, cetirizine hydrochloride (ZYRTEC), pseudoephedrine, ascorbic acid, ergocalciferol, nicotinamide, retinol, riboflavin, thiamine hydrochloride (VITAMINS) and tramadol. The patient reported that she not to be able to breath (seriousness criteria-life threatening) on 22Dec2020. She woke up this morning and could not breathe and there was no reason for her to not be able to breath. She thought she may have had a reaction to the COVID vaccine. It was the only thing she could think of that might have caused her not to be able to breathe this morning. As treatment for not to be able to breath, she used Budesonide and Levosalbutamol in her nebulizer. She had sore right arm on 18Dec2020. She informed that she had done everything she can and she was better but still not good. She planned to take the second dose of the COVID Vaccine because she thought it was more important to be protected. She suspected that the vaccine was related to the events sore right arm and could not breathe. The outcome of the event not to be able to breath was recovering; for sore right arm was recovered on unknown date in Dec2020; for she is better but still not good was unknown.; Sender's Comments: Severe allergic reaction including anaphylaxis is the known risk factor; a possible causal association between administration of BNT162B2 and the onset of not being able to breath cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Headache; pain in her arm; Dizziness; This is a spontaneous report from a contactable consumer (patient's husband). A 45-year-old female patient started to receive bnt162b2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE, lot number: N9899, expiry date: 01Jan2021), via an unspecified route of administration on the right arm on 21Dec2020 at a single dose for COVID-19 immunisation. Medical history included ongoing high blood pressure. Concomitant medication included ongoing alprazolam for high blood pressure. On 22Dec2020, the patient experienced headache, pain in her arm and dizziness. Clinical outcome of the events was not recovered.

positive COVID-19 test with symptoms; positive COVID-19 test with symptoms; Soreness at injection site; This is a spontaneous report from a contactable nurse (patient). A 40-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 17:30 in the left arm at single dose for COVID-19 immunization. There was no medical history or concomitant medications. The patient experienced soreness at injection site, cough, body aches on 19Dec2020; sore throat, voice changes from coughing on 20Dec2020; tested positive for covid on 21Dec2020; mild low congestion, loss of taste and smell on 22Dec2020. The nurse stated that he got the vaccine on Friday (18Dec2020). The next day (19Dec2020) he had common side effects: Soreness at the injection site and body aches, which were expected. He also had a cough on top of that, which progressed to the next day. His body aches and coughing were infrequent. The afternoon of Sunday (20Dec2020), he developed sore throat. Yesterday(21Dec2020), he said he could not work because he was still coughing and had a sore throat. His voice was also changing due to the coughing. He was getting better now. The doctor from Employee Heath said that the cough was concerning so he got a COVID swab test yesterday(21Dec2020), and today (22Dec2020) it came back positive. This morning (22Dec2020) he had loss of taste and smell. He no longer had sore throat or cough. He had the vaccine before the test. He wanted to know where they were at with information on this. Was this being monitored? How did this happen? Was it possible that the test was a false positive because he had the vaccine prior? He would like someone to give him an answer, if the test was a false positive due to the vaccine? His doctor could not tell if the test was legit a positive because of the vaccine. He was not able to work right now. He did not even know if the COVID was from the vaccine or not. Will he get compensation for this? Will his workplace cover his absences? In the case he went to the hospital, will this be considered a work related or vaccine related issue? The outcome of event soreness at injection site was recovered on 21Dec2020. The outcome of event tested positive for COVID was not recovered. The nurse considered the cough was disabling as this was not part of the symptoms to watch for after getting the vaccine. All of the symptoms currently besides the cough are not serious as of now, but it has put him out of work. The nurse considered all other events as non-serious except for cough (disabling). Information on the lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded.

hands were tingly and both hands were tingly; lips got numb; both hands were tingly and kind of numb feeling; both hands were tingly and kind of numb feeling and then became itchy; This is a spontaneous report from a contactable nurse (patient). A 58-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date unknown), via an unspecified route of administration on 18Dec2020 17:13 at single dose for covid-19 immunization. Patient history was no. There were no concomitant medications. The patient didn't notice anything until the Saturday on 19Dec2020, at about the same time at 24 hours later, it was noticed that hands were tingly and both hands were tingly and kind of numb feeling and then became itchy and lips got numb during that time frame, the patient just took anti-histamines, only one dose Loratadine on 20Dec2020. Issue still persisting, it's not as bad on 21Dec2020 but it still as numb, fingers were especially numb. The outcome of the events was not recovered. No investigation assessment. When asking the causality, the patient

said it was fine until, that's what she was presuming, the Covid shot. Information on Lot/Batch number has been requested.

Severe headache; photophobia; eye pain; myalgia; diarrhea; skin sensitivity; lesions and blisters around mouth and lips, oral lesions; lesions and blisters around mouth and lips, oral lesions/intra-oral lesions/Buccal lesion; inflammation; pharyngitis; lymph node inflammation in neck; BL earache; nausea; diaphoresis; fatigue; This is a spontaneous report from a contactable consumer (patient). A 50-years-old female patient received first dose of BNT162B2 (Lot# EH9899), via an unspecified route of administration, in right arm, on 18Dec2020 15:00 at single dose for COVID -19 immunization. The patient was not pregnant at the time of vaccination. Facility where the most recent COVID-19 vaccine was administered was workplace clinic. Medical history was none, good health. No allergies to medications, food, or other products. Prior to vaccination, patient was not diagnosed with COVID-19. Since the vaccination, patient had not been tested for COVID-19. No other vaccines was received within 4 weeks prior to the COVID vaccine. The other medication that the patient received within 2 weeks of vaccination was amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL) at 30 mg orally daily. The patient experienced severe headache, photophobia and eye pain, myalgia, diarrhea, skin sensitivity, lesions and blisters around mouth and lips, oral lesions and inflammation, intra-oral lesions, buccal lesions, pharyngitis, lymph node inflammation in neck, BL earache, nausea, diaphoresis, fatigue, all on 19Dec2020 05:00 AM. The events were reported as non-serious. No treatment was received for the events. The outcome of the events was recovering.

Hives all over his body, on his tummy, his legs, his wrist; did a cold compress, it seemed to work but it came back again; This is a spontaneous report from a contactable consumer (patient's wife). A 47-year-old male patient received BNT162B2 (Lot# EK5730), via an unspecified route of administration on an unspecified date at single dose for COVID -19 immunization. Medical history included type 1 diabetic, blood pressure high and cholesterol. Concomitant medication included insulin. The patient got the vaccine on Friday. On 21Dec2020, the patient had hives all over his body, on his tummy, his legs, his wrist. He started getting it at midnight and the reporter wondering do she need to take him in or can she just give him Benadryl. she was looking at the documents trying to find a number to call. He got the COVID Vaccine on Friday and no trouble till this morning, now at midnight. The treatment included he did a cold compress on it, it seemed to work but it came back again. It's still the same. Cold compress last night or this morning, it seemed to help. The outcome of the event was not recovered.

"Soreness at the site for the first 24 hours; Swelling underneath my right arm; Inflammatory response or immune response from the vaccine; Right breast had swollen areas in it almost being at lymph nodes; Right breast had swollen areas in it almost being at lymph nodes; Around nipple was very swollen and had about three knots; This is a spontaneous report from a contactable Nurse (patient). A 34-year-old female patient received first dose of BNT162B2 (lot number not provided), via an unspecified route of administration on an unspecified date at single dose for COVID -19 immunization. Medical history and concomitant medication were reported as none. The nurse stated she had received the first dose of the Pfizer Covid Vaccine on Thursday. It didn't really had anything other than some soreness at the site for the first 24 hours but on the Saturday, she started noticing a bit of swelling like underneath her right arm. She didn't think anything of like that was probably just the inflammatory response or immune

response from the vaccine. So, she thought it was all a normal side effect. The next morning, next Sunday morning, she woke up and her right breast had swollen areas in it almost being at lymph nodes and that's kind of where she just thought - Okay the breasts have lymph drainage and vessels and all these things. And she could palpate it like from her arm pits, she could palpate and can find out another one that was the area but it was around her nipple that was the concern because it was very swollen and had about three knots and again she was like probably it's just the lymph nodes. She reported ""But they wanted us to report anything. You are at Hospital, like little health area and I was told that you need to call Pfizer too. I am saying that is something out of the ordinary because I am like they are not ordinary, they are in the breast area. don't want to call it as nothing, it might be something else as it is kind of hard to tell if it related to the vaccine or is it not or something I need to talk to my OB-GYN about. I didn't know if that was something else did anybody else is experiencing"". The event onset date was unspecified. The treatment of the events included Motrin. The outcome of the events was unknown. Information on the Batch/Lot number has been requested."

Severe headache; headache was very bad; it was so much that I am scared to take the second dose; Muscle pain; joint pain; This is a spontaneous report from a contactable nurse (patient). A 55-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730, Expiry Date: 31Mar2021) via an unspecified route of administration on 18Dec2020 at single dose to prevent Covid 19, to get antibodies; folic acid via an unspecified route of administration from an unspecified date at 1 mg, daily for Thalassaemia minor; levothyroxine sodium via an unspecified route of administration from an unspecified date at 50 mg, daily for an unspecified indication; zinc oxide via an unspecified route of administration from an unspecified date at 50 mg, daily for an unspecified indication; nifedipine (NIFEDIPINE XL) via an unspecified route of administration from an unspecified date at 60 mg, daily for blood pressure high; valsartan via an unspecified route of administration from an unspecified date at 80 mg, daily (one morning one in the evening) for blood pressure high; paroxetine via an unspecified route of administration from an unspecified date at 10 mg, daily for an unspecified indication; cyanocobalamin (VIT B12) via an unspecified route of administration from an unspecified date at 1000 mg, daily for an unspecified indication; ascorbic acid (VIT C) via an unspecified route of administration from an unspecified date at 1000 daily for an unspecified indication; acetylsalicylic acid (ASPIRIN) via an unspecified route of administration from an unspecified date at 81 mg (once in week or every other day) for an unspecified indication. Medical history included hyperthyroidism; anxiety; Thalassaemia minor; Blood pressure high; patient was diagnosed with Covid-19 earlier, she stated she was a survivor, she recovered on 06Apr2020, she was sick on 21Mar2020 and she was ruled out positive on 25Mar2020 when they bought out the test first time, she said she might have been positive before but they did not have the test. The patient's concomitant medications were not reported. Patient stated she took the vaccination (Pfizer Covid 19 vaccine) in the hospital, she worked there she was a nurse, and she got the side effect, she got severe headache. She had headache but her mistake she did not take Tylenol that time but it got eased after may be 5 hours but the problem was (statement incomplete), and then she started having muscle pain, joint pain and that was okay but headache was very bad, out of all this. Her question was she was a survivor Covid-19 but this one took on her, the headache and she was on blood pressure medications too (further not appropriately paraphrased and clarified hence captured as unspecified medications) so she didn't know what were the ingredients which caused her

such a severe headache. So now her question was that was it okay for her to take the second dose after 3 weeks. The start date of headache was not even half an hour within 15 minutes of taking vaccine. For headache, patient was okay now, that time it was so much that she was scared to take the second dose, the booster dose, so that was why she want to check with them that it was okay or not because she had severe headache. After 5 hour it was improved without taking anything, it subsided on it's on. No treatment received. The action taken in response to the events for folic acid, levothyroxine sodium, zinc oxide was unknown. The outcome of the event Headache was recovered on 18Dec2020, of the other events was recovering. Pfizer is a marketing authorization holder of [folic acid, levothyroxine sodium, zinc oxide] in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of [folic acid, levothyroxine sodium, zinc oxide] has submitted the same report to the regulatory authorities.

Fever; injection site mild pain; This is a spontaneous report from a non-contactable other healthcare professional (patient) via a Pfizer sales representative. A 51-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiration date were not reported), via an unspecified route of administration on an unspecified date at a single dose for covid-19 immunization. There were no medical history. Concomitant medications were not reported. The patient experienced fever and injection site mild pain on an unspecified date. Outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

rash; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). A contactable consumer (patient) reported that a 64-years-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EJ1685) , via an unspecified route of administration on 20Dec2020 at single dose for covid-19 immunisation . Medical history reported as none. There were no concomitant medications. The patient experienced rash on 20Dec2020 about an hour after receiving the vaccine. The patient did put some lotion on rash. The outcome of event was not recovered.

headache; soreness on injection site; hives; This is a spontaneous report from a contactable nurse (patient). A 47-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EK5730), intramuscular on the left arm on 20Dec2020 10:30 at a single dose for covid-19 immunization. The patient's medical history included chronic cough, post nasal drip, asthma, sinusitis, and allergies to sulfa. The patient was not pregnant. Concomitant medications included levocetirizine dihydrochloride (XYZAL), amoxicillin, clavulanic acid (AUGMENTIN), omeprazole (PROTONIX), fluticasone propionate, salmeterol xinafoate (ADVAIR), budesonide (PULMICORT), albuterol [salbutamol] (ALBUTEROL [SALBUTAMOL]), and guaifenesin. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 20Dec2020 16:00, the patient experienced headache, soreness on injection site, hives started on the day of injection in the afternoon until current day. The patient underwent lab tests and procedures which included COVID-19 Nasal Swab was negative on 13Nov2020. The patient was not diagnosed with COVID-19 prior to vaccination and had been tested for COVID-19 on Dec2020 since the vaccination. No treatment was received for the adverse events. Outcome of the events was recovering. The events was considered non-serious.

coughing; chills; cold; This is a spontaneous report from a contactable consumer (patient). A 76-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot EJ1685, Expiration Date 31Mar2021, via unspecified route of administration, on unspecified date, at single dose for COVID-19 immunization. The patient medical history included blood pressure high. Concomitant medications included unspecified medication for high blood pressure. The patient experienced coughing, chills, and cold on 20Dec2020. The events were non serious. The outcome of the event coughing was unknown. The outcome of the events chills, and cold was not resolved.

"muscle soreness; This is a spontaneous report from a contactable physician. A male patient of an unspecified age (age: 43; Unit: unknown) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 16Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient had muscle soreness for about 24 hours after the shot. The patient stated, ""I received the Pfizer vaccine on 16Dec at my hospital, (Institute Name Withheld). I think our hospital management wanted to first vaccinate some key clinicians who felt very comfortable with it - I personally wanted it as soon as possible since I see patients with COVID-19 every day. Twelve hours before I received the vaccine, I took information survey and signed the consent form. At my appointment, I was asked to confirm that I was feeling OK, was given the injection, and then waited about 15 minutes to make sure I didn't experience any side effects. I had a little muscle soreness, sort of like a punch to the arm, for about 24 hours. Other than a little muscle soreness that felt similar to a punch, I felt perfectly fine. The hospital administrator said they'd be in touch to schedule the second dose, which will be within a 96-hour window about three weeks later. I believe the science behind this type of vaccine - the messenger RNA platform - is strong. Understanding the basic science of it, I have very few concerns about the efficacy of the vaccine or the long-term complications. As a mechanism, there is no live COVID -19 virus in the vaccine: It's just giving you the code for spike protein so that your immune system will be able to make antibodies. To me, it's an even safer platform than many previous types of vaccines. Many infectious diseases are managed through vaccines. Infectious diseases that we don't think of as being a big issue anymore, like polio, even chickenpox, have been all but wiped out in the US thanks to vaccines that most people now get as babies. One or two people are not going to stop the COVID-19 pandemic. It's really when we get a good majority of the population fully vaccinated that we'll start to see a major effect. Until then, I plan to still wear my face mask, practice social distancing, and observe safety and sanitary precautions. The outcome of the event was unknown. Information on the lot/batch number has been requested."

Fatigue; Dizziness; Tachycardia/heart rate is 115 laying down and her heart rate is 123 walking around; patient may be having an allergic reaction; This is a spontaneous report from a contactable other healthcare professional (hcp). A 31-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 Vaccine, lot number: EL0140, NDC number: 59267-1000-1, Expiry Date: 31Mar2021), via intramuscular on 21Dec2020 09:15 at 0.3 mL, single (0.3ml intramuscular injection in arm) for preventative (COVID-19 immunization). There were no medical history or concomitant medications. The patient did not receive any other vaccines prior vaccinations (within 4 weeks) or on the same date. The reporter worried the patient may be having an allergic reaction. The patient experienced dizziness, tachycardia, and fatigue, all on 21Dec2020, started about 45 minutes after receiving the injection

around 10:00 am. The patient's heart rate is 115 laying down and her heart rate is 123 walking around on 21Dec2020. It is not life threatening and is kind of minor. The patient does get motion sickness easily. The reporter also received an injection from the same lot number. The patient she was reporting on is the only patient she has had that had an adverse reaction. There had not been any issues with any of her other patients. Treatment: The patient took Advil pm last night and it did not help, states Advil PM has benadryl in it. States it did not help. The outcome of events was not recovered. The causality between events dizziness, fatigue, tachycardia and BNT162B2 is considered related by Primary Source Reporter per Global Introspection.

hives all over her body; Itching; This is a spontaneous report from a contactable Pharmacist. A 32-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot EH9899, Expiration Date Mar2021, via intramuscular route of administration in right arm, on 18Dec2020 15:55, at single dose for COVID-19 immunization. The vaccine was administered at Hospital Facility. The patient medical history and concomitant medications were not reported. The patient experienced hives all over her body and itching on 18Dec2020 at 19:00. The events required visit to Emergency Room. The patient was treated with Benadryl PO and Prednisone 60mg PO. The patient did not have any respiratory distress or anything. They said this was related to the vaccine. The events were non serious. The outcome of the events was unknown.

tingling in her arm at the injection site; hand turned red; soon after had tingling up and down her entire arm; This is a spontaneous report from a contactable consumer. A 27-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration, on 24Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced tingling in her arm at the injection site, hand turned red, and soon after had tingling up and down her entire arm. Therapeutic measures were taken as a result of the events, which included diphenhydramine hydrochloride (BENADRYL). The clinical outcome of tingling in her arm at the injection site, hand turned red, and tingling up and down her entire arm was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

migraine; This is a spontaneous report from a contactable consumer. An adult female patient (middle-aged) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration in Dec2020, at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced migraine in Dec2020. The patient was not responding to their usual migraine medicines. The clinical outcome of migraine was unknown. No follow-up attempts are possible; information about batch/lot number cannot be obtained.

he felt very achy and tired with a sore arm; he felt very achy and tired with a sore arm; he felt very achy and tired with a sore arm; This is a spontaneous report from a contactable physician (patient) via Pfizer Sales Representative. A male patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Batch/Lot number unknown, via an unspecified route of administration on 21Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant

medications were not reported. The patient reported he felt very achy and tired with a sore arm on 21Dec2020. The events were non serious and the patient completely recovered from the events on 22Dec2020. Information about batch/lot number has been requested.

Sore left arm at injection site. Pain started 8-10 hours after injection; resolved by 3 days after injection; This is a spontaneous report from a contactable physician (patient). A 49-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot EH9899) intramuscular in left arm on 18Dec2020 at 07:45 am at single dose for COVID-19 immunization. Medical history included Cluster headaches, Osteoarthritis of right shoulder and gastrooesophageal reflux disease (GER). No Known allergies to medications, food or other products. Concomitant medication included ascorbic acid (VITAMIN-C), omeprazole and fish oil. The patient experienced sore left arm at injection site on 18Dec2020 at 04:00 pm; pain started 8-10 hours after injection and resolved by 3 days after injection. Patient was treated with ibuprofen and recovered from the event in Dec2020. Case is non serious.

Mild arm soreness; This is a spontaneous report from a contactable physician. A 34-years-old female patient started to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), lot number: EJ1685, intramuscularly on 22Dec2020 14:00 (at the age of 34-years-old) as a single dose in the left arm for COVID-19 immunization. Medical history included allergies to medications, food, or other products: shellfish from an unknown date and unknown if ongoing. Concomitant medication included clomifene citrate (CLOMID), folic acid (FOLATE). The most recent COVID-19 vaccine was administered in the hospital. It was unknown if the patient was pregnant at the time of vaccination. On 23Dec2020, the patient experienced mild arm soreness. The event mild arm soreness did not result in death, was not life-threatening, did not cause/prolonged hospitalization, was not disabling/incapacitating and did not cause congenital anomaly/birth defect. No treatment was received for the event. Outcome of the event mild arm soreness was recovering. Since the vaccination, the patient has not been tested for COVID-19.

He is sleeping a lot of side effect, I mean all day; This is a spontaneous report from a contactable consumer (patient's wife). A 52-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: AJ1685), via an unspecified route of administration on 17Dec2020 at single dose for covid-19 immunization. Medical history was none. There were no concomitant medications. The patient got his first shot on 17Dec2020 and he was sleeping a lot of side effect, all day. No treatment received and he just slept all day. Due date of next short was 08Jan2021 to 10Jan2021. The outcome of the event was unknown.

throat tightness; sore throat; This is a spontaneous report from a contactable consumer (patient herself). A 61-year-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in Dec2020 at single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient reported that 4 hours later she started to have throat tightness that lasted through the night. Caller reported during the call that the tightness was no longer present but she now had a sore throat. Outcome of event throat tightness was recovered in Dec2020, and outcome of event sore throat was unknown. Information on the lot/batch number has been requested.

"basically thought she had COVID all over again; basically thought she had COVID all over again; Pain at the injection site; Joint pain; Feeling unwell; This is a spontaneous report from a contactable physician (patient). A 45-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730), via an unspecified route of administration on an unspecified date in Dec2020 at single dose for COVID-19 immunization. Medical history included COVID a month ago in 2020. There were no concomitant medications. The patient experienced pain at the injection site, headache, myalgia, joint pain, chills, nausea, feeling unwell, fatigue in Dec2020. The patient basically thought she had COVID all over again. The patient stated, ""I was calling because I just had the COVID vaccine which has caused so many adverse reactions which is the side effects? I am experiencing all the side effects but it is calming down because today is day three. Pain at the injection site, headache, myalgia, joint pain, fatigue, chills, nausea, feeling unwell. Basically I had COVID a month ago and I had vaccine three days ago (Dec2020) and I basically thought I have COVID all over again. I took the vaccine on Friday started with the symptoms pretty much on Saturday."" The patient received ibuprofen (ADVIL) as treatment. The outcome of events was unknown. The physician assessed events pain at the injection site, headache, myalgia, chills, nausea, feeling unwell, fatigue was related with vaccine.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient cannot be completely excluded."

I have like muscle pain; I am having like chest pain, pain in my chest; This is a spontaneous report from a contactable consumer (patient). A 47-year-old female patient received BNT162B2 (Pfizer-BioNTech COVID-19 Vaccine, lot number EJ1685) on 21Dec2020 for COVID-19 immunization. The patient's medical history included high blood pressure and asthma. Concomitant medications were not reported. On 21Dec2020, the patient reported that she had like muscle pain, and had like chest pain/ pain in her chest. The outcome of the events was unknown.

chronic cough; Itchy welt in the lower of my back, its more like swell; whelps; This is a spontaneous report from a contactable nurse reported for herself. This 66-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot number: EJ1685, Expiry Date: 31Mar2021) via an unspecified route of administration at single dose in the right deltoid on 22Dec2020 08:00am for Covid-19 immunisation. Medical history included stage 0 breast cancer, she had a lumpectomy and radiation in 2016, she also just her Zyrtec for her seasonal allergies a few minutes. Concomitant medications were not reported. The patient experienced whelps on 22Dec2020 02:00pm with outcome of not recovered, chronic cough on an unspecified date with outcome of unknown, itchy welt in the lower of my back, its more like swell on an unspecified date with outcome of unknown. The events were described as follows: After getting the vaccine she noticed raised whelps on her lower back. They are about 1-2 cm in length and that was the largest and the smaller ones are about 1/2 a centimeter long. There are 4-5 on her lower back and there is one right around her upper scapula area. She describes them as itchy, red, and raised. She has never had this happen to her before and so she immediately took Benadryl. The patient also reported that she has a chronic cough which has been described as a combination of things. It is an asthma variant cough, she has drainage and a hyper-reactive airway but doesn't not have asthma technically. The vaccine was administered at Hospital Facility. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine.

left arm soreness; extreme fatigue for 4 days; severe headache day 3,4; This is a spontaneous report from a contactable physician, who is also the patient. This 44-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration in the left arm on 18Dec2020 at 07:00 at single dose for COVID-19 immunisation. Vaccination facility type: hospital. Relevant medical history included penicillin allergy. There were no concomitant medications. On 18Dec2020 at 15:00, the patient experienced left arm soreness and extreme fatigue for 4 days and in Dec2020 she experienced severe headache day 3, 4. The patient did not receive corrective treatments. She recovered from the events in Dec2020. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, she had not been tested for COVID-19. No follow-up attempts are possible, information about batch number cannot be obtained.

I had a fever last night; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), via an unspecified route of administration on 21Dec2020 at a single dose for Covid-19 immunization. The patient's medical history was and concomitant medications were not reported. The patient had the Pfizer vaccine yesterday (on 21Dec2020) and had a fever at night. The patient asked if patient has to quarantine because of that. The outcome of the event was unknown. Information on the lot/ batch number has been requested.

severe headache; This is a spontaneous report from a non-contactable consumer (patient husband). A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient experienced severe headache on an unspecified date with outcome of unknown. No follow-up attempts are possible, information about lot/batch cannot be obtained.

she woke up this morning with vomiting, loose stool and her chest wall muscles are extremely painful; she woke up this morning with vomiting, loose stool and her chest wall muscles are extremely painful; she woke up this morning with vomiting, loose stool and her chest wall muscles are extremely painful; nausea; This is a spontaneous report from a contactable consumer (patient). A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient wanted to know about her symptoms after receiving the covid 19 vaccine. The patient reported that she woke up this morning (an unspecified date) with vomiting, loose stool and her chest wall muscles were extremely painful, and she wanted advice on what to do about her nausea. The outcome of the events was unknown. Information on the lot/batch number has been requested.

metallic taste in mouth; general malaise; This is a spontaneous report from a contactable other HCP (Nurse anesthetist) reporting for himself. A 42-year-old male patient received bnt162b2 (BNT162B2, Batch/lot # EL0140) at single dose at left deltoid on 21Dec2020 08:30 for immunisation. Medical history and concomitant medications were none. On 22Dec2020 he was feeling just some general malaise that has since improved. On 23Dec2020, he woke up with a metallic taste in his mouth around 6:30 am and it

is persisting. The patient stated he felt fine, he was afebrile, could still smell, went for a 7 mile run, but still had this metallic taste in his mouth. The outcome of malaise was recovering, of metallic taste in mouth was not recovered.

intractable vomiting; This is a spontaneous report from a contactable physician (patient). A 38-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number EK5730), intramuscular on 22Dec2020 at 13:00 at single dose in right deltoid for covid-19 immunization. There were no medical history or concomitant medications. The patient experienced intractable vomiting on 22Dec2020. The reporter was a physician, she received the Covid-19 vaccine on 22Dec2020 at 1:00 pm. At night on 22Dec2020, she started experiencing intractable vomiting, it was less frequent at time reporting, happening every 2-3 hours. The outcome of the event was resolving.

"dry throat; arm feeling sore; This is a spontaneous report from a contactable consumer. This consumer reported similar events for two patients. This is the first of two reports. A 43-year-old female patient received bnt162b2 (BNT162B2; lot number: EH9899), via an unspecified route of administration on 21Dec2020 at SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On 21Dec2020, it was reported that she had a ""weird very dry throat 3 hours after the vaccine at the same time that my arm started feeling sore."" She also commented that her coworker also had a dry throat 2-3 hours after the shot and thought it was just talking to his student too much. The outcome of the event was unknown.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020510803 same reporter, suspect drug, event, different patient"

"dry throat; This is a spontaneous report from a contactable consumer. This consumer reported similar events for two patients. This is the second of two reports. A male patient of an unspecified age received bnt162b2 (BNT162B2), via an unspecified route of administration on an unspecified date at SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On an unspecified date, it was reported that the patient experienced dry throat 2-3 hours after the shot and thought it was just talking to his student too much. The outcome of the event was unknown. Information on the lot/ batch number has been requested.; Sender's Comments: Agree with the reporting consumer, the reported dry throat reported as "" just talking to his student too much"" is considered unrelated to the administration of BNT162B2 for COVID-19 immunization,Linked Report(s) : US-PFIZER INC-2020510790 same reporter, suspect drug, event, different patient"

fatigue; headache; sore throat; feeling crummy; This is a spontaneous report from a contactable physician (patient). A 32-year-old male patient received first dose of BNT162B2, via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced fatigue, headache, sore throat, feeling crummy all on an unspecified date with outcome of unknown. Caller stated that he got the COVID vaccine on Saturday, got fatigue, headache and sore throat, kind of feeling crummy. Wanted to know if this was a side effect of the vaccine. Wanted to know if it was worth getting a test. Wanted to know will the test come up positive due to the vaccine. Wanted to know if he needed to quarantined. Wanted to know if what he got was good. Stated that this was his first dose. Information on lot/batch number has been requested.

chills; body aches; runny nose; This is a spontaneous report from a contactable consumer (patient himself). A male patient of an unspecified age received BNT162B2 (Pfizer-BioNTech COVID-19 vaccine), via an unspecified route of administration on an unspecified date at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced chills, body aches and runny nose on an unspecified date. All events were reported as non-serious. Outcome of events were unknown. Information on the lot/batch number has been requested.

Feeling a bit unwell/I am not feeling good; Chills; little weak; Little bit tired; This is a spontaneous report from a contactable consumer (patient herself). A 56-year-old female patient received the first dose of (Pfizer-BioNTech COVID-19 vaccine, lot# EK5730), via an unspecified route of administration on 20Dec2020 at single dose for covid-19 immunization. Medical history included allergy. Consumer stated, she guessed its environmental allergies. Concomitant medication included cetirizine hydrochloride (ZYRTEC) for allergy. Patient had the vaccine on Sunday and was feeling a bit unwell on 22Dec2020. Consumer further stated, because she had the vaccine the first shot on Sunday and today (22Dec2020) she was not feeling good, she was wondering it could be a side effect. When probed for the adverse events, Consumer stated, she was feeling like little bit like chills, little bit tired and a little weak. Consumer stated she got it from work at the hospital. Outcome of events were unknown.

"Developed sore muscle pain after the injection; Little more tired than normal/had to go to bed earlier than usual, around 10-10:30pm instead of midnight to 1am; This is a spontaneous report from a contactable other healthcare professional. A 46-year-old female patient received bnt162b2, via an unspecified route of administration on 21Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was asked that if patients develop sore muscle pain at site of injection, did that mean the body was mounting an immune response to the vaccine? The patient developed sore muscle pain after the injection on 21Dec2020, it continued 22Dec2020, but it is gone and better on 23Dec2020. It was also reported that the last few nights, she had been a ""little more tired than normal"". She had to go to bed earlier than usual, around 10-10:30 pm instead of midnight to 1am. The outcome of event tiredness was unknown; of another event was recovered on 23Dec2020. Information on the lot/batch number has been requested. ."

back pain has been getting worse; This is a spontaneous report from a contactable other healthcare professional (patient herself). A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. Medical history included back pain. The patient's concomitant medications were not reported. The patient back pain had been getting worse on 20Dec2020. The outcome of event was unknown. Information on the lot/batch number has been requested.

he felt weakness; fever/100.1 degrees; chills; nausea; tiredness; headache; This is a spontaneous report from a contactable consumer (patient himself). A 25-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140), via an unspecified route of administration at site of left arm (reported left shoulder) at 11:00 on 22Dec2020 at single dose for COVID-19 immunization. Before vaccination, patient was recently COVID-19 positive by a nasal swab COVID-19 test and had

ended his quarantine period a few days before receiving the COVID-19 vaccine. There were no concomitant medications. After vaccination, he had chills, fever, nausea, tiredness, and headache around 10:00 PM on 22Dec2020, and throughout today, he had been experiencing these side effects. The side effects all hit at once. He felt weakness this morning on 23Dec2020, and then had a severe headache and chills. He had a headache and fever of 100.1 degrees. he had taken a generic dextromethorphan hydrobromide guaifenesin paracetamol pseudoephedrine hydrochloride (DAYQUIL, liqui-gels for his symptoms. and about 30 minutes later, his symptoms dissipated, and he was good for 3 hours until the symptoms came back. The outcome of event 'felt weakness' was unknown, of rest events was not recovered.

sore throat and L ear pain about 22 hours after vaccination; sore throat and L ear pain about 22 hours after vaccination; This is a spontaneous report from a contactable pharmacist. A 48-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# eL1284), intramuscular from 22Dec2020 15:45 to 22Dec2020 15:45, single for COVID-19 immunisation. Medical history was none. The patient's concomitant medications were not reported. Vaccine location was left arm. No other vaccine was received in four weeks. The patient experienced sore throat and left ear pain about 22 hours after vaccination on 23Dec2020 13:30. No treatment was administered. The action taken in response to the events for bnt162b2 was not applicable. The events outcome was unknown.

Muscle aches; Chills; Fever little over 100; This is a spontaneous report from a contactable nurse. A female patient of an unspecified age received bnt162b2 (BNT162B2, lot number and expiry date were not reported), via an unspecified route of administration on Dec2020 at a single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient experienced muscle aches, chills and fever little over 100 on Dec2020 with outcome of unknown. Information on the lot/batch number has been requested.

"metallic taste in my mouth; tongue feels like it's being coated with something; This is a spontaneous report from a contactable consumer reported for himself. This 52-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot number: EL0140), via an unspecified route of administration at single dose on 22Dec2020 for Covid-19 immunisation. Medical history included cholesterol. Concomitant medication included colecalciferol (VITAMIN D [COLECALCIFEROL]). The patient stated, ""I get the vaccine about an hour ago and I didn't see anything stating with the side effects but I have got the metallic taste in my mouth and now my tongue feels like it's being coated with something"" on 22Dec2020 with outcome of unknown. No treatment was performed."

fatigued; disoriented; This is a spontaneous report from a contactable physician (patient) via a Pfizer sales representative. A male patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiration date were not reported), via an unspecified route of administration on Dec2020 at a single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. On Dec2020, the patient was fatigued and disoriented for 3 days. He felt fine now. Outcome of the event was recovered on Dec2020. Information on the lot/batch number has been requested.

when they were drawing the needle back out of her arm there was unusual amount of blood that came out; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs), by a contactable pharmacist. A male patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at 0.3 mL, single on 22Dec2020 for Covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient experienced that when they were drawing the needle back out of her arm there was unusual amount of blood that came out on 22Dec2020 with outcome of unknown. We don't know if we needed to re-dose or revaccinate her since it was unusual amount that came out. Information on the Lot/Batch number has been requested.

Headache; Muscle pain; Chills; This is a spontaneous report from a contactable consumer (healthcare medical assistant) reporting for herself. This 39 years old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot EK5730, expiry date 03Jan2021) on 21Dec2020, at single dose, for COVID-19 immunization. Medical history included thyroid (no other information reported). The patient was exposing herself to patients with COVID, she worked in a health care. Concomitant medication included an unspecified thyroid medication. The patient experienced headache, muscle pain and chills on an unspecified date in Dec2020. The reporter asked if she could take like paracetamol (TYLENOL). Events outcome was unknown.

general body aches; discomfort; This is a spontaneous report from a contactable physician reporting for himself, received via a Pfizer sales representative. This healthy 31-year-old male patient received the first single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 19Dec2020, for COVID-19 immunization. Medical history and concomitant medications were not reported. On 22Dec2020 the patient experienced general body aches during the day. Aches may have begun a day or two before 22Dec2020. Aches caused discomfort but did not interfere with ability to perform normal tasks / activities. Events outcome was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

her tongue felt a little weird; she got nervous; her arm was really sore; something about her tongue was like feeling lazy or heavy or something like that; she had like a taste of metal, like a lingering taste of metal; she was starting to feel a little weird, overall she was getting weird; This is a spontaneous report from a non-contactable consumer. An approximately 47 years old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on an unspecified date in Dec2020, at single dose, for COVID-19 immunization. Medical history and concomitant medications were not reported. On an unspecified date in Dec2020 the patient experienced her tongue felt a little weird, she got nervous, her arm was really sore, something about her tongue was like feeling lazy or heavy or something like that, she had like a taste of metal, like a lingering taste of metal and she was starting to feel a little weird, she just said overall she was getting weird. Last night, on 21Dec2020, the reporter was speaking to her sister who took the COVID vaccine and she said her tongue felt a little weird and she was starting to feel a little weird and she got nervous and she got up and started walking around just to like clear herself and just to make sure there was nothing going on. She said it took about half an hour, it happened about half an hour but sure went ahead. No treatment was given. Events outcome was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

sinus infection; This is a spontaneous report from a non-contactable consumer. A 52-years-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced sinus infection in Dec2020. The patient wanted to know the efficacy of the covid vaccine after getting the first dose. The outcome of the event was unknown. No follow-up attempts are possible. Information about lot/batch number cannot be obtained. No further information is expected.

anaphylaxis; This is a spontaneous report from a contactable physician reporting on behalf of patient. A patient of unspecified age and gender received single dose of BNT162B2 (batch/lot number and exp date not reported), via an unspecified route of administration on an unspecified date for immunisation. The patient's medical history and concomitant medications were not reported. On an unspecified date, the patient experienced anaphylaxis with a very protracted course requiring an epi dose for 4.5 days and was still in the ICU (date/s unspecified) following administration of the COVID vaccine. The physician would like to use a drop of leftover vaccine from one of the vials to do a future skin test after the patient is stable. They were unsure if they needed permission as this was standard practice in allergy to test afterwards but wanted to check in with the company. The outcome of event was unknown. Information about batch/lot number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylaxis cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Had a sore arm after receiving Pfizer's Covid 19 vaccine; This is a spontaneous report from contactable consumer received via a sales representative. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient experienced sore arm after receiving Pfizer's COVID-19 VACCINE. The patient outcome of the event was unknown. No follow-up attempts are possible, information about batch number cannot be obtained.

mild injection site soreness; This is a spontaneous report from a contactable nurse received via a Pfizer sales representative. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 22Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient experienced mild injection site soreness on Dec2020. The patient outcome of the event was unknown. Information about Lot/Batch number has been requested.

Sense of taste is gone; This is a spontaneous report from a contactable nurse reporting for himself. A 49-year-old male patient received the 1st dose of bnt162b2 (BNT162B2, Manufacturer Pfizer-BionTech), via an unspecified route of administration, on 20Dec2020, at single dose, for COVID-19 immunisation.

Medical history included asthma from an unknown date and unknown if ongoing. Concomitant medication included procaterol hydrochloride (PRO-AIR) as needed (inhaler) for asthma. The patient experienced sense of taste is gone on 21Dec2020 with outcome of unknown. The information on the lot/batch number has been requested.

Tongue feel tingly; This is a spontaneous report from a contactable consumer reporting for herself. A 27-year-old female patient received bnt162b2 (BNT162B2) (lot# EK5730), via an unspecified route of administration, on 22Dec2020, at single dose, for COVID-19 immunisation. Medical history and concomitant medications were none. The patient experienced tongue feel tingly on 22Dec2020 1 hour after vaccination with outcome of unknown. Therapeutic measures were taken as a result of the event and included treatment with Tylenol.

Sore throat; Headache; Left arm pain; This is a spontaneous report from a contactable nurse. A 39-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), intramuscular on the left arm on 22Dec2020 18:15 at single dose for COVID-19 immunisation. Medical history included she was COVID positive a few months ago. There were no concomitant medications. The patient previously got flu vaccine in Oct2020 for immunisation. The patient experienced sore throat and headache on 23Dec2020 and left arm pain on 22Dec2020. The outcome of sore throat and headache were recovering and left arm pain was not recovered.

Substantial back pain; This is a spontaneous report from a contactable consumer (the patient) A patient of unspecified age and gender received bnt162b2 (BNT162B2; Lot # EK5730) vaccine , via an unspecified route of administration on 21Dec2020 at single dose for Covid-19 immunisation . The patient medical history and concomitant medications were not reported. The patient experienced substantial back pain on an unspecified date with outcome of unknown.

experienced loss of taste; Cannot taste or smell red wine vinegar or bleach respectively.; This is a spontaneous report from a contactable other healthcare professional. A male patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 20Dec2020 at a single dose for COVID-19 immunization. The patient's medical history includes wears a CPAP (ongoing). Concomitant medications were not reported. The patient received vaccine 20Dec2020 and experienced loss of taste. He wears a CPAP. He went to the doctor on 21Dec2020 and was prescribed amoxicillin. The patient cannot taste or smell red wine vinegar or bleach respectivel. Outcome of the events was unknown. Information on Lot/Batch has been requested.

"threw up about 3 hours ago; fever which started last night; This is a spontaneous report from a contactable other healthcare professional (reporting for herself). A female patient (Age: 22; Units: unknown) received bnt162b2 (also reported as PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date were unknown), via an unspecified route of administration on 23Dec2020 11:30 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient got Covid vaccine yesterday at around 1130 am and had fever which started last night (23Dec2020) and ""threw up"" about 3 hours ago this morning (24Dec2020) and mentioned that it

was just on 1 occasion, but it was a lot. She wanted to know if it's normal. The outcome of the events was unknown. Information on the lot/batch number has been requested."

I had a headache quite severe and arm pain; I had a headache quite severe and arm pain; Dizziness; Hot flashes; This is a spontaneous report from a contactable consumer for herself. A 55-years-old female patient started to receive bnt162b2 (BNT162B2; Lot # EJ1685) vaccine , via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunisation . The patient medical history was not reported. Concomitant medication included liraglutide (VICTOZA). The patient had a headache quite severe, arm pain, dizziness and hot flashes on 19Dec2020 with outcome of recovered. The patient also stated that everything was fine by Sunday.

fever; This is a spontaneous report from a contactable other health professional received via Medical Information Team. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 23Dec2020 at 09:00 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient experienced fever on 23Dec2020. The patient outcome of the event was unknown. Information about Lot/Batch number has been requested.

lymphadenopathy in her cervical area; This is a spontaneous report from a contactable consumer (parent). A female patient of an unspecified age (reported as 59, unit unknown) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 22Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was reported that patient noticed lymphadenopathy in her cervical area yesterday (23Dec2020). Outcome of event was unknown. Follow-up attempts are completed. The following information on the batch number has been requested.

slight fever; cold; This is a spontaneous report from a contactable other health professional received via Medical Information Team. A 24-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 23Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient experienced slight fever and cold on Dec2020. The patient outcome of the events was unknown. Information on the lot/batch number has been requested.

Flushing after an hour of receiving the vaccine; This is a spontaneous report from a contactable consumer (patient). A patient of an unspecified age and gender received BNT162B2 (Pfizer-Biontech Covid-19 Vaccine) on 21Dec2020, at single dose, for COVID-19 immunisation. Relevant medical history and concomitant medications were unknown. On 21Dec2020, the patient experienced flushing after an hour of receiving the vaccine and on 22Dec2020, the episode was lasting quite a bit longer. Clinical outcome of the adverse event was unknown at time of this report. Information on the lot/batch number has been requested.

the injection site is extremely painful; bleed a lot; there was lot of blood, it was more than usual; I could barely move; Rest of the arm feels cold like really cold; This is a spontaneous report from a contactable nurse (patient). This 48-year-old female patient (weight 68.04 kg, height 160 cm) received BNT162B2

(Pfizer-Biontech Covid-19 Vaccine) on 22Dec2020, at single dose, for COVID-19 immunisation. Relevant medical history included asthma and allergy from an unspecified date and ongoing. Concomitant medications were none. On 22Dec2020, the injection site was extremely painful and bleed a lot; there was lot of blood, it was more than usual. She could barely move and rest of the arm felt cold like really cold. Patient put 3 band aids on injection site. Clinical outcome of the events was unknown at time of this report. Information on the lot/batch number has been requested.

Swelling reported around mouth and eyes; Swelling reported around mouth and eyes; rash; This is a spontaneous report from a contactable consumer (patient). A female patient of an unspecified age received bnt162b2 (Pfizer-BIONTECH COVID-19 vaccine), via an unspecified route of administration on 22Dec2020 16:30 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient previously took doxycycline in 2019 and experienced swelling reported around mouth and eyes and rash. On an unspecified date in Dec2020, the patient experienced swelling reported around mouth and eyes and rash. The outcome of the events was unknown. Information on the lot/Batch number has been requested.

"Armpit is swollen; This is a spontaneous report received from a contactable consumer (patient). A 45-year-old male patient (also reported as female, pending clarification) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number reported as ""It is hard to read this handwriting EIP5730. This one it might be A or K, EK5730"" (clarification pending), expiry date not reported), via an unspecified route of administration in gluteus, on 18Dec2020, at single dose, for COVID-19 immunization. Medical history included sexually transmitted disease (STD). There were no concomitant medications. The patient reported, ""I took vaccine shot (COVIDvaccine) on 18th and I noticed my, yesterday (20Dec2020), my armpit is swollen is like big hill, it is like swollen."" The patient stated, ""Armpits, under my arm is swollen."" The patient underwent lab tests and procedures which included blood work (unspecified date) with unknown results, the patient reported that this was for his STD. The outcome of the event was unknown. Information about lot/batch number has been requested."

body aches and fever; body aches and fever; This is a spontaneous report from a contactable nurse. A patient of unspecified age and gender received bnt162b2 (BNT162B2), via an unspecified route of administration on an unspecified date at SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On an unspecified date, it was reported that the patient was having body aches and fever. The outcome of the events was unknown. Information on the batch/lot number has been requested.

"ear ringing; This is a spontaneous report from a contactable consumer. A male patient of an unspecified age (age: 63; Unit: unknown) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 20Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received vaccine on Sunday 20Dec2020 and indicated experiencing ear ringing started Monday 21Dec2020 that has been persistent. The patient's blood pressure was ""fine"". The outcome of the event was not recovered. Information on lot/batch number has been requested."

I had body hives for 24 hours; This is a spontaneous report from contactable nurse (patient). A female patient of an unspecified age received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 16Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On an unspecified date in Dec2020, the patient had body hives for 24 hours. The patient recovered from the event on an unspecified date in Dec2020. Information on the lot/Batch number has been requested.

headache; nausea; cough; fatigue; This is a spontaneous report from a contactable nurse. A male patient of an unspecified age received bnt162b2 (BNT162B2, lot number and expiry date were not reported), via an unspecified route of administration on 18Dec2020 at a single dose for immunization. The patient's medical history and patient's concomitant medications were not reported. On 22Dec2020, the patient experienced cough and fatigue. On 23Dec2020, the patient got severe nausea, severe headache that continued through the night. The outcome of the events was recovering. Information on the lot/batch number has been requested.

"sore throat; This is a spontaneous report received from a contactable other healthcare professional (who is also the patient). A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date not reported), via an unspecified route of administration, on 21Dec2020, at single dose, for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient reported, ""I received my vaccine on Monday the 21st and on Tuesday (22Dec2020) I had a sore throat. I don't see on the fact sheet this as a commonly reported side effect. Should I get tested?"" The outcome of the event was unknown. Information about Lot/Batch number has been requested."

hurts to breathe or move; severe pleuritic pain at the right ribcage; abdominal pain; This is a spontaneous report from a contactable consumer. A female patient of an unspecified age received bnt162b2 (BNT162B2), via an unspecified route of administration on left arm on an unspecified date at SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. She experienced abdominal pain 14 hours after receiving the vaccine (went away after 6 hours). At 26 hours after she experienced severe pleuritic pain at the right ribcage (vaccine was injected on her left arm), saturation is at mid 90s, and it hurts to breathe or move. The outcome of the event abdominal pain was recovered, while unknown for the other events. Information about lot/batch number has been requested.

"flu like symptoms; fever 99.5 this morning; feel weak; fatigue; injection site pain; upper arm pain; breathing heavier now; This is a spontaneous report from a contactable consumer (patient). A 27-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at a single dose for covid-19 immunization. Medical history included COVID-19 in Jul2020. The patient's concomitant medications were not reported. On 24Dec2020, the patient experienced flu like symptoms, fever 99.5 this morning, feel weak, fatigue, injection site pain, upper arm pain and was breathing heavier. The patient took paracetamol (TYLENOL) for the events injection site pain and upper arm pain. Outcome of the events ""upper arm pain"" and ""injection site pain"" was recovering while the outcome of the events ""flu like symptoms"", ""fever

99.5 this morning"", ""feel weak"", ""fatigue"" and ""breathing heavier"" was unknown. Information on the lot/batch number has been requested."

Sore arm; This is a spontaneous report from a contactable nurse, the patient. A 39-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, lot number El0140), via an unspecified route of administration in the left arm on 23Dec2020 at 19:15 (at the age of 39-years-old) as a single dose for Covid-19 vaccination. Medical history included Fibromyalgia from an unknown date. The patient did not have any allergies to medications, or other products, was allergic to milk. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient was not tested for COVID-19 post vaccination. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 24Dec2020 at 09:30, the patient experienced sore arm. Therapeutic measures were not taken for the sore arm. The clinical outcome of the event sore arm was recovering.

Swollen painful axillary lymph node, malaise, constant headache, nausea for several days; Swollen painful axillary lymph node, malaise, constant headache, nausea for several days; Swollen painful axillary lymph node, malaise, constant headache, nausea for several days; Swollen painful axillary lymph node, malaise, constant headache, nausea for several days; Swollen painful axillary lymph node, malaise, constant headache, nausea for several days; This is a spontaneous report from a contactable consumer, the patient. A 50-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE) solution for injection in the left arm on 18Dec2020 at 09:00 (at the age of 50-years-old) as a single dose for COVID-19 vaccination. The patient was not pregnant at the time of vaccination. Medical history included celiac disease and hypothyroidism. Concomitant medications included levothyroxine sodium (SYNTHROID) and paroxetine hydrochloride (PAXIL). Past drug history included known allergies: minocycle, tetracycline and acetylsalicylic acid (ASPIRIN). The patient did not receive any other vaccine within 4 weeks prior to the vaccine. Prior to the vaccination, the patient was not diagnosed with COVID-19. On 22Dec2020, the patient experienced swollen painful axillary lymph node, malaise, constant headache, nausea for several days. No treatment was provided for the events swollen painful axillary lymph node, malaise, constant headache, nausea. The outcome of the events swollen painful axillary lymph node, malaise, constant headache, nausea was not recovered. Since the vaccination, the patient has not been tested for COVID-19. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

get hot with a feeling of an elevated heart rate /she also experienced similar reactions to her vaccine; get hot with a feeling of an elevated heart rate/she also experienced similar reactions to her vaccine; This is a spontaneous report from a contactable consumer (nephew of the patient). A female patient of unknown age received BNT162B2 on unknown date at single dose for COVID-19 immunisation. Medical history and concomitant medications were unknown. Approximately 3 to 4 minutes after injection site, the patient started to get hot with a feeling of an elevated heart rate. The action taken with BNT162B2 was not applicable. The outcome of the event swas unknown. Information for Lot/Batch number has been requested.

Diarrhea; Nausea; This is a spontaneous report from a contactable Other health care professional (HCP) (patient). A 20-year-old female patient, not pregnant, received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 23Dec2020 at 06:00 PM at single dose in Right arm for COVID-19 immunization, Lot number: EK9231. Medical history included covid. No known allergy to medications, food or other products. Concomitant medications included amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL) and trazodone. On 23Dec2020 patient experienced diarrhea and nausea. Patient received anti diarrheal as treatment. Since the vaccination patient had not been tested for COVID-19. Patient was recovering from the events.

hives all over her arms and legs; This is a spontaneous report from a contactable nurse. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 21Dec2020 at single dose COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient reported on Monday 21Dec2020 that she got the COVID-19 vaccine. Last night 23Dec2020, she got hives all over her arms and legs. The doctor was thinking of putting her on Prednisone and she wants to check to make sure that won't decrease the effectiveness of the vaccine. It was not provided if a sample of the product was available to be returned, if requested and if packaging was sealed and intact. The outcome of the event was unknown. Information on lot/batch number has been requested.

Right lower quadrant pain; back of throat tight and full and moved to tongue; fullness in ears; some itching and fullness on the right side near the back of her tongue; This is a spontaneous report from a contactable nurse (patient). A 50 years old female patient (weight 81.65 kg and height 173 cm) received BNT162B2 (Pfizer-Biontech covid-19 vaccine, Lot. EL1284) on 22Dec2020, at single dose, for COVID-19 immunisation. Relevant medical history and concomitant medications were none. It was reported that she had no allergies to anything. On 22Dec2020, the patient experienced a sharp pain in her lower right quadrant of her abdomen, then her ears started getting full, then the back of her throat started getting tight and full and moved to her tongue. It was also reported that she started feeling some itching and fullness on the right side near the back of her tongue. Her airway was intact. Nurse clarified that her reaction last night after the vaccination all happened within 12 minutes of receiving the shot. She went to the emergency room for observation and was treated with epi and Benedryl. She went home after a couple of hours. Clinical outcome of the events was recovering at time of this report. The adverse event, right lower quadrant pain, was assessed as serious (medically significant).; Sender's Comments: By close temporal relationship ('within 12 minutes of receiving the shot') and absence of factors which may provide an alternative cause, the company cannot exclude a contributory role of the BNT162B2 administration in the development of the serious event reported as 'sharp pain in her lower right quadrant of her abdomen'. The impacts of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Itching - injection site and left side of body, throat, back and neck Slight soreness off & on - inj site. Sore body, tired, headache

Fatigue x 3 days, SOB x 4 days (history of asthma; used inhaler multiple time daily). Headache - motrin/Tylenol x 7 days. Upset stomach x couple of days. Arm, red swollen, hard, painful with some itching x 1 wek.

Started feeling unwell Monday night and sick by Tuesday night. Extreme fatigue Tuesday AM, nausea & fatigue & headache. By Tuesday night, very sore throat and extreme fatigue. Wednesday very congested, sore throat, swollen and painful lymph nodes. Went to urgent care & swabbed for COVID and strep. Both negative (tests were rapid and PCR). Since Wednesday continuing through today 12-28-20 - congestion, sore throat, coughm, swollen painful lymph nodes, some GI issues, headache, and fatigue. Return to PCP on 12-29-20

- light headedness, headache started later Some itchiness but did not last BP - 118/84 Headache not resolved

itchiness around vaccine 5-10 mins - resolved with cold compress intermittent dizziness (did resolve) + headache (did not resolve) at 15 mins - 60 mins

On December 23rd, around 5:30-6:00 p.m. I received the Moderna COVID-19 Vaccine EUA at the Vaccination Site. I did not have any adverse symptoms until the night of December 24th around 11:30 p.m. It started that night with nausea. I initially thought it was something I had eaten. I went to bed feeling nauseous but fell asleep. I slept through the night, and work up the next morning, December 25th, still nauseous. I did not ever vomit, even though I very much thought I would. As the day progressed, I developed chills and a low-grade fever. This continued through the day. The nausea was terrible! I could not eat anything because the mere thought of food made me feel sicker. I drank very little as well. I also developed flu like symptoms. I could not stand to be touched, as my skin was highly sensitive to touch. (The same feeling you get if you have a bad case of the flu.) I used a cold wet washcloth all day, as I felt hot, but my fever never went over 99.7 degrees. I eventually fell asleep that night, but I was restless. I woke up several times to noises in my home. Each time it felt like my body was trembling or my heart was racing or fluttering, but these episodes did not last long, nor could I tell you for sure that was exactly what it was. I just felt shaky. Each time I fell back asleep. The next morning, December 26th, I awoke, and the nausea was gone, but the chills and the fever were still hanging on. I just felt bad! I used a cold wet washcloth on my forehead, face, and neck all day. I did eat maybe 5-10 dry saltine crackers and drank a glass or two of sprite. As the day progressed, I felt worse!! The nausea came and went all afternoon and into the night. I eventually fell asleep around 10-11:00 p.m. I slept all night. I awoke the next morning, December 27th, initially feeling nauseous again. I made it a point to drink a lot of Gatorade and sprite throughout the day. I found that I felt some better when I sat up but felt worse when I laid down. So, I sat for about an hour on the side of my bed. I eventually got up and walked around my house. I began to feel better and thought I might be able to shower and possibly eat. So, I did? and it was like my body did a 180! I quickly felt so much better. I ate some soup and drank some sprite. I didn?t completely go back to my normal routine, but I did stay up the remainder of the day and did not get sick. The next day, December 28th, I felt like myself again and pretty much went back to my normal routine. The most interesting side effects that I had that are not mentioned in the CDC COVID-19 Vaccine common side effects are: *My feet were ice cold, but they were wet with sweat

(I put on socks to try to warm them up, but it did not help as my socks would get damp thus making my feet colder) *My tongue became coated white (I did not lose my sense of taste or smell) *My skin felt hot to me, even though it was not hot to the touch (I used a cold wet washcloth for 2-3 days straight)

1 hour after vaccination, itchy eyes, swollen lip, tickle/scratchy throat. Went to ED. Took 25mg benadryl. Observed x 5 hours. Symptoms improved.

Headache the evening after , migraine overnight, soreness at the injection site, fatigue the next day, mild myalgia

Dizziness, itching of entire arm for days, migraine and nausea, sore muscles and fatigue for days, sinus pressure and pain, small rash at site

Started with lower back pain in the morning when I woke up. Then my back and hamstring muscles tighten up. All that went away as the day went on. Just a lingering discomfort remained. That night I was awaken by 10/10 dull pain in both my hips. I don?t have arthritis, but I imagine that is what the pain must feel like. That eventually subsided over the course of the night and then the following morning I woke up with a stronger lower back pain and major stiffness in my hamstrings, but the hip pain was gone. Throughout the day the pain would come and go and move up and down my back and along my spine. It was the strongest on the night of the 22 and has since gotten weaker and the tightens in my back and hamstrings has since left. Now I just get random aches throughout my back that come and go during the day. Yesterday, the 27th, I was hiking down a hill and the impact from that caused instant discomfort in my spine, it felt like it was compressing like an accordion. Never had this happen before. After that my back was sore for hours. Today, the 28th, I tried jogging and the spinal discomfort was instantly there. Went about thirty yards before I stopped and my back has been aching down my spine for hours. Also been experiencing a couple mild headaches through the day since the 22nd. This also has fired up the endothelial dysfunction in my heart which causes some strong chest pain throughout the day. I?ve gone back in my heart medication, so hopefully that will fix that issue. I will be contacting my cardiologist in regards to this and seeing if the vaccine can affect that.

Fever, chills, bodyaches

Burning eyes bilateral one hour after injection. Sore throat 4hours after injection.

Hives on neck. Swollen throat. Nausea.

Numbness and tingling all the way from injection site to the pinky and ring fingers foe few days. Nausea since injection off and on.

Fever and body aches. It feels like when I had covid a month and a half ago.

About 24 hours after the vaccine moderate soreness/pain in the area of the injection on the left upper arm. It disappeared 48 later without treatment. Also, 48 hours after the vaccine, a slight pain in the right ear/upper right mandible, especially when chewing, presented itself. it disappeared without treatment three days later, about five days after the vaccination.

I recieved vaccine on 12/22 at 1500 and awoke 12/24 at 0500 with a broken blood vessel in my R eye that did not involve pain, blurred vision or irritation.

headaches, severe myalgia, fatigue for over 24 hours

fever, nausea, vomiting fatigue starting 12/25 2 hrs after vaccination, fever 100.8 starting 12/26 at 2 pm, improved with acetaminophen, emesis x 1 around 9 pm, symptoms resolved by 12/27 9 am

Headache, lightheadedness, nausea, pain at injection site

Tiredness first thru day 5 Injection site soreness next for 24 hours Fever and chills at 12 hours thru day 6, highest fever 101.5 at day 5. Sweating and skin paleness day 4 thru 5. Headache at 12 hours thru currently, piercing behind right eye day 3 thru 6, eye watering on day 5 during worst fever, occasional nausea when headache is worst. Fatigue at 12 hours thru day 6.

Malaise, persistent fever 99.3-101.8 defF. Chills, diarrhea, body aches. All since the vaccination day to present.

The day after getting the vaccine I started having an intermittent tremor in my lower lip. This has continued through 12/29/20.

Within minutes of receiving my first vaccination, I developed a metallic type taste in my mouth. Currently experiencing altered smell and greatly reduced or altered taste.

Numbness and swelling of left upper lip

Fever 101 the first night , achy muscles and occasional dry cough

Woke up from being asleep with moderate pain in injection site, mild headache that has rapidly intensified into a moderate headache, body aches and chills began around 130 am and have continued. Took advil around 1 am for headache and has not helped. Low grade temp was recorded at 150 am of 99.9.

Presyncopal with hypertension and tachycardia . Resolved after observation . Was given oral Benadryl

Mild Bell's Palsy affecting right side of face. Mild assymetry noted, mild decreased muscle strength and tone, and slight right eye irritation. Symptoms with minimal progression by day 2. Started course of Prednisone on day 3 (12/28/20.) Currently symptoms persist but early in treatment course.

Left arm soreness, Chills since around 1:30pm on 12/28/2020, nausea around 4:00 am, low temp fever 99.1

Patient experienced a syncopal episode after receiving the COVID-19 vaccine. Patient transferred to the emergency department. Upon arrival to the emergency department, patient was awake and alert with GCS of 15. Patient did state she felt a little dizzy. Patient denied any nausea, vomiting, or abdominal pain. Patient received IV fluids. Patient was reassessed and stated she felt significantly improved. Patient discharged at 1300 on 12/23/2020.

Moderna COVID?19 Vaccine EUA 10 minutes after vaccine : injection site pain, feeling warming of entire body. 1 hour after vaccine: fatigue, worsening injection site pain. 15 hours after vaccine: woken up to mild head ache, mild body ache, moderate chills, restlessness. General malaise. Worse injection site pain

Within a couple minutes I had a metallic taste. Within about 15 minutes of vaccine my lips started feeling tingly and numb, after 20 minutes it spread to my mouth, nose area and eventually my whole face. My face felt numb. My eyelids felt like they were turning in. I was advised to take a Benadryl. I took one and within 20mins symptoms improved. After about 40mins the numbess started to come back. I then realized my Benadryl had expired in July 2020. I went back to vaccine site and they gave me pepcid & advised to take more Benadryl. I took pepicid & went to pharmacy & got new Benadryl. Within about 20 mins my symptoms improved. I was advised to take another pecid and did so that evening. I stayed with the metallic taste for another day. Symptoms have not returned.

Slurred speech, crooked walking, slow thought process, unable to spell words that I've never had a problem with before.

Patient reported flushing in the face, tingling on the left side down the left arm and then began to break out into hives on their chest. The individual also had a rapid heart rate and needed a wheel chair due to feeling slightly faint.

start time 03:00 am 12/29/2020: headache, neck pain, fatigue, injection site pain - treating with over the counter ibuprofen and rest

Headache, body aches, chills

Cold sore

Generalized Warm sensation x 3 min

"5 to 10 minutes after receiving vaccine started feeling ""drunk"", anxious, paranoid. Muscles became mildly tense and teeth clenched. The physical aspects only lasted a short time (10-15 minutes)the anxiousness paranoia and ""drunk"" feeling lasted approximately another hour. An hour after receiving vaccine started experiencing nausea and vomiting with extreme muscle soreness that was generalized and fatigue. After napping the nausea and vomiting resolved. Woke up shivering in cold sweats and shivering. Began experiencing forgetfulness and having problems thinking correctly. Issues with finding words, conversing and conveying information to other people. Shortly after waking up began experiencing severe back pain in lower to mid left back. Pain was shooting and it did not seem to matter on positioning. Back pain has resolved. Day 2 still experiencing severe fatigue, extreme muscle soreness, forgetfulness and not thinking correctly. Having issues finding words to use and communicate. Thinking process seems slow. Occasional cold sweats and shivering. Day 3 still feeling of forgetfulness, unable to find words and communicate correctly, slow thinking process, occasional cold sweats and shivering, occasional bouts of anxiety (lasts only 2-3 minutes at a time), short bouts of shortness of breath with exertion resolved quickly. Some muscle soreness seems to be resolving."

shanking chills (fever taken = 101.9), body aches, fatigue, nausea & vomiting

very bad palpitations for a short time frame

Parathesia in left foot. Did not seek medical treatment yet.

swelling and tingling sensation of left eyelid

Injection sight began to become sore around 6:30pm on 12/28, which kept me up all night with the soreness worsening. Throughout the night, I had severe chills, which is not normal for me.

3 Hours after injection left arm swollen from shoulder to elbow. 2 days after injection arm still swollen and rash on 20 percent of left arm

Pt c/o mottling of palms, tingle in arm; pt became hypertensive with headache within 15 minutes of vaccine; symptoms resolved and pt dc from ED

12/24 @3pm - tingling and heat sensations throughout body, tingling in mouth. Sore arm. 12/25 @5am - total body aches, joints, bone pain , mild headache, increased heat and tingling sensation to face, bright red cheeks. Body temp normal to low-grade 99F. Fatigue. Self-treated with Tylenol x3 doses. 12/26 - body pain resolved, heat and tingling sensation continued until late morning. Arm was red/hard/itchy 12/24 through 12/26.

At end of 30 minutes, patient started to itch and wanted to go to convenient care. Went to convenient care, received methylprednisolone 125 mg IM x 1 and diphenhydramine 50 mg PO x 1. Stayed for 20 minutes and reprted relief from treatment. Discharged to home.

Pfizer-BioNTech COVID-19 Vaccine Soreness at injection site, generalized body aches and malaise, headache/neck ache, low grade fever (99.3), mild chills.

Awoke with Flu-like symptoms: nausea, vomitting, fatigue, muscle soreness

Received SARS-CoV-2 Moderna vaccine in left deltoid. Pain at injection site and developed stiff/sore trapezius about 12 hours after injection. Got worse for about 12 hours after that before starting to get better. Fully recovered after 3 days.

localized reaction at site of injection redness and itching

On 12/26, I woke up with a headache, nausea, and feverish without a temp. They resolved by 12/28. I was tested for Covid on 12/26, results pending

throat tightness

Pain, burning, redness and heat at injection side and upper arm to shoulder

Extreme fatigue, headaches, and body aches since day of vaccination given. Taken Tylenol. Symptoms go away for couple hours and then come back.

"I had tingling/swelling in tongue and body itching for 30 minutes post vaccine, then felt light headed/dizzy and almost passed out. Then about 8 hours later I noticed my arm was swollen, hard, red, puffy and hot at injection site. It continued to get worse the next day. I was extremely tired and felt "" like I was hit by a truck "" for almost 2 days later. Pain in arm continued for a couple days later."

After having covid 4 weeks ago, I got the covid vax. After an hour, arm was sore. I went through my work day. Got home and was tired, showered, and was tired. I woke up at 1am and was shivering and shaking . It was intense. I had a better reaction with the actual virus. The CDC stated that I should be 10 days out from having covid, to get the vaccine, and I did so. My arm is swollen, there is a lump where the injection was. I did not take any thing for pain or symptoms.

Extreme fatigue. I slept close to 24 hours, woke for about 10 min and had horrible muscle/joint aches. Returned to bed for another 5 hours. Had a lingering headache (pain behind my eyes) for about 2 days afterwards.

Received vaccine on 12/28/2020 at 12:30 PM. Experienced injection site soreness by 6:00 PM. Experienced fever and chills in the night at 02:00 AM. On 12/29/2020 @ 06:00 AM I experienced perfuse sweating. At that time I took (2) Tylenol 500 mg tablets PO. Shortly thereafter the symptoms resolved.

Pt received injection in left arm. Pt had no initial pain. Approximately 5 minutes after injection became flushed, started seeing spots, felt like he may black out, felt numbness and tingling in the left arm that radiated up into the left side of the face and jaw.

Began with feeling fatigued around 6pm, had chills, palpitations and severe body aches with 101.3 fever. Fever resolved with Tylenol . Woke up then next morning (24 hours later) still with low grade 99 fever with weakness and fatigue. Fever spike again at 1pm 101F. Tylenol resolved fever again. The next day (48 hours after) fever free still with general aches and fatigue.

About 9 hours post vaccine, started to get extreme fat. 12 hours post vaccine, started getting chills and body aches. About 15 hours post vaccine, woke up with worsening body aches, headache, chills, nausea and a fever of 101.4. Took 600mg Ibuprofen at this time. 22 hours post vaccine, still having body aches, headache, nausea and temp 100.2. Took another 600mg Ibuprofen. 23 hours post vaccine, I feel exactly how I felt when I was infected with Covid-19 a few weeks ago. Temp 100.5.

dry cough, headache, body ache, feverish the following morning

rash all over chest to neck and lower face, started resolving on own, but took allergy med before bed. Mostly gone in am

Employee reported feeling shortness of breath and chest discomfort. Employee was taken to ED for evaluation.

Noted to have difficulty swallowing approximately 1-2 minutes after injection. Palpitations noted as well as being shaky. This lasted about 1-2 hours after. Difficulty swallowing did not worsen. Became light headed for about 1/2 hr after above symptoms subsided. Then all symptoms disappeared. Towards evening soreness in right arm started... throughout night soreness increased to the point of alternating Tylenol and naproxen. Soreness continue to increase throughout 2nd day... 3rd day soreness lessened and today(day4) almost nonexistent

I received my vaccine on 12/22 around noon. I woke up at 4am this morning 12/25 with tingling in my lips and tongue, in addition to the left side of my face being swollen. Not entirely sure what these side effects are from exactly but thought it best to report my experiences I was hospitalized on 12/25 to 12/26 because my reaction did get worse. I was experiencing numbness on the left side of my body and swelling, numbness, and redness on the left side of my face as well. The hospital didn?t really give any explanations but I?m only now have mild swelling and numbness on the left side of my face. Everything else has resolved at this point in time.

Slight lip swelling sensation, scratchy throat, her skin felt itchy (no visible hives).

muscle pain in both arms, R worse than L. Slight dizziness for first 4 hours after vaccine. On and off minor headaches for the first 48 hours post vaccine

tiredness, extreme nausea, pain in arm of injection, horrible headache

At 1234 am I developed fever, chills, severe night sweats and whole body aches. It lasted approx. 6-630 hours. I also have had increase in GERD/acid reflux since about 2 hours after the injection.

Achy body Extreme tachycardia (HR in the 180s). Unable to get below 90. Uncontrollable shaking Migraine

whole body hives, responsive to diphenhydramine

Became diaphoretic a few minutes after receiving the vaccine. Said his throat was 'scratchy' and was dizzy when he stood up. Sent to ED for evaluation. Discharged from ED without incident.

chills, achiness, diarrhea, fatigue

Moderna COVID-19 Vaccine EUA Experienced injection site soreness, Body and Joint aches, Fatigue, Sleeplesness

"Two minutes after vaccine was give to left arm was painful and swelled about 1"" diameter at injection site 2-3 mm out from skin. No redness present."

body hives

Left upper additional pain and left shoulder pain. Palpable mass under left anterior ribs. Tiredness.

Patient experienced episode of severe leg cramping on 12/22/2020 that began in early AM and lasted until noon. Patient experienced another episode on 12/24/4040 of cramping that began in the legs and went up to the head that felt like muscle tension. This episode also began in the early AM and lasted until noon. However, patient did have residual minor leg cramping. Patient did follow-up with his PCP, who obtained bloodwork on patient. On 12/28/2020, patient states all symptoms have been resolved.

58 y/o female with history of severe seafood allergy presented to ED on 12/24 at 933am with hoarseness, sensation of throat closing. Stated received Covid vaccine at 0730 this morning. Patient took claritin and prednisone prior to vaccine and 20 minutes prior to arrival to ED took benadryl. Symptoms

have improved since arrival to ED. Presenting with symptoms of difficulty swallowing. No difficulty breathing, no itching, no rash, no swelling and no wheezing. One dose of Prednisone 40mg tablet given orally at 0955am. Patient monitored and then discharged to home at 1027am with prescription for Prednisone 20 mg by mouth daily for 4 days and to follow-up with primary physician.

waited 20min. got up to leave and while walking out had a little side step/unbalance moment. thought nothing of it and got to car. waiting in car for an extra 10 min. left hand started tingling. same tingling like if it was asleep and was waking up. started to drive home, on the way home, noticed tingling in left foot and left side of face. neck on left side felt like someone had hit it. about 50 min after receiving injection, was at home, injection site and whole deltoid was numb. left side of face, left foot and left ear all felt numb but with tingles. I had stopped timer after 2 hours. tingling and numbness subsided sometime after 2 hour of receiving vaccine. Today, everything feels fine. Injection site just feels like I got a shot, can barely notice it.

Pain at time of administration, right upper arm, continued throughout day. Nauseated appprox, 0100 29 December. Still Nauseated at 0815, Pain in upper arm increased.

Cold Chills Muscle aches Heart rate 110-150BPM for 5-6 hours that started approx 36hrs after the vaccine was administered Axillary swelling the size a baseball, swelling was also noted in left pectoral muscle and in left shoulder blade

Dose given was 1mL vs. 0.5mL

Pain at injection site, trouble sleeping.

"Tingling tongue and numbness and tingling on R cheek and jaw; R jaw line pain and R sided teeth pain--pain rated 8/10 initially; Provided 50 mg of Benadryl orally; tingling tongue symptom resolved; after 45 minutes pain 2/10 with ""mild"" jaw and teeth pain and R-cheek numbness and tingling"

headache, lower back pain, inject local site achiness.

I received the covid vaccine on 12/23. Since then I have had a fever, chills, body aches, sore throat, headaches, sinus pressure and have been very fatigued. My symptoms seem to come and go, they are currently less severe, but last night a had a fever of 103.2 with chills and shakes.

Patient became dizzy / weak a few minutes after getting the dose. Had slight flushing on chest and rapid heart rate. ER physician feels it is likely vaso vagal response and not a medication reaction. Patient recovered quickly.

The employee's primary care provider's office contacted our office this morning saying that she received the vaccine on 12/22/2020, on 12/26/2020 she began experiencing facial drooping, came into their office on 12/28/2020, had MRI performed (that was negative), and was diagnosed with Bell's Palsy.

Intermittent Fever, cold sweat, cough, congestion, fatigue, stomach upset, loss of appetite, and diarrhea resolved with Tylenol, PO fluids, and light diet of soup and saltine crackers

Already did: 2:30 p.m. until about 6:30 p.m., leg cramps and unusual joint pain in hip and knees. Subsided. From about 10 pm to 8 am, localized discomfort at injection site, on upper left arm.

1mL was given instead of 0.5mL

headache feeling unwell pain and swelling at injection site muscle pain fatigue fatigue

Patient presented to the ED ~ 14 hours post dose. Chest discomfort, dyspnea, fatigue, and malaise. Had prolonged covid hospitalization April-May. Had some sinus tachycardia between 110 and 117. Administered methylprednisolone 40 mg IV. Was discharged from the ED with no outpatient prescriptions.

pt was given 1mL instead of 0.5mL

Vomiting and diarrhea for 2 days. Chills, body aches, sore throat on left side only, ear ache left side only, low grade temps up to 99.9 F taken temporal, lasting 4 days.

Around 4:30 pm on day if vaccination I started feeling nauseous and had the chills. Then around 8 pm my arm became extremely sore to the point where I could not lift it without 10/10 pain and when I touched it my pain was also 10/10. As the night progressed my body not only had the chills but I got a temperature of 102 and I was on fire. I could not cool down until my significant other put cold compresses on my forehead chest and arm. I felt all of those symptoms until about 5am when my fever finally broke. The next day I continued to have a headache and mild soreness in my arm. Then that night I had mild chills and night sweats and a mild temperature. I was therefore out of work for two days following the vaccine.

Alergi

Throat tightness and tingling , itchy mouth within 15 minutes post-vaccination. Received diphenhydramine 50 mg PO and hydrocortisone 20mg PO. VS stable throughout observation period with O2 Sat at 99%. D/C'd in stable condition. Will be evaluated by Allergy Clinic for Dose #2 recommendations.

Extreme fatigue; intermittent episodes of vertigo; intermittent episodes of tachycardia - all started on 12/28 at approximately 7 p.m. The tachycardia appears to be resolving today; the vertigo remains and the fatigue continues. Localized reaction has lessened.

MUSCLE PAIN, CHILLS, LOW GRADE TEMPERATURE, TIREDNESS, HEADACHE

Ibuprofen

Ibuprofen

Patient woke up in the night, walked downstairs to get water, walked back upstairs and became nauseous, laid down and became unresponsive. Eyes were open but not focused, breathing was irregular and snoring-like. this lasted less than a minute and he regained consciousness.

red, raised, hard, swollen. painful area at the site of injection. Area of swelling was approximately 3 inch circular shape. Treated with ice pack and Tylenol for pain After about 2 days, the pain and swelling gradually subsided

I received the injection at 11:00am and around 4:00p, I began to feel like my heart was racing. It continued until about 7p. At one point I thought I should go to the Emergency room but I began to feel better. That was about an hour and a half later but then it started again increasing but by 7p, it went away.

Swollen and discomfort left armpit lymph nodes

Day of injection uncontrollable diarrhea for 36 hours Saturday and Sunday night- nausea , abdominal pain, Sunday I starting vomiting Monday went to the hospital

Day 1: Arm pain 5/10, neck stiffness, tension headache 5/10 (occipital and temporal) Day 2: Arm pain 5/10, neck stiffness, throbbing headache 5/10 (occipital and temporal) Day 3: Arm pain 1/10 Day 4: no symptoms

I broke out in hives Sunday morning. The convenient Care would not see me and sent me to the ED. I was given a muscle relaxer and benadryl. I was prescribed prednisone and benadryl. It took 3 days for the hives to go away. I still have spots and swelling.

Moderate muscle pain/soreness of left arm- started approximately 6 hours post injection and present even after 24 hours

Nurse at vaccine clinic injected subcutaneously and did not reach the muscle. Did not have information to know what to do. Observed patient who was asymptomatic.

Panic attack following, both cheeks red. symptoms left. 6 hours after L side of face started swelling, pain at cheek bone followed by numbness of entire left side of face. numbness lasted for 5 hours. Today face is still swollen. I went to the ER and was kept for two hours for observation, no intervention

After I received the vaccine. Approx 24 hours after the shot, I started having a headache. As my headache got worse, the ache muscle and joint pain came. When the headache started, I started feeling really tired. I was feeling like I was having flu symptoms. I started taking IB prophen on Wednesday morning. It lasted aprox 2 days, and I started feeling better on Saturday morning. Symptoms lasted about 3 days. Symptoms got better with IBprophen.

12/24- fatigue, joint aches, cough, diarrhea, headache 12/25- fatigue, less cough and aches, headache, some diarrhea 12/26- same 12/27 slightly better 12/28 loss of taste and smell. Positive Covid nasal swab test 12/29 headache, cough, fatigue, diarrhea

7:48 am hot, difficulty swallowing, numbness/tingling lips, raspy/hoarse, 50mg benadryl given- symptoms did not resolve so sent to ER, Initial Blood pressure 166/117 Given 50mg IV benadryl, IV dexa

methasone, and IV pepcid Difficulty swallowing resolved in about 1 1/2 hours, numbness and tingling lips resolved approximately 8 pm 12/28/2020 continued raspy/hoarse and day 2

30 minutes after receiving the vaccine I developed pain in my left upper gumline, swelling started and over the next 12 hours included my entire left cheek. I sought medical treatment and 12/24/2020 was prescribed prednisone 50mg PO daily for five days. The swelling has decreased but not resolved, the pain has resolved.

Dizziness/Headache Swollen right elbow (tender to touch) Fatigue High Temperature

Patient reported numbness and tingling to bilateral hands. Patient was transported to ED for evaluation.

I am Health Care worker (Security Officer) at Hospital. On 12/28/2020 around 9am I received my Covid Vaccine (1st) After the shot, I sat the required 15 minutes and felt no ill effects Around 530 pm. I was out shopping after work and almost passed out. It was not a gradual feeling -It felt more like someone had punched me in the head. I was too dizzy to walk for 30 seconds or so. After about 5 minutes I felt okay and drove home. I feel absolutely fine today (12/29/2020)

Chills, Aches, Fever of 101, HA

Extreme soreness at injection site, hard to lift arm above shoulder. Chills, low grade fever, nausea

Muscle soreness, chills, fever, body aches

Facial Flushing, throat constriction, feeling faint

12/27/2020 joint pain, body aches, sinus congestion, chest and throat soreness; . l cheek numb, sluggish.; left eyelid more raised and sluggish than other 12/28/2020; l armpit swollen armpit.

Nausea; vomiting; diarrhea; fatigue; headache

She was vaccinated 12/23. Initially she had some soreness, nausea, diarrhea, extreme fatigue, but no fever. Two days later, she developed a diffuse erythematous rash on her bilateral arms, chest and neck with sharply delineated white patches. She also describes that her hands were purple, almost cyanotic appearing. The rash was not itchy or painful and lasted about 6 hours before going away completely.

Vaccine administered via SubQ pinching technique in upper left posterior arm, midway between shoulder and elbow. NOT an IM injection. Site red, swollen and tender. Concern raised for less immune response. No training given to administration staff by hospital clinic.

paresthesia along ipsilateral arm (ulnar nerve distribution) a few minutes after vaccination soreness at injection site, mild headache, & lightheadedness 1-2 hours after vaccination chills 4 hours after vaccination (but no fever) * most symptoms improved/resolved 8 hours after vaccination

Moderna COvid-19 vaccine eua

6 days after receiving my initial covid vaccine, I began to develop an itchy rash. The rash started in the morning of 12/28/2020, beginning with itchy, red ankles. Progressed over the next 8 hours over my whole body. Red, raised, itchy patches. No other associated symptoms and no other means of explaining allergic reaction (no new meds, foods, clothing, detergents). Left work, took Benadryl and a shower. Rash subsided. I feel fine today.

Developed headache rated 9/10, feeling hot and light headed.

Pain both right and left arms and left side of neck with tingling of the lips, palms of hand and soles of the feet. Mild headache. Mild chest pains at 1900 same day. Performed breathing exercises and yoga. Took a 1.5 mile walk. Took 1000mg of Tylenol and 12.5mg of Benadryl at 1900. Pain was relieved but tingling around the mouth persist even today 12/29/20 with leg muscle tingling and stiffness in the left neck . I had to take off work 12/28/20 due to severe pain left neck. Same symptoms I have when I take the tetany vaccine.

Moderate arm pain and swelling at site of injection.

Patient reports freezing and sweating for 2 days after immunization 12 days ago. Body aches and headaches have persisted since then. Also reports numbness going down left arm to all fingertips since vaccine.

2-3 minutes after injection, experienced what felt like a drop in blood pressure, tachycardia, tongue tingling and taste, and for a few seconds, my nose stuffed up but then all symptoms went away within a few minutes. I felt completely fine 5 minutes later.

Went to hair appointment and water aerobics after vaccination. Arm started to hurt a lot. Went to bed at 10pm and at 12am was feeling really hot with a headache, chills, and shivering. Temp was 99.4.

trouble breathing

ON THE THIRD DAY I FEEL LIKE PINS ON MY BACK AND A SLOPE CAME OUT OF MY NOSE AND ON MY LIP. I TAKE BENADRYL TABLETS 50MG TWO TIMES.

muscle pains, shakes, 100.3 temp, headache, nausea

Fever, body weakness, headache, sinus drainage

Drooping of the Right side of her face. Started 12/26/20. MRI to rule out Stroke negative. Diagnosed with Bell's Palsy. RX with a Prednisone taper and Valtrex.

called to observation area 10:50 - report that patient passed out, was on stretcher, reported did not fall, 'came to' in less than 1 minute. 108/68, P 70 and strong, alert and oriented. states feels anxious about flu shots. felt lightheaded, hot, sweaty, skin pale and warm. at 1052 rapid response arrived. states feeling better, had had food/fluids today. assessed that not allergic response - vaso/vagel. 1055 sat up and feeling good, skin pink. 1100 to chair. 1115 left area walking.

Patient felt lightheaded, flushed and nauseous.

Approximately 1 and 1/2 hours after the injection, her tongue became thick, lips swelled, chest pain, short of breath and headache. Injections site was red and swollen. She was traveling out of town and called an urgent care and was advised to take 50 mg of Benadryl q 4 hours till swelling was gone. She took it for 4 days. She saw here PCP on 12/21/2020.

Didnt feel good, soreness on arm Monday I had chills , Unconformable at work Took Antibiotics Chills Possible UTI the following Wednesday I discovered a cold sore on lip

Called and spoke with patient, the received her COVID vaccine yesterday. Since the vaccine she had a temp of 99.9 last night, has not checked today, feeling a little warm today but not as warm as last night. The area is hot and red and swollen in the size of a golf ball, was bigger yesterday. Her entire body feels itchy. She did take benadryl approx 5 hours ago, it helped a little bit right away but now she feels no relief again. She states she has small little bumps that have slowly been spreading from the arm of injection to back and now onto other arm. á Does report she felt like she needed her inhalers, now denies and swelling or itching of mouth throat or tongue. No difficulty breathing at this point.

RASH AND HIVES TO NECK. BENEDRYL AND PREDNISONE. SYMPTOMS STARTED AT 4:00 VACCINE ADMINISTERED AT 1:00

5 hours after injection my legs from the knee to the ankle joint became very itchy, I wrapped them both in a cool wet towel to keep the itching down. This lasted for 48 hours and then went away.

5 hours after injection my legs from the knee to the ankle joint became very itchy, I wrapped them both in a cool wet towel to keep the itching down. This lasted for 48 hours and then went away.

During first few minutes after the vaccination, the client began to cough repeatedly. She stated that her throat was tingling and she was noted to be diaphoretic, with Shortness of breath, an increased heart rate and hives. Epinephrine 0.3 mg IM given to client. Client responded with less diaphoresis and cough subsided. However, noted in 5 more minutes that the symptoms progressed. (As we were in a hospital area administering the vaccine), a rapid response team was activated and she was sent to the ER for further evaluation monitoring and treatment.

intermittent itching, some blotchy rednesss no hives or raised rash that lasted about 3 hours, went away on its own without any treatment

Employee reported numbness and tingling in upper lip 10 minutes after receiving vaccine. Employee was transported to Emergency Department for evaluation.

low grade fever- 99.9 sore arm

Hot flush Dull headache

Day 1-after immunization covid 19 moderna vaccine-headache, sneezing, low grade temp 99 when she arrived home Day 2-102F-took tylenol as needed, she continue to experience headaches, body aches Day 3- No signs or symptoms, temp 97.6F with out tylenol

Local reaction: Pain and swollen arm in the injection spot for over 2 days

14 hours after injection woke up with swollen upper lip and extreme systemc itching. Took 50 mg Benadryl. 12/26/2020 at 0900 continued itching took claritin 10mg and 25 mg Benadryl lip still swollen.12/26/2020 @2000 took 25mg benadryl for itching lip no longer swollen. 12/27/2020 itching has now become burning sensation systemically took 25 mg benadryl and 10mg Claritin. Upper lip swollen 12/27/2020 @ 2000 took 25 mg benadryl for continue burning and itching Lip no longer swollen. 12/28/2020 @ 0600 took 10 mg claritin till itching no burning. 12/28/2020 at 2100 took benadryl 25 mg for continued itching. 12/29/2020 0600 took claritin 10 mg for itching.

Vomiting within 15 minutes Fever 1 hr post vaccination Continued vomiting

Rash on chest

Scratchy throat within minutes. Left thigh pain and spasms, left arm pain. The next morning I can't lift my arm above shoulder, thigh pain not as bad, diarrhea at 9:30 am.

Erythematous rash over anterior torso, groin, flexor aspect of elbows/knees/hips

12/28/2020 weakness, fatigue, chills, tongue swollen, left arm pain at injection site 12/29/2020 fever 101.00 headache, loss of appetite, weakness, fatigue, dizziness, throat swollen

Injection site swelling (~6 cm across), redness, and tenderness beginning 12/28, resolved when patient took benadryl

developed raised red bumps on arms and legs several hours after receiving vaccine.

Debilitating, severe neck and shoulder pain the next day that continued for a week Stiff neck, spread to back pain Unable to work/left work early Still have stiff neck and feel strain doing my normal day-to-day tasks

Day 1-after Covid 19-Moderna injection-employee experienced an extreme pounding headache, her blood pressure was elevated 161/93. Evening hours employee reported fatigue, rash to chest/back no itching, along with fever 102F Day 2-Employee continued with fever 100.2 F and rash to chest/back no itching-taking Motrin and Tylenol Day 3-No fever, no rash, pain to injection site and generalized body aches Day 4-No symptoms

38 y.o. female who arrived by Clinic/physician office presented to the emergency department for Concern for possible allergic reaction. Patient was receiving the Covid vaccine today and while waiting during the observation. She felt some palpitations and was found to have some tachycardia. She was sent here for further evaluation. Currently she says she feels fine and denies any swelling, rashes, difficulty breathing or wheezing. She has not had any allergic reactions in the past and has never had any issues with shots or vaccinations before. She does not have any pain or swelling at the injection site. She was initially heart rate in the 120s but during exam is 100-105. She denies any shortness of breath, chest pain, lightheadedness and does not think she is feeling anxious at all. o ECG (My read): Sinus tachycardia, normal intervals, no ST elevations or depressions and no T wave inversions or signs of right heart strain o Patient did start to feel palpitations again, her heart rate periodically drops into the 90s and then jumps back up into the 1 teens. Considering this, did obtain basic labs all of which were completely normal. Her heart rate has improved, did order Zio patch for monitoring over the next 7 days and recommend she follow-up with her PCP for results on this. Otherwise appears well with no signs of allergic reactions or other emergent concerns. Discharged in stable condition with return precautions given

Developed a severe headache around 1 PM of the day she received her vaccine, some general tingling non-specific; sever headache lasted until 9 PM that evening, relieved with medication but in the morning continued to have headache although more mild then previously. Was better by the 3rd day.

Pain at injection site

Numbness in nose tip of tongue; earlobes warm

Severe right arm soreness inability to have range of motion cannot pick up items over 5 lbs numbness and tingling and cooler fingers in rt hand

Fatigue, chills, body aches, mild cough, headache, sweats for 36 hours Arm soreness for 5 days

Injection site pain

Approximately 5 minutes after administration of vaccine, patient felt nauseated and vomited with some relief. Blood pressure was checked (171/94). Approximately 50 minutes @09:20am after administration of vaccine, patient complained of mild headache. Blood pressure was checked (148/96). At 09:35am, patient reports no nausea. Continues with mild headache. Patient clinically stable. No medications administered. At 10:05am patient reports headache still present but is gradually subsiding. Patient was released at 10:10am.

2 minutes after injection patient c/o head heaviness, nose tightness. VS: BP 159/88, HR 101, O2 SAT 99%, RR 24

Approximately 15 minutes after administration of vaccine, patient experienced twitching on left upper eyelid off-and-on for approximately 10 minutes. Twitching resolved. Blood pressure was checked at 09:50am (161/109). HR=76. Patient clinically stable. No medications were administered. Patient was advised to follow-up with PCP regarding blood pressure concerns and released at 10:10am.

Injection Site Pain

Experienced fever, chills, sweats, joint pain and soreness in Right arm

Fever, chills, headache, arm soreness

After receiving the vaccination, I experienced slight soreness at the site of the injection and a mild headache every day until Friday 12/25. Starting Friday evening 12/25 I started to experience tingling around my jaw after flossing my teeth. It continued when I woke up the next day and spread to my chin and around my lips. I now feel the sensation on my forehead as well. In addition to this I have been having chills, runny nose, pressure in my face, head, and ears, had diarrhea X1 and have been nauseous . I tested COVID negative on 12/28 and had my electrolytes checked along with CBC which all came back normal. Today 12/29 I took 2 Benadryl in the event it could help an allergic reaction.

Patient began with muscle/body aches and chills on 12/24. Highest temperature recorded was 99.8, took ibuprofen. On 12/25, lymph nodes near right clavicle and right axilla swollen and stiffness in neck and shoulder. Right foot also became swollen. On 12/27, developed pain behind eyes, swelling began decreasing on 12/27. Began having headache on 12/28.

Nausea, Headache, arm pain, Neck pain, Swelling, Headache

Swollen, tender lymph node under left armpit

Loss of taste

Resident found unresponsive in her room. Note from earlier: Resident appears to be weak today. Resident ate a few bites of dinner before refusing the tray. Writer encouraged fluids. Vitals 123/72 80HR BS 166. Will log for Doctor and continue to monitor. Was sent out 911.

Flush and dizziness ,Increased heart rate and elevated BP 8 mins after the shot. Evening of the shot 12/18/20,patient c/o blurry vision and joint pains.

First symptom was body ache, headache, fatigue, loss of taste

Runny Nose, Sore Throat, and Fatigue

Patient with tongue and throat swelling, some shortness of breath

developed fever,chills, shaking and body aches. Very sore arm

Dizzy/lightheaded at 8pm 12/28, nauseous. 12/29 6:30am dizzy, lightheaded, fainted in shower

Chills, back pain, severe headache, muscle pains

no symptoms

Started with mild headache the evening of vaccine administration. 12/27/20 woke up with severe body aches, severe chills, sorethroat, sinus congestion and sinus discomfort, and extreme fatigue. Took temp once and it was 99.5 oral. Symptoms were gone within 28 hours of onset. Minor discomfort at vaccine site as expected.

Injection site soreness

When leaving post vaccine, numbness and tingling of right foot, over the next 7 days spread numbness to both lower extremity extending into calf?s. Burning nerve sensation started at day 7 increased up legs into hips. Numbness and burning sensation bilateral from feet to hip

One week following the COVID 19 vaccine, patient developed a psoriatic arthritis flare up. She has history of psoriatic arthritis; however reports it has been well controlled. She had a change in her medication in 11/2020 and was started on Ixekizumab. She is also taking Hydroxychloroquine. States psoriasis rash under her nails is severe. She also reports bilateral shoulder pain. Taking Tylenol.

Right arm and neck are very sore and has a headache.

muscle pain in arm, headache, fatigue

Injection Site Pain, Fatigue

After i received my vaccine 11:00am, i was ok until 8:30 PM, i started to unusual to my body, particularly in my stomach. I didn?t hqve the appetite to eat. By 2am, i woke up with chills and my body was shivering. Temperature 98.3, i took tylenol ES. After an hour, my chills went away. I feel lack of energy. This morning, i still have feelings of being cold, body malaise and mild headache and still no energy to do house chores.

Pt was experiencing shortness of breath, sweating, and racing heart, and dizziness. Code A was called and RN and MD came to attend. Vitals 1st set 90/41, pulse was 50, and O2 was 100%. Vitals 2nd set, 10 min later 100/60, pulse was 60, and O2 was 100%. Pt was given apple juice and given the okay to discharge home after waiting 10 more minute for observation.

Extreme dizziness with nausea and vomiting that starting on 12-26-2020 after receiving the vaccine on 12-24-2020

Lip swelling, left 4th digit swelling, pruritic palms, headache

I received the vaccine shot on 12/23/20 at 3 pm. By 12/24/20, I had pain in my left arm that radiated to my neck and back on the left side. Over the past 4/5 days, I continue to have pain in my left arm, back and neck

soreness on injection site, headache, fatigue, muscle pain, joint pain, chills

Fever, Body aches, fatigue, Nausea

On monday 12/28 i started to feel fatigue/ weakness Body ache Headache Slight feverish On tuesday morning between 1-5am i had Fever Body ache Chills

Nausea, extreme fatigue, headache, swelling left arm

within 15 minute waiting period after vaccine, employee felt like she was going to black out, no LOC. Increased BP 180/130 and tachycardia, HR 120's. After sitting/resting, VS returned to normal and employee felt weak but better. On 12/29 called employee and she had called in ill to work today for h/a, vomiting and is now reporting severe dizziness that she cannot stand up, chills with the h/a and vomiting. She is taking Tylenol/ibuprofen.

I received the Moderna COVID-19 Vaccine EUA on December 28 at 3:30 PM. Starting at 4:30 AM today (December 29), I started to have chills, followed by fatigue, headaches, muscle pain, joint pain, chills, nausea and vomiting. I vomited twice.

Nausea, Injection Site Pain, Vomiting, Diarrhea

Severe myalgia, chills, fever, nausea, vomiting

"Employee reported ""racing heart and ""feeling like passing out"". Employee was transported to Emergency Department for evaluation."

Pfizer-biontech covid-19 vaccine eua 15 minutes after receiving shot my head became itchy. that resolved within 15 minutes. around 1430 that day i developed nausea and diarrhea, which lasted until 12/25/20 at 2130.

It started with a cough that night went to work. The cough was consistent at work the coworkers asked me to call employee health. I was informed to get Covid test at 11:00 am when I got home took a nap. Upon waking had a fever, cough had gotten worse, exp breathing problems, abdominal pain, muscle ache and joint in knee/wrists swelling. I took Tylenol for fever went away and still feel exhausted. On this morning my fever was 99.7,still have cough, and trouble breathing after Nebulizer treatments. I have missed over 5 days of work.

Employee received vaccine, c/o shortness of breath, throat tightness, difficulty swallowing, difficulty breathing and hoarseness. METS team called and Employee taken to Emergency Room.

about an hour afterward began experiencing diarrhea up to 6 times that day. around 11:30PM at work I began feeling a whole body tingling/pins and needles sensation along with muscle/joint pain in my back, neck, and hands. The tingling lasted about 3 hours then subsided, on the 19th night again I felt the tingling for about an hour. patient replied yes, she had MIS as result of Covid vaccine.

Injection site redness and increase skin temp at site which occurred 8 days after 1st dose of vaccination. No itching present. Slightly tender and no swelling at this time.

Headache Fever Body aches Fatigue

I had three days of fatigue, chills, aches, and intermittent night sweats. 1 day after the vaccine was administered I developed a rash (red bumps/itchy) over my chest, back, and inner ankles. The chest rash was relieved with Benadryl administration and lasted 2 days, I still have a very mild rash within my inner ankles 6 days later (tiny red itchy bumps).

Fatigue, Body aches

Vaccine error: Vaccinator administered COVID 19 vaccine however some of the liquid of vaccine splashed onto the patients arm and thus the patient did not receive full first dose. The vaccinator likely

did not secure the needle to the syringe well enough. Incident was filed on the date of occurence. Patient did not have any symptoms.

throat tightening and scratchy

Modern a COVID-19 Vaccine. Swelling in the right eye lid. Muscle pain. Headache. Injection site throbbing in pain. Labored breathing (with burning discomfort). Fatigued.

Hives and itching to left bicep on Morning of 12/28, Hives spreadin to all four extremeties by 0500 on 12/29. Mild Shortness of breath

states she had nausea and diarrhea afternoon that she received the vaccine and into the following day with lack of appetite; had not eaten anything

Severe Headache

Moderna COVID-19 Vaccine EUA Fever (99.8 - 100.4 F over course), body aches, chills - took 2 tylenol (650mg each) about 1-2 hours after onset, symptoms resolved within 2 hours, temperature back down to 98.6F.

Tuesday, rash started on Wed with no new meds/food/lotion/soap/detergent. Rash is raised, wide-spread to left arm, abdomen and upper back/shoulders. + Itching/irritation. Denies blistering, SOB, cough, fever, chills. Using topical triamcinolone which helps with itching START ON Prednisone for 9 days, Claritin 10mg AM for 7 days,Benadryl 25-50mg PM for 7 days.

After injection, within 1 hour, started having left arm muscle tightening, up to left shoulder. Following morning: facial numbnes/decreased sensation; mild facial droop. Onset 9am on 12/28/2020. Went to ED for evaluation. Sensation started to resolve, continues to be slightly diminished on left side of face. Droop has since resolved.

Pt came in for vaccination for COVID-19 at 4:03 . She received Moderna vaccine at 4:15. She experienced palpitation, worsening chills, headache, and presyncope. No loss of consciousness. Denies chest pain, shortness of breath but feels heavy to push air in and pulse OX 100%, No angioedema, No rash, No pruritus, No throat swelling, denies hoarse voice, or difficulty breathing. She traveled to MD on 12/14/20 to receive antibiotics. She was treated with Erythromycin dose for 6 days from MD. á The patient was +COVID19 on 12/11/20 with fever, scratchy throat, congestion, cough, and SOB and was seen in urgent care on 12/13/20 where was DX + for COVID19. She was quarantine for 10 days when she was returned to work on 12/22/20. Her Chest X-ray was negative on 12/13/20. She was negative for nausea, vomiting, diarrhea. She denies any recent vaginal bleeding, or abdominal pain. Denies any history of cardiac disease, or history of arrhythmias. Denies any history of prolonged immobility, or history of clots.

Headache for 48 hours, fever x 12 hours, fatigue x 5 days, severely enlarged lymph nodes to left arm started Monday 12/28, continues today 12/29

Employee reported by bedtime of 12/28/2020 which was the date she received her 1st dose of the COVID-19 vaccine she had the following symptoms: Arm was sore as a boil and she had upper respiratory symptoms similar to a cold, drainage, nasopharyngeal irritation and cough lasting a good while.

Pt. received vaccine, at 640pm... at 705 pm, c/o throat tightness, nausea, mouth tasting like chemical. METS team called, taken to Emergency Room

Pfizer-BioNTech COVID-1 Vaccine Patient presented to ED 10 minutes after receiving COVID vaccine with mild redness around injection site and some chest tightness that may be attributed to being nervous and anxious over vaccination. no erythema or swelling noted around injection site. Patient had just worked 14 hours night shift. 0823 redness improved along with chest tightness. IM dexamethasone 8 mg given in ED 0837 significantly improved after ED observation and stable for discharge Prescription for hydroxyzine 50 mg po TID x 7 days Follow up with PCP

Sore Throat, Coughing, started 16hrs after injection

Uterine/pelvic cramping, nausea. Third pregnancy, EDD 6/8/21, 16 weeks pregnant

Hives, angioedema, and periorbital edema.

hand tingling, itching all over, chest feels hot or flushed, nausea, rash Went to the ER after advised by staff -treated with benadryl 50 mg IV solu medrol 125 mg IV/zofran 4mg IV/Pepcid 20 mg IV/Tylenol 975 mg po stable after IV meds, discharged home with epi pen and steroid dose pack

"Woke up the morning after vaccination and had ""blisters"" in mouth and itching all over. States wife saw some ""red spots"" on his back but no other place. Also immediately after injection felt the need to take inhaler. Itching to hands and ""all over"" continues as of 12/28/2020 without evidence of hives or rash."

Vomiting at 10:30. Watery diarrhea until about 1:00 am

Injected into tricep instead of deltoid

Runny Nose, No smell

Patient c/co - lightheadedness, tingling on L side of jaw, w/ peripheral tingling in bilateral feet. Pt given water for hydration, VS taken: 121/75 BG of 105 HR of 85 w/ O2 sat. of 98%. ED (Dr.) contacted, assessed for anaphylactic events - none noted. After 20 mins, patient reported relief w/ only dry mouth remaining. Pt believes it may have been an anxiety attack. Continuous monitoring applied. Patient washed face w/ water and relayed he was feeling fine and will now get something to eat. Pt released w/ no s/s reported.

headache backache neck ache dizzy about 30 min. after vaccine

heart rate of 40; dizzy; really tired; This is a spontaneous report from a non-contactable consumer (patient's friend). A male patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date were not reported), via an unspecified route of administration on 16Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was having some symptoms that wanted to check out. On Dec2020, he was really dizzy, he was really tired, and he had a heart rate of 40. No questions, they just want to make sure that he was not going to die. Outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

immediate chills, shaking, low BP (82/60), low grade fever (99.8) when covered with blanket in following 48 hrs - fever 102.7 before meds. chills, shaking, severe diarrhea, abdominal cramping, nausea

Chills, body aches, dizzy, migraine, vomiting, low grade fever, neck pain. Took Tylenol and Advil to relieve the pain.

Diaphoretic, felt like she was going to pass out. Lost pulse momentarily, stopped breathing momentarily. Spontaneously recovered.

Left side of face Numbness, Gone after 24 hrs

Injection into tricep instead of deltoid. Discovered next day by patient based upon pain location.

I was being monitored for 30 minutes. At 20 minutes after the vaccination, I began having difficulty swallowing and within minutes of that began experiencing numbness around my mouth, including my lips, with minimal swelling wound my lips and mouth. Then I had a tingling sensation as if pins were sticking me in my face, especially around my eyes and forehead. I immediately ported my symptoms to the nurse standing next to me for observation. My entire body felt as if it was on fire, with a burning and itching sensation. I was administered 25 mg of Benadryl IM and was transported to the Emergency Department, where I was given oral prednisone. I left the Emergency Department is about 2 hours. At 24 hours after the, I still have itching around my scalp, back and lips.

7:30PM flu like symptoms with severe shaking and fever ranging from 102 to 104 the first night. At approximately the same time for the next two nights fever ranging from 101 to 103 and flu like symptoms . These symptoms lasted 3 days during the evening hours only.

Sore arm, Joint Aches

Sore arm, Joint Aches

The vaccine was administered on the following date: 12/28/20áand at approximately the following time: 12:20pm á The symptoms began 5 min after administration of the vaccine.á The symptoms were: 5 min after vaccine had hives, felt itchy and warm. Symptoms were on chest, face and scalp. Tingling in her arm and left jaw tingling. She did not have swelling, wheezing, SOB, dysphagia, GI symptoms. She went to the ER- given IV benadryl, pepcid, solumedrol. 30 min it felt much better By the time she left 2 h later, she felt much better. She had some blotchiness and itcihng on her skin this AM (24h later) so she took

allegra. She was prescribed prednisone but has not yet picked it up. Hives 4 hours post-vaccine. Improved with diphenhydramine. Resolved by the following day

Adverse reaction post Covid vaccine. Waited for 20 min post vaccine. Experienced S/S Heart palpitations, shortness of breath, tingling in extremities, diaphoretic after leaving clinic observation. Drove back to hospital, escorted by pre surgical testing hospital staff and taken by wheelchair to ED.

Body Chills, Joint pain

major confusion 9 hours after first administration continuing on to the next day, pain at wound site, itchy feeling

"Patient reported developing a ""butterfly rash"" across the bridge of nose and cheeks approximately 24 hours after COVID-19 vaccine. Rash resolved without treatment within 10 days. Also experienced some fatigue."

Within 1 hr of receiving shot felt heaviness and pain in lungs, gradually getting worse then swollen face and clearing of throat constantly by hr 4. By hr 7 gradual lung pain and face swelling reduced. Today 12/29 still have some lung pain little face swelling but still have trouble breathing while walking and talking.

Throbbing, constant pain with burning from L) shoulder joint to fingertips plus shoulder joint up to left neck; nausea, dizziness, headache, joint pain (all body), muscle aches, throwing up, loss of appetite

headache

Achiness, chills and fatigue for 2 days. Better for 1 day, worked and went for a run, then woke up in middle of night going into 4th day post vaccine with severe aches. Got Covid tested on day 4, came back negative on day 5. I am now on day 11 post vaccine and am still having aches in my hip joints. I?m unsure if it?s related to the vaccine but I haven?t been able to run (I am a regular runner) without pain. I did not have any pain from running prior to the vaccine.

Injection site soreness in the AM 12/23. Later in the day on 12/23, body aches and general malaise. On 12/24 continued malaise and painful headache.

Low grade fever and body aches onset approx 14-16 hours post vaccine

Lightheaded, body aches, hot flashes, chills, developed a 101 fever, shortness of breath

Almost a week later after the first dose, still experiencing intense shaking / chills at night. Fatigue during the day with headaches.

The patient was given the Moderna vaccine. She then felt very hot around 15 min post vaccine, felt anxious. Felt her HR was racing, so she looked at her Apple Watch, which said it was 103bpm. She let the RN know and it went up to 125 bpm. BP was 140 which is high for the patient, baseline is around 100 systolic. She then felt shaky. The RN said she saw a few hives on her chest and it was a bit itchy. They gave her some water and juice. She felt better and the hives resolved on their own. She then was given

Zyrtec 10mg. About 30 min post-vaccine, her HR was 85 and BP was 130 systolic. No wheezing, no SOB, O2 sat was normal the entire time. She still feels shaky and anxious. 2 h later she felt asymptomatic.

Low grade fever to 100.1 the morning after receiving the vaccine, mild body aches and headache. Symptoms dramatically improved within 12hrs and by the following morning (48hrs post receipt of vaccine), I was symptom free.

Experienced numbing of right face and jaw for half a day 2 days post vaccination. Took ibuprofen 400mg and symptoms eventually resolved.

Arm soreness Feverish Chills Body Aches

Pt felt lightheaded. Pt did not eat breakfast or lunch prior to vaccine. Pt commonly becomes nauseated after flu shots with no additional adverse effects. Pt was positioned in supine and given Sprite and crackers. After eating, symptoms resolved.

Red itchy spots/hives across abdomen and chest. Have used topical anti-itch cream, taken over the counter benadryl and zyrtec. Topical cream and benadryl did not seem to have any effect. Just took zyrtec this morning so results tbd.

within 2 minutes after receiving vaccine I became flush, tightness in base of my throat and chest and heart starting racing faster and faster. A few nurses came over and saw my fit bit heart rate going higher (max 136 BPM) my fingertips started to get numb. They quickly injected me with .05 epinephrine. They brought me up to the emergency room and put me on a heart monitor. The racing heart subsided after approx. 7 min then started again. It happened 3 times in the emergency room. They ran a few EKG's to try to catch the tachycardia episodes. They started an IV and ran fluids. After 2 hours the symptoms stopped and they released me from the hospital.

Mild rash all over the body the evening post-vaccination. Alleviated by diphenhydramine. Heart palpitations for 2 days post-vaccination

Sore arm, body aches that are as bad as when I had covid, chills, stomach ache.

12am I woke up with a headache chills body aches and sore arm

Sore arm, Heart skipping Beats, Body pain

Itching, redness, hives to right side of face and neck, abd pain. Right upper back pain started almost immediately after vaccination. Continued through the night. Itching, redness, and hives resolved in approximately 2 hours with administration of dexamethasone. Abd pain continues today. Right upper back pain is full today, instead of sharp, and is intermittent today.

The employee reported difficulty breathing. She transferred to the Emergency Department for elevated heart rate and possible syncopal episode. Symptoms self resolve with no medications required.

Received vaccine on 12/28/2020 @ 930am. By 7:00pm left deltoid was tender to touch. Redness , swelling at site. on 12/29/2020 the redness and swelling had increased to 1 inch wide x 3 inch like a band across my deltoid , It is tender to touch and itchy.

Facial numbness,redness

terrible headache, pain in the joints, chest tightness.

Sweating then chills. Back to back. Two days.

Swelling redness and soreness at injection site

Swelling redness and soreness at injection site

Soreness in arm immediately. 13 hours after injection- sweats, chills, increased arm pain, body aches, extremity pain, palm sensitivity, nausea, trouble sleeping. 14 hours after injection- fever, shortness of breath, fatigue, redness in arm, swelling in injection site. 18 hours after injection- stiffness in injection site, extreme fatigue, increased nausea.

6 hours post vaccine: sore arm, chills 24 hours post vaccine: fever (101-102), chills, myalgias, headache, severe soreness at injection site (no other symptoms). All symptoms resolved by 48 hours post vaccine.

cough and a little difficulty breathing rash in the torso (of abdomen and back

Red circle about 3 inches wide and 3 inches long bruising itching, swelling, dizzy headache

Headache and injection site pain, Nausea

shingles

Moderna has an EUA from the FDA for patients aged 18 and older. This vaccine was used inappropriately to vaccinate a 17 year old staff member at a clinic hosted by Pharmacy. Patient experienced no adverse effects, but this improper usage of the vaccination requires reporting to VAERS.

hives down bilateral exposed skin - Benadryl oral tab provided with relief. Hives disappeared by 12:45PM

elevated blood pressure to 156/92 following injections. Experienced dizziness. BP checked 5 hours after vaccine: 143/88.

lightheaded, left lower arm pain chest pain with burning sensation , increase heart rate to over 190 and High blood pressure lasting for 2-3 hours

Fever, Nausea, Diarrhea, covid test was negative

On December 27th I began to have uticaria on my chest, back, legs and neck that respond to oral diphenhydramine but return after 6-8 hours. This is ongoing for three days so far.

Anaphylaxis requiring epinephrine

Body aches, low grade fever 99.5

Injection sight soreness

Body aches, chills, slight fever

a couple days after the vaccine, I developed a rash on the bottom of my abdomen, my neck, and my elbow creases. The rash was worst along my abdomen especially the right hip. The rash is red and looks like tiny red circles.

Patient presented five days after first COVID vaccine with complaints of tingling running down her arm (peripheral paresthesias per MD report) and also swelling and redness at injection site. She does also complain of feeling a little achy the day following her vaccination. She was given prednisone and diphenyhdramine while in the ED. She was prescribed prednisone (20 mg x 3 days) upon discharge.

Fatigue, joint pain, muscle aches, headache, nausea and vomiting for three days. Treated at home with over the counter pain relievers.

Neck swelling, labored breathing

Fatigue, Muscle pain and redness at injection site

moderate rash to left arm, mild to right arm. Also rash to trunk and legs. Benadryl was taken

Hives to face for 1.5 hours - improved after 1 course of Benadryl

5 minutes after the injection I developed tinnitus in both ears. This has continued on since the injection. It varies in intensity but is constantly there. I had never experienced tinnitus prior to the shot.

Vaccine recipient received vaccine on 12/17/2020. Reported that they felt tired the next day. Three days after receiving the vaccine, reported to develop headache and neck/should pain. This was still bothering the vaccine recipient. Directed to follow-up with occupation health.

Rapid heart rate, achy, fever 101, flu like symptoms started about 7 hours after vaccine. She did have Covid on 11/1/2020. She is going to give it today and see how she feels and will let me know if she goes to the DR or ER.

Pain at injection site, muscle pain, redness around injection site

Fever, shortness of breath, headache, myalgias

itching, face and eye swelling, wheezing, H/A. Treated successfully with Epi X 2 and Benadryl.

Anaphylaxis requiring epinephrine

tenderness in armpit, specifically upon touch

Patient received the covid vaccine on 12/20/2020. She reported that she started to have chills (temp reading were in 98.0s), headache, bodyaches, and swelling of the Right groin on 12/21/2020. She was evaluated by her PCP (in person) and treated with Ampicillin x 7 days . She did NOT inform her PCP about her covid vaccination status. HAs, bodyaches, chills, and R groin swelling resolved by 12/26/2020. On 12/28/2020 she c/o new onset of nasal congestion. Denies fevers or cough. She tested positive for covid on 12/28/2020 at Employee Health. Has FU appt with PCP in one week and EH on on 1/7/2021.

Hives on abdomen, back, and ankles; associate reports taking loratadine 10 mg PO from personal stock

Fell light headed, muffled hearing, flush, warm.

Jittery, Increase heart rate with 20 min after shot.

Light Headed, Cold, burning sensation inside, nausea, felt like she was going to pass out, rash on chest/neck, she could hear people talking but felt she didn't feel like she was present - elevated BP 200/110. Staff member took Metoprolol 25mg. 1/2 hour took medication feels better but feels foggy

Rash on the upper chest and neck

Increased heart rate and blood pressure, syncope, nausea, sore throat, fever

I received the Pfizer EK5730 shot at about 11:30 am on 12/28/2020. When I walked out of the office from getting the shot I started feeling like I had walked mile but I was ok. At about 4:00 PM I started feeling some tightness on my chest and some aching like a pulsing aching on my chest. I felt like I had some energy but I also felt I was paying to mush attention to my symptoms. I lay down at 8:30 PM and I fallen to sleep on the couch. When I got up this morning as stood up from my bed my legs were hurting and I feel exhausted. I just want to cuddle and go back to sleep. I force myself to make it to work but I am dealing with leg pain and very very tired with a slight headache and chills.

"My temperature, it is 100.6; I was feeling chills; I am having body aches/full blown body aches; I was starting to feel achiness/achiness was not going away; I am congested all of a sudden; I felt like I was developing a headache that just got worse as the day progressed/now I woke up this morning and my head is hurting; I was not feeling well; This is a spontaneous report from a contactable nurse who reported for herself. A 56-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot #: EH9899; Expiry Date: Mar2021) via an unspecified route of administration on 18Dec2020 at 09:59 (at the age of 56-years-old) as a single dose for COVID-19 vaccination. Medical history was reported as none. The patient reported ""no, I do not have any health issues."" Concomitant medications included estradiol taken as hormone therapy from an unspecified date at 0.1 mg, once daily. The patient experienced ""I felt like I was developing a headache that just got worse as the day progressed/now I woke up this morning and my head is hurting"" and ""I was not feeling well"" on 18Dec2020, ""I was starting to feel achiness/achiness was not going away"" on 18Dec2020 at 18:00, ""I was feeling chills"" and ""I am having body aches/full blown body aches"" on 18Dec2020 at 19:00, ""I am congested all of a sudden"" on 18Dec2020 and ""my temperature, it is 100.6"" on 19Dec2020. It was reported that the ""symptomatology began immediately after I got the vaccine (COVID Vaccine)"". The

clinical course was reported as follows: ""I received a vaccine (COVID Vaccine) at work. I am a nurse, I received a vaccine at 09:59 today morning and within probably 5 or 10 minutes, I felt like I was developing a headache that just got worse as the day progressed. By the time, I got home, I get off at 6 O'clock, I started to feel achiness and then eventually I was feeling chills and I was congested all of a sudden as well. So, I took a 1000 mg of acetaminophen last night probably around 9 PM. Initially, I thought it was just side effects from the shot and I would ride it out, but the achiness was not going away. So, I took the acetaminophen and went to bed. When I took the acetaminophen within about two hours the symptoms improved, the achiness had diminished, but I woke up this morning and my head was hurting, I am having chills, I am having body aches. I just took my temperature, it was 100.6."" The nurse stated that she took acetaminophen as treatment for the side effects. When asked about the primary/prescribing Healthcare Professional details the patient stated ""well, it was not a doctor it was a nurse at our hospital, it was a room full of people giving the shot."" The patient also stated ""I read correctly under side effects that the vaccine cannot cause you to contract COVID. Is that true?"" The nurse was informed about Pfizer Medical Information department. When asked about the dosage, the patient stated ""No, I don't think that is on here."" When asked about the causality, the patient stated ""I think it is possible, but it is also possible I mean I just got the vaccine yesterday, I mean we test patients for COVID in my department. My department is responsible for testing all procedures on surgical patients at the hospital and there is always a chance that I have contact with COVID but it is odd that the symptomatology began immediately after I got the vaccine (COVID vaccine), I mean within 10 minutes, I was not feeling well. When I woke up yesterday I was having no symptoms whatsoever and then almost immediately after I took the vaccine it seemed that I had a headache again and it just lasted the entire day, all day until I got home it was so bad and I still have not taken anything because I thought it was just the side effects and like 7 O'clock I was having full blown body aches and chills."" (as reported). The clinical outcome of the event ""I felt like I was developing a headache that just got worse as the day progressed/now I woke up this morning and my head is hurting"" was not recovered/not resolved; the outcome of the event ""I was starting to feel achiness/achiness was not going away"" was recovering/resolving; while the outcomes of the events ""I was feeling chills"", ""I am congested all of a sudden"", ""my temperature, it is 100.6"", ""I was not feeling well"" and ""I am having body aches/full blown body aches"" were all unknown."

parasthesia in injected arm including ring and pinky fingers; parasthesia in injected arm including ring and pinky fingers; weakness in injection arm up to the tricep muscle; He also experienced mild weakness; This is a spontaneous report from a contactable nurse (patient). A 33-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EK5930), via an unspecified route of administration in left arm on 21Dec2020 09:00 at a single dose in TB size syringe for COVID-19 immunization. The patient has no medical history. There were no concomitant medications. The patient is a nurse anesthetist calling about himself, stating that he thinks he has had a reaction to the Pfizer COVID Vaccine. He took a dose about 9am this morning and about 2.5 hours later he experienced paresthesia in his injected arm including his ring and pinky fingers. He also experienced mild weakness. The symptoms lasted about 45 minutes. Stated that the symptoms lasted about 45 minutes and has completely resolved thus far; however, he cannot attest if these symptoms will return or not. Stated that it was given with a TB size syringe and so assumes that it was the standard dose that

he received, but does not know for sure. No treatment was received for the symptoms. He just monitored himself. Caller wants to know if he should move forward with the second dose. He heard about Bells Palsy. If he had paresthesia with his first dose in the injected arm, could the paresthesia come to his face next? He wants to know if he is in the normal category to advance with the second dose. The events were reported as not serious. The events recovered on 21Dec2020.

Severe heartburn; abdominal pain; Agita; swelling; chest tightness; generalized redness; itching; sore throat; severe weakness; fatigue; headache; muscle pain; nausea; malaise/feeling unwell; increased temp but not febrile; This is a spontaneous report from a contactable nurse, the patient. A 63-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), intramuscular in the left arm on 18Dec2020 at 14:15 (at the age of 63-years-old) as a single dose for COVID-19 immunization. Medical history included chronic pain, hypertension, diabetes, depression, and broken vertebra. The patient was allergic to many antibiotics and benzodiazepines which caused dystonia. The patient also had an allergy to all anti-emetics except ondansetron (ZOFRAN) in the form of dystonia. Prior to the vaccination, the patient was not diagnosed with COVID-19. Ongoing concomitant medications included diclofenac (MANUFACTURER UNKNOWN) from an unknown date for an unknown indication, esomeprazole magnesium (MANUFACTURER UNKNOWN) from an unknown date for an unknown indication, fentanyl (MANUFACTURER UNKNOWN) for a broken vertebra from an unknown date, gabapentin (MANUFACTURER UNKNOWN) from 2019 for an unknown indication, misoprostol (MANUFACTURER UNKNOWN) from an unknown date for an unknown indication, oxycodone hydrochloride/paracetamol (PERCOCET) from an unknown date for an unknown indication, and fentanyl (FENTANYL PATCH) from an unknown date for an unknown indication. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 18Dec2020 at 14:30, the patient experienced generalized redness, itching, swelling, and chest tightness; which required her to go the emergency room for 6 hours and was treated with epinephrine (MANUFACTURER UNKNOWN), diphenhydramine hydrochloride (BENADRYL), and fluids. On an unknown date in Dec2020 (reported as later), the patient had sore throat, severe weakness, fatigue, headache, muscle pain, nausea, malaise/feeling unwell, and increased temperature but not febrile. On 22Dec2020, the patient had severe heartburn, abdominal pain, and agita. Since the vaccination, the patient had not been tested for COVID-19. The clinical outcomes of generalized redness, itching, swelling, chest tightness, sore throat, severe weakness, fatigue, muscle pain, nausea, malaise/feeling unwell, and increased temperature but not febrile were recovering; while that of the headache, severe heartburn, abdominal pain, and agita were not recovered. The events were reported as non-serious and assessed as possibly related to the vaccine. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: The patient was allergic to many antibiotics and benzodiazepines and had an allergy to all anti-emetics except ondansetron (ZOFRAN) in the form of dystonia. Based on information available, the reported chest tightness and swelling together with generalized redness and itching were possibly related to the BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), considering temporal relationship and clinical course. This case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any

appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Severe headache woke me from sleep approx. 6 hrs later, continued till the next day; Severe headache woke me from sleep approx. 6 hrs later, continued till the next day; severe neck and back stiffness, just did not feel well; severe neck and back stiffness, just did not feel well; This is a spontaneous report from a contactable nurse (patient). A 47-year-old female patient received bnt162b2 (Pfizer Biontech COVID 19 vaccine), lot number: EJ1685, via an unspecified route of administration at the left arm on 20Dec2020 06:30 at a single for COVID-19 immunization. Prior to vaccination the patient was diagnosed with COVID-19. Concomitant medication included levothyroxine sodium (SYNTHROID), carvedilol (COREG), ergocalciferol (VIT D), vitamin b complex (VIT B COMPLEX) and bupropion hydrochloride (WELLBUTRIN). On 20Dec2020, the patient experienced severe headache that woke her from sleep approximately 6 hours later and continued till the next day. She started having severe neck and back stiffness and just did not feel well. The patient was not hospitalized for the events and did not receive any treatment for the events. The events were reported as non-serious. The vaccine was administered in a hospital. The patient has not received any other vaccines within 4 weeks prior to the COVID vaccine. Since the vaccination, the patient has not been tested for COVID-19. The events recovered on an unspecified date in Dec2020.

Her BP went down to 80/60 with a pulse of 50.; sudden light headiness/light headedness; pulse of 50; Slurred speech; extreme sleepiness/sleepiness that there was no other focal deficit; felt like she was under anesthesia, was unable to move her legs/felt like she was under general anesthesia trying to wake up but unable to open her eyes or move her arms or legs; This is a spontaneous report from a contactable pharmacist. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number and expiration date were not reported, via an unspecified route of administration on unspecified date at a single dose for immunization. Medical history was none. The patient's concomitant medications were not reported. It was reported that the patient (a doctor) received the vaccine and had a sudden light headiness, slurred speech, and extreme sleepiness with outcome of recovered. She felt like she was under anesthesia, and was unable to move her legs. Her BP went down to 80/60 with a pulse of 50. All of these episode lasted about 2 hours. The patient became alert, but she still felt a bit light headed. She felt normal the next day. The patient said that at the sudden onset of the side effects: light headedness, slurred speech, and sleepiness that there was no other focal deficit. She felt like she was under general anesthesia trying to wake up but unable to open her eyes or move her arms or legs. The outcome of the events Her BP went down to 80/60 with a pulse of 50, sudden light headiness/light headedness, Slurred speech, extreme sleepiness/sleepiness that there was no other focal deficit and felt like she was under anesthesia, was unable to move her legs/felt like she was under general anesthesia trying to wake up but unable to open her eyes or move her arms or legs was recovered on an unknown date. Information about lot/batch number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of low blood pressure/ low pulse with dizziness cannot be excluded, considering the plausible temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for

adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate

Midbottom of foot to toes is completely numb; tingling in toes of both feet; paresthesias (numbness, tingling) right arm; paresthesias (numbness, tingling) right arm; This is a spontaneous report from a contactable nurse practitioner, the patient. A 56-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EK5730), intramuscular in the left arm on 18Dec2020 (at the age of 56-years-old) as a single dose for COVID-19 immunization. The patient did not have any relevant medical history. Ongoing concomitant medications included levothyroxine sodium (SYNTHROID) and unspecified vitamins. On 18Dec2020, the patent experienced paresthesia (numbness, tingling) in right arm. On 19Dec2020, the patient had tingling in the toes of both feet. On 21Dec2020, the mid bottom of foot to toes was completely numb. The clinical course was as follows: The patient received the vaccine in the left arm on 18Dec2020 and 9 hours later, she had paresthesias (tingling/numbness) in right arm. It was stemming from her shoulder down her arm. Around mid-morning on 19Dec2020, she had started having tingling in the toes of both feet. On 21Dec2020, the mid bottom of foot to toes was completely numb. The patient reported that the paresthesias (tingling/numbness) in right arm was getting better and was more intermittent and the tingling in the toes was only in the left foot as of 22Dec2020. The clinical outcome of the paresthesia (numbness/tingling) in the right arm was recovering; while that of the numbness in mid foot to toes and tingling in the toes were not recovered. The reporter assessed the events as serious for being medically significant and assessed the events as related to the suspect vaccine.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported paresthesia (numbness, tingling) in right arm, tingling in the toes of both feet, the mid bottom of foot to toes was completely numb, and the administration of the BNT162B2 for COVID-19 immunization, based on the plausible temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified, as appropriate.

Hypotensive (diastolic 43, sistolic 103); neurological tingling -upper spine/between shoulder blades; felt crummy; This is a spontaneous report from a contactable consumer. A female patient of an unspecified age received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in left arm on 21Dec2020 15:45 at single dose for Covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced hypotensive (diastolic 43,sistolic 103), neurological tingling - upper spine/between shoulder blades and generally felt crummy on 21Dec2020 at 15:45 (also reported as occurred within 5 minutes of shot). The patient underwent lab tests and procedures which included blood pressure measurement: 103/43 on 21Dec2020. Event resulted in emergency room and physician's room visit. Treatment received intravenous (IV) fluid replacement, lab tests (unspecified), 6 hour observation. The outcome of events was unknown. Information on the lot/batch number has been requested.

"Immunocompromised; Flushing; This is a spontaneous report from a contactable other healthcare professional which is also the patient. A 37-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration not provided), via an unspecified route of administration on 21Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the COVID-19 vaccine yesterday (21Dec2020) and experienced flushing since Dec2020. Added that patient was also immunocompromised. The events were reported as non-serious. Outcome of the events was unknown. Information on the Batch/Lot number has been requested.; Sender's Comments: Limited information was provided for the mentioned ""immunocompromised"". Based on the information currently available, pending further clarification, the Company deems the reported ""immunocompromised"" unlikely related to the administration of BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate."

chills all night and syncope; chills all night and syncope; This is a spontaneous report from a contactable other health professional (patient). A 39-year-old male patient received the first dose of the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number and Expiration Date: Unknown), intramuscularly in the left arm (also reported as the right arm) on 22Dec2020 at 15:00 at 39-years-old at a single dose for COVID-19 immunization. The facility where the most recent COVID-19 vaccine was administered was reported as: other. Medical history included Penicillin allergy from an unknown date and unknown if ongoing. Concomitant medications included estrogens conjugated (PREMARIN), progesterone (MANUFACTURER UNKNOWN), estradiol (MANUFACTURER UNKNOWN), montelukast (MANUFACTURER UNKNOWN); all taken for an unspecified indication from an unspecified date to an unspecified date (all of which were received within two weeks of vaccination). The patient did not receive any other vaccines within four weeks prior to the COVID vaccine. On 23Dec2020 at 00:00, the patient experienced: chills all night and syncope. The event syncope was considered medically significant; and the event chills was non-serious. There was no treatment received due to the adverse events. It was reported that prior to vaccination, the patient was not diagnosed with COVID-19; and since the vaccination, the patient had not been tested for COVID-19. The clinical outcome of the events, chills all night and syncope, was recovering. The batch/lot numbers for the vaccine, bnt162b2, were not provided and will be requested during follow up.; Sender's Comments: Based on temporal association, a possible contributory role of suspect BNT162B2 vaccine cannot be excluded for reported event syncope. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"vomiting; nausea/felt like she was going to vomit; headache/bad headache was reported as worsened; arm and joint pain in injection arm/Joint pain; arm and joint pain in injection arm; arm and joint pain, mostly in the left arm where she received the COVID vaccine/left arm pain at injection site; had a history of a pain conditions in her back/ but got worse after the shot""; This is a spontaneous report from a

contactable nurse (reported for herself). A 26-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 22Dec2020 11:30 at single dose at arm for COVID-19 immunization. Medical history included complex regional pain syndrome from Dec2019 and ongoing, back pain ongoing. Concomitant medications included naproxen sodium (ALEVE) ongoing, duloxetine hydrochloride (CYMBALTA) from 20Dec2020 and ongoing. Caller wanted to know if she should receive the second dose of the Covid vaccine. She received the vaccine yesterday (22Dec2020) at 11:30 (11:30 a.m.) by 21:30 (9:30 p.m.) she was experiencing side effects of vomiting, nausea, headache, arm and joint pain in injection arm, and continued to feel as if she was going to throw up. HCP was called to get Zofran prescribed. Caller further reported that she got the COVID Vaccine yesterday, 22Dec2020, at 11:30 (11:30am). At 21:30 (9:30 pm) last night (22Dec2020), she started vomiting and has had nausea since that time. Caller also stated that she had a really bad headache. Caller stated that she also had arm and joint pain, mostly in the left arm where she received the COVID vaccine. She went to sleep at 8:30 last night and woke up vomiting at 9:30pm and then had had nausea and a headache since then. If she tried to get up, she felt like she was going to vomit. She had a history of a pain conditions in her back and ""let"" (as reported, pending clarification). Stated that she cannot say that this was entirely due to the shot, but got worse after the shot (Dec2020). Caller reported that last night, she took Zofran which help the vomiting. The vomiting stopped around 3 o'clock this morning (23Dec2020 03:00), but she was still having nausea that made her feel like she was going to throw up. She could not stop vomiting for a few hours during the night. Caller asked how she know if she should be taking the 2nd dose of the COVID vaccine. Events Vomiting, Nausea, bad headache, left arm pain at injection site, Joint pain all reported as started from 22Dec2020 (21:30). Patient recovered from vomiting with lasting effects of nausea which made her feel like she was going to vomit, started on 23Dec2020. Reporter seriousness for Vomiting, Nausea, bad headache was Medically significant and bad headache was reported as worsened. Reporter seriousness for left arm pain at injection site and Joint pain was not serious. No Investigation Assessment. The reporter considered events Vomiting, Nausea, bad headache, left arm pain at injection site, Joint pain were related to the suspect product. The outcome of the event vomiting was recovered on 23Dec2020 03:00. The outcome of ""had a history of a pain conditions in her back/ but got worse after the shot"" was unknown. The outcome of the other events was not recovered.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the vomiting, nausea, headache and other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

hypertensive emergency; felt like the swelling was progressing into the back of her throat; swallowed harder; she felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt; she felt like she was hot in her face and felt like something was squeezing her neck

like a tight collar on her shirt; shivering on and off; This is a spontaneous report from a contactable pharmacist. This pharmacist reported similar events for two patients. This is the first of two reports. A 67-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EH9899), intramuscularly in an unspecified arm on 21Dec2020 14:30 at 0.3 mL single for COVID-19 immunization. Medical history included sulfa allergy. The patient's concomitant medications were not reported. There were no prior vaccinations within 4 weeks prior to the first administration of the suspect vaccine. The patient did not have a history of reactions to any other vaccines. On 21Dec2020, the patient experienced hypertensive emergency, which was reported as being medically significant. On 21Dec2020, the patient also felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt, shivering on and off, felt like the swelling was progressing into the back of her throat and she swallowed harder. Clinical details were reported as follows: the patient received the vaccine on 21Dec2020 at 14:30 and fairly quickly the patient started saying she felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt. She was given 25mg of diphenhydramine hydrochloride (BENADRYL), orally. The patient was shivering on and off and patient said she felt like the swelling was progressing into the back of her throat. She was having to clear her throat and swallow harder. She was taken to the emergency department around 15:11 and given intravenous (IV) famotidine (PEPCID) 20mg at 15:27. The patient did not have issues oxygenating. It was noticed that the patient's blood pressure was 232/100 on 21Dec2020 and they started treating her for the hypertensive emergency with amlodipine (MANUFACTURER UNKNOWN) 5mg orally, one time of IV labetalol (MANUFACTURER UNKNOWN), 10mg , IV labetalol (MANUFACTURER UNKNOWN) 20mg once, Clonidine (MANUFACTURER UNKNOWN) 0.1mg, orally. The patient was sent home around midnight and was not admitted to the hospital. The outcome of hypertensive emergency was recovering and of patient also felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt, shivering on and off, felt like the swelling was progressing into the back of her throat and she swallowed harder was unknown. When querying causality, the reporter stated this patient did not have a history of hypertension, so she thinks it is suspicious.; Sender's Comments: The 67-year-old female patient had sulfa allergy medical history. Throat swelling and hypertensive emergency were possibly related to the BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), considering temporal relationship and clinical course. This case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.,Linked Report(s) : US-PFIZER INC-2020510772 Same reporter/different patient/similar events

had a patient receive COVID vaccine and 3 days later developed bilateral pulmonary embolisms; This is a spontaneous report from a contactable physician. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at single dose on an unspecified date for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The physician had a patient receive COVID vaccine and 3 days later developed bilateral pulmonary embolisms on an unspecified date with outcome of unknown. Have there

been any similar reports of such events within short time frame of receiving the vaccine? Information about lot/batch number has been requested.; Sender's Comments: The information provided is limited and doesnot allow a full medically meaningful assessment. This case will be reassessed should additional information, especially patient age, relevant medical history, concomitant drugs and clinical course, become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

facial itching; throat swelling; lump in throat; hoarse voice; This is a spontaneous report from a contactable nurse. A 37-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: ELO140), via intramuscular on left arm on 23Dec2020 at 09:45 at single dose for COVID-19 immunization. The relevant medical history and concomitant medications were not reported. The patient experienced facial itching, throat swelling, lump in throat and hoarse voice, all at 11:30 on 23Dec2020. The most recent COVID-19 vaccine was administered at hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The events resulted in doctor or other healthcare professional office/clinic visit for the patient. The patient received IV benadryl and Epi pen as the treatment for the events. Prior to vaccination, the patient was unknown if diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The outcome of the events was recovered on an unspecified date in Dec2020.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events pruritus, pharyngeal swelling, sensation of foreign body and dysphonia cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

Exaggerated immune response and rigors; Exaggerated immune response and rigors; Fever and night sweats; Fever and night sweats; Sustained tachycardia between 100-105; This is a spontaneous report from a Pfizer sponsored program. A contactable 31-year-old male physician reported that he received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number EH9899) via an unspecified route of administration in the right deltoid on 19Dec2020 at 10:30 at single dose for COVID-19 immunisation. Vaccination facility type: hospital. Relevant medical history included COVID-19 (recently had COVID prior to receiving the COVID-19 Vaccine). There were no concomitant medications. Five minutes after the COVID-19 Vaccine, on 19Dec2020, the patient experienced sustained tachycardia between 100-105 that lasted about 40 minutes and then dissipated by itself; the patient recovered from tachycardia on 19Dec2020. Early morning on 20Dec2020 at 03:30, he had an exaggerated immune response and rigors, which lasted about 30minutes to 40minutes, followed by fever and night sweats, which continued for 30 minutes and then it was all over. Reactions were spontaneously over. The patient recovered from the events exaggerated immune response and rigors, fever and night sweats on

20Dec2020. The physician believed that it was a hyper immune response. Recently, he had COVID prior to receiving the COVID-19 Vaccine and he wanted to know whether he should have waited after experiencing COVID to have received the first dosage of the COVID-19 Vaccine. The physician considered the reported events related to the COVID-19 Vaccine.; Sender's Comments: Based on available information, a possible contributory role of the subject product cannot be excluded for the tachycardia and other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including EKG at baseline and during subject drug therapy, echocardiogram, electrolytes, chemistry panel, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

patient's anaphylactic reaction persisted longer than expected; This is a spontaneous report from a contactable pharmacist. A 45-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient's anaphylactic reaction persisted longer than expected in Dec2020. The outcome of the event was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.; Sender's Comments: The causal relationship between BNT162B2 and the event anaphylactic reaction cannot be excluded as the information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

heart racing/her heart beat was 140 BPM; felt flush, hot; tired; soreness at the injection site; This is a spontaneous report from a contactable consumer. An adult female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 22Dec2020 at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient received the vaccine and with 10 minutes felt flush, hot, and her heart racing on 22Dec2020. At one point she looked at her watch and her heart beat was 140 BPM. She was sent immediately to the ER (emergency room). Since then she was tired and had soreness at the injection site. She would have to see an allergist before getting the 2nd shot. The outcome of the events was recovered on unspecified date in Dec2020. Information about batch/lot number has been requested.

tunnel vision; Shortness of breath; headache; couldn't move arms/legs; This is a spontaneous report from a contactable other health professional via a Pfizer sales representative. A patient of unspecified

age and gender received bnt162b2 (BNT162B2), via an unspecified route of administration, on an unspecified date, at single dose, for Covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced tunnel vision, shortness of breath, headache and couldn't move arms/legs all on an unspecified date with outcome of unknown. The information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of tunnel vision, shortness of breath, headache and couldn't move arms/legs due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including eye examination at baseline and during subject drug therapy, Head CT/MRI, chemistry panel and chest x-ray , counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

hallucinations; pain in right arm; headache; fever; chills; This is a spontaneous report from a contactable pharmacist via Regulatory Authority (Regulatory Authority report number not provided). A 35-year-old female received the 1st dose of bnt162b2 (BNT162B2, Manufacturer Pfizer-BionTech), intramuscular, on 18Dec2020 morning, at single dose, for Covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient has never had an adverse event following any previous vaccine. On 18Dec2020 afternoon, 12 hours after receiving vaccine, the patient experienced hallucinations, pain in right arm, headache, fever and chills. The patient underwent lab tests and procedures which included body temperature: fever (18Dec2020). The events recovered in Dec2020, 36 hours after. The information on the lot/batch number has been requested.

She woke up with a burst blood vessel in her eye; This is a spontaneous report from a contactable other healthcare professional (hcp) (patient). A 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 Vaccine), via an unspecified route of administration on an unspecified date in 2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. After receiving the Covid-19 vaccine in 2020, she woke up with a burst blood vessel in her eye. There was blood throughout the white portion of her left eye. The outcome of event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject vaccine cannot be excluded for the reported event of eye hemorrhage due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including including eye examination at baseline and during subject drug therapy, Head CT/MRI, chemistry panel, CBC and coagulation panel, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events.

Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

tenderness when pressure applied under left arm pit

Elevated temp 1?.2, chills, aches, nausea

Throat tightness, hoarse voice

Patient stated her throat felt tight and she was having trouble swallowing and her heart was racing. She was given diphenhydramine 50 mg IM and taken to the emergency room for observation. She was not given any additional medication in the emergency room and was discharged to home approximately 3 hours later.

nausea, headache, pain and swelling in arm, and weakness

Felt dizzy/faint and heart pounding. Given ice water and cool wash cloth, rest. Monitored, blood pressure 102/76. After 30 minutes continued to feel faint and dizzy with heart pounding feeling. Brought to Emergency Department for further evaluation.

Mild generalized, erythematous rash noted on patient's abdomen and back. The rash is pruritus.

Near Syncope

swollen gland in left armpit? tenderness to touch

Dry Cough

Client complained of numbness in arm, SOB, throat closing per onsite party, medical rendered by ambulance service, client given a Benadryl, condition improved, client released to self and drove self from the waiting parking lot.

Chills, body aches. He did have Covid on 11/11/2020

When rec'd injection on 12/23, it hurt more than any I've ever had and expected discomfort for several hours. By evening on 23rd my upper arm and shoulder were very painful and deltoid area swollen. By 24th, the pain was affecting entire left arm, shoulder, left back and neck. Then had pain/discomfort throughout body through the 25th, Ibuprofen taken as needed, by end of 26th I was feeling a bit better, and the 27th near all symptoms resolved. I do still have a good sized bruise around injection site.

7 AM - severe arm pain and swelling (for about 24 hours) 12:00 PM - 10 PM: chills, fever, fatigue, malaise

Patient reports elevated heart rate of 147 (normal: 70-120) and dizziness about 20 minutes after receiving vaccine.

shoulder pain with movement.

Patient was vaccinated for COVID-19 on 12/27/20 at 11am. 2 days later, upon waking up she developed pain at the injection site (left deltoid), and a rash on her right hand and right side of her stomach, not itching reported. The patient reported to employee health the reaction, she was seen in urgent care and given prednisone, benadryl, and famotidine.

Golf ball size swelling lymph nodes. Swelling in shoulder, chest, N/V.

Throat swelling, hard to breath, wheezing, went to employer ER. Prescribe a steroid and antihistamine.

"Patient reports that at about 30 minutes after she received her vaccine, her lips began feeling numb and tingling, mouth dry. She reports her face starting itching and developed a red rash, her face felt like it was ""on fire"". She denied any shortness of breath or difficulty breathing. She walked back into the clinic office at 1240, a set of vitals were taken and at 1250 25mg of PO benadryl was administered. Patient was held for observation and at 1325 she reported that the itching had improved. She did have an itching sensation in her through but no feelins of constriction or difficulty breathing. She stated that she did not feel drowsy and was okay to drive herself home. Her husband would be at home with her for the remainder of the day and she was told that if she developed any new or worsening symptoms to report to the ED immediatley."

Vaccine recipient received vaccine on 12/18/2020 at 7:30 am and at 9:00 am reported their bottom lip had swelling and around the chin had tingling that lasted 1.5 hours. At the occupational health follow-up visit on 12/28/20, the vaccine recipient reported that the injection site has been soar with occasional numbness and weakness that has not changed in intensity. Pfizer-BioNTech COVID-19 Vaccine

Received vaccination 12/23/20. On 12/28/20 began having fever 102+ and shortness of breath. Decided to go to ED for evaluation and COVID tested. Discharged from ED.

Back started itching, noticed huge red spot warm to the touch, hives. Neck and face become blotchy looking. Called NP, took 50mg of diphenhydramine. The hives and rash subsided by the end of the day on December 24th.

minutes after had flushed feeling all over body (similar to when I had dye injected for a cat scan).. felt lightheaded and extreme dry mouth.. lasted for about an hour. blood pressure when check on floor had a high diastolic number (120/94)

Approx 25 minutes after vaccination, client developed mild, red, raised rash with itching on lateral left wrist distal to injection site. Client denies any other adverse signs/symptoms of angioedema or anaphylaxis 1 hour after administration of vaccine.

Fever (102): body aches, chills, nausea, lightheaded (vertigo) All symptoms have subsided EXCEPT Vertigo/dizziness

Severe arm pain the following day. Resolved after about one day.

"Dizziness, warmth, ""just not normal"", scratchy throat. Resolved in about 1 hour."

Dizziness and nausea 10 minutes after injection, continued to wax and wane over approx 90 minutes. No vitals taken. Patient ambulated back to work at 1800.

tenderness to touch under right arm/armpit area. pain pressure felt when running.

Swelling of palate approx. 5 minutes post COVID Vaccine Dose #1. VS normal and stable. Received diphenhydramine 50mg PO with symptom resolution within 20 minutes. Observed for 40 minutes and D/C'd in stable condition with no sxs present.

Rash developed on forehead. Felt itch on other part of body. Felt hot and prickly. Took diphenhydramine and subsided within 45 minutes.

Weird rash to both lower legs, chest and neck area about 2 hours after administration.

Patient describes a tingling feeling all over the body, especially in the hands in face and it came in 2 waves lasting not more than a few seconds. She no longer is having these symptoms

Symptoms started 2 days after I got my injection. I had a massive migraine, body aches, chills, fever with temperature reaching 102. Symptoms lasted 24 hours. The following day I felt fine again.

Soreness in the arm achness around injection site itchy around the ears, in ears and itchy spots in throat around lips and face body felt numb

Near Syncope, dizziness

Near Syncope, dizziness

While, receiving the Covid vaccine with the needle still inserted, felt a significant amount of liquid drip down my arm and unsure how much of vaccine was administered.

Extremely stiff joints and joint pain.

Ipsilateral (to side of vaccination, i.e. left) supraclavicular adenopathy (painful, swollen, very tender to palpation for 3 days) Itchy throat Congestion Left arm soreness (this was immediately after, resolved after 3 days around the time the adenopathy began)

On December 25th developed a rash that started on the stomach, spread down legs then up the back on December 26th, all over body by the December 28th. Started off as a blistery area then turned to dry flakey skin, on the 28th started itching. by December 29th the itching had started to subside. Rash did not occur on the face but was in the scalp area. Patient took diphenhydramine but it die not help. As of the time this report is being filed has not contacted any healthcare provider.

facial swelling and hives; hives to right arm - zyrtec and prilosec taken. Ice administered. subsided by next day.

About 7 hrs after the vaccination I've experienced the side effect of tense pain on neck, lower back, thighs, calves and got more intense with time throughout the night and in the morning, daytime (now

12:34pm). Hard to sleep, kept waking up at night. I took Advil and Tylenol and couldn't tell if one was helpful then the other. The pain was still there but not as intense.

metallic taste in mouth

sore arm, chills, body aches; lasted 2 days after the vaccine date

Chills, joint pain, and headache starting 4 hours after the covid vaccine. S/S have yet to subside.

Patient received the covid vaccine on 12/19/2020. C/O new onset on sore throat and diarrhea on 12/28/2020. Sore throat is worsening. Hx of colitis by well controlled with Xeljanz. Diarrhea is unusual this time. Last diarrhea was almost 1 year ago. Denies fever, cough, loss of smell, rhinorrhea, nasal congestion, abdominal pain Awaiting PCP at medical center for evaluation and testing. Declined Employee Health Service

Systemic reaction. 3 days after injection. Severe, worsening macular-papular rash. Started on Abdomen and groin area. Now diffuse and encompasses chest, neck, and both legs. Very pruritic/itchy. Been taking daily Claritin and Benadryl. Not improving after >4 days.

Severe, disabling myalgias of lower back, flank, then lower abdomen resulting in extreme difficulty with standing and ambulatory.

"tingling in fingers approx 5 minutes after injection which resolved approximately 2 minutes later. At 0954, complaint of feeling ""clammy"", 1001 states feeling ""weak"" overall, denies lightheadedness, dizziness while sitting up on cart with HOB elevated. At 1011 no complaints and discharged from care."

Recipient reported to Employee Health Nurse: Pain at injection site, severe fatigue, headache, muscle pain, severe chills, joint pain, fever exceeding 101.0 for 2 days, increased heart rate, rash, dizziness, weakness, tightness in throat, difficulty breathing, nausea, swelling of face/lips.

8PM: Extremely nauseous 4AM: 101.5 fever 11AM: 100.3 fever 11AM: extreme body pain

12/29 c/o fatigue, heavy eyes, and numbness, tingling and swelling to left arm. Also numbness, tingling to left leg and foot. She was seen in ED , prescribed naproxen and sent home.

24 hours after receiving vaccine, Patient started to experience fever, tachycardia, chest pressure, excessive sweating, cough. Patient presented to ER for evaluation. Patient received EKG, blood tests and Covid Rapid antigen test. Patient tested positive for Covid on Rapid Antigen test in ER. Patient was having no symptoms of covid and reported no exposure to covid on pre-vaccine questionnaire the day prior. Patient released from ER to home in stable condition with instructions to call physician immediately if condition worsens.

On 12/28, start getting a really bad headache. Within two hours, I started developing aches all over my body. Developed chills for a few hours. Chills were gone by morning, but headache and some of the aches remained by noon.

Was given the vaccine and about 5 minutes later started having swelling and my eyes and face. It was watched for a few minutes and was assessed by EMS and taken to the emergency department. I was given epinephrine, Benadryl, Solu-Medrol, Pepcid, IV fluids, DuoNebs and observed overnight. I was given multiple rounds of Benadryl, steroids, Pepcid, DuoNebs

She arrived at 12:30 and was vaccinated shortly after while waiting 15 for observation within the 1st 10 min she C/O tingling of her throat and lower lips, felt palpitation. No chills, No headache, + palpitations, and No presyncope. Tells me that she did not experience any loss of consciousness. Never had any chest pain, shortness of breath, or angioedema, rash, pruritus, throat swelling, hoarse voice, or difficulty breathing. The patient has had no recent illnesses, fevers, chills, nausea, vomiting, diarrhea, or flu-like illnesses. She has had no cough, rhinorrhea, or congestion. She denies any recent vaginal bleeding, or abdominal pain. Denies any history of cardiac disease, or history of arrhythmias. Denies any history of prolonged immobility, recent travels, or history of clots. In ED:32 year old female with PMHx as listed in HPI presents with concern for allergic reaction to mod chair and a COVID-19 vaccine, felt tingling in the back of her throat and lower lip, no swelling, wheezing, shortness of breath, throat tightening, rash, nausea vomit or dizziness. Vitals reviewed found to be within normal limit. Physical exam as per above, no signs of mucosal or oral swelling, no hives or rash and no wheezing on exam. Given above findings, low suspicion for allergic reaction this time but plan to observe patient in the ED for any delayed reaction. á

Nausea 10-15 mins after dose. Pain at injection site ~10 hours later. Generalized severe myalgia (thighs and buttocks), chills & rigors ~12 hours after. Headaches, mild nasal congestion and persistent myalgia 24 hours post vaccine with fevers of 38.7 C max 36 h post vaccine. Now ~48h post vaccine and continue with headaches and myalgia especially of lower limbs. However, now also feeling fatigued.

C/o itching and redness to arms and face approx. 20 minutes post vaccine administration.á Admin Benadryl 25mg po x1 per S.O.á 1400-Pt reports itching is nearly resolved; redness improving.

extreme arm soreness, extreme body ache

Fever, chills, recently was positive for Covid on 11/29/2020

Myalgia Dizziness Nausea Fatigue Fever

Pressure in ears that started approximately 3 hours and 40 minutes after vaccination. Pressure is reported in both ears but more prominent in the left ear. Patient came back to immunization clinic under direct observation for additional 30 minutes after symptoms started. Symptoms still present.

Tachycardic, flushing

"Dizzy, nausea at 1 hour Throat tightness, felt ""swollen"" Worked x 2 1/2 hours then reported to nurse, sent to ER"

Around 4am exactly a week after getting the vaccine; I woke up in a sweat, went to the bathroom with extreme nausea thought I may throw up. No throw up came but severe nausea persisted. Along with a

lot of dizziness and light headedness. My balance feels off. My body feels strange, very sensitive to touch. Extreme exhaustion. No motivation. Head ache that seems to not go away with Tylenol. Stomach pain. And my body hurts on the inside my joints. I have metal in my back and it seems to be increased in pain. I had to take the day off and could not work. I feel miserable. Very flu like.

12hours after shot -mild to moderate pain at injection site (no redness or swelling). 12/27/20 (day 5) Skin reaction to few mosquito bite (1 inch red spot around bites). Its the first time I react to mosquito bites. Resolved overnight. 12/28/20 (day 6) Dark reddening around both eyes (specially in eyelids) when removing my makeup. Same routine/products as always. Also resolved overnight.

Dizziness. Light-headed. Given water & mint candy. Took blood pressure. Reading normal. Offered opportunity to lie down. Refused. Sat in chair until about 11:00 AM when felt better to drive.

Dizziness. Light-headed. Given water & mint candy. Took blood pressure. Reading normal. Offered opportunity to lie down. Refused. Sat in chair until about 11:00 AM when felt better to drive.

Dizziness. Light-headed. Given water & mint candy. Took blood pressure. Reading normal. Offered opportunity to lie down. Refused. Sat in chair until about 11:00 AM when felt better to drive.

12 hours after vaccination I started chilling and had intense body aches, terrible joint pain. I do have arm soreness but nothing worse than with other vaccinations. These symptoms have continued for 24 hours after the injection

"Vasovagal response. Pt requested to lie down following vaccination. Reported feeling faint, nauseous and ""seeing stars."" Team applied cool compresses, patient instructed to lie on the floor with feet on a chair. Vitals were BP: 124/82, hr 53, o2 97% at 1200. Pt moved to sitting shortly thereafter. Then, at approximately 1210 requested to lie down 2/2 ringing in ears, sweating, and feeling nauseous again. At 1212 vitals were bp 124/78, hr 58, o2 97%. At approximately 12:25 symptoms abated, pt moved to sitting. Continued to monitor until 12:50 with no recurrence of symptoms."

12/23/2020 - VACCINATION 12/24/2020 - WOKE UP AT 6AM WITH HEADACHE. LASTED 12 HOURS; NO RELIEF WITH TYLENOL (TOOK 2 BRANDS); NAUSEOUS. 'WAS NOT THE NORM'. FELT BETTER AFTER THE 12 HOURS. PREGNANCY HISTORY; 12 WEEKS,; DUE DATE JULY 11/12TH 2021.

About 45 minutes post injection I experiences the sensation of heat all over my body, my heart rate increased rapidly and I had tingling in my mouth. This passed after about 10 minutes, since then I have been experiencing exhaustion and feeling foggy. No additional reactions at this time.

Feeling of wanting to pass out, dizziness and fell at home, severe headache, body aches, scratchy throat and SOB.

Localized urticaria on day 7 post vaccine with generalized swelling, itching, and tenderness. No prior reaction until day 7.

"She arrive at 3:43 and she was nervous before the vaccination for COVID19 (Morena) because has had anaphylactic reactions to Flonase. She was feeling well up to 15 min post vaccination when she felt she is going to pass out w/o loosing consciousness. She felt weak and feeling fainted when we transferred her to the stretcher. Her BP was 163/106 P=112, Pulse Ox 100% at 16:09. She was resting, received O2 lit per min, she was feeling chest tightness when she used her inhaler Albuterol 2 puffs X2 within 5 min. She was feeling weak and stating ""I am going to pass out."" Her repeat BP=152/110, P=94 with pulse Ox 100% at 16:12 repeat at 16:30 BP=139/100, P=99 pulse OX 100% She then C/O chills later. Paramedics were called and transferred in to ED. She takes AMLODIPINE 5 MG DAILY FOR HTN. She has family HX of HTN. Negative for headache, + palpitations, + presyncope, + shortness of breath, slight difficulty brathing. She did not experience any loss of consciousness. Never had any chest pain, angioedema, rash, pruritus, throat swelling, hoarse voice. The patient has had no recent illnesses, fevers, chills, nausea, vomiting, diarrhea, or flu-like illnesses. She has had no cough, rhinorrhea, or congestion. She denies any recent vaginal bleeding, or abdominal pain. Denies any history of cardiac disease, or history of arrhythmias. Denies any history of prolonged immobility, recent travels, or history of clots. á In ED: 36 year old female presents with dizziness and presyncopal like symptoms approximately 15 minutes after receiving the Medina vaccine at this hospital the patient who is mildly tachycardic mildly hypertensive but otherwise normal and stable vital signs and is overall nontoxic appearing. Of note the patient's oxygen saturation was 97% while I was in the room and not the 2% that is documented here. á EKG notable for a rate of 87 normal axis normal sinus rhythm T-wave inversion in V1 otherwise no evidence of Brugada interval abnormality or evidence of electrolyte abnormality that would require further workup at this time. Patient counseled to follow up with her primary care. Patient given EpiPen given her EpiPen has expired. Patient requested to go back to work I feel this is fair given patient will be on campus and can return to the emergency department should she develop any further symptoms. á Patient states her symptoms have completely resolved and she has normal vital signs currently heart rate in the 80s blood pressure 138 systolic feeling well and requesting to be discharged."

Upon registration, pt informed staff she normally gets hives and itching with flu vaccine. Pt received COVID vaccine at 1205. Pt sat down in monitor area at 1209. At 1221, pt stated she started to feel slight itching. At 1230, pt stated itching had increased. RN also noted redness to neck. Pt denied any SOB, difficulty breathing, tingling in mouth, or any other anaphylactic symptoms. At 1234, RN gave 25mg Benadryl orally. Pt requested to receive smaller dose instead of the entire 50mg. Pt stayed to be monitored until 1255. No other symptoms noted. Pt educated to monitor for further signs of anaphylaxis.

Immediately injection site was itchy, but no distress. within 10 minutes, throat became very dry; back of tongue started to tingle and feel as if it were swelling. No shortness of breath noted.

Full body hives approximately 12 hours after injection, resolved with oral diphenhydramine

Shortness of breath, wheezing, throat tighness, body aches without fever beginning 3 days ago lasting 2 days resolved spontaneously overnight

reported throat closing

She stated she had hives appear on her face and had to take Benadryl.

Large red lump that was very sore to the touch, the site is warm and 7 days later a bruise has formed. Lump appears to be very slowly getting smaller.

I woke up on the morning of Dec 26th with significant eye swelling. It was somewhat relieved with loratidine anithistimine 10 mg po daily x 3 days . The swelling was bilateral, symmetrical and was not accompanied by significant reddening of the eyes. Swelling was above and below the eyes. Swelling is slowly resolving but still present today 12/29. A small amount of skin sloughing occurred below the eyes and on the eyelids. Swelling was accompanied by watery eyes, itching with foreign body sensation.

Fever- Started in the middle of the night around 1:00 am and dizziness felt like I was going to pass out. Woke up at 8 with a slight cough, dizziness and faint feeling.

Patient felt lightheaded and dizzy about 5-10 minutes after receiving his first COVID vaccine. His blood pressure was elevated (160/96 mmHg) and he was tachycardic (143 bpm). He said he felt some tingling in his arm. The injection site appeared normal. The patient sat for 30 minutes and his blood pressure and pulse normalized (134/86 mmHg and 84 bpm). He said he began to feel better and eventually left the building.

Approximately 2 and a half hours after vaccine administration, I had the sudden onset of abdominal cramping, multiple episodes of diarrhea, nausea, and tingling in my hands and lips. I recognized these symptoms as a potential allergic reaction and took cetirizine 20 mg and famotidine 20 mg. These symptoms subsided approximately one hour after onset. Approximately 4 hours later, I experienced moderate fatigue and mild muscle soreness of my left arm (where the vaccine was administered). The fatigue and soreness persisted into the next day and gradually subsided.

Sudden onset. Chills, low-grade fever. Myalgia, arthralgia I did have the Covid virus in June. I still have adequate IgG. This began while I was seeing patients today. I do not feel very good. No cough, nasal congestion, no fear of contamination.

Redness of both arms, mild cough, temp 99F

12/22/2020 Received vaccination at approximately 1000 in left deltiod area. Approximately 1700 12/22/2020 developed parethesia 3rd, 4th and 5th fingers diagonally to ulnar area of left palmar surface. 12/23/2020 noted paresthesia alone vertebrea with outward extension to all areas of back.

None stated.

Very tired the first day; pain in my arm for two days; sporadic palpitations; This is a spontaneous report from a contactable nurse (patient). A 28-year-old female received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: Ek5730, via an unspecified route of administration in the left arm, first dose on 18Dec2020 08:15 at a single dose for immunization. Medical history included hypothyroidism. Concomitant medication included levothyroxine sodium (SYNTHROID). The patient previously took oral aspirin but had intolerance. The patient was not pregnant. The patient did not receive any other vaccines within 4 weeks prior to the vaccine. The patient was not diagnosed with covid-19 prior to vaccination and she has not been tested since the vaccination. The patient was very tired the first day, she had pain in her arm for two days and sporadic palpitations that continued. The events started on 18Dec2020 at 10:30 AM. The outcome of the events 'very tired the first day, she had pain in her arm for two days and sporadic palpitations' was unknown. The patient did not receive any treatment for the events.

Numbness and swelling of the right side of the face; Numbness and swelling of the right side of the face; This is a spontaneous report from a contactable pharmacist. A 39-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899) via intramuscular on 15Dec2020 12:45 on left arm at a single dose for COVID-19 immunization. The patient has no medical history and not allergy to medications, food, or other products. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine and did not receive any other medications within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient has not been tested for COVID-19. The patient experienced numbness and swelling of the right side of the face on 22Dec2020 12:30. The adverse events result in emergency room/department or urgent care. There is unknown whether treatment received for the adverse events. The outcome of the events was unknown.

High Blood pressure; tachycardia; This is a spontaneous report from a contactable nurse (patient). A 36-year-old male patient received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot number: EK 5730) intramuscular in the left arm on 18Dec2020 17:00 at a single dose for COVID-19 immunization. The patient received COVID-19 vaccine in a hospital facility. Medical history included asthma, high blood pressure, and allergy to seafood. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The patient is taking unspecified concomitant medications. The patient previously had allergies to acetylsalicylic acid (ASPIRIN) and iodine (IODO). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced high blood pressure and tachycardia then 2 minutes after receiving the vaccine. The patient did not receive treatment for the adverse events. The outcome of the events was recovered in Dec2020. The report is considered non-serious.

Pain and numbness in the left arm, from the shoulder to the fingers.; Pain and numbness in the left arm, from the shoulder to the fingers.; Pain and numbness in the left arm, from the shoulder to the fingers.; Cannot raise arm, nor leave it down.; This is a spontaneous report from a contactable pharmacist. A 55-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), intramuscular on 17Dec2020 14:15 at single dose for covid-19 immunization. Vaccine location was left arm and it was the first dose. The COVID-19 vaccine was administered at Hospital. Medical

history included Right breast cancer. Concomitant medication included vitamin Vitamin C, Vitamin D, anastrozole (ARIMIDEX). The patient experienced pain and numbness in the left arm, from the shoulder to the fingers. Can not raise arm, nor leave it down on 19Dec2020. Relief with a sling. Also, to manage pain she was taking Tylenol every four hours. By medical order she started diclofenac potassium 50 mg tablet. Adverse events resulted in: Doctor or other healthcare professional office/clinic visit. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, it was unknown if the patient was been tested for COVID-19. The outcome of the events was unknown.

Nausea; colic; diarrhea; This is a spontaneous report from a contactable pharmacist. A 51-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EK5730), intramuscular at left arm on 21Dec2020 11:15 at single dose for COVID-19 immunization at a hospital. The patient's medical history and concurrent conditions was reporter as none. The patient had no known allergy (NKA) to medications, food, or other products. There were no concomitant medications (no any other vaccines within 4 weeks prior to the COVID vaccine, no any other medications received within 2 weeks of vaccination). The patient was not diagnosed with COVID-19 prior to vaccination, and had not been tested for COVID-19 since the vaccination. On 21Dec2020 15:00, the patient experienced nausea, colic, and diarrhea. The events lead to doctor or other healthcare professional office/clinic visit. No treatment was received for the events. The outcome of the events was recovered in Dec2020.

joint pain in both knees and elbows/pain in both hips/some joint pain on the right knee and hip; This is a spontaneous report from a contactable physician(patient). A 35-year-old male patient received the first dose of BNT162B2 (lot number: EKS730), via intramuscular in left arm, on 18Dec2020 09:45 AM at single dose for COVID-19 immunization. Facility where the most recent COVID-19 vaccine was administered was hospital. The patient was not diagnosed with COVID-19 prior to vaccination. Since the vaccination, the patient was not tested for COVID-19. Relevant medical history was none. No allergies to medications, food, or other products. No other vaccines were received within 4 weeks prior to the COVID vaccine. The medications received within 2 weeks of vaccination included CBD oil drops. On Monday 21Dec2020 06:00 AM the patient started experiencing joint pain in both knees and elbows. Pain was moderate and fluctuating, the patient took some Tylenol and intensity of pain improved. On Tuesday, 22Dec2020 pain intensity decreased, however at night time the patient started experiencing pain in both hips, mostly on the right side. Today 23Dec2020 pain has disappeared from both elbows, left hip and left knee. The patient was still experiencing some joint pain on the right knee and hip, mostly when he was walking, if he was sitting down or not moving at all, pain is not present. Treatment Tylenol 500 mg P.O. (oral) q (every) 8 hours and CBD oil was received for the events. The outcome of the event was recovering.

Bell's Palsy; This case has been considered invalid as non-serious event was not reportable in clinical study. This is a report from an interventional study. A 51-year-old female non-pregnant subject received blinded therapy (BNT162; PLACEBO) first dose on 24Aug2020 at 13:15 and second dose on 15Sep2020, via an unspecified route of administration on left arm at single dose for COVID-19 immunization. Medical history included allergy to some foods. No other vaccine in four weeks and no other medications in two weeks. The subject experienced bell's palsy on 03Dec2020 which considered as non-

serious by investigator. Clinical course was as follows: on 03Dec2020, the subject had a diagnosis of bell's palsy post 2nd vaccine. The subject had no COVID prior vaccination. A nasal swab post vaccination on 30Nov2020 was negative. After visit 3 (13Oct2020), the subject reported the Bell's Palsy. She went to her doctor, but mot hospitalized. The investigator did not think this was an SAE and was not considered life threatening. The action taken in response to the event for blinded therapy was not applicable. Event treatment included an unspecified medication. The outcome of the event was not recovered. The investigator assessment with blinded therapy, concomitant drugs and clinical trial procedure not reported. Follow-up (21Dec2020): New information received from site included: updated report type, patient ID, event seriousness (non-serious).

Headache for 4 days now; 10 hours post vaccination, patient's entire arm (not injection site) hurt horribly, unable to lift; 10 hours post vaccination, patient's entire arm (not injection site) hurt horribly, unable to lift; At times her face will feel tight; 30 min post starting itching very bad; Have experienced insomnia since the injection, followed by exhaustion; Have experienced insomnia since the injection, followed by exhaustion; eyes itch and have been red; eyes itch and have been red; This is a spontaneous report from a contactable nurse. A 45-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration (left arm) from 18Dec2020 09:45 at a single dose for COVID-19 immunization. Medical history included migraine, depression, anxiety, allergies, poly cystic ovary syndrome, asthma, different food allergy and sensitivity to all antibiotics. It was reported that 30 min post vaccination, patient started itching very bad and none of her allergy meds would calm it. Have experienced insomnia since the injection, followed by exhaustion. The itching decreases daily but even 10 hours post vaccination, patient's entire arm (not injection site) hurt horribly, unable to lift. She had headache for 4 days now. At times her face will feel tight. She added that she has allergies and sensitivity to many medications/ environmental/ scents. Outcome of events was recovering. No treatment was received due to events. Follow-up attempts are completed. The following information on the batch/lot number has been obtained.

Muscle aches in legs; This is a spontaneous report from a contactable nurse. A 50-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular from 18Dec2020 07:45 to 18Dec2020 07:45 at a single dose for COVID-19 immunisation. Medical history included sinusitis, HLD, and penicillin (PCN) allergy. Concomitant medication included vitamin c [ascorbic acid], tocopheryl acetate (VITAMIN-E), ergocalciferol (VIT D), magnesium and calcium. The patient experienced muscle aches in legs from 2 to 12 hours post vaccine administration (18Dec2020 10:00). Outcome of event was reported as recovered. No treatment was received due to the event.

redness above eyebrow, nose and cheek and left hand had few reddened marks on skin, neck had a thin red line; right eyebrow was swollen and neck had a thin red line; The initial case was missing the following minimum criteria: unspecified event. Upon receipt of follow-up information on 23Dec2020, this case now contains all required information to be considered valid. This is a spontaneous report from a contactable nurse. A 62-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EK5730), intramuscularly in the left deltoid on 18Dec2020 10:30 at a single dose for COVID-19 immunization. Medical history included hypertension (diagnosed at 47 years old), hypothyroidism, Hashimoto's disease from 2000 to an unknown date (diagnosed 20 years ago), anxious

person and weight loss. Concomitant medication included hydrochlorothiazide (MANUFACTURER UNKNOWN), taken for blood pressure from 2000 to an unspecified date, levothyroxine sodium (SYNTHROID), taken for hypothyroidism and Hashimoto's disease from 2015 to an unspecified date, rosuvastatin calcium (CRESTOR), taken prophylactically from 2010 to an unspecified date and semaglutide (OZEMPIC) taken for weight loss from May2020 to an unspecified date. Family history included; the patients mother had an allergy to Sulfa and allergy to penicillin and the patients father had unspecified allergies and hay fever. There were no prior vaccinations within 4 weeks. On 19Dec2020, the patient experienced redness above eyebrow, nose and cheek and left hand had few reddened marks on skin, neck had a thin red line and right eyebrow was swollen. The reporter considered the events to be non-serious. The patient was worried about anaphylaxis, so they went to the emergency room (ER) for the reported events but was not admitted. The patient was treated in the ER for the events with diphenhydramine hydrochloride (BENADRYL), prednisone (MANUFACTURER UNKNOWN) and famotidine (PEPCID). Relevant tests were none. The outcome of the events was recovering. The reporter stated that there was a reasonable possibility that the events were related to the suspect product.

left arm began having generalized weakness and difficulty holding pen.; Mild tremors of left hand and fingers.; This is a spontaneous report from a contactable pharmacist. An adult female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EJ1685), intramuscular on 18Dec2020 at a single dose for COVID-19 immunization. The vaccine was administered in the hospital. The patient's medical history and concomitant medications were not reported. Around 6 hours post-administration on 18Dec2020, patient's left arm began having generalized weakness and difficulty holding pen. Mild tremors of left hand and fingers. Lasted approximately 2-3 hours and resolved spontaneously. No other symptoms. No treatment was given. The events were reported as non-serious. Outcome of the events was recovered in Dec2020.

Was exposed to someone positive and then 2 days later tested positive; Was exposed to someone positive and then 2 days later tested positive; Was exposed to someone positive and then 2 days later tested positive; This is a spontaneous report from a contactable pharmacist. A male patient of an unspecified age received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the first COVID-19 vaccine last week in Dec2020, then was exposed to someone positive and then 2 days later, patient tested positive. Reporter inquired whether they can vaccinate patient on schedule 3 weeks after the first dose or if they have to wait 90 days. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Extreme dizziness that is still ongoing; This is a spontaneous report from a contactable nurse (patient). A 54-year-old female patient received the first dose of bnt162b2 (Pfizer Biontech COVID 19 vaccine), Lot number: EK5730, via an unspecified route of administration at the left arm on 18Dec2020 15:15 at a

single dose for COVID-19 immunization. The patient medical history includes migraine and known allergies to Latex and sulfa drugs. Concomitant medication included levothyroxine, gabapentin, calcium, colecalciferol (CALCIUM & VITAMIN D). On 05Dec2020 03:00 (pending clarification), the patient experienced extreme dizziness that is still ongoing. The patient was not hospitalized for the event, did not receive any treatment for the event and event was reported as non-serious. The vaccine was administered in the workplace clinic. The patient has not received any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination the patient was not diagnosed with COVID-19. Since the vaccination, the patient has been tested for COVID-19 (Dec2020-unknown results). On 14Dec2020, Nasal Swab (COVID 19) Result was Negative. The outcome of the event was not recovered.

tightness in throat; This is a spontaneous report from a non-contactable Other Health Professional. A 51-year-old female patient started to receive bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: HE9899, intramuscular in the right arm, first dose on 16Dec2020 10:21 at a single dose for immunisation. The patient's medical history and concomitant medications were not reported. The patient is not pregnant. The patient had been escorted from observation area to emergency area with complaints of tightness in throat. The patient was eupneic, p/w/d, ambulatory, NAD. Vitals #: P72, 100% pulse ox, RA Vitals #: P72, 98% pulse ox on RA, 112/78 seated. She was administered with 25mg diphenhydramine PO per verbal order (VO)/D. (Name) PA #, pt swallowed with water. Vitals #: 98% pulse ox on RA, P74, denies shortness of breath or pain. She was presented to vaccination clinic. Patient received her vaccination at approximately 1021. Patient reported symptoms onset at approximately 1038 with tightness of the throat. The outcome of tightness in throat was recovered on an unknown date. No follow-up attempts are possible. Information about lot/batch number cannot be obtained. No further information is expected.

tongue tingling and swelling specific to the left side of her tongue; tongue tingling and swelling specific to the left side of her tongue; This is a spontaneous report from a non-contactable other hcp. A 57-year-old female patient received 1st dose of bnt162b2, lot number: HE9899, intramuscular in the right deltoid muscle on 16Dec2020 13:30 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was seen at the clinic today for her first dose of the COVID 19 vaccination. She denied any history of previous adverse reactions to vaccines. She reports that she also had shingles and pneumonia vaccination on Monday, 14Dec2020. She was given the Pfizer vaccination in the right deltoid muscle. During her 15 minute waiting period after the injection, the patient began to experience tongue tingling and swelling specific to the left side of her tongue. She denied rash, difficulty breathing, difficulty swallowing, wheezing, throat tightness, dizziness and lip swelling. She reports similar reactions after receiving other vaccinations. States that those symptoms always resolved with time and never required any treatment. Outcome of the events was recovered. The events was assessed as non-serious. No follow up attempts are possible. No further information is expected.

Red itchy rash around injection site; Red itchy rash around injection site; Red itchy rash around injection site; This is a spontaneous report from a contactable nurse. A 38-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: Eh9899), intramuscular (Arm Left) from 18Dec2020 18:45 at a single dose for COVID-19 immunisation. Medical history included hypothyroidism

and pre diabetes. Patient had no known drug allergies (NKDA). Concomitant medication included levothyroxine. On 20Dec2020 23:45, the patient experienced red itchy rash around injection site. The patient underwent lab tests and procedures on 16Dec2020 which included nasal swab with negative result. Outcome of events was recovered. No treatment was required/involved. Follow-up attempts are completed. Information on the batch/lot number has been obtained.

lymphadenopathy/I was having reaction of lymphedema; This is a spontaneous report from a contactable consumer (medical dosimetrist and patient herself - pending clarification). A female patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number EJ1685), via an unspecified route of administration in Dec2020 at SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. In Dec2020, the patient was having reaction of lymphedema/ lymphadenopathy and was wondering how long it last generally. The patient also inquired if she would get the next vaccine in different arm. Outcome of the event was unknown. No follow-up attempts are possible. No further information is expected.

Left sided lip numbness; Left hand and foot tingling; This is spontaneous report from a contactable physician (patient). A 29-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EH9899) intramuscular in left arm on 20Dec2020 17:45 at single dose for COVID-19 immunization. There was no medical history. The patient was not allergic to medications, food, or other products. There were no concomitant medications. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced left sided lip numbness, left hand and foot tingling on 20Dec2020 18:00. No treatment was received for the adverse events. Events outcome was not recovered.

Itching and tingling to right arm that traveled to elbow; Itching and tingling to right arm that traveled to elbow/itching to flank area; Itching and tingling to right arm that traveled to elbow; Itching and tingling to right arm that traveled to elbow; This is a spontaneous report from a contactable nurse. A 30-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), intramuscular at the right arm on 22Dec2020 07:45 to 22Dec2020 07:45 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On 22Dec2020 8AM, the patient experienced itching and tingling to right arm that traveled to elbow, employee reported sensation was 'easing up' 5 minutes after it started. She also reported itching to flank area, no rash was noted. The patient was not hospitalized for the events but had an emergency room/department or urgent care visit because of the events. The events were reported as non-serious. The vaccine was administered in a hospital. The outcome of the events was recovering.

throat tightness; This is a spontaneous report from a non-contactable other healthcare professional. A 36-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number HE9899, intramuscular Right arm (right deltoid muscle) from 18Dec2020 12:45 to 18Dec2020 12:45 as single dose for COVID-19 immunization. Medical history included mild anxiety. The patient's concomitant medications were not reported. Patient was given the Pfizer vaccination in the right deltoid muscle. During her 15-minute waiting period after the injection, the patient began to experience throat

tightness. She denied rash, hives, difficulty breathing, hoarseness, lightheadedness, dizziness, facial swelling, lip swelling and tongue swelling. Review of Systems Constitutional: Negative for activity change, appetite change and fever. HENT: Negative for congestion, facial swelling, rhinorrhea and trouble swallowing. Initially with some throat tightness. Resolved within 10 min Respiratory: Negative for cough and shortness of breath. Neurological: Negative for dizziness, weakness, light-headedness and headaches. The outcome of the event was recovered on 18Dec2020. No follow-up attempts are possible, information about batch number cannot be obtained.

bumps; This is a spontaneous report from a contactable consumer. A 58-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685 & expiration date: 30Dec2069), via an unspecified route of administration at the left arm on 17Dec2020 15:30 at a single dose for COVID-19 immunization. Medical history included border line diabetic, ovarian cancer over 25 years ago, high blood pressure, depression, all under control. The patient has no known allergies. Concomitant medications included metformin, sertraline, lisinopril, ibuprofen, vitamin c, and ergocalciferol (VITAMIN D). Sunday of 20Dec2020, around 16:00, patient noticed bumps on her arms, then the next day more came out and some on her upper legs, which were not painful or red, just bumps. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination and was not tested for it since the vaccination. The patient has not recovered from the event.

tachycardia; This is a spontaneous report from a contactable nurse. A 25-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EL0140, expiry date: 31Mar2021), intramuscular on the left deltoid on 17Dec2020 13:22 at 0.3 mL, single for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient had tachycardia on 17Dec2020 13:25, post vaccine but it went away quickly. Reporter stated that she didn't know if patient was anxious. Outcome of the event of tachycardia was recovered on 17Dec2020. The reporter assessed the event as non-serious.

diarrhea; shortness of breath; tachycardia; elevated blood pressure; flushing; chills; 101F fever; weakness; fatigue; muscle aches; This is a spontaneous report from a contactable nurse. A 24-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EJ1685, expiration date unknown) via an unspecified route of administration on 19Dec2020 ast 14:15 at a single dose for COVID-19 immunization in the hospital. The patient has no medical history. There are no known allergies. Concomitant medication included ethinylestradiol, ferrous fumarate, norethisterone acetate (JUNEL FE) for birth control. The patient was not diagnosed with COVID-19 prior to vaccination. The patient experienced diarrhea, shortness of breath, tachycardia, elevated blood pressure, flushing, chills, 101F fever, weakness, fatigue, muscle aches all on 20Dec2020 at 10:00. No treatment was received in response to the events. The patient has not been tested for COVID-19 since vaccination. The patient recovered from diarrhea, shortness of breath, tachycardia, elevated blood pressure, flushing, chills, 101F fever, weakness, fatigue, muscle aches all on an unspecified date.

diagnosed with COVID-19; diagnosed with COVID-19; This is a spontaneous report from a contactable physician, the patient. A male patient of an unspecified age received the first dose of BNT162B2 (PFIZER-

BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration on 21Dec2020 as single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On 22Dec2020, the patient was diagnosed with COVID-19. The clinical outcome of diagnosed with COVID-19 was unknown. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: The patient was diagnosed with COVID-19 one day after he received vaccination with BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE). There was not a reasonable possibly that the event was related to vaccination considering the temporal gap between the vaccination and the event onset.

hives; she had an achy left arm (injection arm); fatigue; This is a spontaneous report from a contactable nurse (patient). A 67-years-old female patient started to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), Batch/lot number was not provided, unspecified route on 17Dec2020 (at the age of 67-years-old) as a single dose in the left arm for COVID-19 vaccination. Medical history and concomitant medication were not reported. On unspecified date in Dec2020, the patient experienced she had an achy left arm (injection arm) and fatigue which she states that she expected. On 22Dec2020, the patient experienced hives. She woke up and had hives. Outcome of the event fatigue was recovered in Dec2020. Outcome of the events hives and she had an achy left arm (injection arm) were unknown.

rash to both forearms, thigh and private area/developed a rash on both arms, thighs, and kind of near the private area. Areas are red and bumpy/rash now is flat, red, and pinkish; rash to both forearms, thigh and private area/developed a rash on both arms, thighs, and kind of near the private area. Areas are red and bumpy/rash now is flat, red, and pinkish; rash to both forearms, thigh and private area/developed a rash on both arms, thighs, and kind of near the private area. Areas are red and bumpy/rash now is flat, red, and pinkish; This is a spontaneous report received from a contactable nurse (who is also the patient). A 62-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685, expiry date unknown), intramuscular in left deltoid, on 19Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient reported she received the COVID-19 vaccine on Saturday (19Dec2020). Everything was fine all day on Saturday and when she took a shower on Sunday morning (20Dec2020), she noticed she developed a rash on both arms, thighs, and kind of near the private area. Areas are red and bumpy, and she still has the rash on the arms. She called her primary care provider and was instructed to use Benadryl at bedtime and Zyrtec in the morning to help. She was wondering because in 20 some odd days she is to get the second shot and wants to know if she should expect this type of adverse reaction. She mentioned that the rash now is flat, red, and pinkish. She stated she has never had COVID-19 testing or symptoms. Just this rash from the vaccine. The reporter assessed the events as non-serious. The outcome of the events was not recovered (reported as ongoing).

Patient woke up with forehead and back of hand rash; she had swelling in the morning after being vaccinated; This is a spontaneous report from a contactable pharmacist. A 29-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: unknown, via an unspecified route of administration on 21Dec2020 at a single dose for immunization. The patient's medical history and concomitant medications were not reported. It was reported that the patient woke up with forehead and back of hand rash and she had swelling in the morning after being vaccinated. She took a

BENADRYL and went to the ED (Emergency Department). Event onset date was on 22Dec2020. The event was reported as non-serious. The outcome of forehead and back of hand rash and she had swelling was unknown. Information on Lot/Batch number has been requested.

my lt. arm felt like lead , so heavy and very sore; my lt. arm felt like lead , so heavy and very sore/felt soreness if she lifted up her arm; This is a spontaneous report from a contactable healthcare professional (patient). A 58-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EUA), intramuscular in the left arm on 21Dec2020 16:45 at single dose for COVID-19 immunization. Medical history included the patient being pre-diabetic. The patient's concomitant medications were not reported. The patient previously took epinephrine, norethindrone, and comtrex cold medicine and experienced drug allergy. The patient didn't have anything until around 2:00am on 22Dec2020 - her lt. arm felt like lead, so heavy and very sore. Her arm felt better after getting up - having shower around 6:30am. By 2 pm she only felt soreness if she lifted up her arm. No treatment was given for the events. The patient was not diagnosed with COVID-19 prior to vaccination and was not tested for COVID-19 post vaccination. The patient also did not receive any other vaccines within 4 weeks prior to the COVID vaccine and have not received any other medication within 2 weeks of vaccination. The outcome of the events was recovering. Information on the Lot/batch number has been requested.

achiness; Fatigue; patient was administered 0.3ml of undiluted covid vaccine intramuscularly.; patient was administered 0.3ml of undiluted covid vaccine intramuscularly.; This is a spontaneous report from a Pfizer-sponsored program, IBCC (Inbound Call Center for HCPs). A contactable pharmacist reported that a 28-year-old female patient received bnt162b2 (BNT162B2; lot number: EH9899; NDC number of Covid vaccine: 59267-1000-1 Expiry Date of Covid vaccine: Mar2021), intramuscular on right deltoid on 18Dec2020 at 0.3 mL for COVID-19 immunization. There were no medical history and concomitant medications. On 18Dec2020, a patient was administered 0.3ml of undiluted covid vaccine intramuscularly. The patient experienced achiness, fatigue. The patient received the covid vaccine injection Friday afternoon. When querying seriousness regarding the patient receiving the undiluted dose, he states she has not had very many side effects from it thus far. Clarifies that achiness and fatigue were her main side effects which started Friday night and continued into Saturday. Treatment: She received IV fluids this weekend in the ER as a precautionary measure He does not have time to continue with report and requested to be transferred. No further details. The outcome of the events was unknown.

localized tingling at the injection site that radiated into her 4th and 5th digits and proximally along the sternomastoid muscle; localized tingling at the injection site that radiated into her 4th and 5th digits and proximally along the sternomastoid muscle; This is a spontaneous report from a non-contactable healthcare professional. A 45-year-old female patient received bnt162b2 (BNT162B2; lot number: EH9899; expiration date: unknown), intramuscularly left arm on 22Dec2020 11:15 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. During her 15-minute (22Dec2020 11:30) waiting period after the injection, the patient began to experience localized tingling at the injection site that radiated into her 4th and 5th digits and proximally along the sternomastoid muscle. The patient denied rash, hives, difficulty breathing, difficulty

swallowing, wheezing, throat tightness, hoarseness, stridor, itching, dizziness, facial swelling, lip swelling and tongue swelling. This reporter was notified of patient reaction and she was then assessed in the emergency bay area. Monitored patient for severe reaction symptoms, including rapid progression of symptoms, vomiting, hypotension and chest pain. The patient was observed for approximately 30 minutes post injection with no evolution of symptom. Injection site tingling that extended along the ulnar nerve distribution was improving at the time of discharge. The outcome of the events was recovering. No follow-up attempts are possible, information about batch number cannot be obtained. No further information is expected.

Hives torso, abdomen, neck and leg; This is a spontaneous report from a contactable nurse. A 50-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EH9899), intramuscular on the right arm on 22Dec2020 08:30 at a single dose for COVID-19 immunization. The patient's medical history included penicillin allergy. The patient was not pregnant. There were no concomitant medications. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination and had not been tested for COVID-19 since the vaccination. The patient experienced hives torso, abdomen, neck and leg on 22Dec2020 12:00. Therapeutic measures were taken as a result of hives and included treatment with oral antihistamine. Outcome of the event was recovered on 22Dec2020. The event was considered non-serious.

Severely swollen, hard and painful lymph nodes in the L axillary region. / other swollen glands; fever; muscle aches; chills; headache; This is a spontaneous report from a contactable nurse (patient). A 52-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ 1685, expiry date was not provided) solution for injection, via an unspecified route of administration on left arm on 17Dec2020 12:00 at a single dose for Covid-19 immunisation. Medical history included Covid-19. Concomitant medication included sertraline hydrochloride (ZOLOFT). Prior to vaccination, patient was diagnosed with COVID-19. The patient received the vaccine at a workplace clinic and experienced severely swollen, hard and painful lymph nodes in the L axillary region, other swollen glands; fever; muscle aches; chills; and headache, all on 18Dec2020 12:00. It was unknown if patient received treatment for the events. The events were reported as non-serious. Outcome of the events was not recovered. No follow-up activities are needed. No further information is expected.

"BNT162B2 was given to the patient subcutaneously instead of intramuscular; upset; crying; This is a spontaneous report from a contactable nurse via medical information team. A 42-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via subcutaneous on 19Dec2020 at single dose for COVID-19 immunization. Medical history included deep vein thrombosis (DVT) from 3 years ago and unknown if ongoing. Concomitant medication included acetylsalicylic acid (ASPIRIN (E.C.) for DVT and multivitamins. The patient stated ""BNT162B2 was given to me subcutaneously instead of intramuscular (IM)."" She stated she works at (Name withheld) and it was administered by an employee and her hospital employee health will not talk to her and she was being brushed off. The patient asked what's needed to do moving forward. She stated she does not know the efficacy for subcutaneous administration. After providing information in attached document the patient asked what should her next steps be since the hospital will not answer do anything about this incorrect administration.

BNT162B2 was administered her incorrectly. The patient was little upset and was crying about it in Dec2020. The outcome of the events was unknown. Information on the lot number/batch number has been requested."

Having some raised bumps in the back of the hand, multiple small bumps very very small/The bumps are very very small, like an 8th of a centimeter; almost like hives and chicken pox; almost like hives and chicken pox; This is a spontaneous report from a contactable nurse (patient). A female patient of an unspecified age received BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot number: EJ1685, expiry date: Mar2021), intramuscular in the left deltoid on 21Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced a mild side effect after receiving the COVID Vaccine yesterday on 21Dec2020. The patient is having multiple raised bumps, almost like hives and chicken pox, on the back of her hand. The bumps are very very small, like an 8th of a centimeter. The outcome of the events was unknown.

dizziness; throat dryness; nausea; This is a spontaneous report from a non-contactable healthcare professional . A 23-year-old male patient received bnt162b2 (BNT162B2, lot number:EH9899), intramuscularly in his left arm on 22Dec2020 11:00 at a single dose for covid-19 immunization (reported as covid-19 vaccination). The patient's medical history included GI symptoms that he was currently being worked up for. Patient reported onset of similar signs around time of vaccine injection. The patient's concomitant medications were not reported. During his 15 minute waiting period after the injection, the patient began to experience dizziness, throat dryness, and nausea. He denied rash, hives, difficulty breathing, difficulty swallowing, throat tightness, hoarseness, stridor, itching, facial swelling, lip swelling and tongue swelling. The provider was notified of patient reaction and he was then assessed in the emergency bay area. Monitored patient for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with stridor, vomiting, abdominal pain and hypotension. Outcome of the events was unknown. No follow-up attempts are possible; information about batch number cannot be obtained.

I feel weird, kind of spacey; metallic taste; Blood pressure 133/90.; This is a spontaneous report from a contactable nurse. A 53-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number: EJ1685), intramuscular on the left arm on 22Dec2020 14:15 at SINGLE DOSE as COVID-19 vaccination at the hospital. Medical history included reactive airway disease, attention deficit hyperactivity disorder (ADD) and asthma. The patient also had allergies to sulfa. Concomitant medications included losartan potassium (LOSARTA), methylphenidate hydrochloride (CONCERTA) and unspecified inhaler for asthma. On 22Dec2020 14:25 (10 minutes after injection), the patient felt weird, kind of spacey and had metallic taste. The patient also had blood pressure of 133/90 (unit of measure not reported) on 22Dec2020 but denies urticaria, itching, pain, shortness of breath, and chest pain. The patient was brought to the emergency room/department or urgent care further evaluation due to the events. It was unknown if treatments were received for the events. Outcome of the events were unknown. No follow-up attempts are possible. No further information is expected.

Fatigue; The initial case was missing the following minimum criteria: No adverse effect. Upon receipt of follow-up information on (23Dec2020), this case now contains all required information to be considered

valid. This is a spontaneous report from a contactable healthcare professional. A 23-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), first dose via intramuscular on 22Dec2020 15:00 in left arm at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The facility where the most recent COVID-19 vaccine was administered in a hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The patient experienced fatigue on 22Dec2020 18:00. The outcome of the event was unknown. The event was considered non serious as it did not results in death, was not life threatening, did not cause/prolonged hospitalization, was not disabling/Incapacitating and had no congenital anomaly/birth defect.

now COVID positive with symptoms; now COVID positive with symptoms; This is a spontaneous report from a contactable consumer(patient). A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 16Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient received the vaccine on 16Dec2020 and now COVID positive with symptoms as of 19Dec2020. The patient asked that should he (she) still get the second vaccine. The outcome of event was unknown. Information on lot/batch number has been requested.

my lymph node is really swollen/and it hurts; headache/a mild headache; had a little bit of dizziness; sick for a little bit; had a little bit of chills; soreness in my arm; This is a spontaneous report from a contactable other hcp (patient). A 40-year-old female patient received 1st dose of bnt162b2 (Pfizer-Biontech Covid-19 Vaccine, lot number: EH9899), via an unspecified route of administration into the left arm on 19Dec2020 at a single dose for COVID-19 immunization. Medical history included high cholesterol diagnosed in maybe 2016 or 2017, but stated that she has the hereditary type, so she can never get rid of it. Concomitant medication included acetylsalicylic acid (BABY ASPIRIN) for high cholesterol; the patient started taking this last year, but then she stopped for a while because her cholesterol was ok, and then her cholesterol went back up and she started taking this again 3-4 months ago. The patient had the COVID vaccine on Saturday and 20 min in, she had a headache and didn't think much of it, had a little bit of dizziness and they gave her Tylenol and she was fine. She was sick for a little bit and just a mild headache. She had a little bit of chills and soreness in her arm. The next day she woke up and notice her neck, between her shoulder and collar bone and woke up and said 'oh that hurts me' and looked and her lymph node was really swollen. It does not bother her but she took a Tylenol and that seems to help with the swelling and it swells up again after the Tylenol. The caller asked if that was a normal side effect or adverse side effect and should she take the next dose 09Jan2021. She also asked if this is a serious adverse reaction or just a side effect. The patient has an appointment today at the time of report with her doctor. The reporter further added that she is a healthcare worker and she took the COVID vaccine this last Saturday; she received the vaccine in her left arm, and on the left side of her body, where she got the vaccine, she is having a reaction. She was fine right after she got the vaccine, like maybe within 20 minutes of getting it she had a headache a little bit of dizziness, and so she was kept in observation for an hour, but she took some Tylenol and was fine. Then, the next day, the caller woke up and on the left side of her body, she has a lymph node that is swollen, and still has not gone

down, and she is wondering if that is normal for the product. She does not really have the headache anymore, but the dizziness is still coming and going, not as bad as it was on that first day, but it comes and goes. She also did have the chills for a bit the day she got the vaccine, but it was just for a few hours and then it went away. The headache she had, was a different type of headache, it was not severe, but it was like a wave where it would come on strong, but not where she couldn't tolerate it, and then the dizziness would come at the same time, and then it would all just go away, and then come back like a wave; caller states that it was weird. The swollen lymph node started the next day, and it hurts. It was pretty swollen when she found it, but she took Tylenol and with the Tylenol, the swelling went down a little bit, but when the Tylenol works its way out of her system, the lymph node swells back up. The patient stated that the lymph node hurts and is painful. The patient does not know the actual dosage amount she received, she just knows it was the first dose in the series. The patient confirms that she did not take any other vaccines on the same day as the COVID vaccine. The patient is due for her second dose of the COVID vaccine next month, and she is wondering if the swollen lymph node would be something that would disqualify her from getting the second dose. Therapeutic measures were taken as a result of headache, dizziness, lymph node is really swollen and it hurts. Outcome of the events headache and chills recovered in Dec2020, for the events dizziness, sick, and soreness in arm was unknown; and for the event node is really swollen/and it hurts was not recovered.

Diarrhea; This is a spontaneous report from a contactable other healthcare professional (patient). A 46-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EL0140, expiry date unknown) intramuscular at the left arm on 21Dec2020 13:30 at single dose for COVID-19 immunization. The patient received Covid vaccine in a hospital. Medical history included high blood pressure, penicillin allergies. Concomitant medications included clonidine, bupropion hydrochloride (WELLBUTRIN XL), pantoprazole, topiramate, alprazolam (XANAX), cetirizine hydrochloride (ZYRTEC [CETIRIZINE HYDROCHLORIDE]), ascorbic acid (VIT C), fish oil, lactobacillus nos (CULTURELLE), ox bile; all from unspecified date for unspecified indication. The patient previously took ceftriaxone and experienced allergies. The patient did not receive other vaccine in four weeks. The patient has no diagnosis of Covid-19 prior to vaccination. On 22Dec2020 07:00 AM, the patient experienced diarrhea. The patient was not Covid tested post vaccination. No treatment was administered due to diarrhea. The outcome of the event diarrhea was not recovered. The reporter considered the event non-serious.

Allergic reaction; full body rash; fatigue; This is a spontaneous report from a contactable nurse. A 48-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EK5730, intramuscular, first dose on 20Dec2020 at a single dose for immunization. Medical history included diabetes mellitus (DM), depression, gastrooesophageal reflux disease (GERD) and hypercholesterolaemia. The patient had no known allergies. The patient have unspecified concomitant medications. She had other vaccines in two weeks (unspecified). The patient experienced allergic reaction- full body rash, fatigue on 21Dec2020 with outcome of not recovered. Treatment received for the events included steroid and antihistamines. The events are reported as non-serious. The patient had doctor or other healthcare professional office/clinic visit. She had no covid prior vaccination. She was tested for covid post vaccination through nasal swab on 21Dec2020 with negative result.

Body aches; fatigue; headache; not feeling well; Muscle aches; elevated temperature; This is a spontaneous report from a contactable nurse (patient herself). A 43-year-old female patient received the first dose of bnt162b2 (BNT162B2 also reported as Covid-19 vaccine by Pfizer, lot EK5730), intramuscular 20Dec2020 15:15 at single dose in left arm for Covid-19 immunisation. Medical history included High blood pressure and interstitial cystitis interstitial. Concomitant medications included losartan and hyoscyamine sulfate, methenamine, methylthioninium chloride, phenyl salicylate, phosphoric acid sodium (URIBEL). The patient previously took doxycycline and experienced drug allergy. The patient experienced body aches, fatigue, headache, was not feeling well, muscle aches, elevated temperature, all on 21Dec2020 12:00. The events were reported as non-serious. Prior to vaccination, patient was not diagnosed with COVID-19 and since the vaccination, the patient was been tested for COVID-19 via nasal swab on 22Dec2020 with pending results. The outcome of events was unknown. No follow-up attempts are possible. No further information is expected.

headache; body aches; chills; fatigue; fever of 102; This is a spontaneous report from a contactable nurse (patient). A 28-year-old male patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE; lot/batch number unknown), via an unspecified route of administration on the left arm on 21Dec2020 07:30 at a single dose for covid-19 immunization. Medical history included anxiety and Covid-19. Prior to vaccination (covid-19 vaccine), patient was diagnosed with COVID-19 (Covid prior vaccination: Yes). The patient has no known allergies. No allergies to medications, food, or other products. Concomitant medications received within 2 weeks of vaccination included sertraline hydrochloride (ZOLOFT), ascorbic acid (VITAMIN C), zinc and colecalciferol (VITAMIN D). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 21Dec2020 at 18:00 hour, the patient experienced headache, body aches, chills, fatigue and fever of 102 around 6pm the same day receiving vaccine. The events were considered non-serious by the reporter. Since the vaccination, the patient has not been tested for COVID-19 (Covid tested post vaccination: No). No treatment was received for the events. The outcome of the events was recovering. Information on the lot/batch number has been requested.

Moderate to severe lower back pain; This is a spontaneous report from a contactable physician (patient). A 38-year-old male patient started to receive BNT162B2 (Solution for injection, lot number and expiry date unknown), via an unspecified route of administration on 18Dec2020 08:30 at single dose in the left arm for COVID-19 immunization. The patient's medical history was not reported. Concomitant medication included vitamin C and multivitamins. The patient was not diagnosed with COVID-19 prior to vaccination and since the vaccination, the patient has not been tested for COVID-19. On 18Dec2020 19:00, the patient experienced moderate to severe lower back pain approximately 9-10 hours after receiving vaccine. He was feeling well prior to that, no strenuous activity. Symptoms progressed over 1-2 hours, then resolved over 4 days with tylenol/motrin use. Therapeutic measures were taken as a result of moderate to severe lower back pain. The outcome of the event was recovered on an unspecified date. The following information on the batch number has been requested.

runny nose; sore throat; This is a spontaneous report from a Pfizer-sponsored program. A contactable consumer (patient) reported that a 44-year-old male patient started to receive BNT162B2 (Solution for injection, lot number and expiry date unknown), intramuscular on 18Dec2020 at single dose in the left

deltoid for COVID Prevention. There were no medical history and concomitant medications. The patient called and stated that he took the COVID vaccine first dose, on Monday, and now he is getting the side effects of running nose and sore throat. Stated that the running nose and sore throat starting this morning on 22Dec2020, right as he woke up, and then it went away, and now it just seems to have gotten worse. He wondered if those are common side effects because he couldn't find them on the facts sheet. He stated that he is just trying to gather more information because he knows that it is currently cold and flu season, and it could also just be allergies. Also he wanted to make sure this is a common side effect, because if not, he has family coming to town to visit him for the holiday and he wants to be safe if he is sick. The outcome of the events was not recovered. The following information on the batch number has been requested.

Tachycardia; This is a spontaneous report from a contactable physician (patient). A 41-year-old male patient started to receive BNT162B2 (Solution for injection, lot number and expiry date unknown), via an unspecified route of administration on 21Dec2020 12:30 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was not diagnosed with COVID-19 prior to vaccination and since the vaccination, the patient has not been tested for COVID-19. The patient experienced tachycardia on 22Dec2020 02:30. No treatment received for the event. The outcome of the event was not recovered. The following information on the batch number has been requested.

Fever (39.1 C); chills; headache; body aches; nausea; This is a spontaneous report from a non-contactable nurse. A 37-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), intramuscular at the left arm on 21Dec2020 10:45 at a single dose for COVID-19 immunization. Medical history included COVID-19 prior to vaccination. The patient has no known allergies. There were no concomitant medications. The patient experienced fever (39.1 C), chills, headache, body aches, nausea on 21Dec2020 20:00 with no treatment. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not tested for it since the vaccination. The patient recovered from the events on an unknown date. No follow up attempts are possible. No further information is expected.

Nausea; body aches; night sweats; headache; tired; This is a spontaneous report from a contactable other healthcare professional (patient). A 37-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EJI685), intramuscular on the arm (reported as location was in the left and right arm, pending clarification) on 21Dec2020 15:30 at a single dose for COVID-19 immunization. The patient's medical history included celiac disease and wheat, gluten, chicken, nightshades, yeast allergy. The patient was not pregnant. received due to the events. The outcome of the events pain in the arm of injection site, numbness and pins and needle tingling in the lower arm and hand, loss of feeling in hand and loss of sensation and strength; difficulty holding onto objects, dizziness, weakness, severe joint pain, throbbing headache was not recovered. The events were assessed as non-serious which did not results in death, not Life threatening, did not cause/prolong hospitalization, was not disabling/incapacitating, and not a congenital anomaly/birth defect.

Fever/ got up to 102 degrees Fahrenheit; Body aches; Sore throat; Feels like she has got just a regular cold; This is a spontaneous report from a contactable other hcp (patient). A 59-year-old female patient started to receive BNT162B2 (Solution for injection, lot number and expiry date unknown), intramuscular on 21Dec2020 19:00 to an unspecified date at single dose in the right arm for vaccination. Medical history included menopause from an unknown date. Concomitant medication included levothyroxine sodium (SYNTHROID), fenofibric acid, metformin, escitalopram and unspecified hormones for menopause. The nurse practitioner called to report on herself as the patient. She received her first dose of COVID-19 Vaccine on 21Dec2020 around 7:00pm. Starting about 10:00 am today, 22Dec2020, she had onset of fever, body aches and sore throat. She is hoping that this is all a normal part of the COVID-19 Vaccine; but she called to verify if that is all normal because she has to work tomorrow. Stated that her fever got up to 102 degrees Fahrenheit. She mentioned regarding seriousness criteria of all events that they are not serious, that she feels like she has just got a regular cold. She is scheduled to get the second dose of this vaccine 21 days after first dose. Causality of all events reported as yes, she really believes it is related to product. The outcome of the events was not recovered. The following information on the batch number has been requested.

Sore arm at injection site; This is a spontaneous report from a contactable healthcare professional reported for himself. A 41-year-old male patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EJ1685, expiry date: unknown), intramuscular on the left arm on 22Dec2020 01:30 at a single dose for COVID-19 immunization. There was no medical history. The patient's concomitant medications were not reported. The patient experienced sore arm at injection site on 22Dec2020 02:00. Outcome of the event was not recovered. No treatment was given. Patient had no COVID prior to vaccination and was not tested for COVID post vaccination. The event was considered non-serious.

back is achy; Injection site pain; Body achy; body feels like after you have a workout; Muscles are sore; My close coworker who works with me in the same company cubicle as me when we document, tested positive for COVID; This is a spontaneous report from a contactable other health professional (patient). A female patient (Age: 35; unit unknown) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), via an unspecified route of administration on 21Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received COVID vaccine on 21Dec2020 and experienced side effect of the vaccine. Stated 'achy feeling. The patient's abdomen and trunk like after a workout.' She move suddenly her back was achy. She had injection site pain. Consumer stated, her close coworker who worked with her in the same company cubicle as she, tested positive for COVID and he had been having symptoms since Saturday. And she was body achy at the time of this report, like she kind of feel like, her body felt like after she

had a workout and her muscles are sore. So, she did not know what to do because she do not know if this body achiness is a symptom of COVID or a symptom of the vaccine. And if she went get tested, whether she will show like a positive because she had the vaccine. The outcome of events was unknown.

she was freezing one minute, and then she was hot the next minute; dizzy; soreness throughout body/achy; stated her eyes feel heavy; Chills; This is a spontaneous report from a contactable consumer (patient herself). A 50-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EK5730, expiration date: Mar2021, intramuscular in left upper arm from 21Dec2020 10:00 to 21Dec2020 10:00 at 0.3 mL for Covid-19 immunization. Medical history included COVID-19 in Jul2020. She said she had a real bad case of COVID-19, and didn't get over it until Oct2020. The patient's concomitant medications were not reported. The patient stated she received the COVID-19 Vaccine yesterday at her employer, which is a hospital. She said she got the COVID-19 Vaccine at around 10:00AM on 21Dec2020. She said she had a few chills not too long after receiving the COVID-19 Vaccine. She said last night the chills got worse, saying she had chills all night. She said the chills are not as bad now. Reported she is sore and achy, clarifying she has more of a soreness throughout her body. She stated her eyes feel heavy too. Caller asked if what she was experiencing were side effects of the COVID-19 Vaccine and how long were the symptoms going to last. The reporter stated she is not a healthcare professional. She said she works in the surgery area at the hospital, and the hospital was offering the COVID-19 Vaccine yesterday, so she got the vaccine. Reported after receiving the COVID-19 Vaccine, she noticed she felt cool at work. She said last night she felt like she was freezing one minute, and then she was hot the next minute, and kept going back and forth between freezing and hot. She said she woke up at 1:00AM and felt really hot. She said she wished she had a thermometer at the time to check her temperature because she thought she had a fever. She said her husband told her what she was experiencing was part of having the chills. She said when she woke at 1:00AM, she got out of bed to go to the bathroom, and her eyes felt heavy, and she thought she may have been a little dizzy. She said now she doesn't think she was dizzy at the time, but maybe it was because she just woke up and got out of bed. She said she hasn't had any dizziness today. Treatment: Reported she took an Ibuprofen 200mg at 2:00AM and another Ibuprofen 200mg at 8:30AM. She clarified it was Equate Brand Ibuprofen 200mg. The event chills with outcome of recovering; the rest of the events was unknown. Therapeutic measure has been given as a result of the events. Information about the lot/batch number and expiration date has been requested.

Dry mouth; rapid heart rate; fuzzy feeling in middle of forehead; This is a spontaneous report from a non-contactable other healthcare professional (patient). shingles; This is a spontaneous report from a contactable Nurse. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was vaccinated with the Pfizer-BioNTech COVID-19 Vaccine last week (in Dec2020). She claimed being diagnosed with shingles and has asked the nurse if it could be related to the vaccine. The outcome of the event was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

left hip pain; This is a spontaneous report from a contactable physician. A 71-year-old male patient received bnt162b2 (BNT162B2), via an unspecified route of administration on 17Dec2020 at, SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. Caller stated that he got the coronavirus vaccine last Thursday and on midday Saturday that he got left hip pain. reported that he has sticky hips. Stated that he does not experience pain normally. Stated that the day before on Wednesday that he did yoga at home. Stated that he has done yoga for years. Stated that every time that he does it the he could strain something. Stated that the pain was bad enough that he took 3 doses of Advil over the next 24 hours and it went away. Stated that it did not

cause any major limping. Stated that he took 75 minutes walks on Saturday and Sunday and did yoga that evening. Stated that he is not sure that it is not related to the vaccine. Stated that this is his first dose of the vaccine. Stated that he is happy that he got the vaccine. Stated that he would get it again in a heartbeat. The outcome of the event was recovered. Information on Lot /Batch Number has been requested.

I am diabetic on a CGM and insulin pump. My blood sugar started to rise mid-afternoon and I couldn't get it below 200 despite giving myself increased amounts of insulin. It was up to 289 at bedtime. I count carbs and was very careful about what I ate yesterday. This morning I was back down to 169 when I got up, but I had increased my basal rates during the night. Second event that I'm not sure is related, but FYI, last evening I got some sharp pains in my left hip and continual aching in my left buttock while sitting watching TV. It continued until after I went to bed. It's back to normal this morning.

injection site pain-minor; tiredness-moderate/fatigue; headache-mild to moderate; muscle pain-minor/muscle aches; chills; fever-low grade; injection site redness light pink; nausea-comes and goes; feeling unwell-mild to moderate; muscle weakness; weak; This is a spontaneous report from a contactable consumer (patient). A 49-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 18Dec2020 12:15 on the right arm at a single dose for COVID-19 immunization. Medical history included allergies to anxiety medication. The patient's concomitant medications were not reported. On 18Dec2020 20:00, the patient experienced mild to moderate side effects: injection site pain (minor), tiredness (moderate), headache (mild to moderate), muscle pain (minor muscle aches), chills (sometimes), fever (low grade), injection site redness (light pink), nausea- (comes and goes), feeling unwell (mild to moderate), muscle weakness and feeling fatigue which were moderate Friday, Saturday, and Sunday and Monday. If patient was active, for example Christmas shopping for about an hour, she was very fatigue, weak and the nausea was strongly moderate and it would come and go. Outcome of the events was recovering. No treatment was received for the events. The events were considered non-serious. The patient was not diagnosed with COVID-19 prior to vaccination and had not been tested post vaccination.

dry mouth; peculiar sensations running through extremities/trunk/abdomen (akin to IV contrast administration); elevated BP; tachycardia; lower abdominal cramping; This is a spontaneous report from a contactable physician (patient). A 46-year-old male patient received the first single dose of BNT162B2 (Lot number: EH9899, exp date not reported), intramuscular (vaccine location: left arm) on 21Dec2020 15:00 for Covid-19 immunisation. Medical history included hyperlipidaemia. The patient had no known allergies. Concomitant medication included atorvastatin (LIPITOR), and omeprazole (PRILOSEC). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The COVID-19 vaccine was administered at a Hospital. On 21Dec2020 at 3:00 pm (also reported as within minutes of receiving vaccine), the patient developed dry mouth, peculiar sensations running through extremities/trunk/abdomen (akin to IV contrast administration), elevated BP, tachycardia, and lower abdominal cramping. The patient considered the events as non-serious. AEs resulted in doctor or other healthcare professional office/clinic visit. No treatment was given for the events. The patient had no

prior COVID vaccination and did not undergo COVID testing post vaccination. The patient recovered from the events on an unspecified date Dec2020.

Patient with a nut allergy, tongue became tingly 20-30 minutes following vaccine. Patient was given 50 mg of diphenhydramine and was able to transport home with his wife.

is 'fibril' until today/ fever; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received BNT162B2, via an unspecified route of administration on 18Dec2020 at single dose for COVID -19 immunization. The patient medical history and concomitant medications were not reported. After the patient got the vaccine on 21Dec2020, she was instructed to sit for 15 minutes and was given flyers and the card that stated the next scheduled dose is on 11Jan2020. She mentioned that the card she was given is the COVID-19 appointment card with a return flyer attached regarding Pfizer vaccine recipients and care givers. She reported that all that she can see on there is that, there was no lot, batch or serial number, just the name of the vaccine. She stated that the vaccine was shipped in the morning and they started giving it around noon and she got hers at three o'clock in the afternoon. She stated this is their facility's second batch, and the first was consumed last week. She stated she made a mistake, and that she should have requested they inject her left arm because she is right handed. The patient reported that she experienced arm stiff and sore two hours after getting vaccine (17:00). It was tolerable at first, but when she got home, she couldn't raise her right arm. She thought it would just be like the Flu vaccine and tolerable but she couldn't lift her right arm. The farthest she can lift her right arm from her side is 2 inches. She tried putting a cold compress on it but it was not working. She doesn't know if she can take TYLENOL. She would like to know if she can take TYLENOL for the pain since it was the only medication she has. Her supervisor advised her to take Advil, but she only has TYLENOL. She says she does feel better and that she was fine, there was nothing else, just her arm is so sore. She has nothing negative, no other side effect, no redness, just her muscle is stiff in her right arm and it feels sore. She stated maybe if she had taken TYLENOL the night before, but last night or today she didn't have strength to open the bottle it was new and she cannot open it. She stated at least the pain is lesser than last night, she didn't get to sleep last night since it felt heavy and stiff with discomfort. She was supposed to get a mammogram on reporting time, but since she couldn't raise her arm she was trying to reschedule. She is supposed to have a blood test the following day. Therapeutic measures were taken which includes cold compress. Outcome of the event ""arm stiff and sore two hours after getting vaccine, at right arm"" was recovering while outcome of all other events was unknown. Information on the lot/batch number has been requested."

Subject received vaccination Wednesday Dec 16th in the afternoon. He became symptomatic (shortness of breath, low grade fever) the next day. Went to the Emergency room on Saturday Dec. 26th, 2020 due to shortness of breath, had an 02 Sat of 60%, and was hospitalized in the ICU at another hospital (due to bed unavailability).

Brown spots in the shape of a circle at different locations in the body all appearing within a few hours; This is a spontaneous report from a contactable nurse (patient). A 29-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number: EH9899), via an

unspecified route of administration on the right arm on 22Dec2020 07:45 at SINGLE DOSE for COVID-19 immunization at the hospital. The patient had allergies with detergent and soap products. Concomitant medications included fenofibrate (FENOFIBRATE) and vitamin D from unknown dates and indications. Prior to vaccination, the patient was not diagnosed with COVID-19 and has not been tested for COVID-19 since vaccination. On 22Dec2020, the patient experienced brown spots in the shape of a circle at different locations in the body all appearing within a few hours. No treatment was received for the event. Outcome of the event was not recovered. No follow-up attempts are possible. No further information is expected.

Fever; Chills/rigors; Nausea; Vomiting (one episode); Headache; Myalgia; Change in taste; Generalized weakness; This is a spontaneous report from a non-contactable physician (patient). A 44-year-old male patient received one dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: 1647, expiration date not reported), via an unspecified route of administration (left arm), on 21Dec2020 at 12:30 at a single dose, for COVID-19 immunization. Medical history included hypertension and COVID-19 from an unknown date. Concomitant medication included lisinopril and amlodipine. On 22Dec2020 at 04:30, the patient experienced 8 hours of severe symptoms: fever, chills/rigors, nausea/vomiting (one episode), headache, myalgia, change in taste, generalized weakness. The patient took Tylenol and naproxen as treatment. The patient was recovering from the events. No follow-up attempts are possible. No further information is expected.

"Patient became visibly flushed within five minutes after inoculation, and she reported having ""waves of nausea."" A cool compress was applied to her neck. While she was closely being monitored, she admitted feeling ""dizzy right after the shot bit didn't want to tell anyone because she [ic] was embarrased."" At 1532, patient denied that she was allergic to Benadryl, so Benadryl 50 mg/mL IM was injected into her right deltoid. At 1545, patient reported an alleviation of symptoms. She was advised to go home to rest, but to immediately contact 911 or go to the ER if symptoms worsened. Patient voiced understanding and left the facility with coordinated ambulation and in stable condition. RN 12/29/2020 @ 1318"

"tingling in injection arm, left arm, left neck, around the lips/tingling through arms, hands, fingers, and legs/worsened by sitting on legs/dense tingling in anterior shins upon standing; tingling in injection arm, left arm, left neck, around the lips/tingling through arms, hands, fingers, and legs/worsened by sitting on legs/dense tingling in anterior shins upon standing; tingling in injection arm, left arm, left neck, around the lips/tingling through arms, hands, fingers, and legs/worsened by sitting on legs/dense tingling in anterior shins upon standing; This is a spontaneous report from a contactable physician (who is also the patient). A 37-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730, expiry date not reported), via an unspecified route of administration in left arm, on 19Dec2020 09:30, at single dose, for COVID-19 immunization. There were no medical history and no known allergies. The patient's concomitant medications were not reported. The patient reported that about 30 minutes after vaccination on 19Dec2020 at 10:00, while driving home, tingling was noted in injection arm, traveling up the left arm into the left neck and around the lips. Tingling resolved but the next day, tingling was noted to be diffuse, light and scattered through arms, hands, fingers, and legs equally and bilaterally. No dermatomal or distinct nerve distribution. Tingling worsened by sitting on

legs, became dense tingling in the anterior shins upon standing, but then resolved a few minutes later to the more diffuse light tingling. No notable difference in strength (able to hike and cook) and no notable numbness. No rashes, no shortness of breath, no changes in heart rate. The events resulted in ""doctor or other healthcare professional office/clinic visit"". No treatment was received for the events. The patient was not diagnosed with COVID-19 prior to vaccination. The patient has not been tested for COVID-19 since vaccination. The patient did not receive any other vaccines within 4 weeks prior to BNT162B2. The reporter assessed the case as non-serious. The outcome of the events was recovered (as reported)."

"light headache; Low grade fever; Muscle ache; Pain; This is a spontaneous report from a contactable consumer (parent) reported that a 49-year-old female patient received single dose of (BNT162B2, Solution for injection, lot number was not provided), via an unspecified route of administration on the left arm on 18Dec2020 for covid-19 immunization. Medical history included ongoing hypertension that was diagnosed when she was 32-years-old, after she gave birth to her second child; she was diagnosed with COVID-19 on 25Aug2020, and now was 4 months out from having COVID-19; reportedly she was tired and had a lot of ""nervously"" feeling, like heart palpitations before she took the COVID-19 vaccine. There were no concomitant medications. On 19Dec2020, the patient experienced light headache, low grade fever, muscle ache and pain. The patient underwent lab tests and procedures which included weight: 212-213 lbs on an unspecified date. The outcome of the events was recovered on 19Dec2020. Information about lot/batch number has been requested."

Raspy voice, body and joint pain, pain at injection site, fatigue, headache

myalgia; chills; headache; fatigue; Loss of appetite; This is a spontaneous report from a non-contactable physician. A 44-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 21Dec2020 14:30 in left arm at single dose for COVID-19 immunization. Medical history included COVID-19 from an unknown date and unknown if ongoing. Concomitant medication included omeprazole. After vaccination, 12-15 hours later, the patient pronounced myalgia joined 18 hours later with chills, headache, fatigue and loss of appetite. The patient experienced myalgia on 22Dec2020 05:00; chills, headache, loss of appetite and fatigue on 22Dec2020. Treatment such as acetaminophen and rest was given to patient for the events. The facility where the most recent COVID-19 vaccine was administered was in the hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The patient had no allergies to medications, food, or other products. The events were considered non serious as it did not results in death, was not life threatening, did not cause/prolonged hospitalization, was not disabling/Incapacitating and had no congenital anomaly/birth defect. The outcome of the events was not recovered. No follow up attempts are possible. No further information is expected.

Metallic taste in mouth.

Headache; nausea; mild body aches; hot flashes; This is a spontaneous report from a contactable nurse (patient). A 39-year-old female patient (not pregnant) received the first dose of BNT162B2 (PFIZER-

BIONTECH COVID-19 VACCINE, lot number EJ1685), intramuscular at right arm on 21Dec2020 17:45 at single dose for COVID-19 immunization at a hospital. The patient's medical history included migraines, bipolar II, anxiety, attention deficit hyperactivity disorder (ADHD) and insomnia. No allergies to medications, food, or other products. No other vaccines within 4 weeks prior to the COVID vaccine. Concomitant medication received within 2 weeks of vaccination included amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL), diphenhydramine hydrochloride (BENADRYL), lamotrigine (LAMICTAL), nortriptyline, alprazolam (XANAX) and multivitamin. The patient was not diagnosed with COVID-19 prior to vaccination, and since the vaccination, the patient been had not tested for COVID-19. It was reported that on 22Dec2020 17:45, the patient experienced headache, nausea, mild body aches, and hot flashes. Treatment for the reported events included that the patient took ondansetron (ZOFRAN) and acetaminophen (Tylenol) that she had at home. She took them on her own. No doctor needed. The outcome of the events was recovered in Dec2020.

Arm pain/Pain in arm was so severe; Pain in arm was so severe I could not sleep; Extreme body aches the aches intensified throughout the day; Headaches; sore throat; head and chest congestion; head and chest congestion; This is a spontaneous report from a contactable other hcp (patient). A 49-year-old female patient received bnt162b2 via an unspecified route of administration on arm left, first dose on 16Dec2020 12:45 at single dose for COVID-19 immunization. Other vaccine same date product included Pfizer-Biontech first dose on 16Dec2020 on left arm (pending clarification). Medical history included COVID-19 prior vaccination from an unknown date. Not pregnant at the time of vaccination. No known allergies. No other medical history. Concomitant medication included bupropion from 2020. No other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced arm pain. Pain in arm was so severe she could not sleep. Applied an ice pack throughout the night. Extreme body aches the aches intensified throughout the day. Headaches, sore throat, head and chest congestion. Adverse event start date was on 16Dec2020. The event was reported as non-serious. Therapeutic measures were taken as a result of arm pain/pain in arm was so severe, treatment included ice pack. No treatment was received for other events. The outcome of the events was recovering. Information about Lot/batch no has been requested.

Significant arm soreness, headache.

"muscle soreness; This is a spontaneous report from a contactable physician (patient). A patient of an unspecified age (reported as 35, unit unknown) and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration from 15Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient reported that after he got the shot (Dec2020), he had experienced ""just a little muscle soreness"". The outcome of event was unknown. Follow-up attempts are completed. The following information on the batch number has been requested."

muscle soreness; This is a spontaneous report from a contactable physician (patient). An adult patient (Age: 44; Unit: Unknown) of an unspecified gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot/batch number: not provided), via an unspecified route of administration on 14Dec2020 at

SINGLE DOSE for COVID-19 immunization. Medical history and concomitant medications were not reported. It was reported that the patient had side effects that were minimal - muscle soreness in Dec2020 for 24 hours, that's about it. The patient recovered from the event in Dec2020. No follow-up attempts are possible, information about batch number cannot be obtained.

I started getting profused rhinitis; I am got a little hoarse and it lasted all night long; I started getting profused rhinitis; I am got a little hoarse and it lasted all night long; I had enough Postnasal drip that I got a little bit of cough and no fever and didn't know if this was related to the vaccine; I had enough Postnasal drip that I got a little bit of cough and no fever and didn't know if this was related to the vaccine; This is a spontaneous report from a contactable physician who was also the patient. A 71-year-old male patient received bnt162b2 (BNT162B2 lot: EK5730, expiry: Mar2021), intramuscular in left arm on 17Dec2020 at a singe dose for covid-19 immunisation. The patient's medical history included hypertension from an unknown date and unknown if ongoing. Concomitant medications included olmesartan medoxomil (BENICAR) for hypertension and unspecified vitamins. On a unspecified date, the patient started getting profused rhinitis, he got a little hoarse and it lasted all night long. Patient actually had enough Postnasal drip (Captured as suspect conservatively) that got a little bit of cough and no fever and didn't know if this was related to the vaccine or not and needed to find out if that's the case. It was also reported that the patient took a rapid Covid test in the morning and whould like to know if that would to be 'false' positive because of taking the virus shot or Covid shot. It was reported that an RN administered the vaccine. The outcome of the events was unknown.

"Pain in arm; Kind of allergy you know like sneezing a lot, the whole day I have been sneezing; Kind of allergy you know like sneezing a lot, the whole day I have been sneezing; This is a spontaneous report from a contactable consumer. A patient of unspecified age and gender received bnt162b2 (BNT162B2), via an unspecified route of administration on 18Dec2020 at SINGLE DOSE for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. Consumer stated, ""I have a question about, I just had Pfizer on last Friday so I didn't have any symptom anything, the next day on 19Dec2020 I have like my arm pain, not swollen just pain and then I have kind of allergy you know like sneezing a lot, it is the whole day I have been sneezing and just like the whole day. Is it allergy to the Pfizer or should I just have another like second shot should I have it or is it the allergic reaction or what is that? It is the COVID the one COVID I had from Pfizer (COVID Vaccine). Because of I am afraid to have second shot if I have like more allergy or."" The outcome of the events unknown. Information on the Batch/Lot number has been requested."

Spiked the temperature during the night; Body ache; Fatigue; This is a spontaneous report from a contactable nurse (patient). A 58-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EH9899), via an unspecified route of administration on 21Dec2020 at a single dose for COVID-19 immunization. There were no medical history and no concomitant medications. The patient was not having any serious side effects but she was having like probably spiked temperature during the night, body ache, and fatigue on 22Dec2020. The patient want to make sure if it is okay to take paracetamol (TYLENOL) or ibuprofen (MOTRIN) generally. Outcome of the events was unknown. The reporter assessed that the events were related to the suspect drug.

bad headache; This is a spontaneous report from a contactable consumer. A male patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration on 22Dec2020 as a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On 22Dec2020, the patient experienced bad headache. The clinical outcome of the bad headache was unknown. No follow-up attempts are possible; information about lot number cannot be obtained.

I have COVID after getting the vaccine. Fever, chills, and I feel very bad.

Respiratory: Laryngeal stridor going into the trachea and the central bronchial tubes. No wheeze out on the periphery. , Respirations: Tachypneic, Breath sounds: Stridor.

lightheaded/dizzy; This is a spontaneous report from a contactable consumer. A 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), first dose via an unspecified route of administration on 21Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was vaccinated yesterday with the Pfizer COVID-19. The patient felt lightheaded/dizzy after the injection and for many hours after in Dec2020. The patient felt these events before with other vaccines. The outcome of the event was unknown.

chills; malaise; raynauds in left fingers cold,blue; tingling; This is a spontaneous report from a contactable physician (patient). A 42-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), via an unspecified route of administration on 21Dec2020 06:15PM, at right arm, at single dose for covid-19 immunization. Medical history included Guillain barre after flu vaccine in 2010, covid-19 prior vaccination. The patient's concomitant medications were not reported. The patient previously received flu vaccine in 2010. The patient experienced chills, malaise, raynauds in left fingers cold, blue, tingling on 22Dec2020 08:00 AM. No treatment received for all events. The outcome of events was recovering. Patient had not tested for COVID-19 post vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No seriousness criteria: no Results in death, no Life threatening, no Caused/prolonged hospitalization, no Disabling/Incapacitating, no Congenital anomaly/birth defect.

Headache Fever (101.3) with chills body aches/malaise nausea/decreased appetite site injection-arm pain

headache; Tachycardia; chills; body aches; This is a spontaneous report from a contactable nurse (patient). A 25-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EH9899), intramuscularly on right arm at 07:30 AM on 18Dec2020 at single dose for COVID-19 immunization. The patient medical history was not reported. Concomitant medication included ethinylestradiol, ferrous fumarate, norethisterone acetate (LO LOESTRIN FE). The patient experienced tachycardia, chills, body aches, headache at 12:00 AM on 19Dec2020, events resulted in: Emergency room/department or urgent care], events were reported as non-serious. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient was tested COVID post vaccination on

19Dec2020; COVID test type: Nasal Swab, COVID test name : Covid PCR, Covid test result: Negative. The patient did not receive any treatment for events. The outcome of events was recovered in Dec2020.

Episode of nausea; Right-sided preauricular and superficial cervical lymphadenopathy; This is a spontaneous report from a contactable physician (patient herself). This 36-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number EJ1685), via an unspecified route of administration, at single dose on 19Dec2020 at 08:45 AM for COVID-19 immunisation. Vaccine location was left arm. The patient was vaccinated at hospital, age at vaccination was 36-year-old. No other vaccine was received in four weeks. The patient was not pregnant. The patient did not have a relevant medical history. Relevant concomitant medications included ibuprofen and 20 Ethinyl Estradiol-3 Drospirenone. On 21Dec2020, the patient developed right-sided preauricular and superficial cervical lymphadenopathy. On 22Dec2020, the patient had an episode of nausea. The patient did not perform COVID test before and after vaccination. No therapeutic measures were taken as result of the events. The outcome of the events was unknown.

On day to the left arm had some redness at the injection site and was sore. This was listed as unknown possible side effect. On the days following a became increasingly red and itchy. I took Benadryl to help resolve the itching. Redness and itching continued and then on Sunday 12/27/20 The site became increasingly read painful to touch and warm to touch. On Monday morning I contacted my immediate supervisor advised her that I was having something outside of what I believed to be a ?normal? reaction or side effect. I went to urgent care to see occupational health. I was given prescriptions for keflex and naproxen for cellulitis. My arm is extremely painful to touch. I was advised if the area worsens or spreads to see the ER because I may need IV antibiotics.

Sore arm; This is a spontaneous report from a contactable nurse (patient). A 24-year-old female patient (no pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899) via intramuscularly on 22Dec2020 06:15 AM on left arm at single dose for COVID-19 immunization. The patient's medical history included hyperthyroidism/goiter and not allergy to medications, food, or other products. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine and did not receive any other medications within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient has not been tested for COVID-19. The concomitant drug included vitamins within 2 weeks of vaccination. The patient experienced sore arm on 22Dec2020 06:15 AM. No treatment for sore arm. The outcome of the events was recovering.

"In Clinic: Pt received Moderna vaccine on right arm. She immediately felt numbness and tingling sensation on both shoulders and right neck. Neck felt tight, pain and + weakness on left wrist and 4th / 5th digit. BP was 149/ 78, O2 sat 99%, pulse 82. Pt then felt nausea, dizziness, burning sensation of left thigh, ""not feeling well"". Pt abvle to move all extremities, denies SOB. Hx of allergic reaction to Reglan and compazine. Repeat Vitals: 160/74, pulse,83,O2sat 100%, 2 pm: 135/85, pulse 75, O2 sat 99% Paramedics was called and arrived at 2:11 pm. Pt to be further evaluated in ER. In ED: Gen: Patient is in NAD, non-toxic appearing, cooperative HEENT: NC/AT, MMM, no conjunctival injection, b/l sclera anicteric. Mallampati 1 oropharynx clear, no exudates, tonsils within normal limits. No edema or

erythema. Neck: Supple. Cardiovascular: RRR Pulmonary/Chest: CTAB, no increased WOB, no respiratory distress, no wheezes/rhonchi/rales, chest wall tenderness. Abdominal: Soft. NT/ND, no r/g, no masses Extr/MSK: Well perfused, distal pulses intact. No tenderness. No LE edema. Back: No CVAT Neuro: No evidence of facial droop, normal speech, mentation appropriate, steady gait. Sensation intact to light touch to upper lower extremities. Cranial nerves 2-12 within normal limits. Psychiatric: Normal affect. Mood not labile nor depressed. Skin: No rashes, lesions, or wounds appreciated on exposed skin. á ED Course & Clinical Decision Making: 43 year old female with PMHx as listed in HPI presents with intermittent numbness after receiving the coronavirus vaccination. á - History of present illness also notable for symptoms started 20-30 minutes after receiving the coronavirus vaccination. á - Vitals reviewed and all wnl á - Physical exam notable for neurologically intact, no rashes, no airway abnormalities, otherwise unremakrable. á - Given above findings, presentation is concerning for side effects from the coronavirus vaccination, electrolyte abnormality. Will check basic lab work here in the emergency department. Will give symptomatic control with 1 L of IV fluids and Zofran for the nausea. Will monitor here in the emergency department. Disposition pending clinical improvement. á Lab work grossly unremarkable here in the emergency department. Mild hypo phos of 2.6. Electrolytes otherwise within normal limits. No leukocytosis. Hemoglobin of 10.2, no baseline but the patient does have a history of chronic anemia given uterine fibroids. á The patient was able to ambulate with steady gait. She continues to have burning sensation to her left leg and her right arm. She will be given lidocaine patches for symptomatic control. She also be given ibuprofen 600 mg. á Return precautions returning to the patient. At this time presentation does not appear consistent with anaphylaxis. Min presentation most consistent with side effects from coronavirus vaccination. á Patient tolerated p.o. here in the emergency department. She was able to ambulate with steady gait. Symptoms mildly improved after lidocaine patch and ibuprofen. Return precautions given. á Patient re-evaluated and is stable for discharge. á At this time, suspicion is low for acute injury/illness requiring hospital admission or emergent intervention. No indication for inpatient management; No medical or surgical emergent care needed at this time. á However, it was stressed to the patient that symptoms may persist or worsen, in which case she should be reevaluated. Patient should also get appropriate and timely follow up for further evaluation and continuation of care. The patient indicates understanding of these issues. Patient is ready for discharge. Return precautions (advised to return to ER if their symptoms persist, change, or worsen) and follow up plan reviewed with patient and understood. á á"

Left deltoid soreness; This is a spontaneous report from a non-contactable physician (patient). A 28-year-old female (not pregnant) patient received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EJ1685), intramuscular in left arm on 22Dec2020 08:15 at single dose for COVID-19 immunisation. Facility where the most recent COVID-19 vaccine was administered was Hospital. Medical history included asthma (Prior history of asthma). No allergies to medications, food, or other products. Prior to vaccination, the patient was not diagnosed with COVID-19. Concomitant medications included ethinylestradiol, norethisterone acetate (JUNEL), ascorbic acid, betacarotene, biotin, capsicum annuum fruit, colecalciferol, collagen marine, curcuma longa, cysteine hydrochloride, equisetum arvense, fallopia japonica, hyaluronic acid, iodine, keratin, lysine, methionine, piper nigrum, selenium, serenoa repens, tocotrienols nos, withania somnifera, zinc (NUTRAFOL). The patient not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced left

deltoid soreness (non-serious) on 22Dec2020 10:00. No treatment received for the adverse event. Since the vaccination, the patient has not been tested for COVID-19. The outcome of the event was not recovered. No follow up attempts are possible. No further information is expected.

""""whole body aches everywhere.""/whole body is so sore today, my breast, my back, shoulders, my neck; My throat gets a little sore; I just threw up everywhere; This is a spontaneous report from a contactable consumer (patient). A 65-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration on 22Dec2020 08:20 at single dose for COVID-19 immunization. The patient medical history was not reported. There were no concomitant medications. The patient reported that her ""whole body aches everywhere/her whole body hurts."" Healthcare professional (HCP) had not been made aware of this at time of call. The patient further reported that her whole body was so sore today (23Dec2020), my breast, my back, shoulders, my neck. Also, her throat gets a little sore and she just threw up everywhere on an unspecified date in Dec2020. The patient was working in a nursing home. No treatment was given for the events. ""Lab test: Consumer stated, ""No, just the Covid test but I passed it so (sentence incomplete)."" The outcome of the events was unknown."

Anxious, dizzy, hypertensive, lightheaded for 30 min-- monitored throughout -- resolved without intervention -- discharged home

"Facial Tingling 25 minutes after injection. Still with mild tingling.; Face and ears felt very warm; This is a spontaneous report from a contactable nurse (patient). A 55-year-old non-pregnant female patient received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 21Dec2020 13:30 at single dose on her left arm for covid-19 immunization. Medical history included gastrooesophageal reflux disease (GERD) and known allergies included Latex, epinephrine (""epi""), shell fish. Concomitant medication in two weeks included fexofenadine hydrochloride (ALLEGRA), lansoprazole (PREVACID), plantago ovata (METAMUCIL), dextran sulfate sodium (DSS). The patient previously took epinephrine and experienced drug hypersensitivity. The patient experienced face and ears felt very warm. Facial Tingling 25 minutes after injection on 21Dec2020 14:00. No treatment was received. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient has not been tested for COVID-19. The outcome of the events was recovering."

2 inch diameter at injection site; swelling, redness, tender for 3 days after; 2 inch diameter at injection site; swelling, redness, tender for 3 days after; 2 inch diameter at injection site; swelling, redness, tender for 3 days after; This is a spontaneous report from a contactable other health professional (patient). A 40-years-old female patient (not pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly on 17Dec2020 16: 30 at single dose on left arm for COVID-19 immunization in hospital. Medical history included attention deficit hyperactivity disorder (ADHD), idiopathic retinitis. Concomitant medication included amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL), gabapentin, naproxen sodium (ALEVE), ergocalciferol (VIT D), magnesium supplement and multivitamin.

The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced 2 inch diameter at injection site; swelling, redness, tender for 3 days after, stated from 18Dec2020 12:00 PM. Then gone. No treatment received for the adverse events. The events outcome was recovered in Dec2020. No COVID prior vaccination, since the vaccination, the patient hadn't been tested for COVID-19. The seriousness was reported as no. The information on the batch number has been requested.

Tachycardia up to 160 with exertion. Some shortness of breath noted. Returns to normal heart rate with rest. Cardiac monitor, CXR, CBC, TSH, CMP in the Emergency Department and physician evaluation. Returned to work same day without restrictions. Will follow up with personal provider.

left arm soreness a little; This is a spontaneous report from a contactable nurse (patient). A 55-year-old female patient (not pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), intramuscularly on 22Dec2020 16:30 at single dose at left arm for COVID-19 immunization. Medical history was none. The patient's concomitant medications were not reported. The most recent COVID-19 vaccine was administered at Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient did not receive any other medications within 2 weeks of vaccination. A 25-years-old female patient (not pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EH9899), intramuscularly on 22Dec2020 08:00 at single dose on left arm for COVID-19 immunization. Medical history included polycystic ovarian syndrome (PCOS), sinus tachycardia, anxiety. Concomitant medication included propranolol, fluoxetine hydrochloride (PROZAC), spironolactone (ALDACTONE A), all from Dec2020. The known allergy included metoclopramide (REGLAN). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced moderate/severe fatigue, muscle discomfort at injection site on 23Dec2020 05:45 AM. No treatment received for the adverse events. The events outcome was not recovered. No COVID prior vaccination, since the vaccination the patient hadn't been tested for COVID-19. It was not reported as serious. No follow-up attempts are possible. No further information is expected.

she felt cold, then hot; she felt tired and weak; feel hot; she felt tired and weak/weakness; she felt cold/cold sensation; chills; headache; have a temperature of like 99 to 99.1/temperature went to 99.1; This is a spontaneous report from a contactable physician (patient). A 41-year-old female patient

received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730, Expiry Date: Mar2021), intramuscular in left deltoid on 16Dec2020 around 2:00 or 2:30 in the afternoon at single dose for COVID-19 immunisation. Medical history included none. Concomitant medications included colecalciferol (VITAMIN D), ascorbic acid, ergocalciferol, nicotinamide, retinol, riboflavin, thiamine hydrochloride (VITAMINS [ASCORBIC ACID;ERGOCALCIFEROL;NICOTINAMIDE;RETINOL;RIBOFLAVIN;THIAMINE HYDROCHLORIDE]). The patient previously took flu shot on 16Oct2020 at age of 41-year-old for immunization. Caller asking if is possible to see side effects days later after getting the vaccine. Caller report her symptoms which the caller reports started 4-5 days after receiving the vaccine. Symptoms included were chills, weakness, headache and temp. Caller on the line a doctor, MD, calling about the COVID Vaccine. She mentioned she got the shot last week, 16Dec2020. Almost like the fourth day after getting the vaccine, that Sunday (20Dec2020), she started to experience chills and have a temperature of like 99 to 99.1. She did not get the vaccine through her doctor. She got the vaccine at the hospital she works at. She explained on Sunday (20Dec2020) night, she felt cold. She had to use a couple of blankets and wear a sweatshirt which was not usual for her. On Monday 21Dec2020, she felt tired and weak. That afternoon and evening she felt chills as well. It was like all of a sudden she had a cold sensation. She commented her normal temperature always runs like 97.6 to 98. Her temperature went to 99.1, something like that. However, she confirmed it did not go above that. She would feel hot at times and chilly at times. She also mentioned she experienced headaches. Yesterday (22Dec2020) morning she felt better. Last evening it was not that bad. She mentioned with chills she felt cold, then hot. She checked her temperature and it was 98.8 something like that. Just a little higher than her normal. Outcome of chills: Stated this morning she was fine, but in the evening it is worse. Felt weak: She mentioned there was time where she was fixing lunch and after it was cooked she felt weak and like she had to sit right away. Headache: Had an episode Sunday (20Dec2020) night and it happened again yesterday. The headaches for short periods. Caller confirmed this was the first dose received of the COVID vaccine. She confirmed she does not know if the chills, feeling weak, headache, or temperature is related to the COVID vaccine. She mentioned she has no other symptoms like cough. She also added she was tested for COVID and it was negative. She had the test done on 22Dec2020. At end of call, caller questioned, it was asked if it is possible to have side effects days later after getting the COVID vaccine and it be related to the vaccine. She stated she's read it's common for it to occur like two days after, but not this long afterwards. Vaccination Facility Type was Hospital. Vaccine Administered at a Military Facility was No. Additional Vaccines Administered the Same date of the Pfizer Suspect was None. No AE(s) require a visit to the Emergency Room or Physician Office. The outcome of the event weakness was not recovered. The outcome of the event have a temperature of like 99 to 99.1/ temperature went to 99.1 was recovering. The outcome of other events was unknown.

lump in armpit and sore; sore collar bone swollen on side that received vaccine; lymph node and collar bone swollen; collar bone swollen; fever; chills; shakes; This is a spontaneous report from a contactable nurse. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 21Dec2020 at single dose for covid-19 immunization. The patient medical history and concomitant medications were not reported. The patient stated she was noticing possible side effects in Dec2020, with lymph node and collar bone swollen,

fever, chills, shakes, this morning (23Dec2020) lump in armpit and sore collar bone swollen on side that received vaccine. The action taken in response to the events for bnt162b2 was not applicable. The outcome of events was unknown. Information on the lot/batch number has been requested.

Moderna COVID-19 vaccine EUA

Sore arms; light headed; This is a spontaneous report from a contactable Other Healthcare professional (HCP) reported for himself. A 55-year-old male patient received (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), intramuscular on 22Dec2020 18:30 at single dose for covid-19 immunization. Vaccine location was Right arm and it was the first dose. The COVID-19 vaccine was administered at Doctor's office/urgent care. Medical history reported as none. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced sore arms, light headed on 22Dec2020. No treatment received for the events. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of the events was recovered on an unknown date in Dec2020.

I hard time swallowing Tingling in my face

About 20 minutes after the injection he started to feel tired and like he wanted to go home from work. His feeling was staying the same. The outcome of the event was not recovered.

I started feeling a lump in my throat, not really bad but it got worse it did not affect my speech or my breathing. But after a while I realized I was having a hard time swalowing, I asked the nurse for Benadryl and it took about 10 min to receive, they took my vitals, they watched for about 45 min and once I told them my throat was feeling better I was realized to go back to work.

Sore arm only; This is a spontaneous report from a non-contactable other HCP (patient). A 39-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685) via intramuscular on 22Dec2020 08:30 on left arm at a single dose for COVID-19 immunization. The patient allergy to Percocet and medical history included hypothyroidism. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine and did not receive any other medications within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient has not been tested for COVID-19. The patient experienced sore arm only on 23Dec2020 18:00 and no treatment received. The outcome of the event was recovered in Dec2020. No follow-up attempts are possible. No further information is expected.

Difficulty breathing, itchy mouth rash, very bad cough, fever (103)

chills; fatigue; headache; arm pain; body aches; Fever; This is a spontaneous report from a contactable nurse(patient). A 29-year-old female patient received the first dose of BNT162B2 (Lot number: EL0140), via intramuscular, in arm left, on 22Dec2020 18:15 at single dose for COVID-19 immunization. Facility where the most recent COVID-19 vaccine was administered was hospital. Medical history included Covid 19, pneumonia, anxiety/depression. Prior to vaccination, the patient was diagnosed with COVID-19. Since the vaccination, patient was not tested for COVID-19. No allergies to medications, food, or other products. No other vaccines were received within 4 weeks prior to the COVID vaccine. The other medication that the patient received within 2 weeks of vaccination was MULTIVITAMIN, sertraline hydrochloride(ZOLOFT), VITAMIN D3, ZINC, VITAMIN C. The patient experienced fever, chills, arm pain, body aches, headache, fatigue on 23Dec2020 09:00 AM. No treatment was received for the events. The outcome of the events was not recovered.

"Chills; sweats; aches and pain; Reports she was up all night opening the window and tuning on the heating blanket during the night; This is a spontaneous report from a contactable consumer (patient). A

67-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number ""CJ1685 and 228255"" pending clarify), via an unspecified route of administration on 22Dec2020 08:30 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was reported that she got the covid-19 vaccine yesterday (22Dec2020) at 08:30 A.M. Reported that all night long (22Dec2020) she had chills, sweats, aches and pains. She was told that she should be fine by Christmas. She was up all night opening the window and tuning on the heating blanket during the night. She was wrapped in blankets. Patient was advised to contact healthcare professional for treatment recommendations. Patient declined any treatment to the events. Patient also mentioned that her doctor did not want her to get the vaccine. She works as a certified nurse assistant (CNA) in the hospital. For the lot number, NDC number, and expiration date, she provided details from the card she was given for the vaccine. She read first dose COVID-19: ""CJ1685 and 228255"". She put her glasses on to read the card. The patient she wanted to lay down. The outcome of the event chills, aches and pains was not recovered, for event sweats was recovering, for the rest of event was unknown."

At about 15 minutes the patient experienced nausea, headache, then face flushing.

fever/steady fever/Caller says his fever got as high as 101.5 degrees Fahrenheit; This is a spontaneous report from a contactable Other Health Professional (patient) from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). An 82 years old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, lot EL0140) via an unspecified route of administration on 21Dec2020 at single dose in left arm for COVID-19 immunisation. Medical history and concomitant medications were none. Warm transfer in regards to the COVID vaccine which he received Monday morning. Agent reports caller said since then he has had a steady fever and has questions in regards to side effects. As for Height: Caller says he is shrinking, he is about 5 feet 9 inches tall. No further details provided about shrinking. Caller clarifies his doctor title and says that he is not a physician or medical doctor, he has a PhD in psychology. Caller says he doesn't have a prescribing provider, he got the vaccine at a retirement home called (facility name and location). Caller says that his fever started the day he got the shot. He says he got the shot that morning, clarified to being about noon, and had a fever that evening. Caller clarifies that he takes Advil, not Aspirin for his fever. He says when he takes the Advil it goes away, it gets rid of it, but when the Advil wears off the fever comes back again. He says he has no idea what side effects of this drug are, so he thought he would give a call because others were worried about it and pressured him to ask. Caller says the only information he has is the card, the COVID-19 Vaccine Record Card, which says Pfizer, then below it EL0140, which could be either 0 or letter O, probably 0. He says it has the date 21Dec2020 on it from when he got it and he got it in his left arm, it was his first injection of it, he has another to come. Caller says his fever got as high as 101.5 degrees Fahrenheit on 22Dec2020, and he also has a fever right now. Therapeutic measures were taken as a result of fever and included treatment with Advil. Outcome of event was not recovered.

after 2 hours headache lasted for 3-4 hours; left arm injection site soreness worse at night unable to raise arm due to pain lasted up to 48 hours from time of injection; unable to raise arm due to pain; This is a spontaneous report from a contactable other hcp (patient). A 64-year-old male patient received bnt162b2 (Lot: EK5730), via an unspecified route of administration at Left arm, first dose on 20Dec2020

10:30 at single dose, for COVID-19 immunization. Medical history included diabetes, high cholesterol and hypertension (HTN) from an unknown date. Prior to vaccination, the patient was not diagnosed with COVID-19. No Known allergies. Concomitant medication included metformine, lisinopril, atorvastatin and finasteride. This reporter was notified of patient reaction and she was then assessed in the emergency bay area. The patient presented with rapid breathing and anxiety. Monitored patient for severe reaction symptoms, including respiratory distress with stridor, wheezing, dyspnea, increased work of breathing, persistent cough and cyanosis. The patient's breathing slowed and felt less anxious by the time she left. The outcome of the events rapid breathing and anxiety was recovering, the outcome of the other event was unknown. No seriousness criteria: no Results in death, no Life threatening, no Caused/prolonged hospitalization, no Disabling/Incapacitating, no Congenital anomaly/birth defect. No follow-up attempts are possible. No further information is expected.

The day after on 12/18 soreness at at the injection site. On 12/19 symptoms exp headache and fatigue. Then on 12/20 started chills, fever and headache. I went to see the doctor on 12/21 and got several test Covid ,Flu and Strep results positive for all. Since then symptoms has continued. I have had to miss 6 days of work.

muscle aches; chills; Fatigue; This is a spontaneous report from a contactable nurse (patient). A 51-year-old female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, expiration date: 31Mar2021), via an unspecified route of administration on 19Dec2020 19:30 at single dose to prevent Covid. Medical history included COVID-19 from 30Oct2020 to 24Nov2020. There were no concomitant medications. Eight hours after getting the vaccine (20Dec2020 03:30), she had muscle aches and chills, she also had fatigue on 20Dec2020. She was worried. She was concerned that she had done something crazy. She was through Covid for sure. She wasn't able too much. She was off work that day and didn't have to do anything. She would not have been able to work. The muscle aches were rivaling the worst days of Covid. She had Covid for 3 weeks. Then she had to wait another 10 days to get over the symptoms. She never had to go to the hospital. These muscle aches that she experienced after the injection were as intense as when she had Covid. The Lot on the patient card was difficult read. The information was hand written and squished in. She was unsure if it was EK5B30 or EK5030 or EK5730. The patient underwent lab tests and procedures which included COVID test: positive on 30Oct2020, negative on 24Nov2020. The outcome of muscle aches and chills was recovered on 21Dec2020, fatigue was recovering. The event muscle ache reported as serious, with serious criteria medically significant.

Information about lot/batch number has been requested.; Sender's Comments: The Company considers there is a reasonable possibility that the reported muscle ache is related to the administration of BNT162B2, based on the plausible temporal association and the known safety profile of the suspect. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate.

Low-grade fever and chills (99.5 Fahrenheit); Low-grade fever and chills (99.5 Fahrenheit); headache; This is a spontaneous report from a contactable nurse (patient). A 29-year-old female patient received her fist dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number not provide), intramuscularly on right arm at 09:30 AM on 21Dec2020 at single dose for COVID-19 immunization. Medical history included deep vein thrombosis (DVT), covid-19 prior vaccination. Concomitant medication included escitalopram oxalate (LEXAPRO), rivaroxaban (XARELTO), atenolol, multivitamins. The patient experienced severe headache at 18:00 on 21Dec2020. Low-grade fever and chills (99.5 Fahrenheit) Q (every) 90 mins from 22:00 21Dec2020 till 04:00 22Dec2020. The events were assessed as non-serious. Since the vaccination, the patient had not been tested for COVID-19. The outcome of event headache was recovered in Dec2020, the outcome of events chills and low grade fever was recovered at 04:00 on 22Dec2020. Information on the Lot/Batch number has been requested.

dizziness; This is a spontaneous report from a non-contactable healthcare professional. A 21-year-old male patient started to receive bnt162b2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE, lot number: EH9899, expiry date not reported), intramuscular on the right arm (right deltoid muscle) on 22Dec2020 18:15 at a single dose for COVID-19 immunisation. Medical history and concomitant medications were not reported. The patient experienced dizziness on 22Dec2020. He denied rash, hives, welts, difficulty breathing, difficulty swallowing, wheezing, throat tightness, hoarseness, stridor, itching, facial swelling, lip swelling and tongue swelling. The provider was notified of patient's reaction and he was then assessed in the emergency bay area. The patient was monitored for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with stridor, wheezing, dyspnea, increased work of breathing, persistent cough and cyanosis, vomiting, abdominal pain, hypotension, dysrhythmia, chest pain and collapse. Therapeutic measures were taken as a result of dizziness that included water and rest. The patient was stable to go home. Clinical outcome of the event was unknown. No follow-up attempts are possible. No further information is expected.

I felt a little flushed; My heart is breathing; This is a spontaneous report from a contactable consumer (patient). This female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at single dose on 21Dec2020 for Covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient stated: I felt a little flushed and my heart is breathing on an unspecified date with outcome of unknown. Information on the lot/batch number has been requested.

dizziness; This is a spontaneous report from a non-contactable healthcare professional. A 72 year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE, lot number: EH9899),

intramuscular on the right leg (right deltoid muscle) on 22Dec2020 17:30 at a single dose for COVID-19 immunisation. Medical history and concomitant medications were not reported. The patient experienced dizziness on 22Dec2020 17:45, during her 15 minute waiting period after the injection. She denied rash, hives, welts, difficulty breathing, difficulty swallowing, wheezing, throat tightness, hoarseness, stridor, itching, facial swelling, lip swelling and tongue swelling. This provider was notified of patient reaction and she was then assessed in the emergency bay area. The patient was monitired for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with wheezing and dyspnea, vomiting, abdominal pain, hypotension, dysrhythmia, chest pain and collapse. On an unspecified date, the patient underwent lab tests and procedures which included blood sugar: 108 and vital signs measurement: normal. No therapeutic measure was taken as a result of the event. Clinical outcome of the event was unknown. No follow-up attempts are possible. No further information is expected.

About 10 minutes after vaccine a red injection site appeared and then also was red further up around the shoulder (noticed because shoulder was itchy). I also felt warm. I have been diagnosed in the past with exercise induced asthma. Asthma started to flare up shortly after but did not require intervention. Was monitored by a doctor at facility where vaccine was given and symptoms did not worsen. No medication required. I noticed unusual muscle aches starting the next morning and persisted for a week after vaccine. Left arm where vaccine was given did not hurt, but other right arm, shoulders and thighs were aching. Hands seemed arthritic with movement at work. Feet occasionally felt tingly when walking for 5 days after vaccine. Asthma flare-ups continued after vaccine. Had to stop and rest after climbing stairs which is unusual for me. The worst asthma flare-ups persisted for up to 5 days. After 10 days at time of reporting adverse effects, asthma is still triggered but to a lesser extent. Can climb stairs without pause now. Airways have not fully recovered yet and I have a residual cough. Started self treating with albuterol rescue inhaler if needed.

Developed swollen lymph node under right arm; This is a spontaneous report from a contactable nurse (patient). A 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EK5730) intramuscularly at right arm on 20Dec2020 at 10:15 a.m. at a single dose (dose number=1) for COVID-19 immunization. Medical history and concomitant medications were not reported. The patient was not pregnant. Facility type vaccine was at hospital. No other vaccine in four weeks. The patient developed swollen lymph node under right arm on 21Dec2020 at 11:00 a.m. The event was reported as non-serious. with outcome of recovering. No treatment received for the event. No COVID-19 diagnosed prior vaccination and no COVID-19 tested post vaccination. No known allergies (no allergies to medications, food, or other products). No follow-up attempts are possible. No further information is expected.

Chills and body aches

Headache; nausea; This is a spontaneous report from a contactable other health professional (other HCP) (patient). A 60-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730) via an unspecified route of administration at right arm on 21Dec2020 at 10:00 a.m. at a single dose (dose number: 1) for COVID-19 immunization. Medical history included hypothyroid and

hyperlipidemia. Concomitant medications in two weeks included levothyroxine, simvastatin (ZOCOR), ergocalciferol (VITAMIN D), ascorbic acid (VITAMIN C) and calcium (reported as calcium mul, to be clarified). No other vaccine in four weeks. The patient was not pregnant. Facility type vaccine was hospital. No COVID-19 diagnosed prior vaccination and no COVID-19 tested post vaccination. No known allergies (no allergies to medications, food, or other products). The patient experienced headache, nausea on 22Dec2020 at 12:00 p.m. with outcome of resolved in Dec2020. The events were reported as non-serious. No treatment received for events.

Bilateral parasthesia to fingers 4 hours post injection. This passed in 15 minutes, About 7 Pm on 12/28/20, bilateral parasthesia to hands & feet. On 12/29/20 (AM) foot pain--painful to walk, went away in about 5 minutes, but still felt tingling to both feet. Still having tingling sensation to both feet (constant) and both hands (intermittent)

Pain injection site; numbness in both hands; This is a spontaneous report from a contactable consumer (patient). A 30-years-old male patient started to receive first dose bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, Lot number: EK5730), via an unspecified route of administration on 22Dec2020 14:00 at single dose (Anatomical Location of Administration: right shoulder) for COVID-19 immunization. Medical history included ongoing allergy, allergic to Sulfa drugs, Clindamycin, and Vancomycin. Concomitant medication included ongoing fluticasone propionate (FLONASE [FLUTICASONE PROPIONATE]) for Allergy and ongoing loratadine for Allergy. Prior vaccinations within 4 weeks was none. The patient experienced numbness in both hands on 22Dec2020 about ten minutes after the injection, pain injection site on 23Dec2020 09:00. He had an interesting side effect that was not listed on the fact sheet. He mentioned he did not want his information going to any third parties. He clarified the interesting side effect that he did not see listed on the fact sheet as, received the COVID 19 vaccine yesterday (22Dec2020) around 2 pm, after getting the shot he felt fine initially, but then he started to experience both of his hands go numb. He was not sure if had any effect on the nerves, but it effected his hands. Then he noticed today (23Dec2020) he had some pain at injection site. He stated that was normal and saw it listed. It was the numbing of his hands that was weird to him. His left hand felt better, but right hand felt the same. He was calling to see if due to this if he should still take the booster shot or not. He also wanted to see if these details had been reported before. Pain at injection still hurts a good amount and unable to provide outcome. He mentioned the card he received with the lot number the person who wrote on it had terrible hand writing, so he was not sure of the lot number. He stated these reactions are not severe, it is kind of annoying. The action taken in response to the events for bnt162b2 was not applicable. Relevant Test was None. The outcome of the events was not recovered.

anxiety; chills; generalized feelings of not feeling quite right; nausea; nervousness; This is a spontaneous report from a non-contactable other hcp. A 34-years-old female patient received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, Lot number: EH9899), intramuscular on 22Dec2020 13:45 (vaccine location: Right arm) at single dose for covid-19 Vaccination. Past medical history includes anxiety for which she took venlafaxine (Effexor) on a daily basis as well as type 2 diabetes, diagnosed approximately seven or 8 years ago during a pregnancy, she was on oral medication during the day and insulin at nighttime. Concomitant medications were not reported. She did take her oral medication today (22Dec2020) and last ate a pasta lunch right before arriving to the vaccine clinic. Last A1c was 6.

During her 15-minute waiting period after the injection, the patient began to experience generalized feelings of not feeling quite right as well as anxiety/nervousness, nausea and chills. She denied difficulty breathing, throat tightness, dizziness, chest pain, or other GI complaints. This provider noticed her raising her hand from across the waiting area and tended to her where she noted the above complaints. she was then assessed in the emergency bay area. She was monitored for severe reaction symptoms, including rapid progression of symptoms, vomiting, hypotension, chest pain, collapse and Respiratory distress. The action taken in response to the events for bnt162b2 was not applicable. The outcome of the events was unknown. No follow-up attempts are possible. No further information is expected.

Upset stomach; Nausea; Mild headache; This is a spontaneous report from a contactable nurse reporting for herself. This 26-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EJ1685) on 22Dec2020 14:25 at a single dose intramuscularly in the left arm for COVID-19 immunization. The patient medical history was not reported. Concomitant medication included sertraline hydrochloride (ZOLOFT). Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient experienced upset stomach, nausea and mild headache on 23Dec2020. The events were non-serious, no treatment received for the events. The patient was recovering from the events.

Patient was under the age of 18 when Covid-19 vaccine was administered

dizziness; This is a spontaneous report from a non-contactable healthcare professional (HCP). A 63-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EH9899) on 22Dec2020 17:30 intramuscularly at a single dose in the left arm (in the left deltoid muscle) for COVID-19 vaccination. No relevant medical history. The patient denied any history of previous adverse reactions to vaccines. The patient's concomitant medications were not reported. During her 15 minute waiting period after the injection, the patient began to experience dizziness. She denied rash, hives, welts, difficulty breathing, difficulty swallowing, wheezing, throat tightness, hoarseness, stridor, itching, facial swelling, lip swelling and tongue swelling. She was then assessed in the emergency bay area, monitored for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with stridor, wheezing, dyspnea, increased work of breathing, persistent cough and cyanosis, vomiting, abdominal pain, hypotension, dysrhythmia, chest pain and collapse. Vitals were normal, glucose was 100. The event dizziness was non-serious. The outcome of the event was unknown. No follow-up attempts are possible. No further information is expected.

Swollen lymph nodes; Injection site pain; Tiredness; This is a spontaneous report from a contactable Nurse(patient). A 31-year-old female patient received first dose of BNT162B2(PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140), via an unspecified route of administration on 22Dec2020 20:45 at single dose at left arm for COVID-19 immunization. The patient was not pregnant. There were no known allergies or other medical history. There were no other vaccine in four weeks. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Concomitant medication included ascorbic acid (VITAMIIN C), ergocalciferol (VIT D), vitamin b complex (SUPER B COMPL); reported as prenatal. The patient experienced swollen lymph nodes,

injection site pain, tiredness; all on 23Dec2020 14:00 with outcome of not recovered. The events were non-serious. No treatment received for the events.

Moderna COVID-19 Vaccine EUA Day1- none Day2- Injection site: soreness, firmness, and weakness. General symptoms: none Day3- Injection site: bruising, tenderness. General symptoms: fatigue Day4- Injection site: bruising, tenderness. General symptoms: fatigue, body aches, joint pains, difficulty waking in the morning Day5- Injection site: bruising, tenderness. General symptoms: fatigue, body aches, joint pains, difficulty waking in the morning Day6- Injection site: bruising, tenderness. General symptoms: fatigue, body aches, joint pains, difficulty waking in the morning I am currently on day 6 from getting the Moderna COVID-19 Vaccine and the injection side bruising and tenderness still persist along with the general symptoms of fatigue, body aches, joint pains, and difficulty waking up in the morning.

had only a sore arm; muscles were sore.; This is a spontaneous report from a contactable physician (patient, psychologist, work as a healthcare provider in a prison system). A 69-year-old male patient received a single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot number reported as: E316, either 05 or 85) via an unspecified route of administration on 21Dec2020 (between 13:15 and 13:30) in the right arm for COVID-19 immunization. Medical history included flu, not recently, several weeks ago. Concomitant medications were reported as none. The patient had only a sore arm on 21Dec2020 as a side effect. The patient also reported muscles were sore on 21Dec2020. The outcome of the events was unknown. Caller stated he wanted to check and make sure he wasn't supposed to have side effects. He had seen on TV people complaining of chills, fever and headache. As he was looking at the document he was given, he may have called the wrong number for the question to ask: he was lucky enough as a healthcare professional to be administered his first shot of Pfizer's COVID vaccine, and with the exception of where the site where it was injected, his right arm being a little sore, like with any shot, he had not experienced side effects, like headaches or nothing, and today he noticed he didn't get a check in, he got texts. But his question was: if he didn't feel side effects, did it mean the vaccine was not necessarily taking, if no side effects, did it mean it will not be effective? Stated it was just minor, like any other shot. He did not mind participating in this study, for information, since Pfizer may be counting soreness in the arm, but he did not perceive this as a problem. He got the vaccine on Monday 21Dec2020, between 13:15 and 13:30, and then it was just like, he had a flu shot, not recently, several weeks ago, and to the same point. No further details provided. Like within a couple, three hours, it started, and it was difficult to sleep on it, just sore, no redness/inflammation, he could not tell where the skin was punctured, just his muscles were sore. He called the number on the sheet, he was just real curious, he did not feel bad, like he hears on TV, and he knew personally people who got symptoms and he no symptoms, that he can ascertain. No further details provided. His appointment was 1:15, it may have been in his arm at 13:25, or 13:30 or something, he went and sat for his 15 minute wait time, at 1:30, so it was between 13:15 and 13:30. Outcome reported as it was OK during the daytime, but to sleep on that side, it can feel sore, and he turned to the other side, it did not keep him from typing, lifting, writing, working, emptying the dishwasher. He had a registration code, was given a card. Read from his vaccination card: provided date of vaccination 21Dec2020, vaccine name Pfizer COVID 19, stated lot was written in ink, looked like it was E316, stated he can't read, it was smeared, but then said next dose is 11Jan2021. States it was E316, either 05 or 85. He didn't have the sore arm before he got it,

and it is going away now, or it would go away. Information on the lot/batch number has been requested.

she broke out in hives 4 hours after she received the vaccine; This is a spontaneous report from a contactable other-healthcare professional (HCP) (patient). A 34-year-old female patient received a single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot #: EL1284) as the first dose via intramuscular on 23Dec2020 13:00 in the right arm for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the vaccine BNT162B2. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient reported that she broke out in hives 4 hours after she received the vaccine on 23Dec2020 (also reported as at 16:00). The event was reported as non-serious. No treatment was received for the event. The outcome of the event was recovering. No follow-up attempts are possible. No further information is expected.

"This is a spontaneous report from a contactable nurse (patient). A 33-year-old female patient received BNT162B2 (Pfizer-BioNTech Covid-19 vaccine) on 22Dec2020 11:30AM at left arm for COVID-19 immunization. The patient had known allergies to sulfa and was currently breastfeeding. The patient had concomitantly received ascorbic acid, honey, melatonin, zinc gluconate (ZARBEE'S ALL NATURAL COUGH SYRUP NIGHTTIME) (reported as "" Zarbees elderberry immune syrup"") in two weeks. The patient experienced fatigue, myalgias, headache, arm soreness, brain fog at 3:00PM on 22Dec2020. Patient received ibuprofen 400 mg as treatment for the adverse events. The outcome of the events was resolving at the time of reporting. Information on the lot/batch number has been requested."

headache; fatigued; lightheaded/dizzy(the room was spinning); nauseous; chills; hot flashes; This is a spontaneous report from a contactable nurse reported for herself. A 24-year-old adult female patient (pregnant: no) was received the first dose BNT162B2 (brand: Pfizer, Batch/lot number: EK5730) via unspecified rout of administration on left arm on 23Dec2020 13:00 at single dose for COVID-19 immunization. Medical history included asthma, Bipolar Disorder, known allergies: Latex, milk, bananas, blue dye 2&, COVID-19 (Prior to vaccination, was the patient diagnosed with COVID-19? :Yes). Concomitant medication in two weeks included lamotrigine (LAMICTAL), fluoxetine hydrochloride (PROZAC), cetirizine hydrochloride (ZYRTEC [CETIRIZINE HYDROCHLORIDE]) and ascorbic acid, ferrous fumarate, folic acid, retinol (PRENATAL [ASCORBIC ACID;FERROUS FUMARATE;FOLIC ACID;RETINOL]). No other vaccine in four weeks. After the vaccination patient became lightheaded, dizzy (the room was spinning), nauseous and got chills and hot flashes. After 30minutes or so she began to get a headache while the other symptoms wore off and then became fatigued. Adverse event start date was 23Dec2020 01:00 PM. the most recent COVID-19 vaccine was administered in Hospital. Since the vaccination, the patient has not been tested for COVID-19. Treatment received for the events included ibuprofen (MOTRIN), Meclizine, ondansetron (ZOFRAN) and paracetamol (TYLENOL). Patient was recovering from the events. It was reported as non-serious. No results in death, life threatening, caused/prolonged hospitalization, disabling/Incapacitating nor congenital anomaly/birth defect.

woke up with mild fever, and severe headache, lasted through the day, was gone upon waking next morning.

Joint ache and tiredness on the next day after vaccination; Joint ache and tiredness on the next day after vaccination; This is a spontaneous report from a contactable other healthcare professional (patient). A 27-years-old female patient (not pregnant) received BNT162B2 (lot number: EK5730) first dose on 18Dec2020 12:45 PM intramuscularly on Left arm at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. No Known allergies to medications, food, or other products. Facility type vaccine was Hospital. Other medications in two weeks was No. Patient experienced Joint ache and tiredness on the next day after vaccination (19Dec2020). Patient had no covid prior vaccination. Patient had covid tested post vaccination on 21Dec2020, Nasal Swab, the result was negative. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No treatment received for the events. The outcome of the events was recovering. The seriousness was reported as no.

soreness at site of injection; This is a spontaneous report from a contactable nurse (patient). A 39-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 17Dec2020 intramuscularly on right arm at single dose for COVID-19 immunization. Medical history included ongoing Psoriatic arthritis, patient received allergy shots (Unable to provide the names, NDC. Lot, or expiry for the allergy injections she received. It's the regular one for pets (cat and dog dander), trees, mold and dust. No food allergy. Mentions having an allergy to sulfur), unspecified sulfur products-wheezing, rash, itching. Concomitant medications included adalimumab (HUMIRA) and methotrexate, both ongoing for Psoriatic arthritis. She Is having soreness in her arm where she received it and she got it last Thurday (17Dec2020). Today (23Dec2020), she went to get her allergy shots and not sure if she should have waited or if she is missing something in the literature about doing the allergy shots after. It didn't say. She knows that it is the same when she has to get a flu shot she waits about a week to get her allergy shots. Received the vaccine early last Thurday evening and the allergy shots today at 2pm. Received the vaccine through her workplace. The soreness started on Friday morning (18Dec2020) and by Monday afternoon (21Dec2020) and it had gone away. She is just worried because she got the allergy injection today in the same arm that the vaccine was given. Clarifies that the soreness is around the injection site of where the vaccine was given, not where the allergy shots given. Worried that she should have waited and doesn't want to go to bed and wake up with something wrong. States this is her first shot. Unable to provide the names, NDC. Lot, or expiry for the allergy injections she received. It's the regular one for pets (cat and dog dander), trees, mold and dust. No food allergy. Mentions having an allergy to sulfur. Has wheezing airway and the first time was when she was a kid and she got a rash, redness, and itching. The doctor now knows not to prescribe anything with sulfur because the second time was when she was 20 something she had the wheezing. Vaccination Facility Type was Hospital. Vaccine Administered at Military Facility was No. History of all previous immunization with the Pfizer vaccine considered as suspect (or patient age at first and subsequent immunizations if dates of birth or immunizations are not available) was none. Additional Vaccines Administered on Same Date of the Pfizer Suspect was none. No AE(s) require a visit to Emergency Room or physician office. Prior Vaccinations (within 4 weeks prior to the first administration date of the suspect vaccine(s)) was none. The outcome of the event was recovered on 21Dec2020. The seriousness was reported as no. Information on the Batch/Lot number has been requested.

woke up with mild fever, and severe headache, lasted through the day, was gone upon waking next morning.

Severe body aches; chills; low grade fever 100.7; fatigue; muscle pain; This is a spontaneous report from a contactable nurse (patient). A 34-year-old female patient (pregnant: no) was received first dose BNT162B2 (brand: Pfizer BioNtech, lot number: EJ1685), via unspecified route of administration at arm right on 17Dec2020 12:30 PM at single dose for COVID-19 immunization. Medical history included Complex Migraines, prior to vaccination, the patient was diagnosed with COVID-19. Concomitant medication in two weeks included verapamil, amitriptyline, fish oil, magnesium, vitamin b2 [riboflavin], no other vaccine in four weeks. Patient previous took amoxicillin clavulanic acid (AUGMENTIN), butalbital caffeine paracetamol (FIORICET) and eletriptan hydrobromide (RELPAX) and had allergies to them. Patient experienced severe body aches, chills, low grade fever 100.7, fatigue, muscle pain on 18Dec2020 03:00 AM. the most recent COVID-19 vaccine was administered in Hospital. Since the vaccination, the patient has not been tested for COVID-19. No treatment received for the events. Patient was recovered from the events. It was reported as non-serious. No results in death, life threatening, caused/prolonged hospitalization, disabling/Incapacitating nor congenital anomaly/birth defect.

soreness at site of injectio and droziness

"Fever up to 100.4; Headache; Chills; Muscle pains; This is a spontaneous report from a contactable physician (patient). A 57-year-old male patient was received first dose BNT162B2 (reported ""Active Drug substance names: COVID 19"", lot number: EJ1685), via unspecified route of administration at left arm on 18Dec2020 05:15 PM at single dose for COVID-19 immunization. Medical history included hyperlipidaemia and COVID-19 (Prior to vaccination, was the patient diagnosed with COVID-19?:Yes), No known allergies. There are no other medications in two weeks and no other vaccine in four weeks. Patient experienced fever up to 100.4, headache, chills, muscle pains on 19Dec2020 12:00 PM (20Dec2020 00:00). the most recent COVID-19 vaccine was administered in Hospital. Since the vaccination, the patient has not been tested for COVID-19 (COVID was not tested post vaccination). Treatment for the event included paracetamol (TYLENOL). Patient was recovered from the events. It was reported as non-serious. No results in death, life threatening, caused/prolonged hospitalization, disabling/Incapacitating nor congenital anomaly/birth defect. Pfizer is a marketing authorization holder of COVID 19 vaccine in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of COVID 19 vaccine has submitted the same report to the regulatory authorities."

Patient reports that about 25 minutes after receiving the vaccine she began to feel like her throat was swollen and the her voice was changed and she had a feeling of pressure on her vocal chords. She also noted that she seemed to have an increase in heart rate. She took a dose of Benadryl and no further symptoms were experienced. She reports that these symptoms resolved by next day but she felt extreme fatigue for the next few days.

fever; Headache; fatigue; This is a spontaneous report from a contactable Other healthcare professional (patient). A 59-year-old male patient received BNT162B2 (lot number: EJ1685) first dose on 22Dec2020 07:30 AM on left arm at single dose for COVID-19 immunization. Medical history included HTN (Hypertension) and Allergies to PCN (Penicillin) and Sensitive to morphine. Concomitant medications included venlafaxine hydrochloride (EFFEXOR), atenolol, ergocalciferol (VIT D) and multivitamin. Facility type vaccine was Hospital. Patient had other vaccine (Trial) in four weeks, patient had it on 02Dec2020 first dose on Left Arm. Patient had other medications in two weeks: Effexor, atenolol, multivitamin, vit D. About 16 hrs (22Dec2020 11:00 PM) after injection patient began fever 100-101. Lasted about 20 hours. Relieved with ibuprofen. Headache and fatigue also. All resolved about 36 hours after injection. Patient did not have covid prior vaccination and no covid tested post vaccination. No treatment received for the adverse event. The outcome of the events was recovered. The seriousness was reported as no.

Patient received the vaccine, waited 15 minutes and had no difficulties. He presented back to the injection area with complaints of dizziness, slight chest and neck tightness. BP was slightly elevated. He was given 2 benadryl an taken to the ED where they monitored him. No further medication intervention needed.

Felt a little achey and a sore arm; This is a spontaneous report from a contactable consumer. An adult female patient of unspecified age was received first dose of BNT162B2 (Brand: Pfizer/BioNTech, lot number: unknown) via unspecified route of administration at single dose for COVID-19 immunization. Medical history and concomitant medication were unknown. It was unknown if other vaccine in four weeks. Patient felt a little achey and a sore arm on 21Dec2020. It was unknown if the patient diagnosed with COVID-19 prior to vaccination, it was unknown if the patient been tested for COVID-19 since the vaccination (unknown covid tested post vaccination). It was unknown if treatment received for the event. Outcome of the events was unknown. It was reported as non-serious. No results in death, life threatening, caused/prolonged hospitalization, disabling/Incapacitating nor congenital anomaly/birth defect. Information on the Batch/Lot number has been requested.

"Vertigo; Dizziness; Sore arm; This is a spontaneous report from a contactable Other healthcare professional (patient). A 63-year-old female patient received BNT162B2 (lot number EL0140) on 21Dec2020 2:30""pm on arm left at single dose for COVID-19 immunization. Medical history was none. Concomitant medications included multivitamin. She doesn't know if it is a side effect but today she has had vertigo that she has never had before, and a little bit of dizziness on and off. The vertigo started about 4:30am this morning (23Dec2020) when she got up to go to the bathroom. Everything was just spinning so she didn't go to the bathroom, she just laid down. She had it 2 more times but not anymore after that. Now she is just having some dizziness from time to time (Dec2020). She also specified that soreness is ""normal"" for her to experience ""after injection"". She has takes multivitamin but nothing that would be related to this event. She has just never had this happen before. It was given in his left upper biceps area. With previous vaccines she has had a sore arm but with this vaccine the sore arm wasn't that bad. It was sore that day (21Dec2020) and yesterday but today there is nothing, no soreness. She received no other vaccines that day or within 4 weeks of the vaccine. There is no significant family history. There have been no treatments for the events. The outcome of event vertigo and sore arm recovered on 23Dec2020. The outcome of event Dizziness was not recovered."

Shaking chills; body aches; nausea; vomiting; vertigo; This is a spontaneous report from a contactable Other-healthcare professional (patient). A 57-year-old female (not pregnant) patient received BNT162B2 (lot number: EH9899) first dose on 17Dec2020 02:00 PM intramuscularly on left arm at single dose for COVID-19 immunization. Medical history included Colon Cancer, Hypothyroidism, Allergic Rhinitis, Weight Loss Surgery, GERD, BPPV. Concomitant medications in two weeks included Levothyroxine, cetirizine hydrochloride (ZYRTEC), Escitalopram, MVI, Calcium, colecalciferol (VIT D3), cyanocobalamin (VIT B12). No Known allergies to medications, food, or other products. Facility type vaccine was Other. No other vaccine in four weeks. Patient experienced Shaking chills, body aches, nausea, vomiting and vertigo on 18Dec2020 03:30 AM. Patient received Zofran, Meclizine, Phenerga as treatment. Patient did not have covid prior vaccination and no covid tested post vaccination. The outcome of the events was recovering. The seriousness was reported as no.

Within two days of vaccine, shortness of breath on light exertion (talking, walking), ?revved up? like on steroid or medrol. Anxiety, increased resting HR, abdominal cramping, diarrhea, agitation, palpitations, fatigue, dazed, premenstrual spotting.

Temp 103, and very sore arm for 3 days; Temp 103, and very sore arm for 3 days; This is a spontaneous report from a contactable nurse reported for herself (patient). A 57-year-old female patient (pregnant: no) was received BNT162B2 (brand: Pfizer, Lot number: unknown) via unspecified route of administration on 19Dec2020 10:30 AM at single dose for COVID-19 immunization. Medical history included COVID-19 (Prior to vaccination, was the patient diagnosed with COVID-19?:Yes). Concomitant medication in two weeks of vaccination included simvastatin, acetylsalicylic acid (BABY ASPIRIN), docusate sodium (COLACE) and fish oil (FISH OIL OMEGA 3). no other vaccine within 4 weeks prior to the COVID vaccine. Patient used took ciprofloxacin (CIPRO) and had allergy. Patient experienced temp 103, and very sore arm for 3 days on 20Dec2020 02:00 AM. the most recent COVID-19 vaccine was administered in Hospital. Since the vaccination, the patient has not been tested for COVID-19. Since the vaccination, the patient has not been tested for COVID-19. Treatment received for the events included ibuprofen. Patient was recovered from the events in Dec2020. It was reported as non-serious. No results in death, life threatening, caused/prolonged hospitalization, disabling/Incapacitating nor congenital anomaly/birth defect. Information on the lot/batch number has been requested.

"12/28/20 called to observation area at 12:05. she had already waited 15 minutes after vaccine. reports tingling top of tongue, tingling ums, back of mouth/throat scratchy. 12:10 states no change, 12:12 rapid response and supervisor arrived - talked with her. decided to not go to ER unless worse, agreed will not go back to work or leave for home until sx resolved. 12:20 states gum tingling decreasing. 12:30 states sx resolved - left observation with instruction to return if sx. 12/29/20 came to vaccine area at 1045 to report injection site with 1"" redness, firm to touch. blanches, tender w/ pressing outer edge redness. arm size unchanged, noted when got up this morning. states sore, able to move arm. 1050 evaluated by rapid response and nursing supervisor. states otherwise feeling ok, no sx. supervisor drew circle around redness. suggested ice/anti-histamine. talked with her - to wait 30 minutes, to contact PCP if spreads. 1130 states no change, decided to RTW"

Severe arm pain at injection site.; No swelling but can barely move arm; Chills; fatigue; moderate headache; This is a spontaneous report from a non-contactable nurse (patient). A 27-year-old non-pregnant female patient receive first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), via an unspecified route of administration at left arm on 22Dec2020 at 10:00 AM at single dose for COVID-19 immunization at pharmacy or drug store. Medical history was none and there was no known allergies. Concomitant medication included oxybutynin hydrochloride (OXYBUTYNIN) and birth control received within 2 weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced severe arm pain at injection site, there was no swelling but can barely move arm, chills and fatigue and moderate headache, all on 22Dec2020 at 09:00 PM. There was no treatment for the events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The outcome of the events was not resolved. No follow-up attempts are possible. No further information is expected.

He was diagnosed with COVID 19; He was diagnosed with COVID 19; This is a spontaneous report from a contactable consumer (front line hospital worker) reporting for himself, received via a Pfizer sales representative. This male patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on an unspecified date in Dec2020, at single dose, for COVID-19 immunization. Medical history and concomitant medications were not reported. On an unspecified date in Dec2020, after vaccination, the patient was diagnosed with COVID 19 with unknown outcome. Information on the lot/batch number has been requested.

Pain at the injection site; This is a spontaneous report from a contactable Other Health Professional (patient) via Pfizer sales representative. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced pain at the injection site after Covid 19 vaccine on an unspecified date with outcome of unknown. Information on the Batch/Lot number has been requested.

Lightheadedness; This is a spontaneous report from a contactable Nurse (patient). A 60-year-old female patient (not pregnant at the time of vaccination) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EL1284), intramuscularly in arm left on 23Dec2020 16:30 at single dose for COVID-19 immunization. The patient medical history was not reported. Concomitant medication the patient received within 2 weeks of vaccination included colecalciferol (VIT D3), smilax aristolochiifolia (SARSAPARILLA), ascorbic acid (VIT C), dioscorea villosa (WILD YAM), multi collagen protein. The patient previously took codeine and experienced allergies: Codeine. The patient experienced lightheadedness on 23Dec2020 17:15 with outcome of recovered in Dec2020. Facility where the most recent COVID-19 vaccine was administered: Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No treatment received for the adverse event. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Identification of the case safety report: Serious: No; Seriousness criteria-Results in death: No; Seriousness criteria-Life threatening: No; Seriousness criteria-Caused/prolonged hospitalization: No;

Seriousness criteria-Disabling/Incapacitating: No; Seriousness criteria-Congenital anomaly/birth defect: No.

I begin chilling the next day after I received the vaccine and started running a low grade fever of 100.5-body aches, headache, fatigue and pain in the arm where I received vaccine x 2 days.

Tiredness; Chills; mild joint pain; Nausea; feeling unwell; he hasn't eaten; threw up; This is a spontaneous report from a contactable consumer (patient). A 28-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration by injection once in the left arm, near shoulder on 18Dec2020 at single dose for COVID-19 immunization. Medical history included asthma from 2009 and ongoing (Has asthma but he has no breathing symptoms, no runny nose, no dry cough, no shortness of breath, no COVID symptoms). There were no concomitant medications. The patient experienced tiredness on 20Dec2020 with outcome of not recovered, chills on 20Dec2020 with outcome of recovered on 20Dec2020, mild joint pain on 20Dec2020 with outcome of recovered on 20Dec2020, nausea on 20Dec2020 with outcome of not recovered, feeling unwell on 20Dec2020 with outcome of not recovered, he hasn't eaten in Dec2020 with outcome of unknown, threw up in Dec2020 with outcome of unknown. No runny nose, cough or anything. Investigation Assessment: No. The patient took the COVID vaccine and was having mild symptoms, which he wished to report, and he was seeking recommendations. He had the print out thing given with all the symptoms that may happen, he had tiredness, chills, mild joint pain, nausea, and feeling unwell. He was a COVD tester, which is why he got it last week. This is not his first date of symptoms. Nausea: He threw up Sunday and Monday, was nauseous on Tuesday, is nauseous now but feels better, he missed work on Monday, he went for 2 hours yesterday and was sent home, he didn't go in today, but is feeling more normal, but has been perpetually nauseous since Sunday, like 24/7, in the middle of the night, middle of day, for no reason. He ate yesterday, he hasn't eaten today, because he feels nauseous. States feeling unwell goes along with nausea, he can't separate the two. What kind of medicine should he take, like over the counter or Pedialyte. What would a person potentially take if they were nauseous. Pedialyte, fluid or something. States this is Pfizer, he guesses any guidance is medical. Information on the Lot/batch number has been requested.

"positive rapid COVID testing positive/COVID-19 PCR test positive; positive rapid COVID testing positive/COVID-19 PCR test positive; This is a spontaneous report from a contactable nurse (patient herself). A 42-year-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899, Expiration date: Mar2021), intramuscularly at site of right deltoid at 08:00 on 16Dec2020 at single dose for COVID-19 immunization. Medical history included ongoing high blood pressure. The patient received a flu shot in Oct2020. The patient's concomitant medications were not reported. The patient was tested positive for rapid COVID-19 testing on 21Dec2020 and was also positive for COVID-19 PCR test on 22Dec2020. No treatments after positive testing and patient was not hospitalized. The outcome of events was not recovered.; Sender's Comments: The reported ""tested positive for rapid COVID-19 testing"" after 4 days of immunization with BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) is considered related to BNT162B2 administration."

soreness at the injection site; slight fever; tiredness; This is a spontaneous report from a non-contactable consumer. A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 22Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced soreness at the injection site, slight fever and tiredness on 22Dec2020. The outcome of events was recovered in Dec2020. No follow-up attempts are possible; information about batch/ lot number cannot be obtained.

Mild symptoms such as muscle soreness; This is a spontaneous report from a Pfizer-sponsored program. A contactable physician (patient himself) reported that a 31-year-old male patient received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 vaccine, lot# EJ1685), via intramuscular on 17Dec2020 20:00 in right arm at single dose for routine vaccination. There were no medical history and concomitant medications. Vaccination facility type was hospital, not a military facility. No additional vaccines were administered on same date of the Pfizer suspect. Prior Vaccinations (within 4 weeks) was none. Event following prior vaccinations was none. Relevant test was not tested. Patient was calling about COVID vaccine. He got the vaccine last Thursday and experienced mild symptoms such as muscle soreness around 6 am on Friday, 18Dec2020. On Sunday, his family became symptomatic and got tested for COVID and tested positive. He wanted to know if the COVID vaccine could produce false positive and if he can get the second dose. Caller did provide medical information's number and patient would need to be transferred over. There was no prescriber. It was given as routine from the hospital that he worked at. ER (emergency room) or physician's office required was none. Outcome of event was recovering.

Just letting you know it felt like a bad flu shot, sore enough to avoid sleeping on, but it went away after a few days :) thank you for your hard work, let?s hope after Jan 20 you can do your jobs without restriction.

felt weak; Nauseated; unable to sleep; was sick for about 2 hours; got so cold and couldn't get warm/felt cold to her bones; This is a spontaneous report from a contactable consumer (patient herself). A 64-year-old female patient received BNT162B2 (Pfizer-BioNTech COVID-19 vaccine), via an unspecified route of administration on 21Dec2020 at single dose for covid-19 immunisation. There were no medical history and concomitant medications. Investigation assessment was no. Caller received the Covid-19 vaccine Monday (21Dec2020). She was sick for 2 hours yesterday (22Dec2020). She got so cold and couldn't get warm, after a while she felt better. She felt cold to her bones. Today (23Dec2020) she felt weak and was nauseated. She worked at hospital. She was a tech at the hospital. She was a frontline worker. When a vial became available, she was given the vaccine. She was also unable to sleep last night (22Dec2020). She was up most of the night. She clarified that when she said she was sick for about 2 hours she was referring to being cold. Outcome of cold was recovered on 22Dec2020, and outcome of other events were unknown. Information on the lot/batch number has been requested.

Lymphadenopathy; Injection site pain/pain and tenderness under her arm; Lethargy; tired/did not feel like getting out of bed; Headache; arm was swollen/her sleeve was tighter, 1.5-2 inches bigger than her other arm; This is a spontaneous report from a contactable nurse reporting on behalf of herself. This 50 years old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot EJ1685) on

19Dec2020 at 11:15, at single dose, in right deltoid, for COVID-19 immunization. No other vaccine was given on the same date or within 4 weeks before. Medical history included ongoing epilepsy, ongoing depression and anxiety, COVID in late Oct2020 early Nov2020 (so her manager advised her to get the vaccine), allergies as a child, ongoing allergy to penicillin that showed up on an allergy test, ongoing allergy to house dust and trees, things like that. She previously received influenza vaccine in Oct2020, for immunization. AE(s) following prior vaccinations: none. Family medical history relevant to AE(s): none. Concomitant medications included topiramate (TOPAMAX) and brivaracetam (BRIVIACT), both for years, for epilepsy and duloxetine HCl (CYMBALTA) from Aug2020, for depression and anxiety. The reporter related Cymbalta use to COVID. The patient experienced lymphadenopathy on 21Dec2020, headache on 20Dec2020, injection site pain on 20Dec2020 at 03:00, lethargy on 20Dec2020, tired on 20Dec2020, arm was swollen on an unspecified date in Dec2020. Lymphadenopathy was reported as medically significant. The other events were reported as non-serious. The reporter stated it was painful but everyone told her it would be so she expected that. At about 3 A.M. on 20Sun2020 she woke up to her arm hurting when she tried to turn on her right side. She had taken 2 of the arthritis strength paracetamol (TYLENOL) the night before because she was told it was going to hurt, that might have been the reason she did not notice it before then. This was just injection site pain. At this point, she still had some injections site pain and it was tender if bumped but it was better than before. On 20Dec2020 she did not go to church because she felt tired and did not feel like getting out of bed, she also had a headache but these things were expected by her. She stayed in bed till noon. She went to work on 21Dec2020 and in that morning when she went to apply deodorant she noticed pain and tenderness under her arm. Her arm was swollen and she noticed that her sleeve was tighter so she had her husband measured her arm and it was 1.5-2 inches bigger than her other arm. It was tight and tender, actually at this point it was more than tender when she put her deodorant on. She was also giving the vaccine. No other treatments were given and she had not called her doctor about this. No emergency room or physician office visit were not required. Relevant tests: none. Headache and lethargy resolved on 20Dec2020. Injection site pain was resolving. Lymphadenopathy had not yet resolved and was reported as aggravated. The outcome of the other events was unknown. The reporter considered there was a reasonable possibility that headache, injection site pain, lymphadenopathy, lethargy were related to BNT162B2 vaccine.; Sender's Comments: Based on available information, a possible contributory role of the subject drug cannot be excluded for the lymphadenopathy and the other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Tachycardia

was tired and slept more than usual; was tired and slept more than usual; Soreness in left arm; This is a spontaneous report from a contactable consumer reported for himself. A 71-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in left arm on 22Dec2020 13:50 at single dose for covid-19 immunisation. There were no medical history or concomitant medications. The patient got it at 1:50 pm, and got home and was really tired, so he said he was going to bed at 6pm and woke up at 7:30 feeling pretty refreshed. He then told himself, if he didn't get up, he wouldn't sleep at night, so he got up until 11:00 and slept until 8am. The patient was tired and slept more than usual on 22Dec2020 at 16:00. The only side effect was that he got a little bit more rest than normal. The other side effect is he got soreness in left arm and it was pretty sore unspecified date in Dec2020. He did not have any headaches or anything else. He was pretty satisfied. The outcome of the events was tired and slept more than usual was recovering while for other event was unknown. Information on lot/batch number has been requested.

rash on his forearm by his elbow/He said that the rash is also on the back of his of calf; injection site soreness; a little achy; tired; itching; could not sleep well; This is a spontaneous report from a contactable consumer (reporter). A 50-year-old male patient received bnt162b2 (BNT162B2, lot number EK5734), via an unspecified route of administration on 18Dec2020 18:30 at single dose for COVID-19 immunization. Medical history included asthma. He said that he took no other medication except for a multivitamin and his asthma medication. The patient said that within 5 hours of receiving the vaccine, he was a little achy and had injection site soreness. He said that he felt a little tired on Friday (18Dec2020) and Saturday (19Dec2020), but by Sunday (20Dec2020) it was gone. He said that starting Monday (21Dec2020), he noticed a rash on his forearm by his elbow. He said that his skins was normally sensitive and dry. He thought maybe it was not the vaccine and said that he used hand sanitizer that may have bothered it. He said that the rash was on the back of his tricep now though. He said that the rash was also on the back of his of calf. He said that it was itching. He stated that he treated it with triamcinolone cream for rash from his kid and it did not do anything. He said that he was following up with this primary care physician about this. He stated that it was so itchy and he could not sleep well. The outcome of the event tired was recovered on 20Dec2020 while for other events was unknown.

test positive for COVID-19; test positive for COVID-19; This is a spontaneous report from a contactable consumer (patient). A 26-year-old female patient received the first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 20Dec2020 at single dose in left arm for covid-19 immunization. There was none medical history or concomitant medications. The reporter reported that she got the vaccine on the 20Dec2020 and found out Monday (21Dec2020) that she was exposed to someone who was positive so they used a rapid test post exposure on the 22Dec2020 that the result was positive for COVID-19. She reported she knew that the vaccine would not have given her COVID, and it was likely she had it before she got the vaccine and didn't know she had it because she didn't have symptoms. The outcome was unknown. Information about lot/batch number has been requested.

Sore left arm the day of the vaccination near the site. Throughout the next morning I felt a progressively worsening sore neck, that evolved into a stiff neck by early afternoon. My neck is a bit swollen, on the same side I received the vaccination (Left).

arm feels sore and heavy; arm feels sore and heavy; This is a spontaneous report from a contactable nurse (patient). A 36-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient reported that arm felt sore and heavy on an unspecified date after vaccination. The outcome was unknown. No follow up attempts are possible; information about lot/batch number cannot be obtained.

the arm was quite sore; This is a spontaneous report from a contactable consumer (patient's friend). A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730, expiration date: Mar2021), via an unspecified route of administration on an unspecified date at single dose in arm for covid-19 immunization. The patient's medical history was and concomitant medications were not reported. The patient was a frontline healthcare worker, the patient said the arm was quite sore (far more than expected) after vaccination, but no problem after an hour or so. The outcome of the event was resolved.

head ache; sore arm; This is spontaneous report from a contactable nurse (patient). A 43-year-old female patient (non-pregnant) received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot #: lot number Eh9899), via an unspecified route of administration on 22Dec2020 at single dose for immunization. Medical history was none. The patient's concomitant medications were not reported. Patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, patient was not diagnosed with COVID-19. Since the vaccination, patient has not been tested for COVID-19. The patient experienced head ache after 24 hours, sore arm on 23Dec2020 18:00 with outcome of unknown. Patient didn't receive treatment for events. The report is considered non-serious. Information on Lot/ Batch number has been requested.

Slight alteration in smell. Smells are not as pungent and some smells are different then what they should be.

lymphadenopathy in left lower neck area above clavicle/swelling of lymph nodes; sick; sore throat; This is spontaneous report from a contactable other-healthcare professional (patient). A 45-year-old female patient (non-pregnant) received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot #: lot number Eh9899), via an unspecified route of administration on 16Dec2020 19:00 at single dose at left arm for immunization. Medical history included known allergies/shellfish. The patient's concomitant medications were not reported. Patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine, patient didn't receive other medication within 2 weeks of vaccination. Prior to vaccination, patient was not diagnosed with COVID-19. Since the vaccination, patient has not been tested for COVID-19. On 21Dec2020 07:00 AM, the patient experienced lymphadenopathy in left lower neck area above clavicle. Patient had never had this before but had felt sick since patient took the vaccine mainly the first day but sore throat not sure if related, then the swelling of lymph nodes. Patient didn't receive treatment for events. Outcome of events was not recovered. The report is considered non-serious.

Arm soreness; slight aches; slight fatigue; Large lump (lymph node maybe) under arm pit left arm; This is a spontaneous report from a contactable other health professional (patient). A 47-year-old male patient received first dose of BNT162B2 (Lot number: Eh9899) intramuscularly in left arm on 21Dec2020 10:00 at single dose for COVID-19 immunization. Medical history included COVID-19 from an unknown date and unknown if ongoing (COVID prior vaccination: Yes). There were no concomitant medications. The patient experienced arm soreness, slight aches, slight fatigue, large lump (lymph node maybe) under arm pit left arm all on 23Dec2020 03:00 AM. Treatment was not received. The patient underwent lab tests and procedures which included COVID test: COVID on an unspecified date. The outcome of events was not resolved. Facility where the most recent COVID-19 vaccine was administered in hospital. Prior to vaccination, the patient was diagnosed with COVID-19.

pain that worsened at injection site; pain that worsened at injection site; This is a spontaneous report from a non-contactable consumer (patient). A 43-year-old patient of an unspecified gender received BNT162B2 via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced pain that worsened at injection site over time on an unspecified date with outcome of unknown. No follow up attempts are possible; information about lot/batch number cannot be obtained.

dry mouth; my arm is sore at the injection site; my temperature is also slightly above baseline; It feels like I am dehydrated; my arm is sore at the injection site; This is spontaneous report from a contactable other health professional (Patient). A 32-year-old male patient received first dose of BNT162B2 (lot number: EJ1685), via an unspecified route of administration in left arm on 22Dec2020 17:45 at single dose for COVID-19 immunization. Medical history included psychiatric history, partially empty selle tursica, no other major Illnesses. Concomitant medication included testosterone, emtricitabine, tenofovir disoproxil fumarate (TRUVADA) for prevention. On 23Dec2020 09:00 AM, the patient was experiencing a dry mouth. This was unique because he never had this problem but his arm is sore at the injection site and he had a dry mouth, his temperature is also slightly above baseline, but not significantly. It felt like he was dehydrated but he was drinking lots of water. He had about 3/4 of a gallon today and his mouth was still dry. Almost like a cotton mouth feeling but very mild. It was only 3/10 on how bad it's bothering him. Treatment was not received. The patient underwent lab tests and procedures which included body temperature: slightly above baseline on an unspecified date. The outcome of events was not resolved.

--- 12/29/2020 11:02 AM by NOT AUTHENTICATED--- 1809: Patient is a 54 year old female presents requesting vaccination for COVID-19. Patient's identity was verified utilizing two patient identifiers. Allergies reviewed and patient has no history of severe allergic reactions. Patient reviewed vaccine information and given opportunity to ask questions: Yes Patient wants vaccine: Yes Pfizer-BioNTech COVID-19 vaccine # 1 in series administered, see Immunizations activity for vaccine details. Patient tolerated well and will remain for observation period to monitor. 1815: Patient is a 54 year old female COMPLAINED OF NO FEELING STRANGE, WITH TINGLING IN NECK ON BOTH SIDES. ADULT EMERGENCY WAS CALLED AND WATER WAS OFFERED TO PATIENT. RADIAL PULSE READ 110 BPM. SHE WAS TRANSFERRED TO HOSPITAL FOR EXTENSIVE OBSERVATION. NO APPOINTMENT WAS MADE FOR

SECOND VACCINE. 1817: Staff present and transported via w/c for eval. Pt. treated as noted below. Triage Note: C/O feeling ? Strange?. Tingling in neck. Pulse:110 Upon arrival, (Triage Note) Member received COVID vaccine, and shortly thereafter began to experience SOB, tingling in bilateral hand and back of neck and head, and elevated heart rate. Feels like symptoms have improved. Pt speaking in complete sentences, in no acute distress. Given Benadryl 25mg IV, Famotidine 40mg PO. Improved, Observed. D/C home at 2242.

area of swelling, erythema, induration, one inch by 2.5 inches from the injection site and downwards, noted 24 hours after injection; area of swelling, erythema, induration, one inch by 2.5 inches from the injection site and downwards, noted 24 hours after injection; area of swelling, erythema, induration, one inch by 2.5 inches from the injection site and downwards, noted 24 hours after injection; This is a spontaneous report from a non-contactable physician (patient). A 31-year-old female patient received BNT162B2 (lot number: e51685), via an unspecified route of administration in left arm on 22Dec2020 at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced area of swelling, erythema, induration, one inch by 2.5 inches from the injection site and downwards, noted 24 hours after injection in Dec2020. The outcome of events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

muscle soreness; fatigue; This is a spontaneous report from a contactable nurse (patient herself). A 42-year-old female patient (non-pregnant) received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EK5730), intramuscular on 22Dec2020 07:30 at single dose at left arm for immunization. Medical history included PCOS, allergy to ragweed, grass. The patient's concomitant medications were not reported. Patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, patient was not diagnosed with COVID-19. Since the vaccination, patient has not been tested for COVID-19. On 22Dec2020 10:00 AM, the patient experienced muscle soreness and fatigue. Patient was unsure if the fatigue was from lack of sleep before working 12 hours and then getting the vaccine, or from the vaccine itself. Patient was recovered from all events in Dec2020, and didn't receive treatment. The report is assessed as non-serious. Information on the lot/batch number has been requested.

Woke up next morning after vaccine with chills and sweats and bodyaches. He has been fatigued. He has been nauseated and headache as well. Fever of 102.4 degrees and chills and sweats back and forth.

Headache; muscle aches; fatigue; possible fever; This is a spontaneous report from a contactable other healthcare professional (hcp) (patient). A 26-year-old female non-pregnant patient received first dose of BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine, lot number: EH9833), intramuscularly on 22Dec2020 10:30 at a single dose in left arm for COVID-19 immunization. There was no medical history. Concomitant medication included fluoxetine received within 2 weeks of vaccination. There were no other vaccines received in four weeks. No known allergy. The patient experienced headache, muscle aches, fatigue, and possible fever, all on 23Dec2020 18:30. No treatment received for these events. The patient did not have COVID prior vaccination. Since the vaccination, the patient had not been tested for COVID-19. The outcome of events was unknown.

severe myalgias, fever of 100.6*F, malaise, fatigue for the past 12 hours (approximately 12-18 hours after receiving the vaccine). Patient of note, had COVID19 infection in July 2020. She tested negative for COVID19 this morning (screening done/ordered after reporting her initial symptoms).

skin reaction of circles on forearm and trunk; This is a spontaneous report from a contactable nurse (patient). A 46-year-old male patient received BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine), via an unspecified route of administration on 22Dec2020 09:15 at a single dose for COVID-19 immunization. He is fair skinned. There were no medical history or concomitant medications. The patient experienced skin reaction of circles on forearm and trunk on 23Dec2020. The outcome of event was unknown. This case is reported as non-serious by reporter. The causality between event skin reaction of circles on forearm and trunk and BNT162B2 is related by Primary Source Reporter per Global Introspection. Information on the lot/batch number has been requested.

Cough; voice sounded different; not feeling great; Chest congestion; Nasal congestion; sore arm; Fatigue; body ache; This is a spontaneous report from a contactable consumer, the patient. A 27-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EK5730), via an unspecified route of administration in the left arm on 20Dec2020 (at the age of 27-years-old) as a single dose for COVID-19 immunisation. The patient did not have any relevant medical history. She never had any reactions to any vaccines prior. Prior to this vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications included loratadine (CLARITIN) and unspecified birth control. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 21Dec2020, the patient experienced sore arm, fatigue, and body ache. On 22Dec2020, the patient developed nasal congestion and chest congestion. On 23Dec2020, the patient had a cough, her voice sounded different, and was not feeling great. Since the vaccination, the patient had not been tested for COVID-19. However, in May2020, she was tested for COVID-19 antibodies and was negative. The clinical outcomes of fatigue, body ache, nasal congestion, chest congestion, cough, voice sounded different, and not feeling great were not recovered; while that of the sore arm was recovered on 22Dec2020.

Employee started exhibiting sx 10 minutes after vaccine administration. She started having chest heaviness, difficulty breathing and became tachycardic. Employee was sent to the emergency room.

Fever 100; cough; fatigue; This is a spontaneous report from a contactable Nurse (patient). A 33-year-old female patient (not pregnant) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EJ1685), intramuscularly in right arm on 20Dec2020 16:15 at single dose for COVID-19 immunization. Medical history included Hashimotos, PCOS, hyperlipidemia. Concomitant medication the patient received within 2 weeks of vaccination included levothyroxine sodium (LEVOTHYROXIN), neomycin hydrochloride;polymyxin b sulfate (neomycin and polymyxin b sulfates otic solution). The patient previously took ciprofloxacin hydrochloride (CIPRO) and experienced drug allergy. Facility where the most recent COVID-19 vaccine was administered: Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient experienced fever 100, cough, fatigue, all on 22Dec2020 13:00 with outcome of not recovered. The

patient underwent lab tests and procedures which included pyrexia: fever 100. AE resulted in: None of the above. It was unknown if treatment received for the adverse event. Serious (NO). Seriousness criteria-Results in death (NO). Seriousness criteria-Life threatening (NO). Seriousness criteria-Caused/prolonged hospitalization (NO). Seriousness criteria-Disabling/Incapacitating (NO). Seriousness criteria-Congenital anomaly/birth defect (NO).

Symptoms clarified as body aches and pains like her bones aching; Symptoms clarified as body aches and pains like her bones aching; This is a spontaneous report from two contactable consumers (one was patient herself). A 54-year-old female patient received the first dose of NT162B2 (Pfizer-BioNTech COVID-19 vaccine, lot# EJ1685), via an unspecified route of administration on 21Dec2020 in right arm at single dose for vaccination. Medical history included hypertension. Concomitant medication included lisinopril from 2017 and ongoing for hypertension. This Medical Assistant called to report on behalf of herself, not a healthcare professional. She had her first dose of Pfizer COVID-19 Vaccine on 21Dec2020. She reported she developed symptoms which she clarified to be body aches and pains like her bones aching. Symptoms clarified as body aches and pains like her bones aching: onset 22Dec2020 around 10:00am. By around 8:00pm on 22Dec2020 this event pretty much went away, but she can still feel the body aches and pains like her bones aching on and off; event had improved now. She was taking paracetamol (TYLENOL) 1000mg every 6 hours for this event. She was scared she was gonna not be alive after getting this vaccine; because she was very sensitive with flu shots. She clarified that she got flu shot on 30Oct2020 at the institution where she worked and did not get sick with that flu shot. Second dose in series scheduled for 11Jan2020-she did not plan to change dose at this time. Outcome of events were recovering.

Myalgias; Left leg sensitivity; Fatigue; This is a spontaneous report from a non-contactable Other Health Professional. A 38-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EJ1685), intramuscularly on 21Dec2020 at single dose for COVID-19 immunization. Medical history included COVID from an unknown date and unknown if ongoing (Prior to vaccination, was the patient diagnosed with COVID-19: Yes). The patient's concomitant medications were not reported. Facility where the most recent COVID-19 vaccine was administered: Hospital. Did the patient receive any other vaccines within 4 weeks prior to the COVID vaccine: No. Was treatment received for the adverse event: No. Since the vaccination, has the patient been tested for COVID-19: No. The patient experienced myalgias, left leg sensitivity, fatigue on 21Dec2020 with outcome of recovered in Dec2020. AE resulted in none. Serious: No: Seriousness criteria-Results in death: No. Seriousness criteria-Life threatening: No. Seriousness criteria-Caused/prolonged hospitalization: No. Seriousness criteria-Disabling/Incapacitating: No. Seriousness criteria-Congenital anomaly/birth defect: No. No follow-up attempts are possible. No further information is expected.

Pt reports approximately 5-6 hours after waking he begins to feel very flushed and hot. After that, he begins to have severe dizziness, to the point that he is unable to ambulate, instead having to crawl across the floor. He checked his blood pressure and blood sugar, both of which were within normal limits. The dizziness can last several hours and is only resolved if he goes to sleep.

Injection site soreness; This is a spontaneous report from a contactable other healthcare profession (hcp) (patient). A 54-year-old non-pregnant female patient received first dose of BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine, lot number: EJ1685), intramuscularly on 21Dec2020 16:30 at a single dose in left arm for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. No known allergies. The patient experienced injection site soreness on 21Dec2020 17:00. No treatment received for this event. The patient underwent lab tests and procedures which included COVID test type post vaccination (Nasal Swab): negative on 14Dec2020. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. This is a non-serious report. The outcome of event was recovering.

Dizziness for about 1 hour; This is a spontaneous report from a contactable other health professional (patient herself). A 43-year-old female patient (non-pregnant) received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 vaccine, lot# EJ1685), via an unspecified route of administration at 23Dec2020 01:00 in left arm at single dose for covid-19 immunization. Medical history included slightly elevated BP (blood pressure) and gastrooesophageal reflux disease (GERD). Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Concomitant medication included omeprazole (PROTONIX) and lisinopril. The patient experienced dizziness for about 1 hour on 23Dec2020 01:30 with outcome of recovering. No treatment was received for the event.

rash; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient experienced rash after first vaccine on an unspecified date with outcome of unknown. Information on the lot/batch number has been requested.

Pt reports approximately 5-6 hours after waking he begins to feel very flushed and hot. After that, he begins to have severe dizziness, to the point that he is unable to ambulate, instead having to crawl across the floor. He checked his blood pressure and blood sugar, both of which were within normal limits. The dizziness can last several hours and is only resolved if he goes to sleep.

Chills; dizziness; high blood pressure; This is a spontaneous report from a contactable nurse (patient). A 50-year-old female patient (not pregnant) received first dose of BNT162B2 (lot number: EJ1685), via an unspecified route of administration in right arm on 22Dec2020 16:45 at single dose for COVID-19 immunization. Medical history included GERD (gastrooesophageal reflux disease) from an unknown date and unknown if ongoing. Concomitant medication included omeprazole (PRILOSEC), cetirizine, ascorbic acid (VIT C), ergocalciferol (VIT D), zinc, magnesium. The patient experienced chills, dizziness, high blood pressure on 22Dec2020 17:30. Treatment fluids was received. The patient underwent lab tests and procedures which included blood pressure: high on 22Dec2020. Facility type vaccine: Hospital. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The adverse event result in emergency room/department or urgent care visit, treatment was received for the adverse event (fluids). The outcome of events was resolving.

Experienced right arm tingling and the tingling went up into the right side of her neck. Experienced a few minutes of chills and heart racing.

Dizziness; Headache; chest pain; This is a spontaneous report from a non-contactable physician (patient). A 40-year-old female non-pregnant patient received BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine), intramuscularly on 23Dec2020 13:00 at a single dose in arm for COVID-19 immunization. Medical history included known allergies: roasted chestnuts. Concomitant medication included ascorbic acid, betacarotene, biotin, calcium carbonate, calcium phosphate, chlorine, colecalciferol, cupric oxide, ferrous fumarate, folic acid, iodine, magnesium oxide, manganese sulfate, molybdenum, nickel sulfate, nicotinamide, pantothenic acid, phosphorus, potassium chloride, pyridoxine hydrochloride, retinol acetate, riboflavin, selenium, silicon, thiamine, tin, tocopherol, vanadium, vitamin b12 nos, zinc oxide (MULTIVITAMINS & MINERALS PLUS LUTEIN) within two weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced dizziness, headache, chest pain, all on 23Dec2020 21:30. No treatment received for the event. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of events was recovering. This is a non-serious report. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Swollen, firm, tender infraclavicular lymph node on side ipsilateral to injection site. Swollen to the extent where it is visible without need for palpation.

I had a very mild soreness on my right jaw at about 10 mins about my shot.

Headache; Pain and swelling at the injection site.; Pain and swelling at the injection site.; This is a spontaneous report from a contactable nurse (patient) from a Pfizer sponsored program. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient experienced pain and swelling at the injection site on 19Dec2020. They told her she could only take paracetamol (TYLENOL). Then she was reporting a headache on 23Dec2020 and was asking if she could take ibuprofen (ADVIL) as well. The outcome of the event was unknown. Information on the lot/batch number has been requested.

Minor headache; This is a spontaneous report from a contactable nurse (patient). A 39-years-old male patient started to receive bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) , intramuscular at 10:30 22Dec2020 at the first single dose for covid-19 immunisation. Vaccine location was Left arm. The patient medical history was not reported. No covid prior vaccination; No covid tested post vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient's concomitant medications were not reported. The patient experienced minor headache in Dec2020. The outcome of event was unknown. Information on the lot/batch number has been requested.

Mild/moderate nausea starting 24 hrs after vaccine, continuing for 10 hours now and has not subsided. Mild injection site soreness; Mild/moderate nausea starting 24 hrs after vaccine, continuing for 10 hours now and has not subsided. Mild injection site soreness; This is a spontaneous report from a contactable

other health professional reported for herself. A 40-year-old female patient (pregnant at the time of vaccination was reported as No) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly on 22Dec2020 13:00, on Right arm, at single dose for COVID-19 immunization. Medical history included migraines, anxiety. Concomitant medications included fluoxetine, Vit B complex, ergocalciferol (VIT D), cetirizine hydrochloride (ZYRTEK). The patient previously took Iohexol and experienced allergies. The patient reported mild/moderate nausea starting 24 hrs after vaccine on 23Dec2020 13:00, continuing for 10 hours now and had not subsided. Also reported Mild injection site soreness on 23Dec2020 13:00. No treatment was received for the adverse events. The outcome of the events were not resolved. Information on the lot/batch number has been requested.

Went to the PMD a day later for routine blood work and found I have significantly elevated LFTs with ALT and AST 400s

Within 6-8 minutes of receiving vaccine, looked at cell phone to text husband and could not focus on the keys (Blurred vision), then felt a rush/tingling sensation thru whole body, as if the medication starting/moving from my arm all the way down my legs, some dizziness and heart rate increased - I believe to 120. No increased BP, SOB, itchiness, closed throat feeling, hives. Heart felt like it was racing for about 10 minutes. RN at site checked BP and heart rate 5 times in 40 minutes. Left facility and was able to drive myself home. Later that evening, soreness at injection site for 36 hours. No fever, chills, body aches.

"Fast heart rate, heart rate kept fluctuating went to 120 then 112 then 90 and 80, it went high for like at least half an hour, I kept feeling that palpitation; Sweaty; Tired; Body pain and ache; This is a spontaneous report from a contactable Consumer (patient). The 39-years-old female patient received bnt162b2 (BNT162B2), unknown on unknown date in Dec2020 at single dose for COVID-19 immunisation. Medical history and concomitant medications were none. Consumer stated, ""I am calling because I got the COVID Vaccine yesterday morning and then after I got the vaccine I had a fast heart rate and then my heart rate kept fluctuating, it went to 120 then 112 then 90 and 80 and it kept, it went high for like at least half an hour not more and then I kept feeling that palpitation and then today I am still feeling sweaty, tired, body pain and ache. So, I want to see what should I do regarding that? Is that considered like a severe allergic reaction and I need to do something about it or what should I do? So, I contact my employee health and they told me I need to contact you guys."" The outcome of the event Palpitation was unknown and was not recovered for the rest events. Information on the lot/batch number has been requested"

Moderna COVID-19 Vaccine EUA: injection site soreness for 36 hours

Chills/chills in the night; Headache, very severe headache very painful; Pain at the injection site; Little bit of stomach cramping and pain; probably a fever too; Little pain; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration on 22Dec2020 at single dose for Covid-19 immunisation. The medical history and concomitant medications

were not reported. The patient experienced chills, headache, very severe headache very painful, pain at the injection site, little bit of stomach cramping and pain and probably a fever too, little pain and chills in the night in Dec2020. The outcome of the events was unknown.

notable pain at the injection site; This is a spontaneous report from a contactable consumer (patient) via Pfizer Sales Representative. This 40-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 23Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the COVID vaccine on 23Dec2020, that evening he was having notable pain at the injection site. The outcome of the event was unknown. Information on the lot/batch number has been requested.

body aches, chills, rigors, headache, fatigue, lymphadenopathy on the side of the injection

"I started getting achy; Headache; Joint pain; I started developing congestion; Cough; Sore throat; Fatigue; This is a spontaneous report from a contactable consumer (patient). A 23-years-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EH9899) via an unspecified route of administration in right arm on 17Dec2020 at single dose for COVID-19 immunization. There was no medical history. There were no concomitant medications. The patient got the vaccine (Covid vaccine) on this past Thursday the 17 and he first didn't show any symptom or anything like that and then later at night and then in the beginning of morning of 18Dec2020, he started showing some symptoms. He started getting achy, he guessed little bit joint pain and started to get headache and didn't take too much of it neither of those side effects and as he found out last night apparently he had a positive exposure on the 18th the following day and didn't find out until last night but after the 18th he started showing different symptoms, he can't find better with the vaccine so he started developing congestion, cough, sore throat and a little bit of fatigue (all on Dec2020). He is going to get tested now and they have told him that the test, the vaccine should not affect the test itself. He received a medication for his headache. Treatment reported as the only thing he took was Tylenol. His height was about 5""8 or 5""9. Events outcome was unknown."

Continued fevers after 24 hrs after injection and body aches; Continued fevers after 24 hrs after injection and body aches; This is a spontaneous report from a contactable nurse(patient). The 25-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular on 22Dec2020 09:45AM at single dose(dose number was 1) at left arm in workplace Clinic for covid-19 immunisation. Medical history and concomitant medications were none. She was not pregnant, no known allergy to medications, food, or other products. There is no Covid prior vaccination, no covid tested post vaccination. There is no other vaccine received in four weeks, no other medications in two weeks. The patient experienced continued fevers after 24 hours after injection and body aches on 23Dec2020 06:00AM. There is no treatment received. Outcome of events was not recovered. Case considered non-serious. Information on the Batch/Lot number has been requested.

soreness in the injection; headache; This is a spontaneous report from a Non-contactable Nurse reported for herself. This female patient of an unspecified age received the first dose of BNT162B2

(PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for Covid-19 immunisation. The medical history and concomitant medications were not reported. The patient had the first dose of the vaccine and mentioned that she experienced the expected adverse events of soreness in the injection site and headache. She said she felt better after multiple ibuprofen (ADVIL). The outcome of the events was recovering. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Moderna COVID-19 Vaccine EUA

she felt sleepy and cold; she felt sleepy and cold; a bit dizzy; This is a spontaneous report from a contactable consumer reported for cousin. A female patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 23Dec2020 at single dose (lot number: Ek5730) for COVID-19 immunization. Medical history and concomitant medications were unknown. The patient got the vaccine on the morning of 23Dec2020. She said she felt sleepy and cold. The patient said she felt better this afternoon. A pinch, the patient felt cold and sleepy. She could take a nap. The patient felt a bit dizzy when she got out of her chair just now. Outcome of the events was recovering. No follow-up attempts are possible. Information about lot/batch number cannot be obtained.

Drowsiness; This is a spontaneous report from a contactable pharmacist reported for self. This 43-year-old female patient (not pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on an 23Dec2020 14:15 on Arm left at single dose for covid-19 immunisation. Medical history included Seasonal allergy. No allergies to medications, food, or other products. Concomitant medications were none. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No any other medications the patient received within 2 weeks of vaccination. The patient experienced drowsiness on 23Dec2020 16:30. Prior to vaccination, was the patient did not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. No treatments were received for the event. Outcome of the event was Not recovered. Information about lot/batch number has been requested.

"Patient notified me this morning that his clavicle (on the same side as injection) is ""very swollen."" Patient was advised to follow up with his PCP and report event through V-Safe."

Left arm/shoulder pain; Left arm/shoulder pain; Sternal pain; Fatigue; Headache; This is a spontaneous report from a contactable Other HCP (patient). A 33-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on left arm on 23Dec2020 16:00 at single dose for COVID-19 immunization. The patient medical history was not reported. There were no known allergies, no allergies to medications, food, or other products. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19, since the vaccination, the patient has not been tested for COVID-19. The patient experienced left arm/shoulder pain, headache, sternal pain, and fatigue on 24Dec2020. No treatment was received

for the adverse events. Events outcome was not recovered. Information on the lot/ batch number has been requested.

Night sweat; Soreness of the thighs; This is a spontaneous report from a contactable Nurse (patient). A 47-years-old female patient received bnt162b2 (Batch/lot number: EJ1685), via an unspecified route of administration on 22Dec2020 16:30 at single dose for covid-19 immunisation. Medical history was none. There were no concomitant medications. The patient experienced night sweat on 22Dec2020 with outcome of unknown, soreness of the thighs on 22Dec2020, which was ok with outcome of recovered on Dec2020.

Onset of body aches 12h after vaccination, lasted for 24h; This is a spontaneous report from a contactable other healthcare professional reporting for a patient. A 26-year-old female patient (no pregnant) received her dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Batch/lot number: EH9899), via an unspecified route of administration on 21Dec2020 at single dose for COVID-19 immunization. Medical history was not reported. The patient had no allergies to medications, food, or other products. The patient's concomitant medications were not reported. The patient experienced onset of body aches 12h after vaccination on 21Dec2020, lasted for 24h. No treatment received for the event. The event was reported as non-serious. The most recent COVID-19 vaccine was administered in Hospital. The patient had not received any other vaccines within 4 weeks prior to the COVID-19 vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The outcome of the event was resolved in Dec2020.

Arm soreness lasting 24 hours; This is a spontaneous report from a contactable Nurse reporting for herself. A 48-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Lot number EK5730, intramuscularly on 15Dec2020 14:00 at the right arm at single dose at workplace clinic for COVID-19 immunisation. There were no medical history and no concomitant medications. There were no allergies to medications, food, or other products. The patient did not receive any other medications within 2 weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient had no COVID prior vaccination. The patient did not have COVID tested post vaccination. The patient experienced Arm soreness lasting 24 hours on 15Dec2020 16:00. The event was reported as non-serious. Treatment was not received for the adverse event. The outcome of the events was recovered on an unspecified date in Dec2020.

Tenderness in injection site; This is a spontaneous report from a non-contactable Other HCP (patient). A 34-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Lot number EJ1685, via Intramuscular route of administration on 23Dec2020 11:15 at single dose on left arm for COVID-19 immunization. Medical history included Gastrooesophageal reflux disease (GERD), Postpartum Depression. Concomitant medication included sertraline. The patient previously received nickel, amoxicillin, penicilline, hepatitis b vaccine and had allergies. The patient had not received other vaccine in four weeks. The patient had no covid prior vaccination. The patient had no covid tested post vaccination. The patient experienced Tenderness in injection site on 24Dec2020. The outcome of the event was resolving. No follow-up attempts are possible. No further information is expected.

105 degree fever, chills, fatigue, pain in injection site that extended to neck, shoulder, right breast, and right leg and thigh. Headache. These symptoms were at there worst for first 48 hours. I am now at day 5 and continue with headache, arm pain and right leg tingling.

Body aches and weakness; Body aches and weakness; Really fatigued; Sore arm; Chills; This is a spontaneous report from a contactable consumer (patient). This 25-years-old female patient (no pregnant) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EH9899) on 23Dec2020 02:15 PM on Right arm for COVID-19 immunization. Medical history and concomitant drug were not reported. Past drug was known allergies with pethidine hydrochloride (DEMEROL). No other vaccine in four weeks, no other medications in two weeks. It was reported that patient experienced really fatigued, sore arm, chills and slight body aches and weakness (all reported as non-serious) on 23Dec2020 08:00 PM with outcome was Recovered in an unspecific date in Dec2020. No treatment. No COVID prior vaccination. No COVID tested post vaccination. Prior to vaccination no diagnosed with COVID-19. No follow-up attempts are possible. No further information expected.

Ten minutes after vaccine administration, employee started feeling very nauseated. She became tachycardic and became very blotchy across her chest and left arm. Employee was sent to the emergency room for evaluation.

Right nipple soreness and swelling; Right nipple soreness and swelling; This is a spontaneous report from a contactable physician (patient). This 73-year-old male patient reported that he received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730), via intramuscular at arm right on 19Dec2020 03:00 PM at single dose for COVID-19 immunization. Medical history was none. Prior to vaccination, the patient was not diagnosed with COVID-19. No allergies to medications, food or other products. Concomitant medication was not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient received no new medications within 2 weeks of vaccination. Since the vaccination, the patient had not been tested for COVID-19. Patient experienced right nipple soreness and swelling on 22Dec2020. No treatment was received for the adverse event. It was reported as non-serious. Outcome of event was not recovered.

swelling right under the arm (mentioned axilla); This is a spontaneous report from a contactable consumer (patient herself). A female patient of an unspecified age received bnt162b2 (BNT162B2 also reported as PFIZER-BIONTECH COVID-19 VACCINE) , via an unspecified route of administration on unspecified date at single dose, for immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced swelling right under the arm (mentioned axilla) on an unspecified date. The outcome was unknown. Information about batch/lot number has been requested.

Sore arm a few hours after injection but very mild on first day. Day 2 arm soreness was worse and throbbed at times and was slightly warm to touch with mild swelling but relieved with ibuprofren. Day 3 arm sore but just barely noticeable. Soreness gone on day 4. No treatment needed other than the ibuprofren.

Arm soreness for 24 hours. Muscles aches and chills in the evening after the vaccine.; Arm soreness for 24 hours. Muscles aches and chills in the evening after the vaccine.; Arm soreness for 24 hours. Muscles aches and chills in the evening after the vaccine.; This is a spontaneous report from a non-contactable physician reported for self. provided for the events lightheadedness and confusion. The outcome of the events lightheadedness and confusion was recovered on 22Dec2020. No follow-up attempts are possible. No further information is expected.

Employee developed a severe headache approximately 10 minutes after vaccine administration.

Extreme fatigue and nausea and vomiting; Extreme fatigue and nausea and vomiting; Extreme fatigue and nausea and vomiting; This is a spontaneous report from a contactable nurse. A 40-years-old female patient started to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), Batch/lot number: Unknown, intramuscularly on 23Dec2020 11:30 (at the age of 40-years-old) as a single dose in the right arm for COVID-19 immunization. The patient did not have allergies to medications, food, or other products. Concomitant medication included metformin, zolpidem tartrate (AMBIEN), venlafaxine hydrochloride (EFFEXOR XR). The most recent COVID-19 vaccine was administered in the hospital. The patient was not pregnant at the time of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. On 23Dec2020 14:30, the patient experienced extreme fatigue and nausea and vomiting. The extreme fatigue and nausea and vomiting did not result in death, was not life-threatening, did not cause/prolonged hospitalization, was not disabling/incapacitating and did not cause congenital anomaly/birth defect. No treatment was received for the event. Outcome of the event extreme fatigue and nausea and vomiting was recovering. Since the vaccination, the patient has not been tested for COVID-19. Information on lot/batch number has been requested.

muscle ache, fatigue, hoarse throat, flushed skin, chills

Sore arm; nausea; This is a spontaneous report from a contactable nurse reporting for self. A 43-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), Lot# EH9899, via an unspecified route of administration in the right arm on 19Dec2020 at 15:30 (at the age of 43-years-old), as a single dose for COVID-19 immunization. The patient was not pregnant at the time of vaccination. The vaccine was administered in a hospital facility. There was no prior COVID-19 vaccination. The patient was not diagnosed with COVID-19 prior to vaccination & not COVID tested post vaccination. Medical history was none. Concomitant medications were not reported; however, there were no other medications the patient received within 2 weeks of the vaccination. The patient did not receive any other vaccine within 4 weeks prior to the COVID vaccine. There were no known allergies to medication, food, or other products. The patient experienced sore arm for 24 hours, then from about 34-72 hours had nausea. The onset date and time for the events was reported as 19Dec2020 at 15:30. The events were reported as non-serious. There was no treatment for the events. The patient recovered from the sore arm and nausea on an unspecified date.

"hearing in his left ear started sounding muffled; I was given the shot and instantly, within 30 seconds felt a slight numbing feeling radiating up my arm, then to my neck and up the left side of my face.My tongue felt a little numb but not swollen; had that ""metal"" taste in my mouth, but that did not return; This is a spontaneous report from a contactable other HCP. A 58-year-old male patient received BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine) (lot number EL1284), intramuscularly in the left arm on 23Dec2020 at 07:00 (at the age of 58-years-old) as a single dose for COVID-19 immunization.

Medical history included high blood pressure from an unknown date and unknown if ongoing and latex allergy from an unknown date and unknown if ongoing. There were no other vaccines received within 4 weeks of the BNT162B2 vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medication included nebivolol hydrochloride (BYSTOLIC), fish oil (FISH OIL), naproxen sodium (ALEVE) and bifidobacterium lactis (PROBIOTIC [BIFIDOBACTERIUM LACTIS]). On 23Dec2020 at 07:00 (within 30 seconds of the vaccination as reported), the patient felt a slight numbing feeling radiating up his arm, then to his neck and up the left side of his face. Then, within 15 minutes, his hearing in his left ear started sounding muffled. His tongue felt a little numb but not swollen. It was reported when he first started feeling the numbing feeling, for about a split second, he had a metal taste in his mouth, but that did not return. It took about 1.5 hours for the numbness to go away. No therapeutic measures were taken as a result of the events. Clinical outcome of the numbness was resolved on 23Dec2020 at 08:30. Clinical outcome of the metal taste in his mouth and hearing in his left ear sounded muffled was unknown. It was also reported that since the vaccination, the patient tested negative for COVID-19 on 23Dec2020."

Headache, body aches and pain, lower back pain, high blood pressure, injection site soreness

severe shoulder pain/injection in left shoulder once, close to shoulder higher up; states it was not on the deltoid, it was given higher than normal; This is a spontaneous report from a contactable consumer (patient). A 61-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Lot number EJ1685, on 23Dec2020 13:30 at single dose by injection in left shoulder once, close to shoulder higher up for COVID-19 immunization. Medical history and concomitant medication were none. The patient received the shot yesterday, and her only experience she was having was severe shoulder pain, and she was wondering if it was possible to just take Aleve, they mentioned taking Tylenol, but she was wondering if Naprosyn was ok to take. Towards yesterday evening, she noticed the severe shoulder pain, she received it at 1:30 in the afternoon, and noticed probably around 9PM, all night was just pain like as if someone or else you overexert with exercise, that kind of pain. She hadn't taken anything, she wondered if it was ok to take Aleve, no one seemed to know. She stated the dose was not given on the deltoid, it was given higher than normal. The outcome of severe shoulder pain was not resolved.

Weakness in the left side of face; and fatigue. 1112 am went to observe patient in her room. Laying in the bed with left side droopiness to face. Weakness on left side only, nurse taking care of her stated just happened. On observation it appears to be Bells Palsy reaction. No treatment at the time, Hospice nurse is to visit her today and check on her. Staff will check on her every 30 min for the next few hours and do a pulse oximeter check every hour for next few hours. 1205 second check on patient in room prior to staff leaving. Patient squeezed my hand and opened her eyes on command. Pulse saturation was 95 per staff. Patient resting comfortable with no signs of trouble breathing.

"I don't feel so good; This is a spontaneous report from a non-contactable consumer, the patient. A female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration on an unknown date as a single dose for COVID-19 vaccination. Medical history was unknown. The patient's concomitant medications were not reported. On an unknown date, the

patient reported ""I don't feel so good and I don't want to go to the hospital."" The clinical outcome of "" don't feel so good"" was unknown. No follow-up attempts are possible. Information on the lot/batch number cannot be obtained."

pruritic rash in pubic area moving up; This is a spontaneous report from a contactable nurse (patient). A female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, lot number:EH9899), via an unspecified route of administration in the left arm on 21Dec2020 at 11:00 AM as a single dose for COVID-19 vaccination. Medical history included cardiomyopathy and hypothryroid. The patient did not have any allergies to medications, food, or other products. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported; however, there were other medications the patient received within 2 weeks of the vaccination. The patient did not receive any other vaccine within 4 weeks prior to the vaccine. On 22Dec2020 at 08:00 AM, the patient experienced pruritic rash in pubic area moving up. The report was reported as non-serious. The patient was not treated for pruritic rash in pubic area moving up. The clinical outcome of pruritic rash in pubic area moving up was not recovered. It was also reported that since the vaccination, the patient had not been tested for COVID-19.

chills; body aches; fatigue; This is a spontaneous report from a contactable consumer. This consumer reported that a 54-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration in the right arm on 23Dec2020 at 03:00 PM ((at the age of 54 years-old) as a single dose for COVID-19 vaccination. Medical history was unknown. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported. The patient did not receive any other vaccine within 4 weeks prior to the vaccine. On 23Dec2020 at 10:00PM, the patient experienced chills, body aches, fatigue. The report was reported as non-serious. The patient was not treated for chills, body aches, fatigue. The clinical outcome chills, body aches, fatigue was recovered on an unknown date in Dec2020. It was also reported that since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Fever; Headaches; Chills; Aches and pains; This is a spontaneous report from a contactable consumer (patient herself). This 60-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration, on 23Dec2020 at 08:30 AM at single dose for COVID-19 immunisation. Vaccine location was left arm. The patient was vaccinated at hospital, age at vaccination was 60-year-old. She was not pregnant. No other vaccine was received in four weeks. Relevant medical history included diabetic, allergies to eggs, chicken and latex. It was reported that prior to vaccination, she was diagnosed with COVID-19. Relevant concomitant medications included insulin aspart (NOVOLOG) for diabetes. On 24Dec2020, at 02:30 AM, the patient developed fever, headaches, chills, aches and pains. The patient was treated for the events. Nasal swab, COVID test (rapid) was performed on 24Dec2020 and was negative. The outcome of the events was unknown. Information on the lot/batch number has been requested.

I noticed onset of a mild rash down my bilateral arms and along my hips, back and legs. This rash worsened upon inspection on 24Dec2020 with associated itching and warmth along the rash site; warmth along the rash site; I noticed onset of a mild rash down my bilateral arms and along my hips, back and legs. vomited; muscle pain.; severe flu symptoms for about 4 hours; This is a spontaneous report from a contactable healthcare professional, the patient. A 58-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, Lot# EL1284), via an unspecified route of administration in the right arm on 23Dec2020 at 10:45 (at the age of 58-years-old) as a single dose for Covid-19 vaccination. Medical history was not reported. The patient did not have any allergies to medications, food or other products. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient was not tested for COVID-19 post vaccination. The patient's concomitant medications were unspecified (had received other medications in two weeks). The patient did not receive any other vaccines within four weeks prior to the vaccination. On 24Dec2020 at 00:00, the patient experienced severe flu symptoms for about 4 hours, vomited and had muscle pain. Therapeutic measures were not taken for the severe flu symptoms for about 4 hours, vomited and had muscle pain. The clinical outcome of the events severe flu symptoms for about 4 hours, vomited and had muscle pain was recovered.

Fever; chills; arm was sore; extreme body aches; This is a spontaneous report from a contactable consumer, the patient. A 51-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), intramuscular in the left upper arm on 21Dec2020 at 11:00 (at the age of 51-years-old) as a single dose for Covid-19 vaccination. Medical history included COVID in May2020 for he knows he has detectable antibody levels; body aches in his shoulder, hip joints, knee joint and elbow joint for the last month and a half after recovering from COVID virus from an unknown date and weight loss of about 27 to 28 pounds since having COVID from an unknown date in 2020. The patient's concomitant medications included vitamin C, oral from an unknown date and ongoing for supplementation; Vitamin D, oral from an unknown date and ongoing for supplementation and aspirin (unspecified) since middle

of Jun2020 after having COVID per recommendation of his doctor. The patient previously received flu shot Flublok Quadrivalent a couple months ago (did not receive any other vaccines within four weeks prior to the vaccination). On 21Dec2020, the patient experienced extreme body aches around 8:30 to 9:00pm (described as more like the ones he experienced when he had COVID virus) and chills around the same time; and arm was sore. The patient experienced fever on an unknown date (in the middle of the night). The patient underwent lab tests which included body temperature which included 99.5 degrees F (last night), up to 100.8 degrees F (this morning) and 98.8 degrees F; and blood tests on an unknown date with unknown results. Therapeutic measures were taken for the events pain, pyrexia, chills and arm was sore which included paracetamol (TYLENOL) in the morning around 8am. The clinical outcome of the events pain, chills, pyrexia and arm was sore was recovering (improved with treatment). Information on the lot/batch number has been requested.

About 12 hours following the vaccine, I suddenly felt like I had the flu - shivers, shakes, nausea, headache, fatigue but no fever. I went to bed and woke up the next morning and felt back to normal. I was fatigued the second day and had a very sore arm.

Severe headache; fever; chills; fatigue; This is a spontaneous report from a contactable nurse, the patient. A 40-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), intramuscularly on 23Dec2020 at 18:15 (at the age of 40-years-old) as a single dose in the left arm for COVID-19 immunization. Medical history included multiple sclerosis and hypothyroidism. The patient had no known allergies. The patient was not pregnant at the time of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. Concomitant medication included duloxetine hydrochloride (CYMBALTA), gabapentin, cefixime (FLEXERIL), tolterodine, levothyroxine, liothyronine; all for unknown indications from unknown dates and unknown if ongoing. The patient did not receive any other vaccines within 4 weeks prior to the vaccination. The patient experienced severe headache, fever, chills, and fatigue on 23Dec2020 at 18:30. No treatment was received for the events. Since the vaccination, the patient had not been tested for COVID-19. The clinical outcomes of the severe headache, fever, chills, and fatigue were recovering. Information on the lot/batch number has been requested.

Armpit of injected arm swollen and sore; Armpit of injected arm swollen and sore; This is a spontaneous report from a contactable healthcare professional, the patient. A 29-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, Lot ek5730) solution for injection in the left arm on 19Dec2020 at 14:00 (at the age of 29-years-old) as a single dose for COVID-19 vaccination. The patient was not pregnant at the time of vaccination. Medical history included fibromyalgia, depression, anxiety and ADHD (attention deficit hyperactivity disorder). Concomitant medications were unknown. The patient did not receive any other vaccine within 4 weeks prior to the vaccine. Prior to the vaccination, the patient was not diagnosed with COVID-19. On 20Dec2020, the patient experienced armpit of injected arm swollen and sore. No treatment was provided for the event armpit of injected arm swollen and sore. The outcome of the event armpit of injected arm swollen and sore was recovering. Since the vaccination, the patient has not been tested for COVID-19.

Reported paresthesia on the left side of her face and swelling of the lower part of her mouth an hour after administration of the Moderna COVID-19 vaccine. These symptoms resolved by this morning. She was observed for 15 minutes (as directed) following the vaccine and symptoms were not observed by clinic staff. She was advised to contact her personal physician for recommendations.

Unsure if side effect of vaccine but experiencing sweating, abdominal cramps and diarrhea.; Unsure if side effect of vaccine but experiencing sweating, abdominal cramps and diarrhea.; Unsure if side effect of vaccine but experiencing sweating, abdominal cramps and diarrhea.; This is a spontaneous report from a contactable Nurse. A 41-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, lot and batch number unknown) via an unspecified route of administration at an unknown dose in the right arm on 23Dec2020 at 12:45 (at the age of 41-years-old) for COVID-19 immunization. Medical history included asthma, anxiety, arthritis, fibromyalgia and surgical menopause all from unknown dates and unknown if ongoing. The patient did not have any allergies to medications, food or other products. Prior to the vaccination the patient was not diagnosed with COVID-19. The patient was not pregnant at the time of vaccination. The patient was administered the vaccination in the hospital. Concomitant medication included meloxicam (MELOXICAM), estradiol (ESTRADIOL), gabapentin (GABAPENTIN), phentermine (PHENTERMINE), melatonin (MELATONIN), aminobenzoic acid, biotin, calcium pantothenate, choline bitartrate, cyanocobalamin, folic acid, inositol, nicotinamide, pyridoxine hydrochloride, riboflavin, thiamine mononitrate (B COMPLEX), collagen (COLLAGEN). The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient stated that she was unsure if these were side effect of vaccine but on 25Dec2020 at 10:00 she was experiencing sweating, abdominal cramps and diarrhea. The clinical outcomes of sweating, abdominal cramps and diarrhea were reported as recovering. It was also reported that since the vaccination the patient had not been tested for COVID-19. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

"Describes left face, arm, leg felt numbness/tingling Had first COVID shot on 12/20/2020 19:36 then while driving home felt L face numbness at 20:37 Went to ED, BP 167/107 ""...driving home she states that she developed a strange, difficult to describe sensation when she was swallowing in her car, this started around 8:37 p.m.. She states that her numbness generalized to involve the entire left side of her face on the left side of her body including her left upper and left lower extremity. She denies any weakness. She denies any dysarthria or noticeable facial droop, she does not feel like she is walking differently. She denies any headaches or visual changes, denies any dizziness, chest pain, shortness of breath, palpitations. She states she has never had anything like this before."" ED notes had a normal neuro exam POCT glucose was normal at 83 resolved after minutes to hours in ED"

Vaginitis; This is a spontaneous report from a contactable healthcare professional. A 22-month-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at the left arm from 23Dec2020 13:00 at a single dose for COVID-19 immunization at a hospital. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient experienced vaginitis on 24Dec2020 13:00 which was reported to be treated with an unspecified OTC. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination

and was not tested for it since the vaccination. The patient was recovering from the event. Information on the batch number has been requested.

Headache; This is a spontaneous report from a contactable consumer (patient). A 61-year-old female patient received the first dose on BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), on 18Dec2020 at single dose for COVID-19 immunization. Medical history was reported as none. Concomitant medications were not provided. Patient stated that she had her COVID shot on 18Dec2020 (reported as last Friday) and she had a headache ever since. Patient was just taking Ibuprofen trying to get rid of the headache. Outcome of the event was unknown. Information on lot/batch number has been requested.

developed some tingling, kind of a shock that comes and goes in her arms and in her back; This is a spontaneous report from a contactable nurse (patient). A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899) via an unspecified route of administration on 23Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient took the vaccine yesterday on 23Dec2020 and she developed some tingling, kind of a shock that comes and goes in her arms and in her back. She watched it for a long time, as nurses like to watch, and she finally feel asleep, so she wanted to tell this, she didn't know if this is any danger to her, she didn't think so, she was breathing well and can talk, but she was concerned because the tingling was almost like a little shock that comes and goes, not permanent. The reporter wanted to know if anyone has reported this. She was about to go out, but decided to call, agent can't say if this is something reported and she need to go to the local hospital. The outcome of the event was unknown. Information on the Lot/batch number has been requested.

UTI; This is a spontaneous report from a contactable consumer. A 65-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration, left upper arm on 22Dec2020 12:30 at a single dose for COVID-19 immunization at a hospital. Medical history included urinary tract infection (UTI) in 2018 (2 years ago). There were no concomitant medications as the patient does not take any prescription drugs. Patient thinks her urinary tract infection (UTI) started to develop, 28-29 hours after receiving the vaccine so the onset was 23Dec2020. Patient stated the UTI came on fast and she has an appointment with an urgent care and may need antibiotics to treat the UTI. Patient was drinking a lot of fluids to try to flush the UTI out of her system. She said she doesn't feel as bad and felt like the UTI was getting better, and just woke up a short time ago. Patient also stated that she is concerned the antibiotic will mess up the vaccine, and wanted to know if she can take an antibiotic so soon after receiving the vaccine. The patient was recovering from the event. . .

Rash all over body, very itchy; Rash all over body, very itchy; This is a spontaneous report from a contactable nurse reporting for herself. A 62-year-old female patient received bnt162b2 (BNT162B2, Batch/lot # EJ1685) at single dose at left deltoid on 20Dec2020 in the afternoon around 13:30-13:45 for covid-19 immunisation, administered by a nurse at a tent outside of the hospital. The patient medical history was not reported. There were no concomitant medications. No additional vaccines administered on same date of BNT162B2. No prior vaccinations within 4 weeks. The patient got Flu shot a long time ago for immunisation. No events occurred following prior vaccinations. The patient experienced bad

rash all over body, very itchy on 20Dec2020 in the evening. The rash was driving her crazy.The reporter assessed the events were not really life threatening, not requiring hospitalization. Therapeutic measures were taken as a result of events: patient just bought Benadryl cream. No invesitgations. The outcome of events was unknown. She wanted to know if she has to get the second dose.

Arm pain on the left side, back pain, neck pain, headaches and then a dry cough developed several days later.

Headache; Body ache; Joint pain; This is a spontaneous report from a contactable consumer (patient). A 31-year-old male patient received the first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular, on 22Dec2020 at 11:00 AM at single dose for COVID-19 immunisation. Age at vaccination was 31-years-old. Medical history and concomitant medications were reported as none. On 22Dec2020, the patient developed headache, body ache, and joint pain. The patient reported the body ache has gotten worse, headache is still the same. The patient was treated with Advil. Outcome of all events was not recovered. Information on lot/batch number has been requested.

Shortly after vaccination (within 15 min), patient experienced warmth and itching at injection site, some radiating pain. Patient asked to stay longer to be observed, but eventually returned back to work without progress in symptoms. Approximately an hour later, she was prompted by her supervisor to return to vaccine area when she developed a headache and tingly lips. She was given 50mg of diphenhydramine PO. In no apparent distress after dosing

Fatigue, Headache, Nausea, sore throat

Achy pain at injection site; This is a spontaneous report from a non-contactable Other health care professional (HCP) (patient). A patient of an unknown age and gender received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), on unknown date at single dose for COVID-19 immunization. Medical history and concomitant medications were not provided. On unknown date patient experienced achy pain at injection site. Outcome of the event was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

GI problems; This is a spontaneous report from a contactable consumer (patient). A 46-year-old female patient (weight 74.39 Kg) received the first dose of BNT162B2 (Pfizer-Biontech covid-19 vaccine, Lot. EK5730) on 18Dec2020, in the left upper arm, at single dose, for COVID-19 immunisation. Relevant medical history included thyroid disorder. Concomitant medications were unknown. On 18Dec2020, the patient experienced gastrointestinal (GI) problems. Clinical outcome of the adverse event was unknown at time of this report.

Some problem with my arm; that is red; This is a spontaneous report from a non-contactable consumer (patient) This patient of an unknown age and gender received BNT162B2 (Pfizer-BioNTech COVID-19 at a single dose for COVID-19 immunization.Medical isotry and concomitant medication were not provided.The patient stated as follows:I have some problem with my arm that is red .The patient was wondering if it was an allergic reaction.The outcome of the event was unknown at the time of the report. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Patient experienced dizziness/lightheaded, pale, body wide shaking, face tingly, hypertensive, tachycardic from patient reported baseline.

"Paresthesia in right hand (received covid-19 vaccine in right arm); Numbness; ""pins and needles""; This is a spontaneous report from a non-contactable nurse, who is also the patient. This 25-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration in the right arm on 23Dec2020 at 13:00 at single dose for COVID-19 immunisation. Vaccination facility type: workplace clinic. The patient did not receive other vaccines in four weeks. Relevant medical history included allergy to latex, mango and naproxen. Concomitant medication included unspecified oral contraceptive pill. On 23Dec2020 at 13:30, the patient experienced paresthesia in right hand (received COVID-19 vaccine in right arm), numbness and ""pins and needles"" which continued on and off for 48 hours. The patient did not receive corrective treatments for the reported events. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, she had not been tested for COVID-19. The patient recovered from the events in Dec2020. No follow-up attempts are possible; information about lot/batch number cannot be obtained."

headache; This is a spontaneous report from a contactable consumer received via Medical Information Team. A 61-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient experienced headache on 23Dec2020. The patient outcome of the event was not recovered. Information about Lot/Batch number has been requested.

The following day had arm pain and fatigue for three and a half days, nasal congestion, dry eyes and itchy throat. Got tested for COVID one week later and is positive.

fever on and off; arm pain; body aches; chills; joint pain; This is a spontaneous report from a contactable nurse who was also the patient. A 55-year-old female patient received bnt162b2, lot:EK9231, via an unspecified route of administration on 23Dec2020 at an single dose for covid-19 immunisation. The patient's medical history was none. The patient's concomitant medications included unspecified vitamins. On 23Dec2020, the got the vaccine and the fever (on and off) started that night and had some arm pain too. The patient also had body aches, some chills and joint pain in Dec2020. The nurse stated that the thing should have gone better. She was just wondering how long she could have that side effects because it's been 3 days. Therapeutic measures were taken as a result of fever on and off pyrexia, body aches pain and chills were Tylenol and Motrin (patient did not clarify the improvement after taking the treatment). The outcome of the events was not recovered at the time of the report.

Feeling nauseous, throwing up; Feeling nauseous, throwing up; don't have the strength to keep talking right now; This is a spontaneous report from a Pfizer-sponsored program. A contactable female consumer, who is also the patient, of an unspecified age reported that she received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 23Dec2020 at single dose for COVID-19 immunisation. Relevant medical history and concomitant medications were not reported. In Dec2020, the patient started been feeling nauseous, throwing up and she wanted to double check if

she needed the second dose of the vaccine. The patient further specified that she didn't have the strength to keep talking. At the time of the report, the outcome of the events was unknown. The information on the lot/batch number has been requested.

"Tingling in her tongue and in her arm; Tingling in her tongue and in her arm; This is a spontaneous report from a contactable other health professional (patient) from Pfizer-sponsored program. A 33-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular on Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. On Dec2020, the patient experienced tingling in her tongue and in her arm, the patient reported that: ""after getting the vaccine but it looked like the tingling in my arm was probably within an hour and the tongue was all like that in evening"". The patient outcome of the events was recovered. Information on Lot/Batch number for the product has been requested.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020516692 same reporter, different patient/drug/event"

Pt woke up morning on 12/23 at0800 with rash on arms, thighs and legs. Called Nurse Manager, and primary doctor. Took 25mg PO Benadryl at 0815. Claritin 10mg PO at 0820. Took Pepcid 20mg at 0915. Had telehealth visit with primary doctor at 1000. Primary doctor informed patient that he believed this was an allergic reaction as the rash was spreading, patient was itching and had trouble swallowing pills in AM (unusual for patient to have that problem, resolved 1 hr post benadryl). MD informed patient to take 25mg PO of benadryl Q4H until rash disappeared. Ordered steroid dose pack if patient felt the benadryl did not help. Rash went away after 5 doses of 25mg PO Benadryl.

24hrs Soreness at injection site; This is a spontaneous report from a contactable consumer. A female patient of unknown age received on an unknown date BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. On an unknown date the patient had 24hrs soreness at injection site. Outcome was unknown. Information on the batch number has been requested.

Patient received Pfizer vaccine at approximately 12:00 PM and drove to observation area. Observer reviewed safety measures with patient. Observer stated that patient c/o tingling at injection site. At approximately 12:05PM observer stated that she saw patient slightly waving paddle and went to assess patient, upon arrival to patient's car, patient was unresponsive. Emergency measures implemented. Epi administered via IM route, Oxygen applied, vital signs taken and EMS called. Patient remained unresponsive up EMS arrival. Patient was transported to the ER via EMS.

"I started running a fever; This is a spontaneous report from a contactable consumer (patient). A 63-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot EH9899) intramuscular in the arm on 22Dec2020 at single dose for COVID-19 immunization. Medical history included depression, allergy, high cholesterol, asthma, thyroid disorder. Concomitant medication included sertraline, bupropion and atorvastatin for High cholesterol. The patient started running a fever (non-serious) on Dec2020. Patient worked at the day care center that provided care for the Doctor's and Nurses Children. She worked at a healthcare site, she was not a doctor or a pharmacist, so that's how

she got a vaccine.Patient stated she got vaccine on 22Dec2020 and on 26Dec2020 she took her son, he was 24, to the doctor and he tested for Covid, now up to that point she had no side effects or anything, he did not get a vaccine so she wasn't surprised when he came down with it on his own but well she was surprised, last night she started running a fever so she was wondering ""will the vaccine effect a Covid Test?"" (as reported). Patient was treated with paracetamol (TYLENOL) and final outcome of the event was unknown."

Constant headache; This is a spontaneous report from a contactable nurse (patient). A 42-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EH9899) on 24Dec2020 at 09:00 at single dose for COVID-19 immunization. Medical history was none. Concomitant medication included multivitamin (unspecified) . The patient experienced constant headache on 24Dec2020 at 15:00. The patient, who was a health care worker front line (nurse), received the vaccine on 24Dec2020. She started having a headache, bad like afternoon around 6 hours after she was given the vaccine. The headache has not gone away. It was not like a terrible headache. It was a constant headache like if she took some paracetamol (TYLENOL) it went away but it came back. Patient stated she did not suffer from headaches and she had been having a constant headache since 24Dec2020, when she received the vaccine. The final outcome of the event was reported as not recovered.

Rushed to ER. Has now been tubed and put into the ICU and has had full-cardiac arrest less than 24 hours after receiving the vaccine.

nausea; chills; This is a spontaneous report from a Pfizer-sponsored program a contactable consumer (patient). This female patient of unknown age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route od administration, on 19Dec2020 at single dose for COVID-19 immunisation. Medical history and concomitant medications were unknown. She's experiencing symptoms like nausea and chills. She wants to know how long the symptoms will be. Outcome was unknown. Information on the lot/batch number has been requested.

Nauseous; I did start throwing up; Headache; This is a spontaneous report from a contactable consumer (patient herself). This 65-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration, on 27Dec2020 at 07:30 AM at single dose for COVID-19 immunisation. The patient was vaccinated at hospital, age at vaccination was 65-year-old. Relevant medical history included diabetes, blood pressure abnormal and thyroid disorder. Relevant concomitant medications included insulin for diabetes, levothyroxine for thyroid disorder, and lisinopril for blood pressure abnormal. She was a MRI tech. She stated ''I had COVID Vaccine this morning at 7:30 and a little while ago like about 4'o clock. I work mid night, I got up from bed and I stand little nauseous and I did start throwing up and I have bad headache now but that's it. It is not emergent, but I just want to make sure, I am just checking in because I haven't. I can't get my smart phone to work because it keeps discharging so fast, but I was in bed. I am all right.' She stated ''there is no rash or anything. I just got nauseous which surprised me.'' The second dose is planned for 19Jan2021. No therapeutic measures were taken as result of the events. The outcome of the events was unknown. Information on the lot/batch number has been requested.

Aching in left deltoid hear injection site

Patient received vaccine around noon. She immediately felt numbness and tingling after injection. She reported back to clinic an hour later due to numbness and tingling persisting. She was given oral Benadryl and referred to the emergency department for evaluation.

Pain in left fingers and elbow that occurred within 15 minutes of injection. Numbness in left hand and forearm

0915 Generalized itching walked pt over to EMS Administered 50 mg of diphenhydramine PO

injection site pain, redness around injection site, Fatigue

Pt received first dose of Pfizer Covid 19 vaccine at around 12:45 and within 20 seconds, pt reported feeling sensation of tightness in his throat. Pt was observed for 15 minutes and his symptoms persisted but did not progress. Patient was taken to ED for evaluation. At 30 minutes post injection symptoms resolved. Monitored in ED for approx. 3 hours and discharged.

"Pt began c/o ""not feeling right"" with her tongue ""feeling funny"" and her lips tingling approximately 5 minutes after the administration of the Moderna COVID19 vaccine. Pt was transported to the Emergency Department for care and monitoring and was discharged when symptoms had resolved after approximately one hour."

Severe injection sure pain, jaw pain, hip pain, headache, palpitations, chills, nausea/vomiting, dizziness, fatigue

Left lip, cheek and nare swollen very visible to others. No difficulty breathing or swallowing . She has been taking zertec and this has resolved some but not all of the swelling.

Left eye bloody area lateral from iris, approximately 2cm x 2cm

Peripheral sensation loss

Swollen upper arm. Fever, chills with nausea

Extreme chills, muscle aches, joint pain, headache, fever, fatigue

On 12/28, reported that on 12/25 she had swollen lymph glands in her clavical and neck areas. Also, reported extreme fatigue (slept 16 hours following vaccine on 12/24) and significant arm soreness. Is seeking medical attention.

numbness on my right foot right after the injection (it went away) 30 min after swelling of right side of my face and droopy right eye (swelling went away but my eye is still droopy) little body pain, head ache and body felt warm (took Tylenol and it all went away). I'm just a little worried about my eye. Not sure how long it will take this to go away. I didn't take any allergy med because I'm not sure if I can.

High blood sugars, vision change, hearing issues, anxiety

Chest/arms itchy, tingling tongue

Itchiness after her first dose of COVID-19 vaccine this afternoon. Received vaccine around 2:15 PM and may be 30 minutes later just got diffusely itchy. No rashes not swollen anywhere no nausea or vomiting or belly pain no trouble speaking or swallowing or breathing. She got some oral Benadryl 50 mg prior to ED arrival.

Patient received the vaccine Monday, December 21. Patient started getting flu like symptoms on Thursday including cold, cough and headaches. Patient reports on Saturday the left ear and the left side of the throat began to hurt. Today Monday , December 28th, the patient states to waking up with a sore throat and the left side of the neck was swollen as big as a golf ball and remains swollen.

Today Monday , December 28th, the patient states to waking up with a sore throat and the left side of the neck was swollen as big as a golf ball and remains swollen.

Cold Like Symptoms

At 9 PM on December 22 I became absolutely exhausted extreme fatigue I went to bed I was woken around 11 1115 something like that every part of my body hurt it hurt to move my fingers it hurt to move everything every joint hurt and if I did move I felt nauseous then I started to throw up I did that for half an hour or so it was if you need to know it was violent and then I got back into bed with a cool cloth on my head at about 4 AM I got back to sleep I woke up at 6 AM to my alarm for work and I felt absolutely fine except my arm was sore just like it is from any regular inoculation.

area around injections, red, raised, warm, tender to touch

Hospitalized 12/29, has now been tubed and put into the ICU

May be in no relation at all but day after vaccination patient woke up with ankle pain. It was hard for the patient to walk/run. During the evening time he reports possible pulling of muscle/ligament while walking in a parking lot at the store during a snow storm.

Approximately 29 hours after the vaccine I developed fatigue, myalgias and chills. Lasted until I went to bed that night (4 hours or so). Resolved as of when I woke up the next morning.

Approximately 29 hours after the vaccine I developed fatigue, myalgias and chills. Lasted until I went to bed that night (4 hours or so). Resolved as of when I woke up the next morning.

Developed a rash on her face and arms; took Benadryl 50 mg immediately when the rash emerged at 9:15 AM; she notified the Employee Health office of the rash at 9:45 AM and was immediately referred for evaluation by an Employee Health medical provider at 9:50 AM; she took Benadryl 25 mg at 7:00 PM and then went to bed; the rash was gone upon waking at 8:00 AM on 12-29-2020; she had a follow-up

evaluation at 9:00 AM on 12-29-2020 with an Employee Health medical provider and was cleared to return to full duty and was discharged from care.

9:30pm on 12/23/20 i started with a severe headache and then an immediate onset of fatigue, i was unable to stand up and felt like i could not walk. thru at the night i had bodyaches, nightsweats, chills and fever. i had a fever or 101.3 on 12/24/20 for most of the day I rotated tylenol and ibuprofen and was only able to get it too 100.3 . bodyaches and headache continued . 12/25/20 fever and burning of eyes. 12/26/20 -12/27/20 fever and headache. all symptoms subsided on 12/28/20

Moderna COVID-19 Vaccine EUA. Around 25 min after injection I started feeling dizzy then had tachycardia, sweating, numbness and tingling in extremities. Given Oxygen and taken to the ER. Symptoms subsided 5 min after arriving in ER except numbness and tingling in hands. About 30 min later I started having dizziness and tachycardia again which lasted a few minutes. EKG, CHest X-ray and labs all normal. Just feel tired.

Patient observed for 15 minutes in the clinic after vaccine with no issues. Patient is a NP and left clinic. 10 min after leaving, was in physician lounge and had tachycardia, dizziness, flushing. Hospitalist in lounge recorded pulse as 180 normal rhythm. Patient taken to ED. In SVT - heart rate eventually reduced. Patient released on cardiac monitor to home. Later that night, patient had increased heart rate again - 160's - while in bed. Admitted to hospital.

Cough, diaeresis; initially only injection site soreness then other symptoms developed

Patient had tingling and numbness of the mouth and throat 20 minutes after receiving the COVID vaccine

Patient reports 2 hours after getting vaccination that she had difficulty moving left arm. Reports having decreased strength in left arm, and decreased ability to lift any amount of weight with left arm. Reports having numbness in left arm that is ongoing. Pt reports symptoms are improving .

Directly after receiving the vaccine I tasted a metallic taste and my tongue started to tingling. My face flushed. Last about ten minutes.

Lethargy & fever 12/29/2020

12/29/20 came to vaccine clinic to report. states had vaccine 7:10 pm, waited 15 minutes, 'felt edgy' but thought maybe nerves. 7:25 pm walked back to her office, felt slightly lightheaded, had worked 12 hours, sx subsided. 7:45 pm walked to her car felt right side jawline numbness that extended to forehead and whole side of face, able to smile, swallow, drove home (30 min) and sx stayed the same. states lingered over the evening, went away by 10 pm. states eyelid felt heavy, was not puffy. did not keep her awake - did report night sweats. 0700 awoke, states no sx, no residual. states arm slightly sore and general joint aches. 1205 came to clinic to report. states feels pretty good, concern is about next shot. Will contact PCP, did vsafe and will complete report.

Right side tongue numbness, tingling and burning in/around lips, elevated heart rate 136+, Blood pressure spike 165/105. Shortness of breath believed to be r/t elevated heartrate. Within 10 mins of shot. Face flushed, redness worsened with some swelling to ears and tongue skin felt like a sun burn rawness. Throat tugging noted. Dispatched an ambulance, had my husband take me around corner to ER where I was treated for anaphylaxis with 1 dose of Epi IM, IV solumedrol, and two rounds of benadryl IV. I was monitored and sent home on steroids, benadryl, and cimetidine for several days. I was issued an Epi Pen at that time. The rash and redness with feeling of burning has come and gone since as well as the tongue numbness on right side.

Red bump, painful and itchy

Cough and injection site soreness

Patient is a physician. He reported palpitations and tachycardia the evening of vaccination (about 4 hours after vaccination) when he was at home. It did subside within 2-3 hours.

I'm not sure if it was the vaccine, I'm a chaplain at the hospital I didn't eat or drink anything before the vaccine. I had a trauma that day and after the shot my arm was tingling when I was driving home I couldn't focus I had a headache, when I got home I ate and immediately went to bed, I slept for 10 hours and the next day I was getting my son ready and I fell asleep sitting up and by lunch time I felt completely normal again.

Generalized itching

Itching and rash/ hives. Itching started approximately 5 minutes after injection, slight at first then itching increased throughout body. Rash hoed later. Mostly only on areas scratched (face, chest and neck). Rash and itching present for 5 days including day injection given. Used over the counter antihistamines round the clock. Used inhaler once evening of injection day and once 3 days later. (Albuterol)

Deltoid pain with movement of arm.

"Co-worker reported a ""sever headache"" and later at 2:05pm she reported she was ""unable to open her right eye due to the severe pain in her head"". She took Benadryl 25mg by mouth. Her mother came and picked her up to take her home after an hour without any additional symptoms. The co-worker reported she still had a ""headache"" the next day, but it was much better."

12/19/2020 0630 AM WOKE UP AND WENT TO REACH FOR PHONE, COULD BARELY LIFT LEFT ARM. HURT ALL WAY DOWN TO WRIST. WHOLE ARM WAS SWOLLEN, HARD. SEVERE HA. GOT UP TO GO TO BATHROOM; BODY ACHES, CHILLS, DIARRHEA. 12/20/2020 AFTERNOON FELT WORSE. FELT LIKE HAD THE FLU BUT 50 MILLION XS WORSE; BODY DIDN'T 'FEEL RIGHT'. GETTING TO POINT OF FEELING WORSE. CALLED HOSPITAL, PHARMACIST. SCARED. COULDN'T STAY AWAY, COULDN'T STOP SLEEPING. COULDN'T WORK. CALLED PCP. TEMP SLIGHT ; 99.5 12/21/2020 WEDNESDAY MIDDAY ALL SIDE AFFECTS WENT AWAY LIKE SOMEONE FLIPPED A SWITCH. 'NOT A GOOD EXPERIENCE' 'I DON'T THINK I CAN GO THRU THIS AGAIN WITH THE SECOND SHOT'

general body itching

Hives, nausea, headache. Given benadryl. Hives resolved. Residual dull headache. Patient sent home with scheduled Benadryl x 24 hours, has Epipen. Encouraged to use prn and to seek medical attention prn.

Day of vaccine- extreme fatigue, pain at injection site Day 1- scratchy throat, extreme fatigue, muscle pain Day 2 - scratchy throat, extreme fatigue, chest tightness, muscle pain, headache Day 3 all symptoms as above with sore throat and fever

Palpitations, dry eyes, vertigo, rash on chest several hours after receiving vaccine. Resolved within a few hours.

Patient reported on 12/29/2020 that she experienced right hand numbness 15-20 minutes after vaccination and this lasted about 5-10 minutes. About 20 minutes after the vaccination she experienced lip tingling which then progressed to mild swelling and redness of the lips. This has persisted to this day and is gradually improving. She has experienced lip swelling in the past, not triggered by any event, medication, or substance, however has never experienced hand numbness or reactions to vaccines in the past. She has not received fillers.

Woke up with a rash over stomach, back, thighs and arms that were like goosebumps and itchy. They would get red and were painful and that would come and go. on the 25th the rash was constant, The rash was not relived with multiple doses of Zyrtec, Allegra or hydrocortisone cream and has persisted and worsened through the weekend. Prednisone was started on Sunday the 27th which seems to have helped however still itchy and the goosebump like rash is still on stomach, back and thighs.

SOB, Asama attack

Headache, muscle pain, joint pain, fever 100.6, fatigue,chills

Sensation of a racing heart

Employee came and report/showed me a raised rash that is on her face, neck and chest that developed the evening of her vaccine. Has been utilized OTC Benadryl. Able to still work.

low grade fever 99.2 after taking Ibuprofen headache sudden hot feeling and then fast cooling off, almost chilled, but I am fine, very mild

Noticed a rash around mouth and cheeks

5-10 minutes after vaccine got mild numbness/heaviness feeling corner of left side of mouth (very pinpoint without migration) that 1-2 hours after vaccine progressed to similar feeling on lateral left side of face and corner of left eye-no motor weakness in face, facial drooping or clinical change in sensation on palpation of skin, intermittent gritty/sandy feeling on tongue/mouth that started about 30 minutes or so after received the vaccine. Intermittent very mild scratchy/sore throat that start 30+ minutes after vaccine, frontal pressure-like headache-forehead/temples/cheeks on face-started within about 30 mins-

1 hr of getting vaccine-can get extremely strong at times. Approximately 12-14 hrs after vaccine got tingling/burning sensation on tongue with complete 100% loss of taste that was transient and 1-2 hours after started has slowly been improving and taste is slowly returning since then. no loss of smell. no tongue swelling or throat closing up sensation. all symptoms improve with taking over the counter antistamines-Zyrtec or benadryl, but haven't resolved yet. all symptoms overall mild (except headache at time) and are waxing and waning in severity (including headache) the entire time since receiving the vaccine. I feel completely fine otherwise.

Tachycardia and throat tightening

I developed a maculopapular rash over my chest, abdomen, back and proximal extremities but sparing my face, hands and feet. I was otherwise asymptomatic and the rash was not painful or itchy. It resolved on its own after 24 hours.

Patient reports arm tingling down from elbow to hand of left arm. A little numbness in left hand. Few hours later patient reports numbness moving down to arm and hand and up to eye with somewhat lessening on the lip. Patient currently experiencing some tingling on the right arm.

I actually am having a hard time lifting up my arm. Cannot put any pressure on the arm or take off clothes in shower. I cannot carry my son. I cannot lift anything. I cannot put my arm in pocket or jacket. If I get beyond 15-30 degrees abduction, I cannot do very well. Beyond that I can.

Sore arm for a week, redness and bump at injection site

Sore arm for a week, redness and bump at injection site

patient had body aches, head ache and shortness of breath. symptoms resolved on own no treatment necessary.

12/19/20 Employee's written report/description of events: shoulder injection site, left shoulder. Including shooting pain from my left wrist into the left side of my face. I have shooting pain into my chest from the injection site which also has included involuntary muscle movement in my neck and face, involuntary muscle movement is painful and this occurs with dizziness. All the pain stems from the injection site itself and always starts there when the pain happens. 12/23/20 saw OHS RN and was improved: states symptoms are better today & no involuntary muscle movements experienced today. Pain at injection site is less also. Has been using OTC Aleve, 1-2 every 12 hours. CMS left hand intact; all digits both hands have pale nail beds with > 2 sec cap refill; skin temp cool to warm. States has been on a medication that can cause Reynaud's disease; and has been concerned this may be occurring. Work comp MD appt. for 12/30/20; has not confirmed.

2:30 PM vaccine listed above given, 3:02 PM cheeks flushed with slight swelling of lips, Benadryl & Pepcid taken per employee. 4:35 PM symptoms resolved, 6:34 PM employee to ER with rash, itching, and trouble swallowing. Treatment received of Benadryl and Solu-Medrol, symptoms improved and employee DC to home. FU this am, employee states she has a HA and has taken med for, no further problems noted.

Strange taste in mouth, heart felt like it was pounding out of chest, blood pressure 195/100 (elevated), dry/burning mouth Was brought to ED and given Benadryl and Lorazepam

Tachycardia. Fever. Sweat. Body aches. Weakness

After I received the vaccine, after I went upstairs to go back to work (about 30 min later) I felt my hands and feet very cold and numb. I also felt dizzy and my hands and feet kept cold. Kept trying water and coke and I was continuously dizzy, a weird dizzy, like I had taken some kind of drug. My coworkers said I had slurred speech, my BP was 180/120 and my heart rate was 140. They sent me down to the ER. As soon as I laid down at the ER I started feeling better and within one hour my symptoms were gone. I also felt very sleepy throughout, as soon as I started feeling dizzy. I was fighting the sleep.

Fever Chills Rash and hive Fatigue

Noticed redness and swelling to vaccination site upon waking up. Site is warm to the touch and hard now about the size of a quarter.

Swelling redness and bump at injection site

Swelling redness and bump at injection site

Patient reported that his arm is tingling, has nausea, chills (no fever) and vomiting. These events all occurred as the patient woke up the morning after vaccination on 12/29/20.

Headache, light headed, dizziness for about 10 minutes

itchy tongue/throat

Right side of face swollen

Palpitations, tachycardia, anxiety several hours after vaccine while at home after awakening from a nap. Resolved after 2 hours.

Chest pain, short of breath. Morphine, sublingual Nitro, IV Nitro drip & Heparin drip

Severe headache, mild fatigue

Tension headache

Patient developed persistent nausea one day after vaccination with Pfizer COVID-19 vaccine. Nausea is ongoing 7 days post vaccination. Patient has not had any vomiting, diarrhea, myalgias, fever, and endorses no pain or tenderness in her abdomen. She has taken promethazine oral with minimal relief of nausea.

Headache body aches dizziness low back pain sore throat diarrhea

fever, fatigue, cough/dyspnea, muscle aches, headache, dizzy

fever, fatigue, cough/dyspnea, muscle aches, headache, dizzy

12 hrs after vaccine. symptoms runny nose, tenderness on left arm, headache, dry cough

12 hrs after vaccine. symptoms runny nose, tenderness on left arm, headache, dry cough

About 7-10 minutes after receiving covid vaccine, I was just talking with other nurses and suddenly felt a rush came over me. Felt lightheaded and dizzy. My pulse and blood pressure spiked. After about 5 more minutes, my forehead became numb. My pulse and BP had come back down. Later on that evening and into the next day my palms of my hands were bright red and itchy.

Flushing for 5-10 minutes

General Hives, sunburn effect, itching

General Hives, sunburn effect, itching

"Blurry vision, RIGHT arm weakness, shortness of breath, feels ""sick."""

Pain at injection site the night after injection. Swelling, pain, heat in the muscle around the injection site the next day.

12/18/2020 9:00PM Body aches, fatigue, headache and chills; Tylenol dose. Symptoms have not subsided; have continued to today 12/29/2020. 12/28/2020 Swollen lymph nodes left armpit, extremely fatigued and headache. 12/29/2020 Clinic visit with NP, Flu -- negative and COVID 19 test taken -- no results yet. Advised to continue Tylenol for treatment.

Received vaccine in left arm at 7:20 am sat for 15 minutes without any incident. At approximately 7:50 am I felt an intense burning sensation to outer aspect of right eye and eyelid. My eye was burning and watering continuously.Reported back to department where vaccine was administered nurse gave my 25 mg of P.O Benadryl. No other symptoms at that time. At approximately 2:00pm same day right eye partially opens,swelling persists to right eyelid with burning sensation and eye watering.

Loss of appetite/nausea

Vertigo, nausea, altered vision within minutes of receiving vaccine. Observed in clinic for 1 hour. Symptoms resolved. Returned to work. Vaccine received around 1150 am - patient had not had anything to eat that morning.

Vertigo, nausea, altered vision within minutes of receiving vaccine. Observed in clinic for 1 hour. Symptoms resolved. Returned to work. Vaccine received around 1150 am - patient had not had anything to eat that morning.

stiff and inflamed joints where i have had previous injuries. Also sore throat and hot flashes.

Fever 103.5, body aches, chills, nausea, vomiting

22 mins after , I was light headed, Accelerated heartrate 170/101. I felt weak and shaky . Chills, I was given Iv fluid. In injection of Benadryl Slight Fever of 98.7

After 24 hours. Chills diarrhea and fever

RASH ON NECK AND LEFT HAND BUMP/ITCHYNESS

"Felt ""fine"" initially, then became ""lightheaded and dizzy"", felt like having an asthma attack. This occurred approximately 20 minutes after immunization. Went to ER, given rescue Albuterol inhaler, given Benadryl IV, Pepcid IV , monitored vitals"

Chest pains and short of breath within one hour of vaccine

Low grade temp 99.5

"Mental confusion. Couldn't gather thoughts. Mental ""fog"". Dizziness while sitting."

Patient received the vaccine on 12/23. Patient reports fever and fatigue from 12/24 ? 12/27 and developed hives on 12/26 and a diffuse red rash on 12/28. Patient was treated in the ED 12/28. On 12/28/20 patient was diagnosed with Diverticulitis, Allergic Reaction. Patient discharged with antibiotics and corticosteroid.

Fever this morning of 103 F. Took 1,000mg of Tylenol and fever went down to 101 F. 4 hours later took another 1,000mg of tylenol and fever is currently down to 100 F. Chills Soreness at injection site Fatigue

Patient received Pfizer Vaccine at approximately 1430 and was in observation area. At approximately 1435 observer stated that patient started to c/o dizziness and became pal.. Patient maintained LOC. Emergency measures implemented. Patient was place on oxygen, vital signs taken, EMSA called. EMSA present and evaluated patient. Patient was able to leave clinic site after evaluation.

Hospitalization 12/26 for Covid PNA

generalized edema, facial redness, slow resolution over next 18 hours

After injection developed swelling in cheeks and under eyes -

Moderna covid-19 Vaccine. Moderna was given to pt Im Left Deltoid 2 10:06 am . during her observation period for 15 min @ 10:20 she complained of itching and red spots on left arm and started on her back until 10:30 when 50 mg of Benadryl given in RD Im . started itching and red spots on rt arm noted. no other c/o , no shortness of breath noted, pt alert, oriented x4, sitting in chair talking to husband and drinking water. 11:00 am pt says I am no longer itching, my husband is going to drive me home. Instructed pt if any other symptoms develop go to Hospital ER . Pt walked out to car with husband to go home. I called pt 3:50 no answer at home number. spoke to pt at 4:10 pm , she also vomited X1, Slight headache.

Left arm put swollen and tender, lymph node

injection site pain

Pt called on 12/29 to report she is in pain. Reports at around 9:30 PM on 12/28 she had headache. They woke up at around 4 AM in severe pain. Her head hurt all over as well as the back of her neck down in her legs. Her entire body ached. She felt like she could not get a good breath. Her SaO2 was decreased. Today she is still in pain. Her pulse is 108 lying down and SaO2 88-92%. Will be going to the ER. Her oncologist is concerned about pneumonnia.

Fever-100.3

prolonged pain at the injection site, the pain increased in intensity 72 hours after the vaccine was administered and is persistent after 10 days. no systemic symptoms, evaluated locally, no findings on exam.

Multiple episode of irregular HR for about 7 hours. Severe pain in the left shoulder and joint, with muscles involvement. The pain extended down the arm to the wrist. Muscles were weak and unable to lift arm higher than chest, unable to perform ADL's with left arm as there wasn't any muscle strength to lift a thin blanket covering. Severe pain lasted about 48 hours with continued joint pain, although much less severe, in the left shoulder. Used Benadryl and Motrin. Didn't notice any different outcomes. Arm remained elevated on a pillow for some pain diminishment.

Near syncope, palpitations, tachycardia, elevated blood pressure

received vaccine at 02:30 pm 12/26/20, by 09:30 12/27/20 had chills, muscle aches, headache, sinus pressure, fatigue, and moderate soreness in arm of injection, symptoms resolved as of 12/28/20 09:30

Patient stated she had her Covid Vaccine on Friday 12/18 at 930am. On Friday night she reports she had a terrible migraine, on Saturday she felt very fatigued. She reports Sunday was her worst day and she felt very achy & her body felt like it was on fire. On Monday (12/21) she reports feeling better, but today 12/22 she reports that she has a bad cough and chest tightness.

Loss of appetite/nausea

"Co-worker reported she brought her ""epi pen"" with her to receive vaccine as she has allergies. Pt was given vaccine and waited 30 minutes and did not report any symptoms. Co-worker returned the next day to the vaccine clinic at approximately 11Am and reported that she was having symptoms of a reaction ""(unable to walk), "". She was taken to the emergency room. Co-worker had already taken Benadryl prior to coming to report the adverse reaction. Co-worker was called the next day by co-worker health 12/23/2020 and she reported that she had symptoms the evening of the day she received the vaccine that consisted of hives on her arms, shortness of breath and felt like ""something was coming on"" and she was disoriented. Co-worker was treated and released from the ED the same day."

"Patient stated that 2 hour after shot stated to develop ""brain fog,"" fatigue, and pain/burning in injection arm. In am, was nauseated, slept all day, arm pain improved as did ""brain fog."" Did not feel this was an allergic reaction, but side effects that needed to be reported"

"Patient stated that 2 hour after shot stated to develop ""brain fog,"" fatigue, and pain/burning in injection arm. In am, was nauseated, slept all day, arm pain improved as did ""brain fog."" Did not feel this was an allergic reaction, but side effects that needed to be reported"

Night sweats, body aches, temp 100, severe fatigue. Symptom onset approximately 6 hours after vaccine, resolution within 24 hours

Patient is first responder (EMT) did not disclose symptoms of illness at time of vaccination or would have been denied. Reported that he developed headache and sinus issues on 12/26/2020. Developed extreme arm soreness in arm of injection site and night-time onset of extreme chills. Presented at local health department 12/29/2020 9 AM for PCR testing and tested positive for SARS-CoV2 negative for Influenza A&B. Chills have subsided was of short duration - arm remains sore. Patient denies known route of exposure . Was active over the recent holiday - significant other (GF) scheduled for PCR during AM 12/30/2020 currently asymptomatic.

Significant exhaustion, headache, flu like symptoms, body and muscle aches, fever, chills

Swollen supraclavicular lymph nodes (2 bumps) 12/28/2020 7:00 pm 1 week after. None other side effects

EE developed tingling in left arm, tingling of tongue and roof of mouth, started feeling like her tongue/mouth was swelling. Was given 50 mg of Benadryl PO at 1255. Symptoms continued to worsen, to Emergency Dept at 1300. Was given IV solumedrol and Pepcid. Oral Zyrtec and discharged home. OK to RTW with out restrictions. Upon f/u EE did report a hive like rash on the right side of her body but this has since resolved as well.

Numbness, tingling of low lip, tongue, right side of face for 5 minutes. Hours later developed temp, 101.2, headache. Took a Claritin.

Fevers-101.3, 99.3, 99.1

On 12/28/20 at approximately 1700 hours I felt slightly drowsy and warm. I checked my temperature with a tympanic thermometer which read 98.4. At around 1900 hours I began to feel I had a fever and chills. Temperature was checked again and it read 101.2. I went to bed around 2200 hours where I continued to experience moderate fever and chills. At around 0100 hours on 12/29/20 I had profuse sweating, headache. I took tylenol PM and awoke at around 0730 hours on 12/29/20 and found I no longer had any symptoms.

Itchy Hands were red Itchy at injection site 2 days later got a migraine. from her elbows up everything was red, not hot or didn't break out in a rash.

Dizziness, migraine, neck pain, jaw pain? all on the right side

12/28/2020 flushed neck to face and R side face paralysis (duration for 30 minutes). symptoms resolved and pt feeling better No further symptoms to report

Nausea, which started around 1pm on the same day of vaccination.

Nausea, which started around 1pm on the same day of vaccination.

Loss of appetite/nausea

Approximately 35 minutes after the patient received the vaccine, she reported a muscle spasm and tremor in her right arm, numbness in her lower lip, nausea, jaw heaviness; numbness, tingling and weakness bilaterally in legs.

5 days after injection have a red welt around injection site 2 in wide by 1 in up and down

5 days after injection have a red welt around injection site 2 in wide by 1 in up and down

Loss of appetite/nausea

10:05am injection of moderna covid vaccine into left arm 1010am- started with tingling of left fingers 10:15 tingling increasing up arm, pressure feeling on left side of head and tongue 10:20am tongue feeling numb on left side 10:21am Benadryl 50 mg given PO Liquid 1030am Cetirizine 10 mg tablet given PO Physician observation for 30 minutes, symptoms resolved, still felt groggy, sent home

She has an area measuring 3x2 inches of red, warm tissue. The area is itchy, but I am concerned with a possible cellulitis brewing.

Loss of appetite/nausea

Stated she developed itching all over her body and a rash on her left side of her body. Was taken to ER for further evaluation. Reported to ER provider history of anxiety and panic attacks and stated she was unsure if she could possibly having and anxiety attack. Reported also having chest tightness. . Given Benadryl 50mg po, Ativan 1mg po, and Solu-Medrol 125mg IM. Relieve of symptoms

Fever, severe headaches, body aches, fatigue

On 12/19 when I got my vaccine at 5:00 pm. When I woke up tingling feeling fingers, feet, face and scalp of head. The following morning I notice a rash around my hairline. I called my associate health was informed to take Benadryl multiple times throughout the day and was prescribed Ativan. The itching is still occurring in my scalp of the head and feet. I dint have to miss any days of work.

Vaccine scheduled for 6:30 pm on 12/28/20. only new loss of taste and smell the next morning approx. 5:15 am of 12/29/20.

itcing and welp/hive at injection site

Pain in right arm lasting two days, headache lasting two days, dizziness lasting two days, and fatigue lasting three days

Pain in right arm lasting two days, headache lasting two days, dizziness lasting two days, and fatigue lasting three days

Pt presented to COVID Vaccine Clinic for first dose of Pfizer vaccine, which was administered. Pt complained of throat swelling and itching approx. 1 min later. Patient transferred to ED.

"A few minutes after receiving the Moderna vaccine, pt reported feeling ""warm and heavy,"" seeing spots. Felt faint right away. Pt pale and clammy. Does have a hx of anxiety and reports taking propranolol 40 mg prior to vaccination. She had this reaction prior to a Hepatitis A vaccine"

Approximatley 2 hours after injection, after arriving home and starting some housekeeping activities, vertigo started with nausea and sensitivity to light. It is going on 2 hours while lying down with eyes covered and some improvement in that eye motion is no longer sensitive.

Developed high fever of 103.2; body aches, headache at 7:00pm; this morning fever down to 99.7; continues with body aches and fatigue.

Pt described starting to have warm, red, swollen, tingly fingers on both hands and felt that her ears and back of her neck were hot/red. Upon examination - there was no warmth or redness noted on ears or neck; lungs were clear to auscultation. Her hands were a little pink but did not appear swollen. She was able to drink a large cool water and said holding the container in her hands felt good. She also noted her lips were a little tingly. A decision was made to offer her 25 m.g. benadryl p.o. - and she felt some relief within ~ 20 minutes of dose. She was able to return to work but did note she developed a headache and did take excedrin for that. Since this initial episode - she has felt extreme fatigue and body aches and those appear to continue to today (29Dec2020). She also has been experiencing chills and some itching on her torso. She also reported starting to have a bit of a cough and sore throat - so will see if she should go to COVID testing.

severe chills fevers and myalgias.

Diarrhea , 102Temp, Nausea and vomiting

Extreme pain at injection site, fever, headache, nausea, vomiting, metallic taste in mouth, muscle aches

Headache, nausea, stomach cramps, diarrhea

Client was vaccinated approx 10:00am at the Health Dept. Client left after 15min without incident. Client went to report to work and began feeling nauseated, dizzy, and feeling as if was going to faint. Client returned to Health Department approx 12:30. Client was diaphoretic, HR was 140bpm, and BP was 178/120. Client was given 50mg/20mL of diphenhydramine PO and EMS was called and client taken to local ER. Client remained A+Ox3 at time of EMS transport. Spoke with client evening of 12/28/2020. He reports he was transferred to another facility and was told was in a-fib. He reports that he is feeling much better but heart still fluttering. Spoke with client afternoon of 12/29/2020. He reports that he is

being discharged in a few hours and is being sent home on metoprolol and a baby ASA. He reports they had been working on getting his BP down. He reports that he is feeling better and is going to be scheduled for a heart cath outpatient. He reports that he was initially in a-fib, then a-flutter, and then arrhythmia. He reports that he has been seen by Dr. a Cardiologist, while hospitalized.

"Pt presented to COVID vaccine clinic for 1st dose of Pfizer, which was administered at 0739. Pt complained of itchy throat and ""unable to speak."" Pt was transferred to ED"

Rash on both thighs, hypersensitivity to touch, burning pain when walking and thighs touching, chills of feeling like getting sick

828a- covid injection left arm 836a- itchiness at site of injection in left arm 839a-hives at site of injection left arm physician notified 840a-benadryl 50 mg PO liquid given, zyrtec 10 mg given po 852a-symptoms resolving, pt feeling fine, no difficulty breathing or swallowing, no further increase in hives

Throat started to swell. Did not affect my breathing, but made it difficult to swallow. The employee health nurse gave me a Benadryl and monitored me for an additional 30 minutes or so. By the time I left, my throat was starting to feel a bit better. Never got any worse.

Swelling and pain at injection site, nausea, headache, muscle aches, chills but no fever

After 25 minutes started coughing, shortness of breath, wheezing, vitals taken,albuterol inhaler administered, wheezing and shortness of breath improved

Fever spiked at 102.6 then broke after 6am and tylenol 1200 po, blotchy red raised rash to rt side of body(harlequin in nature) only mainly torso and back extending to some anterior upper thigh and neck region went away around 1300 on 29th, severe HA, shakes, N/V, dizziness, severe body aches especially to neck amd ankles, injection site swollen x4 camaraderie to rt arm with heat for 12+ hours.

Patient began with a rash to trunk 20 minutes after vaccine Benadryl IM given as no other symptoms. Within 5 minutes he stated his throat itched and was sractchy Epinephrine 0.3 mg given IM then sent to ER as he needed monitored

Fatigue, chills, fever and now headache.

Employee reports Myalgia and SOB

dizziness, nauseas, dry mouth, Shortness of breath, see light spots Solu-Medrol 125mg IVP slowly Benadryl 50mg IVPB refer to ED

Monitored x 15 min per guidelines. Began to experience SOB and throat swelling, after which pt presented to the ED for tx, dx acute hypertensive urgency with severe hypertension.

Patient presented back at work with a rash on her chest, mouth felt tingly, had red blotches on her arm about an hour after receiving injection. Patient returned to ER and was given Benadryl and monitored for 3.5 hours.

"Pt presented to receive 1st dose of Pfizer COVID Vaccine, which she received at 1130. She emailed hospital leadership to describe a reaction which is as follows: I feel the need to inform you about a likely reaction I had to the COVID vaccine I received yesterday around 11:30 am. I was feeling fine after the immunization, drove home and took some Tylenol in case of any arm pain (of which I have had none). I ate some lunch, was on the phone talking with a friend and developed sudden onset of lightheadedness, slurred speech and extreme sleepiness. No other focal deficit. I actually got up and walked around to try to shake it off. But I suddenly felt so tired that I could not keep my eyes open. I called my husband and asked him to come home immediately. I laid down and tried to reassure my kids that I was fine. I don't remember much thereafter. Just bits and pieces. It felt like I was under general anesthesia, trying to wake up but not able to open my eyes or move my arms/legs. I could hear some things going on but could not talk. There were times I would ""wake up"" in my mind and I would check to make sure I could swallow and I was breathing ok. I remember mumbling to my husband that I could breathe. He says he was checking my vitals throughout this time and monitoring things. He said my Blood pressure was initially 80/60, pulse 50, and as he keep checking it gradually improved. This lasted about 2 hours and then finally I was able to wake up. I felt a little lightheaded and tired for the rest of the day, but I feel essentially normal today. Please note: age not provided in internal system report; unsure of person's age"

Upper lip numbness, bilateral midline. Possibly associated with very minimal swelling to the upper lip. Lasted a few hours. No other associated reaction.

Dizziness, racing heart , short of breath

Fogginess in the head, dry mouth, increased heart rate 120s-140s No treatment Lasted approximately 3 hours

Weakness, Headache, Chills, Fever, Nausea, Vomiting, Diarrhea

dizziness, chills, fever, muscle aches, tachycardia

Body aches, left arm soreness, chills

Received vaccine 12/26/2020, by 4:45 pm 12/27/2020 started feeling a headache. On 12/28/2020 it had become a migraine with nausea. On 12/29/2020 it is still a migraine with some vomiting and nausea.

The symptoms began 20 min after administration of the vaccine. The symptoms were: throat tightening and tongue swelling which self-resolved within 15 min. He did feel that there was difficulty swallowing which persisted. He had a sneezing fit when he got back to the vaccine clinic. He got very anxious. He felt that his hand was swelling and was cold. He felt that he was having itching in his arm where the vaccine was given.He was in his car when the symptoms began so he turned around and went back to hospital. His BP 153/98, HR 128. At this point, he felt that he had no blood in his hands and he felt he needed to do deep breathing. He was observed for 1.5 hours and the symptoms self-resolved with the exception of his HR which has persistently been > 100. He feels very anxious. No treatment was given. He has no symptoms at this moment, 3.5 h after vaccine administration.

Redness about 2 inches diameter swelling after hour Following several hours tenderness and swelling to bicep to lift and move and tenderness in armpit

Hot flash, tightening to throat, tingling to tip of tongue and lips. Mild to moderate. Began 5 minutes post injection. Increased for about 10 minutes, then leveled off but did not resolve. Seen in ER and given Benadryl 50 mg IV and Solu-Medrol IV, dose of Solu-Medrol not listed on ER visit summary. Observed for about an hour and a half symptoms resolved,and discharged. Rx for Prednisone 40 mg po x 4 days and Epi pen given.

Chills, Headache, Cough, Body Aches

Pain to right leg

So that night throughout I felt feverish around 100.9 the highest was 101F. I would break though and then 1-2 hours later again it would come back. Body chest, couldn't move my arm, the pain was severe. Tuesday I could not even sit down I felt so weak, I had rashes in my face, legs, chest. I was so weak, I fainted and hit my head twice while going to the bathroom and kitchen. I felt like I was constipated, ant then I had diarrhea, I did not have appetite but could not hold anything in, I would throw up. My left side was all numb. I could not feel anything. It was like that the while Tuesday. Wednesday body aches, rashes, numbness, but I had a little bit of a body strength and could walk on my own. Thursday I was able to start eating a little bit and constipation were stating to go way. Friday was just body aches. Sunday the rashes finally went away.

After vaccine started with dyspnea \Tx: Pepcid 20mg Benadryl 50mg Atrovent 0.5mg

Arm was very sore for several days. 6 days after injection -- upper left arm broke out in a red, itchy rash (12/28). On 12/29 the rash is more spread out on the left upper arm and is lighter red.

Chest heaviness, chills, headache, fatigue

ask for auscultation before she goes, found with wheezing Solu-Medrol 125mg IVP slowly Refer to ED

PATIENT STATES FEELS LIGHTHEADED AND FLUSH AFTER INITAL 15 MINUTE WAIT TIME. PATIENT HAD NO INCREASE IN HEARTRATE. PATIENT STATES HAS NOT HAD ANYTHING TO EAT TODAY. PATIENT GIVEN WATER AND PEANUT BUTTER CRACKERS AND OBSERVED ADDITIONAL 15 MINS WITH NO OTHER COMPLAINTS AND FEELS BETTER.

Chills, Shortness of Breath, Chest Pain, Arm Pain

Swelling, warmth, redness to left deltoid at injection site started 12/29/2020. Measures 3.5 inches vertical and 2 inches wide. Ice and advil.

After 15 minutes observation I drove home, ate almonds and took a hot shower. My face turned bright red over my cheeks and forehead and broke out in hives all over my face. I never had a reaction like this to nuts before and believe it may be from the vaccine. The redness lasted one hour the hives slowly subsided after a full day.

Within a short period of time my neck became stiff. I developed a headache and became unsteady on my feet. After sitting longer while being observed by our nurse I was allowed to leave. That night I woke up nauseous and vomited. The next day I develped muscle and joint pain. Similar to flu symptoms. Everytime I ate I felt nauseous again. All the symtoms disappeared about 42 hour later. I have had an annaphilatic shock to penicillin as a child.

Patient felt tachycardia, was hypertensive, HR 200, O2 wnl, skin with red blotches throughout shoulders, face and chest and had cold hands and more blotches on shoulder area, transported to ED urgently for further evaluation

Heachache, chills, muscle pain, and temp of 100.9

Nausea, face tingling

Patient received a Hepatitis B booster within 2 weeks of COVID vaccine.

Slight arm soreness, nausea and decreased appetite

TEN MINUTES AFTER VACCINATION, PERSON BECAME LIGHTHEADED, PALE, NAUSEATED AND C/O HEADACHE. SHE ALSO C/O OF BEING HOT AND COLD. HR AND BP ELEVATED AT 157/100 AND 130 BPM. PERSON SITTING WITH LOWER EXTREMITIES ELEVATED, ICE PACK GIVEN TO POSTERIOR NECK, JUICE AND ICE WATER GIVEN TO PT TO DRINK. RAPID RESPONSE TEAM ACTIVATED. PERSON RESTED AND MONITORED AT VACCINE SITE FOR ONE HOUR WITH IMPROVEMENT IN SYMPTOMS. PERSON STABLE AFTER THIS TIME AND ABLE TO GO HOME.

"Immediately Following vaccine: light headed (resolved) & left jaw pain 1 Day following vaccine: nausea, dizziness, headache - all resolved 2nd day following vaccine: fatigue- all resolved 12 days after vaccine: continued left jaw pain- described as consistent dull ache with intermittent ""nerve shock"", weird taste in mouth, left ear pain feeling full with ""crackles"". Patient has not reported symptoms or seen any health care provider since vaccination."

Patient reports having symptoms of nausea headache and Low grade fever.

CHILLS LIGHT FEVER MUSCLE PAIN ALL OVER MY BODY JOINT PAIN ALL OVER MY BODY GAIT BALANCE

Rash, itching

Itching, cough. Given benadryl 50mg and epinephrine 0.3 in vaccine clinic, and taken to ED for further tx.

Intense arm pain, site redness and swelling, site was warm to touch, increased nausea, decreased appetite, slight shortness of breath, and fatigue

Patient stated she felt experiencing potential angioadema and scratchy back of throat, additionally she was tachycardic and hypertensive

Elevated Blood pressure, dizziness, fatigue, Headache, Light headed , Nausea .

Headache, Fatigue, light chills. taking Tynenol. it is improving slowly.

Headache, Fatigue, light chills. taking Tynenol. it is improving slowly.

With five minutes of vaccine Increased heart rate shot up to 198 bpm. Regular resting heart rate for me is in the 50s. Left pupil dilated completely, right people constricted to pin size. Extremities went numb and ice cold. Went to emergency room Per request of EMTs at vaccination center. Was given high-dose Benadryl and Saline IV. Heart rate return to normal and all other symptoms disappeared after treatment.

Headache, Chills, vomiting

All other symptoms resolved, continued arm redness

Developed chest tightness, slight fever and headaches

Patient experienced hives all around her body she was give benadryl and within 5 minutes the allergic reaction seemed to resolve

After vaccine started with chest pain, dizziness and dry mouth Tx: Solumedrol 125mg Benadryl 50mg

PATIENT FELT LIGHTHEADED AFTER INITIAL 15 MINUTE WAIT TIME. PATIENT WAITED ADDITIONAL 15 MINS UNTIL HE FELT BETTER. PATIENT SYMPTOMS RESOLVED BEFORE HE LEFT.

Swollen lymph node under clavical on left side

Soreness at injection site starting 30 min after the infection.

Itching in hands, head and back of neck, dizziness. Benadryl 25mg given and taken to ED for further tx.

Patient is reporting injection site discomfort, body aches and a tactile fever (unable to measure fever due to no thermometer).

Chills, fever, running nose, fatigue, joint pains, muscle pain, nausea, loss of appetite; lasted two days. Took Tylenol

"Significant redness/rash to chest and back with itching, lips numb, dry mouth, itchy hands, ""feels like I've been hit by a truck"" 2 doses of Benadryl 25 mg IM administered at 11:42 am and at 12:19 pm. 3 hours later, patient still reports feeling like she'd been hit by a truck"

Pt reported feeling of lightheadedness, dizziness and had sweating a few minutes after receiving the injection. Pt is breastfeeding just an FYI.

Right arm pain. Nausea, body and joint aches.

Jaw pain Numb lips Hives over face and neck Hard to breath

Jaw pain Numb lips Hives over face and neck Hard to breath

Tingly lips and around mouth Swollen bottom lip 10 minutes post infusion Right top of mouth tingly

n/v headache T 101 on 12/27/20

soreness in arm of injection, about a 6 inch area

fever of 103F the morning after the vaccine, chills

covid vaccine given at 1030am 12/28/20 bed ridden from pain, dizziness, nausea, and lightheadedness from 2pm 12/28/20 to 4pm 12/29/20. severe muscle pain in L upper pain which peaked around 1230am generalized muscle aches dehydration even though constant fluid drinking nausea, lightheadedness, dizziness if speaking more than one sentence at a time, shortness of breath vitals (taken 5pm 12/29/20) BP 131/87 (normal is usually 116/56) HR 95-105 (normal resting is around 70s-80s)

Client received vaccine,while scheduling next appointment got hot , heart felt like it was pounding, felt like her throat was slightly tight. She immediately took a benadryl from her purse. When writer arrived client's B/P was 150/78 heart rate 98. Respirations even and unlabored. Skin pink,warm and dry. Client was kept for further monitoring. Upon discharge B/P 110/68 no signs or symptoms of distress. Informed to seek medical advice if any further problems.

Metallic taste in the mouth for 10-15 minutes post vaccination; started 10 minutes after vaccination. About 5.5-6 hours after vaccination, experienced rhinorrhea and epiphora for about 1-2 hours, which then progressed to mild nasal congestion and mild chest congestion. Also experienced mild headache and mild fatigue around the time of the congestion. Notable puffiness/swelling of the hands and face set in about 10 hours post vaccination; resolved by the next morning upon waking.

The evening following administration of the vaccine, patient had left-sided rib 2-7 muscoskeletal pain.

Severe cold symptoms beginning 2 days post vaccine, runny nose, cough, shortness of breath leading to ER visit on 12/28, covid test results still pending as of time of this submission

Received COVID vaccine on 12/19/2020. On 12/20, she experienced chills and fever (100.9) and body aches (shoulders, HA). UC visit on 12/21 and doing much better, essentially normal. Clinical Impression: Post-vaccination syndrome. Tested for COVID and flu on 12/21, received negative results on 12/22

Nausea, Fatigue, Minor Chest Pain

I got it on the 21st and ten mins after I had tingling sensation all the way down to my hands, dizzy 190/101 blood pressure, I was sent to Urgent Care and they did a EKG and it was normal I was discharged with BP 180/90, I had cold clammy hands that day, weakness, the next day I was week and fatigued. The 23rd I started having chills and numbness on the left arm. I never had a fever. I'm still not 100% back I'm still tired and I've been having palpitations. I have an appt with my primary Dr today 12/29/20 in the evening.

Patient reports dizziness, hot/flushed, and ears ringing; Patient placed supine x 15 minutes and provided water as requested. BP 128/72 HR 76 O2 sat 100% Patient denies any symptoms after 10 minutes. Observed sitting for another 15 minutes

Patient is a 40 y.o. female with no known past medical history brought to ED with concern for ALOC after getting the COVID vaccination 30-40 minutes PTA. Pt is a nurse and experienced decreased level of consciousness following her COVID vaccinationn. Pt reports h/o anaphylaxis. She was given epinephrine PTA. Denies SOB, oral swelling, CP. BGL within normal limits. Pt denies any other complaints or symptoms at this time.

"got flushed, trying to ""clear"" throat, labored breathing, bp elevated, pulse 120's 15 minutes after vaccine administration. Given 50 mg of po benadryl and at the advice of her physician, 0.3mg epi im in R thigh. After epi, patient breathing slowed, flushing slowed, BP and pulse remained elevated. Pt. expressed feeling better. History of multiple allergies and seen in clinic. Encouraged by physician to receive vaccine."

Strong migraines, fatigue, muscle pain, chills. Pain, tenderness, and swelling at vaccine sight.

Patient received the Moderna Vaccine within 5 minutes complained of throat tightness and not feeling well. The patient was noted to be pale and hypertensive. She was placed on a stretcher, placed on oxygen and a Rapid Response was called. MD responded and initiated IV fluids and administration of Pepcid 20 mg IVP. Patient was transported to the Emergency Department (ED) for further evaluation. In the ED, patient received Methylprednisolone succinate 125 mg IV x 1 dose and Diphenhydramine 25 mg IV x 1 dose. Patient reported relieve of throat tightness and upper chest pressure. Patient was discharged with prescriptions for oral Prednisone x 3 days, Pepcid 20 mg oral twice daily and Benadryl 25 to 50 mg every 6 hours as needed for and recurrent symptoms.

12/29/2020. 0430 I awoke with facial swelling including eyes/nose/lips. Slight wheezing, coughing & my skin felt like I had been sunburnt. I took Benadryl 25mg, Pepcid 20mg, Prednisone 10mg and I did an Albuterol Neb treatment. When I awoke at 0830, the swelling ,wheezing & burning had subsided. I was extremely fatigued & I had a 99 degree fever. The fever subsided ,but I remain fatigued. (12/29/20 @ 1615) It's important to note my past severe allergic reactions have always been delayed by 8-14 days. I do carry an epi-pen.

Body aches & sore left upper and lower arm.

About 28 minutes after receiving I started getting hot, I could feel my heart racing in my chest, my breathing quickened, rapid response was called taken into another room by then my fingers had cramped up to where I couldn't work then arms and legs felt like pins & needles. Sent by ambulance to nearest ER where I was given benadryl and Solu-Medrol by IV, given another dose before being discharged with a prescription for Methprednisolone a few hours later.

Difficultly breathing sweats then passed out

Cloudy vision in left eye

Immediately after getting the vaccine she complained of headache. She had warm feeling at injection site She H/A Thursday, Friday and Saturday at mid-day her boyfriend called and said weakness in Right arm right face droop, no speech she was taken to the ER at 1 pm approximately. She was admitted and was dx was CVA . 2 TIA on left side of brain. Stopped Birth control and physician said it could be a combination of both birth control and vaccine.

26 hours after injection, the person had hives on bilat upper ext, pt's back had some redness

Patient (aRN) felt dizzy was tachycardiac stayed in area for 1 hr symptoms persisted then was taken to ED there was no evidence of Anaphylaxis is. Patient stateds she was given to large of dose RN administering denies states gave 0.5 IM she was monitored for several hours because patient has cardiac history

We requested pt wait 30 min due to her hx of severe allergies. Initially after vaccination, she felt nauseated and looked a little flush. Gave her cold compress and she felt better and wanted to leave. We made her wait and around 20-25 post vaccination, she reported feeling itchy all over and then said her throat felt funny. We were administering the vaccine for a clinic for their hcp staff. Rather than using our benadryl and ER kit, we walked her down to the ER since we were right in the hospital.

Fever, chills, arm pain, horrible body aches and congestion

Headache, chills, vomiting

Difficulty catching my breath, stiff joints in legs

5 minutes post-vaccination, struggled to breathe, felt itchiness in throat, light-headed, dizziness, & tightness in chest.

I have had intermittent numbness in my left hand for about 1 week. The first 2 days were the worse. It is also resolved but still feels different from my right hand. I have not had any weakness.

Pt reported her lip swelling and lip tingling a few minutes after receiving the injection.

Throat numb and swollen metallic taste back of tongue numb chest tightness

Pt c/o nausea and headache. Reported very nervous about getting vaccine. 1013 Vital Signs - 139/80; HR 96, Spo2 99. 1018 reported I may be hungry VS - 129/75; HR 86: SPO2 100. 1025 VS 125/75; HR 86, sp02

100 reported HA, Warm, I am so nervous. At 1030 VS 130/83, HR 97 SPO@ 100 pt reported All I want to do is eat.

Body aches, chills, L arm pain (lasted 2 days-until 12/26) Swollen lymph nodes L arm (lasted at least 5 days, current)- have added warm compress.

"Received the COVID-19 vaccine 12/19/2020 and felt great the next few days with zero symptoms. About 3-4 days later I felt some chest discomfort especially when taking a deep breath in. This occurred on both the front side and back side of chest. This continued for the next 5-7 days. Kept experiencing pain with deep breaths and my exercise tolerance was diminished. When I would hike up a small incline I felt I was not getting enough air and was a bit winded. Finally made an e-visit with my healthcare provider on 12/28/2020 after 5-7 days of symptoms. Knowing I work in healthcare my provider asked if my pain felt like, ""pleuritic chest pain"" and I think that is a spot on description of how it felt. Based on my symptoms he told me the most likely diagnosis is a mild case of pericarditis and prescribed me ibuprofen 400 mg by mouth 3 times daily for a few days. After ~36 hours of ibuprofen I'm feeling 80-90% better but still have some discomfort with deep breaths or exertion."

Soreness in injection site arm, headache, sore throat

Headache, chills, vomiting, temp 100.3

I had my vaccine at 0910 and was instructed to wait 15 minutes post-injection to monitor for any reaction. While seated, at 0920 I felt suddenly extremely lightheaded, dizzy, and nauseous. I had a feeling in my chest like my heart was racing and I check my HR on my watch and it read 120-125 bpm. My baseline HR is 60-70 at rest. I notified staff immediately and was placed onto a stretcher. The rapid response team was called and I was brought to the emergency department on site for evaluation. In my recollection, my heart rate came down to the 70?s/80?s within the hour at which time the feeling like my heart was racing had subsided. The nausea was treated with 4mg IV Zofran. My lightheadedness, dizziness, and nausea resolved with a 1,000 mL NS Bolus. I was discharged home at approximately 1145 with a mild to moderate headache and generalized fatigue.

metallic taste, tongue tingling and numbness began within minutes and numbness took the longest to resolve--hours

patient received a dose of Moderna vaccine after receiving the Pfizer vaccine.

1037 Pt c/o dyspnea, metal taste in mouth and dizziness; 50 mg Benadryl given.. 1039 vs 160/112, HR 123; rr 20; spo2 98 - pt reports metal taste gone. 1044 VS 148/107; hr 94; rr 20; sp02 96; 1052 vs 162/106, 90 sp02 97 - pt said he felt fine and wanted to drive home. no further reports of any s/s first reported.

Started with nausea and racing heart rate on 12/21/20 then lymph node under left arm became swollen, warm and tender on 12/23/20 and continued through 12/28/20

I started on Sunday 12/27/20 with chills, body aches, headache (that was all over) reaction on my arm, felt like my arm was the size of baseball. I figured it was all from the shot because I, myself work in the health field so I knew these were all reactions. However, as the day went along the worse I got to feeling. I kept taking Tylenol (only thing I can take because of not having a spleen and having a bleeding disorder) and my headache would not go away. So, then at midnight I ended up checking my temperature and it was 100.4. As the night went on I still wasn't able to get rid of my headache and I had even started adding Benadryl along with my Tylenol and still wasn't able to get rid of it. I ended up talking to my Hematologist and she had recommended me to go to the ED to be checked out.

Chills and temp of 101

Pfizer-BioNTech COVID-19 Vaccine EUA About 3.5 hours after vaccine was administered pimple like rash appeared on right hand and wrist. Slight itch associated with rash. Rash still present on second day after administration.

"Patient felt a migraine aura that started about 8-10 min post-vaccination. She was experiencing pain around her left eye and some vision disturbance although no nausea which she stated she usually has. Patient was still at clinic waiting since it had not been past her 15 min time yet. We gave her some tylenol and had her move to a room that was a little darker and quieter and kept her for another 30 min (45 min total). Patient said she still felt like it was the ""beginning of a migraine"" and not feeling well. We called someone to come drive her home and sent her home for the rest of the day."

"12/29/20- Spoke to CG. Received Pfizer COVID-19 vaccine, dose #1 on 12/23/20 @ 4pm. Stayed in Observation area for 15 minutes without any problem. Suddenly, on 12/26/20 (3 days after receiving the COVIID vaccine), CG felt ""itching to throat, gum, mouth and body; itching head to toe"", also noticed ""lip, mouth swelling"" as well as ""wheezing"". Stated she has history of ""asthma"". CG then self-medicated with ""Claritin and Albuterol inhaler"" without much improvement on 12/26/20. Then the next day, on 12/27/20, itching to throat and mouth is resolving but still had shortness of breath and itching body. On 12/28/20, CG came to work but still experienced itching body and ""hard to breath"" when wearing surgical mask (required at work). CG was sent home and saw primary care physician (PCP) via virtual visit. Per PCP's evaluation, CG has had ""delayed allergic reaction"" to COVID-19 vaccine. PCP recommended CG to continue with Benadryl and Albuterol inhaler until recheck on January 4 for re-evaluation and discussion on preparation of 2nd dose with steroid and EpiPen. CG would like to complete the vaccination series to receive 2nd dose. As of today, 12/29/20- CG stated she still has shortness of breath and itching and will be off work until re-evaluation by PMD on Jan 4, 2021. Reviewed CG?s consent form of COVID-19 Vaccine- Date received 12/23/20 @3:37pm. Answer of NO to question ?Do you have a history of severe allergic reaction (e.g. anaphylaxis) to another vaccine or injectable medication??"

Fatigue Headaches Muscle pain Joint pain Fever Soreness at injection site

throat discomfort/ irritation

Arm soreness, same day Fever and chills, same day and 1 day after Fatigue, same day and 1 day after

Sore arm at injection site, about 6 hours after injection, ongoing Next morning stiff neck on left side, about 19 hours after injection, ongoing Swollen lymph node in neck area, collar bone, left side about 21 hours after injection, ongoing Tiredness, off and on, about 7 hours after injection, sporadically ongoing

Hot flushes with rash to chest

headache, 100.0 temperature

I got the shot at 115PM I waited and within a couple of mins I tasted metal on the left side of my tongue. the back of my tongue and my left cheek started to go numb and I was taken to the ER, my vitals were taken and was normal and was monitored for a couple hours, triptase was taken and they did bloodwork, the numbness climbed to the left side of my face from my eye to my jaw, they gave me antihistemines for the next 48 hours and was sent home. Saturday morning I went to the gym and felt fine and 24 hours later I felt complete fatigue like I had been hit by a bus, Sunday I had congestion and still numbness on my face. On Monday I got a call from an allergist, they couldn't figure out if it was an allergic or adverse reaction. I was put on a high dose of Allegra to see what it could be. Tuesday the congestion went into my lungs and was out of breath and was having trouble breathing. My PCM called me and asked me to video call and said I looked terrible. my pulse oximeter was 99. Wednesday when I woke up my difficulty breathing was starting to get better. I was tested for covid twice on Wednesday and both were negative. Wednesday to 12/28 I continued to have serious fatigue and I'm very active I feel much better 12/28 and 12/29 I feel better but I've had the numbness on my left side of my face this whole time and it feels like I've had Novocain I can't get rid of it.

PATIENT received the covid vaccine on 12/28/2020. He had two episodes of nausea and vomiting at 2 pm and at 3:30 pm on 12/28/2020 (about 3 hours after vaccination). Nausea and vomiting have resolved. Has bodyaches today. Denies fever, chills, cough, sore throat or HA.

SHORTLY FOLLOWING THE VACCINATION, PATIENT COMPLAINED OF ITCHING, REDNESS ON HER FACE, SCALP AND MOUTH. LEGS AND TORSO ITCHING ALSO.

Patient rec'd first dose of the Pfizer Covid-19 vaccine. About 5 minutes after she reported a hot peppery taste and her tongue felt hot. No other reported symptoms. Had the patient sit in observation for a total of 45 minutes with no worsening or new symptoms. Called patient 2 hours after event and symptoms have resolved.

Client reported dry mouth occasional cough and feeling warm after. Water provided leg elevation cool compress to neck reports feeling much better

sore throat, cough

2 minutes after she received the vaccine, she felt numbness at injection site that radiated across her chest and down her right arm. She was sent to the ED, no treatment needed and symptoms had resolved prior to her leaving the ED.

First day of vaccine, I had a really sore arm. Next day after vaccine, felt very fatigued that continued for 3 days. On 3rd day after vaccine, developed mild cold symptoms/sinus congestion. Day 5 after vaccine, lost taste and smell and tested positive for COVID-19.

1st day - muscle tenderness in injection site. 2nd day - around 11am headache, fatigue, chills, joint pain

Patient was nauseated and warm Ice pack to neck Denies further symptoms

Anxiety, arm soreness and chills

No adverse event. The vaccine was given 22 hours after the vial was punctured. The event was discovered three days later which was a Sunday at 10pm at night. The patient was notified the next day (12-28-20). The patient reported no side effects and was feeling felt great.

Took Benadryl at home before arriving at shot clinic - began to feel tightness & burning sensation in throat shortly after injection - taken to ER for observation and was administered prednisone

Extreme fatigue, fever, chills, headache, body aches and pain at injection site. I know they are all listed I just didn?t know if I needed to report them

headache, chills 100.0 temperature

"Patient was monitored for >15 minutes after vaccination. Patient told a nurse that her knees felt weak. Patient then fainted and was laying on the floor when i arrived. Patient reported she felt like she was ""floating"" and she did not want to ""fall"". She was also nausea and wanted to vomit and did not end up vomiting anything up. Patient fainted several more times. Her BP was around 143/80 and unsure about the pulse. Patient then become unresponsive for 20-30 seconds."

1:00 am to 5:00am the night after vaccine in morning. Chills and shivering severely. Body ache. Headache. No fever. Chills subsided. Mild Headache only symptom for remainder of day.

Moderna COVID-19 Vaccine EUA Approximately 16 hours after receiving the vaccine (8 AM), I was woken to hot flashes, sweating, and fever-like symptoms. My arm was also very sore and slightly bruising had occurred. My temperature at this point was 99 degrees. After taking Tylenol at 4 AM for arm soreness and Motrin at 8 AM, symptoms of aching and soreness subsided. At 2 PM I had not had medicine since 8 AM and symptoms resumed. My temperature was 100 degrees and I experienced chills and body aches. It is currently 6 PM and symptoms have mostly subsided, however, my arm is still sore and I feel faint fatigue and soreness all over.

Developed 2 hive like welts on chest that I thought might be bug bites because they were very painful itchy and swollen with fluid in them. After a few days more of them developed until there were about 22 on my legs, arms and chest. Very painful and inflamed and itchy. They are as painful as shingles but there are none on the midline or abdomen. I saw physician and he determined it was a reaction to the vaccine. I have never had a reaction to a vaccine before nor have I ever had welts as painful or like these. He prescribed prednisone which I am taking now. I have only finished one day of oral prednisone

and the swelling on the site have started to improve but I still have pain itching and have 3 new ones that have come up. One on the lateral breast and the other two on the anterior breast (superior).

headache, chills, temp 100.7

headache, chills, temp 100.7

Within 1-2 minutes: left hand felt numb and my body became very warm. Within 5-10 minutes: a huge headache. Within 30 to 45 minutes: Blood Pressure fluctuated, headache became worse, and chills started to occur. Within 1 hour to 1.5 hours: the headache became a huge migraine and my head felt like a bowling ball (I was still at work at this time.) Eventually, I could not lift my head off the desk. About 2 hours to 2.5 hours later, I felt so bad that I could not continue to work and head to leave work and go home. Upon arrival at home, the chills, aches, pains, migraine, some fever, eyes could barely stay open, and diarrhea started. About 7 hours later, a full blown Lupus flareup seemed to have started and/or it seemed to feel like a full blown case of the flu (if that makes any sense at all.) By the time I wrote this, all the symptoms have remained the same. I have had chicken soup, Gatorade, and bananas and treating this like the flu. I have continued to take my medication except for the Prednisone because I was told not to take the prednisone at the time that I was given the COVID19 shot at 9am this morning. I have stayed at home since I arrived at home around 1:30 or so...

Headache, body aches, chills, nausea and vomiting. Tool Ibuprofen at start of symptoms, and an additional dose later in the day.

Approximately 10 minutes after administration of vaccine, patient reports having dry mouth and some tightness and closure of esophagus (similar to what happens when patient eats shell fish), but not as severe. Patient was offered Benadryl, but declined. Patient drank some water to help relieve dry mouth. Blood pressure @4:30pm was 136/84. At approximately 35 minutes after symptoms started, patient reports being able to produce a little more saliva. Blood pressure @4:55pm was 118/87. Clinically stable. Symptoms are not progressing.

Individual began feeling dizzy and reported feeling painful sensation in her neck within approximately 5 minutes after receiving the vaccine. She was tachycardic in the 120s. She was encouraged to take deep breaths, offered water, and given 50 mg Benadryl IM in the right deltoid. After several minutes post Benadryl administration, her symptoms resolved. She was taken home by a family member.

Approximately 7 minutes after administration of vaccine, patient reports having tingling sensation on head and face. Symptoms lasted for approximately 10 minutes. Blood pressure @4:34pm was 140/87, HR=71. Blood pressure @16:52 was 150/73, HR=105. At 5:10pm, patient clinically stable. Symptoms have completely resolved. Patient released from vaccination clinic at 5:14pm.

headache

Vaccine administered at 7AM on 12/26/20. 12:00 noon, 101 fever, chills, joint and muscle aches same day. Took Ibuprofen to reduce fever, temp down to 99 by 6PM 12/26/20. Next day, 12/27/20, at 5AM temp back up to 101. Took Ibuprofen again and fever was gone by 5PM. Muscle aches and fatigue

continued through 12/28/20. 12/29/20 woke up feeling like I have a minor cold with some congestion. No fever as of 3:20PM on 12/29/20

During the observation time after receiving the vaccine, the employee report that her ears were read and warm. Employee noted to be squeezing her ears at time of concern. Employee evaluated by RN staff, no swelling, SOB or difficulty swallowing noted. Employee then reported onset of itching to her neck and ears. Employee was escorted to the Emergency Room for evaluation. Per ED physician note: 46 yo F c/o R ear redness, swelling and generalized itching. sudden onset just PTA. pt had COVID-19 vaccine approx 20 min ago. denies throat/tongue tingling/swelling or SOB. O2 sat = 100%, no acute distress, lungs clear, respirations non-labored, breath sounds equal, speaking in full sentences, no pharyngeal erythema or exudate.. Treated with diphenhydramine 50mg IV, famotidine 40mgIV, methylprednisolone 125mg IV and NS 1000 ml x 1.

patient experienced dizziness, lightheadedness approx 20 minutes after dosing. VS WNL BP 100/70, HR 80. Pt sat and drank water and put ice on her neck for approx 30 mintues

After administration of vaccine at 1:00 pm, I looked up and saw patient had fainted in chair, that time was maybe around 1:01 pm. When I rushed over to her, she regained consciousness, noticed she was not able to speak well, nurses removed her mask and we noticed her lips were swollen and was having an anaphylactic reaction, I then administered one dose of Epi-pen at 1:04 pm and called 911. We took her BP but it was high due to the Epipen injection, we tested her blood sugar. When the EMT arrived, they took over and took her to the ER.

Hives on neck takes Benadryl and refused to be seen

Loss of taste that evening only, some dizziness at time of vaccination - fatigue, muscle aches, nausea and declined in appetite. Symptoms have cont as of time of generating this report 12/29/2020 but has lessened in severity each day.

DAY ONE 12/22/2020- SORE INJECTION SITE, DAY 2 TOTAL BODY ACHES ON 12/23/20, FELT FINE ON 12/24/2020, 12/27/20 SWOLLEN LYMPH NODES AROUND THE CLAVICAL AREA WITH SORENESS IN THE INJECTION SITE, NUMBNESS AND TINGLING TO THE EXTREMITIES.

received injection at 13:04, went to observation area. reported brief dizzy spell at 13:20. Drank water, BP right arm 184/101, BP left arm 166/90 at 13:25. Patient reported only brief episode of dizziness and no further dizziness. User reports they ate lunch 1.5 hours earlier. BP 173/90 at 13:30. User reports she feels fine and will recheck BP when she gets home and follow up with her PCP. User waited 5 additional minutes before leaving with no further adverse effects. Total time of observation post injection was 30 minutes.

About 15 hours after the injection I developed sudden onset of chills, headache, nausea, dizziness and low back pain. The site of the injection was also throbbing. I had no side effects prior to this. It was severe enough that I had to call off of work. Symptoms resolved about 6 hours later. I have had no further symptoms since that time.

Fever 102.1 Chills Muscle aches Cough Headache

Fever, coughing, tachypnea, tachycardia

Right after vaccine, felt like she was freezing. Got home from work, took Tylenol felt achy, went to bed, woke up about 11:00 pm shivering really bad, breathing heavily, temp was 102.3, took more Tylenol. Up all night off and on with body aches, headaches, chills and fever. Felt the same way as when she had COVID.

Frontal headache, shivers, body aches, fever to 101.6F.

Received vaccine at 13 15. At 1351 c/o mild chest pain. 1353 c/o throat fullness and anxiety; 1354 bp 148/81 HR 99 O2 sat 100% c/o difficulty swallowing, SOB and itching. Rapid response called. Benadryl 50 mg IVP given at 1355. 1356 Solumedrol 125mg given IV; 1357 Epinephrine given; 1358 Pepcid 20 mg given. 1400 Normal saline 250 mg IV; 1415 transported by ambulance to local ER. In waiting area in local ER no attention. Came back to Hospital and admitted to observation

Developed skin reaction (hives). Treated with 25 mg of Diphenhydramine orally and observed for additional 30 minutes. Hives subsided and patient released.

developed headache, body aches and fever - has since resolved

headache/chills/weakness

Patient reported that immediately after receiving the vaccine she felt lightheaded, dizzy, like she might pass out. She felt as though her throat was more swollen and she had difficulty swallowing. She had no hives, shortness of breath, or difficulty breathing. No myalgias, sore throat, cough, or wheezing.

Facial/ arm numbness and tingling

Soon after IM vaccine c/o sore & swollen arm for 2 days. Also felt weak, shaky and tired for those 2 days

About 4 hours after injection, pain at injection site started. 5 hours after injection, fatigue, body aches, and fever and chills occurred. Symptoms subsided for several hours until night time. Severe nausea occurred sometime around 1:30 am, a little 12 hours after injection. Vomiting happened at 5am. The entire next day after injection I experienced nausea, fatigue, sore throat, headache and fever.

High fever to 102 with uncontrollable shivering and chills beginning apx 12 hours after injection, improved with ibuprofen but not resolved, fever continued x 16 hours

18 min after injection. Throarlt began tonitch and feel tight, chest pressure. Light headed. Epi 0.3 given, sent to er, provided with solumedrol, benadryl, pepcid, ativan and 1750 cc of fluid. Released from hospital at 330.

- arm tenderness. Initially felt like routine flu vaccine. After 12 hours, arm started to increase in tenderness, more similar to other vaccines such as TdaP or tetanus. Gradually resolved at 72 hours. - Mild malaise developed at 24 hour mark (1st day post injection). Checked temperature at 28 hour post

injection with 1 degree Fahrenheit higher than normal forehead temperature using Exergen thermometer. Subtle myalgia during the evening. Symptoms resolved after sleeping, which should be at 40 hours after injection. Slightly less than normal physical stamina between 40-50 hours post injection (2nd day post injection). Symptoms have completely resolved after the second night sleep (66 hours post injection or 3rd day post injection). Injection was on Saturday 2:00pm. Completely symptom free on Tuesday.

Next day after the vaccination, the patient(staff member) came back to the vaccination clinic and stated that she felt numbness and tingling along the smile lines of her face and around her lips. She was monitored for about 40 minutes then she reported difficulty of swallowing. At first reported symptom of swallowing difficulty she as administered diphenhydramine 50 mg oral liquid by mouth. After about 30 minutes of continued monitoring, epinephrine 0.3 mg IM was administered. At the same time 911 emergency response was called and the patient was transferred to the acute care hospital.

Four hours later after received vaccination he complaints of tingling sensation in both cheeck with associated edema and redness. Treated with Solumedrol 125 mg IV and Benadryl 50 mg IV. Patient improved and was discharge with instruction .

Sustained slight but rapid muscle twitching in the deltoid muscle of the injection (left) arm. Noticable the afternoon of post injection day #1. Twitching continued for approximately 1 hour then ceased. No other side effects reported other than minimal arm soreness that didn't interfere with daily activity

Received dose @ 1445; 1458 had a cough and itchy throat and flushed; Bp 162/103 HR 86 Sat 99%; At 1459 gave IV push solumedrol 125 mg; 1510 bp 150/93 hr 80; sat 99%; feeling better

Hives on neck, face, upper chest, and back. Increased heart rate. Metal taste in mouth. Zyrtec given and monitoring Relief after about an hour

Onset of herpes zoster (shingles) - right anterior thigh

Moderna COVID- 19 Vaccine: During observation period after receiving the vaccination patient reported headache, nausea, and dizziness. Vital signs: blood pressure: 111/73 mmHg, pulse: 56 beats per minute, oxygen saturation 100%. Patient reports that she is typically hypotensive and does become nauseous somewhat frequently. Patient offered water and snacks. No loss of consciousness or respiratory symptoms reported. Patient observed for at least 30 minutes and left vaccine clinic in stable condition.

fever 102

nauseated; sensitivity to light; sweaty; hypertensive; tachycardic.

Received vaccine on 12/22/20, on 12/25/20 noticed redness, hives, and itching on the left arm where received vaccine. Took Benadryl on 12/25/20 and 12/26/20. Reported on 12/29/20, and feels itching with some redness subsiding, no pain.

12/24 EVENING c/o being so cold causing shivering. Not normal for pt. Also arm pit area swelling for a bit. All symptoms resolved on 12/25/20.

Morning of day after vaccination had headache, fever, chills, joint pain, muscle aches. 2 days after vaccination same symptoms also diarrhea and positive COVID-19 test.

Moderna COVID - 19 VACCINE Sorearm in left arm Chills Severe headaches Nausea and vomiting

flushed and nauseous and anxious and dry cough; dizzy; hypotensive

METALLIC TASTE IN MOUTH ABOUT 10 MINUTES AFTER VACCINE. NO OTHER SX.

Feeling dizzy and light headed 30 mins after injection. One hour later felt nausea and dizzy. BP 177/73, and 156/70-72 w/ repeat. Symptoms improved with Tums.

fever 103'

"Patient received the covid vaccine on 12/22/2020. No problem with the vaccination. Reported new onset of ""dry cough"" and nasal congestion started on 12/29/2020. Denies fever, chills, HA, body aches, or fatigue. Last covid test on 12/17/2020 was negative."

Complains of left arm swelling and pain. She had the COVID-19 vaccine on December 23. The next day she had some mild pain at the injection site. She massaged it and use Tylenol. On December 24 he developed pain down all of her left arm. On the 25th she had complete loss of sensation and feeling in her left hand for about 3 hours. Then the arm seemed to tingle and feeling came back. That night she developed pain down in her wrist. Complains of some swelling in the left forearm. That area is burning and throbbing. Pain is affecting her sleep. She has tenderness to palpation on her wrist area. She also has pain with with wrist movements. . .

Pain in area of inyection (left arm), mild rash in chest area

Approximately 5-7 minutes after receiving vaccine, I experienced a rapid increase in heart rate along with a head rush. I then was shaky and lightheaded and was told extremely pale. I then noticed the back of my tongue was slightly swollen and I had a tightness/itchy feeling so n my throat. My pulse was checked at 120bpm, Approximately 10 minutes later my lips were tingling and numb. I was given Benadryl and prednisone. 1.5 hours later since my symptoms did not go away I was escorted to the ER for epinephrine.

12/28 Difficulty falling asleep, Awake in middle of night w/ achiness - couldn't get comfortable. This morning c/o headache, feeling exhausted and weak.

staff member received his first injection in the left arm. As staff was waiting for his time of observation, he stated he could feel his blood pressure rising. When assessed, his blood pressure was 196/119. Staff member stated to the MD he takes medications for hypertension but was unable to state what that medication was. He says he just takes what he was given. Staff member stated he was having a hard time breathing due to his blood pressure and was given supplemental oxygen at 3L per nasal cannula.

O2 was 98% throughout. 911 was called to assist staff member to ED for evaluation of symptoms. While taking staff member to meet the ambulance, via wheelchair, he stated he believes he forgot to take his medication for the day. Ambulance took staff to ED with no noted complications.

Immediately after receiving the dose, I developed lightheadedness, nausea, sweating. This worsened for 15 minutes, then slowly subsided over several hours. The next day, I was a little fatigued, but returned to baseline by the evening. On the 2nd day after vaccination, I developed uncontrollable violent rigors and PACs, along with fatigue and vertigo. These symptoms improved on days 3-5 after the vaccine, but returned on day 9 with worsening rigors and PACs. I also developed substernal chest pain on day 5. Now, day 9 post vaccination, and I'm feeling unwell. Main symptoms are chest pain, PACs, intermittent rigors, vertigo.

Pfizer-BioNTech COVID 19 Vaccine Starting at 20-minutes post vaccination and lasting for approximately two hours, patient experienced episodic tachycardia (HR 123-200), flushing of face and arms, and tingling sensation in upper body lasting up to 5-minutes per episode. Episodes were 20 minutes apart and decreasing in severity. Patient medicated after second episode with 25mg/Benadryl, 40mg/prednisone, and 20mg/pepcid. Side effects resolved within 40 minutes of medicating.

Pfizer-BioNTech COVID-19 Vaccine: Soon after vaccine administration patient reported dizziness, trouble swallowing, paresthesias in both hands, shortness of breath, anxiety, and one episode of vomiting. Patient was transferred to the emergency department where initial vital signs were: blood pressure 161/84 mmHg, pulse 97 beats per minute, temperature 36.9 degrees Celcius, respiratory rate 16 breaths per minute, and oxygen saturation 98%. The patient presented alert and oriented in no acute distress. On exam no rash, edema of the uvula or tongue, respiratory distress, wheezing, rhonchi, or rales were noted. Patient was administered one dose each of lorazepam and ondansetron and was discharged.

I previously had covid the first 2 weeks of november** Symptoms of adverse reaction included: -severe pain and limited movement of injection site - large amount of redness and swelling at injection site - fever of 101.2 - body aches and chills - headache

drooping OF LEFT EYE, twitching, weeping of left eye. Upper eyelid of left eye puffy and red. Chest tightness

"""Pfizer-BioNTech COVID-19 Vaccine"": left-sided facial bell's palsy; facial drooping mostly resolved, minimal eye drooping on left side; headache; Tylenol taken for headache; headache has resolved;left-sided sensitivity to loud noises; hearing sensitivity resolved"

Mild headache, significant fatigue, runny nose

Severe headache, nausea almost to vomiting, body aches, injection site inflamation/pain,

itching (full body), sore throat, L ear pain

Diarrhea

physician/patient with history of anaphylaxis to shellfish - symptoms of tingling tongue & syncope. no longer carries epi pen sue to ability to avoid food. 10 minutes post vaccination pt/physician experienced tongue tingling similar to prior anaphylactic events. administered 25 mg. Benadryl po. no further issue, vital signs stable throughout & later in evening.

chest tightness, tongue tingling, tachycardia, hives on left arm

Unilateral facial numbness, tingling, and swelling

"Metallic taste in mouth, dizziness, weakness, altered mental status, difficulty raising arms, ""heavy like a slug"", HR 81, BP 112/78. reaction immediately after vaccination. Symptoms did not resolve after an hour. Patient taken to ER for evaluation."

rash, dizziness, neck pain, hypertension, vomiting, mydriasis, diaphoresis: neck pain started within 10 mins, while other symptoms proceeded after about 20-30 mins.

Temporary Numbness of facial muscles

Days 1-4 - low grade fever (100.8) swollen lymph nodes and extreme sore throat and lethargic. Day 5 no fever but swollen lymph nodes and sore throat. Day 6 congestion, no taste or smell.

10 MINUTES FOLLOWING VACCINE - SOB, COUGH, TIGHTNESS IN CHEST, THRAOT SWELLING, DIFFICULTY SWALLOWING, LIGHT HEADEDNESS, AND ELEVATED HEART RATE. ORAL AND IM BENADRYL ADMINISTERED, 2 DOSE OF EPINEPHRINE, 2 NEB TREATMENTS, O2 PLACED. 911 CALLED AND TRANSPORTED TO EMERGENCY FOR FURTHER TREATMENT AND MONITORING. AT HOSPITAL IV STEROID ADMINISTERED. SYMPTOMS SUBSIDED WITH SECOND DOSE OF EPINEPHRINE, HOWEVER RETURNED 3 HOURS LATER AND ANOTHER DOSE OF BENADRYL ADMINISTERED. ELEVATED HEART RATE CONTINUED AND IV FLUIDS ADMINISTERED TO ATTEMPT IN BRINGING DOWN HEART RATE. IV FLUIDS WERE NOT EFFECTIVE. HEART RATE (118-120) REMAINED ELEVATED INTO THE OVERNIGHT HOURS AND SUBSIDED AROUND 1:30A ON 12/29/2020. CONTINUED HEADACHE, NAUSEA ONSET, FATIGUE, DIFFICULTY SWALLOWING AND COUGH ON 12/29/2020.

Shingles outbreak mostly lesser occipital nerve distribution

Got shot on Tuesday. On Sunday night had cough and congestion and little fever. Going to do COVID testing this morning. Is feeling better today.

I received my Moderna vaccine 12/28/2020. First symptom began that day with pain, soreness of injection site. Later throughout the day I began to have chills, and body aches. I had a sleepless night. The following morning 12/29/2020, I still felt chills, body. Then, I felt nausea, and headache. I slept most of the day today since I felt fatigue too, but it's better than going through Covid .

Face turned red,sweating,cold clammy skin, throat constricted

Atrial fibrillation

The morning after getting vaccine, patient had high BP 213/159, 92% on room air, shaking, chills, LCTAB with diminishment at bases, emesis. Admitted to hospital for pneumonia.

Muscle tightness to bilat shoulders and neck. Tension headache. Rash across shoulders and chest.

Sore arm, body aches, mild fevers for 48 hours

Bad Headache, nausea, extreme body aches

Pt had felt little tingling effect in mouth and mentioned about having an allergy shot today.

Hives from Head to toes. Swollen ears, slight lip swollen, fever 101

12/23/2020 developed left ear pain and next day experienced drooping of left side of face, difficulty blinking left eye Bells Palsy

Chills, fever, fatigue, headache

Vaccine administered with no immediate adverse reaction at 11:29am. Vaccine screening questions were completed and resident was not feeling sick and temperature was 98F. At approximately 1:30pm the resident passed away.

Injection site pain 4-36 hours after dose. Headache 12-36 hours after dose. Joint pain 12-36 hours after dose. Fatigue 12-36 hours after dose. Chest tickle 24-36 hours after dose. Tooth ache 4-36 hours after dose.

His wife ended up contracting Alpha-Gal by Ticks; This is a spontaneous report from a Pfizer-sponsored program Pfizer First Connect via contactable consumers (patient's husband, and patient herself). A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient ended up contracting alpha-gal by ticks on an unspecified date. The reporter asked about the ingredients of the COVID-19 vaccine, if it contains mammalian cells, dairy, guinea pig 1 cell, or cholesterol origin. Outcome of the event was unknown. Information on the lot/batch number has been requested.

near syncope episode, orthostatic; feels a little foggy; This is a spontaneous report from a contactable Physician. A 38-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), via an unspecified route of administration on unspecified date in 2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The emergency medicine physician was monitoring a patient that came in from a vaccination event, stated that it was Pfizer BioNTech Covid 19 vaccine. The patient had a near syncopal episode. They did orthostatics (unspecified) and found that she was orthostatic (near syncope episode, orthostatic). There was no anaphylaxis reaction or allergic reaction. She still felt a little foggy. The physician did a blood glucose, labwork and EKG that look good. The physician wanted to know if there was any data for things that they should looking for with the vaccination and will direct the patient to

contact Pfizer to report it. The outcome of the events was unknown. Information on the lot/batch number has been requested.

Sore arm; Dizziness; Tiredness; nausea; fever of 102¦F; severe headache; This is a spontaneous report from a contactable consumer (patient). A 20-year-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899, expiration date unknown) intramuscular at the left arm on 18Dec2020 at a single dose for COVID-19 immunization in the hospital. Medical history included allergy to Sulfa from an unknown date. Concomitant medications included escitalopram and clonazepam. The patient did not receive any other vaccines within 4 weeks prior to the vaccine. It was unknown if the patient was diagnosed with COVID-19 prior to vaccination. The patient experienced sore arm after first 8 hours; dizziness, tiredness, nausea, fever of 102 F and severe headache all on an unspecified date in Dec2020 (reported as 12Dec2020 at 01:15 AM). The patient was tested for COVID post vaccination and had a nasal swab with negative results. The patient recovered from sore arm, dizziness, tiredness, nausea, fever of 102 F and severe headache all on an unspecified date in Dec2020.

Fever of 101.0; sore throat; light headedness; aches; chills; excessive sweating; nasal congestion; This is a spontaneous report from a contactable healthcare professional. A 32-year-old female patient received BNT162B2 (lot number and expiry date unknown) at a hospital, at age 32-year-old, intramuscular, on the left arm on 21Dec2020 19:45, at single dose (dose 1), for COVID-19 immunization. Medical history included anemia, anxiety, and urticaria. Patient was also diagnosed with COVID-19 prior to vaccination. Patient is not pregnant at the time of vaccination. Patient did not receive any other vaccines within 4 weeks prior to the COVID-19 vaccine. Concomitant medication included ethinylestradiol, norgestimate (ORTHO TRI-CYCLEN), lorazepam (ATIVAN), clonazepam (KLONOPIN), and diphenhydramine hydrochloride (BENADRYL) from unspecified dates. The patient previously took hydrocodone/acetaminophen (VICODIN), oxycodone / paracetamol (PERCOCET), pseudoephedrine hydrochloride (SUDAFED) on unspecified dates and had known allergies. On 21Dec2020 at 23:00 , the patient experienced fever of 101.0, sore throat, light headedness, aches, chills, excessive sweating and nasal congestion. No treatment was received for the events. Since the vaccination, has the patient has not been tested for COVID-19. The outcome of the events was recovering. Case is reported as non-serious. Information on the lot/batch number has been requested.

hives and sore throat the day after receiving COVID19 Vaccine; hives and sore throat the day after receiving COVID19 Vaccine; This is a spontaneous report from a contactable Nurse. A 46-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number: EL0140, Expiry Date: 31Mar2021), intramuscular (injection left deltoid) on 18Dec2020 (around 1621) at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient has no prior vaccinations. The patient experienced hives/ She had body hives all over and sore throat the day after receiving COVID19 vaccine on 19Dec2020, within 24 hours. The patient took BENADRYL and was fine. Reporter was not sure if the patient would receive the second dose. The adverse event did not require a visit to the emergency room nor physician office. Outcome of the event was recovered on 19Dec2020.

headache; fever/as high as 102.9 degrees Fahrenheit, now (22Dec2020) it's just over 100.0 degrees Fahrenheit; This is a spontaneous report from a contactable nurse. A 31-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EK5730, via an unspecified route of administration, at the right arm, from 17Dec2020 18:30 at a single dose for covid-19 immunization. Medical history included attention deficit hyperactivity disorder (ADHD), osteoarthritis (OA); patient already suffer joint pain and her current joint pain is no worse than usual, Raynaud's, palpitations and joint pain. Concomitant medications included amfetamine aspartate monohydrate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (MYDAYIS); amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL); and ibuprofen (IBUPRO). It was reported that the patient has had fever daily. Initially on 18Dec2020 at 9:00, it was as high as 102.9 degrees Fahrenheit, now (22Dec2020) it's just over 100.0 degrees Fahrenheit. She also has had a headache daily(reported as started on 18Dec2020 at 9:00), but today's headache is much worse than previous days. The patient underwent lab tests and procedures on 18Dec2020 which included sars-cov-2 test/COVID-19 test/nasal swab with negative result. Outcome of events was reported as not recovered. Therapeutic measures were taken as a result of events headache and fever included OTC medications (unspecified). Follow-up attempts are completed. The information on the batch/lot number was obtained.

Chills; joint pain; muscle pain; This is a spontaneous report from a contactable other healthcare professional (patient). A 21-year-old female patient (not pregnant) received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), intramuscular (Left arm) on 22Dec2020 09:30 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was not diagnosed with COVID-19 prior to vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. There were no other medications received within 2 weeks of vaccination. The patient experienced chills, joint pain, and muscle pain on 22Dec2020 (19:00). There was no treatment received for the adverse event. The patient has not been tested for COVID-19 since the vaccination. The outcome of events was recovering. This case is non-serious.

Fever; chills; body aches; headaches; malaise; chest pain in side-lying; cough; diminished appetite; This is a spontaneous report from a contactable healthcare professional. A 30-year-old male (also reported as female) patient received the first dose of BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine; Lot number: EH9899), intramuscular in the left arm on 17Dec2020 at 15:45 at a single dose for immunization. The patient had no relevant medical history. The patient din not have Covid prior to the vaccination and had no known allergies to medications, food, or other products. The patient's concomitant medications were not reported. It was reported that the patient had no other medications in two weeks and did not receive any other vaccines within four weeks prior to the COVID-19 vaccine. The patient experienced fever, chills, body aches, headaches, malaise, chest pain in side-lying, cough, and diminished appetite starting at 11pm (23:00) on 17Dec2020 and gradually decreasing mild symptoms still present on 22Dec2020. The patient received no treatment for the adverse events and was not tested for COVID-19 after the vaccination. The facility where the most recent COVID-19 vaccine was administered was at the hospital. The outcome of the events was recovering. The case was reported as non-serious (did not

result in death, was not life-threatening, did not cause or require prolonged hospitalization, was not disabling/incapacitating, and did not result to any congenital anomaly/birth defect).

Left arm pain; generalized malaise; i was wiped out and wanted to sleep all day; This is a spontaneous report from a contactable Nurse. A 52-years-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number: EJ1685), via an unspecified route of administration on 22Dec2020 07:15 at a single dose (dose number 1, left arm) for COVID-19 immunization. Medical history included HIV+ and COVID-19 from an unspecified date. Concomitant medication included bupropion hydrochloride (WELLBUTRIN), trazodone, oxazepam (SERAX), valaciclovir hydrochloride (VALTREX), and ibuprofen from an unspecified date for an unspecified indication. The patient has allergies to Tegretol and AZT. The patient was diagnosed with COVID-19 prior to vaccination. The patient had no other vaccine in four weeks. The patient experienced left arm pain, generalized malaise (he was wiped out and wanted to sleep all day) on 22Dec2020 09:00. Treatment was not given. Event outcome was recovering. Since the vaccination, the patient has not been tested for COVID-19. The events were assessed as non-serious.

"vertigo; left facial tingling; lip tingling/tingling in the left corner of the mouth; he feels hazy/Haziness; facial numbness; heaviness and tingling in the left corner of the mouth; This is a spontaneous report from a contactable physician (patient). A 32-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EL0140), via an unspecified route of administration on 18Dec2020 08:15 am at single dose for covid-19 immunization. Vaccine location was left deltoid and it was the first dose. The facility type vaccine was hospital. Medical history included raynaud from an unknown date. The patient clarified that Raynaud's is not officially diagnosed. When he was in medical school and would take Methylphenidate to study his fingers would get pale and in cold weather he gets it in his hands. No known allergies. Patient didn't do relevant test. There were no concomitant medications. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. Physician stated that received COVID-19 Vaccine on Friday. A couple of hours later he had left facial tingling and lip tingling that lasted about an hour. The left facial tingling and the lip tingling started between 9AM and 10AM. It felt like facial numbness and heaviness and tingling in the left corner of the mouth. It was less tingling and more of a heaviness. Vertigo started on the second night (19Dec2020). Whenever he sit back in a chair quickly he has vertigo as well as when he laid back in the bed at night. He took no medications. Throughout the day he felt hazy. Haziness that is consistent. The best way to described it is if you drank a lot of alcohol and were well hydrated. The next morning you feel fine, but there is something there and feels off, but you can't put a finger on it. There was no adverse event require a visit to emergency room or physician office. The action taken in response to the events for BNT162B2 was not applicable. The outcome of events ""left facial tingling"" and ""lip tingling"" was recovered on 18Dec2020 and were reported as non-serious. The outcome of event Vertigo was not recovered, it was reported as serious-Medically significant. The outcome of other events was unknown. The drug result of events ""Vertigo"", ""left facial tingling"" and ""lip tingling"" was Related.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of event Vertigo cannot be totally excluded. The case will be reassessed if additional information becomes

available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

cold tingling sensation in right hand; sore right arm; This is a spontaneous report from a contactable consumer. A 56-years-old female patient receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number: EK5730), via an unspecified route of administration on 18Dec2020 at a SINGLE DOSE (injection to right arm one time) for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. There were no other vaccines within four weeks of the suspect product. The patient previously took mefloquine hydrochloride (LARIAM) and experienced allergies. On 21Dec2020 14:15, the patient experienced very sore arm for about one day, dizzy for one hour, five hours after the vaccine. On 21Dec2020, the patient experienced chills and body aches for about one hour 10 hours after vaccine with one hour of fatigue also. There was no treatment received

for the events. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient has not been tested for COVID-19. The outcome of the very sore arm for about one day was recovered in Dec2020 and of dizzy for one hour, five hours after the vaccine and chills and body aches for about one hour 10 hours after vaccine with one hour of fatigue also was recovered on 21Dec2020. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

can't raise her arm up; pain at the site of the injection; During the night she couldn't sleep; This is a spontaneous report from a contactable nurse (patient herself) via the Pfizer Sponsored Program. A 69-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EK9231, via an unspecified route of administration on left arm from 23Dec2020 10:10 to 23Dec2020 10:10 as single dose for COVID-19 immunization. The patient medical history was not reported. There were no concomitant medications. The patient previously took tetanus toxoid and got red and was itching (clarified she had a reaction to a tetanus shot several years ago). Reports she received the first dose of COVID 19 vaccine at the hospital where she works on 23Dec2020 at 10:10AM in left upper arm. She started having pain at the site of the injection in the afternoon at around 3PM or 4PM 23Dec2020. During the night she couldn't sleep because of the pain no matter where she turned. The patient states the pain was probably 8 out of 10 on the pain scale. Adds she had no redness or swelling. The pain today (24Dec2020) is still the same and now she can't raise her arm up. No treatment has been applied. No cold or heat applied. The outcome of the event pain at the site of the injection was not recovered; while the other events was unknown. Information about lot/batch number and expiration date requested.

headache; Had soreness in arm; This is a spontaneous report from a non-contactable consumer. A female patient in her 60s received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot/batch number and expiration date not reported, via an unspecified route of administration from 23Dec2020 to 23Dec2020 as single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced had soreness in arm and a headache on 24Dec2020. The outcome of the events was unknown. Information about lot/batch number has been requested.

Fever; Chills; Myalgia; Headache; Feeling weak; anorexia; This is a spontaneous report from a contactable consumer. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EH9899), via an unspecified route of administration on 22Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced fever, myalgia, feeling weak, anorexia and headache in Dec2020. The patient reported that the symptoms lasted over 48 hours. The outcome of the events was unknown.

"Vertigo; Headache; High temperature; Woke up in the morning with vivid nausea and vomiting and threw up constantly; Woke up in the morning with vivid nausea and vomiting and threw up constantly; Body aches; This is a spontaneous report from a contactable consumer (patient). A 70-year-old female patient (weight: 81.65 Kg, height: 173 cm) received BNT162B2 (Pfizer-Biontech covid-19 vaccine, Lot. EL0140) on 21Dec2020, at single dose, for COVID-19 immunisation. Relevant medical history included

pulmonary arterial hypertension. Concomitant medications included furosemide (LASIX) 20 mg, daily and potassium 20 meq, daily. The patient experienced the following reactions: body aches on 22Dec2020; nausea and vomiting on 23Dec2020 at 02:00 described as ""she woke up in the morning with vivid nausea and vomiting and threw up constantly all on the 23rd and most of the day 24th""; headache and high temperature on 24Dec2020 and vertigo on 25Dec2020. The patient recovered from nausea and vomiting on an unspecified date, in Dec2020, while clinical outcome of the other events was unknown."

Resident extremely confused. BP 125/66; Pulse 124, Temp 99.7; 02 at 92% (around 10:00a.m.) BP 138/84; Pulse 125, Temp 99.5, O2 at 95% (around 1:00p.m.)

Increased heart rate majority of day, low bld sugar, nausea and headache late evening of vaccine. Hives appeared Rt arm - elbow, neck to eye. Took Benadryl 50mg at 7:30 pm another dose at 10pm. Awoke 12-29-20 all hives gone but feels hot, fluctuating heart rate, stiff neck, short of breath. Called MD, will monitor symptoms next 24 hours.

In middle of night had strong headache, then day following vaccination was headache-y (mild), light-headed, tired and with body aches. Two days after had mild body aches and mild light headed-ness; day 3 I was clear.

"Patient contacted our pharmacy and noted that ""the day after his Moderna dose, he experienced fever and chills of 100.3 Deg. Pain at the site of injection, and Vomitting."""

Pt experienced Weakness, dizziness, vomiting, headache soreness @ inj. site.

Pt developed a rash about an 30mins to an hour after receiving vaccine. Pt took Loratadine & Benadryl. Next day pt felt better. Soreness @ inj. site.

Patient left hospital and complained of dizziness outside. Patient brought back to vaccine Pod. Patient's blood pressure taken, patient given snack and water and felt better.

Patient felt tingling in left hand. Patient's blood pressure taken. Patient monitored by RN and seen by Resident. As per patient tingling went away

Patient complained of dizziness. Patient's blood pressure taken. Patient given water and snack and felt better.

Bell?s Palsey about 4.5 hours after injection.

10 minutes after receiving vaccine patient complained for being jittery and having an elevated heart rate. monitored BP, heart rate and 02 saturation; patient chose to leave with her friend and drive to Medical Center for evaluation

Starting around 1700 the day I was vaccinated, I started to experience body aches and a sore throat. As the night progressed, I had a fever of 102F. The fever lasted throughout the night until it broke the next

morning. It is currently 2125 the day after vaccination and I still am experiencing body aches and fatigue after sleeping for 18 hours. I have taken Tylenol to help relieve these symptoms.

1 hour after vaccine itching, redness, elevated small bumps in arms. 6.5 hours after the vaccine had flushing and tachycardia up to 130. Had to call FIRE RESCUE .,Took tachycardia meds

headache, nausea, light headed, swelling of the hands Patient was given 1000mg of acetaminophen and 25mg diphenhydramine. Patient was monitored for 60 minutes.

Fevers, chills, night sweats, fatigue, malaise, body aches

Approximately 5 minutes after the injection, I suddenly began experiencing tachycardia (felt like I had way too much coffee). The nurse took my pulse and summoned the attending physician who sat with me for more than 30 minutes. I felt good enough to leave but did experience a somewhat rapid heart rate on and off through the afternoon. Upon leaving, I was told to call my allergist to have my Epi-Pen refilled (my current Epi-Pen had expired), which I did. Eleven hours post injection I'm feeling fine except for the expected arm soreness. In terms of my allergic history, I had previously discontinued allergy shots last year due to repeated systemic reactions to very low dose vials (itchy roof of mouth, swollen throat, etc).

I received my vaccine on 12/18/2020. The side effects I experienced were initially as expected. Mild headache, muscle pain at the injection site. However, the muscle issues have not subsided, and have actually gotten worse. Day 3 I began having a burning sensation in my underarm area radiating back towards my triceps. Muscle spasms continued to increase and spread to include deltoid, trapezius, and SCM muscles. Yesterday I developed a fever and began having a burning sensation down my triceps muscles and radiating into my forearm (radial side). No visible rash noted. Slight weakness in left arm.

On the second day I had a sore arm and I woke up with a headache that lasted 2 hours.

Muscle aches, headaches, chills, vomiting, shakes

Developed metallic taste in mouth within 5 minutes of vaccine administration that persisted for 1 to 2 hours. Developed palpitations and flushing within 10 minutes of vaccine administration that resolved after 1 minute. Palpitations and flushing recurred along with development of burning sensation in distal extremities within 15 to 20 minutes of vaccine administration. Palpitations were forceful and pronounced enough to cause chest tightness, lightheadedness, and weakness. These symptoms resolved without intervention after less than 5 minutes.

Maculopapular Rash beginning not long after vaccine, began with hives and itching on hands, did not speculate vaccine relation until following day, hives appeared on hands and continued non-uniform across forearms, armpits, chest, abdomen, pelvic/thigh crease, buttocks, and behind knees, approx 50-60% of body experienced hives and maculopapular rash within 0-4 days after vaccine, minor swelling occurred where rash was present and was most prevalent 3 days post injection.

Short-term memory loss consistent with Transient Global Amnesia

Had shot at 7:45am and around 3:45pm started having severe itching in mouth , ears and skin. Took oral zyrtec without relief. Was scratching myself raw and bleeding. Went to ER and got solumedrol 125 and 25mg IV Benadryl. Next day had wheezing and rash on chest. Went on prednisone oral taper and albuterol.

One week after vaccine administration I developed lymphadenopathy on the left side - very painful and has lasted 4 days and is ongoing. Antibiotics were started on day 4.

Swollen Lips, throat, foot, sore throat, body aches, chills, head aches, Feeling that can not keep eyes open, pain on administration site, on/off body itching.

Fever within 16 hours of vaccine lasting for 48 hours, general muscle aches lasting under 48 hours, fatigue, non-productive cough persisting more than 3 days

severe chills, hot sweats, muscle and joint pain, headache, fever, vertigo

pt received dose 1 of pfizer/biontech covid-19 vaccine on 12/29/20 at approx 14:04. after 10 minutes of observation pt developed a left upper trunk rash. patient's HR was elevated and BP elevated. pt was nervous. Benadryl 25 mg PO and Pepcid 20 mg PO was given and patient had no other reactions. after 30 additional minutes of observation, pt was able to go home as spouse was driving her home

10:30 AM After receiving the COVID-19 vaccine, the patient experienced an anaphylaxis reaction that included, throat closing and tongue swelling sensation, itchiness, and hives on her bilateral arms and legs. Patient received 65 mg of Benadryl IV, 125 mg SoluMedrol IV, two doses of 0.3 epinephrine IM, 1 mg of Ativan, and 4 mg of Zofran, then taken to the ED for further monitoring. Patient was on 2L NC for comfort, sats in mid 90s off oxygen, and monitored the patient for a few hours. Patient discharged to home with stable vital signs off oxygen and a steady gait.

Unusually high level of fatigue / exhaustion. Feeling ?fluish? Headache Feeling feverish but no actual fever. Has lasted So far from 12/24 to 12/29. Six days. A bit better day 6.

Extreme gas and diarrhea.

Arm started hurting a few hours after injection. A headache and nausea a few hours after that.

Pt. developed tachycardia, hypertension and felt weak with decreased verbal responsiveness, alert but lethargic. She complained of dry throat, took a sip of water then began persistent coughing and wretching also C/O itching of her throat. She denied difficulty breathing, there were no cutaneous signs of edema, tongue enlargement, etc.

Pt. began to feel weak with palpitations about 8-10 minutes after vaccination, her pulse was extremely fast, she then began to complain of lower mid-esophageal burning

LEFT AXILLARY LYMPH NODES TO LEFT ARM SWOLLEN AND PAINFUL. WARM COMPRESS APPLIED. CONTINUE TO MONITOR

Pfizer-BioNTech COVID-19 Vaccine EUA Itching and hives on upper arms, upper legs, and sides of torso x48 hrs thus far, controlled with oral otc Benadryl and pep I'd.

Muscle pain in left deltoid, vomited at 1:22am. No treatment taken

Syncope, severe bradycardia followed by 20+ hours of chills, fatigue, weakness, body aches

Began developing flu-like symptoms about twelve hours after receiving first dose. I started having body aches, chills, fever, and fatigue. Ibuprofen has helped manage symptoms.

About 15 hours after I received the vaccine I started getting body aches and chills. Low grade fever. After 24 hours I was shivering, aches and temp of 102.4. Symptoms lasted a total of 48 hours from first onset of body aches.

On Dec 28th I received the shot & initially didn't feel anything. When I woke up on the morning of Dec 29th I had a really bad headache, felt burning up & cold at the same time. My right arm (shot arm) and my left hip were super soar. I couldn't keep liquids down. I passed out the first time between 6:55 A.M. & 7:05 A.M. Later that morning I passed out a second time for 2 mins. I still plan to get the second dose on Jan 25th 2021. Since I'm a contact tracer I texted my supervisor. I was advised to take the day off & report it just in case it was related to the vaccine.

Started with sudden headache which gradually worsened. Dizziness/light headed followed by progressive foggy thought process, severe arm soreness, and general aches all worsening through the night.

I received the vaccination on Saturday morning. The following day around 10:00a.m., I started feeling weak with a headache and severe left arm pain around the injection site. Around 2:00p.m., I started getting chills and spiked a temperature of 100.6. I was taking ibuprofen and Tylenol interchangeably. The fever and chills resolved that night but still with a headache and weakness. Only the headache remained the following day but the rest of the symptoms subsided.

30 seconds following IM injection, felt warm, flushed, lightheaded, vision dimming., near syncope. Symptoms improved lying supine. Blood pressure measured to be 90's systolic, Heart Rate 60's. NO RASH, NO ANGIOEDEMA, NO Shortness of breath. Symptoms resolved completely within in 3 minutes.

Rig he arm sever pain at elbow. Swelled and painful right axilla lump nodes

mild arm soreness low grade headache

Large lymph node about size of lime in left armpit

lost of taste and smell

Swollen lymph nodes in armpit and side of chest, extreme pain in swollen area Pain at injection site, but not nearly as severe as armpit pain

Large red, swollen area at site of injection Nausea, diarrhea, stomach cramping

"""Increased skeletal pain, Shinbone, back, muscle tightening swelling in back, sharp pains throughout knees and shinbones. These are ongoing medical issues but over the pat week they increased to the point where I stayed in bed with warm compresses and analgesic topic creams from Christmas through Monday the 28th. Currently working and taking 3 advils every six hours to deal with back pain."""

2 days after vaccine had significant back pain. Lower back with excruciating pain. Chest muscles became stiff Was difficult to walk or sit. Then the next day was having breakfast and had an allergic reaction to food that I have eaten regularly. I had an allergic reaction for the first time in September to a different food but it was same reaction. Significant periorbital edema to where my eyes were almost completely swollen shut. No breathing issues.

lethargy chills/sweats pain at injection site for multiple days nausea headache

Moderate myalgia of arms, shoulders, neck and upper back; milder myalgia of lower back and thighs. Treatment is rest, acetaminophen and massage. Outcome to be determined; symptoms still present at 48 hours.

Patient c/o of tingling in the legs about 15 mins after receiving the vaccine. Patient also c/o of warmst in the chest area

My arm was very sore all night and when I woke up I had two raised, red patches on my right arm. One patch was at the injection site, one was slightly below the injection site. The injection site is also still very sore and hard.

Developed a lump in my throat soon after receiving the injection. Feel like I have to keep swallowing and clearing my throat. Some fullness in my ears that resemble having water in your ears when swimming. Some chest tightness, but mild. No shortness of breath. No rashes. Reported this to the nursing staff at the Covid Pod site around 12:15pm. Ate lunch, drank water, and took Benadryl at 1230. Developed chills and fever of 100.1 at 2:30pm.

Fever to 101.5F reported evening of vaccination. No other symptoms reported yet.

Red, raised rash noted to right arm, hands bilaterally, and neck area. Swelling noted to bilateral hands 6 days post injection. Patient given Decadron for symptom relief per PCP.

Patient reported headache immediately after injection. Within 5 minutes, reported headache radiating down neck and arms to elbows with tingling down arms lasting about 10 seconds. 30 minutes after injection, patient declined further care while complaining of persistent sharp frontal headache radiating down neck. Patient was very anxious prior to receiving vaccine.

103.5 fever Vomiting Chills Muscle spasms Headache Difficulty walking

I got the vaccine around 12:35 on 12/29/2020. Around 3 in the morning I started having sever body aches. Now its 12/30/2020 7:32 in the morning, I have sever body pain, Dont have fever but I feel very

warm, My hands are very warm it feels like I have a high fever, chills and very tired with no energy. It feels like I have flu.

Severe Chills, fatigue, blinding headache, pain at ejection site,

Arm pain, chills, headache, fatigue

hives, itching; seen in ED given po Benadryl,, Pepcid with relief discharged on po Benadryl, Rx Decadron if needed Improved and back to work in 2 hours; will follow up with health clinic.

Moderna COVID?19 Vaccine EUA Pain, swelling, warmth to injection site. Chills, body aches and headache onset the next morning.

Fatigue, low grade fever 99.3, chills, muscle and joint pain ,and nausea. At vaccine site bruise and right arm pain

On his drive home, his cheeks started to swell up, throat swelled, the roof of his mouth didn't feel right & he had difficulty swallowing. He went to the ED and his throat closed.

2hours after receiving injection developed a uticarial rash on upper body. Treated with zyrtec 10mg and 25mg of benadryl. Resolved after 30 minutes of receiving benadryl.

Symptoms started on Monday when the test site of my arm was extremely sore and I had a mild headache. Tuesday I started getting additional symptoms of respiratory symptoms with a runny nose and cough, chills, and headache.

Itching to face and legs. Rash to left leg. States she applied Hydrocortisone cream to areas. Side effects have improved.

Fever (100.1 F when first taken), chills, body aches, headache, soreness at injection site. Fever and chill started during the night, woke up about 1am with sweats, chills, and headache. Took 400 mg ibuprofen and headache went away. Low grade fever and chills still persist.

8 hours post injection developed mild injection site/arm pain and soreness 13 hours post injection developed fever, tax 102.7F, chills/rigors, severe body aches

Confused, dizzy, heavy tongue feeling, pale skin, weakness.

Pt developed anaphylaxis, was given IM Benadryl, and was sent to the ED. Pt spent 1 night in the hospital, went home, and has come back and is in the ICU. Pt had hives, itching, chest tightness, swollen lips.

Shortness of breath Hives, Fever, chills joint pains. I was Tx in the ER with Pepcid IV Solumedrol IV, Benadryl IV ,Tylenol and IV fluids. I was discharged on prednisone , Benadryl and Tylenol.

12/29/2020 07:00AM Mild body aches, low grade fever 100.0; 12/29/2020 PM same day-- fever 102.6, severe body aches and fatigue and headache, Tylenol and ibuprofen-- some relief to fever. 12/30/2020 mild headache, left armpit swollen, tender knot -- all other symptoms have resolved.

Approximately 15 minutes after IM injection, patient developed chest tightness. Patient was taken to the Emergency Department for treatment. Was given sublingual nitroglycerin and subsequently admitted to the hospital for observation. Patient discharged home the following morning in good condition.

Several minutes after vaccine started feeling tightness in her throat and a rapid heart rate. Administered epinephrine pen and when to the emergency department. Received oral Benadryl and steroids. Was discharged home later.

My grandmother died a few hours after receiving the moderna covid vaccine booster 1. While I don?t expect that the events are related, the treating hospital did not acknowledge this and I wanted to be sure a report was made.

About 3 am after the injection I woke up with severe chest pains and headache and went to the ER. I was admitted for 2 days and was released with a prescription of Isosorb Monoer, Metroprol, aspirin which is used as a blood thinner. The diagnosis and prognosis was severe migranes and cardioartery disease.

Shortness of breath , Erythema within 30 minutes of vaccine per provider note

Left side of my face went numb. 5 minutes later tongue was dry and tingly. Went back to place of work and went to monitoring room. Went to ER to be checked out. Got better over that day. I was admitted the same day and discharged the next day.

anxiety, tachycardia, flushing, diaphoresis, HTN, SOB

Patient administered Pfizer-BioNtech vaccine, dose #1 in series at 810AM, without notable concerns for 10 minutes. At 10 minutes post vaccination, patient developed itching and some blotching, throat becoming scratchy. No known allergies to components listed in vaccine, though does have a listed allergy to contrast dye, does not carry an epi-pen. Patient was walked to urgent/emergency care in the clinic, where she was seen immediately. Patient was given diphenhydramine 25 mg IV, pantoprazole 40 mg IV, with mild uticaria continuing. Patient notes she feels her 'back is on fire'. Patient was then given methylprednisolone 125 mg IV. At this time, no SOB is noted, uticaria is still present. 0930 patient reports swelling in throat and respiratory difficulties at this time with visible edema in the neck. 0.3 mg Epinephrine given at 0935, epinephrine drip and racemic epinephrine neb given. 1006 Patient on epinephrine drip 2.5 mics/hour. Patient transferred to Medical Center ICU, where she remains at the time of this report.

BP of 176/126mmhg/persistent severe hypertension/continued severe elevation of BP of 178/130mmHg; intermittent chest pains; severe nausea; rash and hives on left side of arm where injection site was, as well as left side of face; rash and hives on left side of arm where injection site was,

as well as left side of face; rash and hives on left side of arm where injection site was, as well as left side of face; rash and hives on left side of arm where injection site was, as well as left side of face; mild progressive headache; body aches; chills; fatigue; fever of 100 degree F; This is a spontaneous report from a contactable Other Health Professional (patient). A 29-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: unknown, intramuscular in the left arm, first dose on 18Dec2020 12:30 at a single dose for immunisation. Medical history included ongoing gestational hypertension in 2016 that never recovered, with controlled hypertension, asthma/COPD, and seasonal/animal allergies. Concomitant medication included sertraline hydrochloride (ZOLOFT) and losartan. The patient is not pregnant. The patient previously took and had allergies to erythromycin and nitrous oxide. It was reported that within 20-30 minutes of receiving covid vaccine on 18Dec2020, the patient developed mild progressive headache, body aches, chills, fatigue, fever of 100 degree F. At approximately 8:00 p.m. same day of vaccination, she developed rash and hives on left side of arm where injection site was, as well as left side of her face. Immediately following this, she had intermittent chest pains in which she took a BENADRYL 25 mg with some relief. Next day (19Dec2020), progressive headache persisted to a severe headache, severe nausea, persistent chest pains and a BP of 176/126mmhg. Reported to a place for evaluation with persistent severe hypertension and severe headache treated by toradol, compazine, and Benadryl. She was released from the ER with improved blood pressures and reduced headache. The following day Sunday Dec2020, progressive and severe headache occurred with continued severe elevation of BP of 178/130mmHg. Current treatment of losartan 50 mg was increased to 100 mg to attempt control. She was then placed on chlorthalidone/amlodipine. The events resulted in doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. The outcome of the events mild progressive headache, body aches, chills, fatigue, fever of 100 degree F, rash and hives on left side of arm where injection site was, as well as left side of face, intermittent chest pains, severe nausea, and BP of 176/126mmhg/persistent severe hypertension/continued severe elevation of BP of 178/130mmHg was not recovered (reported as symptoms persist). The patient was not diagnosed with Covid 19 prior to vaccination and she had not been tested since vaccination. Information on the lot/batch number has been requested.; Sender's Comments: Based on the compatible time association, the hypertension aggravated is possibly related to bnt162b2 administration. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

blood pressure was super elevated, in the 190/110 range; It was getting close to stroke level; woke up and felt restlessness and agitation; Headache; felt really restless and anxious; felt really restless and anxious; was not able to sleep/ could not go back to sleep; This is a spontaneous report from a contactable consumer (patient). A 53-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EK5730, expiration date: Mar2021 intramuscularly in left deltoid from 17Dec2020 at single dose for COVID-19 immunization. Patient medical history included seasonal allergy. Concomitant medication included mometasone furoate (FLONASE) via nasal from 2018 (about 2 years ago) and ongoing at 1 spray each nostril, 1x/day for seasonal allergy. The patient previously received flu

shot, on Oct2020 (2 months ago) for immunization. Patient was a firefighter and reported that he received the vaccination in the afternoon of 17Dec2020. On that afternoon, he was on duty and felt really restless and anxious and was not able to sleep. He did not sleep at all that night. He maybe got like an hour or 2 on Friday after his shift. Friday night he had the same kind of deal and it continued on into Saturday. He did crash and burn (pending clarification) on Saturday night. On Sunday, he got up and felt normal again. A few hours later on Sunday, it started up again and then it went away. He said that after dinner Sunday evening it started up again, but he was able to get some sleep. He said that Yesterday, 21Dec2020, he was fine. He took off yesterday. This morning on 22Dec2020 at 0200 he woke up and felt restlessness and agitation and he could not go back to sleep. He said that he had a headache and his blood pressure was super elevated, in the 190/110 range on 22Dec2020. It was getting close to stroke level. He said that he thought about going to the ER, but did not experience any stroke or cardiac symptom's, although his blood pressure is still high, but not as high as it was. He has not gotten any sleep since then. He said that he has an appointment to see his physician this afternoon at 1300 22Dec2020. It was reported that all events require physician office visit. Got his flu shot like 2 months ago and nothing like this happened. He said that he heard with the second round there are supposed to me more symptoms like flu like symptoms with the Covid vaccine like fever, muscle aches. Outcome of the events was reported as unknown.

"diagnosed with COVID-19; diagnosed with COVID-19; This is a spontaneous report from a contactable pharmacist. A female patient of an unspecified age (reported as 62 without unit) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiration date not provided), via an unspecified route of administration on 16Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. Reporter requested information on the administration of the second dose of the COVID-19 vaccine to a patient. The patient received vaccine first dose 16Dec2020; she was diagnosed with COVID-19 on 18Dec2020; started taking the medication ""Bamlanivimab"" on 21Dec2020. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: There is not a reasonable possibility that reported ""diagnosis with COVID-19"" is related to BNT162B2 vaccine. Event developed 2 days after vaccination. The event is most likely intercurrent medical condition."

Patient had dizziness when she got down to the emergency department.; transient ischemia attack (TIA); Hypertensive emergency; This is a spontaneous report from a contactable pharmacist reporting for two patients. This is the second of two reports. A 53-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot number: EH9899), intramuscular at 0.3 mL, single in the arm on 23Dec2020 for Covid-19 immunisation. Medical history included hypertension, allergies to sulfa, morphine and cipro. There were no concomitant medications. The patient experienced hypertensive emergency on 23Dec2020 with outcome of unknown, patient was getting her blood pressure checked and the patient was in the 170s systolic on an unspecified date with outcome of unknown, patient had dizziness when she got down to the emergency department on an unspecified date with outcome of unknown. The events were described as follows: Patient was getting her blood pressure checked and the patient was in the 170s systolic. She was taken down to the emergency department. She had a blood pressure of 191/105 in the emergency department. Patient had dizziness when she got down to the

emergency department. She does not have further details to provide since the patient is being worked up right now to see if she experienced a transient ischemia attack (TIA). Patient has a history of hypertension. The vaccine was administered at Hospital Facility. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine.; Sender's Comments: While the patient is a known hypertensive and events may be intercurrent events, the causal relationship between BNT162B2 and the events hypertensive emergency, dizziness and transient ischaemic attack cannot be completely excluded due to temporal association. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.,Linked Report(s) : US-PFIZER INC-2020510735 Same reporter/different patient/similar events

positive COVID-19 test with no symptoms; positive COVID-19 test with no symptoms; This is a spontaneous report from a contactable other HCP. A 93-year-old male patient received fist dose of BNT162B2(PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose by injection at arm for COVID-19 immunization. Medical history and concomitant medications reported as none. The patient was not been treated with immunomodulating or immunosuppressing medications or received any other vaccines around the time of COVID-19 vaccination. The patient, nursing home had turned positive after the getting the vaccine. The patient was tested negative for COVID 19 before getting the vaccine on 18Dec2020, then took his first dose of COVID vaccine. The patient had no reaction to the vaccine. The patient got on the plane on 19Dec2020 and tested positive on 22Dec2020. PCR test for COVID 19 was done on 22Dec2020 and received the results on 23Dec2020 and it was detected(PCR test was positive). Event reported as non-serious. The patient still had had no symptoms before the test and none after the test came back detected. He was pretty healthy. It was unknown if patient would receive the second dose but he was scheduled to receive it. Patient was not admitted to an Intensive Care Unit. Patient did not display clinical signs at rest indicative of severe systemic illness. Patient did not require supplemental oxygen (including high flow or ECMO) or receive mechanical ventilation. Patient had no any new or worsened symptoms/signs during the COVID-19 illness experienced (including date of onset/worsening). The patient did not receive any additional therapies for COVID-19. The event did not require the initiation of new medication or other treatment or procedure. Patient's outcome with COVID-19 reported as not currently ill. The outcome of the event was unknown. Information on the Batch/Lot number has been requested.; Sender's Comments: The patient received BNT162B2 on 18Dec2020 and took plane on 19Dec2020. The patient was tested positive for COVID-19 on 22Dec2020. The event occurred only 4 days after first vaccination and therefore the patient was not under full protection by vaccine.

"patient tested positive for COVID 19 the same day; patient tested positive for COVID 19 the same day; This is a spontaneous report from a non-contactable Nurse. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The relevant medical history and

concomitant medications were not reported. The COVID 19 vaccine was administered to the patient and the patient tested positive for COVID 19 the same day. Patient did not have a fever and reported feeling tired. The nurse wanted to know if the immune response would be affected by having COVID 19 at the time of vaccination and will the symptoms be exacerbated because of receiving the vaccine. The outcome of the events was unknown. No follow up attempts are possible. Information on Lot/Batch could not be requested. No further information is expected.; Sender's Comments: The patient tested positive for COVID-19 on the same day when receiving BNT162B2 vaccine. And therefore there is not a reasonable possibility that reported ""tested positive for COVID 19"" is related to vaccine."

tested positive for COVID; positive for COVID; positive for COVID/asymptomatic; This is a spontaneous report from a contactable nurse reporting for herself. A female patient of an unspecified age received the 1st dose of bnt162b2 (BNT162B2) at single dose on 18Dec2020 for Covid-19 immunisation. The patient medical history and concomitant medications were not reported. She was tested positive for COVID, through the rapid COVID test on 27Dec2020. She stated being asymptomatic and being scheduled for her 2nd dose on 08Jan2021. She asked can she still receive the 2nd dose of the vaccine or should she repeat the vaccination series. The outcome of event was unknown. Information on the Lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with suspected vaccine in this patient cannot be completely excluded. Further information like confirmative COVID 19 Nucleic acid/ PCR test are needed for full medical assessment.

10 minutes after receiving vaccination, a significant increase in HR was noted, along with a tingling sensation through out body. Also, scratchy throat was noted. Alert by patient made to staff at vaccination site. Sweating noted and shortness of breath at that time. Epi pen given via L thigh IM. PIV started and benadryl and solumedrol given. Relief of symptoms noted very shortly after Epi administration. Taken to ER for 4 hour observation. Sent home after 4 hours and given prednisone to be taken at home, 50mg daily for 4 days. No further adverse symptoms noted.

decreased range of motion in vaccinated arm: unable to raise left arm above shoulder x 72 hours now due to pain. no associated numbness or swelling. I am a surgeon and this impacts my work and driving. I would not have been able to operate during these last 3 days and while the pain is better 72hrs later, my arm is still out of commission. I think we need to inform healthcare providers who perform procedures that they may want to schedule the vaccine when no planned procedures for at least 72 hrs. Due to this issue I will be unable to proceed with the second dose, unless I can take it a week later than the scheduled January 24, 2021. It is taking too long to regain full function of the arm but i expect it will be back to normal as it is better today 72 hrs later.

Facial numbness radiating down left side of neck to left arm, elbow and chest. Went to ED, admitted for observation overnight.

Bell's palsy; experienced sudden flushing; tachycardia; the left side of my tongue became numb and tight. The numbness and tightness radiated to my left cheek, ear, jaw, and neck; the left side of my tongue became numb and tight. The numbness and tightness radiated to my left cheek, ear, jaw, and

neck; the left side of my tongue became numb and tight. The numbness and tightness radiated to my left cheek, ear, jaw, and neck; The numbness lasted for approximately 45 minutes with resulting jaw and ear pain for 3-4 days after injection; The numbness lasted for approximately 45 minutes with resulting jaw and ear pain for 3-4 days after injection; New lymph node tenderness at day 4.; This is a spontaneous report from a contactable other healthcare professional (patient). A 31-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on left arm at 11:30 AM on 18Dec2020 at single dose for COVID-19 immunization. Medical history included seasonal allergy. Concomitant medication included fluticasone propionate (FLONASE), loratadine (CLARITIN) both for seasonal allergies. The patient had sudden generalized flushing, tachycardia, and the left side of her tongue became numb and tight. The numbness and tightness radiated to her left cheek, ear, jaw, and neck at 11:45 AM on 18Dec2020. She hadn't found any similar reports/reactions documented. Spoke briefly per document below regarding Bell's palsy. The numbness lasted for approximately 45 minutes with resulting jaw and ear pain for 3-4 days after injection. New lymph node tenderness at day 4 in Dec2020. No shortness of breath, dysphagia, or facial drooping associated. All events were reported as non-serious. The patient was not diagnosed with COVID-19 prior to vaccination. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any treatment for events. The outcome of events was unknown. Explained that Pfizer would not be able to provide treatment recommendations and referred to her HCP to discuss the 2nd dose.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of event Bell's palsy cannot be totally excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

lips were tingly and swollen; lips were tingly and swollen; fatigued; allergic reaction; passed out; breathing fast; her brain felt like a rock, like she was there but not there; head was so heavy,wouldn't open her eyes; her throat started to tighten up; chest pain; nauseous; headache; felt a little lightheaded, a little wobbly; palpitations; sweaty; This is a spontaneous report from a contactable consumer (patient) via Pfizer Sponsored Program. A 48-year-old female patient (no pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899) via an unspecified route of administrationon 22Dec2020 on left shoulder at single dose for COVID-19 immunization. The patient's medical history included pernicious anemia and She had problems with B12 and Vitamin D like 10 years ago, she had none in her body, everyone said she was deficient and this year with her new primary care, they sent her to do some antibody tests, and found out she has pernicious anemia, allery to MRI and CT contrast. MRI and CT contrast NDC, lot, expiry unknown. Her CT contrast allergy happened when she was 9 and 12 years old. It turns out to be her dad has an allergy the same way, his airways close. Whenever she needs a CT, they do without contrast, if she does need, they prep and give her Benadryl and keep an eye on her. This only happened once, that she needed with contrast, and with prep she was ok. With the MRI, this happened 4 or more years ago, maybe like 5 years ago. She

needed an MRI, they said she would be fine, they injected contrast, she felt pretty hot, then she doesn't know, 20 minutes into it, she couldn't handle her gown, she looked at her chest, her whole chest was red like a burn. They gave her the IV Benadryl, she guesses, and it went away, now she knows, she doesn't know if her dad is allergic to MRI dye, but she knows she got the allergy from him for the CT contrast. The concomitant drugs was not reported. The patient was taken to ER with a severe allergic reaction. She had an allergic reaction on 22Dec2020: she passed out, said her brain felt like a rock, like she was there but not there, she then received an Epi Pen shot, when she got to the ER, her throat started to tighten up, lips were tingly and swollen, she was breathing fast, she had chest pain, she scaled it from a scale of 1-10, as about a 3 to 4 for chest pain, she felt nauseous, sweaty, and had a headache. She went to bed last night, and woke up, feeling better but a little fatigued on 23Dec2020. She is wondering if she should take the second dose, and wants to be in the clinical trial for this type of reaction. She needs transfer to Regulatory Authority. Caller confirmed details. Caller states she works in a hospital, and all this happened at the hospital, and her doctor was not involved. Outcome of allergic reaction: asks what does lasting effects mean? Right now she has a little fatigue and headache, but she knows they are regular symptoms she can have with the vaccine, are those lasting effects? She was discharged from the ER to home. She mentioned to the nurse she has, she went to get the shot, she told the registration nurse, she said she has a severe allergic reaction to CT contrast, her airway closes and she has a severe reaction to MRI contrast, her skin burns, it turns red and feels like a horrible burn, she cannot handle anything to contact her skin, it burns, and she mentioned that to the nurse, she said, instead of staying 15 minutes, said to stay 30 minutes there to observe just in case. She got the vaccine, and 10 minutes after the vaccine, she felt a little lightheaded, a little wobbly, but she didn't think much, it was mild, and on the mark at 30 minutes, the nurse asked her to stand, and that is when she started feeling, like her head was so heavy, the only way to describe, was like her brain was like a rock, she had to lay down, and when they laid her down, she wasn't there, she was there but wasn't, and they didn't wait at all to give her the Epi Pen, she had a feeling of heaviness that got worse, she wouldn't open her eyes, she was able to answer questions, but it was not her there, it was weird, then she didn't have. she breathed fast, had palpitations, chest pain, so they called a Rapid Response team, they were keeping an eye on her breathing, which was super fast, and they rushed her to the ED, and the doctor did what they were doing, giving her IV of whatever medication, and she was also very nauseous, then at one point in the ED, she started feeling, like imagine if fists were on throat, pushing her throat, a little bit, and she tried to tell to the ED doctor, but guessed she was calling everyone to give her things, and didn't catch it, but it didn't last long, at the same time, she started to feel her lips tingly, so she thinks that, because they gave the Epi Pen so quickly, they wasted no time, she didn't have the airways closing like she does when she gets the CT contrast, they were quick. NDC/lot/expiry: She reads from the card they gave her: states first dose COVID-19 EH9899, states it doesn't specify lot, but she can find that out, they just gave her a vaccine record card. EPi Pen: NDC, lot, expiry unknown, states everything happened so quickly, she didn't think to get this information before calling, but she can get it. There at the hospital, she went to see the occupational health doctor, and based on guidelines from the CDC, he read supposedly she cannot get the second dose, but the doctor said because it is so new, and she has to wait the 3 weeks she guesses, things can change, and she wanted to be proactive. The outcome of the events, allergic reaction, passed out, throat started to tighten up, lips were tingly and swollen, chest pain, nauseous,

headache, lightheaded, palpitations, sweaty was recovering. The outcome of other events was unknown.

COVID test positive two times; COVID test positive two times; Pain in bum, back; Pain in bum, back; Last night I was feeling so bad; Skin like a rash; This is a spontaneous report from a non-contactable consumer (patient). This patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot EK5730) on 21Dec2020 at 1:36 P.M., at single dose, for COVID-19 prevention. Medical history and concomitant medications were not reported. On an unspecified date in Dec2020 the patient experienced pain in bum, back, last night was feeling so bad, skin like a rash. On 22Dec2020 the patient did COVID test which was negative. She did another test on 23Dec2020 and it was negative. The patient did not feel any fever. But last night, on an unspecified date in Dec2020, when the patient went to the emergency for work, the lady did COVID test two times and the patient was positive. Events outcome was unknown. No follow-up attempts are possible. No further information is expected.

Tested positive for covid after the first dose of the vaccine; Tested positive for covid after the first dose of the vaccine; This is a spontaneous report from a contactable Pharmacist. A patient of unspecified age and gender received the 1st dose of bnt162b2 (BNT162B2) at single dose on 18Dec2020 at single dose for Covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient experienced Tested positive for covid after the 1st dose of the vaccine on an unspecified date. The outcome of unknown. Reporter wanted to know if the patient should receive the 2nd dose. Information on the lot/batch number has been requested.; Sender's Comments: The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Patient presented to the ER on 12/26/2020 with complaints of fever, chills and SOB for about 3 days. Stated it was a gradual onset and has been intermittent. Also reported some nausea and chronic loose stools, mild loss of smell and sinus drainage, non productive cough. Discharged to observation and then home on 12/27/2020. Patient readmitted to hospital on 12/30/2020.

Within 3 minutes of vaccination patient became fully flushed head and neck, with rapid heart rate (112), and feeling like her airways were tightening.. Nurse immediately called for response, administered Epipen, when response arrived applied oxygen and transported to ED. Solumedrol 125 mg, Bendadryl 25 mg, and Famotidine 20 mg, she responded well and was released home with Rx Prednisone 40 mg x 3 days. Only residual effect was a dry/sore throat.

12/30 9:30 am developed angioedema. Swelling of face, lips, tight throat. Also had bright red rash over body trunk and arms. Both palms were red, hot and painful.

Weakness, fatigue, decreased appetite, upper extremity shaking, sternal red blotchy rash, decreased mental status, non-verbal, decreased level of conscious, mottling, left side facial droop, hypertensive, fever, unable to follow commands

headache 15 minutes after receiving vaccine, 3 to 4 hours later broke out in rash on upper extremities, ABD pain, itchy, and arm swelling, throat hurts. SOB

Left sided weakness, fatigue for 3 days post immunization. Patient was seen by health care provider on 12/30/2020. Provider transferred patient to Hospital ER for further evaluation.

At about 6am after receiving the shot I felt very tender at the injection site almost as if it was bruised. Then over the course of the day I started to feel very itchy all over my body but mainly on my right side. 10pm I got up for work, and could barely move, I'm feeling intense back pain on my lower back on the right side. I can walk but its all very limited motion, I can really only manage by putting all my weight on my left side.

I developed severe abdominal pain and was diagnosed with colitis. I was seen in ER. I have no idea if the vaccine called this.

Patient presents with ? Altered Mental Status ? Headache á á HPI Patient presents to ER by EMS ambulance after family called 911 as patient was incomprehensible with slurred speech and moaning on the phone this evening. On arrival of EMS patient was asleep in bed and reportedly unresponsive other that to localize to pain. EMS transferred patient to ER. On arrival to ER patient had GCS 7. Reportedly patient is locum nurse who works in a Nursing Home and patient reportedly received COVID vaccination 2 days ago and that night reportedly began complaining to family on the phone of headache, nasal congestion, sore throat, cough, fever, chills, nausea, emesis, myalgias, and lethargy. Per the medical record patient has history of seizures, migraines, and sciatica. No other information is known on patient arrival to ER. 1. Peripheral IV right dorsal hand placed by EMS in route to ER. 2. On arrival to ER GCS 7 (E1M5V1) and roving eye movements with episodic lateral conjugate and at times disconjugate gaze concerning for seizure activity. Arms and legs with moderately increased tone but no clonic movements and patient able to localize bilaterally. 3. Ativan 1 mg IVP for seizure, then further 2 mg IVP for persistent seizure. 4. Fosphenytoin 1,000 mg IVPB in ER for loading dose of antiseizure medication. 5. Patient had significant improvement following completion of Ativan 3 mg IVP and GCS improved to 14 (E3M6V5) from GCS of 7 (E1M5V1). 6. Patient able to communicate after improvement as above and reports she has had headache or migraine for past several days as well as dysuria with bilateral CVA pain and has significant pain on percussion of bilateral CVA and moderate pain on palpation of bilateral flanks. No nuchal rigidity or pain with ROM of neck. Additionally, she complains of severe headache and diffuse pain of back and abdomen/pelvis. She reports a history of seizures in the past and reports she had one last month and was treated at a hospital in her home state. She denies antiseizure medications. Additionally, patient reports nonproductive cough, sore throat, nasal congestion, fever, chills, myalgias, lethargy, nausea, and episodic emesis over the past 2 days. She has anterograde amnesia following seizure and does not recall events. 7. Normal saline 1,000 mL IV bolus, then 100 mL/hour in ER. 8. CT of head with and without contrast performed and negative for intracranial hemorrhage, lesions, stroke, or other acute pathology. 9. CT of chest/abdomen/pelvis with IV contrast shows no acute pathology or notable abnormalities. 10. Lactic acid drawn and normal. 11. UA and urine microscopy collected by straight catheterization and culture collected and pending. 12. Blood cultures x 2 collected and pending. 12. Rocephin 2 mg IVPB in ER after blood cultures collected. 13. Vancomycin 20 mg/kg (1,500 mg) IVPB

following Rocephin. 14. Dexamethasone 10 mg IVP in ER. 15. Duoneb nebulizer in ER. 16. Called to discuss with patient's daughter and the family's preferred contact who is 23 years old. She reports patient had COVID vaccination 2 days ago and beginning that night patient has complained of headache, fever, chills, nonproductive cough, sore throat, nasal congestion, myalgias, and lethargy. Additionally, she reports patient has history of seizures on at least 1 occasion in the past a few months ago but is not on antiseizure medications. She reports patient had MRI and MRA of her brain at that time and reportedly and intracranial aneurysm was identified at that time. 17. Called to request transfer to another facility and spoke with hospitalist who states there is no neurologist there and suggests transfer to larger tertiary care facility with neurology. 18. Called to request transfer and accepted by ER provider. 19. Transfer by ALS ground ambulance with telemetry, pulse oximetry, O2 to keep > 02%, vitals every 30 minutes, normal saline at 100 mL/hour, Rocephin 2 grams IVPB, vancomycin 20 mg/kg (1,500 mg) IVPB in ER. á DISPOSITION Patient Stabilized and Transferred Data Unavailable Wed Dec 30, 2020 2:12 AM CST

PATIENT WAS OBSERVED FOR 15-20 MINUTES IN THE PHARMACY POST INJECTION, AND HAD NO SYMPTOMS. PATIENT ALSO HAD BROUGHT ALONG HER EPI-PEN TO THE APPOINTMENT AS SHE WOULD BE PREPARED IF SHE HAD ANY PROBLEMS. ON HER WAY HOME, APPROXIMATELY 30 MINUTES AFTER HER VACCINATION, SHE HAD SOME MILD CHEST PAIN AND FELT SOME THROAT TIGHTNESS. SHE DID ADMINISTER 1 DOSE OF HER EPI-PEN 0.3 MG INJECTION AT THAT TIME. SHE EXPERIENCED RELIEF OF HER SYMPTOMS, AND APPROXIMATELY 1 HOUR AND 30 MINUTES LATER WHEN I CALLED HER, SHE WAS STILL FEELING UNUSUAL SENSATION IN HER THROAT, BUT WAS MUCH BETTER. I ENCOURAGED HER TO TAKE SOME HYDROXYZINE , WHICH SHE HAD AVAILABLE AT HOME, AND TO CONTACT THE EMERGENCY ROOM IF HER SYMPTOMS DID NOT RESOLVE COMPLETELY OR SEEM TO BE GETTING WORSE.

Anaphalaxis reaction, stridor an unable to breathe. Happened in 30 seconds

Spouse awoke 12/20 and found spouse dead. Client was not transferred to hospital.

Resident in our long term care facility who received first dose of Moderna COVID-19 Vaccine on 12/22/2020, only documented side effect was mild fatigue after receiving. She passed away on 12/27/2020 of natural causes per report. Has previously been in & out of hospice care, resided in nursing home for 9+ years, elderly with dementia. Due to proximity of vaccination we felt we should report the death, even though it is not believed to be related.

Within 24 hours of receiving the vaccine, fever and respiratory distress, and anxiety developed requiring oxygen, morphine and ativan. My Mom passed away on the evening of 12/26/2020.

Near syncopal episode approximately 2.5 hours after vaccination. Sudden onset of dizziness, nausea, and diaphoresis. Was admitted to ED and observed overnight. Full cardiac work up was done and shown to be within normal limits. I have no pre-existing conditions and considered to be a healthy adult.

On Dec. 20, 2020 around 11:30 PM, 2 days after patient received her COVID-19 vaccination, she was found on the bathroom floor , obtunded, very pale, diaphoretic, nauseous, and complaining of severe chest pain. Paramedics was called and patient was transported to the nearest emergency room.

According to paramedics, on the way to the ER while patient was in the ambulance,she was noted with a sudden drop in heart rate about 19 beats/minute and have to be given Atropine IV Push, oxygen and was connected to transcutaneous pacing which improves her heart rate. In the ER patient continued to have chest pain and she was given Morphine, Oxygen, Nitroglycerine and Aspirin. IM had an EKG which showed Sinus Bradycardia with a Right Bundle Branch Block. She had serial ekgs, a chest x-ray, laboratory testing which included Troponin. Her first Troponin level came back elevated prompting her hospital admission to Telemetry. Her next 2 Troponin level improved and return to normal range and her chest pain has resolved.. She underwent a Stress Test which came back negative. Patient was admitted for a total of 20 hours in the Telemetry unit with Cardiology consultation before being discharged home last . She was re-evaluated by the cardiologist yesterday which diagnosed her a chest pain of unknown origin.

RESIDENT CODED AND EXPIRED

Rash, Itching and swelling of left arm. Progressed to tachycardia in the 150's, hypertension 200/114. Tingling of lips, dizziness

Went to Emergency room on 12/28/20 because he was short of breath. Tested positive for COIVD_19 and was admitted with hypoxia.

Approx 20 min after vaccination patient developed itching at the site and this progressed to include chest, neck. EMS evaluated patient who recommended transport and patient agreed. Benadryl offered by EMS and IV started. Pt with concurrent treatment for valley fever noted. ED administered medications - famotidine 20mg iv, methylprednisolone 125mg iv, NS 1000ml bolus. Prescribed prednisone 20mg po daily x 2 days.

Injection given on 12/28/20 - no adverse events and no issues yesterday; Death today, 12/30/20, approx.. 2am today (unknown if related - Administrator marked as natural causes)

Death by massive heart attack. Pfizer-BioNTech COVID-19 Vaccine EUA

Moderna COVID?19 Vaccine EUA - Metalic taste - Lump in her throat- felt like swelling - Nausea and then vomiting - Shaking and started to become unresponsive.

pt passed away with an hour to hour and 1/2 of receiving vaccine. per nursing home staff they did not expect pt to make it many more days. pt was unresponsive in room when shot was given. per nursing home staff pt was 14 + days post covid

pt was a nursing home pt. pt received first dose of covid vaccine. pt was monitored for 15 minutes after getting shot. staff reported that pt was 15 days post covid. Pt passed away with in 90 minutes of getting vaccine

The patient had COVID19 infection diagnosed 12/14/2020, and he stated 5 to 10 days after this, he developed shortness of breath. Had vaccine on 12/24/2020. Hypoxic and short of breath with COVID19

pneumonia on 12/29/2020. I do not know if this is an adverse effect or temporally related or if the vaccine activated prior infection.

"my left arm and breast were tender with some mild body aches and low grade headache/Arm soreness; my left arm and breast were tender with some mild body aches and low grade headache/ left breast was increasingly painful with swollen palpable lymph nodes; my left arm and breast were tender with some mild body aches and low grade headache/ left breast was increasingly painful with swollen palpable lymph nodes; my left arm and breast were tender with some mild body aches and low grade headache/ left breast was increasingly painful with swollen palpable lymph nodes; my left arm and breast were tender with some mild body aches and low grade headache; body soreness and stiffness; This is a spontaneous report from a contactable healthcare professional. A 34-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient stated, ""the day after the injection, my left arm and breast were tender with some mild body aches and low grade headache. Sunday Arm soreness went away but left breast was increasingly painful with swollen palpable lymph nodes, with body soreness and stiffness. Monday left breast is still remarkably tender with palpable lymph nodes"" on 19Dec2020 (reported as Seriousness criteria-Caused/prolonged hospitalization: Yes, on an unspecified date in Dec2020). The outcome of the event was not recovered.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."

got COVID vaccine from Pfizer, next day got COVID tested with mild symptoms and positive; got COVID vaccine from Pfizer, next day got COVID tested with mild symptoms and positive; This is a spontaneous report from a contactable physician (patient). A patient of unspecified age and gender received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient reported that he is a physician and got COVID vaccine from Pfizer, next day got COVID tested with mild symptoms and positive. The patient stated so he got vaccinated probably while having COVID. The patient wanted to know any concerns from the vaccine standpoint efficacy side effects. Outcome of the event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

"asking on how to differentiate between side effects from COVID vs vaccine side effects/also wondered if he needs to quarantine; asking on how to differentiate between side effects from COVID vs vaccine side effects/also wondered if he needs to quarantine; swelling of glands in throat/lymphadenopathy in throat; headache; Feeling a little fluish; This is a spontaneous report from a contactable healthcare professional (patient). A 61-year-old male patient received BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, batch/lot number and expiry date were unknown), via an unspecified route of administration on 21Dec2020 18:06 at a single dose for COVID-19 vaccination. Medical history included diet controlled Type 2 Diabetic diagnosed 5 years ago in 2015. There were no concomitant medications. The patient previously got Shingles vaccine and it was a two dose vaccine. He felt a little bit like he did now after receiving the second vaccine. He felt fluish for 8-12 hours the day after receiving the vaccine. He has gotten lots of vaccines like Flu and has no responses. The patient does not have prior vaccinations within 4 weeks. The patient received the vaccine yesterday (21Dec2020), and maybe an hour ago on 22Dec2020, he started feeling swelling of the glands in throat or lymphadenopathy in throat and a little bit of headache. He has a question that he cannot find the answer to anywhere. The patient is asking on how to differentiate between side effects from COVID vs vaccine side effects? His temperature was 98.1 on unspecified date. He did not have an exact time frame for when it began. He stated, ""you get swelling in glands and then you notice it."" He noticed about 2 hours ago and it is getting worse. Now he is feeling like he is sick. He has been volunteering and giving the vaccines over the past two days himself. He is feeling now a little fluish. He doesn't know how to say it other than tired and just doesn't feel good. He would go to work like this and does not feel it is medically significant. He does feel like he is deteriorating but that is only a guess. He felt a little worse than an hour ago. He also wondered if he needs to quarantine because he is signed up to give the vaccines and would not want to do that if he should not. No ER or physician's office required. The outcome of the events was not recovered. Information on batch/lot number has been requested.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of reported events cannot be totally excluded. The case will be reassessed if additional information becomes available."

tested positive for Covid; tested positive for Covid; This is a spontaneous report from a contactable consumer (patient) from a Pfizer-sponsored Program Pfizer First Connect. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Lot number Unknown, via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient was upset. She was part of the COVID Trial in and this past week (in Dec2020) she started to get sick and tested positive for COVID. They gave her a diary which she had to fill out weekly, so she filled it out and put that she had COVID. She never heard from anyone. She stated the testing site people and snarky attitudes and when they went no one was wearing masks. She was told by the testing site, they couldn't make people wear them. Relayed that she could do an escalation and have someone reach out to her in regards to this. The patient underwent lab tests and procedures which included Covid test: positive on unspecified date in Dec2020. The event outcome was unknown. Information on the Batch/Lot number has been requested.

Itchy throat, red eyes after 30 minutes. EMS on site gave IV Benadryl, epi pen shot and took to ER for monitoring. Vitals were good so he was discharged.

Hives/swelling/itchiness/redness at injection site about 5 inches long a week after injection.

"Chills, Fatigue, ""hot"" feeling eyelids when I close eyes, muscle/joint pain, injection site pain. No treatment besides rest and a hot shower."

Pt felt hot and short of breath . Pt recieved EPI in office and EMS was called . Pt was transported to the Hospital

Sore arm-2days , headache -current on and off , light sensitivity 2 days

Currently have shortness of breath, chest pain, fatigue, nausea, body aches, joint pain, and injection site pain.

Dizziness, Equilibrium was off. This started within an hour of the vaccine and lasted 24 hours. Had to take the following day off of work. Also, burning in the chest (like heartburn) lasted 48 hours.

Weakness, headache, high level myalgias, fever, nausea, cold intolerance, shaking

Onset was 10 min post vaccination. Symptoms experienced over an hour, in this order. Went to the ED. Some still continuing within 14 hrs past time of shot. Severe headache. * same night Dizziness and lightheaded. * same night Nauseous Clammy Cheeks flushed Itchy Chills Short of breath / slight wheezing * same night Fatigue * same night

Extreme vertigo occurred suddenly around 9:00 pm. Continuous dizziness continues. Unable to walk straight lines. Wobbling and loss of balance when I walk. I have eaten and been drinking fluids. Side effect still continues.

Normal resting heart rate of 58-61. At 10 PM, heart rate increased to 137 while watching TV, heart rate continues to average at 102 bpm for 120 minutes + and counting. Body feels warmer than usual

About 4 hours after receiving this vaccine I experienced burning down my left arm and up into my chest. I had chest tightness and over the course of the day it became worse. I developed a fever of 100.9 and I woke in the night to SEVERE body aches and a migraine headache. Fever and chills I also had a runny nose earlier that day. It is now the second night after the vaccine and I am still experiencing severe pain in my joints back and kidneys. Also muscle pain If I have a fever in the am, should I wait to go back to work?

Fever of 102 with onset at midnight after vaccination,a long with chills, muscle aches, some nausea,--subsided after a few hours. headache and tiredness the morning after

Raised, hardened, hot bump on arm 24 hrs post injection with pain and swelling

I have an autoimmune disease, psoriatic arthritic and osteoarthritis. This caused my flare up. My knees and ankles swelled to the size of grapefruits. I could not move legs for about 18 hours. From Friday to

Sunday, I could not get out of bed. Monday night, I really started feeling better and was able to take care of my kids again on Tuesday. I went back to my normal shift on Wednesday. I was under the care of my PCP and Rheumatologist.

10 minutes after receiving vaccine, patient reported numbness across upper lip which progressed to her tongue. Felt tingling and dryness of tongue and swelling. No difficulty breathing or swallowing, no chest pain, no wheezing, no rash, no itching. Taken to ED and given methylprednisolone 125mg IV, diphenhydramine 50mg IV, famotidine 20mg PO. Patient improved and monitored x 4 hours with resolution of symptoms. Prescribed prednisone 50mg po x 4 days.

erythema, tachycardia, tachypnea, headache, uncontrolled dystonic shaking

Developed sudden onset of shaking chills and fevers as high as 103.0. She has developed a small circular 5 x 5 area of erythema and firmness at the injection site of her left upper arm.

Dizziness, Hives on entire body

pt received vaccine at covid clinic on 12/30 at approximately 3:30, pt vomited 4 minutes after receiving shot--dark brown vomit, staff reported pt had vomited night before. Per staff report pt became short of breath between 6 and 7 pm that night. Pt had DNR on file. pt passed away at approximately 10pm. Staff reported pt was 14 + days post covid

Sent home from work after receiving vaccine. I immediately developed sore throat. First 3 days I was miserable and then this whole week everything has bad. Outside of ears were burning. Stomach turned immediately. I thought I was going to vomit. Top of my head started spinning. I am still foggy. Breathing was never altered.

Received my vaccine on December 22nd, 2020 at around 830 Am. That afternoon, about 3 PM, I started to have a reaction. It started with tingling/numbness in my right hand which progressed up my arm into my elbow. About 10 minutes later, it then progressed into my right foot, and my left foot. About 10 minutes after that, I started to get flushed and a neck rash (diagnosed from Dr.). I took Benadryl and Ibuprofen 800mg PO every 6 hours for the next 24 hours. The numbness in my right foot and left foot along with the flushness went away a couple hours later. Although, the numbness in my right hand never went away. It came and went for the next 4 days until December 27th and 28th when it started getting worse. On December 28th evening, it got so bad that I was debating going to the emergency room around 1 am. The numbness and tingling was in my right hand and started shooting up my arm. The nerve pain around my wrist was unbearable. I finally fell asleep and the next morning, it was not nearly as bad, but was still there. The numbness and tingling moved from my right hand mainly to right hand, right foot, right leg, left foot and left hand today (12-30-2020).

angiodema. hospitalized overnight. During the hospitalization pt was started on an epi gtt and given MTP 125 mg. He had subsequent hyperglycemia, and increased his rate on his insulin pump to 2 U/hr (from 0.83 U/hr). Pt then decreased his rate to 1.4 U/hr while on the epi gtt, and then to 1.1 U/hr when off of the epi gtt. He also strengthened his carb ratio from 1:12 to 1:10 last night.Pt reports he had

postprandial hyperglycemia overnight after his meal, but then BG corrected overnight. Pt reports fasting this morning is in the 110s. This morning's breakfast on 1:10 CR with well controlled BG.

Resident received vaccine per pharmacy at the facility at 5 pm. Approximately 6:45 resident found unresponsive and EMS contacted. Upon EMS arrival at facility, resident went into cardiac arrest, code initiated by EMS and transported to hospital. Resident expired at hospital at approximately 8 pm

Due Date unknown/6-7 wks pregnant -nausea -Body felt heavy -headache -in & out consciousness -Fatigue, severe -Heart Racing

Patient had an anaphylactic reaction to the vaccine the day after it was given and went to the nearest ER.

Patient stated he stopped his blood pressure medications 3 days prior to vaccination due to a previous reaction to losartan, a medication he was no longer taking. Patient took aspirin and a MVI on day of vaccination and drank lemon water. Patient developed tingling sensation in his mouth after eating dinner around 18:00. Patient stated he ate tacos with apple cider and noticed tingling after dinner. Patient stated he took two benadryl with no relief. His tongue continued to swell and he took two additional benadryl at 22:00. Once he developed difficulty swallowing he went to the emergency department. Patient presented to the ED with tongue swelling and difficulty swallowing. At 23:57 he was adminsitered 0.3mg of epinephrine IM, diphenhydramine 25mg IV, famotidine 40mg IV, dexamethasone 10mg IV at 0114, methylprednisolone 60mg q6hrs started at 0417, diphenhydramine 25mg q6hrs IV started at 0416, albuterol 2.5mg via neb q6hrs started at 0710

Patient died within 12 hours of receiving the vaccine.

Resident received vaccine in am and expired that afternoon.

Started feeling a reaction immediately after the vaccine, felt blurred vision, dizziness, racing heartbeat, chest rash and face, itching all over, difficulty swallowing, tongue tingling and wheezing. Sent to ED. EPI and Benadryl. 1800 Went to see her in the ED, room 33. She has red rash to neck, shaky hands itching to neck and chest. ED Dr to discharge, she stated husband to pick her up and she will follow up with OH tomorrow. ----------RN ED gave her Epinephrine 0.3 mg, Methylprednisolone 125mg, Diphenhydramine HCL 50 mg, Zofran 4mg, Lorazepam 1 mg, Hydroxyzine HCL 50 mg Sumatriptan 6mg , Discharge from ED at 1902 ---------- ---------- RN 12/29/2020 1715 called to check on patient. left voicemail for her to call OH. ???????..? 12/29/2020 1838 left voicemail for patient to call OH. ??????????????????????. 12/30/20 2030 spoke with her. Tuesday 12/29 3pm-4pm dizziness, confusion, sob. Wheezing. Ambulance called. Hospital admitted. Intubated for less than 24 hours. Breathing treatments, epi drip. Now just on steroids and walking around and feeling better. Still admitted at hospital. Hoping discharged tomorrow. ----------RN

Patient received dose 1 of COVID vaccine 12/24. He developed symptoms consistent with COVID infection on 12/25. He was seen in the emergency room at Hospital on 12/27,was diagnosed as COVID positive, and was discharged to home. He returned to the emergency room on 12/29 and was admitted to the hospital for treatment related to COVID infection. He is currently admitted to Hospital.

10 minutes after vaccine numbness and tingling in left foot, hand and left side of face. Spacing out feeling. Feel like i'm going to pass out.

EDD - 4/1/2021 - Contractions at 26 w 3 days sent to L&D to be monitored on 12/28/20. Covid-19 Sars Vaccine given 1st dose 12/27/20. Patient was diagnosed with Fetal Hydrops. Patient Hospitalized 12/28/20 - current MFM consulting in hospital & outpatient

EE has a history of anaphylaxis reaction to Latex. EE states she was intubated in Mexico over this in the past. Pfizer-BioNTech vaccine given, 20 minutes later EE c/o dizziness. EE places on cot and starting wheezing and being short of breath. Lungs sound tight and wheezy throughout. á 1052- Epi 0.3mg IM given in Right Deltoid 1053- Benadryl 50mg IM given in Left Deltoid á 1054- EE getting restless and starts feeling chest tightness. Epi 0.3mg IM given in Right Deltoid á Code Green Team arrived at 1054. á BP 197/126, HR 88, RR 44, blood sugar 109 á 1058- EE getting wheezing and short of breath again. Epi 0.3mg IM given in Right Deltoid and Benadryl 50mg IM given in Left Deltoid. á 1059- EE transferred to ED on stretcher, escorted by ICU RN and ICU MD. In ED- patient given solumedrol, epi, benadryl, phemodidine, ativan, zofran x 2 and ee sent home with medications as well.

Redness about 1 1/2 inches around injection site, edema to right arm, r side of neck, r breast, r shoulder, temp 99.3, increased blood pressure. Patient went to primary care physician. She was then sent to the ER. She was Covid (+) in July 2020

Shortly after receiving the vaccine (within 10 minutes) the patient's tongue swelled, facial redness, gasping for air. This resident was marked for a 30 minute observation due to previous anaphylaxis type reaction. Immediately administered 0.3mg epinephrine x 1 dose. Then administered 50mg IM Diphenhydramine. This treatment course resolved the adverse reaction. Patient was monitored onsite at facility. Her husband came to pick her up and take her home. Tried to reach patient several hours after but was unable to at this time.

I had shortness of breath

approximately 30 minutes after receiving vaccination i began to develop tongue and lip swelling as well as difficulty swallowing and breathing , i then proceeded immediately to the nearest er

Patient complained of a headache, then patient was losing consciousness and gasp for air. EpiPen was utilized due to being unresponsive then began to seizing. Patient started to flatline and an AED was used while a paramedic came. Patient was put on her side then facility gave something for seizures. Lastly, ,ambulance took her to the hospital.

Patient started having myalgia, chills, nausea on the next day of the vaccination. on 2nd day (12/29) patient had chest pressure which made her present to Hospital ED. She had troponin elevation to 1.14.

Cardiac Catheterization was done which was negative. On Trans Thoracic Echocardiogram, patient was found to have hypokinesis of the mid and distal segment with some sparing of apex proving Takotsubo (stress induced) cardiomyopathy. Patient did not have any underlying emotional or physical stress going on in her life or family. Till now extensive infectious as well as inflammatory work up is done to rule out any secondary causes of cardiomyopathy which till date have remained negative. As a diagnosis of exclusion, her presentation seems to be COVID-19 vaccine induced Takotsubo Cardiomyopathy

Pt received 1st dose of Moderna vaccine in am at COVID vaccination clinic. On presentation to clinic he stated he was feeling well. Pt was brought to ER in pm with hypoxic, requiring 15L supplemental O2. Per pt's family, pt was not feeling well for the last couple of days but didn't think it was related to COVID. Abbott COVID + in ER. Possible vaccine reaction, though seems unlikely.

"15-20 mins after receiving the vaccine she reported she had difficulty swallowing and difficulty breathing and was ?shaking."" a PA wrote in her note that when she ran in to help, she found the patient to be tachypneic, diaphoretic, warm with some red blotchy patches on face, chest & neck. Able to speak easily c/o trouble breathing & sensation of throat swelling & extremities feeling abnormal. No stridor. No facial edema noted by that clinician. Administered epi-pen 0.3mg - IV started , Benadryl 50mg IVP and solumedrol 125mg IVP. Patient reports she subsequently arched her back and had rigidity of her arms/legs and tremors. Clinic PA reports that while she was there, pt was never hypotensive. Initially hypertensive after epi as expected with some favorable response after 10-15 min Staff there gave her IM epinephrine, IV Solu-Medrol and 50 mg IV Benadryl. EMS was contacted and transported to the emergency room. She arrived at the ER, was monitored for 2 hours, was started on pepcid and benadryl and discharged from the ER. She had a diffuse itchy rash. The following day she again developed recurrence of throat swelling. Went back to a different ER. Developed dyspnea immediately prior to arrival at ER. There was again given solumedrol and benadryl and pepcid and developed muscle rigidity and arched back for 10 minutes. Symptoms of SOB and dyspnea resolved with epinephrine. Was discharged from the ER with prednisone after being monitored for 5 hours. Is continuing to take prednisone and benadryl. Rash is still present but improving with scheduled benadryl. Has new redness at injection site today. Continues to feel some throat swelling but no tightness today. This information was gathered from talking with pt today for a phone appt and also from her medical chart regarding her vaccination visit and two ER visits."

Acute appendicitis, onset morning of 1/1/2021 (Reporting this because Pfizer covid vaccine had 3-4x higher risk of appendicitis, although data not reported for Moderna covid vaccine)

on dec 22 I felt some myalgias, chills, fatigue, HA --quite normal. That evening, noted small amount swelling R hand --I iced and took acetaminophen. By Dec 25, hand very swollen and painful with decreased ROM all fingers

Within 15 minutes of receiving the vaccine I began to get very itchy and blotchy with a hoarse voice. The paramedic downstairs walked me up to the emergency room. I was treated with medications to help calm the itching and burning feeling. By 940 I went anaphylactic and had several doses of epinephrine to help calm this. I continued to have rashes and the feeling of my throat closing. I was transferred by

ambulance to medical center in the ICU. I am still here and have had two toner anaphylactic episodes since. I have been on a epi drip, steroids, famotidine, Ativan and Benadryl. I also had a picc like placed.

Anaphylaxis. Immediately experienced shortness of breath, rapid heart rate, and rash. I am a Nurse Practitioner in the emergency department. Had went down to the temporary vaccine station to receive my vaccine, immediately returned to the ER and began to experience symptoms of anaphylaxis. Was immediately placed in a treatment room and received treatment by the ER physician, which included oxygen, intravenous Benadryl, Solumedrol, and Normal Saline. Was observed for several hours and then eventually sent home with prescription for Prednisone and Pepcid. I do have a allergy to shellfish, was never asked about my allergies and nothing on the paperwork I was given prior to the injection noted a concern for shellfish allergies.

Vaccine on 12/22/2020 and started feeling bad on 12/27/2020 and tested positive on 12/30/2020 for COVID 19 Was advised to fill this out by my PCP

Flushing, sweating, increased heart rate proceeded to feel difficulty swallowing and clearing my throat. I was taken to the ER. The symptoms progressed to feeling dizziness, difficulty speaking, and chest pressure with increased SBP/DBP. General nausea and feeling very unwell.

CAREGIVER RECEIVED FIRST VACCINE DOSE AND SOON AFTER BEGAN TO FEEL DIZZY AND HER EYES BEGAN TO TWITCH, FOLLOWED BY UNCONTROLLED SHAKING, WITH HIGH FEVER FOLLOWED BY SEVERE SHORTNESS OF BREATH AND GASPING, WITH TIGHTNESS AROUND THE CHEST. TRANSPORTED TO EMERGENCY DEPARTMENT. HAD MULTIPLE EPISODES OF ITEMS LISTED ABOVE WHILE IN ED, INCLUDING HEAVINESS IN HER LEGS AND TINGLING IN ARMS. SHE WAS DISCHARGED FROM ED AT 10:30PM BUT WAS READMITTED ON 12/24 TO ED FOLLOWING SIMILAR ISSUES. TO DATE SHE HAS HAD 5 RAPID RESPONSES IN HOSPITAL DUE TO REPEAT OF SIGNS/SYMPTOMS. CT AND PULMONOLOGY CONSULT SCHEDULED FOR 12/28/2020.

Patient is a 55 year old male with no past medical history who presents with complaint of sudden onset of left-sided nonradiating chest discomfort of sudden onset approximately 1 hour prior to presentation while doing administrative work at rest. He describes the pain as a dull heaviness sensation and approximate 3/10 pain severity. Chest discomfort was associated with a feeling of flushing that was quite transient but chest discomfort was persistent. Patient immediately presented to the ED for further evaluation. He denies experiencing any chest pain upon waking up this morning. Does note that he did have a transient episode of epistaxis on his way to work for which he had to pull over and apply pressure to his nose but this subsequently subsided and he attributed this to dry air as he has experienced epistaxis in the past but with less severity previously. In the ER, vital signs noted for BP 133/76, pulse ranging 91-114, respiratory rate 16-20, 96% on room air. Initial laboratory parameters were completely normal including normal CBC, CMP, LFT, lipase, UA, and normal D-dimer. Initial troponin was negative x1. EKG with sinus tachycardia, heart rate of 115. Noted Q waves inferiorly. No acute ST or T wave changes appreciated. Chest x-ray with mild increased density in the left lower lobe. Given this, patient was tested for rapid Covid which was negative but PCR was positive for COVID. CT of the chest noted for focal subsegmental groundglass infiltrate at the superior segment of the LLL, likely infectious versus

inflammatory. Also noted small nonspecific groundglass attenuation with focal septal thickening at the right upper lobe which could be infectious or inflammatory, bibasilar atelectasis. Patient was treated with aspirin 324 mg in the ED. Of note, patient actually just received the COVID-19 vaccination on 12/24/20. He denies any shortness of breath, no cough, denies any nausea or vomiting, denies any change in taste or smell nor change in appetite. Does note 1 single episode of loose stool but otherwise denies any diarrhea. Does report that he had approximate 48 to 72-hour period of fatigue and soreness at the site of the left deltoid injection following the vaccination but otherwise no further symptoms. It is also noted that he does have a positive family history of coronary artery disease as his dad had an MI at the age of 49. Patient has never undergone a cardiac catheterization in the past but does report having a negative stress test at the age of 42. He is being admitted under the hospitalist service for further management Patient was initially admitted under observation for chest pain obs. However patient's Covid test came back positive and patient also had dynamic EKG changes concerning for possible unstable angina. Patient was treated with aspirin Plavix full-strength Lovenox along with beta-blocker and a cardiology consult. Serial troponins were negative. Echocardiogram revealed normal EF of 55 to 60% with no hemodynamically significant valvular disease. Cardiology felt that patient likely has underlying coronary artery disease have recommended discharge home with aspirin and Plavix with outpatient stress testing given his positive Covid testing. At the time of discharge patient denied any chest pain or shortness of breath. Patient was borderline diabetic with a hemoglobin A1c of 6.1. Patient was discharged home with Metformin along with glucometer, glucose strip, lancets. Given patient's tachycardia patient's Metformin 25 mg twice daily was changed to Toprol 25 mg daily. (Please note clarification in comparison to discharge home med list. Toprol XL 25 mg daily was called to pharmacy in place of the metoprolol.)

The vaccine was received at 1:12 PM, and I felt fairly fine, aside from injection site pain and some tingling in my left arm until I had sudden significant elevation of heart rate, with shortness of breath, and throat swelling/tightening at approximately 1:26PM. I cold compress was applied to my forehead and I was put in a reclining position & then received Epinephrine at 1:28PM. EMS (present onsite) arrived for transport at 1:31PM. 4L of oxygen was applied after O2 sat of 89% noted by EMS. Blood pressure was elevated to >200/100 initially by EMS. Symptoms improved quickly following epinephrine, with some residual feelings of very mild throat fullness, and I developed chills which improved over time. I was transported to emergency department where I was evaluated (symptoms mostly resolved at that time, but ED physician noted a little swelling remaining in my uvula), then IV Benadryl and Decadron were given. Later acetaminophen was also given for headache that developed during my ED stay. My vitals were monitored throughout and observation occurred until I was discharged at approximately 5:00PM, as symptoms had not recurred.

HIVES, SOB, THROAT CLOSING UP, WHEEZING

12/28/2020, Pharmacy staff administered Moderna COVID Vaccine. 12/29/2020, he had not eaten breakfast or lunch but did consume fluids and take his medications. BP =150/70, Temp. = 101.6, Pulse= 102, Respirations= 18 and Oxygen saturation= 97%. Tylenol 650 mg given. It was difficult for him to swallow. Also had no use of right upper extremity and unable to move lower extremity, mouth was drooping and was drooling. Physician in attendance and ordered to send to ER. 1/1/2021, received

information from nurse at hospital that patient received a Peg Tube this afternoon and Clinical indication of a stroke.

I received the vaccine at 6:30pm on 12/27. I worked atb7pm and took lunch at 2:00am. After lunch, I immediately felt sick to my stomache and threw up. I went home after my shift and went to bed. After 5 hours, I woke up and went to the couch to lay down while kids watched TV. Next, I woke to several people in my house. I had a seizure and my son had called 911. I was taken to emergency department. I was admitted and stayed 2 nights in the hospital.

After vaccination, patient tested positive for COVID-19. Patient was very ill and had numerous chronic health issues prior to vaccination. Facility had a number of patients who had already tested positive for COVID-19. Vaccination continued in an effort to prevent this patient from contracting the virus or to mitigate his risk. This was unsuccessful and patient died.

A little over ab hour after receiving the vaccine I noticed a burning sensation in my sinuses. By 130am 1/1/2021 I awoke from my sleep terribly dizzy, shaking violently and experiencing a fever of 101.3 F. I took advil and tylenol and fell asleep about an hour later. I woke up with similar symptoms at approximately 830am on 1/1/2021 took an additional dose of advil and tylenol and slept till 12p. I woke up with a bad headache and coughing fits similar to when I had covid back in March. I went to an urgent care who assessed me and ordered me to the ER. medical center administered IV fluids, an inhaler, steroids, epinephrine and benadryl and a few hours later my symptoms had subsided for the most part and a dose of IV antibiotics was administered. I am currently admitted for observation with likely discharge on 1/2/2021.

30YO F ICU nurse obesity (BMI 35) COVID 19 on Dec 2 symptoms, Dec 3 tested positive for COVID-19. never hospitalized, outpatient only. 12/12 completed isolation 12/21 received vaccine 12/7 developed Fever chills diarrhea SOB cough Urgent care visit. RLL consolidation on CXR given doxycycline 100 mg po bid worse, fever 40 targetoid lesions to LE (started before doxy) WBC 22K tachycardic tachypneic admitted requiring 2-4L oxygen CT angio without clot, diffuse ground glass and RML dense infiltrate DDimer 7.8 LDH 599 CRP 41 procal 0.67 ferritin 500 Viral respiratory PCR negative Sputum cx with oral flora (pending) COVID ag testing neg COVID PCR 1/3 targets positive (called as indeterminate).

Within 5 minutes of the vaccine, patient had wheezing, shortness of breath and chest pain. patient given epi x 4, decadron, fluids with some improvement and then hospitalized. IN the hospital, patient continued to have chest pain and satting well but with protracted course and is still in the hospital.

Vaccine given at 7:05am 12:00noon, 5 hours later, I started experiencing severe chest pain, jaw pain and shortness of breath in which EMS was called and I was taken to the hospital. Since then, I lost feeling in my hands and feet, numbness and tingling. I've improved however, during my recovery suffered with spinal pain, shortness of breath, very winded, muscle pain and loss of appetite to especially meat.

Soreness and weakness of left arm for more than 5 days. Intermittent headaches and runny nose

On 12/29: lightheadedness, flushed, felt like I was going to pass out, numbness/tingling down arms and hands, chest tightness, clammy hands and feet.

Anaphylaxis. The COVID shot was given, no reaction then. After 7 minutes, congestion, severe cough, vomiting phlegm, feeling like throat closing started happening. Code was called, Benadryl was immediately given intramuscular in the left arm, blood pressure, pulse ox was taken, and then was taken to the Emergency Department. In the ED, I was given prednisone, one EPI, anti-nausea medication all through I.V. and many more medications given to me via I.V. that I don't sincerely remember. I was under observation for 4 hours. I was discharged after all symptoms dissipated and was given Prednisone 20 MG (3 tabs a day) to take to help my lungs. Management followed up almost immediately, everyone from the moment I had the anaphylactic reaction was quick and prepared.

Patient with a history of thalassemia and Gilbert's disease, developed severe jaundice three days after vaccination. Had mild headache and sore arm but otherwise felt well. Had labs drawn - found to have highly elevated bilirubin (23) and LFTs in the 700s. Was admitted to the hospital and had CT showing Cholelithiasis, choledocholithiasis and minimal intrahepatic biliary ductal dilatation. Left hospital and was admitted to another facility where plan was for ERCP and cholecystectomy. Ultimately unclear if at all related to the vaccination - may be coincidental.

Pt had vaccination at city site. Waitied 15 min after shot and was cleared to go. Reported to wife that he was very thristy, so they stopped at a convenience store on the way home. While there, he felt worse and asked to go to the Emergency room. They chose Methodist to enter. Pt went to triage and while at triage, had syncopal episode, then full arrest. After short course of CPR and defib, he had ROSC. Was taken to cath lab for intervention (stents) and is now in ICU.

At the time of vaccination, there was an outbreak of residents who had already tested positive for COVID 19 at the nursing home where patient was a resident. About a week later, patient tested positive for COVID 19. She had a number of chronic, underlying health conditions. The vaccine did not have enough time to prevent COVID 19. There is no evidence that the vaccination caused patient's death. It simply didn't have time to save her life.

Prior to the administration of the COVID 19 vaccine, the nursing home had an outbreak of COVID-19. Patient was vaccinated and about a week later she tested positive for COVID-19. She had underlying thyroid and diabetes disease. She died as a result of COVID-19 and her underlying health conditions and not as a result of the vaccine.

Tactile fever ,arm pain, headache and malaise in 24 hrs following injection Next day generalized achiness ,retrosternal chest pain and bilateral forearm tingly pain similar to Nov 2019 and went to Hospital UC,CXR and EKG normal but with short PR interval on EKG ,elevated troponin 3.5 Transferred to hospital troponin 12.1 ng/ml IVIG given SARS IGG positive on admission PCR negative

ON 1/1/21 THE DAY AFTER I RECEIVED THE VACCINE I WAS TAKING A NAP AND MY WATCH KEPT SENDING ME ALERTS. HOWEVER I DID NOT CHECK MY WATCH UNTIL 5:30 WHEN I WOKE UP AND I FELT LIKE I WAS HAVING HEART PALPITATIONS. I WENT TO THE EMERGENCY ROOM WHERE I WAS TREATED. I

WAS TOLD THAT I WAS FEBRILE WITH A TEMPERATURE OF 102. I WAS GIVEN IV FLUIDS, CHEST X-RAY, EKG AND LAB WORK. I WAS RELEASED ON 1/2/21 AT APPROXIMATELY 0030 (MIDNIGHT).

"Patient is hospital employee who completed screening form for COVID-19 vaccine by answering ""no"" to all contraindication questions. Approx 10 minutes after receiving COVID-19 vaccine dose # 1, patient was still in vaccine clinic area and complained of dizziness, palpitations and flushing. I observed patient fanning herself with papers. She was escorted out of the immediate clinic room, and assessed by paramedics present as having an anaphylactic reaction. Epinephrine 0.3 mg IM and diphenhydramine 50 mg IV given in clinic, Rapid Response was called overhead and patient immediately transported down the hall to the Emergency Dept. In ED, pt was noted as having swollen tongue, large areas of erythema on face, arms and chest, shortness of breath, nausea, dizziness (per ED physician notes). Pt reported being hospitalized in ICU with COVID disease more than 3 months ago, including intubation (not treated at this hospital), and has been back at work since August 2020. ED physical exam noted bilateral wheezing and patient in acute distress. In ED, pt administered racemic epinephrine 2.25% 0.5 mL via neb, epinephrine 0.3 mg IM, diphenhydramine 50 mg IV, Solu-Medrol 125 mg IV, famotidine 20 mg IV and epinephrine 5 mg/250 mL IV drip (started at 0.118 mcg/kg/min). Acute symptoms reported to resolve in ED. COVID test was negative. ED physician discovered that pt had history of multiple medications, including previous anaphylactic reaction to radiocontrast dye requiring intubation (which was not disclosed on the vaccine screening form). Pt admitted to Telemetry floor for observation. Overnight course was unremarkable, and patient was discharged the following day with prescription for Prednisone taper and prescription for Epi-pen. Advised not to return for second dose of COVID vaccine. EMR updated to reflect possible anaphylactic reaction to Moderna COVID-19 vaccine."

25 minutes after receiving the injection, there was a sudden onset of facial swelling, hives, itching and airway constriction. I had already left the drive-thru vaccination clinic and was driving to the hospital emergency room where I work. I informed my colleagues of my symptoms and was treated for anaphylaxis with IV diphenhydramine and famotidine over several hours. I was given a prescription for a prednisone taper for the next 6 days.

I suffer from lingering SOB with exertion after COVID infection. On the night of 12/31/2020 I began to feel more SOB than usual and was unable to correct my SOB with rescue inhaler. Became more SOB with exacerbated tachycardia and tachypnea, My family had to call 911 because I became aphasic and showing signs of possible stroke. I was taken to the ER and admitted for respiratory recovery and to role out stroke. The stroke was ruled out and I recovered with IV prednisone therapy, twice daily and supplemental oxygen. Released after HR, BP, & respiratory effort returned to normal: 01/03/2021

I was 28 weeks and 5 days pregnant when I received the first dose of the COVID19 vaccine. Two days later (12/25/2020 in the afternoon), I noticed decreased motion of the baby. The baby was found to not have a heartbeat in the early am on 12/26/2020 and I delivered a 2lb 7oz nonviable female fetus at 29 weeks gestation. I was 35 years old at the time of the fetal demise and the only pregnancy history for this pregnancy included a velamentous cord insertion that was being closely monitored by a high risk OB. My estimated due was March 12, 2021.

At around 40 hours post vaccination, developed severe abdominal pain and went to an emergency room for evaluation on 1/1/21. Abdominal pain was eventually diagnosed as appendicitis requiring appendectomy on 1/2/21. Emergency room visit and hospital discharged patient early on 1/2/21. It was then determined that the on-call team covering mis-read the CT scan and acute appendicitis was found. Patient then went to Medical Center on 1/2/21 for appendectomy and was discharged later that night following operation.

Headache, muscle pain on the site of injection, chills, nausea, fever. Started time 01.03.2021 8:15pm.

15 min after the vaccine I was flushed and felt hot , ears felt hot as well. I had a macular rash on chest and arms. My throat felt itchy and they immediately gave me benedryl. I was tahycardic as well. When I got home from the ER that night I had to take more benedryl and then the next morning I was still itchy and my voice was hoarse so I took more xyzal and famotidine. The rash subsided and I continued taking xyzal twice a day , benedryl and famotidine for a week. After my vaccine the itching did not subside for about 48 hours and it was very difficult to control. I had to take max doses of antihistamines to control the hoarseness In my voice and itching

High fever (104.2 degrees) at present, fatigue, chills

Blood pressure and pulse rate increased to 164/64, 85

1/1/2020: Residents was found unresponsive. Pronounced deceased at 6:02pm

Approximately 11:00pm on 12/29/20: Hives/itching on bilateral hands/wrists/forearms/lower legs/ankes, red face/swelling on face, rapid pulse, headache, nausea, extreme fatigue.

At about almost 4 hrs after receiving the injection I started to experience a tingly feeling to my lips, some lip swelling and tightness in my throat. I had my epi pen on hand incase I needed it but I ended up taking 25mg of Benadryl, then 50 mg of Benadryl 5 hrs later. The following morning my lips where feeling tingly again so I took 25mg of Benadryl again and continued for the next 48 hrs at the advice of my doctor.

About 5 minutes after injection: fast growing wave of internal burning sensation throughout body, feeling that I would pass out, lightheafdedness, increased heart rate and blood pressure, mild difficulty with speech/thought/concentration, freezing hands, wabbly/shaky., chest tightness, very slight throat soft tissue sensation

Fatigue, sore muscle

extreme body aches, fever of 101 degrees F, pain at injection site, severe headache

Swollen painful lymph node left clavicle

Redness and swelling an inch away from the injection site, hives on face

Migraine with nausea and dizziness preceded by visual aura, severe left arm pain (could not raise arm without significant pain), left wrist pain

about 1 hour and 15 minutes post injection (I waited in area as recommended for thirty minutes because of hx), I had the sudden onset of itchy runny nose and chest tightness and wheezing of significant intensity that I needed to use inhaler then and again later in the day. Noteworthy, I had as a precaution taken prednisone 20mg p.o about 2 hours before the injection. I had to take more later that afternoon because of symptoms. I then seem better but several times since the vaccine I have needed to uses the inhaler and take prednisone more than I have except after an infection about 6 years ago that precipitated similar symptoms to now. Today I had a flare significant enough that except for covid I might have gone to the ER or urgent care.

Resident noted with right sided facial swelling and lip droop. diagnosed as bells Palsy

Slight headache a few ours later after vaccination. The next morning I had headache, some joint/muscle pain, right arm pain and a Fever. That evening/night Fever and chills. The following morning still had a fever and chills. All symptoms were gone later that evening (within 48 hours of initial vaccination time)

4 hours after vaccine, sore arm, fatigue, headache, blurred vision 12 hours after vaccine, full body tremors, fever of 102, extreme muscle weakness, fatigue, deep chest cough, shortness of breath. fatigue, weakness and cough continued for three days after vaccine before subsiding

on the following day after the vaccination, I developed chills, awful headache, body aches, extreme fatigue, malaise, no fever

Fatigue, headache, body aches, chills, localized rash

I received the shot around 0730 on 12/30/2020. Went home and got ready for work. Around 12am 12/31/2020 my arm started to radiate at the injection site and was very tense. I placed a heat pack on the right harm but the pain did not dissipate. My arm continued to be in pain for the rest of the night. Around 0240 I ate dinner, had water and still had some arm pain. Around 0345 my arm started to flare up and sent pain sensations throughout my body. My right arm was increasingly discomforting, I could barely move it. The sensations spread to my legs, numbing them and my throat had felt as if it were closing up. I got up to get the attention of the nurse and was able to flag her down. She said I was pale as a ghost. My vision was very blurry, I could not hear anything because my ears had filled up and everything was muffled. My head had begun to ring and I was on the brink of fainting when a chair was given to me. My eyes had become extremely sensitive to the light, I was given water and spoken to about what had happened leading up to the event. I was greeted by the paramedics who drew my blood, placed an IV and transferred me to the Acute Care portion of the Emergency Department. My vitals were 76/49, 80/50, 90/56, 100/60 before being brought to the ER. On 1/1/2021 My thighs have been sore/tense, my knees and ankles have been stiff and just feeling sickly. On 1/2/2021 much of the same symptoms are present. The soreness in the muscles isn't as prevalent, however joints still are stiff On 1/3/2021, congestion and runny nose are still present, stiffness in ankles and now shins are prevalent.

On 12-22-2020, approx. 2 days after vaccine, I noticed several non-tender lumps under my chin/adjacent to left jaw line ~ small gum drop size lumps seemed to congeal together over next 9 days into a single half-dollar dollar sized lump - not completely round.

Headache Chills Temp (101.6) Body aches Skin hurts to touch Soreness in arm (injection site)

Hospitalized with COVID-related pneumonia on 03 Jan 2021. Close contact exposure on 25 Dec, with positive COVID PCR test on 29 Dec... managed as outpatient until respiratory sxms prompted hospitalization on 03 Jan. Care team anticipates at least 4 inpatient days... but patient remains hospitalized at date of this report.

Patient developed SVT 15 minutes after receiving vaccine. Admitted to ICU. ER presentation: BP: 160/109 heart rate 132. No e/o anaphylaxis or allergic reaction.

Sore throat, cold symptoms 3 days after, bone pain

The vaccine was given in the deltoid tendon/shoulder bursa area NOT in the deltoid muscle.

Jan 3, 2021 mild pain at injection site, diarrhea all day, chills in morning , no fever, temp 97.6 Jan 4, 2021 significant arm pain at injection site (awakened by it at 3 am) with chills, temp 99.6. Took One tablet ALEVE followed by temp 98.6

Rash on sides started Thursday. Woke up Friday and rash is all over body itching red and hurts. Taken Benadryl, pepsid and hydrocortisone cream. Called tele doc they gave prednisone nothing is working getting worse

Patient is a 49 y.o. female with a PMHx of AAT deficiency, HPV infection, DVT, Vitamin D Deficiency, Hypercholesterolemia and Anxiety with complaints of acute left arm numbness that radiates into her left digits and chest tightness that began 12-13 min after receipt of the COVID-19 vaccine. She noted numbness radiation into the left side of the neck and the bilateral ears. She voices she has also developed chest tightness and wheezing. Evaluated in the emergency department treated with diphenhydramine 25mg, epinephrine 0.3mg and dexamethasone 10mg

sore arm at injection site for about 1 day

"Pain and swelling in arm where injection was received. Lymph nodes in axilla and in neck were also swollen and painful. Eyes were described as ""glassy"", Two medications prescribed Lidocaine Patch and Naproxen"

Patient had swollen lymph nodes under his left arm 3 days after injection was administered. He stayed he had surgery to remove lymph nodes in June 2020.

Arm pain at injection site, fatigue, mild headache, swollen lymph nodes

riggors, fever,, severe body aches, flank pain, headache, eyes hurt

"Patient was anxious when arrived. After receiving the vaccine, felt light headed and revealed he has ""spells"" of anxiety similar to current experience. Became diaphoretic and needed to lie down."

itching, redness and swelling at injection sight. Took Benadryl on 12/31. Reappeared on 1/1, visited Er, got dexamethasone, Pepcid po and bendaryl

Itchy around the vaccine site, stiff muscle, sore arm

Muscle aches, palm size red ring for 3 days, day 4 rash, Diarrhea, vomiting, arm sore 3 days.

shortness of breath, hypotension, presumed anaphylaxis

Pain at site of injection

Painful/sore joints (shoulders and elbows) for two days. Almost went for treatment after about 48 hrs, but got through a rough night and the next morning it was gone.

Moderate local reaction. Swelling, redness, pain, hot to touch, itchy for 5+ days.

Mild swelling, pain, and itching at the injection site 8 days after injection

MODERNA COVID 19 VACCINE EUA PAIN TENDERNESS SWELLING/ FATIGUE, HEADACHE, MUSCLE PAIN, JOINT PAIN, CHILLS/ THEN CAME THE ALL OVER BODY RASH AND I STILL HAVE THIS

Pfizer-BioNtech COVID-19 Vaccin EUA-. Severe Dizziness, light- headed.

Redness to the area after a week. resolved

Thursday 12/29/20 : Started wheezing, I am using my nebulizer but the wheezing seems to be getting worse My throat also is swollen and red. Fatigue/sleeping a lot Headache

Very swollen lymph node in front of my left ear.

Flue like symptoms but no fever.

I am currently breastfeeding my 11 month old son. On Thursday, December 31st, 2020 (2 days after receiving my vaccine), my son developed a fever x24-36hours and diarrhea that is still on going as of today (1/4/2021). There are no known exposures for my son and his illness. I am reporting this as a possible reaction to the Moderna COVID 19 vaccine I received that could have some how passed through the breastmilk to him.

About 1 week after receiving the vaccine (on 12/31/2020) I developed an itchy, raised, and red hive-like rash at the injection site. It got worse over the next day, and I put some steroid cream on it. It went away gradually and was completely resolved by 1/03/2021

redness and swollen to inj site, rash to hands Benadryl given for sysmptoms

Arm soreness at injection site, worse than a flu shot and starting an hour after the shot and lasting approx 2 days. Increased phelgm production for approx 24 hours following injection.

Moderna COVID-19 Vaccine On day 9 after injection, began to get itching at the injection site. Now on day 10 with red area ~ 5 cm x 3 cm. Mild fatigue on day 9 as well.

Pfizer-BioNTech COVID-19 Vaccine EUA - Patient witnessed another patient with syncope prior to her injection. She was already anxious about receiving vaccination and this increased her anxiety, though she proceeded with immunization. Patient was in 15 min observation window in a chair and began to feel light-headed like she may pass out. A SWAT was called. With RN assistance, patient was lowered to the floor, with no loss of consciousness. Patient was pale and reported anxiety, racing /pounding heart, and felt hot with facial flushing. Patient was transferred to ED and was noted to be tachycardic (120s), but dropped to 80s. She noted that this episode felt different than her prior syncopal episodes associated with anemia. Patient was observed for 5 hours and discharged to home. Patient returned to ED roughly 2.5 hours later complaining of continued dizziness and unsteady gate. Patient was pale and anxious. Patient reported had not eaten/drank enough during her shift and received vaccine immediately post a stressful shift. Additionally, patient witnessed another patient have syncopal episode prior to her receiving her vaccine which made her anxious. Patient was given IV fluids and had electrolytes replacement. Patient additionally received diazepam. Patient was discharged at 2358 on 12/23. Patient returned to ED on 12/24 at 0239 complaining of near syncope and lightheadedness. Patient had tachycardia and self-reported palpitations. Received IV fluids and observation on telemetry with no rhythm disturbance. Patient discharged 1428 on 12/24. On 12/29, patient returned to ED at 0326 for continued dizziness, fatigue and near syncope. Was admitted for cardiac evaluation. Noted to have unprovoked tachycardia and was discharged with a Halter Monitor to evaluate cardiac symptoms. patient was discharged 12/31 at 1619

Received the injection on Wednesday afternoon. I woke up around 3am with an excruciating headache, started vomiting around 6am and continued until 7:30pm. The headache continued and as of this morning 1/4 the headache is still there and my stomach is not settled completely.

Patient received the vaccine and had slight chest tightness, had a slight headache and has mild nausea. He worked the day and still has the symptoms at 1:30 pm

Pt developed urticaria on both arms 4 hours after COVID vaccine administration. Pt received dexamethasone 10mg IM for treatment and diphenhydramine PO 25 mg. Symptoms subsequently resolved.

I received the Moderna COVID-19 vaccine on Tuesday, December 29th at work and on Wednesday, December 30th when I woke up my entire neck had broken out in hives. I did not have hives anywhere else or any other reaction. After taking 25 mg of Benadryl po and applying hydrocortisone cream, the hives had cleared up about 75%. I continued to use the hydrocortisone cream throughout the day, but the hives/redness had fully cleared up by Saturday, January 2nd.

Swollen L armpit, medial, at same side of vaccine. Resolved in 2 days with ibuprofen

Circular redness at injection site about 2 inch in diameter.

Flu like symptoms (fever, chills, aches, fatigue, headache); redness, swelling, warmth and firmness at injection site

Stuffy nose tingling lips tingling face i took 50 mg of over the counter benedryl..symptoms resolved

Arm soreness Arm swelling Headache Right side neck pain Bumps on both cheeks (face)

Patient experienced feeling flushed and nauseated after receiving covid vaccine injection. Declines ED evaluation. No further symptoms reported on 12/19 follow-up

"Pfizer-BioNTech COVID-19 Vaccine EUA - Patient with history of anaphylaxis requiring intubation to benzonatate. Patient answered ""no"" to questionnaire about allergic reactions prior to vaccination. 11 minutes after vaccination, patient reported tingling of lips and swelling of face. Developed hoarseness. SWAT was called and patient given benadryl and taken to ED (1055). Patient received steroids and H1/H2 blockers in addition to epinephrine. Patient brought to ICU for monitoring. Patient continued on therapy and was discharged 1/2 at 1113. Patient returned to ED on 1/3 at 1558 with macular papular rash on leg, chest and back with itching on eyelids and face. No respiratory involvement. Patient given benadryl and predinisone and discharged from ED at 2016."

Generalized body aches that evening, same day as injection. Woke up the next morning, 12/31/2020 with a headache, fever of 100.2, and fatigue

Patient had chills and a fever that started on 12/30/2020 @ 12:00am. The highest fever recorded was 100.6. He took Tylenol on 12/30/2020 @ 6:00am. His symptoms resolved on 12/30/2020 at 8:30pm.

Anterior cervical lymphadenopathy on the ipsilateral side of the vaccination. It seemed to begin on the third day but was most pronounced and painful on the fourth day.

Increasing redness and itchiness, swelling, and discomfort at injection site on R arm, delayed response not present at time of injection, symptoms began 12/27/20 and gradually worsened since then, no improving. Tried Benadryl and cold compresses, as well as Tyelnol.

Body aches, stomach cramping, rash on abdomen, arms. Start of period early (last period 12/22). Itchy all over

Patient developed muscle twitching, fatigue, dizziness and headache minutes after vaccine was given. Day after vaccine given, patient developed small red area around injection site that also had swelling and was warm to touch. No fever or other complication.

Hives and facial swelling. Swelling within the ears. Migrain. Nausea.

Severe joint pain, especially in hips, knees and hands lasting approximately 72 hours after first onset of symptoms. Treatment Tylenol/NSAIDs. Resolved on its own.

Upon injection, vaccine leaked out of syringe at hub site. Stopped injection after noticing after ~0.1mL expelled. Syringe removed, needle noticeably noted to have a curve and retracted into the syringe partially engaged safety.

I received the COVID vaccine on Monday Dec. 21, 2020 at 14:30. By 17:00 I was not feeling well. I was tired, had a headache, muscle aches, nausea and a fever of 101 F. The headache, low grade fever and significant malaise continued through Tues Dec 22 and Wed Dec 23. On Thursday morning Dec 24 at 2:30 AM, I woke from sleep with the urge to use the bathroom. I suddenly felt light-headed and dizzy and had a diaphoresis that soaked my hair and PJs. Fortunately my husband who is a nurse anesthetist helped me through the episode safely and was able to get me back to bed. I am not sure if that event was related to the vaccine or if I happened to be a little dehydrated and had a vaso-vagal event. I did not take any medications because I was allowing my body to have a natural response to the vaccine.

Woke up with a case a vertigo that lasted 30-45 minutes, Headache that lasted around 6 hours that same day

2 Red Area-, itching, burning-the size of a golf ball, the other the size of a quarter- Located at the front of my neck I had vaccine on 12/30/20 at 1:30 pm, and woke up on 01/01/21 at 7am with the red areas.

Patient developed a headache one to two hours post vaccination that lasted approximately 24 hours.

I felt like I was having palpitations, and my blood pressure shot up to 169/119.

About 6 hours after receiving dose, experienced aching in both arms that extended down into both hands - hands was resolved by next morning. Achiness in both arms remained x 48 hours

* TESTED POSTIVE FOR COVID ANTIBODIES 06/2020 - 'STILL HAVE RESIDUAL COUGH' 12/21/2020 - VACCINATION 12/22/2020 9:30 WERE AT WORK; FELT SUPER FLUSHED, SOB, COULDN'T FOCUS, FELT FEVERISH, FELT NAUSEOUS. OCCUPATIONAL HEALTH REFERRED TO URGENT CARE; DR STATED 'NOT TYPICAL RESPONSE'; COVID TEST; NEGATIVE

12/26/20 started to experience covid -19 symptoms.

patient developed fatigue approximately 24 hours after immunization that lasted for about 24 hours. Patient also had soreness at injection site 24 hours after that lasted 24 hours.

first 24 hours: nausea, left arm pain and heaviness 1/2/2021 until present: body aches, very strong headache, sore throat, very tired, coughing with pain, flushed, feel as if my eyes are on fire.

6 days after injection, left supraclavicular lymph node swelling and tenderness and axillary tenderness and swelling

52 year old female received the Pfizer vaccine on 30 Dec 2020. Noticed a slight left sided facial droop as left lower lip numbess on 31 Dec 2020, which has become more pronounced over the past 2 days. She states she spoke to the nurse hotline right before speaking to me who told her to go to the ED (she was on her way). Denies any extremity weakness, numbness, HA or dizziness. No pain to face or ear. Speech

clear on the phone. No recent illness or history of Bell's palsy. NKDA or any prior adverse reactions to immunizations.

Client called clinic on 12/30/2020 in the am requesting us to call in prescription pain medication due to having severe arm pain at the injection site. He stated he had not slept any for the last two nights. Encouraged client to see his PMD if he was in the kind of pain that required a Rx pain medication. Encouraged client to ice down his arm for pain.

"Patinet is a 37 y.o. female ER nurse who received her Covid vaccine just prior to arrival. While being observed at the vaccine site, she developed itching and a rash. She was brought down to the ER for evaluation. Mainly she is itchy all over. She notes a rash across her chest. But she has no cough shortness of breath wheezing. There is no problem swallowing there is no facial swelling. She does not have a history of anaphylaxis, or medication allergies. Review of Systems Constitutional: Negative for chills, diaphoresis and fever. HENT: Negative for congestion, trouble swallowing and voice change. Eyes: Negative for redness and itching. Respiratory: Negative for cough, shortness of breath, wheezing and stridor. Musculoskeletal: Negative for myalgias. Skin: Positive for rash. Pruritus Allergic/Immunologic: Negative for environmental allergies, food allergies and immunocompromised state. Neurological: Negative for headaches. 01/04/2021- Speaking with the patient she states noticed ""hives"" accross chest, right lower extremity, and left upper extremity."

I am breastfeeding-Milk supply significantly decreased (<50% of typical) day of vaccine. Milk supply still decreased 5 days later,

Patient developed fatigue approximately 24 hours after immunization that lasted a couple days.

Approx 25 min after injection I became dizzy and my HR went to the 130?s, at around 30 min post injection my tongue started to swell

Left arm warm, red, sore, swelling noted

dizziness, itching/small hives on forearm (not at injection site) , 30 minutes after vaccine given. Vitals monitored, were normal, sent home and advised to take Benadryl. More hives on upper lip/chin appeared 36 hours after vaccine given. Patient was at home, self-treated with benadryl, zyrtec, famotidine and ice pack applied to area.

Significant neck and upper back pain as soon as 1 hour post vaccine lasting until at least 24 hours - tylenol and heat/ice (no change) chills without fever overnight the night of - no treatment soreness in arm 1 hr post to up to its worst at 24 hours later when I could not abduct >90 degrees for 24 more hours

I got moderna COVID19 vaccine on 12/26/2020. Day 1-3 local pain and swelling, no redness. All resolved after day 3-4. Very tired all week post vaccine,. Day 5-6 noticed ipsilateral axillary lymph node swelling. On day 7 post vaccine I got a localized area of itching swelling and redness as if I had been bitten by a few mosquitoes at injection site that was new. Milder on day 8, less itchy and swollen, but still red and a little raised. Mild shortness of breath.

Really bad headache first 3 days Horrible Chills still ongoing Disoriented and almost like hallucinations Most interesting randomly talking to himself. I mean like a full conversation with someone that isn?t there. He also sometimes feels like when holding something he doesn?t see it or feel it and drops it or vice versa ?.. thinks holding something and isn?t Balance is off Shortness of breath No fever thank goodness and taste and smell are normal

After got vaccinated, I walked out of the clinic to monitoring area approximately 15 walking steps, I felt a little off balance but I was able to make to the chair and sat down. Few seconds later, my heart beat increased faster and faster, my neck turned red. I called for help, they gave me some apple juice to drink and talked to me. About 5 minutes later, my heart beat went back to normal rate and my redness turned back to normal skin color. I only had a little vertigo symptom but I was able to manage myself. About 2 hours later, symptoms disappeared and I was back to my normal health

12/31/20 - cough, sneezing, weakness. Felt ill all weekend. 1/3/21 - called Employee Health with low-grade fever, chills, nausea, weakness and elevated blood pressure 165/104, which had come down by the afternoon to 155/95

Developed Tachycardia approximately 40 minutes post vaccine

patient developed fatigue day after vaccination that lasted about 1 day.

After receiving the vaccine, my arm was in a lot of pain. Then that night and the next day, it was extreme pain, I couldnt lay on it. Then about 3-4 days later, the color is blue and black. Then I started having cold symptoms. Like a head cold. On my left side, my arm and my leg is sore. In addition, my face broke out too. I did not go to the ER. I let Employee health examine my arm . No ER visit

Warm to touch, redness, hard area, sore to touch

patient developed headache and arm pain day after vaccination. Patient stayed and worked from home on this day as a result.

1/2/21 @ 1030: EE called to report she received the vaccine on 12/31/20 between 1030 and 1100. And then around 2330 on 12/31/20 she experienced facial swelling, arm swelling, headache, chills, and dizziness. EE stated she felt it was an allergic reaction to the vaccine and took Benadryl for the next 24 hours to help with the symptoms. EE reported she hasn't had anything since the initial 24 hours, but is concerned about taking the next vaccine. Encouraged EE to contact PCP regarding concern for taking next vaccine. After speaking with Administration, EE encouraged to report vaccine side effects to CDC via V-Safe (https://www.cdc.gov/coronavirus/2019-ncov/vaccines/safety/vsafe.html).

about two inches around the site was red and outlined. Felt slightly raised and was itching. Is still red today 1/4/21

"C/O of ""smokey vision"", outside in parking lot. Sat in car for about 10 minutes before coming into the building. A&O, ambulatory, denies dizziness, HA or lightheadedness. States feels SOB with exertion, ""heaviness in trachea"" increasing with inspiration. Hand off to EMTs. EKG performed, Sinus Tach 108

initially then NSR 80s-90s with occ MF PVCs, couplets. BP 162/94, O2SAT 100% RA, BS POC 208. Patient brought to ER by EMTs"

Within 10 mins. Tongue was tingling lips were swelling and tingling left arm fingers were tingling , headache

Itching, redness and swelling on the injection site. Dr. Prescribed antiniotic Bactrim DS 800-160 Tab

Chills and shaking consistent with flu-like symptoms began about 12 hours following vaccination. The next morning, I had a headache and vomited about 5 times. Over the next several hours, I began to feel better and by that evening, was feeling pretty much normal, except for some lingering fatigue.

This patient is a 56 y.o. female presenting to the emergency department with a chief complaint of a possible reaction to the COVID vaccine onset 2 days ago. The patient states that she has had a fever, chills, adenopathy, and body aches since her vaccination. Her highest recorded temperature was 101F, and she has been taking Tylenol. She states that her biggest concern is the adenopathy under her right armpit which is painful to touch. She denies any masses. She saw her PCP on 12/24 and had blood work done, which showed an elevated white count of 17.

patient developed arm pain day after vaccination that lasted about 1 day.

Left arm soreness, Headache 30 mins after, Fever 100.9 T 5am and 9am, monitoring until now

After initially receiving vaccine 12/28/2020 my arm was sore and slightly red for approx 2 days and resolved on 12/30/20. When I awoke this morning my right shoulder ached and I thought massage might make it feel better - at that time I noted it was swollen and warm tender to touch at site and again appeared red. I did report this to the clinic who administered vaccine

Patient developed arm soreness at injection site day after vaccination

Migraine for 2 days controlled with medication, Severe swollen eyes with discharge from eyes, itchy, red watery eyes began the evening of the vaccine and ongoing. using BENEDRYL and ALLEGRA to decrease symptoms.

Weakness, almost paralysis both lower extremities worse than baseline paresis from ms.

Arm itchy at injection site, warm feeling at injection site

Patient c/o feeling tachycardia, flush and dizziness, flushness upper torso neck region and bilateral upper arms. Rash/hives not present. Placed on stretcher , monitored immediately with BP 156/100, HR 88, O2 99%, alert and oriented x3, verbalizing clearly. Placed on EKG monitor, noted in NSR 80. POC 102. Shortly after at 1001, redness subside ,briefly noted with tingling of bilateral feet and hands for only seconds. Patient was monitored for 40 minutes, returned to baseline 142/81 HR 58 O2 100%. Nutrition given . Discharged to home, ambulatory feeling well.

Asthma-like fatigue, cough due to fatigue, mild.

Noticed itching and slight rash on distal portion of extremities the evening of Dec. 30, rash became worse over next few days and became more inflamed/raised even with Benadryl taken as directed on box. I went to urgent care on Jan 1, 2021 and was started on Steroid taper of 60-40-20 each dose for 3 days. Improvement noted after 2nd steroid dose. No respiratory involvement with vaccine or rash episode

Modern a covid 19

Moderna vaccine received on 12/21 from my workplace. Rash (reddened skin not raised) appeared after vaccine was given (within 24hrs) the size of a quarter and was gone 3 days later. Now on 1/3 the rash (red bullseye not raised) came back the size of a baseball and is warm to the touch. Went to urgent care and physician called it a delayed adverse reaction to the moderna vaccine 1st dose

I got the shot, didn?t feel it at all so it went good. I went to the bathroom and went pee and got my arm back in my long sleeve shirt under my scrub top. I wasn?t anxious about getting the vaccine. Then I went to sit down and be monitored. After about another minute I felt very weird like a warm feeling going all over my body. I started pulling my mask away from my face to get a deep breath. Then I broke out in a sweat from head to toe. I think I became pale (I apparently didn?t look good). I started feeling more ?weird? as I had never felt this way before and I stood up to walk because the nurse there wanted me upstairs near the ED but I was weak so I sat down and had tunnel vision. After that it?s a bit of a blur. After I stopped sweating I got very cold and shaky but vitals were ok. It scared me because I have never had a reaction before to a vaccine.

fever 100.6- 100.5, chills, headache, general weakness, sweating, and loss of appetite.

felt hot, prickly, right arm red. Later felt chest tightness

Starting on Thursday, Dec. 31, patient began having shoulder and neck tightness. That night patient began having chills, and noticed redness at the vaccine sight and then the redness started streaking. Also complaints of itching at the vaccine sight. Started taking Tylenol for the two days following the vaccine, states feels like it is improving. Referred to PCP for evaluation. Has appt. Monday, January 4th

Triage for COVID 19 SEVERE post Vaccine Reaction VAERS reportable Your concerns: Vaccine at noon without immediate effect. Driving home at 1400 developed itching and redness at scalp, face, neck, chest, back, arms and sides. Reports that she did not feel warm but looked like she had a sunburn. It appeared to fade over the next two hours but re-occurred at 1700 with all previous symptoms. She took 50mg of Benadryl and went to sleep. She woke at 0200 the re-occurrence of all symptoms, she did not take any Benadryl as that would make her too sleepy to come to work. The symptoms subsided and when we spoke at 1050 she had only small bumps/hive like spots on her fore arms and cleavage. They do not itch or burn at this time. Discussed with PA and Dr. after which I spoke with patient again regarding pending plan. She will call the clinic if she has any further symptomatic episodes in the near future. We will investigate moving her second dose ahead 2 days from 1/12/2021 (day off) to 1/14/2021 this way she will be here at work should it happen again, she works 0630-1900. Med provider will consult with allergy to determine if further steps are needed for dose #2. Dept: Respiratory Therapy

Have you missed work? #shifts: none Did you seek emergency care? none Date and Time of Vaccine: 12/22/2020 at 1200 Age at time of vaccination, 46 years 6 months Sex: female Was the vaccine received at facility? yes Site of vaccine (LD or RD): RD Type of Vaccine Pfizer (X) Moderna ( ) Other _____ 1st or 2nd dose: first When did your symptoms start? 12/22/2020 at 1400 Please note reported symptoms yes or no, these symptoms are considered mild to moderate and are NOT VAERS reportable Injection site pain no Tiredness no Headache no Muscle Pain no Chills no Joint Pain no Fever (note temp if known) no Injection Site Swelling no Injection Site Redness no Nausea no Feeling Unwell no Swollen Lymph Nodes (lymphadenopathy) no Other: no Employee reports THE FOLLOWING SEVERE post vaccine ADVERSE reactions (reportable): Difficulty breathing no Swelling of your face and throat no A fast heartbeat no A bad rash all over your body yes, see above Dizziness and weakness no If COVID-19 symptoms persist and/or worsen beyond 48 hours consider COVID-19 testing Treatment/Advise: see above Plan: see above If employee was vaccinated at another facility, they need to contact that facility , it is an expectation that the facility that gave the vaccine complete the VAERS report. N/A Employee verbalizes understanding and agreement with plan. yes VAERS report is completed electronically vaccine given at facility. Pending further review. 12/24/2020 01:51pm Follow up to VAER 12/23/2020 Patient called this morning to update regarding vaccine reaction. Yesterday she went home and did some shoveling. Later, around 1900, she developed a itchy, red rash that started on her chest and the right side of her neck which later covered her entire body. The skin on her face was bright red and very hot to the touch, there were small raised hives on her face which were likened to 'petechia if they were raised'. She took pictures of the raised/red areas. She took 50mg of Benadryl and went to sleep, when she woke at 0230 she was asymptomatic. Regarding the bumps on her forearms and cleavage, she has residual mottling on her arms. Updated providers.

Moderna vaccine given 12/28/2020, 6 days after injection have left supraclavicular lymph node swelling and axillary swelling and tenderness

Extreme fatigue, weakness, lightheaded, malaise

Began noticing itching and redness on left had on 1/3 PM. When I woke up on 1/4 the itching in the had was persistent and the redness was about the same. I also noticed a raised, red patch of skin on my right anterior ribs. The rash on the ribs is less itchy than the hand.

receive vaccine on 12/24/2020 arm was red and sore few days. then on 1/1/2021 at injection site a rash developed and had HA, tired , weakness, chills. I continue to feel this way on 1/4/2021

About 1 hour after receiving my first dose of the Moderna vaccine for COVID-19, I started feeling extreme pain in my left shoulder and arm, where the shot was administered. The pain continued to intensify throughout the day and night and was 10/10 on a pain scale. In addition, I began to lose my ability to lift my left arm or use it. It became so weak that I had to use my right hand/arm to pick up my left arm to move it. My left arm was 'hanging and drooping' and my left shoulder was very noticeably lower then my right shoulder. I called my primary care and employee health. My primary care doctor advised me to take advil and go to urgent care if the pain persisted and worsened. I could not sleep at all that evening of 12/29/20 because the pain was so intense and I had to keep picking my left arm up with

my right arm to keep re-adjusting to try and get comfortable. The next morning I went to an orthopedic urgent care where I was diagnosed with nerve damage from the shot and prescribed Methylprednisolone 4mg dosepack. The doctor who saw me explained that he could not assess the extent of the damage at this time because my nerves were so agitated and inflamed. He scheduled a follow up visit with me for Thursday, January 7th and stated he will then proceed with an MRI and further investigation to assess the extent of the nerve damage. During the days that followed my immunization, I was unable to do anything with my left arm and was dependent on my husband to help me get dressed, showered, household chores, etc. It is unknown at this time whether this will be temporary or permanent damage and disability.

swelling, redness that started 1 wk after injection

Moderna COVID-19 Vaccine Vaccine on day 0 GI symptoms on days 1, 2, 3, and 4 including abdominal cramps, constipation, gas Uterine cramps (not related to menstruation) and light spotting on day 2 Soreness at injection site days 0, 1, 2, and 3

arm pain

Injection received at 0815. At 0900 I started getting diaphoretic, clammy, nauseas and my face was flushed. At 0930, I developed hives on my neck, chest and arms. I immediately went back to the vaccination site (I was still in the hospital at work) and was administered 25mg oral Benadryl and monitored for 30 minutes. The hives resolved, but I still felt unwell. At 1600 I noticed a swelling in my right upper thigh about the size of my hand. It was about 2 inches inferior to my inguinal crease and was the width of my thigh. It was mildly painful to the touch. My injection site was red, inflamed and itchy. I continued taking 25-50mg Benadryl Q4 and took 100 mg at night due to itchiness on my eyes, face, neck, chest and arms. This is still present, although less each day, as of Monday 1/4/21 morning. I have felt feverish but have not had a recorded fever. I took some Ibuprofen for the pain in my arm at the injection site. The redness, swelling and itchiness has decreased each day at the injection site, but is also still present as of Monday 1/4/21 morning. I still feel unwell and have continued diarrhea throughout the weekend.

The day of the vaccine I had a initial diarrhea and headache, minimum pain on the site of the injection but at 2AM on the 22nd I woke up from my sleep with chills, and shaking even my teeth were clacking. Took Tylenol and it got better around 30 min later. Felt very fatigued and still nauseated almost threw up. By the end pf the day it resolved itself.

patient developed headache, nausea and abdominal pain day of vaccination that continued for two days post vaccination.

Flu-like symptoms - nausea, sweat. Arm sore immediately after injection - sore for 2 days.

12/17/2020 VACCINE 12/18/2020 SWOLLEN LYMPHNODES IN GROIN, FATIGUE 12/21/2020 EXPERIENCED A STEMI; RUSHED TO ER; FELT LIKE COULDN'T BREATHE, INCREASED HR CARDIAC CATH

Employee states reaction to every vaccine she receives. Employee states ticks, perseveration, uncontrolled laughing and crying which resolve on own. This happened today immediately after vaccine administered. Employee given water, cold pack. Symptoms resolving on own as stated. Will keep longer for observation.

patient developed headache, nausea and abdominal pain day of vaccination that lasted two days following administration.

EE received Covid-19 Moderna vaccine on 12/29/20 at 5:10 p.m. at Covid vaccination site. 12/30/20 at 3:00 a.m.EE had pain in left side, hip and leg waking EE up from sleep . Lesions times two, one on hip and one on posterior upper leg. MD insructed EE to double Vitamin C orally and to place Bacitracin on the two lesions, which at first appeared to contain bloody drainage. Lesions are now dry. VAERS document completed.

fever 100.6, chills, headache

patient developed flu like symptoms such as body aches, chills, fever, as well as arm pain day after vaccination.

Resident found unresponsive without pulse, respirations at 04:30 CPR performed, expired at 04:52 by Rescue

Patient complained of increased shortness of breath, generalized weakness and fatigue with mild cough worsening today and was admitted on 12/25/20. Patient is an employee of the hospital in the ICU and received the covid-19 vaccine on 12/25/20. Patient believes symptoms started after the vaccination. On admission, patient was in sinus tachycardia with O2 saturation 91% on room air. Tested SARs CoV 2 RNA, RT PCR positive on 12/24/20. Transferred to ICU for closer monitoring after transitioning to high flow nasal cannula on 12/26. Patient recovered and discharged on 12/31/20.

Resident became SOB, congested and hypoxic requiring oxygen, respiratory treatments and suctioning. Stabilized after treatment and for the next 72 hours with oxygen saturations in the 90s. On 1/3/2021 was found without pulse and respirations. Resident was a DNR on Hospice.

Two days post vaccine patient went into cardiac arrest and passed away.

syncopal episode - arrested - CPR - death

Severe diarrhea, cold chills, 101 fever, and nausea

""""Pfizer-BioNTech COVID-19 Vaccine"" 12/29 patient developed SOB, fever tmax 103 degrees F, diaphoretic, dry heaves all started approximately 16 hours after vaccination given. patient then transferred to Hospital for further treatment and observation. 12/30 seen at injection site- erythema, swelling, warmth and tenderness Discharged back to home on 1/1 with RX for cephalexin to treat cellulitis of injection site"

"Tingling in lower legs- neuropathy like; Fever 102.9; Tingling in lower legs- neuropathy like; Severe cramping in hands and feet; Severe bone pain; This is a spontaneous report from a contactable other healthcare professional (patient). A 39-year-old female patient received the first dose of bnt162b2 (COVID-19 vaccine) lot no: EL0140, via an unspecified route of administration in left arm on 18Dec2020 15:15 at a single dose for COVID-19 immunization. Medical history included acid reflux and known allergies to PCN, both from an unknown date and unknown if ongoing. The patient was not pregnant at the time of report. Concomitant medication included omeprazole (PROTONIX), ibuprofen (MOTRIN). No other vaccines were administered in four weeks. On 19Dec2020 at 14:30, the patient experienced fever 102.9 ""normal for vaccines i know"", tingling in lower legs neuropathy like, severe cramping in hands and feet, and severe bone pain. The patient recovered from the events in Dec2020. The patient did not receive treatment for the events. The events were reported as non-serious. The patient didn't have COVID prior to vaccination and was not tested post vaccination.; Sender's Comments: A possible causal association between administration of bnt162b2 and the onset of neuropathy like cannot be excluded, considering the plausible temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

Scratchy throat; itching lips; This is a spontaneous report from a non-contactable nurse. A 36-year-old patient of an unspecified gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number EK5730, via an unspecified route of administration on Right arm from 22Dec2020 to 22Dec2020 as single dose for COVID-19 immunization. Medical history included food allergy (Shrimp). The patient's concomitant medications were not reported. The patient experienced scratchy throat and itching lips for approximately 1.5 hours starting 20 mins post vaccine on 22Dec2020. The event caused prolonged hospitalization. The outcome of the events was recovered on 22Dec2020. No follow-up attempts are possible. No further information is expected.; Sender's Comments: Based on temporal association, a possible contributory role of suspect BNT162B2 vaccine cannot be excluded for reported events throat irritation and lip itching. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

delirious; hypoxic; fever; ataxic; incontinent; confused; Chills; HA; anorexia/had no appetite; myalgias; extreme fatigue; slept all and had no appetite; This is a spontaneous report from a contactable physician. A 74-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 15Dec2020 16:00 at single dose for COVID-19 immunization. Medical history included diabetes mellitus (DM). The patient has no known allergies. The patient's concomitant medications were not reported. He was an ER doctor and the medical director of his hospital. The patient was asymptomatic when he got the vaccine on 15Dec2020. 3 hours after the vaccine he began to get chills, HA, anorexia, myalgias, and extreme fatigue. This worsened and he slept

all and had no appetite. On 19Dec2020 he woke up delirious with a fever and was ataxic, hypoxic, incontinent, and confused. The patient was hospitalized due to the events on 15Dec2020. The events also caused prolonged hospitalization due to the events. The patient was not diagnosed with COVID prior to vaccination. The patient was tested for COVID via nasal swab post vaccination with unknown results. The patient did not receive any other vaccines within 4 weeks prior to COVID vaccine. The outcome of the events was not recovered. Therapeutic measures were taken as a result of the events as the patient required oxygen, plasma, and remdisivir. The batch/lot numbers for the vaccine, BNT162B2, were not provided and will be requested during follow up.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of reported serious events might not be excluded, considering the plausible temporal relationship. Fever, chills, headache, fatigue and muscle pain are the known adverse event profile of the suspect product. More information such as detailed underlying medical conditions and concomitant medications are needed for fully medical assessment. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Allergic reaction; Diarrhea; Chills; Palpitation; Tongue and throat swelling; Tongue and throat swelling; This is a spontaneous report from a contactable other healthcare professional (patient). A 38-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: ELO141), via an unspecified route of administration on 21Dec2020 at a single dose for covid-19 immunization. The patient's medical history included asthma and allergy. Concomitant medication included levosalbutamol hydrochloride (XOPENEX) for asthma and cetirizine hydrochloride (ZYRTEC) for allergy. About hour and a half to two hours after the vaccine, on 21Dec2020, the patient experienced had an allergic reaction with symptoms set of diarrhea, chills, palpitations, and tongue and throat swelling. The patient took diphenhydramine (BENADRYL) 25 mg as treatment. It helped some. She woke up this morning (22Dec2020) and still had the symptoms. So, she went to the emergency room. They gave her diphenhydramine 25 mg IV, methylprednisolone (SOLUMEDROL), and famotidine (PEPCID). The patient underwent lab tests and procedures which included blood count and chemistry and lab work which showed normal on 22Dec2020. Outcome of the events was unknown. The patient thinks that the product had causality to the events. Information on the lot/batch number has been requested.; Sender's Comments: The patient's medical history included asthma and allergy. Based on information available, the reported allergic reaction with symptoms set of diarrhea, chills, palpitations, and tongue and throat swelling was likely related to the use of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), due to temporal relationship and clinical course. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

shaking uncontrollably/she was full of shakes to the point the bed was shaking; chills; Woke up in the middle of the night; body aches; as painful as a strep infection; sore throat that was as painful as a strep infection/throat feels sore to the point of Strep/Throat soreness: Felt like sharp razor blades; Feels like she is having an extreme immune response; Feels congestion; severe serum sickness/weird serum sickness; high fever/Had a fever over 101; This is a spontaneous report from a contactable nurse(patient). A 32-year-old female patient received BNT162B2(lot number EH9899) via an unspecified route of administration at Arm Left on 21Dec2020 (from 16:30 to 17:00) at the age of 32 years old at single dose for doesn't want to bring COVID home to her family. The medical history included Migraine headaches. The concomitant medications were not reported. The patient had so many immunizations for international travel, had Yellow Fever vaccine, all of the Guardasil vaccines, had MMR vaccine four times because she never developed immunity to it until the fourth round, got a flu shot yearly,got TDap vaccine every five years because she was an HCP, did Emgality shots(not done it this month. Emgality had a protein inhibitor, was supposed to get Emgality shot on 21Dec2020). On 22Dec2020 the patient experienced severe serum sickness, high fever, body aches to the point that she was shaking uncontrollably, sore throat that was as painful as a strep infection; Caller mentioned she was taking tylenl and benadryl for her symptoms. The patient was a Nurse Midwife. She got the vaccine on Monday evening at 4:30PM. Feeling like she was having a weird serum sickness. Woke up in the middle of the night and she was full of shakes to the point the bed was shaking. She had a fever over 101. Felt like she was having an extreme immune response. She was taking Tylenol and Benadryl around the clock. Woke up this morning and her throat feels sore to the point of Strep. Wondering if she need to distance and get some kind of test. Has been wearing a mask all of the time and doesn't know of anyone people who have COVID that she has been in contact with. Feels congestion and sore throat. Shakes and chills: Began at 02:30. Hard core chills and shakes. High fever over 101: same time as chills and shakes. Woke up from a dead sleep. Didn't have a working thermometer but knows her temperature must have been over 101 by the way she felt. She didn't feel that crappy unless her fever is over 101. She can gauge her own temperature. She experienced throat soreness: Felt like sharp razor blades. The patient was taking numbing throat lozenges. Seriousness: Would say serious. Didn't require hospitalization. She self-treated. Had she not had to work, she would probably have stayed in bed. Has been taking round the clock medicine. The outcome of the events was unknown. The information on the batch number has been requested.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported serious events including severe serum sickness, high fever, body aches, shaking uncontrollably, sore throat that was as painful as a strep infection, feels like having an extreme immune response, congestion, chills, woke up from a dead sleep and the administration of the COVID 19 immunization with BNT162B2, based on the reasonable temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to those, as appropriate.

Have a fever with a high of 99.6 Fahrenheit; felt winded like she has exerted herself more than expected/shortness of air; Coughing/cough got worse; She is covid positive/Tested positive for COVID 19; She is covid positive/Tested positive for COVID 19; Shortness of breath/Shortness of breath was

reported as worsened/feels winded; Tachycardia; Has been sick ever since; Felt like she was in a fog, on a cloud, heavy and out of it; She felt hot and weird but had no fever; Headache; Burning sensations in her legs; Extreme fatigue, want to go to bed; headache went away and she felt like the congestion was clearing up some; Arm was sore; This is a spontaneous report from a contactable ICU nurse (patient [Registered nurse ADN]) via Pfizer-sponsored program. A 38-year-old female patient received single dose of BNT162B2 (lot number: EK5730) , via an unspecified route of administration (right arm) on 16Dec2020 20:30 for immunization (for front line health care worker). Medical history included allergies; acid reflux; patent foramen ovale (PFO); supraventricular tachycardia (SVT) without treatment, vitamin D low and ongoing smoker. The patient had no other history/family history. Concomitant medication included loratadine (CLARITIN) taken for at least 5 years for allergy, famotidine from Dec2020 for acid reflex, and vitamin D taken for 5 or more years for vitamin D low; all given orally and were ongoing. The patient had no other prior vaccines within 4 weeks of Covid vaccination. Patient had been taking Covid tests on and off due to her immunocompromised daughter. On 15Dec2020 she took the PTR that took three to four days for results; she tested negative for Covid and was completely asymptomatic. She then received the COVID 19 vaccine 16Dec2020. Her test was positive for COVID 19 on 18Dec2020 and she had been sick ever since. She received the vaccine at the hospital where she works. The vaccine was not administered at facility. She further reported she was fine after getting the COVID 19 vaccine. Her right arm was sore/ started to hurt about four or five hours later on 16Dec2020 but then was fully after 24 to 48 hours. She started to feel sick on 18Dec2020 (Friday evening). States she went to bed Friday morning after the night shift. She felt fine, better than normal. That same day (18Dec2020) she woke up at 1700 and felt like she was in a fog, on a cloud, heavy and out of it. She walked around for a while and that sensation didn't go away. She felt hot and weird but had no fever. Then at 1830 she got the alert on her phone that told her she was positive for COVID 19. She started to feel other symptoms on 18Dec2020 including headache, shortness of breath, tachycardia, burning sensations in her legs; extreme fatigue, wanting to go to bed that persisted from Friday to Sunday. Then on 20Dec2020, Sunday afternoon, her headache went away and she felt like the congestion was clearing up some. Mentions she did have a fever (onset date unspecified) with a high of 99.6 Fahrenheit; but it went back down to 99.0 Fahrenheit (date/s unspecified). On 20Dec2020 the patient experienced coughing. On 21Dec2020 (Monday) she started coughing more but states her O2 was fine and her breathing was okay. However, when walking around she felt winded like she has exerted herself more than expected. She then clarified that on 21Dec2020, she experienced shortness of air and the cough got worse but it has now plateaued. She did call her HCP and they were holding off on treatment at the time. No investigation assessment was performed. The patient was not admitted to an Intensive Care Unit. The patient did not display clinical signs at rest indicative of severe systemic illness nor did she require supplemental oxygen or receive mechanical ventilation. No preexisting diseases worsened during the SARS-CoV2 infection. The patient considered shortness of breath, and tachycardia as serious: medically significant while the events headache, burning sensations in her legs, fatigue, Coughing, and feels winded were considered as not serious. The events headache, shortness of breath, tachycardia, burning sensations in her legs, fatigue, Coughing, and feels winded were ongoing at the time of reporting. Shortness of breath worsened. The patient recovered from arm was sore on an unspecified date in Dec2020; and was recovering from tachycardia, sick, headache and congestion. The outcome of felt like she was in a fog, on a cloud, heavy and out of it; felt hot, and fever was unknown while not

recovered for the other events.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events due to temporal relationship. However, the reported events may possibly represent intercurrent medical conditions in this patient. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including chest x-ray, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

General weakness requiring assistance to stand.; General weakness requiring assistance to stand; Rash on chest/neck; This is a spontaneous report from a contactable Pharmacist. A 33-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EK5730), intramuscularly on 22Dec2020 13:15 at single dose for covid-19 immunization. Vaccine location was right arm and it was the first dose. The facility type vaccine was hospital. None medical history. No known allergies. Patient was not diagnosed with COVID-19 prior to vaccination nor tested for COVID-19 since the vaccination. There were no concomitant medications. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine nor received any other medications within 2 weeks of vaccination. The patient experienced rash on chest/neck. General weakness requiring assistance to stand on 22Dec2020 17:00 with outcome of recovered in Dec2020. The date report was first received from source was 23Dec2020. Patient received Fluid bolus, IV benadryl, IV steroid as treatment for the adverse events. The action taken in response to the events for BNT162B2 was not applicable. The events were reported as non-serious.; Sender's Comments: The reported events rash on chest/neck and general weakness requiring assistance to stand were likely related to the use of first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), due to temporal relationship and clinical course. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Flushing; she noticed that there was a ringing in her left ear; Experienced a weird heaviness on her upper chest and arms/ heavy legs and arms/really heavy arms and legs; experienced a weird heaviness on her upper chest and arms; really cold hands; felt really hot at the injection site/really hot sensation at injection site; lightheadedness/Light-headed; Palpitations; Feeling faint; shortness of breath; Her blood pressure went up to 134/100; paleness; went up to her face; felt tired/She was really tired and slept it off; This is a spontaneous report from a contactable nurse, who is also the patient. This 34-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number EK5730) intramuscular in the left deltoid on 20Dec2020 at single dose for COVID-19 immunisation. Relevant medical history included ongoing asthma (diagnosed as a teenager with sports asthma and uses an

inhaler). There were no concomitant medications. The patient experienced lightheadedness/light-headed (medically significant) on 20Dec2020 with outcome of recovering, palpitations (medically significant) on 20Dec2020 with outcome of recovered on 20Dec2020, feeling faint (medically significant) on 20Dec2020 with outcome of recovered on 22Dec2020, flushing (medically significant) on 21Dec2020 with outcome of recovered on 22Dec2020, she noticed that there was a ringing in her left ear (medically significant) on 21Dec2020 with outcome of recovering, shortness of breath (medically significant) on 20Dec2020 with outcome of recovering, her blood pressure went up to 134/100 (non-serious) on 20Dec2020 with outcome of recovered on 20Dec2020, she experienced a weird heaviness on her upper chest and arms (non-serious) on 21Dec2020 with outcome of recovering, really cold hands (non-serious) on 21Dec2020 with outcome of not recovered, paleness (non-serious) in Dec2020 with outcome of unknown, felt really hot at the injection site/really hot sensation at injection site (non-serious) on 21Dec2020 with outcome of recovered on 23Dec2020, went up to her face (feeling hot) (non-serious) in Dec2020 with outcome of unknown, heavy legs and arms/really heavy arms and legs (non-serious) on 21Dec2020 with outcome of not recovered and felt tired/she was really tired and slept it off (non-serious) in Dec2020 with outcome of unknown. The patient specified that she experienced a moderate reaction after having the COVID-19 vaccine. She had the vaccine last Sunday morning 20Dec2020. She was told to wait 20 minutes before leaving. In the waiting area, she felt lightheaded, had palpitations and was feeling faint. After 20 minutes she started feeling better. Then she started to have more intense light headedness. She went to the ER and was given oxygen. Her blood pressure was 134/100 on 20Dec2020. She had an EKG on 20Dec2020 that was normal. They gave her steroids and Benadryl. She had another episode while being injected with the steroids. On Monday 21Dec2020, she experienced a weird heaviness of her upper chest and arm. She had really cold hands and flushing. On Monday night 21Dec2020 she went to work. She experienced a really hot sensation to the injection site that went to her neck and face. Her left ear was ringing. This lasted until Tuesday 22Dec2020. She took Benadryl again on Tuesday 22Dec2020. She had shortness of breath which started on 20Dec2020 and on 22Dec2020 she had shortness of breath that lasted until 11am. She had really heavy legs and arms and went back to the ER. She had a chest X-ray and D-dimer on 22Dec2020 that were normal per the ER. The night before the report, she had some of the same symptoms. She was really tired and slept it off. She didn't take anything. The morning of the report, she was feeling good and better. She still has heavy feeling on upper chest and arms. Caller clarifies that she did not have a heavy feeling in her legs. Her arms feel heavy if she holds her phone too long. She continues to have ringing in her ear. The flushing went up to her face. The patient specified that she developed sports asthma as a child and uses an inhaler. She gets short of breath if she overexerts herself. Additional laboratory investigations on 20Dec2020 included blood work with unknown results and Troponin which was normal. She was provided with a general steroid. She did not know the name of it. She was also given Benadryl and monitored on telemetry. She was given IV fluids again on 22Dec2020.; Sender's Comments: Based on the compatible temporal association and the known pattern of response, the Company considers the reported events are possibly related to vaccination with BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

just kind of having blackout; Severe fatigue/fatigue; Severe myalgia; Some congestion; Severe headache; Haziness; This is a spontaneous report from a contactable other healthcare professional (HCP), who is also the patient. This patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration in Dec2020 at single dose for COVID-19 immunisation. Relevant medical history and concomitant medications were not reported. In Dec2020, the patient experienced just kind of having blackout, severe fatigue, severe myalgia, some congestion, severe headache and haziness. On day six, symptoms improved and suddenly he/she was having symptoms again, severe myalgia, some congestion severe headaches and fatigue. The outcome of the events was unknown. The information about batch/lot number has been requested.; Sender's Comments: This report fails to include the basic information that is required for an independent medical evaluation. Assessment is postponed after receipt of a more complete case report. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Flu like symptoms like myalgia, achy head, mental cloudiness; Flu like symptoms like myalgia, achy head, mental cloudiness; Flu like symptoms like myalgia, achy head, mental cloudiness; Flu like symptoms like myalgia, achy head, mental cloudiness; Deep cough; This is a spontaneous report from a non-contactable physician. A female patient of unspecified age received the first single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on an unspecified date in Dec2020, in left upper arm like deltoid, for COVID-19 immunization. Medical history and concomitant medications were not reported. On an unspecified date in Dec2020, immediately after receiving the vaccine, the patient experienced a deep cough which came on all of a sudden, followed 31 hours post vaccine by flu like symptoms like myalgias, achy head and mental cloudiness. She was feeling a bit better on 22Dec2020 morning and she was back at work. So, it was like a short couple of hours, maybe 24 hours turnaround. The events were resolving at the time of report. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported flu like symptoms like myalgias, achy head and mental cloudiness and the administration of the COVID 19 vaccine BNT162B2 based on the plausible temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified, as appropriate.

Urination bleeding; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age and gender received BNT162b2 (Solution for injection, lot number and expiration date not provided), via an unspecified route of administration at single dose on 22Dec2020 for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient experienced urination bleeding in Dec2020 and wanted to know if it was going to be a side effect. The outcome of the event was unknown. Information on the lot/batch number has been requested.

"severe fever; chills; severe night sweats; hives throughout my body; a rash on my face; This is a spontaneous report from a contactable nurse. This nurse reported for helf that the 37-year-old female patient received first dose of bnt162b2 (BNT162B2, product: COVID 19, brand: Pfizer), via an unspecified route of administration on Left Arm on 19Dec2020 10:30AM at single dose for covid-19 immunisation. No Pregnant at the time of vaccination. Medical history included Known Allergies to medications, food, or other products:Cocoa butter. Concomitant medications were unknown. Facility where the most recent COVID-19 vaccine was administered was Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient reported that ""Starting seven hours after the vaccine, I experienced severe fever and chills. The next morning, despite multiple anti-pyretics, the fevers/chills were worse. Also I experienced severe night sweats, likely related to the fevers. Three days after the vaccine, I began to have hives throughout my body and a rash on my face. Responds to Benadryl, but eventually reappears."" The event started from 19Dec2020 05:30 PM. Treatment was received for the adverse event included Anti-pyretics, anti-inflammatories, anti-histamine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. Facility type vaccine was hospital. No other vaccine in four weeks. The patient recovered with lasting effects. No Covid prior vaccination. No Covid tested post: vaccination. The outcome of the event was recovered/resolved with sequel in Dec2020. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's Comments: The reported events severe fever and chills, severe night sweats, and hives and a rash on face were likely related to the use of first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), due to temporal relationship and clinical course. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

Left sides shock like pains in head. Lasts 3-5 seconds and go away. It's a stabbing shock like pain. Started on Thursday 17Dec2020 at 7:45 pm; Left sides shock like pains in head. Lasts 3-5 seconds and go away. It's a stabbing shock like pain. Started on Thursday 17Dec2020 at 7:45 pm; This is a spontaneous report from a contactable nurse reported for herself. A 28-year-old female patient (no pregnant) received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly in left arm on 16Dec2020 14:00 at single dose for COVID-19 immunization. Medical history was none. The patient's concomitant medications were not reported. The patient experienced left sides shock like pains in head, lasted 3-5 seconds and went away. It's a stabbing shock like pain. The events started on Thursday 17Dec2020 at 19:45. It was unknown whether treatment was received for the events. The events resulted in doctor or other healthcare professional office/clinic visit. The events were reported as non-serious. The most recent COVID-19 vaccine was administered in hospital. The patient had not received any other vaccines within 4 weeks prior to the COVID-19 vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The outcome of the events was not recovered. Information on the lot/batch number has been requested.; Sender's Comments: Based on the compatible time association, the event left sides shock like pains in head is possibly related to suspect BNT162B2 administration. The impact of this report on the

benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

patient began to experience dizziness/shakiness.; patient began to experience dizziness/shakiness.; This is a spontaneous report from a non-contactable other hcp reporting for a patient. A 58-year-old female patient received first dose of BNT162B2 (Pfizer product, lot number: EH9899), intramuscular on 21Dec2020 16:00 at single dose on left arm for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was reported that during her 15 minute waiting period after the injection (21Dec2020 16:15), the patient began to experience dizziness/shakiness. This provider was notified of patient reaction and she was then transferred to the emergency bay via wheelchair where she was assessed. Monitored patient for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with dyspnea, increased work of breathing, persistent cough and cyanosis, vomiting, hypotension, dysrhythmia, chest pain and collapse. Treatment included no therapy, but did continue with vital checks at approximately 5 minute intervals. Patient discharge: stable to go home and follow up with PCP. The outcome of the events was unknown. No follow-up attempts are possible. No further information is expected; Sender's Comments: Based on the compatible time association, the dizziness and shakiness are possibly related to suspect BNT162B2 administration. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Small bowel obstruction with diffuse bowel and pelvic lymphadenopathy 36 hours after injection; Small bowel obstruction with diffuse bowel and pelvic lymphadenopathy 36 hours after injection; This is a spontaneous report from a contactable physician (patient). A 61-years-old female patient (not pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EH9899), intramuscularly on 21Dec2020 12:30 to at single dose on left arm for COVID-19 immunization in hospital. Medical history included crohn's disease. No known allergies. Concomitant medications within 2 weeks of vaccination included estradiol, progesterone, colestipol hydrochloride (COLESTID), ustekinumab (STELARA), cyanocobalamin (B12). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced small bowel obstruction with diffuse bowel and pelvic lymphadenopathy 36 hours after injection on 22Dec2020 22:00 with outcome of recovered in Dec2020. The adverse events resulted in emergency room/department or urgent care, hospitalization for 3 days. Therapeutic measures were taken as a result of event included inpatient observation, nothing by mouth (reported as NPO), intravenous fluids. No COVID prior vaccination, COVID test nasal swab was negative on 23Dec2020 post vaccination. It was not reported as serious.; Sender's Comments: There is not a reasonable possibility that reported events small bowel obstruction and lymphadenopathy are related to BNT162B2 vaccine. The patient had underlying Crohn's disease, which put patient at risk of developing the event. The impact of this report on the benefit/risk profile of the Pfizer product is

evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"burst blood vessel in left eye/blood in her eye; This is a spontaneous report from a contactable physician (patient). A 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EH9899, expiry date 01Mar2021), via an unspecified route of administration on 23Dec2020 at single dose for covid-19 immunization. Vaccine location was left deltoid. The facility type vaccine was hospital. Medical history included ongoing rheumatoid arthritis for about 8 years. No known allergies. Patient didn't do relevant test. Concomitant medication included duloxetine hydrochloride (CYMBALTA) for rheumatoid arthritis for 2 years, sulfasalazine for rheumatoid arthritis for 4 months, it's unknown if they were ongoing. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient received the vaccine yesterday (23Dec2020), which she was very excited about, but today (24Dec2020) she woke up with a burst blood vessel in her left eye, she appears to have blood in her eye. This has never happened to her before. She knows this can occur with patients that have COVID but didn't know if it was a side effect to receiving the vaccine. Patient didn't receive treatment for the adverse event. The action taken in response to the event for BNT162B2 was not applicable. The outcome of event was not recovered. The relatedness between COVID vaccine and event ""burst blood vessel in left eye"" was related by reporter. Pfizer is a marketing authorization holder of [BNT162B2] in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of [BNT162B2] has submitted the same report to the regulatory authorities.; Sender's Comments: ""Burst blood vessel in eye"" is not uncommon in general population, and there are many causes of the event. Considering temporal relationship, a contribution role of the injection of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) to the reported Eye haemorrhage cannot be excluded. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

Tachycardia; Intermittent palpitations; Low grade fever/fever; muscle aches; This is a spontaneous report from a contactable physician. A 27-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly in unknown arm on 17Dec2020 at single dose for routine mass immunizations (covid-19 immunization). The COVID-19 vaccine was administered at Hospital. Not a military facility. The patient's medical history was reported as none and concomitant medications was none (he was on no other medications). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced tachycardia, intermittent palpitations, low grade fever/fever all started somewhere in the morning of 18Dec2020 and muscle aches on 17Dec2020. Physician assessed tachycardia and intermittent palpitations as serious due to medically significant. Physician stated that one of his workers had the vaccine and proceeded to have tachycardia and low

grade fever. He would like to know if patient should get the second dose. The patient had mostly tachycardia with some intermittent palpitations. Patient was seen in his office on 18Dec2020, and got the COVID vaccine on 17Dec2020. He also reported fever and muscle aches, although the fever was subjective and was not documented. Tachycardia improved and sent him to cardiology on 21Dec2020. It was not life threatening and they did an Electrocardiogram (EKG). His initial heart rate was 130. When he was seen again in their office on 21Dec2020, it was 93, which was baseline. It improved. He never got his temperature. The highest in office was 99.5 degrees Fahrenheit. He had some muscle aches. The physician just sent patient to cardiology because he was having intermittent tachycardia and intermittent palpitations. Two visits to physician office. He was seen on 18Dec2020 and again on 21Dec2020. Relevant tests: they did testing for tachycardia but not related specifically. They did thyroid and EKG in office and he did not know if test were back. EKG was ok. The Thyroid, Complete blood count (CBC) and lipid (all were on an unknown date in Dec2020) were not back and were just done to make sure there were no cardiac issues. The outcome of the events was recovering. The lot/batch number has been requested.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events tachycardia and palpitations cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

Cellulitis: below left elbow; Soft tissue swelling; This is a spontaneous report from a contactable nurse (patient). A 63-year-old female patient (62 years old at time of vaccination) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number: EH9899), intramuscular in left upper arm on 21Dec2020 13:00 at a single dose for COVID-19 immunization administered in the hospital. Medical history included ongoing hypertension and cervical cancer from 2015 and ongoing. The patient has been taking unspecified concomitant medication/s. The patient previously took amoxicillin and had allergies and nausea. On 24Dec2020 16:00, patient had cellulitis below left elbow and soft tissue swelling. On 25Dec2020, patient went to ER and X-ray was taken and patient was prescribed Keflex 500mg 3x day. Prior to vaccination, the patient was not diagnosed with COVID-19: Since the vaccination, the patient has not been tested for COVID-19. The outcome of the events was recovering.; Sender's Comments: Based on the information currently provided, the vaccination with BNT162B2 might play a contributory role in triggering the onset of cellulitis. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

congestion in the throat and upper lungs; congestion in the throat and upper lungs; This is a spontaneous report from a contactable other healthcare professional (patient). A 61-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EK5730), intramuscular on the left arm on 21Dec2020 09:30 at a single dose for COVID-19

immunization. The patient's medical history included herpes 2. The patient was not pregnant. The patient had no known allergies to medications, food, or other products. There were no concomitant medications. The patient was not diagnosed with COVID-19 prior to vaccination and had not been tested for COVID-19 since the vaccination. On 26Dec2020 09:00, the patient experienced congestion in the throat and upper lungs. Oxygen level was 98 and temperature was 97.7. She had a good diet, no dairy, and no Christmas junk food, so for the patient, it was inexplicable. She was also consistent at mask wearing and all the precautions. No treatment was received for the adverse events. Outcome of the events was not recovered. The events were reported as non-serious.; Sender's Comments: Considering the temporal gap between the vaccination and the event onset, the Company considers the event pulmonary congestion is unlikely related to vaccination with BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

She was hospitalized for a month Occurred after a flu two months prior and a stomach flu 2-3 weeks prior; She was hospitalized for a month Occurred after a flu two months prior and a stomach flu 2-3 weeks prior; This is a spontaneous report from a contactable consumer. A 75-year-old female patient received bnt162b2 (BNT162B2, lot number and expiry date were not reported), via an unspecified route of administration on an unspecified date at a single dose for covid-19 vaccination. Medical history included guillain-barre syndrome from 2011 at the age of 65 and Levaquin allergy. The patient's concomitant medications were not reported. On an unspecified date, the patient was hospitalized for a month that occurred after a flu two months prior and a stomach flu 2-3 weeks prior. The outcome of the events was unknown. Information about lot/batch number has been requested.

I got my left arm pit, lump on it, I have bigger than 1 cm 2 lumps, hidradenitis/Pain under my arm; Patient received Pfizer Covid-19 Vaccine who is a nursing mom; Patient received Pfizer Covid-19 Vaccine who is a nursing mom; Mastitis; I got Myalgia all over the body, especially on my shoulders and back; I had chills but my temperature was normal; This is a spontaneous report from a contactable physician (patient herself). This physician reported information for herself (mother) and baby. This is the mother case. A 40-year-old female patient received her first dose of bnt162b2 (BNT162B2, also reported as Pfizer Covid-19 Vaccine, lot/batch number and expiry date were not reported), via an unspecified route of administration on 20Dec2020 18:30 at single dose for Covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient informed that she got in her left shoulder and left arm pit, lump on it. It was bigger than 1 cm 2 lumps, hidradenitis under her pits arm same size on 21Dec2020. She also reported that she was nursing mom to her self-kid which is 16 months old. She had Mastitis right now (20Dec2020) and informed that she hadn't it her life before. She got her vaccine on Sunday (20Dec2020) in night. She started to have pain under her arm on monday afternoon (21Dec2020) and then since yesterday (20Dec2020) she had mastitis. The mastitis in the right side, lump and the in the left side, which was the site of the vaccine. She never got a fever but got myalgia all over the body, especially on her shoulders and back and also she had chills but her temperature was normal. The outcome of events was unknown. Information on the Lot/Batch Number has been requested.;

Sender's Comments: Based on the close temporal relationship, the association between the event mastitis with BNT162b2 can not be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.,Linked Report(s) : US-PFIZER INC-2020520371 Fetal case

26Dec2020 continued decreased perfusion added bilateral knee joint pain; 26Dec2020 continued decreased perfusion added bilateral knee joint pain; 25Dec2020 added facial edema; 24Dec2020 ++6 pitting edema on ankles and feet +3 pitting legs and abdomen; 24Dec2020 ++6 pitting edema on ankles and feet +3 pitting legs and abdomen; throat scratchy and tight; throat scratchy and tight; 23Dec2020 slight swelling on feet and ankles; 23Dec2020 slight swelling on feet and ankles; Tingling and best flutter 5 minutes after administration; Tingling and best flutter 5 minutes after administration; This is a spontaneous report from a contactable nurse (patient). A 48-year-old female patient (not pregnant) received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot/batch number: EJ1685, expiration date: Mar2021), intramuscularly on 22Dec2020 at 09:45 at single dose for COVID-19 immunization in hospital. The patient medical history included known allergies: Sulfa, Penicillin; fibromyalgia; hypertension; high cholesterol. Prior to vaccination, patient was not diagnosed with COVID-19. The patient's concomitant medications included other medications was received within 2 weeks of vaccination. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced on 22Dec2020 09:45 tingling and best flutter 5 minutes after administration; 23Dec2020 slight swelling on feet and ankles; 24Dec2020 ++6 pitting edema on ankles and feet +3 pitting legs and abdomen, throat scratchy and tight; 25Dec2020 added facial edema; 26Dec2020 continued decreased perfusion added bilateral knee joint pain. Since the vaccination, patient had not been tested for COVID-19. Therapeutic measures were taken as result of the events included diphenhydramine hydrochloride (BENADRYL) 50 mg every 6 hours. The outcome of the events was not recovered. The report was reported as non-serious, with seriousness criteria-Results in death: No; Life threatening: No; Caused/prolonged hospitalization: No; Disabling/Incapacitating: No; Congenital anomaly/birth defect: No.; Sender's Comments: Flutter occurred 5 minutes after vaccination; a possible causal association between administration of the suspect vaccine bnt162b2 and the serious event onset cannot be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

dizzy/feel faint; perspiring; like blood not getting to my head; had to get on hands and knees, crawl; felt like my heart may be racing 10 min after vaccine/heart felt off beat and like blood not getting to my head/heart rate was 142; felt like my heart may be racing 10 min after vaccine/heart felt off beat and like blood not getting to my head/heart rate was 142; arm sore day #1 and #2- not unexpected; This is a spontaneous report from a contactable Physician(patient). A 48-year-old female patient received first

dose (BNT162B2, lot number EK5730) , intramuscular at Arm Right on 18Dec2020 14:15 at the 48-year-old at single dose for COVID-19 immunization. The medical history included elevated blood pressure , allergic to sulfa, hypertension and Covid. The concomitant products included alprazolam, diphenhydramine hydrochloride (BENADRYL), spironolactone, metoprolol for hypertension, colecalciferol (VITAMIN D 3). The patient previously took nubaine and experienced drug allergy. The patient also happened to be a physician in private practice and received the vaccine at her local hospital. The patient had hypertension which was under excellent control on metoprolol 25 mg. She took it as prescribed every day surrounding the vaccine. On day #1 at the vaccine she felt like her heart may be racing 10 min after vaccine was about 80 on 18Dec2020 14:25. nothing serious. The patient experienced arm sore day #1 and #2 and not unexpected. On about 7 pm the day after the vaccine 19Dec2020 she was tachy at rate of about 105. She took her metoprolol heart rate never came down. At about 9:30 pm on 19Dec2020 when her rate should have been about70- she got up from couch after falling asleep. Upon standing felt like she was very dizzy. Walked upstairs, started to feel faint, perspiring, heart felt off beat and like blood not getting to my head. She had to get on hands and knees, crawl and heart rate was 142 and sustained for almost a minute. It took over an hour for it to come back to 86 and stayed there all night. There was not treatment to all of the adverse events. The outcome of the events was Recovering.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the palpitations, tachycardia and other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including EKG, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Severe rash; This is a spontaneous report from a contactable healthcare professional (patient). A 42-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EK5730 (pending clarification)), intramuscularly at the left arm on 21Dec2020 at 16:00 (04:00 PM) at single dose for COVID-19 immunization. The patient was vaccinated at a hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not pregnant at the time of vaccination. The patient's medical history included Diabetic, type 1, allergies to penicillin, and the patient diagnosed with COVID-19 prior to vaccination. The patient was not tested for COVID-19 since the vaccination. The patient previously took codeine and experienced allergies. The patient received other unspecified medications within 2 weeks of vaccination. The patient experienced severe rash on 23Dec2020 at 21:30 (09:30 PM). The adverse event resulted in emergency room/department or urgent care: the patient was treated at local ER with prednisone and benadryl. The event was reported as non-serious. The patient recovered from the severe rash on an unspecified date in Dec2020.; Sender's Comments: Based on the information currently provided, the vaccination with BNT162B2 might play a contributory role in triggering the onset of severe rash. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety

evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Diarrhea persisted 24 hours with mucous and bloody mucous after all fecal material was exhausted.; Did have one episode of chills; This is a spontaneous report from a contactable physician. A 51-year-old female patient received the first dose of bnt162b2 (BNT162B2) lot no: EK9231, intramuscular on 23Dec2020 09:45 at a single dose for COVID-19 immunization in workplace clinic. Medical history included hypothyroid, allergies from bee sting, and covid-19 from Apr2020, all unknown if ongoing. Concomitant medication included levothyroxine sodium (SYNTHROID). The patient did not receive other vaccine in four weeks. On 25Dec2020, in the late evening at 11:45 PM-almost midnight, the patient experienced diarrhea, severe, without nausea or vomiting. Did have one episode of chills that resolved. Diarrhea persisted 24 hours with mucous and bloody mucous after all fecal material was exhausted. The patient had COVID-19 in Apr2020 and had positive antibodies in Jun2020 with high titers. She confirmed with their ID chief that she should proceed to receive the vaccine. Diarrhea resolved in 24 hours. Some lingering increased GI activity. No fever (temp 99.0F) (Dec2020). The patient recovered from events without treatment in Dec2020. The events were reported as non-serious. The patient was not tested for COVID-19 post vaccination.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of diarrhea, severe cannot be excluded, considering the plausible temporal relationship and the known adverse profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate

Difficulty breathing; This is a spontaneous report from a contactable pharmacist. A 54-year-old female patient received her first dose of intramuscular BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 22Dec2020 at 04:15 PM at single dose in left arm for COVID-19 immunisation at the age of 54-year-old. Lot number was ELO140. Medical history was unknown, concomitant medications were unspecified. Patient was not pregnant at the time of vaccination. On 22Dec2020 at 04:30 PM, the patient experienced difficulty in breathing, and she was hospitalized for one day. The patient was treated with EPI for the event. The patient was recovering from the event.; Sender's Comments: Based on the compatible temporal association, the Company considers the event difficulty in breathing is possibly related to vaccination with BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

short of breath; Intense headache; tiredness; body aches; This is a spontaneous report from a contactable other healthcare professional (patient). A 47-year-old female patient (not pregnant) received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: ELO124), via an unspecified route of administration on 23Dec2020 at 14:30 on Left arm at

single dose for COVID-19 immunization in hospital. The patient medical history included Rheumatoid arthritis, lupus. No known allergy, no allergies to medications, food, or other products. Prior to vaccination, patient was not diagnosed with COVID-19. Concomitant medications included baricitinib (OLUMIANT), hydroxychloroquine, prednisone. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced Intense headache, tiredness, body aches, short of breath on 24Dec2020; events were resulted in: Doctor or other healthcare professional office/clinic visit. Since the vaccination, patient had been tested for COVID-19 on 27Dec2020: Nasal Swab, result was unknown. No treatment was received for the events. The outcome of the events was not recovered.

"have COVID; have COVID; bone-crushing-pain; fever; This is a spontaneous report from a contactable consumer reporting for a patient (nurse). A 47-year-old female patient received first single dose of BNT162B2 (Solution for injection, batch/lot number and exp date not reported), via an unspecified route of administration on 20Dec2020 for immunization. The patient's medical history concomitant medications were not reported (unknown). Patient was an ER Nurse and took first dose of vaccine and then described mild/moderate symptoms on day one only. On 23Dec2020, patient posted they have COVID (positive COVID test). Contracted from spouse who got it from work. She further described it as ""hit by a truck."" On Day 4 she describes her COVID symptoms: bone-crushing-pain when fever rises. Symptoms were COVID symptoms, not directly related to vaccine. The events/symptoms started on 20Dec2020. Patient had no Covid prior vaccination. The patient was COVID tested post vaccination. The patient considered the events as non-serious. The outcome of events was not recovered. Information on Lot/Batch number has been requested."

abdominal pain; nausea; high blood pressure; This is a spontaneous report from a contactable consumer. A 93-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140), via an unspecified route of administration on 22Dec2020 at a single dose for COVID-19 immunization. Medical history included diabetic and irritable bowel. The patient's concomitant medications were not reported. The patient received the COVID vaccine and had abdominal pain, nausea and high blood pressure within 12 to 18 hours of vaccine received. The events lead to nursing home to emergency room and admitted to hospital. The patient was hospitalized due to events since 23Dec2020. Outcome of the events was recovering.

Golf ball size lump in armpit of injection arm; This is a spontaneous report from a contactable nurse. A 49-year-old female patient received bnt162b2 (BNT162B2), via an unspecified route of administration on left arm on 19Dec2020 18:15 at SINGLE DOSE for COVID-19 immunization. There was no medical history reported. Concomitant medication included estradiol (ESTROGEN), and meloxicam. On 26Dec2020 08:00, the patient experienced golf ball size lump in armpit of injection arm. The patient did not receive treatment for the adverse event. The outcome of the event was not recovered. Information on the lot/batch number has been requested.

I had seizure like 3 times; Vasovagal reaction; Fever; Headache; Weakness; It's just little bit shaky and breathless; It's just little bit shaky and breathless; allergic reaction; This is a spontaneous report from a contactable consumer. A 40-year-old female patient received bnt162b2 (BNT162B2, lot number:

EK5730), via an unspecified route of administration on 24Dec2020 at a single dose for covid-19 vaccination. There were no relevant medical history and concomitant medications. The patient reported that on an unspecified date, she had an allergic reaction. She had vasovagal reaction and seizures. Vasovagal was an allergic reaction that happened, and added that basically it's an allergic reaction. The patient experienced fever, headache, and weakness like right now. It was just little bit shaky, ever since yesterday and she had been way off like she take it as instruction yesterday, weakness, headache and breathless did not stopped from yesterday. The patient had been taking Tylenol for fever and headache. The patient reported that the events persisted. On 24Dec2020, lab work was done at the hospital, and she was told that the lab work was okay and they did CT scan of head because she developed seizure. She had seizure like 3 times so they scanned her brain. The outcome of the events was not recovered.

developed a migraine; nausea; sensitivity to light and sound; sensitivity to light and sound; she developed significant loss of mental clarity (brain fog); On 18Dec in the AM, developed progressive severe soreness at injection site, worse than any other vaccine, hurt even just the the touch. This lasted about a total of 36 hours and progressively improve; brain fog; retroorbital headache/intermittent mild tension type frontal headache; This is a spontaneous report from a contactable physician (patient). A 29-year-old female patient received first dose BNT162B2 (lot number EH9899), via an unspecified route of administration on 17Dec2020 12:00 at 29 years old at single dose at Left arm for COVID-19 immunization. Medical history included Mirena IUD, personal and family history of retinal migraines (without headache). The concomitant medications were magnesium citrate, melatonin, ademetionine (SAME) and fish oil. On 18Dec2020 in the AM, developed progressive severe soreness at injection site, worse than any other vaccine, hurt even just the touch. This lasted about a total of 36 hours and progressively improved. There was no swelling, redness, or other local symptoms. In the afternoon on 18Dec2020, she developed significant loss of mental clarity (brain fog) while at work. In the evening on 18Dec2020, developed mild retroorbital headache (this was actually the first headache of my life). All day 19Dec2020 and about half the day of 20Dec2020 developed a migraine (also the first of my life), experienced as retroorbital pounding headache, sensitivity to light and sound in 19Dec2020, nausea without vomiting in 19Dec2020, and loss of mental clarity. She had intermittent mild tension type frontal headache on 20Dec2020 PM with all other symptoms resolved, all symptoms resolved by 21Dec2020 AM. The patient used naproxen 440 mg and Tylenol 1000 mg on 19Dec2020. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The patient was not Allergic to medications, food, or other products. The outcome of the events was recovered on 21Dec2020. The information on the batch number has been requested.; Sender's Comments: Based on information available, the reported loss of mental clarity together with other events was likely related to the first dose BNT162B2 due to temporal relationship and clinical course. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"husband and daughter tested positive/after taking the shot, she was feeling sick and had a fever/wondering if the vaccine can give the reaction, or maybe she has the virus; husband and daughter tested positive/after taking the shot, she was feeling sick and had a fever/wondering if the vaccine can give the reaction, or maybe she has the virus; having a lot IO symptoms; fever; has been feeling ""sick""; This is a spontaneous report from a contactable consumer. A 56-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on the left arm on 22Dec2020 at single dose for COVID-19 immunisation. The patient's husband and daughter tested positive (COVID-19). There were no concomitant medications. The patient stated, ""had the first vaccine shot, later clarified as Pfizer COVID vaccine, on 22Dec2020, and didn't have any symptoms before that, her husband and daughter tested positive, but she was staying away from that, had no symptoms, but after taking the shot, on 24Dec2020, she was feeling sick and had a fever, and has had a fever ever since, and she is taking Tylenol and Motrin every six hours, and even then she still gets the fever, it hasn't stopped, she is having a lot IO symptoms, and is wondering if the vaccine can give the reaction, or maybe she has the virus. On 24Dec2020 is when the fever started and she was feeling sick. States she filled out a report online, on (Website)"". The outcome of the events was not recovered."

his gums became discolored and turned purple/gums (both sides up and down) remain purple/discoloration to the gums in his mouth; his mouth started hurting; feeling hot; Body aches; Fever; Pain to the gums in his mouth; muscle aches; sore throat; neck pain; This is a spontaneous report from a contactable nurse (patient). A 26-year-old male patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiration date were not reported), via an unspecified route of administration to right shoulder on 24Dec2020 11:30 at a single dose for COVID-19 immunization. There were no medical history and concomitant medications. The patient received vaccine on 24Dec2020. He experienced body aches, fever, and feeling hot with onset of about 3-4 hours after he was administered (24Dec2020). Next day (25Dec2020), his mouth started hurting, his gums became discolored and turned purple. Gums (both sides up and down) remained purple. He will be seeing a dentist. He also reported pain and discoloration to the gums in his mouth on 25Dec2020. He had been experiencing some of the regular side effects such as muscle aches, sore throat, neck pain on an unspecified date in Dec2020. Outcome of the event gum discoloration was not recovered, of the events feeling hot, generelized aching, and fever was recovered on 26Dec2020, of the event gum pain was recovering, and of the remaining events was unknown. He reported seriousness criteria as what he thinks to be medically significant at this point; that they could be medically significant. He is scheduled to receive the second dose of the product which at this point he does not plan to change. Dose change is unknown until he determines cause of these events and on what the doctor and dentist he is going to see recommend. He believes events could be caused by the vaccine. Information on the lot/batch number has been requested.; Sender's Comments: A causal association between BNT162 and the reported events cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

extreme muscle ache that she couldn't move; I couldn't take the pain/severe body ache severe like I couldn't walk; I couldn't take the pain/severe body ache severe like I couldn't walk; extreme muscle ache that she couldn't move; High fever; Lot of chills; Itchiness; Hives; she was crying; This is a spontaneous report from a contactable Nurse (patient). A 44-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date unknown), intramuscular on an unspecified date at single dose for covid-19 immunization. Patient history was no and investigation assessment was no. There were no concomitant medications. The patient had hives and itchiness and then that was the first day that was after 8 minutes and then the next day the patient had severe body ache severe like I couldn't walk, she cried. The patient took Tylenol and Ibuprofen as she couldn't take the pain (further clarification was unknown). The patient had high fever 102.4 and was having a lot of chills. Start date of event was 24th, the 23rd she had the hives and the 24th she had the extreme muscle ache that she couldn't move and she was crying and she had the chills and the fever on the 24th. So it on started 23rd with the hives so then it started with the body aches and the fever on the 24th. Outcome of the events was recovered. The causality between the events and drug was considered as related by the reporter via Global Introspection. Information on the batch/lot number has been requested.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported body ache severe like I couldn't walk, extreme muscle ache that she couldn't move, and the administration of BNT162B2, based on the reasonable temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate.

"left sided weakness; it has weakened his heart; stutter; severe stroke like symptoms; Ventricular tachycardia/help keep his heart rate at bay; Loss of balance; extreme numbness and tingling in left hand and foot; tingling in left hand and foot; oral motor impairment; mouth weakness and not coordinated/mouth is fatigued easily; Issues finding words and trouble speaking; Issues finding words and trouble speaking; Ejection fraction down to 25%; The initial case was missing the following minimum criteria: adverse event. Upon receipt of follow-up information on 28Dec2020, this case now contains all required information to be considered valid. This is a spontaneous report from a contactable other healthcare professional (HCP). A 29-years-old male patient received bnt162b2 (lot number: EJ1685), intramuscular (deltoid left) on 21Dec2020 at 05:30 at 0.3 mL single (first dose) for Covid. Medical history was reported as ""none"". Concomitant medications were not reported. The patient previously received Flu vaccine in Oct2020 for immunization. The patient is an Occupational Therapist, and he called to report an adverse event that he experienced with the first dose of the COVID Vaccine. He received the vaccine last Monday, 21Dec2020 at 5:30AM before his shift at work, then 20 minutes later, he was having severe stroke like symptoms. He experienced severe left sided weakness, loss of balance, extreme numbness and tingling in his left hand and foot, he had issues finding his words and he couldn't speak, and he had an oral motor impairment where his mouth was weak and not coordinated. The staff at the hospital did a neurological exam on him, and he failed, so he had to go to the emergency room (ER). The patient added that he was already in the hospital when this happened, and the ER doctors suspected that he had a CVA, and they gave him TPA to prevent any permanent brain damage and it

worked. The patient then added that due to the shock of this whole event, from everything that happened, it has weakened his heart. Reportedly, he is a healthy 29 year old man, with no preexisting conditions, and he works out, and he has no heart conditions, but he had to get a cardiology follow up a few days after he got the vaccine, because he started going in to Ventricular Tachycardia, which he had never had in his life. So, the doctors at the hospital went ahead and did an Echocardiogram and an EKG, and he was told that his Ejection Fraction is down to 25%. He stated his heart is so weak, that he cannot work right now, but the structure of his heart is fine and has not had any damage. The hospital staff thought that maybe the patient had a chronic heart issue that he just did not know about, and that the stress of this event maybe made it kick into overdrive, but he states that the cardiologist said that was not the case, because the structure of his heart is fine, and the only thing they can see is that the heart is pumping weak. One physician even suggested that due to the shock of the event, he might have Takotsubo Cardiomyopathy, which is a broken heart, but because the structure of his heart is okay, it should be reversible. He stated that he is hoping he will heal up good, because he is young and has no pre-existing conditions. He added that his heart is in such a state right now; he has to wear an external defibrillator. The patient stated that all these happened about 20 minutes after he received the vaccine, and he was admitted to the hospital from 21Dec2020 to 25Dec2020. His neurological symptoms have resolved except that he has a stutter that he did not have before and his mouth is fatigued easily, so he has to slow down when he is eating, but now he can eat regular for the most part. The patient confirmed that he was not specifically prescribed the product; it was administered to him at his place of work, but it was optional. He stated he considered how he is working with COVID patients every day, and given the circumstance, he thought that it would be a best practice for him to get the vaccine. He had not gone to his primary care doctor in a while because he had been fine and healthy, but he called them and found out that his primary care had retired, so he has to find a new one now. Regarding the issues finding words and trouble speaking, he stated that he has improved, but it is still ongoing, he is just stuck in a plateau zone. With the Ventricular Tachycardia, he stated that this is an ongoing issue, as he has to wear the life vest even though he has no need to activate it yet. He did have one minor bought of the VTach, but because he is a therapist, he knows how to take care of it with relaxation techniques, he knows how to manage it. He had one bought of VTach the evening prior, but he was able to get it under control. The doctors have him on medication to help keep his heart rate at bay. He has never had to use medication before and is on the following medications to help keep his heart rate at bay: Metoprolol 25mg one tablet once daily by mouth and Lisinopril 5mg one tablet once daily by mouth. The VTach has improved, it was good enough he was able to discharge home, but it is still a concern. His cardiologist said that, basically his hope, is that once his body recover from the whole shock of everything, then his ejection fraction will heal, and his heart will heal. He again stated that the doctor told him that the structure of his heart is perfectly fine; he has thick walls in his heart, no leaking valves, and the heart was not conducting any abnormal signals. The doctor just said that right now, his heart is super weak and that it is an acute problem. With the Takotsubo Cardiomyopathy, he states that two doctors mentioned this diagnosis, but he confirmed that he was not actually diagnosed with this issue, he was just diagnosed with Ventricular Tachycardia. The outcome of the ejection fraction down to 25% was unknown to the patient at this time as he has not had another EKG or echocardiogram, but the cardiologist told him that the cardiologist expects that this will not be resolved quickly anyway. The patient confirmed that he did not receive any other vaccines on the same day he received the COVID

vaccine. The only other vaccine he had this year was the flu vaccine which he got back in Oct2020. He has gone on to his online portal and there are the bloodwork results and all the imaging results on there from his CTs and MRIs, but he did not see the EKG or Echocardiogram results yet. He does not have this pulled up at this time, but he does have access to this stuff and can provide it later, if requested. He is curious about the next steps from here to how his case is processed. He is also curious if this information would help Pfizer make modifications to the vaccine if it is found that a lot of people are having the same reaction as he did. He is also wondering, given his situation, that probably he is not going to get the second dose, for his safety, but he is wondering what percentage of effectiveness the first dose does having just covered. The events left sided weakness, loss of balance, extreme numbness and tingling in left hand and foot resolved on 25Dec2020; severe stroke like symptoms and oral motor impairment; mouth weakness and not coordinated/mouth is fatigued easily resolved in 2020. The events ventricular tachycardia/help keep his heart rate at bay and issues finding words and trouble speaking were resolving, stutter had not resolved while the outcome of the events it has weakened his heart, and ejection fraction down to 25% was unknown.; Sender's Comments: The reported information is unclear and does not allowa meaningful assessment of the case. It will be reassessed upon receipt of follow up information. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."

Left sided hearing loss; This is a spontaneous report from a contactable physician who was also the patient. A 42-year-old non-pregnant female patient received bnt162b2, lot number and expiration date were unknown, via an unspecified route of administration on 16Dec2020 , 8:30 at a single dose for covid-19 immunization. The patient's medical history included antiphospholipid antibody from an unknown date and unknown if ongoing. The patient's concomitant medications were not reported. On 22Dec2020, the patient experienced left sided hearing loss. It was unknown if patient received treatment for the event. The outcome of the event was not recovered. The patient was not diagnosed with COVID prior to vaccination and has not been tested for COVID-19 since vaccination. Patient has no allergies. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Information on the lot/batch number has been requested.; Sender's Comments: As an individual case report there is not enough evidence to establish a causal relationship with the suspect vaccine. Currently there is no clear biological plausibility between the vaccine use and the even onset. More information such as complete medical history and concomitant medications are needed for fully medical assessment. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

severe hearing loss; This is a spontaneous report from a contactable physician (patient). A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an

unspecified route of administration on 16Dec2020 at single dose for covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced severe hearing loss on Dec2020 and was inquiring if it was a reported side effect of the vaccine. Outcome of event was unknown. Information about lot/batch number has been requested.; Sender's Comments: A causal association between BNT162 and the reported event cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

tightness in throat and lump in throat/had a tightness and lump in her throat; tightness in throat and lump in throat/had a tightness and lump in her throat; allergic reaction like rash, tightness in throat, and lump in throat; allergic reaction like rash/red rash on her chest and rash was on her arms too; cheeks were flushed; This is a spontaneous report from a contactable nurse (patient). This nurse reported similar events for 3 patients. This is the first of 3 reports. A 23-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EK9231, intramuscular in the right deltoid, first dose on 27Dec2020 14:15 at a single dose for covid-19 prevention. Medical history included ongoing asthma and reactive airway which she was diagnosed when she was like 5 years old (2002). Concomitant medication included albuterol [salbutamol] for asthma which started when she was 8 years old or so. The patient wanted to know if she can receive the second dose of covid vaccine after experiencing symptoms of allergic reaction like rash, tightness in throat, and lump in throat. She wanted to know the ingredients and specific proteins in the covid vaccine. The patient received the COVID Vaccine and she developed a reaction. On 27Dec2020, she had a red rash on her chest, and her cheeks were flushed, and the rash was on her arms too, and she had a tightness and lump in her throat, it was not painful to swallow but she could feel the pressure with swallowing. She stated that she did not experience shortness of breath, but regardless, she was seen in the ER and she was given IV SOLUMEDROL, and BENADRYL, and she was watched for 5 or 6 hours and then she was sent home with an Epi Pen, around the clock Benadryl, and prednisone. She asked the ER doctors if they thought it was okay for her to receive the second dose of the product, and they told her to contact employee health for that question. She mentioned that she contacted that employee health and was told to contact her primary care provide which she did. Her primary care doctor instructed the caller to call Pfizer and gather some more information regarding ingredients, as the she may have had the reaction to a particular protein filler. She was also wondering if this is a known reaction to the product. She received the vaccine on 27Dec2020 at 2:15 PM. She reported that the red rash on her chest and arms, and her cheeks being flushed, resolved yesterday after receiving IV BENADRYL. Had a tightness and lump in her throat which was still ongoing, and it was kind of off and on and when the she takes Benadryl it goes away. She reported that this one is medically significant because even though she did not have shortness of breath, it could have affected her airway. She confirmed that she received no other vaccines on the same day as the COVID vaccine. The outcome of the events 'had a tightness and lump in her throat', allergic reaction was not recovered (a s reported); while recovered on 27Dec2020 for allergic reaction like rash/red rash on her chest and rash was on her arms too and cheeks were flushed.;

Sender's Comments: Based on temporal association, the causal relationship between bnt162b2 and the events throat tightness, sensation of foreign body, allergy to vaccine, rash erythematous and flushing cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.,Linked Report(s) : US-PFIZER INC-2020517134 different patient, same drug and same event;US-PFIZER INC-2020517133 different patient, same drug and same event.

Fever up to 120F; Bodyaches; Headache; dulled taste and smell; dulled taste and smell; Pain at the injection site; This is a spontaneous report from a contactable other HCP. A 25-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (reported as COVID 19 vaccine), intramuscular on 27Dec2020 12:00PM at single dose for covid-19 immunization. Vaccine location was left arm and it was the first dose. The patient medical history was not reported. Concomitant medication included influenza vaccine (FLU) on 16Dec2020 at right arm. Patient was not diagnosed with COVID-19 prior to vaccination nor tested for COVID-19 since the vaccination. The patient didn't receive any other medications within 2 weeks of vaccination. The patient experienced fever up to 120F, bodyaches, headache, dulled taste and smell, pain at the injection site on 27Dec2020. Patient didn't receive treatment for the adverse events. The action taken in response to the events for BNT162B2 was not applicable. The outcome of events was not recovered. The events were reported as non-serious. Pfizer is a marketing authorization holder of [BNT162B2] in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of [BNT162B2] has submitted the same report to the regulatory authorities. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's Comments: A causal association between BNT162B2 and the event hyperpyrexia cannot be excluded based on compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

High blood pressure 187/95; Heart rate at one time 210 bpm; chest pain; Shortness of breath; This is a spontaneous report from a contactable pharmacist (patient) reported for herself that a 45-years-old female patient received first dose of BNT162B2 (lot number: EH9899), via intramuscular in left arm on 22Dec2020 07:00 AM at single dose for COVID-19 immunization. The patient was not pregnant. No known allergies. No allergies to medications, food, or other products. No other vaccine was received within 4 weeks prior to the COVID vaccine. No other medications were received within 2 weeks of vaccination. The patient was not diagnosed with COVID-19 prior vaccination and patient was not tested for COVID-19 since the vaccination. There were no medical history or concomitant medications. The patient experienced high blood pressure 187/95, heart rate at one time 210 bpm, shortness of breath and chest pain on 23Dec2020 10:00 AM. The events resulted in doctor or other healthcare professional

office/clinic visit, emergency room/department or urgent care. Treatment was received for heart rate at one time 210 bpm which included lab works and medication given propranolol to decrease heart rate. The outcome of the event was recovering.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events hypertension, heart rate increased, chest pain and dyspnoea cannot be excluded. The information available in this report is limited and this case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

She had an immediate reaction of accelerated heart rate and elevated blood pressure; She has very slightly elevated heart enzymes.; She had an immediate reaction of accelerated heart rate and elevated blood pressure; She's very anxious and very anxious tonight being alone at the hospital.; This is a spontaneous report from a contactable consumer (patient's father). A 30-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient had an immediate reaction of accelerated heart rate and elevated blood pressure. She was monitored for an hour and it subsided. On unspecified date in Dec2020 at 1:00am in the morning she had racing heart rate and went to ER. She was still in hospital. Things were not entirely stabilized. She had very slightly elevated heart enzymes in Dec2020 with outcome of unknown. They keep her overnight for an echocardiogram in morning. The patient was very anxious being alone at the hospital. Caller questioned if this has been reported with the vaccine. Lot/Batch and Expiry date has been requested.

mental cloudiness; bruising of injection site; arm pain; fatigue; This is a spontaneous report from non-contactable Pharmacist (patient). A 33-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection) intramuscular at right arm on 19Dec2020 08:15 at single dose for Covid-19 immunization. The Covid-19 vaccine was administered in a hospital facility. Medical history included seasonal allergies, heartburn, and allergies to ethanol. The patient has no Covid prior vaccination. Concomitant medication included cetirizine, esomeprazole, melatonin; all from unspecified date for unspecified indication. The patient did not receive other vaccines in four weeks prior to the Covid vaccine. On 19Dec2020 at 15:00, the patient experienced bruising of injection site (x 1 week), arm pain, fatigue, mental cloudiness (approximately x 1 day). The patient was not tested post vaccination. The patient did not received treatment due to the events. The outcome of the events mental cloudiness, bruising of injection site, arm pain and fatigue was recovered in Dec2020. No follow-up attempts are possible. Information about lot/batch number cannot be obtained.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the event mental impairment cannot be excluded. The information available in this report is limited and this case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as

part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; This is a spontaneous report from a contactable pharmacist. A 58-year-old non-pregnant female patient received first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number= EH9899), intramuscular on 19Dec2020 07:00 at SINGLE DOSE at Left arm for covid-19 immunization. Medical history included breast cancer female and allergies to shell fish and Latex. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. 30 minutes after receiving vaccine on 19Dec2020 07:30 am, patient reported 'heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness. Patient was taken to the ED where she received IV Benadryl and was observed for 4 hours. Patient was discharged home and symptoms subsided. The events resulted in emergency room/department or urgent care. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. Outcome of the events was recovered in Dec2020.; Sender's Comments: There is a plausible temporal relationship between immunization and onset of allergic reaction in a subject with a positive medical history for allergy to food (shellfish); causality cannot be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

exacerbation of cryptogenic organizing pneumonia; fever; malaise; wheezing; This is a spontaneous report from a contactable physician reported for himself. A 60-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection) via an unspecified route of administration from an unspecified date at single dose for Covid-19 immunization. Medical history included rheumatoid arthritis. The patient's concomitant medications were not reported. The patient experienced having fever and malaise after vaccination and then a few days later he has been wheezing. The patient believed it was an exacerbation of cryptogenic organizing pneumonia. The outcome of the events exacerbation of cryptogenic organizing pneumonia, fever, malaise and wheezing was unknown. Follow-up activities are possible, information on the batch number has been requested.; Sender's Comments:

The association between the event cryptogenic organizing pneumonia with BNT162b2 can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Sudden onset Acoustic Neuritis without Labyrinthitis, hyperacusis, loss of hearing, fullness in ears, dizziness and tinnitus.; Sudden onset Acoustic Neuritis without Labyrinthitis, hyperacusis, loss of hearing, fullness in ears, dizziness and tinnitus.; Sudden onset Acoustic Neuritis without Labyrinthitis, hyperacusis, loss of hearing, fullness in ears, dizziness and tinnitus.; Sudden onset Acoustic Neuritis without Labyrinthitis, hyperacusis, loss of hearing, fullness in ears, dizziness and tinnitus.; Sudden onset Acoustic Neuritis without Labyrinthitis, hyperacusis, loss of hearing, fullness in ears, dizziness and tinnitus.; sore arm; nerve related hearing loss; This is a spontaneous report from a contactable physician reporting for himself. A 69-years-old male patient received bnt162b2 (BNT162B2; Lot : EKS730) vaccine , intramuscular in the left deltoid on 21Dec2020 15:30 at single dose for covid-19 immunisation . Medical history included atrial fibrillation from 2009. There were no concomitant medications. The patient stated he experienced sore arm on the same day 21Dec2020 and this was not a big deal. On 26Dec2020 the patient experienced sudden onset of acoustic neuritis without labyrinthitis, hyperacusis, fullness in ears, dizziness and tinnitus . The patient also experienced nerve related hearing loss from Dec2020. Sore arm was considered non serious events, while the remaining were considered Important Medical Events. The outcome of nerve related hearing loss was recovered, the outcome of sore arm was unknown, while the outcome of the remaining events was recovering.; Sender's Comments: Based on the temporal association, it cannot be fully excluded that the vaccination with BNT162B2 might play a contributory role in the events onset. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

I have lost hearing in my right ear; the right side of my face was numb; This is a spontaneous report from a contactable consumer (patient). A 58-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Batch/lot number number EJ1685, expiration date Mar2021, on 25Dec2020 09:30 at single dose on left arm for Covid-19 vaccination. Medical history and concomitant medications were none. The patient had not received other vaccine in four weeks. The patient had no covid prior vaccination. The patient had no covid tested post vaccination. The patient received her first Covid-19 vaccination on Christmas morning. She worked at a medical center. Within an hour of when she got home, she lost hearing in one ear and also had some numbness on the same side of her face, She was wondering if that was something she should be concerned and she still didn't have hearing in her right ear. Treatment received for the events included Tylenol. The outcome of the events was not resolved.

She suspected that she had an undiagnosed autoimmune disease.; Spinal pain that elicits nausea; spinal pain that elicits nausea; Headache that is worse at night/Headache worse at night time, sometimes gets better during the day/bad head ache; Body aches; Feeling crappy; Low grade fever; Pressure in the head; Terrible pain; Neck pain; This is a spontaneous report from a contactable other health professional (patient). A 43-yearsold female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 19Dec2020 at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received Covid19 vaccine on 19Dec2020 and reported that at 36 hours she had body aches, feeling crappy, and low grade fever in Dec2020, she had since developed at headache that is worse at night, and spinal pain that elicits nausea. She suspected that she had an undiagnosed autoimmune disease. She was inquiring about duration of the reported AE's from clinical trials, and tried to decide how long she will feel this way. And going on 10 days and she's just struggling, bad headache and neck pain headache worse at night time, sometimes gets better during the day. Terrible pain and nausea. Any info on length of side effects: 36 hours- body aches feeling crappy. Low grade fever. Nausea with the spinal pain, pressure in the head. Difference in people with autoimmune issues- infertility - suspected autoimmune. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information currently available, there is no biological plausibility to implicate the suspect vaccine to the occurrence of the serious event autoimmune disease. More information such as medical history and concomitant medications and confirmative diagnostic workups are needed for full medial assessment. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Heart rate high; Blood pressure high; bruise at the site of the vaccination; This is a spontaneous report from a contactable other health professional reporting for herself. A female patient of an unspecified age received the 1st dose of bnt162b2 (BNT162B2, Manufacturer Pfizer-BioNTech), via an unspecified route of administration, on 22Dec2020, at single dose, for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. On 22Dec2020, 1-1.5 hours after vaccination, the patient experienced heart rate high with outcome of unknown , blood pressure high with outcome of unknown and bruise at the site of the vaccination with outcome of unknown. The patient underwent lab tests and procedures which included: blood pressure, high (22Dec2020); heart rate, high (22Dec2020). She returned to the emergency room (ER) of the hospital where she received the vaccine due to all the events. Therapeutic measures were taken as a result of heart rate high and blood pressure high and included treatment with a beta blocker. The patient was also prescribed with a blood pressure medicine from the ER physician. The events heart rate high and blood pressure high were considered medically significant. The information on the lot/batch number has been requested.; Sender's Comments: Based on the compatible temporal association, the Company considers the events heart rate high and blood pressure high are possibly related to vaccination with BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety

concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

tingling of the lips/Lips tingled; Throat got tight; This is a spontaneous report from a contactable other hcp(patient). The 49-year-old female patient received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730, Expiry Date: 31Mar2021), via an unspecified route of administration at left arm on 21Dec2020 at single dose for COVID-19 immunization. There were no concomitant medications nor medical history. Patient got first dose of the COVID vaccine and experienced her lips tingled/ tingling of the lips and her throat got tight, both on 21Dec2020, led to medically significant, lasted about 20 minutes. They observed her and she did not need any further treatment. Outcome of events was recovered in 21Dec2020.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of her lips tingled/ tingling of the lips and her throat got tight cannot be excluded, considering the plausible temporal relationship and the known adverse event (anaphylactic adverse reaction) profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate

"disoriented; hit her head and cut herself; hit her head and cut herself; Passed out at night; This is a spontaneous report from a contactable consumer (patient). A 67-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration on 23Dec2020 at single dose at left arm for COVID-19 immunization. Medical history included Atrial fibrillation/heart problems diagnosed prior to the vaccine, got the COVID virus on 18Nov2020, disoriented in Nov2020. Concomitant medications included her heart medication every day and vitamins, nothing out of the normal. Caller stated she had heart problems. The heart problems were diagnosed prior to the vaccine. Caller also stated that she got the COVID virus this year before the vaccine as well and she was off, of work for like a month. On 23Dec2020 she got the vaccine. Then on Thursday 24Dec2020 and Friday 25Dec2020 she had a reaction. She had passed out in the night, hit her head and cut herself, she was then disoriented for 1 full day. Caller stated that the last time she was disoriented like this was when she had the COVID Virus, because she had heart problems. Caller stated that she was fine now. Caller stated that she had been off, of work so much. The heart problem she had was Atrial Fibrillation. Caller clarified that she had the COVID virus this year in Nov2020, it was before thanksgiving, on 18Nov2020 she had the virus, then on 19Nov2020 she got tested and it was positive. She got the vaccine on the 23Dec2020 Wednesday then on 24Dec2020 at night she passed out and on 25Dec2020 she was disoriented all day. Investigation Assessment: No. On 24Dec2020 she was going to bathroom, and found herself on the floor, then the following day 25Dec2020 was when she was disoriented. She knew this because when she had the actual COVID virus previous in Nov2020 this happened previously. When queried outcome of being disoriented she stated that she still felt a little weird but if getting better very, very slow. The Second dose was schedule for 13Jan2021. Caller confirmed that she did have a Positive Test for Covid Previously. Her treatment at the time was in the Emergency Room, they gave her an Antibody infusion, she had to schedule it because it was actually a

clinical trial. Caller was asked if she knew the name of covid test, she stated that she does not know, she only recalled that she opened her mouth and they test her that way. The outcome of the event ""disoriented"" was recovering, of the other events was unknown."

Bells Palsy; This is a spontaneous report from a contactable consumer. This consumer reported similar events for three patients. This is 1st of three reports. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (also reported as Comirnaty), via an unspecified route of administration on an unspecified in Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient experienced bells palsy on Dec2020. The action taken in response to the event for bnt162b2 was not applicable. The outcome of event was unknown. No follow-up attempts are possible; information about batch/lot number cannot be obtained.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020519118 same reporter/drug/event, different patient;US-PFIZER INC-2020519119 same reporter/drug/event, different patient

Bell's Palsy; This is a spontaneous report from a contactable consumer or other non HCP. This consumer reported same events for three patients (nurses). This is 2nd of 3 reports. A patient of an unknown age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, also reported as COMIRNATY), via an unspecified route of administration on unknown date in Dec2020 at single dose for covid-19 immunization. The patient's medical history and concomitant medications were unknown. Healthcare worker reported that 3 nurses who work in her facility received Pfizer's COVID vaccine last week (Dec2020) came in with Bell's Palsy in Dec2020. Event took place after use of product. The outcome of event was unknown. No follow-up attempts are possible. Information about batch/Lot number cannot be obtained.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020519105 same reporter, same drug, same event, different patients;US-PFIZER INC-2020519119 same reporter, same drug, same event, different patients

Bells Palsy; This is a spontaneous report from a contactable consumer or other non HCP. This consumer reported same events for three patients. This is a 3rd of 3 reports. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, also reported as Comirnaty), via an unspecified route of administration on an unspecified in Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. Healthcare worker reported that 3 nurses who work in her facility received Pfizer's COVID vaccine last week (Dec2020) came in with Bells Palsy. Event took place after use of product. Gallbladder removed, septic, 11mm axillary lymph node.

she got the COVID 19 vaccine on the 16Dec2020 and got tested positive on the following day; she got the COVID 19 vaccine on the 16Dec2020 and got tested positive on the following day; This is a

spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). A contactable nurse (patient) reported that a female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 16Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient reported that she got the COVID 19 vaccine on the 16Dec2020 and got tested positive on the following day (17Dec2020). She is scheduled to take her second dose on 20Jan2021. The patient wanted to know what Pfizer recommendations are. Outcome of the event was unknown. That information on the lot/batch number has been requested.; Sender's Comments: A causal role of BNT162B2 would seem unlikely based on the temporal gap between the vaccination and the event onset.

being tested positive; being tested positive; felt very sick; congestion; This is a spontaneous report from a contactable other healthcare professional (patient herself). A female patient of an unspecified age received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient felt very sick and that's not her normal. The patient felt great after getting the vaccine she hadn't felt that in a while. Today (23Dec2020) the patient had this congestion and 4 -5 people came back positive post covid-19 vaccination on unknown date. All of them sent home after being tested positive. The patient just someone to keep track, she just wanted Pfizer to know. She didn't have any problems, she was working COVID patients. They had a lot new cases. She just didn't feel 100%. The patient wanted to know if it's safe for her to get the second dose after being tested COVID positive post vaccination. The outcome of events was unknown.; Sender's Comments: The information available in this report is limited and does not allow a medically meaningful assessment of the case. The company cannot completely exclude a causal relationship between the reported events and vaccination with BNT162B2. Additional information regarding therapy vaccination date, lot number and investigation results will aid in comprehensive assessment of the case.

she reported on 18Dec2020 got vaccine later that day tested positive; she reported on 18Dec2020 got vaccine later that day tested positive; This is a spontaneous report from a contactable nurse. A female patient of an unspecified age received the 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at single dose on 18Dec2020 for Covid-19 immunisation. The patient medical history and concomitant medications were not reported. She reported on 18Dec2020 got vaccine later that day tested positive with outcome of unknown. She asked can she still receive the 2nd dose of the vaccine or should she repeat the vaccination series. The patient underwent lab tests and procedures which included Sars-Cov-2 test: positive on 18Dec2020. Information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile

of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

received the (1st dose of) COVID-19 vaccine 5 days ago and tested positive; received the (1st dose of) COVID-19 vaccine 5 days ago and tested positive; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Device Type: Vial), intramuscularly on 18Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the (1st dose of) COVID-19 vaccine 5 days ago and tested positive on 23Dec2020. PharmD asked if it's possible to administer Bamlanivimab to a patient who received the (1st dose of) COVID-19 vaccine 5 days ago and tested positive. Pharmacist mentioned that as Bamlanivimab was an EUA drug, they cannot go outside of the recommendations, and given that no information was available about its use after a dose of the COVID-19 vaccine, it is possible that Bamlanivimab may not be administered. Explained Pfizer MI is unable to provide a direct recommendation, was referred to the patient's Docton for guidance: Before receiving the next dose of the COVID-19 vaccine, and to clarify if Bamlanivimab should be administered. The outcome of events was unknown. Information on the Lot/Batch number has been requested.; Sender's Comments: The reported tested positive 5 days after COVID-19 vaccine is considered related to the administration of BNT162B2.

PCR test positive for COVID-19 but no signs of COVID-19; PCR test positive for COVID-19 but no signs of COVID-19; This is a spontaneous report from a contactable physician reporting for himself. A 70-year-old male patient received the 1st dose of bnt162b2 (BNT162B2), via an unspecified route of administration in arm left, on 17Dec2020 at 09:00 AM, at single dose, for Covid-19 immunisation. Medical history included hypertension, high cholesterol, benign prostatic hyperplasia, drug allergy and food allergy all from unknown date and unknown if ongoing. The patient had not been diagnosed with COVID-19 prior to vaccination. The patient received unknown medications within 2 weeks of vaccination. Historical vaccine included typhoid vaccine (unknown trade name) on unknown date and the patient experienced drug allergy. The day after vaccination with bnt162b2, on 18Dec2020 at 04:00 PM, the patient experienced PCR test positive for COVID-19 but no signs of COVID-19. The patient did not receive any treatment as a result of the event. The event resulted in doctor or other healthcare professional office/clinic visit. The patient underwent lab tests and procedures which included: COVID-19 PCR test positive (18Dec2020), nasal swab positive (18Dec2020). Outcome of the event was unknown. The information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of COVID-19 PCR test positive and suspected lack of efficacy due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for

adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

guillain barre syndrome; stroke; left thigh burning; Left b/l gluteal burning/bilateral gluteal burning; paresthesia; mid back burning; right side burning / right thigh burning; b/l hand numbness/bilateral hand numbness; left facial numbness; b/l foot numbness/bilateral foot numbness; This is a spontaneous report from a contactable physician (patient). A 39-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730), via an unspecified route of administration on 19Dec2020 at single dose for prevention. Medical history included none. There were no concomitant medications. Caller states, he received the covid vaccine 19Dec2020 and on 25Dec2020 he was experiencing left facial numbness, b/l foot numbness, b/l hand numbness on 26Dec2020, right side burning on 28Dec2020, Today (29Dec2020) he has had left thigh burning, and Left b/l gluteal burning and paresthesia. No motor issues and no tendon issues, all intact. Also had mid back burning on 28Dec2020 that comes and goes. He has heard that there is a described neuropathy with the virus and/or with the vaccine and wants more information on that. Curious if anyone has anything similar? and makes mention of possible Gillian Barre Syndrome. States that he has had a potential reaction. He had his dose on 19Dec2020. On 25Dec2020 he developed left facial numbness, then later that day he developed bilateral foot numbness. On 26Dec2020, he developed bilateral hand numbness, on 28Dec2020 he developed right thigh burning, and today (29Dec2020) he has developed left thigh burning, and bilateral gluteal burning and paresthesia. States that he has been kind of freaking out about it. He doesn't have any motor issues. States that he heard that there is a described neuropathy with the virus, but not with the vaccine, is that true? The left facial numbness resolved on either 26Dec2020 or 27Dec2020. States that the symptoms were concerning because it could have been a stroke. States his symptoms were moderate. States that due to the bilateral foot and hand numbness, he had a LP, brain and spine MRI, and blood work done on 26Dec2020. All came back completely normal. When asked about causality, caller states that it makes the most sense for his symptoms to be caused by the vaccine due to his age and the fact that all his testing was completely normal. Reporter seriousness for left facial numbness, bilateral foot numbness, bilateral hand numbness, right thigh burning, left thigh burning and bilateral gluteal burning and paresthesia: Medically significant. The outcome of the event left facial numbness was recovered in Dec2020. The outcome of the events guillain barre syndrome, stroke and mid back burning was unknown. The outcome of the other events was not recovered.; Sender's Comments: Based on the temporal relationship the association between the reported serious adverse events with BNT162b2 can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Approximately 4 days after vaccine I started experiencing sharp lower back and left hip pain. Also my left foot feels like pins and needles.

Complete loss of vision in the left eye 12 hours after receiving second dose (Moderna mRNA-1273) while having a fever of 102 F for 6 hours. Loss of vision lasted for 1 minute. Loss of vision occurred while standing. Referral to primary care and ophthalmology specialist found normal eye exam and MRI of orbits but presence of tachycardia especially while standing (fluctuations between 60 beats at rest/laying down to 130 beats per minute standing). Postural tachycardia syndrome (POTS) is suspected. Currently pursuing cardiac workup with cardiologist and Covid POTS specialist. POTS specialist believes autoantibody development after vaccination could be suspected as recovering covid patients similarly present to clinic with POTS like symptoms.

Patient with extreme nausea and vomiting that started soon after receiving the Moderna vaccine. Patient with loss of consciousness, diaphoresis and garbled speech during a foley catheter exchange thought to be from dehydration. Patient was admitted to Hospital for observation for 2 days

12/18 VACCINATION 12/19 WOKE UP, RINGING IN BOTH EARS. CALLED PCP, CONSULTED ENT ABNORMALITY - L INNER EAR; HIGH DOSE STEROIDS, 10 DAYS, 60 MG/DAY. WEEK 2; TINNITUS GOT WORSE. DR. PRIMARY CARE PHYSICIAN MEDICAL EXAM ON 1/6/2021 INJECTION OF STEROIDS.

Acute Pericarditis. Patient was admitted from 12/27-12/28/2020 at hospital by cardiology team who strongly felt the acute pericarditis was due to the Pfizer Vaccine (Dr. was senior cardiologist).

Fever, Malaise

After the 15 min monitoring, I went back to work 15 min later. the left side of my face started tingling which went to a numbing feeling down the left side of my body affecting my neck, shoulder, arm, elbow and up the upper left torso. My face and neck was numb for about 48 hrs and the rest came back to sensation within 24 hrs. D/T the numbness I was admitted into the hospital for a 24hr observation.

""""Pfizer-BioNTech COVID-19 Vaccine EUA."" Patient received first dose of vaccine on 12/21/2020. Patient called on 1/3/2021 to notify that she developed symptoms on 12/27/2020 and had an appendectomy on 12/28/2020 at another facility. Patient also reports that CDC V-Safe Application was used to report event as well. Patient reports that she is recovering well."

Patients adverse reactions started day of vaccination with right arm pain up to right ear as well as complete tongue numbness. On 1-1-21 patient had increased Bell's Palsy symptoms including; inability to raise left eyebrow, inability to close left eye in its entirety, teeth being numb on left side, and numbness and tingling in left foot and left hand (from palm to fingers). ER physician prescribed on 1-1 Prednisone, Keflex and Valtrex. Patient went to ER again on 1-2-21 with lower extremity numbness on left side that is moving proximally toward her hip. Patient went home on 1-3-21 with an RX for Prednisone as well as Valtrex. Symptoms have improved but have not fully resolved at this time.

She was hospitalized on 01/04 but exact situation unknown. COVID +. Hospitalized at Medical Center.

Employee received COVID 19 vaccination at 9:45am on 12/30/20. ~15 min. later she developed a rash down her left arm, then down her Rt. arm. about 4 hours later she decided to go to the emergency room

for Hearty Palpitations, Fever, Chest discomfort and feeling of generalized sunburn. Later developed severe headache..

Right arm swelling very bad right after shot, next day woke up to get ready to work I started to get light headed, dizzy, sweating, felt like I was going to pass out. My husband then called 911. They took me to Hospital ,I stayed there for a couple hours then released. They told me to stay home and the next day I felt fine. I did a televisit with my Nephrologist (Kidney doctor) the following week.

noticed twitching in L arm shortly after receiving vaccine, numbness , weakness and pain in arm and shoulder girdle, diagnosed with parsonage turner syndrome by neurologist, currently taking neurontin for pain as steroids not tolerated

Felt slight warmth throughout body about 5 minutes after vaccine. Disappeared 2 minutes later. Arm started to feel sore as the day went on and was very sore by nighttime. Next day, arm started to feel better and over the next 3 days was no longer sore. On the morning of the 30th, woke up feeling fine, took a 3.5 mile walk and felt fine. Around 12:30 pm, experienced sudden pain and a burning sensation in the chest and both upper arms. Thought it was possibly heartburn ; took a Prilosec. The discomfort (mild but steady) continued so checked blood pressure which was 141/91. Called cardiologist and went to emergency room per instruction, around 1:30. Admitted overnight with the diagnosis of a mild heart attack and performed a heart catheterization where they found no major blockage. One artery noted 30% blocked but that overall heart function looked good. Discharged on 12/31/2020. -reported by patient via email, on 1/3/2021 @ 4:49pm

Bell?s palsy, right side of face is numb, with difficulty closing eyes, smiling, raising eyebrows, eating, drinking, swallowing.

12/21 had covid vaccine (dose 1). On evening of 12/29 had sudden onset of mild neck pain and significant weakness and numbness of left arm, weak hand grip, clumsiness in hand . Did not improve after trying to shake arm/move around , and took prednisone 40mg oral. Went to ER and had CT Cspine which did not show evidence of cervical pathology. Continued with corticosteroids, sought consultation with PMR and neurology specialists, and steroid dose increased to 60mg/day. Some improvement in strength , but still have diminished sensation and strength in left hand/arm. Unable to perform full job tasks as I am left hand dominant. Likely brachial neuritis / parsonage turner syndrome per both specialists seen. Continuing with corticosteroids at this time, pending bloodwork and OT evaluation

Resident exhibited no adverse events during 30 minute monitoring following vaccine administration. Resident found without pulse at 1900.

thrombotic stroke -necessitating hospitalization; and craniotomy; required mechanical ventilator for 2 days. Patient now extubated, breathing on her own. Patient remains hospitalized with marked deficits (aphasic)

Pt experienced nausea, shortness of breath, chest tightness and anxiety and then lost consciousness. Vitals were obtained several times during the medical intervention. Respirations were within normal

limits throughout, BP was 135/89 initially, then rose to 210/110, then declined to 180s/? prior to EMS assuming care. Heart rate was 47 initially, then rose to normal limits. Treated with epinephrine, Benadryl and ammonia smelling salts and transported by ambulance to hospital.

Lightheadedness, throat tightness. Increasing chest tightness. History of atrial fibrillation and bilateral breast implants. Received two doses of epinephrine and one dose of diphenhydramine.

Patient developed a septic knee (history of arthroplasty) need for immediate surgery, hospitalization and months to years of antibiotics in his future now.

Presented to the ED after developing chest tightness, cough, lightheadedness, and throat closing sensation. She received the Moderna COVID-19 vaccine on the morning of presentation. Within 15 minutes of receiving the vaccine she developed pain and numbness, starting at the injection site traveling down the ulnar aspect of her arm, and nausea. Over the next several hours she continued to develop worsening nausea, chest tightness, cough, lightheadedness, and the sensation that her throat closing. She took PO Benadryl 25mg; however, her symptoms were not alleviated. She was subsequently evaluated in the ED. á Received PO Benadryl 25mg, IV Benadryl 25mg, Epinephrine 0.3mg x 2, IV Famotidine 20mg, IV Solumedrol 125mg & 60mg, DuoNebs x 3, Racepinephrine x 1.

Decompensation and temp 103.6.

Around 10 or 11 pm, arm pain, chills, fatigue, headache, nausea, swollen lymph nodes, lightheadedness, fainted in tub. Next day, fatigue all day, couldn't talk, or eat. Went back to bed again. The following day hot flashes, weakness. went to ER. Felt like blood pressure was dropping, tingling in legs, difficulty lifting her head.

20 minutes after receiving the vaccination the resident started to not feel well. She said she felt very far away and just kept repeating I don't feel well. She was diaphoretic and her chest was very red and she kept scratching and rubbing it at it. I asked if she wanted IM Benadryl or epipen and she at first denied. She also said she felt like she needed to focus on her breathing. At this time we decided it was best to administer Epipen x 1 dose. Immediately after she felt better. She was observed for another 30 minutes and then went home. at 7:17pm I called and spoke with her. She said her arm was sore and that her oxygen levels were about 88-89% which is low for her but she said she felt fine and is currently working right now.

Presented to the ED with cc of left sided facial and LUE numbness and weakness x 1 days. Patient received her COVID-19 vaccination on 12/30/2020 around 1PM. Immediately after the injection in her left shoulder, she began to feel warmth and numbness in her left shoulder, arm, neck, face, and chest. She reports later experiencing nausea, palpitations, and left arm weakness. Her symptoms persisted, and her family noted a left sided facial droop which prompted her ED visit. á In the ED, patient was noted to have some left sided facial droop and left arm and leg weakness. CT head and CTA showed no acute abnormalities. Tele-neurology was consulted who recommended admission to rule out acute stroke. Ultimately, work up was negative and symptoms resolved. Symptoms appear to be related to the vaccine.

Severe joint aches, fever-type symptoms, nausea

Cough began approx 5 min post vaccine, then pt experienced flushing of neck, chest tightness and SOB. Placed on O2 mask at 8L/min, given 1 dose of Epi and transferred to ED

On 12/24 at around 10 PM, circulation to my 4th left digit significantly decreased after being outside of my car for around 15 minutes during a temperature of about 50 degrees. I realized when sharp pain was felt at the digit. After about 5 minutes the digit felt numb. I got in my car, turned on the heater, and massaged my finger. Sharp pain was felt again as circulation returned to the digit. The event last approximately 10 minutes from the moment I realized the finger was pale until color returned. This occurred again on 12/27 at around 2 PM as I walked from my car into a store at a temperature of about 40 degrees. This time, discoloration occurred bilaterally on my left 3rd, 4th, and 5th digits and my right 2nd, 3rd, 4th, and 5th digits. The event lasted more than 15 minutes with constant massaging. This has occurred two more times since then, both times occurring bilaterally with minimal exposure to cold.

Fever to 103.4F for approximately 4 hours. Myalgias.

within 20 of the injection I strted to salivate and feeling nauseated. returned to clinic and was monitor there. my blood pressure was noted to be low at 115/41. HR 74. reepat BP was 121/48 which is much lower than my usal BP. i was observed for about 1 hrs. the sx's did not go away but the BP improved a little to 130/64 standing. I went home develop injection site pain, fatigue, headache and the pesistent salivation did not go away. after 1 wk it decreased in frequency but still present today. I can not do my normal activity as this worsen the symptom. and my blood pressure has not normalized. still run in 110's/60's. the headaches and fatigue are becoming a burden.

7 days post injection developed significant hives and edema at injection site

Left antecubital rash and pruritic lasting last 5 days, self treated with hydrocortisone 2.5% cream two times partially relieving the pruritic and redness, but still present at time of report.

At 17:00, the injection site started to itch and was warm to the touch. At 4:00 on 01/04/2021, I experienced extreme vertigo while washing my hands at a sink. I returned to bed to get the vertigo to pass, but then vomited at 4:30. I was extremely tired the remainder of the day, sleeping often and have been flushed all day as well.

after the injection I became lightheaded and my blood rose to 155/94. after a hour both my pressure and lightheadness went away. on 1/1 I felt fatigue at work and the injection site began to hurt. On 1/2 I stood home and was still fatigue and had some tension in my neck area. On 1/3 began to feel better no pain at the injection site, no longer fatique, and no tension on my neck.

"15 minutes after patient received her #1 Pfizer vaccine, she started to feel flushed with some throat irritation. She states she feels "" a bit shaky inside "". Given juice and crackers. BP 143/84. heart rate 89. O2 sat 99%. She was moved into another quieter observation area. She claims she felt better. Given H20 to drink. States she had a bit of chest discomfort but this was nothing new to her. She has been having chest discomfort for the past 1-2 weeks periodically. Upon observing patient for 40 minutes, patient

states, she felt better. BP 115/78, heart rate 80. Patient was then released. She states this is the first time this has happened while taking an IM injection."

One hour post shot, heart beat went up to 120 at rest. Slight dizziness. This passed. Later in the evening compared injection sites with others in the household. Mine is redder, more swollen and seems more tender than others.

Fever, nausea, body aches

Received covid vaccine 1/2 at 2pm. Around 7pm that night, left arm pain and slight itching of whole body. did not think much of it. woke up once in middle of night at 4am with racing heart but went back to sleep. Around 9 am next morning started getting chills, initially mild then severe and developed severe myalgias; could not get out of bed or lift arms or limbs. having chest tightness and shortness of breath. pressing on chest wall hurts, hard to take deep breath. Temps of 99.5 most of morning. started taking tylenol total of 1 gram. 1 hour after tylenol shaking and rigors with sweating. had temp of 101 after tylenol. HR 110 at this time (my baseline is around 60s). O2 sat remained normal. Went to ER for testing for covid in case this was covid--test negative. Felt a little better morning of 1/4--no fever. tried to work 1/2 day; called out sick. lots of brain fog, fatigue mental slowing. still having intermittent chest tightness and sob; feel like i cannot expand my lungs. deep breath makes me cough. had few small red bumps on left antecubital fossa that resolved. i'm a physician, i'm concerned this was a severe reaction and was advised to report this.

About 3 minutes after getting the injection, my heart rate elevated, I was dizzy and felt faint with some chest tightness. I told RN, the nurse who gave me the injection and I was told to lay down on my back and she lifted both of my legs perpendicular to the floor. My hands and feet were tingling. My blood pressure was taken and the first reading was elevated and hear rate was 102. I was given a can of apple juice and I felt better after drinking it. Since the blood pressure cuff was too large for me, I was able to go downstairs to urgent care and get a reading with a smaller cuff. The last BP reading was had lowered and I was able to leave. I did not feel well for a good 45 min. My left arm was very sore for the first 48 hours. It did not go away for at least 5 days.

Injection sight pain and swelling, headache, fatigue, omalaise.

I developed severe hives all over my body hours about 19 hours after the shot. Intense itching woke me up at 4:40am the day after receiving the vaccine. The reaction worsened for the next 3 days and began to settle/decrease at the end of the 3rd day. I also felt somewhat disoriented through the allergic reaction period, and on the day after the vaccine I felt slight pain on my chest. I did not experience shortness of breath or have trouble breathing at any point.

High grade fever with chills almost like rigors 103.8 F Happened after 9 pm Initially started with malaise Fever being monitored throughout the night

Numbness in right cheek of face almost immediately after injection.

tiredness, headache muscle pain, chills, nausea, feeling unwell

paleness, weakness, then a few hours later chills, fever, extreme pain at the injection site, body aches, malaise

Soreness of deltoid resolved 2 days after vaccine. Normal shoulder for 7 days. Day 8 post vaccination onset of itching, swelling and redness of left should, continuing now x2 days. No other systemic symptoms. No pain.

Began experiencing nausea and general stomach pains the morning after receiving the vaccine. After one day of pain and discomfort I woke the following morning (~44hrs after receiving the vaccine) to extreme acute abdominal pain in the lower right abdomen. Went to Urgent Care facility and was diagnosed by CT scan as having acute appendicitis. An emergency appendectomy was scheduled and performed for later that evening. I stayed at the Hospital overnight on 12/24/2020 post operatively on IV antibiotics to recover from the appendectomy. Was discharged from the hospital on 12/25/2020 and have been recovering for about 10 days now with limitted activity.

Fever 101.0

At time of injection and for about 30 minutes after, had light tingling to left arm to fingertips, face flushed and warm. Resolved without intervention. No other side effects except muscle soreness to this arm. (Wouldn't report but a coworker had a similar but more severe reaction and is still having effects 3 wks out)

Patient reported swelling on the injection site, itchiness, warmth and soreness.

12/31, 08:30pm: Immediate pain & welt developed at sight 12/31, 08:45pm: Slight numbness & tingling in left hand, persisted approximately 12 hours 12/31, 09:30pm (the following s/s persisted in varying degrees until 01/02): exhaustion/fatigue, headache, dizziness, nausea, chills 01/02, 08:30am: chills/cold sweat/fever (temp not confirmed, as my home thermometer had died, but I woke up later that night drenched in sweat as though a fever had broken, and since then my body temp has been normal (no cold chills or hot flashes) and other s/s have also decreased significantly) 01/03: minimal s/s - lingering fatigue, mild 01/04: 03:00a: woke up with cough - uncertain if related (seasonal allergies?)

Symptoms were chills, fatigue, body aches, headache, fever, tachycardia that started about 12 hours after receiving the vaccine and lasted for about 3 days.

Age at the time of vaccination was 16. Not identified until after the vaccine was administered.

light headed and nausea for 3 days

"10 minutes after receiving vaccination, patient reported rapid heart rate, fatigue, felt weak, hot, and palpitations. Patient reported tachycardia with heart rate 160-170's. Transient numbness to hands and perioral region. Presented to ED, was monitored with resolution of symptoms. On 1/4/21 patient presented to ED with tachycardia with HR up to 160s, Episode was severe, causing lightheadedness, ""throat squeezing"", with bilat UE paresthesias. Episode lasted 20 minutes. Patient evaluated in ED and discharged with outpatient follow up with cardiology and endocrinologist."

Tight throat.Drank 1 pill benadryl.After few hours the symptoms were gone

less than 24 hours after getting shot #1 i felt as if i was coming down with a cold, very congested, stuffy nose, slight sore throat probably from drainage. injection site pain which is normal, but i just felt under the weather. it cleared up within 48 hours of time of injection.

Cold legs, Fever, bodyache including fingers ache, chills, nausea, body weakness, headache. From Saturday to Tuesday. Tylenol

tested positive for COVID19 via antigen test; tested positive for COVID19 via antigen test; having no sense of taste and smell; having no sense of taste and smell; fever; scratchy throat; This is a spontaneous report from a contactable nurse. A 26-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ168J), via an unspecified route of administration on 21Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. After getting vaccinated, patient developed a fever on 22Dec2020. On 23Dec2020, the patient has no taste and smell and tested (used the Sofia test) positive for COVID. The patient was told to quarantine and take off work for 10 days. The patient has felt like she has had a scratchy throat. Patient has not taken her allegra. The outcome of events was unknown.; Sender's Comments: A causal role of BNT162B2 would seem unlikely based on the temporal gap between the vaccination and the event onset.

"patient received the PFIZER-BIONTECH COVID-19 MRNA VACCINE and then tested positive for COVID; patient received the PFIZER-BIONTECH COVID-19 MRNA VACCINE and then tested positive for COVID; This is a spontaneous report from a contactable pharmacist. A 40-year-old female patient received the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number and Expiration Date: Unknown), via an unspecified route of administration on 18Dec2020 at a single dose for COVID-19 immunization. The patient's medical history included high body mass index (BMI) from an unknown date and unknown if ongoing. Concomitant medications were not reported. On 22Dec2020, the patient received the PFIZER-BIONTECH COVID-19 MRNA VACCINE and then tested positive for COVID; and showed symptoms. The events were assessed as medically significant. The clinical course was reported as follows: The 40-year-old female patient, with comorbidities ""like high BMI"", received the Pfizer BioNTech COVID vaccine on 18Dec2020 and she had tested positive for COVID on 22Dec2020 and she was showing symptoms; however, they were not severe. The pharmacist did not describe the symptoms. In response to further probing, the pharmacist stated, ""can I do this tomorrow because I need to call patient and ask her about if they have an opinion regarding the monoclonal antibodies treatment."" The pharmacist wanted to know if there was information on consumers receiving antibodies after receiving the vaccine. The pharmacist stated the patient was eligible for antibody treatment. The patient underwent lab tests and procedures which included SARS-CoV-2 test: positive on 22Dec2020. The clinical outcome of the events was unknown. The batch/lot numbers for the vaccine, BNT162B2, were not provided and will be requested during follow up.; Sender's Comments: The reported tested positive for COVID after immunization with BNT162B2 is considered related to the administration of the suspect, BNT162B2."

tested positive for covid; tested positive for covid; coughing; congestion; could not sleep that night; her temperature is still low/temperature was lower around 96 or 97; fever; This is a spontaneous report from a contactable consumer (patient). A female patient of an unspecified age received first dose of BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine, lot number: EH9899), via an unspecified route of administration on 15Dec2020 at a single dose, for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the Covid-19 shot 8 days ago on 15Dec2020. She tested positive for COVID on 23Dec2020. She worked in the emergency room, clarified she was a certified Nurse Assistant (CNA). She was hesitant about taking the COVID-19 vaccine. She was curious since she has been around the virus 24/7 since the pandemic started since she works in the emergency room. When she took the COVID-19 shot, stated she felt great the next day and could not sleep at night in Dec2020 which is not normal for her. It's nothing like the flu shot. It was strange since she has been around the virus all this time, she felt like she had COVID in Feb2020, but she was not tested then. She does not ever get sick and she was down for two days with a fever in Dec2020. After those two days, she always had a low-grade fever of 98 or 99 which was constant. After she took the COVID vaccine her temperature was normal, her temperature was lower around 96 or 97 in Dec2020. She woke up on 23Dec2020 and she had congestion and her temperature was still low. She went to work, and she was told she looked like she had no sleep. She was coughing 23Dec2020 morning, but she did not have any symptoms as far as temperature. She realized that the COVID 19 shot is only 50% effective. She is asking if she should get the second dose. The outcome of events was unknown.

30 mins after vaccination caller was notified patient tested positive for covid; 30 mins after vaccination caller was notified patient tested positive for covid; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for immunization. The patient's medical history and concomitant medications were not reported. 30 mins after vaccination caller was notified patient tested positive for covid on an unspecified date with outcome of unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information currently available (30 mins after vaccination Covid test found positive), no effect of the suspect vaccine could be reasonably achieved to protect from the targeted infection/disease due to the very short time lag. Instead, the positive COVID represents the pre-existing infection prior to vaccine use. Further information like confirmative COVID 19 Nucleic acid/ PCR test together with any associated symptoms are needed for full medical assessment.

tested positive COVID; tested positive COVID; nasal congestion; loss of smell; This is a spontaneous report from a contactable physician (patient). A 46-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EK5730, Expiration Date Mar2021), via an unspecified route of administration in her right deltoid on 19Dec2020 at single dose for COVID-19 immunization. Medical history included ongoing Crohn's disease from 2007/ diagnosed at 33 years old. There were no other concomitant drugs. The doctor who received the COVID vaccine stated that she must had been exposed to the virus prior to receiving the vaccine because she became symptomatic 48 hours after getting the vaccine. She noted that on Pfizer website recommended that a person not get the vaccine until 6 weeks after active infection but she of course did not know she had been exposed and when her second dose

was due, she would not be 6 weeks after active infections. The vaccine was received on 19Dec2020 and she tested positive on 22Dec2020. The only symptoms she had experienced after testing positive are nasal congestion and loss of smell and they started on 21Dec2020 in the morning. She had had no worsening of her Crohn's disease. The only testing she had had done was the PCR testing for COVID. No treatments for the symptoms at this point. The outcome of the events tested positive COVID was not recovered, while for other events was unknown.; Sender's Comments: A causal role of BNT162B2 would seem unlikely based on the temporal gap between the vaccination therapy and the event onset.

Tested positive for covid; Tested positive for covid; This is a spontaneous report from a contactable nurse (patient). A 33-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899) intramuscularly at right arm on 18Dec2020 14:30 at single dose for COVID-19 immunization. Medical history included asthma. No allergies to medications, food, or other products. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient developed severe nasal burning sensation the first two days of injection along with severe headache that lasted for 4 days. He lost his sense of taste and smell (23Dec2020) 5 days after vaccine was administered, tested positive for Covid (23Dec2020 16:30) with use of ABBOTT rapid test which was performed at his employment. Pending Covid nasal swab fulgent which was obtained on 23Dec2020 and sent out to reference lab. Patient was just wondering if any of these symptoms and/or testing positive after administration was a rare side effect. The adverse event resulted in doctor or other healthcare professional office/clinic visit. No treatment received for the adverse events. Prior to vaccination, the patient was not diagnosed with COVID-19. The outcome of the events was not recovered.; Sender's Comments: Vaccine BNT162B2 provides protection to COVID-19 after at least 7 days have elapsed from the second dose (21 days post first injection). These conditions are not met in the present report. The reported symptoms are compatible with COVID-19 illness.

positive for Covid with symptoms; positive for Covid with symptoms; positive for streph; positive for influenza; This is a spontaneous report from a contactable physician and nurse. A 68-year-old female patient received bnt162b2, via an unspecified route of administration on 17Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced positive for COVID with symptoms, positive for streph and positive for influenza in Dec2020. Additional Context: caller stated that she had a patient that got Covid vaccine on 17Dec2020 who was complaining of muscle aches, no fever, sudden loss of taste and smell in the last 24 hours, sore throat and a cough. Stated that she cannot attribute the cough to the vaccine. Stated that she was screened for COVID, streph and influenza. Stated that she was positive for covid and streph. Stated that she does not think that and wanted to know if the vaccine would cause a positive from a rapid test. Outcome of the events was unknown. The Lot/Batch and expiry date has been requested.; Sender's Comments: The reported positive for COVID with symptoms after immunization with BNT162B2 is considered related to the suspect, BNT162B2.

Chills, fever and a headache; Chills, fever and a headache; Chills, fever and a headache; tested positive; tested positive; This is a spontaneous report from a contactable nurse. This nurse reported similar events for two patients. This is 1st of two reports. An adult female patient of unspecified age (30-40 yrs

of age) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. The relevant medical history and concomitant medications were not reported. The nurse stated that they gave the vaccines to the patient the past week and the patient was COVID-19 positive at the time of the report. The nurse needed some guidance and needed to know if the patient could receive the second dose or what they were supposed to do. The patient tested positive for COVID-19 on 24Dec2020 after having chills, fever and a headache. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded. The case will be reassessed should additional information become available.,Linked Report(s) : US-PFIZER INC-2020513401 different patient, same drug and event

had another COVID test with positive results on 23Dec; had another COVID test with positive results on 23Dec; This is a spontaneous report from a contactable consumer. A 43-year-old female patient received bnt162b2 (BNT162B2, lot number and expiry date were not reported), via an unspecified route of administration on 18Dec2020 at a single dose for covid-19 vaccination. The vaccination was done in the hospital. The patient's medical history and concomitant medications were not reported. The patient was initially tested negative for covid-19 on 13Dec2020. The patient was not pregnant. The patient believed she may have been infected with COVID as early as 13Dec2020 based on symptoms but test results at that time came back negative. She had vaccine on 18Dec2020 and when symptoms hadn't resolved had another COVID test with positive results on 23Dec2020. The event resulted to a doctor or other healthcare professional office/clinic visit. There was not treatment for the event. The reporter considered the events as non-serious. The outcome of the event was recovering. Information about batch/lot number has been requested.

Received the vaccine and tested positive for Covid today; Received the vaccine and tested positive for Covid today; This is a spontaneous report from a contactable nurse. This nurse is reporting similar events for two patients. This is the first of two reports. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date were not reported), via an unspecified route of administration on 17Dec2020 at single dose for Covid Vaccine/ COVID-19 immunisation. The patient medical history and concomitant medications were not reported. It was reported that the patient received the vaccine and tested positive for COVID today (24Dec2020). She was having symptoms on Saturday (unspecified date in Dec2020), she received her vaccine on Thursday 17Dec2020. The reporter asked several questions, if do they get the second vaccination in 3 weeks and what will be the process, does it do anything to it, or if does it make it worse or better. The outcome of the event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded.,Linked Report(s) : US-PFIZER INC-2020513377 same reporter, same drug, similar event, different patient.

Received the vaccine and tested positive for Covid today; Received the vaccine and tested positive for Covid today; This is a spontaneous report from a contactable nurse. This Nurse reported similar events for two different patients. This is second of two reports. A female patient of an unspecified age received

bnt162b2, via an unspecified route of administration on 21Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the vaccine and tested positive for covid today (24Dec2020).It was further reported that the patient showed up positive today (24Dec2020) and her symptoms have been on and off, she just got her vaccine 21Dec2020. The outcome of the event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Preventive effect of BNT162b2 is documented after 7 days from the second dosing. This case does not match this requirement.,Linked Report(s) : US-PFIZER INC-2020513367 same reporter/drug. different patient and event.

Drug ineffective; tested positive; chills; fever; headache; This is a spontaneous report from a contactable nurse. This nurse reported similar events for two patients. This is 2nd of two reports. A female patient of an unspecified age (30-40 year-old)started to receive bnt162b2 (BNT162B2) , via an unspecified route of administration on 02Dec2020 at single dose for covid-19 immunisation . The patient medical history and concomitant medications were not reported. The patient was tested positive to COVID-19 on 24Dec2020 after having chills, fever and a headache. The outcome of the events was unknown. The reporter stated that these were worse than just side effects. The reporter is wondering if the patient can receive the second dose. Information on the lot/batch number has been requested.; Sender's Comments: Preventive effect of BNT162b2 is documented 7 days after the 2 dose. This case does not match this requirement,Linked Report(s) : US-PFIZER INC-2020512742 different patient, same drug and event

tested positive for covid; tested positive for covid; This is a spontaneous report from a Pfizer-sponsored program, Pfizer First Connect. A contactable consumer (patient) reported that a female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiration date were not reported), via an unspecified route of administration on 23Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the COVID vaccine on Wednesday this week (23Dec2020) and she tested positive for COVID yesterday (25Dec2020). She wanted to know if she should take the second dose of the vaccine. Outcome of the events was unknown. Information on the lot/batch number has been requested.

"I received the covid-19 vaccine and then afterwards contracted covid-19; I received the covid-19 vaccine and then afterwards contracted covid-19; This is a spontaneous report from a contactable nurse. A female patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for covid-19 vaccine. The patient medical history and concomitant medications were not reported. The patient stated on an unspecified date, ""I received the covid-19 vaccine and then afterwards contracted covid-19. I was told by my hospital that because of this I needed to defer the second dose for 90 days. Is this best practice? Or should I take the second dose in 3 weeks as scheduled?"". The outcome of the events was unknown. Information on the batch/lot number has been requested.; Sender's Comments: BNT162b2 provides protection against COVID-19 seven days after the second dose is administered. This case does not match this condition"

"tested positive for Covid; tested positive for Covid; No symptoms at present time; This is a spontaneous report from a contactable nurse (patient). A 50-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EV1685) via an unspecified route of administration on 22Dec2020 at single dose for COVID-19 immunization. The patient's medical history included Covid-19 12 weeks before 25Dec2020. The concomitant drug was reported as levothyroxine sodium (SYNTHROID), hydrochlorothiazide and vitamins. The patient got the vaccine (Covid 19 Vaccine) on 22Dec2020 (Tuesday) and then on 25Dec2020 (today) had to be tested at work and was tested positive for Covid. So, she was wondering if that might have something to do with the vaccine or it was not for sure. Patient had already had Covid once and this is the first time she got tested since for 12 weeks. It just happened to be three days after the vaccine. So, the lady she work with told her a study was done and people were shown to test positive like two days after they got the vaccine. So, that's what she wanted to find out. If that could be."" She states the test on 25Dec2020 was a routine follow up Covid-19 test. No symptoms at present time. The outcome of the events was unknown.; Sender's Comments: BNT162b2 provides protection against COVID-19 after 7 days from the second dose. This case does not match this condition."

received the vaccine on Friday and tested positive; received the vaccine on Friday and tested positive; This is a spontaneous report from a Pfizer-sponsored program Pfizer First Connect from a contactable other healthcare professional. A 27-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration in Dec2020 (reported as on Friday) at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient received the vaccine on Friday and tested positive today 26Dec2020. The outcome of event was unknown. Information about batch/lot number has been requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported event COVID-19 virus test positive based on the known safety profile.

Moderna COVID-19 Vaccine EUA Injection site redness, swelling, itching, discomfort the size of a fist 7 days after injection.

tested positive for COVID with symptoms such as nasal congestion, sore throat, weakness, and flu-like symptoms; tested positive for COVID with symptoms such as nasal congestion, sore throat, weakness, and flu-like symptoms; This is a spontaneous report from a contactable physician (patient). A 46-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EJ1685), via an unspecified route of administration on 20Dec2020 at single dose for covid-19 immunization. Vaccine location was left deltoid. The facility type vaccine was hospital. Medical history included polycystic ovarian diseases from an unknown date. Concomitant medication included metformin, omeprazole, apremilast (OTEZLA). Patient stated she got the vaccine on the 18th. She took the vaccine on 20Dec2020. Yesterday (25Dec2020) she started to feeling sick and today (26Dec2020) patient got tested and she have Covid. She reported to have tested positive for COVID today (26Dec2020) with symptoms such as nasal congestion, sore throat, weakness, and flu-like symptoms yesterday at around 4:00pm. This was the first time she has taken the Covid test. The physician stated she didn't know the causality between the event and vaccine. The action taken in response to the events for BNT162B2 was not

applicable. The outcome of events was unknown.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported event positive test for COVID based on the known safety profile. However the short duration of 5 days since the vaccine first dose is given it is unlikely patient would have fully developed immunity.

Got vaccinated and contracted COVID the following week; Got vaccinated and contracted COVID the following week; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age and gender received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number unknown as the reporter did not have any of that information at the moment of reporting), via an unspecified route of administration on 15Dec2020 at single dose for COVID-19 vaccination. The patient's medical history and concomitant medications were not reported. It was reported that the patient got vaccinated on December 15th and contracted COVID the following week (Dec2020). Treatment included regeneron infusion last night (24Dec2020). Patient was wondering if zinc supplements should be taken or how to handle own's immune system because the patient had the first immunization. The outcome of the event was unknown. Information on lot/batch number has been requested.

had a testing, came up positive; had a testing, came up positive/sporadic coughing and a little short of breath. Maybe a little sore throat; This is a spontaneous report from a contactable consumer. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EJ1685), via an unspecified route of administration on 20Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received Pfizer COVID Vaccine (further clarified) on 20Dec2020. And maybe two days after that, the patient kind of developed a little like very sporadic coughing, it was very mild and a little short of breath. Maybe a little sore throat so that's why the patient was concerned. The patient had a testing in Dec2020, they did swab the patient's throat, it came up positive. The outcome of events was unknown.

Very tired; Cold/head cold; upset stomach; she was not feeling well; it got her all congested and she got the head cold in Dec2020; little whooping cough; I had severe headaches and it was just too uncomfortable; my head was so congested; worst headache; it was just too uncomfortable; This is a spontaneous report from a contactable consumer(patient). A 59-year-old female patient received BNT162B2 via an unspecified route of administration on 22Dec2020 at the 59-year-old at single dose for Covid virus. The medical history included Congested, head cold and Covid virus. There was no concomitant medication. The patient work at a hospital and she went for a Covid shot (clarified as Covid 19 vaccine) on 22Dec2020 and she got a very bad reaction from it which bothered her, she had severe headaches in Dec2020 and it was just too uncomfortable and on 24th she was very tired, she didn't had too much of upset stomach in Dec2020 but it was not all that bad by 9 in the clock by morning she was at work and everything and she was told by if she was not feeling well she can walk by a day, but her question and her concern was back on November okay she had called in sick around, she had a funeral that she gone too and people that were at the funeral, unfortunately were smoking outside and smoke bothers me very much, she get congested and she get head cold from it you know and I was thinking it's nothing it's just a cold and somebody told her no (name) you better go get yourself to the employee health office and get checked out and she didn't bother doing that, she said no it's just the cold she will

be fine but then it just got worse down the road and she said to herself may be she better just to say she did it, so she called in sick on 24th because she had the cold still and she called and she went to employee health office on 25th she still had the headache and she still had the cold, however when she went to the health office they said to her well stay out of work and we will get back in touch with her and she said okay and she will do that so when they got back in touch with her they said they do have the Covid and she said ohhh she said okay so she stayed out of work and she went to work on the 07Dec so she was wondering whole time, so her confusion was this she was told if you already had the virus in her which at that time, she did not know what it was she just thought it was from cigarette smoke because it got her all congested and she got the head cold in Dec2020 and the whole thing that went along with it and the health employee officer know you had the virus and it's just the virus and she go oh great and that's when they told her to stay out of work and she said okay fine then she just have to that, so in the meantime everybody in the work said hi calling me checking up on her and she said it's so nice of you people, she appreciate it but then she went back to work she was still feeling you know much better than she was but she had little whooping cough in Dec2020 but that was not really that bad, so they said you going to get the shot or not, and she said she don't know she kind of debatable, she don't know if she should get it, because she work in the hospital or she should not get, she said she don't know she was kind of up and some people like she get it sometime your health was not that good but on the other hand everybody that is working here in the hospital working with patients because was work right in the ICU, all over the floor you know spreading right there so she said oh alright so she kicked myself and said go get the shot, get it just over with and get it out of here so that is when she took her shot that was on 22nd and on 24th she was very tired all day no she was tired all day but she was kind of dragging most of the day but she had on the 20th no that was fine on the 20th okay for some reason she guess it was after work that week on 19th, she came home and her head was so congested and she had the worst headache and she felt like a wand had hit her over the head, it was horrible and all she could smell was cigarette smoke, like is her neighbor smoking here so she went down the hall because in live in building that used to be hotel but now they turned that into Condominium and she walk up and down the hall and she was like was somebody smoking or why this or why smell this so strong and the all the lights off in a hallway and she don't want to offend anybody but they had to go to work and somebody elsewhere and she am like she can't stand this smell and they gave this shot and she went for this shot, and they told us to come back she think it was a week or something like that to get the second shot, and she am saying if this going to cost her going to feel this way again, she don't want to get the second shot, she told them that and they told her to call this number and talk to them.The only reason she got it because they encouraged to get it. Even though she had the Covid virus, people said if you already have the virus you don't need to get a shot but people were encouraging because that's she thought well she guess she will get it. But she was mad that she got because it made her sick in Dec2020. And because we already got it they want us to go back and get the second shot and what she was m trying to say to you is, without take and hour 3 hour of conversation here she just want to say she don't want to get back and get the second shot and if it is okay by you guys somehow send her a letter or whatever it is, whoever she have to talk to because she don't want to go back and get the second shot just because of getting sick. She took Excedrin because that works for my headache. She didn't understand why you need all this information history with all this when all she want to say was she didn't want to get a second shot. The outcome of events Head

cold and Headache was not recovered, the other events was unknown. Information on the lot/batch number has been requested.

Coworker who received the shot is positive too; Coworker who received the shot is positive too; This is a spontaneous report from a contactable consumer. This consumer reporter similar events for two patients. This is the second of two reports. A patient of unspecified age and gender received bnt162b2 (BNT162B2, lot number and expiry date were not reported), via an unspecified route of administration on an unspecified date at a single dose for covid-19 vaccination. The patient's medical history concomitant medications were not reported. The reporter's coworker who received the shot was positive too. The outcome of the event was unknown. Information about lot/batch number has been requested.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020513735 same reporter/product, different patient, similar event

Caller stated that she received covid vaccine on Tuesday and was tested positive on Friday.; Caller stated that she received covid vaccine on Tuesday and was tested positive on Friday.; This is a spontaneous report from a contactable nurse reporting for herself. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot number and expiration date not reported), via an unspecified route of administration on Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient stated that she received the vaccine on Tuesday (Dec2020) and was tested positive on Friday (Dec2020). The patient stated she was told that vaccine was contraindicated in people who have COVID-19. The outcome of the events was unknown. Information on the Lot/Batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded.

hypersensitivity reaction to COVID-19 Vaccine; throat pain that progressed to a little bit of tightness; ear pain; wheals develop on her back bilaterally; This is a spontaneous report from a contactable pharmacist. A female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EJ1685 and Expiry date: 31Mar2021, strength: 0.3ml) (NDC number: 59267-1000-2) via Intramuscular on 21Dec2020 12:21PM at 0.3ml single dose for COVID-19 immunization. The patient's medical history and concomitant drug was reported as none. The patient experienced a hypersensitivity reaction to COVID-19 Vaccine late last night on 21Dec2020. Hypersensitivity reaction: Further described as patient developed throat pain that progressed to a little bit of tightness; some ear pain; and had wheals develop on her back bilaterally. She was transported to the emergency room on 21Dec2020 where she received treatment and was under observation. The outcome of events was unknown. Since whether outcome recovered completely, recovered with lasting effects or just improved is unknown. She was not admitted to the hospital; she was sent home from the emergency room after 2.5 hours. Caller reported seriousness criteria as medically significant because event required medical intervention. Causality was very likely. Patient at time of this report is scheduled to receive the second dose of vaccine; they have not determined if she will receive the second scheduled dose or change/stop dose in response to this event. First dose; scheduled to receive a second dose; have not determined if will be continuing with it.; Sender's Comments: Based on the compatible time association, the hypersensitivity reactions are reasonably related to suspect BNT162B2 administration.

positive COVID-19 test with symptoms; positive COVID-19 test with symptoms; This is a spontaneous report from a contactable nurse, who is also the patient. This 31-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration in Dec2020 at single dose for COVID-19 immunisation. Relevant medical history and concomitant medications were not reported. The reporting nurse stated that she received her first dose of the COVID-19 vaccine on Saturday (e.g. Dec2020). She had taken a PCR test on Thursday and received a negative result on Saturday, the same day she received her vaccination. She reported developing a fever on Monday night and testing positive for COVID-19 on Tuesday. At the time of the report, the outcome of the events was unknown. The information about lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspect vaccine BNT162B2 in this patient cannot be completely excluded. More information such as laboratory findings on viral nucleic acid /PCR test needed for meaningful medical assessment.

All of a sudden I did not have any taste or smell; All of a sudden I did not have any taste or smell; Tested positive; Tested positive; This is a spontaneous report from a contactable nurse reported for herself. A 29-year-old female patient received bnt162b2 ((PFIZER-BIONTECH COVID-19 VACCINE, batch/lot EH9899), via an unspecified route of administration on 22Dec2020 at single dose for covid-19 immunisation. Medical history included seasonal allergy. Concomitant medication included cetirizine hydrochloride (ZYRTEC [CETIRIZINE HYDROCHLORIDE]). The patient was taking a multivitamin a day. The patient experienced typical symptoms no taste, smell on 22Dec2020, Slight tingling, body aches, chills, all the other symptoms for Covid and now positive for Covid in Dec2020. Outcome of events was unknown.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported event positive for Covid based on the known safety profile.

"I am not feeling well; had a Covid PCR done swapped on yesterday and I am Covid positive; had a Covid PCR done swapped on yesterday and I am Covid positive; This is a spontaneous report from a contactable nurse. This nurse reported for herself that the 35-year-old female patient who received bnt162b2 (BNT162B2), via unknown route of administration on 23Dec2020 at single dose for covid-19 immunisation. Medical history was none. Concomitant medications were none. Nurse stated, ""I received the Pfizer Vaccine this Wednesday and right before getting the vaccine, I had a Covid test (captured as per verbatim) on before the vaccine on Tuesday (22Dec2020) was negative. I had a Covid PCR done swapped on yesterday (25Dec2020) and I am Covid positive. So I have the vaccine and I am Covid positive"" Nurse stated ""It's ""140"" ""130"" pounds (further bot clarified)."" The patient was not feeling well. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the limited available information, the company considers that a causal relationship between the SARS-CoV-2 test positive and vaccination with BNT162B2 cannot be excluded."

positive with Covid; having Covid symptoms; positive with Covid; having Covid symptoms; This is a spontaneous report from a contactable nurse. A 54-year-old female patient (mother) received BNT162B2 (Batch/lot number: EK5730), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunisation. Medical history included asthma. Concomitant medications

were not reported. Patient got the vaccine administered on 18Dec2020 and after that she was diagnosed positive with Covid on 24Dec2020, so now she was having Covid symptoms obviously after the vaccine but like not due to the vaccine. Reporter was just concerned what her next dose supposed to be scheduled for 08Jan2021, was she still supposed to get the second dose or what. No treatment received. Patient was just taking vitamins. Reporter also reported that typically it was not supposed to be but was trying to get the information on enhanced immune response. Outcome of the event was unknown.; Sender's Comments: The reported positive with Covid after COVID-19 immunization is considered ineffective of BNT162B2, and the Company cannot completely exclude the possible causality between the reported event and BNT162B2 administration.

sinus issues; positive COVID-19 test with symptoms; positive COVID-19 test with symptoms; right arm sore; This is a spontaneous report from a Pfizer Sponsored Program. A contactable consumer (patient) reported that a 58-year-old male patient received the first dose of BNT162B2 (lot number: EH9899; Expire Date: 31Mar2021), via an unspecified route of administration, in arm, right upper, on 16Dec2020 11:10 AM at single dose for COVID-19 immunization. The vaccination facility type was hospital. The vaccine was not administered at military facility. Patient's medical history (including any illness at time of vaccination) was none. The patient got ill from all pain medications- from prescription strength pain killers to OTC products such as tylenol, ibuprofen and aspirin. All of them make him sick- experienced hot flashes and nausea. No additional vaccines administered on same date of the Pfizer suspect vaccine. Prior vaccinations (within 4 weeks) was none. The concomitant medication included 2 different blood pressure pills, mentioning Lisinopril, but stated he did not think his blood pressure pills were relevant to what he was experiencing with the COVID-19 Vaccine. A MRI tech (clarified by caller as MRI technologist) at a hospital who received the COVID-19 Vaccine on 16Dec2020 (caller clarified he received the vaccine at 11:10 AM on 16Dec2020). Caller stated on 17Dec2020 he had signs of aches and pains allover, a sore arm (clarified as his right arm), no fever. He also experienced sinus issues and a loss of sense of smell. Clarified his right arm was sore for only a day, his sinus issues started on 20Dec2020, and his loss of the sense of smell gradually started on 22Dec2020. He stated on 23Dec2020 he had a COVID-19 test performed and the test result was positive for the COVID-19 virus. Caller asked since he had the first COVID-19 Vaccine dose, and has now tested positive for the COVID-19 virus, should he get the second COVID-19 Vaccine dose scheduled for 06Jan2021. Patient's Height: 5' 8'' as provided by caller, who stated he has shrunk 1''. No further details provided. Patient's Weight: 169 lbs. as provided by caller, who stated his weight was as of today. Reported he worked an overnight shift, clarifying he was injected with the COVID-19 Vaccine after his overnight shift was finished on the morning of 16Dec2020. He stated he came back to work later in the day on 16Dec2020 to work another overnight shift from 9:00 PM to 7:30AM. He said after he finished is overnight shift on the morning of 17Dec2020, he went home to bed, and woke up around 12:00 PM on 17Dec2020. He said when he woke up, he started to feel aches and pains allover, and after that noticed he was getting chills periodically. Clarified he experienced the aches and pains allover for a couple of days, and then the aches and pains went away. He said he then started to get the feeling a sinus infection was coming on, but he never got a sinus infection. He said the aches, pains, and chills came back. Reported his co-worker received the COVID-19 Vaccine on Saturday, 19Dec2020, clarifying his co-worker did well with the COVID-19 Vaccine. He clarified his employer was concerned that he may have exposed his co-worker to COVID-19 when the

two worked together on the overnight shift of 22Dec2020. He said both he and his coworker kept their PPE on the whole time they worked except when the two ate dinner. He said the two of them sat at a round table about 6 feet apart, and took off their masks to eat. He said his partner agreed that the two of them were right at 6 feet apart when the sat at the table to eat dinner, so their employer deemed his coworker as low risk. Reported on 22Dec2020 he had to go back to work, so he was asked for his temperature at the time, which was 98.8 degrees. He did have a flu shot previously. He was instructed as long as he doesn't have a fever over 100 degrees, he can work. The caller said he went to work on 22Dec2020, and read an email from his employer's wellness office. He said the wellness office email spoke about the COVID-19 Vaccine side effects, and instructed employees to contact the wellness office with any COVID-19 Vaccine side effects experienced. He said he left a voicemail with his employer's wellness office explaining exactly what his COVID-19 Vaccine side effects were. He said he instructed his employer's wellness office call him in the afternoon because he was going to go home, go to bed, and wake up at noon on 23Dec2020. He stated he spoke with his employer's wellness office at around 11:30 AM on 23Dec2020, and the wellness office asked for him to go to the hospital, and have a COVID19 test. Caller stated his employer performed a COVID-19 nasal swab test, and on 24Dec2020, he was told he was COVID-19 positive. He said his employer backed up his quarantine start date to 17Dec2020 (the first day he experienced symptoms), and had him follow a 10-day quarantine until 27Dec2020. He stated today, 28Dec2020, was the first day he has been off quarantine. Reported he was not saying he got COVID-19 from receiving the COVID-19 Vaccine, but should he have the second COVID-19 Vaccine injection. Clarified his symptoms were intermittent, and started coming back around 20Dec2020. Reported he was not experiencing any scratchiness in his throat, and his eyes were not watering. He said he has had no cough, no sneezing, and no trouble breathing. He said in general, it felt like something was coming on, saying it was building up, but not getting out. Clarified he had gone back to work on 23Dec2020 to have his COVID-19 nasal swab test performed, and was told by his employer on 24Dec2020 that the COVID-19 nasal swab test was positive. No AE required a visit to emergency room or physician office. The outcome of the event right arm sore was recovered on 18Dec2020 and the other events was unknown.

patient had COVID two days after vaccination; This is a spontaneous report from a non-contactable consumer. A male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number/expiration date unknown) via an unspecified route of administration on 26Dec2020 at a single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. The patient had COVID two days after vaccination (28Dec2020). The outcome of the event was unknown. No follow-up attempts are possible, information about lot/batch number cannot be obtained.

four days after getting her first COVID vaccine injection, she had a COVID positive test result (antigen rapid response test); four days after getting her first COVID vaccine injection, she had a COVID positive test result (antigen rapid response test); This is a spontaneous report from a contactable consumer. A 29-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EK5730/expiration date unknown), dose number 1 via an unspecified route of administration on 23Dec2020 09:00 at a single dose on the left arm for COVID-19 immunization. Medical

history included vaccination of unspecified flu vaccine in Oct2020. No vaccines or new medications were received on the day of the vaccination. The patient stated that on 27Dec2020, four days after getting her first COVID vaccine injection, she had a COVID positive test result (antigen rapid response test). The patient stated that she had been mostly asymptomatic for COVID. The outcome of the events was unknown.

angioedema; swelling of the lips; This is a spontaneous report from a non-contactable nurse (patient). A 45-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at a single dose as COVID-19 vaccine. Medical history included angioedema 23 years ago. Concomitant medications were not reported. The caller wanted to report AE for the COVID-19 vaccine. AE reported that she took the COVID-19 vaccine and after 23 hours, she developed angioedemia on unspecified date. Additionally, she said that she woke up with swelling of the lips on an unspecified date. Given the AE from the first request, it was inquired if it was recommended to get a second dose. The outcome of the events was unknown. No follow-up attempts are possible. Information about lot/batch number cannot be obtained.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of angioedemia with lip swelling cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate

she had a rapid test performed which indicated a positive test result; she had a rapid test performed which indicated a positive test result; This is a spontaneous report from a contactable nurse (patient). A female patient of unspecified age received the first dose of BNT162B2, via an unspecified route of administration on 18Dec2020 at a single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient indicated she received the first dose of the vaccine on the 18th and due to a family member testing positive, she had a SARS-CoV-2 rapid test performed in Dec2020 which indicated a positive test result. Her employment was questioning as to whether this is due to her receipt of vaccine. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The reported information is limited. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

resident (patient) tested positive for COVID, 10 days after the first dose of COVID vaccine; resident (patient) tested positive for COVID, 10 days after the first dose of COVID vaccine; This is a spontaneous report from a contactable physician via a Pfizer sponsored program Pfizer First Connect. A 29-year-old female patient received their first dose of BNT162B2 (lot number and expiry date not reported), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The reporter wanted to know

how long they have to wait for the second dose of the COVID vaccine as her resident (patient) tested positive for COVID on 27Dec2020, 10 days after the first dose of COVID vaccine given to her on the 17Dec2020. The patient underwent lab tests and procedures which included SARS-CoV-2 test: positive on 27Dec2020. The outcome of the events was unknown. Information on the lot/ batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of subject vaccine cannot be excluded for the reported events of LOE and SARS-CoV-2 test positive, based on temporal relationship. There is very limited information provided in this report. This case will be reassessed upon receipt of follow-up information.

tested positive for COVID-19; was given the first COVID-19 dose. After some time, the employee got symptomatic and was tested positive for COVID-19; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received the first dose of bnt162b2, via an unspecified route of administration on an unspecified date at a single dose for Covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient who is employed in a hospital tested negative for COVID-19 then was given the first COVID-19 dose. After some time, the patient got symptomatic and was tested positive for COVID-19. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The reported information is limited. The case will be reassessed upon receipt of follow up information. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Angioedema of lips, throat, eyes, hands. Flushing of hands; Angioedema of lips, throat, eyes, hands. Flushing of hands; Dizziness; Fatigue; Legs became heavy; Joint stiffness of hands; This is a spontaneous report from a contactable healthcare professional (patient). A 36-year-old female patient received the first dose of BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine; Lot number: EJ 1685), intramuscular on the left arm on 23Dec2020 at 06:30 AM in a hospital at a single dose for COVID-19 immunization. Medical history included known allergies of seasonal allergies, cats, and metals; migraines, chronic idiopathic urticaria, and angioedema. The patient was not pregnant and did not have any other vaccine in four weeks. The patient did not have COVID prior to the vaccination and did not test positive to COVID post vaccination (also reported as not been tested for COVID-19 after the vaccination). Concomitant medication included propranolol, cetirizine hydrochloride (ZYRTEC), and sertraline (reported as other medications in two weeks). On 23Dec2020 at 06:45 AM, the patient experienced immediate symptoms of angioedema of lips, throat, eyes, hands; flushing of hands, dizziness, fatigue, legs became heavy, and joint stiffness of hands. She was monitored by colleagues for an hour, prescription for Epi pen refilled, and available angioedema and fatigue persisted for three days. It was reported that the patient was not treated for the adverse events but it was also reported that the AE treatment also included X-ray and antibiotic. Outcome of the events was recovered in Dec2020.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of immediate symptoms of angioedema of lips, throat, eyes, hands, flushing of hands, dizziness, fatigue, legs became heavy, and joint stiffness of hands cannot be excluded, considering the plausible temporal relationship and the known adverse event

profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate

Angioedema; This is a spontaneous report from a contactable Other Health Professional (patient). A 40-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EL1284, intramuscular in the right arm (also reported as right shoulder), first dose on 22Dec2020 00:30 at a single dose for Covid-19 immunization. The patient's relevant medical history included severe reaction to some animal dander and pollen, severe reactions to poison oak, possible drug induced reactions (unspecified) post C-section, mild rash with influenza vaccine this year (2020) (with no other hx of adverse reaction to a vaccine); had allergies to pollen, mold, some animals. The patient previously took influenza vaccine (split virion, inactivated) and experienced rash. The patient had no covid prior vaccination nor was she tested post vaccination. Adverse event reported was angioedema on 24Dec2020 with outcome of recovering. Systems started appearing on 23Dec2020 evening with slight rash and fluid collection under right eye. Developed more rash on 24Dec2020. In the evening to early morning of 25Dec2020, symptoms worsened significantly. Rapid swelling to face occurred. Swelling was concentrated around eyes and cheeks the most. Both right and left side of the face and neck were affected. However, the right side face had a more pronounced reaction. MD ordered oral prednisone and Benadryl as treatment plan. Also, ordered episode-pen for a worst case scenario. Symptoms have been improving under treatment but still persist some. The events were reported as non-serious. The adverse event start date was 24Dec2020 (as reported). The event resulted in doctor or other healthcare professional office/clinic visit.; Sender's Comments: There is a reasonable possibility that the event angioedema was related to BNT162b2 based on known drug safety profile and temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

tested positive for the COVID virus/she was having a symptom, she lost her sense of smell; tested positive for the COVID virus/she was having a symptom, she lost her sense of smell; sinus infection; tested positive for the COVID virus/she was having a symptom, she lost her sense of smell; Her nose being stuffed; tension headache on the back of head; her deltoid was hurting for 24 hours; active infection after getting the first dose; This is a spontaneous report from a contactable pharmacist (patient). A 37-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on the right deltoid on 18Dec2020 at single dose for COVID-19 immunization. Medical history reported as none. There were no concomitant medications. The patient had active infection after getting the first dose, consult if it was still recommended to get the second dose next week or she should be delaying getting the second dose. The patient got the COVID vaccine on the 18Dec2020. Then on the 24Dec2020 she tested positive for the COVID virus. She was due to get the second vaccine on 08Jan2021. She was asking should she still get the 2nd dose of the

vaccine since came up positive. The patient was having a symptom, she lost her sense of smell of 22Dec2020. She lost her sense of smell on the evening on 22Dec2020, it still had not come back at all. She did have sense of taste on the tongue. She thought it was sinus infection, because her head didn't hurt and she was not stuffed anymore. She stated that after the vaccine, she had a tension headache on the back of head, and her deltoid was hurting for 24 hours. Her headache started the same day in the evening, went on till lunch time next day. Her nose being stuffed which she thought was a sinus infection started on Tuesday 22Dec2020, it was more located in the front middle of her forehead. Her nose being stuffed which she thought was a sinus infection started on Tuesday 22Dec2020, it was more located in the front middle of her forehead. She did not have her Card to provide Lot and Expiry, it was at work at the hospital. She was administered the vaccine on the right deltoid, since she didn't want to sleep on it. Prior to vaccine she has had no positive test for Covid. Caller stated that this was super unfortunately coincidental. She had had no antibody test. She had no reactions to vaccines in the past. Test: Respiratory Panel. Result: Negative on unknown date. The outcome of events drug ineffective, COVID-19 and sinus infection was not recovered. The outcome of event tension headache and muscle pain was recovered in Dec2020. The outcome of rest events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of subject vaccine cannot be excluded for the reported events of LOE, COVID 19 and other events, based on temporal relationship. There is very limited information provided in this report. This case will be reassessed upon receipt of follow-up information.

tested positive; tested positive; Symptoms experiencing include having no taste, smell and slight bodyache; Symptoms experiencing include having no taste, smell and slight bodyache; Symptoms experiencing include having no taste, smell and slight bodyache; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). A contactable other-healthcare professional (patient) reported that a female patient of an unspecified age received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was tested positive on 24Dec2020, and symptoms experiencing include having no taste, smell and slight body ache in Dec2020. The patient asked if she could get the second dose. The outcome of the events was unknown. Information about the Lot/batch number has been requested.; Sender's Comments: Based on the limited available information, the company considers that a causal relationship between the COVID-19, with symptoms of having no taste, smell and slight body ache, and vaccination with BNT162B2 cannot be excluded.

Positive rapid test and PCR test after 1st vaccination; Positive rapid test and PCR test after 1st vaccination; This is a spontaneous report from a contactable nurse reporting for her/himself. A patient of unspecified age and gender received the 1st dose of bnt162b2 (BNT162B2), via an unspecified route of administration, on 15Dec2020, at single dose, for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient tested positive on 27Dec2020 on a rapid test and on 28Dec2020 on a respiratory panel by PCR. Next dose was scheduled on 05Jan2021. The information on the lot/batch number has been requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the

reported event Positive rapid test and PCR test based on the known safety profile. However the short duration of 12 days since the vaccine first dose is given it is unlikely patient would have fully developed immunity.

tested positive for coronavirus; tested positive for coronavirus; This is a spontaneous report from a contactable physician (patient). A female patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 22Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced tested positive for coronavirus on 24Dec2020. The patient worked in a hospital. She got the first dose of Pfizer coronavirus vaccine on Tuesday, 22Dec2020. She tested positive for coronavirus on Thursday 24Dec2020 after exposure to patients and staff. She had mild symptoms. Her 2nd dose was scheduled for 12Jan2021. The patient was inquiry whether she should receive it, or should she take an antibody test first, but it would be less than 3 weeks from the onset of illness. The outcome of event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported event tested positive for coronavirus based on the known safety profile. However the short duration of 2 days since the vaccine first dose is given it is unlikely patient would have fully developed immunity.

"tested positive for covid; tested positive for covid; This is a spontaneous report from a Pfizer-sponsored program Pfizer First Connect. A contactable Pharmacist reported similar events for 2 patients. This is the first of two reports. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 14Dec2020 at single dose for covid-19 immunization. The patient medical history and concomitant medications were not reported. Caller is a pharmacist asked if there is a contraindication for administering antibody therapy to a person after they have received the first dose of the covid vaccine. He reported that there are 2 patients that received the covid vaccine the week of 14Dec and subsequently tested positive for covid on the 23rd and 24th of December. He was trying to determine the safety of administering antibody therapy for those patients even though they already got the first vaccine dose. He reported this question has some urgency and needed the information within 48 hours. Attempted to warm transfer but caller reported that he does not have any patient specific information or identifiers at this time. Escalating Urgently for additional research. Outcome of event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the limited available information, the company considers that a causal relationship between the event ""tested positive for COVID"" and vaccination with BNT162B2 cannot be excluded.,Linked Report(s) : US-PFIZER INC-2020516661 same reporter/ drug/ AE, different patient"

meningitis; headache; fever; weakness; rash; This is a spontaneous report from a contactable consumer (patient). A male patient of an unspecified age received bnt162b2 (lot/batch number and expiration date not provided), via an unspecified route of administration, on 16Dec2020, at single dose, for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient received the Pfizer-BioNTech COVID-19 Vaccine on 16Dec2020, he experienced headache, fever, weakness and rash; went to the ER and after testing blood work and suspecting of meningitis. They did a spinal tap. Test came out negative for Flu and COVID; was told the rash could be due to a drug reaction

and they attributed side effects to a generic bactrim, so he stopped taking all medications. If he continues to have issues the primary concern is whether he should get the second dose of the COVID-19 vaccine or not. The outcome of the events were unknown. Information on the lot/batch number has been requested.

High fevers (103/104 degree F) with chills for five days followed by low fevers (upto 101) for another six days and still ongoing; High fevers (103/104 degree F) with chills for five days followed by low fevers (upto 101) for another six days and still ongoing; headaches; fatigue; This is a spontaneous report from a contactable physician, the patient. A 49-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: UNKNOWN), via an unspecified route of administration in the left arm on 18Dec2020 at 15:15 (at 49-years-old) as a single dose for COVID-19 immunization. Medical history included severe iron deficiency, hypothyroidism, osteoporosis, and low baseline IgM antibodies levels (unknown cause). The patient did not have any allergies to medications, food, or other products. Concomitant medications included gabapentin (MANUFACTURER UNKNOWN), iron (MANUFACTURER UNKNOWN), calcium (MANUFACTURER UNKNOWN), and biotin (MANUFACTURER UNKNOWN). The patient did not receive any other vaccines within four weeks prior to the vaccination. On 19Dec2020 at 18:00, the patient experienced high fevers (103/104 degrees Fahrenheit) with chills for five days followed by low fevers (up to 101 degrees Fahrenheit) for another six days, headaches, and fatigue; all reported as non-serious. On 24Dec2020, the patient had a post vaccination nasal swab rapid antigen test and SARS-CoV-2 PCR test with negative results. The patient took paracetamol (TYLENOL) and ibuprofen (ADVIL) for treatment for the events. The clinical outcomes of the fever, chills, headaches, and fatigue were recovering. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: Based on the compatible temporal association and the drug's known safety profile, the vaccination with BNT162B2 might play a contributory role in triggering the onset of high fevers with chills. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"tested positive for Covid; tested positive for Covid; This is a spontaneous report from a contactable other healthcare provider. A 44-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at single dose on 21Dec2020 for Covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient said that she received the Pfizer-BioNTech Covid-19 Vaccine last Tuesday, 21Dec2020, then tested positive for Covid on 26Dec2020. She said the symptoms started on 24Dec2020. Now, she wants to know if it is still okay to get the 2nd dose of the vaccine on the scheduled date. The outcome of events was unknown. Information about Lot/Batch number has been requested.; Sender's Comments: Based on the limited available information, the company considers that a causal relationship between the event ""tested positive for COVID"" and vaccination with BNT162B2 cannot be excluded."

difficulty thinking; brain fog; Injection site pain and swelling; Injection site pain and swelling; axillary lymph node swelling; wrist pain and swelling/joint pain; wrist pain and swelling; muscle and joint pain;

skin pain; kidney and liver pain; kidney and liver pain; dizziness; nausea; weakness; fatigue; chilling; This is a spontaneous report from a contactable nurse (patient). A 49-year-old female patient (not pregnant) received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date were not provided), intramuscular in right arm on 22Dec2020 14:30 at single dose for COVID-19 immunisation. Facility where the most recent COVID-19 vaccine was administered was hospital. Medical history included asthma. Prior to vaccination, the patient was not diagnosed with COVID-19. No allergies to medications, food, or other products. Concomitant medication included fluticasone propionate, salmeterol xinafoate (ADVAIR). The patient experienced Injection site pain and swelling, axillary lymph node swelling, wrist pain and swelling, muscle and joint pain, skin pain, kidney and liver pain, dizziness, nausea, weakness, fatigue, chilling, difficulty thinking, brain fog on 23Dec2020 01:15. Symptoms lasting x 6 days. The patient not received any other vaccines within 4 weeks prior to the COVID vaccine. No treatment received for the adverse event. Since the vaccination, the patient has not been tested for COVID-19. The outcome of events was reported as recovering. Information about lot/batch number are requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the difficulty thinking, brain fog and other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including head CT/MRI and chemistry panel, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Got first vaccine dose on the 18th and came out Covid test positive; Got first vaccine dose on the 18th and came out Covid test positive; This is a spontaneous report from a non-contactable consumer (patient). A female patient of an unspecified age received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine; lot/batch number and expiry date were unknown) via an unspecified route of administration on 18Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient got the first dose on the 18th, and she came out Covid test positive yesterday (unspecified date in Dec2020). She wanted to know if she should get the second vaccine or what is the protocol into that. The outcome of the event was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.

Diagnosed with COVID after receiving first dose of COVID-19 Vaccine; Diagnosed with COVID after receiving first dose of COVID-19 Vaccine; This is a spontaneous report from a contactable nurse (patient). A 61-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE, lot number PAA156051, expiration date unknown), via an unspecified route of administration on 15Dec2020 16:00 at a single dose at the right arm for COVID-19 immunization. The patient has no medical history, no family medical history and no concomitant medications. The patient is a nurse in the Emergency Room. She had a first dose of COVID-19 vaccine on 15Dec2020. She was diagnosed with

COVID after receiving first dose of COVID-19 vaccine on 23Dec2020. Due for second dose of COVID-19 vaccine on 04Jan2021. She wanted to know if she should go through with second dose if her symptoms subside. The COVID swab was done in the Emergency Room and was not admitted to hospital. The outcome of the event was unknown.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient cannot be completely excluded.

tested positive for covid; tested positive for covid; This is a spontaneous report from a Pfizer-sponsored program Pfizer First Connect. A contactable Pharmacist reported similar events for 2 patients. This is a 2nd of two reports. A patient of unspecified age and gender received BNT162B2, via an unspecified route of administration on 14Dec2020 at single dose for covid-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The reporter was a pharmacist asking if there was a contraindication for administering antibody therapy to a person after they had received the first dose of the covid vaccine. He reported that there was a patient that received the covid vaccine the week of 14Dec and subsequently tested positive for covid on the 23rd and 24th of December. The reporter was trying to determine the safety of administering antibody therapy for the patient even though the patient already got the first vaccine dose. The reporter reported this question had some urgency and needed the information within 48 hours. The patient underwent lab tests and procedures which included covid test: positive on 23Dec2020, positive on 24Dec2020. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the limited available information, the company considers that a causal relationship between the COVID test positive and vaccination with BNT162B2 cannot be excluded.,Linked Report(s) : US-PFIZER INC-2020516319 same reporter/ drug/ AE, different patient

tested positive; tested positive; This is a spontaneous report from a contactable nurse reported for herself. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection) via an unspecified route of administration on 22Dec2020 at single dose for Covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient got the COVID vaccine on 22Dec2020 and tested positive (COVID) on 27Dec2020, she didn't expect to be immune. The outcome of the event tested positive was unknown. Follow-up activities are possible, information on the batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient cannot be completely excluded. Further information like specific SARS-CoV-2 test and any symptom associated with SARS-CoV-2 test positive needed for full medical assessment

Received the first dose of the vaccine; Have now tested positive; Received the first dose of the vaccine; Have now tested positive; This is a spontaneous report from a pharmacist. It was reported that a patient of unspecified age and gender received bnt162b2 (BNT162B2) vaccine , via an unspecified route of administration on an unspecified date at single dose for covid-19 immunisation . The patient medical history and concomitant medications were not reported. The patient received the first dose of the vaccine; and have now tested positive. The patient underwent lab tests and procedures which included sars-cov-2 test: positive No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's Comments: Based on the limited available information, the company

considers that a causal relationship between the reported events and vaccination with BNT162B2 cannot be excluded.

had a positive COVID test; had a positive COVID test; O2 Saturation of 80% / Hypoxia; shortness of breath; He has a CT scan which showed extensive infiltration in the lungs; muscle pain; chills; body aches; low grade fever; cough; This is a spontaneous report from a contactable physician (pulmonary medicine). This physician reported similar events for 2 patients. This is 1st of 2 reports. A 35-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization. There were no medical history and concomitant medications. Caller stated that his close friend who was ER physician (front line worker) and within 24 hours after receiving the COVID vaccine, developed COVID or symptoms of COVID. Patient received the COVID vaccine on 18Dec2020 and the same night patient started with a low grade fever, body aches, chills, muscle pain, shortness of breath, cough, O2 saturation of 80% (hypoxia) and was in the intensive care unit now. Patient swore this was related to the vaccine. This patient tested positive for COVID. He had a CT (computerised tomogram) scan which showed extensive infiltration in the lungs in Dec2020. Patient was admitted to the hospital on 24Dec2020 and then was moved to the ICU 2 days later, on 26Dec2020. Caller thought patient had a positive COVID test at another hospital. Caller did know that tested positive at the current hospital on 26Dec2020 which was done to confirm the previous positive test. Caller thought patient had his first positive COVID test either the same day or the next day after receiving the vaccine. Event of O2 Saturation of 80% / hypoxia was reported as hospitalization from 24Dec2020 and life threatening; infiltration in the lungs and shortness of breath caused hospitalization from 24Dec2020, muscle pain, chills and positive COVID test was reported as medically significant; and other events were reported as non-serious. Outcome of O2 saturation of 80% / hypoxia and shortness of breath was not recovered, outcome of cough was recovering; and outcome of other events were unknown. Information about lot/batch number has been requested. ; Sender's Comments: Based on the information currently available, a lack of efficacy with suspected vaccine BNT162B2 in this patient cannot be completely excluded.,Linked Report(s) : US-PFIZER INC-2020519020 same reporter/drug , different patient/AE.

Anaphylactic reaction requiring two doses of Epinephren to control. Still having issues; other vaccine same date product received; This is a spontaneous report from a contactable nurse (patient). A 54-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly on right arm at 12:30 PM on 18Dec2020 at single dose for COVID-19 immunization, and first dose of other Pfizer vaccine same date product (other vaccine same date lot number: elt9899) on right deltoid on 18Dec2020 for unknown indication. Medical history reported as none. Concomitant medication included vitamin C and colecalciferol (VITAMIN D). The patient experienced anaphylactic reaction at 12:30 PM on 18Dec2020 requiring two doses of epinephren to control. still having issues, resulted in: Doctor or other healthcare professional office/clinic visit, Hospitalization in Dec2020. days hospitalization: 1. The patient received treatment: 2 doses of epinephrine, solumedrol, benadryl, IV and O2 for event anaphylactic reaction to vaccine. The outcome of anaphylactic reaction was not recovered. Lot/Batch and Expiration date has been requested.; Sender's Comments: The information available in this report is limited and anecdotal and does not allow a medically meaningful assessment of the case.

There is a plausible temporal association between vaccines administration and onset of the reported event. It is unclear what is the nature of the vaccine co-administered with BNT162b2. Currently no information is available on the co-administration of the Pfizer-BioNTech COVID-19 Vaccine with other vaccines.

patient received the first dose of COVID 19 vaccine on 16Dec2020. She got tested positive on 20Dec2020; patient received the first dose of COVID 19 vaccine on 16Dec2020. She got tested positive on 20Dec2020; This is a spontaneous report from a contactable nurse (patient). A female patient of an unspecified age received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 16Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the first dose of COVID 19 vaccine on 16Dec2020. She got tested positive on 20Dec2020. The patient wanted to know if it's safe for her to get the second dose of covid-19 vaccine scheduled for 07Jan2021. Outcome of the event was unknown. Information on the Batch/Lot number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded.

anaphylactic shock/numb throat; high heart rate; light headed; anaphylactic shock/numb throat; This is a spontaneous report from a contactable consumer (patient himself). A male patient of an unspecified age (reported as 39: unknown unit) received bnt162b2 (BNT162B2 also reported as PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date were not reported), via an unspecified route of administration on 22Dec2020 at single dose, for covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced anaphylactic shock, numb throat, high heart rate and light headed on an on 22Dec2020. The outcome of events was unknown. Information on the lot/batch number has been requested.

tested positive for COVID-19; tested positive for COVID-19; feeling sick; This is a spontaneous report from a consumer or other non hcp. A male patient of an unspecified age received bnt162b2 (BNT162B2) vaccine, via an unspecified route of administration on 22Dec2020 at single dose for covid-19 immunisation . The patient medical history and concomitant medications were not reported. On 24Dec2020 the patient was sick and was tested positive for covid-19, the outcome of the event was unknown. Information about Lot/Batch number has been requested.

Rhonchi, frothy sputum, low grade temp, elevated HR, 12/30 MD assessed 1:00PM and increased prednisone and added Cefdinir. Sent to hospital 12/30 at approximately 6:30PM with worsening symptoms

Redness and warmth with edema to right side of neck and under chin. Resident was on Hospice services and expired on 1.1.21

12/30/2020 07:02 AM Resident noted to have some redness in face and respiration were fast. Resident vital signs were abnormal except blood pressure. Temp at the time was 102.0 F taken temporal. Resident respirations were 22 labored at times. Pulse is 105 and pulse ox 94% on room air. Resident is made comfortable in bed. Notified triage of change in condition also made triage aware of resident

receiving Covid vaccination yesterday morning. Resident appetite and fluid consumption has been poor for few days. 12/30/2020 07:32 AM Received order from agency to administer Acetaminophen 650mg suppos rectally due to resident not wanting to swallow anything including fluids, medications and food. This writer administered medication as NP ordered. Will monitor for effectiveness and adverse effects if any. 12/30/2020 08:41 AM Received new orders to obtain Flu swab, obtain CBC and BMP, and Chest Xray all to be obtained today. Notified family of resident having temperature and vital signs excluding b/p that was abnormal. Family was thankful for call and inierated to nurse that family does not want resident sent to hospital. Did educate family on benefits of Hospice services, but family persistant on continued daily care provided by nursing staff. Requests visits if decline continues. Family assured if resident continues to decline, facility will accomandate resident family to be able to be at bedside when time comes to do so. NP ordered IVF and IV Levaquin on 12/31/20. Family chose at that time to sign for Hospice services and not have resident provided with IVF or IV Antibiotics

Numbness from Neck to face to head on the left side. Lasted a few days. 12-30-2020 to January 3rd, 2021.

Patient received her Vaccine on 12/16/2020. Afterwards she developed symptoms of fever, chills, diarrhea, nausea, vomiting and headache that became worse over time and on day os presentation to our hospital on 1/2/2021 she was having photophobia. Current headache at time of admission had been persistent for over a week. Patient has no immunocompromising risk factors and was diagnosed with confirmed CMV meningitis. She was also admitted with transaminitis.

"The resident received is vaccine around 11:00 am and tolerated it without any difficulty or immediate adverse effects. He was at therapy from 12:36 pm until 1:22 pm when he stated he was too tired and could not do anymore. The therapist took him back to his room at that time and he got into bed himself but stated his legs felt heavy. At 1:50 pm the CNA answered his call light and found he had taken himself to the bathroom. She stated that when he went to get back into the bed it was ""abnormal"" how he was getting into it so she assisted him. At that time he quit breathing and she called a RN into the room immediately. He was found without a pulse, respirations, or blood pressure at 1:54 pm. He was a DNR."

6-7 hours after the vaccine she developed arm pain, fever and chills. About an hour later she started to have abdominal pain which worsened over the course of the day to excruciating. She went to the Emergency Room where a CT scan revealed a perforation of her sigmoid colon and had a resection of the area of the colon and a diverting colostomy surgery done the evening of 1/3/2021.

starting to feel lethargic and weak. Had menses with increased blessed. Called physician to have blood work done to see if I was experiencing anemia. Blood work complete on 12/31/2020. On 1/3/2021, I woke up with blood blisters all over the inside of my mouth and petechia on my trunk and bilateral upper and lower extremities. I called my primary physician to report the symptoms. He suggested to go to the ER if my symptoms worsened. Later that evening I started with a nose bleed and did go to the ER. Upon arrival to the ER, my platelet count was 9. I was admitted to the hospital and diagnosed with ITP.

12/31/20 around 11am Numbness in right hand and right cheek, 5 minutes later, slurred speech. Episode lasted approximately 10 minutes. Treated in ER. Labs, MRI, all normal 1/3/21 Swollen lymph node to left axilla 1/4/21 Rash to injection site

Tachycardia, resident was sent out to the hospital for evaluation on 12/30/2020 and came back to the facility on 12/31/2020.

Anaphylactic Reaction, facial swelling, facial Redness, Face felt like it was burning, face flushing, throat swelling, heart palpitations, trouble swallowing , feet swelling, light headed, anxiety. Hospitalized from the 12/23/20 to 12/26/2020 . Medications now on Epinephrine, diphenhydramine, cetirizine, famotidine, prednisone, lorazepam, cephalexin. on 1/1/2021 was taken to E.R. by ambulance around 11:00 am left hand was tingle started to go numb traveled up my arm into left side of my face ,ear, tongue, and then down to the left side of my leg and into left foot, could not move left side of body for a good 7 to 8 mins then went away transferred to ambulance enroute to ER blood pressure was high and and started having right ear pain and right side frontal severe headache, arrived to ER and was given diphenhydramine ,ketorolac, metoclopramide HCl, lorazepam. MRI was ordered and Neurologist found two small lesions on right side of frontal brain, following up now with neurologist. added more meds naproxen

2 minutes after vaccine was administered, noticed swelling back of tongue, progressed to posterior 2/3 of tongue, tachycardia, elevated BP. Progressive angioedema involving larynx, cough, shortness of breath. No wheezing. Physical exam did do show any obvious swelling. O2 sat decreased to 80, 1st epinephrine IM administered, 50mg benadryl IV and Famotidine administered. some improvement in symptoms. In 30mins, reoccurrence of angioedema and second epinephrine vaccine administered. Monitored for 2 hours without reoccurrence of symptoms and discharged from ER.

palpitations, chest tightness/heaviness, scratchy throat/frequent throat clearing, head heaviness, blurred vision, elevated blood pressure. Evaluated in ED received solumedrol, benadryl. Discharged home and returned to hospital as direct admit due to continued symptoms. Pertinent labs reveled AKI, elevated LFTs. AKI and LFTs improved with IVFs.

Found deceased in her home, unknown cause, 6 days after vaccine.

Vaccine 12/30/2020 Screening PCR done 12/31/2020 Symptoms 1/1/2021 COVID test result came back positive 1/2/2021 Deceased 1/4/2021

Abdominal pain that proceeded to get worse into the next day. Connected with PCP, had labs drawn and ultrasound ordered. Ended up going to ER. Determined to have Appendicitis, needed and had appendectomy on 12/29/2020.

felt like she had a stroke; fell down; Pain in leg; itchiness in her head; left leg not functioning normally; This is a spontaneous report from a contactable nurse (reporting for herself). A 51-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EH9899), via an unspecified route of administration in the left deltoid on 21Dec2020 at 10:00 (at the age

of 51-years-old) as a single dose for COVID-19 immunization. Medical history was none. There were no concomitant medications. There were no prior vaccinations within 4 weeks prior to the first administration of the suspect vaccine. On 21Dec2020, the patient experienced left leg not functioning normally, which was reported with the seriousness criteria of disability. On 21Dec2020, the patient had itchiness in her head. The patient felt like she had a stroke, fell down and pain in leg on 22Dec2020, which were all reported with the seriousness criteria of disability. The patient called the doctor office and spoke with the doctor on call and was told to use diphenhydramine hydrochloride (BENADRYL). No further details provided. The patient was sent home for 10 days and she was sent back to work. The patient underwent lab tests and procedures which included COVID: negative in Dec2020. The outcome of the events was not recovered. The reported assessed the events related to the suspect product, BNT162B2.; Sender's Comments: The reported events leg dragging, leg pain and fall and suspected stroke were possibly related to the use of first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), due to temporal relationship. However, stroke was not diagnosed. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Had a rapid test for COVID, and it was positive; Had a rapid test for COVID, and it was positive; This is a spontaneous report from a contactable pharmacist. A male patient of an unspecified age started to receive BNT162B2 (lot number unknown), via an unspecified route of administration from an unspecified date to an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The pharmacist stated that they have vaccinated all their caregivers, and a physician (patient) who got the vaccine, called and reported to her that he had a rapid test for COVID, and it was positive. She is wondering if there was any data from the clinical trials where people tested positive after having the vaccine. The patient is now freaking out because he does not know if he needs to go to the hospital and get treatment for COVID. He works night shift and may have been exposed to COVID, but now she does not know how to guide him. The outcome of the events was unknown. The following information on the batch number has been requested.; Sender's Comments: The reported positive rapid test for COVID after COVID-19 immunization is considered related to the administration of BNT162B2.

"Systemic pruritis (itching) all over body; COVID test type: Nasal Swab and Rapid Antigen and were both positive; COVID test type: Nasal Swab and Rapid Antigen and were both positive; This is a spontaneous report from a contactable nurse (patient). A 26-year-old female patient started to receive BNT162B2 (lot number: EJ1685), intramuscular on 17Dec2020 16:30 at single dose in the left arm for COVID-19 immunization. Medical history included hypothyroidism from an unknown date. The patient was not pregnant at the time of vaccination. Concomitant medication included levothyroxine sodium (SYNTHROID) and spironolactone. The patient previously took cefprozil (CEFZIL) and tapazole and both experienced allergies. The patient experienced systemic pruritis (itching) all over body on 22Dec2020 10:00. The patient was not diagnosed with COVID-19 prior to vaccination and since the vaccination, the

patient has been tested for COVID-19. On 22Dec2020, the patient took COVID test type: Nasal Swab and Rapid Antigen and were both positive. No treatment received for the event ""Systemic pruritis (itching) all over body"". The outcome of the event ""Systemic pruritis (itching) all over body"" was not recovered. The outcome of the other events was unknown.; Sender's Comments: BNT162b2 provides protection against COVID-19 after 7 days from the second dose. This case does not match this codition"

result back w positive covid; positive COVID-19 test with symptoms; This is a spontaneous report from a contactable nurse reporting for herself. A 39-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration on 19Dec2020 11:00 (at age 39 years old) as a single dose (Dose 1) in the left arm for COVID-19 vaccination. The patient was not pregnant at the time of vaccination. The patient was not administered any other vaccine in the 4 weeks prior to COVID-19 vaccination. Medical history was none. There were no allergies to medication, food, or other products. The patient's concomitant medications were not reported; however the patient had not received any other medications in the last 2 weeks. The patient experienced a sore throat, voice loss on day 4, loss of smell on day 5, went to test, and the result came back with positive COVID. The events resulted in a Doctor's office visit. The patient was tested post vaccination on 22Dec2020 via NAAT-PCR (nasal swab), with a positive result. The patient had not been diagnosed with COVID-19 prior to vaccination. There was no treatment received for the event(s). The clinical outcome of the event positive COVID was unknown The event was reported as non-serious. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: The association between the event drug ineffective (COVID-19 infection) with BNT162b2 can not be fully excluded.

tested positive for covid19/diagnosed with Covid; tested positive for covid19/diagnosed with Covid; she had SOB the day of her first vaccination; I am very sick; I feel bad; This is a spontaneous report from a contactable consumer (patient). A female patient of an unspecified age received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 21Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient got the first dose of COVID-19 vaccine on Monday, 21Dec2020 and then was diagnosed with COVID-19 on 23Dec2020. Added that she was very sick and wondering if he'll get her second dose or not. The patient feel bad and is due for her second dose on 11Jan2021. The patient also reported that she had shortness of breath (SOB) the day of her first vaccination on 21Dec2020 and then tested positive for COVID-19 later. She posits she may have received the vaccine when she had an active COVID-19 infection. She is wondering if she can still get her second vaccination. Outcome of the events was unknown.

"tested positive for COVID-19; headache; cough; voice being hoarse; Drug ineffective; This is a spontaneous report from a Pfizer Sponsored Program Pfizer First Connect from a Contactable nurse reporting for herself. A 58-years-old female patient received bnt162b2 (BNT162B2; Lot # EK5730) vaccine , via an unspecified route of administration on 18Dec2020 10:30 at single dose for covid-19 immunisation . Medical history included hypertension from an unknown date and blood cholesterol increased. Concomitant medication included losartan (LOSARTAN), hctz (HCTZ), ezetimibe (ZETIA), famotidine (PEPCID). The patient started having a headache and cough on 25Dec2020 and these

symptoms worsened on 26Dec2020 in addition to her voice being hoarse. On 26Dec2020 she went to get tested at an urgent center and tested positive for Covid-19. The outcome of the event was not recovered.; Sender's Comments: The association between the event ""tested positive for COVID-19, headache, cough, and dysphonia"" with BNT162b2 can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."

It looks like one of the ingredients may have an animal cell lipid; Syncope; Dizziness; feeling faint; like going to pass out now and then; overall achiness, severe headaches, fever; overall achiness, severe headaches, fever; overall achiness, severe headaches, fever; This is a spontaneous report from a contactable nurse reporting for herself. This A 30-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot # EH9899), intramuscular at single dose in the left arm on 22Dec2020 09:00 for covid-19 immunisation. Medical history included reaction to pork, porsine and/or if she ever was exposed to exposed to heparin. There were no concomitant medications. On 23Dec2020, the patient experienced syncope (medically significant), dizziness (medically significant), feeling faint; like going to pass out now and then (medically significant), overall achiness, severe headaches, fever. The outcome of the events syncope, dizziness, feeling faint; like going to pass out now was recovering and outcome of overall achiness, severe headaches, fever was recovered on 24Dec2020. The patient ask: are there any animal products, pork gelatin or a lipid form of that contain in the vaccine? The events were described as follows: She experienced a significant amount of syncope and dizziness, for greater than 4 or 5 days post-receiving the vaccination. Also feeling faint like she is going to pass out every now and then. Has a more important question, wondering along with the doctors if one of the ingredients may have an animal product, like pork gelatin or a lipid form of that. It looks like one of the ingredients may have an animal cell lipid and was wondering if she was having a reaction to that. Declines to provide primary care provider details. States she received this first dose at occupational health in her workplace. Received the vaccine on the 22Dec2020 at 9am. 24 hours post vaccination, 1 day after, the syncope, dizziness, feeling faint started. Also the other symptoms, overall achiness, severe headaches, and fever were also experienced, but they stopped after that 24 hours. Those were expected since it was listed as side effects that popped up, so she expected those and they stopped after 24 hours. The syncope, dizziness, and faint feeling are not any worse and are very slowly improving, but she still has it and had to call out of work today because of it. That's consistent. Mentions it takes her a while to get down the stairs when getting product details for the COVID-19 vaccine. Unable to provide the vaccine NDC or expiry, or dose. Did not have any other vaccines at time of this one and none 4 weeks prior. Had to call a (company withheld) doctor and has to go to occupational health tomorrow to be seen. Declines having COVID virus. No further details provided.; Sender's Comments: Based on the compatible time association, the events syncope and dizziness are possibly related to suspect BNT162B2 administration. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in

response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

positive COVID-19 antigen test with symptoms (ache, cough, fever); positive COVID-19 antigen test with symptoms (ache, cough, fever); This is a spontaneous report from a contactable physician (patient). A 51-year-old male patient received the first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EH9899), via an unspecified route of administration on 17Dec2020 at 10:30 at single dose in left arm for covid-19 immunization. Medical history included borderline diabetes, ongoing hypertension, ongoing hyperlipidemia, ongoing rhinitis allergic, and currently ill. Concomitant medication included ongoing fexofenadine hydrochloride (ALLEGRA, strength: 180 mg) at 180mg once daily by mouth for Rhinitis allergic taking for years, ongoing lisinopril (strength: 40 mg) at 40 mg once daily by mouth for hypertension taking for two or three years, ongoing atorvastatin (strength: 40 mg) at 40 mg once daily by mouth for hyperlipidemia taking for a year. The patient experienced positive covid-19 antigen test with symptoms (ache, cough, fever) from 19Dec2020. Event details: The patient received the COVID 19 Vaccine on 17Dec2020 10:30AM in the left arm. Tested for COVID 19 with the antigen test, on 20Dec2020 and his result was positive, he experienced ache and cough on 19Dec2020. Clarified he started having symptoms in the evening (19Dec2020) and then tested in the morning (20Dec2020). He experienced the low grade fever on 20Dec2020. His maximum temperature was 100.4 fahrenheit. He had only been treated with over the counter products. No further information provided for the over the counter products. He was not hospitalized. He will take the second dose of the COVID 19 vaccine on 07Jan2021. The patient didn't have SARS-CoV2 antibodies at diagnosis. The patient was not admitted to an Intensive Care Unit. The patient didn't display clinical signs at rest indicative of severe systemic illness. The patient didn't require supplemental oxygen (including high flow or ECMO) or receive mechanical ventilation. The patient didn't have any pre-existing diseases worsened during the SARS-CoV2 infection. The patient was not treated with immunomodulating or immunosuppressing medications or received any other vaccines around the time of COVID-19 vaccination. The outcome of all his symptoms was resolving.; Sender's Comments: The reported events drug ineffective and COVID-19 are likely intercurrent and are unrelated to suspect drug BNT162B2 based on short temporal relation between vaccination and onset of events.

positive COVID-19 rapid test with symptoms; positive COVID-19 rapid test with symptoms; headache; nasal congestion; This is a spontaneous report from a contactable physician. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration, on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced positive COVID-19 rapid test with symptoms, headache and nasal congestion on an unspecified date. The patient developed headache and nasal congestion by the third day after the vaccination. The patient underwent lab tests and procedures which included COVID-19 rapid test: positive on an unspecified date. The clinical outcome of positive COVID-19 rapid test with symptoms, headache and nasal congestion was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and has been requested during follow up.; Sender's Comments: The reported positive COVID-19 rapid test with symptoms after

COVID-19 immunization is considered ineffective of BNT162B2, and the Company cannot completely exclude the possible causality between the reported event and BNT162B2 administration.

positive COVID-19 test with symptoms; positive COVID-19 test with symptoms; This is a spontaneous report from a contactable nurse (patient). A 37-year-old female patient received their first dose of BNT162B2 (lot number: EL0140; expiry date unknown), intramuscular on 21Dec2020 at single dose for COVID-19 immunization. Medical history included congestion and dry cough (before vaccination), and not tasting anything from an unknown date. Concomitant medication included vitamins. The patient reported that they just have the concern about the vaccination last Monday that was 21Dec2020, on 25Dec2020, Christmas day they were diagnosed with Covid. They were thinking because the day before their vaccination they already had like some kind of congestion and also some kind of dry cough but they didn't really think that it was Covid but they were still able to get the vaccination on Monday. When they started to feel like they were not tasting anything, that's when they decided to get tested and it turns out to be positive. They were confirmed positive on the 25th but in their mind they were probably having Covid since the day before they got they vaccination. So their worry is, is there any effect where they got the vaccine where they already have the Covid in their body. So that is really their worry right now. The patient underwent lab tests and procedures which included SARS-CoV-2 test: positive on 25Dec2020. The outcome of the events was unknown.; Sender's Comments: The association between the event drug ineffective (COVID-19) with BNT162b2 can not be completely excluded.

developed rashes on the chest area, not spreading; This is a spontaneous report from a contactable nurse (patient). A 43-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot number EK5730), via an unspecified route of administration into the left deltoid on 18Dec2020 as the first single dose for covid-19 immunization. Medical history was reported as none. Concomitant medication included rosuvastatin calcium (CRESTOR). The patient developed rashes on the chest area, not spreading on 22Dec2020. The event as reported between not serious and medically significant by the reporter. Details were as follows: and patient was a nurse that had her vaccine through her workplace on 18Dec2020, so she was 10 days out, and noticed a rash on her chest on day 4, which was still present. It did not seem to be spreading, and she could not think of any reason for the reaction. She was scheduled to receive the second dose in three weeks. The outcome of developed rashes on the chest area, not spreading was not recovered. The relatedness of the event to the suspect drug was reported as unknown from the reporter.; Sender's Comments: Based on the information currently provided, the vaccination with BNT162B2 might play a contributory role in triggering the onset of rash. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

blurred vision; little spots on the inside of her eyelids; This is a spontaneous report from a contactable nurse (patient). A 53-year-old female patient received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine; batch/lot number and expiry date were unknown), via an unspecified route of administration on 18Dec2020 at a single dose for COVID-19 immunization. Medical history included

eyeglasses wearer (reported as with her glasses). The patient's concomitant medications were not reported. The patient is experiencing symptoms from the COVID-19 vaccine received on 18Dec2020. She began to have blurred vision that night, and it worsened over the following weekend. She saw the eye doctor on 22Dec2020, and they stated her vision had changed even with her glasses. Now she has little spots on the inside of her eyelids that were also noticed on the eye examination in Dec2020. She has already reported these symptoms to the V-safe program. She mentioned that she is not the only nurse in the workplace that has experienced blurry vision. She asked if she should receive the second dose on 08Jan2021. It was still blurry, but it was better than it was a week ago. It still affected her reading and seeing at a distance. It scared her to get the second one because she doesn't want to go blind. She went to the eye doctor for visit on Tuesday. The outcome of the event blurred vision was recovering, while for the other event was unknown. The reporter considered blurred vision as serious due to being medically significant. Information about lot/batch number has been requested.; Sender's Comments: There is not a reasonable possibility that the reported event vision blurred and eyelid disorder related to the suspect product event most likely due to patient underlying contributory factors

positive COVID-19 test; positive COVID-19 test; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration, on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced positive COVID-19 test on an unspecified date. The patient underwent lab tests and procedures which included COVID-19 test: positive on an unspecified date. The clinical outcome of positive COVID-19 test was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and has been requested during follow up.; Sender's Comments: The reported positive COVID-19 test after COVID-19 immunization is considered ineffective of BNT162B2, and the Company cannot completely exclude the possible causality between the reported event and BNT162B2 administration.

having symptoms/She tested positive to COVID-19; having symptoms/She tested positive to COVID-19; This is a spontaneous report from a contactable nurse (patient). A 30-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 16Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient started having symptoms on Thursday. On Friday, her supervisor had her get tested for COVID. She tested positive to COVID-19 in Dec2020. Outcome of the events was unknown. The patient wanted to know if she is symptom free, should/can she still get the 2nd dose as planned. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event of positive for corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the single dose and short duration

single hive on abdomen (itchy)/full body hives and itching; single hive on abdomen (itchy)/full body hives and itching; This is a spontaneous report from a contactable Physician. A 36-year-old female

patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EL0140, expiry date unknown) intramuscular at left arm on 24Dec2020 at single dose for Covid-19 immunization in a hospital facility. Medical history included Anxiety, Hypertension, and GERD (gastrooesophageal reflux disease). The patient was not diagnosed with Covid-19 prior to vaccination. Concomitant medications included diphtheria vaccine toxoid, pertussis vaccine acellular, tetanus vaccine toxoid (TDAP) on 08Dec2020 for immunization; bupropion hydrochloride (WELLBUTRIN), amlodipine, omeprazole; from unspecified date for unspecified indication. On 25Dec2020, the patient developed a single hive on abdomen (itchy), and on 26Dec2020 the patient developed full body hives and itching but spared the face and mucosal surfaces. The patient has no swelling, no respiratory symptoms. The patient has not been tested for Covid-19 since the vaccination. The patient received treatment of antihistamines (steroids if no improvement) on unspecified date. The hives responded to antihistamines temporarily. The outcome of the event single hive on abdomen (itchy)/full body hives and itching was not recovered. The reporter considered the events non-serious; did not results in death, was not life threatening, did not caused/prolonged hospitalization, was not disabling/incapacitating, not a congenital anomaly/birth defect.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event hives and itching due to temporal association.

ended up testing positive for COVID virus after receiving the first dose of Pfizer-BioNTech COVID-19 Vaccine/ She had symptoms; ended up testing positive for COVID virus after receiving the first dose of Pfizer-BioNTech COVID-19 Vaccine/ She had symptoms; This is a spontaneous report from a contactable nurse. This nurse reported similar events for two patients. This is 1st of two reports. A female patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899; expiry date unknown), via an unspecified route of administration, on an unspecified date, at 0.3 mL, single for COVID-19 vaccination. The patient's medical history and concomitant medications were not reported. The nurse reported on an unspecified date that the patient tested positive after the first dose. The reporter works in employee health at their hospital. The employee ended up testing positive for COVID virus after receiving the first dose of Pfizer-BioNTech COVID-19 Vaccine. She had symptoms the first 2-3 days after getting the vaccine and assumed it was a normal immune response, but after that she continued to have the symptoms. They went to see the provider and tested positive for COVID virus. They were asking how to handle their second doses. Outcome of the events was unknown.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event of corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the short duration of less than 5 days since the vaccine first dose is given.,Linked Report(s) : US-PFIZER INC-2020516628 same reporter, same drug, same event, different patient.

a patient received Pfizer COVID-19 vaccine, couple of days later the patient tested positive for COVID-19; a patient received Pfizer COVID-19 vaccine, couple of days later the patient tested positive for COVID-19; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received the first dose of BNT162B2 (Pfizer-Biontech Covid-19 Vaccine) via an unspecified route of

administration on an unspecified date at a single dose as Pfizer COVID-19 vaccine. Medical history and concomitant medications were not reported. It was reported that on an unspecified date, a patient received Pfizer COVID-19 vaccine, couple of days later the patient tested positive for COVID-19, patient subsequently received monoclonal antibody treatment: a combination of Casirivimab and Imdevimab. It was inquired if the patient could receive the second dose of COVID-19 vaccine. The outcome of the events was unknown. Information about Lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of BNT162B2 vaccine cannot be excluded for the reported events of LOE and COVID 19. There is very limited information provided in this report. This case will be reassessed upon receipt of follow-up information. Based on the information provided in the case, this individual report would not seem to modify the risk-benefit profile of the subject product.

I took the vaccine and two days after I tested positive/had lost my sense of smell and taste; I took the vaccine and two days after I tested positive/had lost my sense of smell and taste; Lost my sense of smell and taste; Lost my sense of smell and taste; This is a spontaneous report from a non-contactable consumer (patient). A patient of unspecified age and gender received BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine; lot/batch number and expiry date were unknown), via an unspecified route of administration on 23Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The consumer stated that he/she just got the vaccine on Wednesday (23Dec2020), and he/she started experiencing some symptoms on 24Dec2020 where he/she had lost his/her sense of smell and taste. On 25Dec2020, he/she went 'health' to get tested, and he/she tested positive. The consumer is asking whether this has been reported that one of the side effects of getting the vaccine. The consumer said he/she hasn't read anything about loss of taste and smell after taking the vaccine. He/she was wondering if this has been reported or this is one of those small side effects that the vaccine has. The consumer further stated that he/she took the vaccine and two days after, he/she tested positive. Now, his/her whole family is also positive but only his/herself had the vaccine, because he/she is the only one that works in healthcare (further clarification was unknown, hence reporter was captured as consumer). The outcome of the events was unknown. No follow-up attempts are possible; Information about lot/batch number could not be obtained. No further information is expected.; Sender's Comments: The association between the event lack of effect (COVID19, lost of taste and smell) with BNT162b2 can not completely excluded.

ended up testing positive for COVID virus after receiving the first dose of Pfizer-BioNTech COVID-19 Vaccine/had symptoms; ended up testing positive for COVID virus after receiving the first dose of Pfizer-BioNTech COVID-19 Vaccine/had symptoms; This is a spontaneous report from a contactable nurse. This nurse reported similar events for two patients. This is the 2nd of two reports. A patient of an unspecified age and gender received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, strength: 0.3 mL, lot number: EH9899; expiry date was unknown), via an unspecified route of administration on an unspecified date at 0.3 mL, single for COVID-19 vaccination. The patient's medical history and concomitant medications were not reported. The patient ended up testing positive for COVID virus after receiving the first dose of Pfizer-BioNTech COVID-19 Vaccine. The patient had symptoms the first 2-3 days after getting the vaccine and assumed it was a normal immune response, but after that the patient continued to have the symptoms. The patient went to see the provider and tested positive for COVID

virus. The patient was asking how to handle his/her second dose. The outcome of the event was unknown.; Sender's Comments: Based on the information currently provided, the company considers that a causal relationship between the COVID-19 and vaccination with BNT162B2 cannot be excluded.,Linked Report(s) : US-PFIZER INC-2020516297 same reporter, same event, different patient.

tested positive after receiving Covid-19 vaccine; tested positive after receiving Covid-19 vaccine; This is a spontaneous report from a contactable nurse. A 38-years-old female patient started received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration on 18Dec2020 at a single dose for prevention of Covid 19. The patient medical history and concomitant medications were not reported. The nurse reported that a staff member received the first dose of Covid-19 vaccine on 18Dec2020. Approximately 9 days later, on 27Dec2020, the patient developed/experienced tested positive after receiving Covid-19 vaccine. The seriousness criteria for this event was none. The nurse asked if the patient will be able to receive the second dose and what is the advice for the patient. The outcome of the event was unknown. The reporter considered the relationship of the event to treatment with BNT162B2 as not applicable. Information about lot/batch number was requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported event tested positive Covid-19 based on the known safety profile. However the short duration of 9 days since the vaccine first dose is given it is unlikely patient would have fully developed immunity.

had loss of sense of smell and tested positive for the virus; had loss of sense of smell and tested positive for the virus; This is a spontaneous report from a contactable healthcare professional (patient). A 42-years-old female patient received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), intramuscular on 17Dec2020 at a single dose on the left arm, for Covid-19 immunization. The patient has no medical history and no concomitant medications (no other vaccines in four weeks and no other medications in two weeks prior to vaccination). The patient has no known allergies to medications, food, or other products. The patient had loss of sense of smell, no other symptoms on 25Dec2020 and tested positive for the virus yesterday, on 27Dec2020. The patient has no Covid-19 prior to vaccination. The patient underwent Covid test (Nasal Swab) and result was positive on 27Dec2020. The patient did not receive any treatment for the event. Outcome of the event was unknown. The events were assessed as non-serious by the reporter. No follow-up attempts are possible, information about lot/batch number cannot be obtained.; Sender's Comments: A possible contributory role of BNT162B2 vaccine cannot be excluded for event based on available information.

PATIENT VACCINATED AROUND 9AM. SHE REPORTS SHE FELT WARM/FLUSHING, FAINT AND STOMACH SPASMS WITHIN ABOUT 4-5 MINS. SHE FELT BETTER AND GOT UP TO WALK ABOUT 30 MINS LATER. SYMPTOMS WORSENED AFTER WALKING ~9:45AM: FAINT AGAIN, SEVERE RETCHING, BP196/140 TO 199/164, TROUBLE SWALLOWING, SOB, WHEEZING. AT 9:58AM, EPI PEN 0.3MG ADMINISTERED AND EMS ACTIVATED. SYMPTOMS REPORTED IMPROVED FOLLOWING EPI. EMS ARRIVED 10:05AM. PATIENT REPORTED RECEIVING 2 BAGS OF PEPCID, STEROIDS, AND ZOFRAN AT HOSPITAL. WAS RELEASED BETWEEN 11:30AM-12PM ON 1/4/21, BP 140/90 AND ACUTE SYMPTOMS RESOLVED. FOLLOW UP WITH PATIENT 1/5/21: NO PRIOR HX OF HTN, BP 120/60, NO SOB/ BREATHING DIFFICULTY. C/O SEVERE HEADACHE, LOW TEMP, FATIGUE, MUSCLE ACHES, SORE THROAT.

Droopy left cheek.; This is a spontaneous report from a contactable nurse. A 52-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number: EJ1685), intramuscularly in the left arm, on 17Dec2020 at 14:30 (at the age of 52-years-old) at a single dose for COVID-19 immunization. The patient had no medical history or concomitant medications. The patient had no other medications within two weeks of vaccination. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient previously took sulfamethoxazole, trimethoprim (SEPTRA) and experienced allergy. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced droopy left cheek on 21Dec2020. No therapeutic measures were taken as a result of the event. The clinical outcome of droopy left cheek was recovered in Dec2020. It was also reported that since the vaccination, the patient had not been tested for COVID-19.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of droopy left cheek might not be excluded considering the plausible temporal relationship. The patient had previous allergy reaction to antibiotic (sulfamethoxazole, trimethoprim) use. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

patient tested positive for COVID; patient tested positive for COVID; This is a spontaneous report from a contactable physician from a Pfizer-sponsored program Pfizer First Connect. A 29-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: UNKNOWN), via an unspecified route of administration on 17Dec2020 as a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On 27Dec2020, the patient tested positive for COVID. The clinical outcome of patient tested positive for COVID was unknown. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: The efficacy of a drug varies from one patient to another and can be affected by different factors; however, a contributory role of the suspect drug BNT162B2 to the reported events Drug ineffective and COVID 19 cannot be ruled out.

"she was administered the first dose of Pfizer COVID-19 Vaccine and later got COVID-19; she was administered the first dose of Pfizer COVID-19 Vaccine and later got COVID-19; This is a spontaneous report from a Pfizer-sponsored program Pfizer First Connect. A contactable female physician (patient) of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration from an unspecified date in 2020 at a single dose for Covid-19 immunization. The patient medical history and concomitant medications were not reported. On an unspecified date in 2020, the patient got the first shot of COVID vaccine and got COVID, she was wondering if she should still get the dose scheduled for 04Jan2021. The patient clarified that she is both a medical doctor/physician as well as the patient. She clarified that she was administered the first dose of Pfizer COVID-19 Vaccine and later got COVID-19. She called to ask if she should still get the second dose of COVID-19 Vaccine which is scheduled for 04Jan2021. She clarified that she does not think anything went wrong with the COVID-19 Vaccine. She does not think her

receiving the COVID-19 Vaccine and developing COVID-19 are related; there was no way she would have had time to develop any protection from the COVID-19 Vaccine at the time she was exposed to COVID-19 2 days later. She does not think she can provide any relevant medical information that would be helpful for this report and declined to continue report. The outcome of the event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The reported ""developing COVID-19"" after COVID-19 immunization is considered ineffective of BNT162B2, and the Company cannot completely exclude the possible causality between the reported event and BNT162B2 administration."

"She tested positive for COVID-19; She tested positive for COVID-19; This is a spontaneous report from a contactable healthcare professional (patient) via Pfizer sales representative. A 55-years-old female patient received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration on 22Dec2020 at a single dose for Covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient, who is a frontline medical worker, informed that she tested positive for COVID-19 today (28Dec2020). The patient stated that she was informed by her employee health division at (place) that she was exposed to a patient with COVID-19 prior to her vaccination. She asked to be contacted regarding the timing of her second dose in light of her current status. The outcome of the event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: There is not a reasonable possibility that reported ""tested positive for COVID-19"" is related to BNT162B2 vaccine. The patient exposed to a patient with COVID-19 before vaccination."

Not feeling well; chills; muscle aches; headache; ears bothering; stuffy/runny nose; stuffy/runny nose; This is a spontaneous report from a non-contactable nurse (patient). A 43-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number: EL0140), intramuscularly in the right arm, on 18Dec2020 at 06:00 (at the age of 43-years-old) at a single dose for COVID-19 immunization. Medical history included hypothyroid, breast cancer, and penicillin allergy. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications, taken within two weeks of vaccination, included levothyroxine (MANUFACTURER UNKNOWN) and tamoxifen (MANUFACTURER UNKNOWN). Other concomitant medications included unspecified multivitamin. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced not feeling well, chills, muscle aches, headache, ears bothering, and stuffy/runny nose on 25Dec2020 at 20:00. The events were reported as non-serious. No therapeutic measures were taken as a result of the events. The clinical outcome of not feeling well, chills, muscle aches, headache, ears bothering, and stuffy/runny nose was unknown. It was also reported that since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible. No further information is expected.

tested positive for COVID-19; tested positive for COVID-19; This is a spontaneous report from a contactable nurse (patient). A 39-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient is a nurse anesthetist that got Covid vaccine on 17Dec2020 and tested positive for

COVID-19 after the vaccine on 26Dec2020. The patient was wondering if have seen this. Stated that she was signed up for the booster scheduled for 05Jan2021 and wanted to know if they had any information about taking this. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The efficacy of a drug varies from one patient to another and can be affected by different factors; however, a contributory role of the suspect drug bnt162b2 to the reported events drug ineffective and COVID-19 cannot be ruled out.

nauseous; weak; no appetite; numbness on the skin of my arms and legs; I was post Ictal for 2+ hours; seizures/having 2 non epileptic seizures; dizzy and lightheaded; This is a spontaneous report from a contactable nurse (patient). A 21-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE. Batch/lot number: EK5730), intramuscularly on 28Dec2020 07:45 AM at right arm, at single dose for covid-19 immunization. Medical history was none. There were no concomitant medications. The patient was not pregnant at the time of vaccination. The patient received vaccine around 7:45 AM. Within 2 minutes she felt extremely dizzy and lightheaded on 28Dec2020. She sat down and drank some Gatorade and took deep breaths. The feelings persisted 5 minutes later. She then woke up after having 2 non epileptic seizures while still in 15m waiting period, (This included posturing and color change) a rapid response was called and she was taken to the ER. She was post Ictal for 2+ hours. Dizzy and nauseous, weak and no appetite for the rest of the day. She had no history of epilepsy. She also have numbness on the skin of my arms and legs within 24 hours of the vaccine. Onset date of all events (except dizzy and lightheaded) was reported as 28Dec2020 08:00AM. Treatment fluids, Zofran was received for all events. All event resulted in emergency room. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of the events was recovered with sequel.; Sender's Comments: A possible contributory effect of suspect BNT162BW on reported seizures cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

"Patient had SVT; flushing; hives; heart rate increased to 160's (had been 180's earlier in the day); This is a spontaneous report from a contactable pharmacist. A 46-year-old female patient received the first dose of BNT162B2 (lot number: EK5730), via intramuscular, on 28Dec2020 at single dose for COVID-19 immunization. Facility where the most recent COVID-19 vaccine was administered was hospital. The patient was not pregnant at the time of vaccination. The patient was not diagnosed with COVID-19 prior to vaccination. Since the vaccination, it's unknown if the patient was tested for COVID-19. No other vaccines were received within 4 weeks prior to the COVID vaccine. The patient's medical history and concomitant medications were not reported. The patient had SVT, flushing, hives 20 min after receiving vaccine on 28Dec2020. Patient was taken to ED and evaluated. SVT resolved. Patient sent home on heart monitor. Later that night while in bed, heart rate increased to 160's (had been 180's earlier in the day) and patient was admitted to hospital. Patient is a NP. Treatment received for the adverse event included cold water to face, vagal massage. The outcome of the event""Patient had SVT"" was

recovered on 28Dec2020 and of other events was recovering.; Sender's Comments: A causal association between BNT162B2 and the reported events supraventricular tachycardia, flushing, hives, heart rate increased cannot be excluded based on the compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."

"Hypertensive crisis; Numbness to my left ear; progressively it went down to my mandible, my face and my left shoulder numbness; Radial blood pressure cough; This is a spontaneous report from a contactable nurse reporting for himself. A 48-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 28Dec2020 at single dose for covid-19 immunization. Medical history reported as none. There were no concomitant medications. During the administration the patient did experience some types of reaction where it wanted medical supervision. So, basically when he did got the injection he was waiting for his 15 minute prolapse. But within probably he would say 7 to 8 minutes he started to experiencing some numbness to his left ear and usually he thought it was secondary to the that he had (not clarified) but progressively it went down to his mandible, his face and his left shoulder numbness and he was experiencing some numbness that radiate towards his fingertips only to the left side. At that time he waived to the Nurse to supervise and at that time he wait again and a Physician came over. He checked his pulse and noted that he had normal rhythm during the pulse check and at that time and he had Emergency medical technician (EMT) come over. The EMT checked his blood pressure he thought multiple times through the left and to the right brachial. He was having what they would consider a hypertensive crisis where systolic were in 170's, 180's, diastolic numbers were between like 120's and 130's and his heart rate was in 70's. So, initially it was not anxiety induced. But he do not have no blood pressure. They wanted he to go to the hospital to treat the hypertensive crisis that was in. The patient opted not to. So he went home in a quieter environment he did have a radial blood pressure cough that he had been checking his blood pressure rigorously, tried different techniques and now he was back to normal state to 120-130 systolic and his diastolic was 70-80. This instance was weird that he did not see as a part of one of the side effects listed with Pfizer BioNTech Vaccine. No treatment received for the events, because he had no history of hypertension it was just more of decreasing the ambient around he. At that time he wanted to go to a quiet environment, took a shower and check his blood pressure. He did orthostatic while laying down sitting up, standing up and he was not hypertensive. For the causality, the nurse stated, ""I think it did. This is a fact I mean I was doing fine prior to administration and then this event is slowly subsiding."" The outcome of the events was recovering.; Sender's Comments: A possible contributory effect of suspect BNT162B2 on reported hypertensive crisis cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."

huge welt on her arm; This is a spontaneous report from a contactable nurse (patient). A female patient of an unspecified age received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at a single dose for covid-19 immunization. Medical history included covid-19 from end of Oct2020 to an unknown date. The patient's concomitant medications were not reported. The patient reported that she is an nurse in the ICU. She had received the 1st dose of the vaccine after she had covid the end of Oct2020. Her reaction to the vaccine was, she felt exactly how she did when she had covid. It lasted 3 days. She had a huge welt on her arm. Her pulmonologist suggested that she contact Pfizer for advice on if or when she should receive the 2nd dose, which is currently due 08Jan2021. Outcome of the event huge welt was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported event of giant urticaria due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Appendicitis / colic pain to her right midsection; This is a spontaneous report from a contactable Other-HCP (Nurse Practitioner). A female patient of an unspecified age received bnt162b2 (BNT162B2) at single dose on 20Dec2020 for covid-19 immunisation. The patient medical history and concomitant medications were not reported. In Dec2020 3 days after vaccination she experienced colic pain to her right midsection. She was diagnosed with appendicitis. The outcome of events was unknown. Information about lot/batch number has been requested.; Sender's Comments: The event appendicitis is most likely an intercurrent medical condition and is assessed as unrelated to BNT162B2.

Fever; feels weak; tired; lightheaded; pain at the injection site; back and hip pain; back and hip pain; This is a spontaneous report from a contactable other healthcare professional (patient). A 47-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EK5730), via an unspecified route of administration on 29Dec2020 at a single dose for COVID-19 immunization. The patient's medical history included sick with coronavirus infection from 11Aug2020. There were no concomitant medications. The patient was experiencing the expected side effects fever, feels weak, tired, lightheaded, pain at the injection site in the right deltoid, hip and back joint pain on Dec2020. She does not know exactly when these events started but that she noticed them when she was trying to sleep last night. Outcome of the events was not recovered. The events were considered serious due to being medically significant.; Sender's Comments: Based on temporal association, the causal relationship between BNT162b2 and the events pyrexia, asthenia, fatigue, dizziness, vaccination site pain, back pain and arthralgia cannot be excluded.

a high fever; extreme fatigue; have allergies; This is spontaneous report from a non-contactable consumer. This consumer reported similar events for eight patients. This is the first of eight reports.

Only this report is serious. A patient of unspecified age and gender received bnt162b2 (BNT162B2 also reported as Pfizer version of the vaccine, lot/batch number and expiry date were not reported), via an unspecified route of administration on unknown date in Dec2020 at single dose, for Covid-19 immunisaton. The patient medical history and concomitant medications were not reported. The patient got the vaccine at a facility then had a high fever and extreme fatigue after getting the vaccine on Dec2020. The patient was admitted to the ICU. The patient had allergies, but it was unknown what the allergies are to. The outcome of events was unknown. No follow-up attempts are possible. Information on batch/Lot number can not be obtained. No further information is expected.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020520700 same reporter/drug/AE, different patients;US-PFIZER INC-2020520703 same reporter/drug/AE, different patients;US-PFIZER INC-2020520699 same reporter/drug/AE, different patients;US-PFIZER INC-2020520704 same reporter/drug/AE, different patients;US-PFIZER INC-2020520705 same reporter/drug/AE, different patients;US-PFIZER INC-2020520701 same reporter/drug/AE, different patients;US-PFIZER INC-2020520702 same reporter/drug/AE, different patients;US-PFIZER INC-2020520700 same reporter, drug, events, and different patients;US-PFIZER INC-2020520701 same reporter, drug, events, and different patients

extremely lightheaded; This is a spontaneous report from a contactable physician (patient's husband). The physician reported same events for 2 patients. This is 2nd of 2 reports. A 74-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140), via an unspecified route of administration on 30Dec2020 at a single dose in deltoid left for Vaccination/COVID-19 vaccine. Medical history included COVID-19 in Jul2020, ongoing overweight. There were no concomitant medications. The patient experienced extremely lightheaded on 30Dec2020. Reporter seriousness for extremely lightheaded is medically significant. The reporter stated his wife (patient) was feeling about the same thing and believed his wife was feeling better. She got up and was walking around and is no longer beside him. No Emergency Room or Physician Office visited. The outcome of event was recovering.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the event dizziness cannot be excluded. ,Linked Report(s) : US-PFIZER INC-2020520760 same reporter/drug/event, different patient

Pt received COVID Vaccine at 1055, 1120 pt began coughing severely and could not stop, unable to speak. 1120 25mg Benadryl liquid given, Pepcid 20 mg given PO, cough worsening. 1122 second dose of Benadryl given, called for MD. Brought pt to Private room via wheelchair. Upon arrival, audible stridor noted. Epinephrine 0.3 mg IM given at 1126. IV started, placed patient on monitor and O2 via 1L NC. MD at bedside along with RT and pharmacy. 1134 Solumedrol 125 mg IV given, 1 puff of Ventolin given. Lungs clear. 1140 Coughing stopped, pt able to speak now. Vital signs: 1130 SPO2 99% Pulse 142 1135 99% pulse 106 BP 168/102 1140 sats 100% HR 93 BP 157/105 1145 sats 100% HR 97 BP 159/93 1200 sats 99% HR 103 155/97 114

Pt vaccinated on 12/23. PCP notified that SOB and fatigue getting worse on 1/4. Unable to keep pre-op Dental work planned prior to mitral valve surgery on 1/14/2021. PCP referred her to our ED where she was diagnosed with COVID-19 and transferred to facility, which is where her surgery was planned.

Pt received vaccination and left after 15 min. observation symptom free. He drove a short distance away from the clinical site when he felt profuse sweating and had syncope (seconds) crashing into curb. He was aroused from impact and was able to stop car. He then developed profuse nausea and sudden urge to defecate. He went to restroom. Given these events he returned to the clinical site in another vehicle. Upon arrival he denied chest pain, shortness of breath or ongoing nausea or abdominal pain. He reported his AM blood sugar was 72 and does not take insulin. No history of coronary disease or syncope. EMS was activated and assumed care.

The resident who was known to have seizures, and under control for many yeas with Keppra 1000 mg twice a day, on the second day after vaccination developed recurrent seizures requiring hospitalization to an intensive care unit, with intubation and mechanical ventilation until 1/5/21 (to be extubated today). She is still at the hospital.

RECEIVED VACCINE ON 12/22; ON 12/24, STARTED FEELING WEAK AND HAVING GI ISSUES WITH DIARRHEA. ON 12/27, STARTED HAVING SHORTNESS OF BREATH AND WHEEZING MORETHAN HER NORMAL WITH HER ASTHMA ILLNESS AND CAME TO ER. WAS TESTED AND FOUND TO BE COVID POSITIVE.

Resident received Covid Vaccine, noted after 30 mins with labored breathing BP 161/77, HR 116, R 38, T 101.4,

22 year old patient with no known allergies or medical history admitted 12/21 with TTP and currently being worked up. Currently unclear if related or unrelated to COVID vaccination, but received Pfizer vaccine Thursday 12/17.

Contracted Covid after receiving the first vaccine; Contracted Covid after receiving the first vaccine; This is a spontaneous report from a contactable consumer (patient). A 51-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 21Dec2020 at single dose for covid-19 immunisation. Medical history included asthma, dry cough due to inhalation from fires over the years. The patient's concomitant medications were not reported. Contracted Covid after receiving the first vaccine was reported. The patient received the first dose of the Covid vaccine, then contracted Covid. He now had the option to receive antibodies through plasma. Since he had the vaccine, was that still an option? Or was that a no-no? He received the vaccine at work on 21Dec2020. He got sick on 22Dec2020 and he was at home. He didn't feel like eating, and can't lay down because it made it worse to cough. He didn't know what vitamins they were giving him. The patient probably should be in a hospital, but was not. The outcome of events was not recovered. Information on Lot/Batch number has been requested.

patient receive the first dose of the vaccine and has now tested positive for Covid; patient receive the first dose of the vaccine and has now tested positive for Covid; This is a spontaneous report from a Pfizer-sponsored program. A contactable pharmacist reported a patient of unspecified age and gender received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The pharmacist reported that they had a

patient receive the first dose of the vaccine and has now tested positive for Covid. He stated the patient is a week out from receiving the second dose and asks what information Pfizer can provide on receiving the second dose for someone with Covid infection. Outcome of the event was unknown. Information on the Batch/Lot number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded.

"lost my sense of smell and tested positive for Covid; lost my sense of smell and tested positive for Covid; This is a spontaneous report from a non-contactable consumer (patient) received via a Pfizer-sponsored program. A patient of unspecified age and gender received BNT162B2 via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. The content of a post was noted that on Dec2020, ""Got mine! And in a stroke of weird ironic awfulness, lost my sense of smell and tested positive for Covid later that day....If only a month sooner! Thank you for creating this vaccine. I know it had nothing to do with my diagnosis!"". The outcome of the events was unknown. No follow-up attempts are possible. Information about lot/batch number cannot be obtained. Sender's Comments: The events drug ineffective and COVID 19 are likely intercurrent and are unrelated to suspect drug BNT162B2 based on the short temporal relation between vaccination and onset of events."

"she is positive that she is positive"" and is having symptoms, although not yet been tested; she is positive that she is positive"" and is having symptoms, although not yet been tested; This is a spontaneous report from a contactable pharmacist (patient). A female patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration on Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient reportedly asking if she should keep her appointment for the second dose of the vaccine as scheduled if she thinks she was positive for COVID and having symptoms. The patient had vaccine on Tuesday (Dec2020), and husband tested positive yesterday, ""she was positive that she was positive"" and was having symptoms, although not yet been tested. The 2nd dose was in 2 weeks. The outcome of the events was unknown. Information on the Lot/Batch number has been requested.; Sender's Comments: Based on the information currently provided, the company considers that a causal relationship between the suspected COVID-19 and vaccination with BNT162B2 cannot be excluded."

Tested positive for COVID-19; Tested positive for COVID-19; Sick; He got the chills and later came down with muscle aches and fatigue; He got the chills and later came down with muscle aches and fatigue; He got the chills and later came down with muscle aches and fatigue; His arm was sore for a day; This is a spontaneous report from a Pfizer-sponsored program Corporate (Pfizer) Social Media Platforms. A non-contactable consumer reported for a 45-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced his arm was sore for a day on 18Dec2020 but he suffered no other side effects. Six days later on Christmas Eve (24Dec2020), after working a shift in the COVID-19 unit, the patient became sick. He got the chills and later came down with muscle aches and fatigue. The day after Christmas (26Dec2020), he went to a drive-up hospital testing site and tested positive for COVID-19. The patient

was feeling better since his symptoms peaked on Christmas Day but still felt fatigued. The outcome of event fatigue was not recovered, the outcome of the events sick, chills, muscle aches was recovering, the outcome of other events was unknown. No follow-up attempts are possible. Information about lot/batch number cannot be obtained.; Sender's Comments: The efficacy of a drug varies from one patient to another and can be affected by different factors; however, a contributory role of the suspect drug BNT162B2 to the reported events drug ineffective and COVID-19 cannot be ruled out.

"Severe allergic reaction; BP of 170/104; felt like his whole body was on fire; chest tightness; HR elevated at 110bpm; Severe allergic reaction with symptoms that include/ rash all over his body including his throat, chest, and inner legs.; Right side of neck was swollen and sore; Right side of neck was swollen and sore; his neck was stiff to turn; he feels ""really weak and tired""; he feels ""really weak and tired""; This is a spontaneous report from a contactable other healthcare professional. A 46-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number and expiry date unknown) via an unspecified route of administration, on 29Dec2020, at a single dose, for COVID-19. The patient's medical history and concomitant medications were not reported. Patient is a 46y/o male certified nursing assistant (CNA). He received his first dose of Pfizer-Biontech Covid19 vaccine, yesterday 29Dec2020. On an unspecified date in Dec2020, patient experienced severe allergic reaction with symptoms that include: felt like his whole body was on fire, chest tightness, BP of 170/104, HR elevated at 110 bpm, rash all over his body including his throat, chest, and inner legs. Right side of neck was swollen and sore. Both sides are swollen, today, and his neck was stiff to turn, he feels ""really weak and tired"". Patient was taken by ambulance to the emergency room. Patient then asked if he should get the second dose of the vaccine. Outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of severe allergic reaction with multiple symptoms cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

potential person infected with Sars-Cov-2 following the administration of the first dose of vaccine and was isolated during the timing of the second dose; potential person infected with Sars-Cov-2 following the administration of the first dose of vaccine and was isolated during the timing of the second dose; This is a spontaneous report from a contactable Pharmacist. A female patient of unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The relevant medical history and concomitant medications were not reported. The pharmacist was questioning as to guidelines to the potential person infected with Sars-Cov-2 following the administration of the first dose of vaccine and was isolated during the timing of the second dose. The outcome of the event was unknown. Information on the Batch/Lot number has been requested.; Sender's Comments: The reported potential person infected with Sars-Cov-2 following the administration of the first dose of

vaccine is considered ineffective of BNT162B2, and the Company cannot completely exclude the possible causality between the reported event and BNT162B2 administration.

Migraines for several days, nausea on day three; nausea; This is a spontaneous report from a contactable other healthcare professional, the patient. A 51-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, Lot number: EL0140), via intramuscular route of administration in the left arm on 18Dec2020 at 09:00 (at the age of 51-years-old) as a single dose for COVID-19 vaccination. Medical history included fibromyalgia and history of migraines. The patient did not have any known allergies to medications, food, or other products. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported; however, there were other medications the patient received within 2 weeks of the vaccination. The patient had not received any other vaccine within 4 weeks prior to the vaccine. On 21Dec2020 at 13:00 the patient experienced migraines for several days, nausea on day three. The patient did not receive any treatment for the events. The clinical outcome of the migraines for several days, nausea on day three was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19.

Felt sore throat and tachycardia; Felt sore throat and tachycardia; COVID test came back positive; COVID test came back positive; This is a spontaneous report from a contactable physician, the patient. A male patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration on 18Dec2020, as a single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. It was unknown whether the patient received any other vaccine within 4 weeks prior to the vaccine. On 28Dec2020, the patient felt sore throat and tachycardia. The patient also reported that on an unspecified date, in Dec2020, the COVID test came back positive (the Sepheid test, not the rapid test). The events were reported as non-serious. The patient underwent lab tests, which included COVID-19 test: positive on an unspecified date in Dec2020. It was unknown if the patient received treatment for the COVID test came back positive, felt sore throat and tachycardia. The clinical outcome of the events the COVID test came back positive, felt sore throat and tachycardia was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: Based on available information, a possible contributory role of subject vaccine cannot be excluded for the reported events of LOE, COVID 19, Oropharyngeal pain and tachycardia, based on temporal relationship. There is very limited information provided in this report. This case will be reassessed upon receipt of follow-up information.

positive for covid; positive for covid; positive for covid; This is a spontaneous report from a contactable nurse (patient). A 43-year-old female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at a single dose for COVID-19 immunization. completely excluded. More information such as laboratory findings on nucleic acid /PCR test needed for meaningful medical assessment.The patient's medical history and concomitant medications were not reported. The patient tested positive for COVID on 20Dec2020. Outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments:

Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this patient cannot be completely excluded. More information such as virus genome /nucleic acid detection needed for meaningful medical assessment

Swelling arm/ swelling down to their biceps after receiving the COVID-19 Vaccine; arm soreness/ soreness in their arms after receiving the COVID-19 Vaccine; light redness around the vaccine injection site; body felt cold; felt real tired right after; fell asleep quickly; This is a spontaneous report from a contactable consumer. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 28Dec2020 13:00 at SINGLE DOSE for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. It was reported the patient got the COVID-19 Vaccine at the same time as her husband did, and she had some symptoms afterwards, but her symptoms went right away. It was reported both she and her husband had soreness in their arms after receiving the COVID-19 Vaccine. She said a micro needle was used when the COVID-19 Vaccine was administered to both her and her husband's left upper arms. It was also reported both her and her husband had swelling down to their biceps after receiving the COVID-19 Vaccine. She said the swelling went away on both of their left arms after 12-14 hours. It was also reported the husband and his wife continuously monitored each others vaccine injection sites. She said the husband used a LED light to look at her left upper arm, and saw a light redness around her vaccine injection site. The husband said the light redness around the vaccine injection site went away in 2 hours after receiving the COVID-19 Vaccine. It was reported her body felt cold after receiving the COVID-19 Vaccine on 28Dec2020, and that she felt real tired right after she noticed her body felt cold. The husband said his wife fell asleep quickly on 28Dec2020, which is not normal for her, and slept for awhile. The husband said after she woke up she was fine. It was reported their arm swelling and soreness didn't really effect either one of them right away. He said the vaccine injection site redness for his wife started about 45minutes to an hour after she received the COVID-19 Vaccine. He said they both started to feel the soreness in their left arms later. He said he could feel the soreness at the vaccine injection site when he moved his left arm. He said it was the same for his wife when she moved her left arm, clarifying it was a very subtle feeling of soreness. The outcome of the events was recovered. Lot/Batch has been requested.

51-year-old female with history of intermittent asthma presented to the ED with 1 week of intermittent fevers, myalgias, arthralgias and headache. Patient reports receiving first dose of moderna vaccine last week. She initially developed arm soreness followed by chills and body aches. Subsequently developed frontal headache, photophobia, back pain, nausea and vomiting. She was seen in the ER on 1/1/21, when her work-up including labs, CT spine, chest x-ray were negative therefore she was discharged home. She continued to have symptoms and also developed bilateral intermittent ear pain. She also developed rash in her extremities and torso. Rash is pruritic but not painful. reports ongoing history of neck pain for which she sees PT. Denies sore throat, cough, chest pain or shortness of breath.

Vaccine given on 12/29/20 by Pharmacy. On 1/1/21, resident became lethargic and sluggish and developed a rash on forearms. He was a Hospice recipient and doctor and Hospice ordered no treatment, just to continue to monitor. When no improvement of codition reported, doctor and Hospice ordered comfort meds (Morphine, Ativan, Levsin). Resident expired on 1/4/2021

DEATH ON 1/4/2021, RESIDENT RECIEVED VACCINE ON 1/2/20

Began experiencing increased temp of 101.4 on 1/4/2021 at 0701. Temp did not resolve with the use of Tylenol. HR increased to >100 and BP was decreasing below baseline. Increased weakness also noted. Temp increased to 102.9 on 1/4/2021 at 2220. Transferred from SNF to ER for evaluation.

Resident had body aches, a low O2 sat and had chills starting on 12/30/20. He had stated that they had slightly improved. On 1/1/21 he sustained a fall with a diagnosis of a displaced hip fracture. On 1/2/21 during the NOC shift his O2 sat dropped again. He later went unresponsive and passed away.

Administered first dose of COVID19 vaccine at 1:29pm on 1/4/21. At approximately 11:00pm resident exhibited acute respiratory decompensation with very limited air entry and hypoxemia. Patient received Benadryl, steroids, epinephrine, and Duoneb without improvement. Resident was referred to the emergency room and found to be COVID positive. No fever or rash were reported.

LTCF Pfizer Vaccine clinic conducted 12/29/2020 Vaccine lead received a call indicating that a staff member deceased somewhere between 1/3/2021 and 1/4/2021. Cause of death is unknown, and an autopsy is being performed.

Vaccine received at about 0900 on 01/04/2021 at her place of work, Medical Center, where she was employed as a housekeeper. About one hour after receiving the vaccine she experienced a hot flash, nausea, and feeling like she was going to pass out after she had bent down. Later at about 1500 hours she appeared tired and lethargic, then a short time later, at about 1600 hours, upon arrival to a friends home she complained of feeling hot and having difficulty breathing. She then collapsed, then when medics arrived, she was still breathing slowly then went into cardiac arrest and was unable to be revived.

tremors resident sent hospital facility.

Started out vague. Started with headache at the base of her head and then it felt like a web that covered her entire head. By 10:00 she did not feel good. Went to sleep instantly. Slept for about an hour. Began to have nausea. Sunday headache got worse. Started ringing , buzzing sound in her head. Took Zofran because of nausea. Sunday night chest discomfort. Monday had horrible chest pain, headache was horrible, then vomiting. went to ER, doctor felt it was a reaction to the vaccine. was give medicine for nausea and Decadron for the reaction. Gave fluids for dehydration. Got medicine for headache. Keep taking Zofran for nausea. Still has headache. Has appointment with pcp in the morning.

"Received COVID-19 Moderna vaccine on 12/28. Developed nausea, vomiting, diarrhea, fever, and hypoxia at facility the day follow vaccine administration (12/29). He was sent to the hospital on 12/29 and admitted for post vaccine fever where he had a chest x-ray that showed infiltrates but WBC count was normal and fever resolved upon admission to hospital. Provider documented ""expected reaction to vaccination in a patient with previous COVID exposure"". He returned to the facility on 12/30."

The resident was found deceased a little less than 12 hours following COVID vaccination, and he had had some changes over the last 2 days. He was 96 and had been on hospice care for a little while. Noone noticed any side effects from vaccine after it was given

Within 10 minutes of receiving the vaccine patient began to look sleepy and started to gasp for breath. She called for help and slouched over in a chair and was moved to lay on the floor. Her feet were elevated and 911 was called. Epinephrine was given, patient responded by being able to gasp for breath and her face returned to a more natural state. Within 5 min she began to struggle to breath and epi was given again. Some improvement did occur. EMS arrived and she was taken to the hospital.

Bell?s palsy

Anaphylactic reaction (swelling and redness of face and torso, shortness of breath, constriction of airway and dizziness)

Pt describes falling with onset of weakness below the hip level about 6 inches above the patella with missing clonus reflex. The pt cannot squat down with associated observable loss of strength, pt is not able to stand up. The pt has fallen 7 times since symptom onset around lunchtime between 1200 and 1300. Pt denies LOC.

After three days, couldn't sleep the whole night. The next day, went to work, came home felt jittery. Close to midnight bp 200/90. Took Clonidine 0.1 and went to ER, bp 180/90. waited for almost two hours bp came down to 141/80. Today, bp is back to normal. Took sleeping medication Zzzquil to go to sleep.

Aseptic meningitis, prolonged fever for more than a week, headache, elevated transaminase (ALT is 124). Lumbar tap showed elevated WBC of 23, 76% polys and 24% mononuclear, 25 RBC. Glucose and protein are normal. CSF PCR viral panel is negative. Patient was initially given Acyclovir and was stopped when HSV and VZV PCR were negative. He was given vancomycin IV for Gram positive bacteremia which was later stopped because it was deemed a contaminant.

Arm weakness increased each day by post vaccine day 4 arm weak and unable to raise arm, conduct ADLs, painful interrupting sleep. Unable to initiate movement in arm. Use other arm to help move arm. Went to ED on post vaccine day 4. Wbc 12. Crp 4. CT no abscess. Mri on 1/4 shows bursitis. DX SIRVA. Bursa aspirated. Pending cultures. PO MEDROL DOSEPAK.

3 Days after the covid vaccine. I Started to have these symptoms around 1am: fever, chills, body aches, cold sweats. I took ibuprofen fell asleep. Around 330am. Woke up with dizziness, headache, chills. Took tylenol. Fell asleep body was extremely cold esp hands and feet. Woke up around 7am. Still had severe body aches and was extremely dizzy, headache worsening. Took ibuprofen. Woke up around noon. Extremely dizzy with chills and body aches headache still severe. Took tylenol. I was not getting better. went to hospital . It was found I had extremely high wbc and had extremely low blood pressure. Diagnosed as septic shock.

Immediate warm rush to my head and body. Heart was beating out of my chest and difficultly breathing. Heart rate spiked to 150 (normal around 55). Hand, legs, and mouth started to go numb. Eventually settled down after about 1 hr. Have not felt normal since which has been 3 days.

Patient presented to receive COVID-19 vaccine, received vaccine at approximately 10 am. Patient waited 15 minutes for observation and left observation area without complaining of any sx. Patient returned a few minutes after reporting tongue tingling which eventually got to her lips. . No difficulty breathing or any other sx. No history of allergies. NP/RN administered PO Benadryl 25 mg. As of report of this iReport no additional symptoms or intervention needed. Last vitals: 131/83 75spo2. BP higher than usual per patient, sp02 normal.

red dotted rash only on my chest. the rash starts at my jaw line and goes behind my ears, around the front on my neck, then my entire chest in between each best down to bra strap line and stops.

Itching, pain, swelling, and redness at injection site; fevers, myalgia, fatigue, malaise.

Painful, swollen lymph node in arm of injection

Left side, neck near collar bone. Swollen bulge in neck (lymph nodes?) severely painful and swollen. No treatment.

Arm pain, extreme fatigue, body/muscle aches, fever, shortness of breath, sensitivity to light, unable to go to work or preform daily activities Onset 5 hours after vaccination

Itchy, red, swollen lump at injection site, 2-3 inches in diameter. Painful, swollen axillary lymph nodes on the same side (right).

I suffered a miscarriage on 12/31/2020. I was at 5 weeks gestation. This was my first pregnancy. I had uterine bleeding and abdominal cramps on 12/31/2020 and underwent evaluation by my Obstetrician and was diagnosed with a miscarriage after ultrasound.

Fever of 101 for the first 48 hrs, ibuprofen, fever went down Pain in the arm for first 24 hrs, ice, ibuprofen, pain went away

Ipsilateral axillary swelling and tenderness beginning 2 days after vaccine with notably increasing swelling and tenderness at 5 days post vaccine. Continuing to monitor at home.

Patient went to get in her car after completing time of wait after vaccination, felt cloudy, compared it to how she feels after having a glass of wine, denied vision changes but states perception of environment felt foggy. EMT assessed patient, HR normal at 71, O2 100%, Bp elevated at 182/100, patient did report anxiety, monitored for another 15-20min until patient felt better, cloudiness improved, Bp improved. Advised to consult with PCP re: Bp.

Significantly sore left shoulder (injection arm) with pain now radiating up into neck & downward around shoulder blade, severe headaches, nausea (no vomiting), sore throat, FATIGUE, chills/cold sweat, general body aches.

Pt states that she developed a rash on her chest along with chest and back pain around 1012pm on 4Jan2021

"19th received Covid Vaccine at noon 21st negative Covid surveillance test completed due to ED Cluster 22nd Bedtime approx. 2100 A very strange feeling of overwhelming fatigue ""spacey feeling""""" 23rd nausea dizzy general malaise 24th nausea dizzy general malaise 25th nausea dizzy general malaise Contacted Health Service 26th still nauseous dizzy general malaise and then chills Health Service Ordered Covid Test 26th negative Covid. 26th video appointment with PCP states no need for labs feels it's Vaccine related 27th minimal nausea no chills episodes of feeling ?spacey? and tired 28th Minimal nausea 29th Morning nausea and fatigue 30th Morning nausea and fatigue 31st increased nausea and fatigue all day easing as day progresses ""spacey"" with fatigue"

Approximately 10 minutes after injection tingling in right hand, red splotchy skin on palm of hands and forearms. Approximately 15-20 minutes after injection. Tingling in feet and lower extremities. Thirty minutes after injection slight itching at injection site. Approximately 1 1/2 hours after injection splotchy red skin inside both thighs and mild generalized itching. At 2:00 pm that day of injection tingling began in face with slight swelling in cheeks. Itching lasted 3 days. Currently intermittent itching since Monday 01/03/2021.

Shortness of breath Dizziness Nausea Soreness in arm of injection

Nausea vomiting chills headache fever

I was instructed to stay for 30min as i have been anaphylatic to cipro in past. at 30min was told i could leave. while driving home on rt 91 my cheekbones became numb. then slowly a few min later my cheeks became numb. a few min later my lips became numb. as i was driving off exit to rt 5 in longmeadow i developed a lump in my throat. i turned around at top of exit and went back to highway to go to ER. this was approx 1645-1650. i went to ER arrived approx 1655. i was shaking. my bp and pulse were elevated. no tingling or swelling in my face. nurse checked my pupils and my smile and were wnl. no history of bells palsy. i received iv fluids, solucortef 125mg ivp, pepcid 20mg ivp, and benedryl 25mg ivp approx 1840pm. approx 45 min after solucortef numbness better but not gone. it started to come back a little more before discharge, which i let md know. she discharged me with scripts for epi-pen, prednisone, and OTC pepcid and benedryl. follow up with my pcp's office in am 12/24 at 10am with his NP. total time with facial numbness/lip numbness 29 hours.

EE starting with migraine about 5 minutes after receiving vaccine. That night had rash to trunk and back with the chills. Took benadryl that night. Next am, had swollen eyes and hands. Within 24 hours,those sx resolved- but then had 48 hours of sx similar to past covid infection.

Severe chills and weakness. Ran 6 miles day of getting vaccinated (21st) unable to even reach the end of the street on the 22nd.

the top of her stomach felt swollen and gassy; Diarrhea/had diarrhea that was like liquid-y water; top of her stomach had a bad burning sensation; Vomiting; she got choked on some saline and sweat ran down

her face, and she had to concentrate on breathing; sore throat with a mild cough, like she needed to be clearing her throat; sore throat with a mild cough, like she needed to be clearing her throat; got a chill; food was not tasting right; arm was sore; could not raise her arm; her weight on 21Dec2020 when she got the vaccine, was 200.6, but her weight today, was 196.0 pounds; This is a spontaneous report from a contactable consumer (patient). A 52-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: unknown) via an unspecified route of administration on 21Dec2020 on left upper arm at a single dose for COVID-19 prevention. Current medical history included a lung disease called asthma and allergies, diagnosed in her late 20's; Diabetes Type 2, diagnosed about 10 years ago and High Blood pressure, diagnosed when she was in her 30's. Caller also wanted to include that she did have COVID before, she had COVID in Jul2020. Current concomitant medications included salbutamol (ALBUTEROL) at 2 Puffs via inhalation, twice daily for asthma; Unspecified Blood Pressure Medication One pill, once daily by mouth in the morning; Unspecified Nasal Spray 1 spray in each nare, once daily via nasal inhalation; montelukast sodium (SINGULAIR) at 1 pill via oral, once a day for allergies; metformin at 1 pill, daily, by mouth for Diabetes Type 2. The patient stated that her place of employment did not give her the card that has the lot number on it, they said they would give it to her with her second injection. The patient did not know the dose received, just that it was the first in the series. The patient had no other vaccines on the same day as the COVID vaccine. The patient reported that her weight on 21Dec2020 when she got the vaccine, was 200.6, but her weight today, was 196.0 pounds. The patient received the vaccine on 21Dec2020, and as soon as she got the shot, her arm was sore like a flu shot. When she got the shot, she could not raise her arm past her shoulder without pain, but now she can raise her arm again. On Thursday, 24Dec2020, patient got a chill, and later that same night, food was not tasting right. On 25Dec2020, the chill continued, and she had a little bit of a sore throat with a mild cough, like she needed to be clearing her throat. On 26Dec2020 morning, the patient experienced vomiting when she woke up, and the top of her stomach had a bad burning sensation, and she had diarrhea. The patient stated that while she was vomiting, she got choked on some saline and sweat ran down her face, and she had to concentrate on breathing. But the patient stated that she vomited, had diarrhea, and the burning sensation, the whole day on Saturday. The patient stated that on 27Dec2020, it calmed down, and she did not vomit at all. The patient stated that she felt like she needed to vomit, but she did not. The patient states that on Sunday, she still had the chills a little, and the top part of her stomach was still burning. The patient took some Pepto-Bismol and that helped calm down the caller's stomach. The patient stated that she could feel the Pepto-Bismol cooling her stomach off, like it had been hot, and patient stated that the top of her stomach felt swollen and gassy. The patient stated that later Sunday night, things calmed down, but she still has the burning sensation and she did not feel like she needed to vomit anymore. This morning, patient reported that she still has some burning sensation, but now, it is coming and going like labor pains. The patient stated that she did go to the bathroom once this morning and had diarrhea that was like liquid-y water. The patient stated that during all this over the last few days, each and every time that she tried to eat, she couldn't eat much because her stomach would burn more with eating. But yesterday, the patient had some fried fish and stated that the fried fish did not burn as much as the rest of the food she tried eating. The outcome of the events vomiting and the top of her stomach felt swollen and gassy was recovered on 27Dec2020, arm was sore and could not raise her arm was recovered on 26Dec2020, chills, top of her stomach had a bad burning sensation was recovering,

Diarrhea/had diarrhea that was like liquid-y water was not recovered and other events was unknown. Information about batch/lot number has been requested.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Vomiting and Foreign body aspiration cannot be totally excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

I woke up with tingling in my right hand and arm, my right side, and down my right leg. I went to the ER at Hospital, and was confirmed to have had a stroke in my left thalmus.

Patient woke on 1/3/2021 weak having uncontroled bowels and off and on confusion.

12/22 Vaccination 12/24 sore throat, sniffles, diarrhea, malaise. Contacted PCP; Covid test; negative. Had symptoms to following Tues. Following week, felt better; 1/1/2021

Fever, RespDepression & COVID positive REMDESIVIR (EUA) 200 mg x1 then 100 mg daily

The patient received the vaccine indicated above. Immediately following vaccination the patient states that they began feeling lightheaded and dizzy.

Severe right lower quadrant pain, anorexia over 12 hours. Went to the emergency department. Lab results showed elevated WBC and CT scan showed acute appendicitis. Admitted for urgent surgery: laparoscopic appendectomy. Was hospitalized from 12/26/20-12/28/20.

Rapid heart rate, shakiness, headache, rash, scratchy throat, raspy voice, dizziness, extreme weakness

tested positive for the Covid 19; tested positive for the Covid 19; This is a spontaneous report from a Pfizer-sponsored program Pfizer First Connect from a contactable consumer. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration on 18Dec2020 as the first single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient tested positive for the COVID 19 on 27Dec2020. The patient underwent lab tests and procedures which included a test for Covid 19 virus, which was positive on 27Dec2020. The outcome of tested positive for the COVID 19 was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment hence, the events are conservatively assessed as related to the suspect drug BNT162B2 until further information becomes available.

"drooping on one side of the face/ eye hurts to open and hurts to close it; Her eyes are droopy; ""my eye is hurting so bad"", it hurts to open and hurts to close it/pain in the eyes; Face is tender to the touch and hurts on that one side; Swelling of her left side of her face that hasn't gone down/swelling and drooping on one side of the face; This is a spontaneous report from a contactable nurse (patient). A 20-

year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date were not provided), via an unspecified route of administration on 23Dec2020 at single dose for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. Caller asking if pain in the eyes and swelling and drooping on one side of the face a side effect of the vaccine. Patient received the Covid vaccine on 23Dec2020 and noticed the next day (24Dec2020) swelling of her left side of her face that hasn't gone down. Her face is tender to the touch and hurts on that one side. Her eyes are droopy, ""my eye is hurting so bad"", it hurts to open and hurts to close it. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset eye hurts to open and hurts to close/ eyes droopy cannot be excluded, considering the plausible temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

received the COVID-19 vaccine on 19Dec2020 and then contracted COVID-19/positive COVID-19 test after receiving COVID-19 vaccine; received the COVID-19 vaccine on 19Dec2020 and then contracted COVID-19/positive COVID-19 test after receiving COVID-19 vaccine; This is a spontaneous report from a Pfizer sponsored program Pfizer First Connect via a contactable consumer. A 22-year-old female patient receive bnt162b2 (BNT162B2, also reported as PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date were not reported), via an unspecified route of administration in left arm/deltoid on 19Dec2020 at 0.3 mL, single for Covid-19 immunisation (as protection). Medical history included ulcerative colitis. The patient's concomitant medications were not reported. On 28Dec2020, the patient was positive for COVID-19 test after receiving COVID-19 vaccine. She informed she contracted COVID-19 due to an exposure from a co-worker. The outcome of events was not recovered. Information about lot/batch number has been requested.

"received his first dose of the vaccine and tested positive for Covid yesterday; received his first dose of the vaccine and tested positive for Covid yesterday; This is a spontaneous report from a contactable healthcare professional. A male patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date were not reported), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. It was reported that the patient received his first dose of the vaccine on 17Dec2020 and tested positive for Covid yesterday (28Dec2020). He is scheduled to have his second dose in January. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role BNT162B2 vaccine cannot be completely excluded for event ""tested positive for COVID""."

tested positive for COVID after the first dose; tested positive for COVID after the first dose; This is a spontaneous report from a contactable Pharmacist reported for herself. A female patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for

injection, lot number and expiry date unknown) via an unspecified route of administration on 22Dec2020 at single dose for Covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient informed that she had the COVID-19 vaccine exactly a week ago (22Dec2020). However, she was tested positive for COVID (Dec2020) after the first dose. The outcome of the events tested positive for COVID after the first dose was unknown. The patient asked if she can take the second dose. Follow-up activities are possible, information on the batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this patient cannot be completely excluded. Further information like confirmative virus genome /nucleic acid detection needed for meaningful medical assessment.

We have a patient that received the 1st vaccine, then 7days later they tested positive for COVID-19.; We have a patient that received the 1st vaccine, then 7days later they tested positive for COVID-19.; This is a spontaneous report from a contactable pharmacist (Pharmacy Intern) via Pizer-sponsored program: A patient of unspecified age and gender received first single dose of BNT162B2 (lot number, and exp date not reported), via an unspecified route of administration on an unspecified date for immunization. The patient's medical history and concomitant medications were not reported. The patient received the 1st vaccine, then 7days later tested positive for COVID-19 (date unspecified). It was asked if patient needed to wait 90 days to receive the 2nd Vaccine dose. The outcome of the event was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

tested positive for Covid; tested positive for Covid; This is a spontaneous report from a contactable consumer (patient). A female patient of an unspecified age received first single dose of BNT162B2 (Pfizer-Biontech Covid-19 Vaccine, lot number and exp date not reported), via an unspecified route of administration on 17Dec2020 for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. Patient received first Covid vaccine and on 26Dec2020, tested positive for Covid. Patient asked when if it was safe for her to get second dose. Asked if she get it on 21 days or if she had to wait. The outcome of the event was unknown. Information about Lot/Batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this patient cannot be completely excluded. Further information like confirmative virus genome /nucleic acid detection is needed for meaningful medical assessment.

had covid and also received the Pfizer covid 19 vaccine.; had covid and also received the Pfizer covid 19 vaccine.; This is a spontaneous report from a contactable nurse. A patient of unspecified age and gender started received single dose of BNT162B2 (Solution for injection, batch/lot number and exp date not reported), via an unspecified route of administration on an unspecified date for immunization. The patient's medical history and concomitant medications were not reported. They have a patient that meets the criteria to receive product bamlanivimab. The patient had Covid and received the Pfizer covid 19 vaccine. The nurse asked if patient can still get the bamlanivimab after receiving vaccine. The outcome of the events was unknown. No follow-up attempts are possible; information about batch number cannot be obtained.; Sender's Comments: Based on the information currently available, it is unclear if Covid developed after BNT162B2 Pfizer covid 19 vaccine, pending further clarification, at this

moment, the Company would handle the reported COVID related to the suspect, BNT162B2, for reporting purpose.

flare of existing autoimmune disease (undifferentiated connective tissue disease (UCTD) with predominant features of systemic sclerosis); flare of existing autoimmune disease (undifferentiated connective tissue disease (UCTD) with predominant features of systemic sclerosis); flare of existing autoimmune disease (undifferentiated connective tissue disease (UCTD) with predominant features of systemic sclerosis); This is a spontaneous report from a contactable physician. A 35-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot EH9899) intramuscular on 22Dec2020 16:15 (04:15 PM) at a single dose on the left arm as COVID-19 vaccine. Medical history included autoimmune disease (undifferentiated connective tissue disease (UCTD) with predominant features of systemic sclerosis); secondary Raynaud's phenomenon with calcinosis; known allergies to sulfa drugs, pine nuts. Concomitant medications included mycophenolate mofetil (MMF) 1000mg bid (twice a day), hydroxychloroquine sulfate (PLAQUENIL) 300mg qd (once a day), and prednisone 15mg daily (received within 2 weeks of vaccination). The patient had an adverse event (AE) of flare of existing autoimmune disease (undifferentiated connective tissue disease (UCTD) with predominant features of systemic sclerosis) on 23Dec2020 09:00 PM (also reported as flare began about 36-48 hours after vaccine) which required increased daily dose of prednisone (higher dose) up to 80mg total daily dose (80mg daily x3d, then tapered down) (treatment received for AE) and lasted about 4-5 days. The patient was not pregnant at the time of vaccination. She had no other vaccine in four weeks (did not receive other vaccine within four weeks prior to the COVID vaccine). She was not diagnosed with COVID-19 prior to vaccination and did not have Covid tested post vaccination (had not been tested for COVID-19 since the vaccination). The patient was vaccinated in a hospital (facility where the most recent COVID-19 vaccine was administered). The outcome of the events was recovered on Dec2020.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported flare of existing autoimmune disease (undifferentiated connective tissue disease (UCTD) with predominant features of systemic sclerosis) and the administration of BNT162B2, based on the plausible temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to agencys, as appropriate.

developed symptoms/mild/thought the symptoms were from the vaccine but turned out she did test positive for Covid; developed symptoms/mild/thought the symptoms were from the vaccine but turned out she did test positive for Covid; This is a spontaneous report from a contactable other healthcare professional (HCP) (patient). A 33-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 19Dec2020 at a single dose as vaccine. Medical history and concomitant medications were not reported. The patient received the vaccine on 19Dec2020 and 2 days later on 21Dec2020, she developed symptoms. Her symptoms had been mild. She thought the symptoms were from the vaccine but turned out she did test positive for Covid on Dec2020. She inquired what would happen if you get the vaccine and you test positive. She also inquired if her symptoms would be worse. The outcome of the events was unknown. Information on the

lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this patient cannot be completely excluded. Further information like confirmative virus genome /nucleic acid detection is needed for meaningful medical assessment.

positive for Covid/ symptoms of Covid; positive for Covid/ symptoms of Covid; This is a spontaneous report from a contactable nurse (reported for himself). A 33-year-old male patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiration date not provided), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. Patient got the first dose of the vaccine on 17Dec2020 and then around Christmas he developed symptoms of Covid (Dec2020). On 27Dec2020, he came back positive for Covid and wanted to know if he skip the second dose. Patient questioned what percentage of persons obtained immunity after the first product dose. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this patient cannot be completely excluded. Further information like confirmative virus genome /nucleic acid detection is needed for meaningful medical assessment.

tested positive for COVID-19 by PCR the following day and developed covid symptoms; tested positive for COVID-19 by PCR the following day and developed covid symptoms; This is a spontaneous report from a contactable physician (patient). A female patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the first dose of the Pfizer-biontech covid-19 vaccine and tested positive for COVID-19 by PCR the following day and developed COVID symptoms. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The reported tested positive for COVID-19 by PCR after COVID-19 immunization is considered ineffective of BNT162B2, and the Company cannot completely exclude the possible causality between the reported event and BNT162B2 administration.

they suspect that I have rheumatoid arthritis; this is like abnormal I mean anybody with arthritis should not be a part of these trials; Never felt this kind of joint pain in my life/these are hitting my every joint in my hand, I can barely move; I have never been in as much pain in my life; I am really bad nauseous; soreness in your arm; This is a spontaneous report from a contactable consumer (patient) (Food service worker in the hospital). A 48-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: Unknown), via an unspecified route of administration on 28Dec2020 at single dose for COVID-19 immunisation. Medical history included Meniere's disease (reported 'Meniere's disease in my left ear'). The patient's concomitant medications were not reported. Consumer stated, ''I just took the COVID 19 vaccine I work at (institute name), (city name), I took it yesterday around 1 and all through the night; they suspect that I have rheumatoid arthritis I got an injection in one of my hips, my right hip and both my shoulders I can inject in cortisone injection and I have never felt this kind of joint pain in my life, I can barely move, I had been calling and I let my director know and anybody that has any kind of arthritis on these trials, I have never been in as much pain in my life and I

am really bad nauseous.'' When offered for the website consumer stated, ''I just wanted to report the side effects, I am really nauseous and I can barely move; this is like abnormal I mean anybody with arthritis should not be a part of these trials.'' When probed if vaccine was prescribed by Physician, Consumer stated, ''No it was voluntary, it was not mandatory it was given my hospital administration.'' Product details for vaccine (LOT#, Expiration date, NDC#, UPC#): Consumer stated, ''EH9894, I think for the last number.'' Treatment for adverse events: Consumer stated, ''I don't have anything for nausea, I did take, they told to me take Ibuprofen my doctor said that it would help with the soreness in your arm, I take my Ibuprofen every six hours because it is prescribed to me, but I could barely move my, I can barely move; these are hitting my every joint in my hand.'' Expiry Date of Ibuprofen: 16Jul2021. The outcome of the events was unknown. Information on the Batch/Lot number has been requested.

"Tested positive for COVID after receiving the vaccine/runny nose and felt achy/coughing/ dizzy and weak. It was affecting her legs and she had no taste; Tested positive for COVID after receiving the vaccine/runny nose and felt achy/coughing/ dizzy and weak. It was affecting her legs and she had no taste; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). A contactable consumer (patient) reported a 53-year-old female received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: Unknown, did not see this information on the vaccination card), via an unspecified route of administration in the left arm on 20Dec2020 at single dose for covid-19 immunization (certified nurse assistant in healthcare). Other products, patient history and investigation assessment was No. There were no concomitant medications. The patient was vaccinated with the COVID Vaccine on 20Dec2020 but tested positive afterwards on 27Dec2020. The patent thought she had COVID in the vaccine and COVID in her body. She was scheduled for next dose on 10Jan2021 and would like to know if she should get the scheduled dose or if she needs to wait longer and re-schedule it. She was now a COVID patient and sick. She was waiting to get better. Before the vaccine she tested negative and felt great. Then she got the vaccine. She had a runny nose and felt achy. She asked her coworker, and her coworker felt the same. She thought if it continued that maybe it was a side effect. Caller confirmed her symptoms were runny nose, feeling achy, and coughing. She took Tylenol and the aches went away. They then came back, and she had more aching and she was wondering why. Caller clarified that these symptoms did not start the next day after receiving the vaccine. Achiness/body aches was started on 23Dec2020 when she was at work. It would wake her up at night. She did have aches right now, but her fever had lowered down. She was also dizzy and weak. It was affecting her legs and she had no taste. She was not eating but needs to eat. If she did, she eat something sweet. Runny nose was started on 24Dec2020. She went back to work on 26Dec2020 but told them she could not work because she had symptoms of COVID. She went to her second job where they do COVID testing and asked her boss for a test. She tested positive on 27Dec2020. Dose was unknown. She said she thought she got 1 vial. The whole thing. The outcome of events ""tested positive for COVID after receiving the vaccine"" was not recovered. Information on lot/batch number has been requested."

testing positive for COVID after getting the vaccine; testing positive for COVID after getting the vaccine; This is a spontaneous report from a contactable Other Health Professional reported for herself. A female patient of an unspecified age (reported as 42) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19

immunization. The patient's medical history and concomitant medications were not reported. The patient experienced testing positive for COVID after getting the vaccine in Dec2020 with outcome of unknown. The patient underwent lab tests and procedures which included COVID test in Dec2020: negative; positive. The reporter would like an explanation as to the rapidness of her testing positive for COVID after getting the vaccine. Can the vaccine cause false positive test results? Information on interpretation of SARS-CoV-2 test results. The patient tested negative on Monday, got the vaccine on Monday. However tested positive today, asymptomatic. Information about batch/lot number has been requested.; Sender's Comments: A possible contributory effect of suspect BNT162B2 on reported events cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Had the vaccine eventually then I ended up getting the virus; I ended up going through a rapid test that turned positive; This is a spontaneous report from a contactable consumer reporting for himself. A 53-years-old male patient started to receive bnt162b2 (BNT162B2; Lot # EK5730) vaccine , intramuscular in the left arm on an unspecified date at single dose for Covid-19 immunisation . Medical history included hypothyroidism from an unknown date. Concomitant medication included levothyroxine sodium (SYNTHROID). The patient stated that he does get test for the virus twice weekly. He did end up getting the Pfizer, the first round of Pfizer vaccine a week ago. The patient had a test, a virus test before, a swab test afterwards, both were negative but by Christmas eve the patient started getting, what he thought was side effect of the vaccine and he ended up going through a rapid test and it turned out he was positive for the virus.

Tested positive for COVID /she received the first dose of the vaccine last 16Dec2020 but tested positive via Nasal Swab test on 24Dec2020; Tested positive for COVID/positive via Nasal Swab test/fever/body aches/headaches/She was very very weak, almost lethargic/felt really bad/fatigued; gas; bloated; the weight last week she was 167 and this week she was 180; This is a spontaneous report from a contactable nurse reporting for herself. A 48-year-old female patient received her first dose of BNT162B2 (Pfizer-Biontech Covid-19 Vaccine) Lot #EH9899, via an unspecified route of administration on 16Dec2020 at single dose by injection in the right deltoid for COVID-19 immunisation. Medical history included borderline hypertension from 2018 and ongoing. Concomitant medication included olmesartan medoxomil (BENICAR) from 2018 and ongoing for borderline hypertension. The nurse reported that she received the first dose of the vaccine last 16Dec2020 but tested positive via Nasal Swab test on 24Dec2020. She said this kinda weird. She received the COVID vaccine on 16Dec2020. She tested positive for COVID on 24Dec2020. Obviously she was exposed to COVID prior to the vaccine. She was scheduled to have the 2nd dose on 05Jan2021 but her hospital deferred it to 23Mar2021. She was asking if this was what's recommended.She said this was another weird thing, regarding the weight last week she was 167 and this week she was 180 (in Dec2020). She was very bloated in Dec2020, it was bizarre. He husband did not receive the vaccine and had symptoms on 24Dec2020. She had normal seasonal allergy symptoms. She did not think much of it. She took her Xyzal and her normal things.She

took her husband to get tested and he tested positive, so she got tested, and was positive. She worked at (address withheld), and all of her patients were immunocompromised. She was shocked. She did not think this had anything to do with the vaccine. If anything, it has helped her fight the virus.By Christmas day 25Dec2020 her fever was 102, she had body aches, she went into overdrive. She had headaches and lots of gas in Dec2020.She went into overdrive from partial recognition from the vaccine.She was very very weak, almost lethargic. Her O2 saturation have stayed good around 98% in Dec2020. She has done really well. Yesterday or the day before she felt really bad again. She did a virtual visit with (name withheld), and the doctor started her on steroids and gave her an inhaler just in case she needed it. She felt better on 30De2020. On 29De2020 she was so bad and bloated, she only had one dose of the steroids, but had unusual weight gain. Then 2 pounds were gone this morning on 30De2020.She had no pitting edema or edema period. She was very fatigued, but had more energy this morning, probably because of the steroids. She had the vaccine, even though day 7 post-injection, instead of day 10, which was about 50%, her body reacted more so than her husbands because her body recognized it. The outcome of the events was unknown. She was unsure of the outcome. It was up and down. She has felt worse and she has felt better. The reporter considered the event Tested positive for COVID was Not serious and unrelated to the BNT162B2.; Sender's Comments: While reporter causality is noted, a possible contributory effect of suspect BNT162B2 on reported events cannot be excluded.

Bell's palsy on the left side of his face; Headaches; Overall was not feeling well; This is a spontaneous report from contactable consumers (including the patient). A 64-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EH9899), via an unspecified route of administration in right arm on 18Dec2020 04:00 at a single dose for covid-19 vaccination. There were no relevant medical history and concomitant medications. On, 19Dec2020, the patient had headaches and overall was not feeling well. On 28Dec2020, the patient experienced bell's palsy on the left side of his face. He said it was a little hard to talk as his mouth was not working at the moment. The provider he saw gave him steroids- Prednisone, and Valaciclovir. He was also told to get some eyedrops as one eye does not close very well. He laughed and said it was a little hard to drink his coffee. The outcome of the events headache and not feeling well was recovered on 21Dec2020 while the outcome of bell's palsy was not recovered. The information on the batch/lot number and expiration date has been requested.

positive COVID-19 test with symptoms; positive COVID-19 test with symptoms; This is a spontaneous report from a contactable physician reporting for a nurse (patient) from a Pfizer-sponsored program Pfizer First Connect. A 43-year-old female patient received first dose of BNT162B2 (Pfizer Covid-19 vaccine), via an unspecified route of administration on 22Dec2020 at single dose for covid-19 immunisation. There were no medical history and concomitant medications. The physician was reporting that a nurse received the vaccine and had a headache after receiving it. She also tested positive for Covid 6 days after getting the vaccine (on 28Dec2020). He was asking if there was any connection with getting the first shot and testing positive. She was very keen with social distancing and wearing a mask. The physician is a medical oncologist. He was reporting on one of the nurses that worked at the hospital. She also developed nasopharyngeal congestion 4-5 days later. The nurse was at work today. She was disappointed because she had to go home. The patient underwent lab tests and procedures which included SARS-CoV-2 test: positive on 28Dec2020. The outcome of the events was

unknown. Information on Lot/Batch number has been requested.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Drug ineffective and COVID-19 cannot be totally excluded. The case will be reassessed if additional information becomes available.

has tested positive shortly after; has tested positive shortly after; This is a spontaneous report from a contactable pharmacist. A patient of unknown age and gender received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on unknown date at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. The pharmacist asked for recommendation for the 2nd dose of the patient who had received the 1st dose but had tested positive shortly after. The outcome of the events was unknown. information on the LOT/Batch number has been requested.; Sender's Comments: A possible contributory effect of suspect BNT162B2 on reported event cannot be excluded.

"fatigue; arm soreness; chills; muscle pain/muscle aches; fever; vomiting; he was positive for COVID-19; he was positive for COVID-19; This is a spontaneous report from a contactable consumer and a nurse. A 45-year-old male patient started to receive BNT162B2, via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. Medical history included bronchiolitis obliterans, and ulcerative colitis. Concomitant medications were not reported. Patient experienced arm soreness. Six days later, after working a shift in the COVID-19 unit, patient had chills, muscle pain and fatigue. A drive-up hospital test confirmed he was positive for COVID-19. Patient was tested positive after receiving vaccination on 18Dec2020. Patient experienced muscle aches, fever, chills, and vomiting. On 30Dec2020, patient was tested positive for Covid-19 after receiving Pfizer vaccination. Outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: A possible contributory effect of suspect BNT162B2 on reported event ""he was positive for Covid-19"" cannot be excluded."

palpitations; Shortness of breath; Heart rate was 160s; This is a spontaneous report from a contactable Physician. This 29-Year-old female physician reported that she received 1st dose of BNT162B2 on 30Dec2020 08:30 AM at right arm for COVID-19 immunisation. Medical history included allergies: Citrus and cinnamon- perioral contact dermatitis. Concomitant therapy included birth control- Mylan. The patient reported within 5 mins of vaccine administration, she experienced palpitations and shortness of breath. Heart rate was 160s on 30Dec2020. No rash or fever. Event onset time was reported as 30Dec2020 8:30. She needed to be taken to the emergency room. Treatment was received as Steroids epinephrine Benadryl. The outcome of the event was recovering. The events were reported as non-serious. Lot/Batch and Expiration date has been requested.; Sender's Comments: A possible contributory effect of suspect BNT162B2 on reported events cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

tested positive; tested positive; This is a spontaneous report from a contactable Nurse. A female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 27Dec2020 (reported as about 3 days ago, as of 30Dec2020) at single dose for covid-19 immunisation. Medical history, concomitant medications or past drug history were not provided. She received the vaccine about 3 days ago and later tested positive in Dec2020 and asked if the patient needs to restart the 2 doses series. Outcome of the events were unknown. Lot/Batch and Expiration date has been requested.; Sender's Comments: The reported events drug ineffective and COVID-19 are likely intercurrent conditions and are unrelated to BNT162B2 based on the short temporal relation between vaccination and onset of event.

Caller stated that a patient tested positive for covid 19 after the first dose of the vaccine; Caller stated that a patient tested positive for covid 19 after the first dose of the vaccine; This is a spontaneous report from a contactable Pharmacist. A female patient of an unspecified age (age: 74; unit- unknown) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient tested positive for COVID 19 after the first dose of the vaccine. Reporter wants to know if the patient can be treated with monoclonal antibodies after having received the vaccine. Reporter also wanted to know if the storage in the thermal shipper can be extended past the 30 days. Event outcome was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment hence, the events drug ineffective and COVID-19 are conservatively assessed as related to the suspect drug BNT162B2 until further information becomes available.

Patient who got the vaccine a week ago tested positive now for COVID; Patient who got the vaccine a week ago tested positive now for COVID; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received first dose bnt162b2 (BNT162B2), via an unspecified route of administration on Dec2020 at single dose for covid-19 immunisation. The patient medical history was not reported. The patient's concomitant medications were not reported. The pharmacist reported the patient who got the vaccine a week ago tested positive now for covid on Dec2020 with outcome of unknown. The patient underwent lab tests and procedures which included covid: positive on Dec2020. the doctor is thinking of giving antibody. The event was reported at non-serious. Information on lot/batch number has been requested.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment hence, the events are conservatively assessed as related to the suspect drug BNT162B2 until further information becomes available.

Moderate to severe Chills; body and head aches; head aches; Fever (99.6 F); This is a spontaneous report from a non-contactable other hcp. A 32-year-old male patient received BNT162b2 (COVID 19, Lot number: EK9231, dose number was 1), intramuscular at right arm on 28Dec2020 08:00 AM at single dose for COVID-19 immunization in hospital. Medical history was none. There was no known allergies to medications, food, or other products. The patient's concomitant medications were not reported. There was no other vaccine in four weeks. The patient experienced Moderate to severe Chills, body and head aches, and Fever (99.6 F) on 28Dec2020 20:30(08:30 P.M). There was no treatment. There was no COVID prior vaccination nor COVID tested post vaccination. Outcome was recovering. Events were assessed as

non-serious by the reporter. No follow-up attempts are possible. No further information is expected.; Sender's Comments: A causal association between BNT162B2 and the reported event chills cannot be excluded based on known safety profile of suspect drug and compatible temporal relation.

bell's palsy; This is a spontaneous report from a contactable physician. A female patient of an unspecified age (age: 37 unit: unknown), received BNT162B2(PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date were not reported), via an unspecified route of administration on 29Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient experienced bell's palsy on 30Dec2020. The outcome of the event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of bell's palsy might not be excluded, considering the plausible temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"heart rate (HR) was 180; tongue and lips tingled; walking for a short distance and felt ""off; This is a spontaneous report from a contactable Nurse reported for herself. This 34-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number: EK9231), via an unspecified route of administration on 29Dec2020 15:15 at single dose on left arm for Covid-19 immunisation. Medical history included allergies to hepatitis B vaccine rhbsag (HEY B VACCINE) booster and poison ivy. Concomitant medication included biotin / calcium pantothenate / cyanocobalamin / folic acid / nicotinamide / pyridoxine hydrochloride / riboflavin / thiamine mononitrate (B COMPLEX), fexofenadine, ascorbic acid (VIT C) and Multivitamin. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Immediately after shot (29Dec2020 15:15), her tongue and lips tingled but it went away quickly. She was walking for a short distance and felt ""off."" The patient checked her pulse and pulse ox and her heart rate (HR) was 180. Her HR had bounced around from 150-180 with minimal exertion and was in the 90s at rest. No treatment received for the events. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of not recovered. The events were non-serious.; Sender's Comments: A causal association between BNT162B2 and the event heart rate increased cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."

dizzy; fever; elevated blood pressure; flushed feeling day of vaccine. The next day she continued to feel flushed; This is a spontaneous report from a contactable pharmacist. This pharmacist reported for a 60-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via intramuscular route on 29Dec2020 15:00 at single dose for COVID-19 immunization. Medical history included COVID-19, hypertension and depression. Concomitant medications included vitamins received

within 2 weeks of vaccination. The patient previously took duloxetine and experienced allergies. Facility that the most recent COVID-19 vaccine was administered in Workplace clinic. Prior to vaccination, the patient was diagnosed with COVID-19. Since the vaccination, the patient hasn't been tested for COVID-19. On 29Dec2020, the patient was dizzy, had fever, elevated blood pressure, and flushed feeling day of vaccine. The next day she continued to feel flushed that moved through her face and down her neck. It felt like she was on fire. The adverse events resulted in the following: Emergency room/department or urgent care. Outcome of the event feel flushed was recovered on 30Dec2020, outcome of other events was recovered in Dec2020. Treatment received for the adverse events included IV fluids, prednisone, diphenhydramine hydrochloride (BENADRYL). Events were reported as non-serious. Information on the lot/batch number has been requested.; Sender's Comments: A causal association between BNT162B2 and the events dizzy, fever, elevated blood pressure and flushed feeing cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

"swelling/cellulitis in her left arm/redness, inflammation, swelling that looked like cellulitis to the arm/deltoid area; redness; to the arm/deltoid area; inflammation; to the arm/deltoid area; swelling/cellulitis in her left arm/swelling; to the arm/deltoid area; This is a spontaneous report from a contactable nurse reported for herself. A 28-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EK5730, expiry date unknown) intramuscular at left deltoid on 16Dec2020 16:45 at single dose for Covid-19 immunization at a hospital facility and not in a military facility. Medical history included ongoing acne. Concomitant medications included ongoing spironolactone for acne. The patient did not receive any other vaccines the day or 4 weeks prior Covid-19 vaccine. The patient informed that after 8 days of getting Covid vaccine she has swelling/cellulitis in her left arm. The patient got the COVID-19 vaccine and had kind of a delayed reaction. She got the vaccine on 16Dec2020 16:45 pm at her workplace. The patient informed that she had no reaction right after the vaccine. On 24Dec2020, the patient experienced redness, inflammation, swelling that looked like cellulitis to the arm/deltoid area. The patient got antibiotics and it has improved. The reporter informed that the events required visit to physician office. The outcome of the events swelling/cellulitis in her left arm/redness, inflammation, swelling that looked like cellulitis to the arm/deltoid area was recovering. The patient was queried regarding seriousness of the events and the patient stated ""it could have potentially dangerous."" The patient wanted to know if she should get second dose of the vaccine.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events vaccination site cellulitis, vaccination site erythema, vaccination site inflammation and vaccination site swelling cannot be excluded."

she had developed symptoms and tested positive to COVID-19; she had developed symptoms and tested positive to COVID-19; This is a spontaneous report from a contactable physician (patient). A female patient of unspecified age received BNT162B2 first dose on 20Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. She tested negative on

18Dec2020. She received the first dose of the COVID 19 vaccine on 20Dec2020. On the following Friday (25Dec2020), she had developed symptoms and tested positive to COVID-19. The outcome of the events was unknown. Information on the batch/lot number has been requested.; Sender's Comments: The causal relationship between BNT162B2 and the events drug ineffective and SARS-CoV-2 test positive cannot be excluded as the information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available.

received the 1st dose of the COVID-19 vaccine on 21Dec2020, however, on 28Dec2020 she tested positive to COVID-19; received the 1st dose of the COVID-19 vaccine on 21Dec2020, however, on 28Dec2020 she tested positive to COVID-19; This is a spontaneous report from a contactable other healthcare professional (HCP) (patient) from a Pfizer-sponsored Program Pfizer First Connect. A 26-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), intramuscularly on left deltoid on 21Dec2020 (between 2:15PM and 2:30PM) at single dose (reported as 225mcg/.45ml intramuscular suspension) for COVID-19 immunization. The relevant medical history included birth control. Concomitant medications included ongoing ethinylestradiol, ferrous fumarate, norethisterone acetate (TAYTULLA) for birth control. The patient received the 1st dose of the COVID-19 vaccine on 21Dec2020, however, on 28Dec2020 she tested positive to COVID-19. She wanted to know if the vaccine could have caused a positive test result, if the test assesses IgM or IgG (to the viral spike proteins), could a false positive result be caused by the vaccine. She hadn't been able to get up with her primary care on the phone. This was her first dose. The window to get the second vaccine is 07Jan2021 through 11Jan2021. The patient did not require a visit to emergency room or physician office. The outcome of the events was unknown.; Sender's Comments: The causal relationship between BNT162B2 and the events drug ineffective and SARS-CoV-2 test positive cannot be excluded as the information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available.

acute pericarditis; This is a spontaneous report from a contactable physician. A male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot/batch number not reported), via an unspecified route of administration on 23Dec2020 at a single dose for covid-19 immunization. The patient medical history and concomitant medications were not reported. It was unknown if other vaccines were given in four weeks and unknown if patient had Covid prior vaccination. The patient experienced acute pericarditis on 24Dec2020. Clinical course as follows: Doctor colleagues at the institution admitted (at Emergency room/department or urgent care) and treated a patient with acute pericarditis who received his first dose of Pfizer SARS-CoV-2 EUA vaccine on 23Dec2020. The physician (reporter) considered the event as non-serious. The outcome of the event was recovering. Information about batch/lot number has been requested.; Sender's Comments: The causal relationship between BNT162B2 and the event acute pericarditis cannot be excluded as the information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as

well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

received the vaccine last week and tested positive for covid this week; received the vaccine last week and tested positive for covid this week; This is a spontaneous report from a contactable other Healthcare Professional (patient). A 30-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: Unknown), via an unspecified route of administration on 23Dec2020 at single dose by injection in the right arm for COVID-19 immunization (to be protected and to protect her family with other conditions like diabetes). The patient's medical history and concomitant medications were none. The patient got the first dose of the COVID vaccine last week on 23Dec2020 and then she tested positive for COVID on Monday on 28Dec2020. She was asking if it was safe to get the second dose. Patient was a pharmacy technician. The outcome of the events was not recovered. Information on the Lot/Batch number has been requested.; Sender's Comments: The causal relationship between BNT162B2 and the events drug ineffective and SARS-CoV-2 test positive cannot be excluded as the information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available.

Headache; blurred vision; unable to read at time; Difficulty focusing; right hand numbness; This is a spontaneous report from a contactable Nurse (patient). A 35-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 28Dec2020 04:15 PM, Intramuscularly at single dose (Vaccine location: Left arm) for COVID-19 immunization. Medical history was reported none. Concomitant medications were not reported. Patient did not have any allergies. Patient did not receive other vaccine in four weeks. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Patient experienced Headache, blurred vision and unable to read at time, Difficulty focusing and right hand numbness on 30Dec2020 12:00 AM. Patient did not receive any treatment. The outcome of the events was not recovered. This case was assessed non-serious by reporter. The events did not result in death, Life threatening, Caused/prolonged hospitalization, Disabling/Incapacitating, Congenital anomaly/birth defect. Information on the lot/ batch number has been requested.; Sender's Comments: The causal relationship between BNT162B2 and the events headache, vision blurred, cognitive disorder, disturbance in attention and hypoaesthesia cannot be excluded as the information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

"mild supraglottic swelling of my aryepiglottic folds; feel difficulty swallowing (globus); allergic response; This is a spontaneous report from a contactable physician. A 41-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), intramuscular on 23Dec2020 12:30 at single dose for COVID-19 immunisation. Medical history included allergies to medications, food, or other products: Penicillin. There were no concomitant medications. The patient previously took benzoyl peroxide and experienced allergies. The patient experienced stated that on

23Dec2020 12:31, ""I am an ENT surgeon. I received the first dose of the vaccine at 12:30pm. Within 1-2 minutes I started to feel difficulty swallowing (globus). I reported this to the nurse and she offered me ginger ale. My symptoms worsened and then stabilized after 10 minutes. I went upstairs and got the residents to perform a fiberoptic nasoendoscopy and this demonstrated mild supraglottic swelling of my aryepiglottic folds. I choose not to receive treatment as I did not want to dampen my allergic response and as an ENT surgeon manage airways on a daily basis. I stayed at the hospital for a further 6 hours and continued to work. My symptoms resolved after 9 hours"". The outcome of the events was recovered on 23Dec2020.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the event laryngeal oedema cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate."

chronic auto immune response; angioedema/tongue is swollen; urticaria/hives; This is a spontaneous report from a contactable other healthcare professional. A 35-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiration date were not reported), intramuscular in the right arm on 28Dec2020 10:15 at a single dose for COVID-19 immunization. The patient's medical history was not reported. The patient was not pregnant. Concomitant medications included cetirizine hydrochloride (ZYRTEC), omeprazole (PROTONIX), naproxen sodium (ALEVE), and birth control. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination and had not been tested for COVID-19 since the vaccination. On 30Dec2020 16:00, the patient have a chronic auto immune response in the form of urticaria and angioedema. The symptoms of hives as well as swollen tongue was maintained with antihistamines. Outcome of the events was not recovered. The events were considered non-serious. The following information on the batch number has been requested.; Sender's Comments: Based on the temporal relationship, the association between the events chronic autoimmune response in the form of urticaria and angioedema with BNT162b2 can not be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Tachycardia/her heart rate at 11:00PM last night was at around 100/ she checked her pulse it was 115; she was not feeling right, so she took the day off from work today; Lightheadedness; wobbly; she felt weak; This is a spontaneous report from a contactable nurse (patient). A 50-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot Number: EL1284, expiration date: Apr2021), via an unspecified route of administration at right deltoid on 29Dec2020 17:45 at a single dose for Covid-19 immunization. Medical history included asthma from 2003 and ongoing, tachycardia and major surgery. Concomitant medication included maintenance inhaler (unspecified) for asthma.

Patient was officially diagnosed with asthma in 2003. She said her asthma was controlled, and she takes a maintenance inhaler every day. She said she has been taking the same maintenance inhaler since she was first diagnosed with the asthma. She said she rarely uses a rescue inhaler. Reported she was prescribed the Metoprolol Tartrate 25mg for her tachycardia that she had after her major surgery, but she did not take the full 25mg dose during that time. She said she hasn't had taken the Metoprolol Tartrate 25mg in almost a year, clarifying it was last Jan2020 that she used the Metoprolol Tartrate. The patient previously received a flu shot in Oct2020, and felt rundown for a day afterwards, but that she always does after she receives a flu shot. She said she had no heart issues after receiving the flu shot in Oct2020. The patient who is a registered nurse reported she received the COVID-19 vaccine last night at work, on 29Dec2020, at 5:45PM, and had experienced some tachycardia after receiving the vaccine. Reported the COVID-19 Vaccine was offered through her employer. She said the COVID-19 vaccine was optional and offered to all employees if they work at the hospital. She experienced the tachycardia at 11:00 PM last night, 29Dec2020. She said her normal resting heart rate is between the high 60s to low 70s. She said her heart rate at 11:00PM last night was at around 100, clarifying she was not running a fever at that time. She stated after she received the COVID-19 vaccine, she was not feeling right, so she took the day off from work today, and slept in. She said when she woke up this morning (in Dec2020), she still didn't feel right, saying she felt weak and wobbly, and when she checked her pulse it was 115. She said she does have a past history of tachycardia. She said a year ago she had major surgery, and she had tachycardia after the major surgery. She said the tachycardia eventually went away, but she did have to see a cardiologist and take a beta blocker. She said she took a tiny dose of the beta blocker this morning, and called the cardiologist to let him know what was going on. She said she has not heard back from the cardiologist yet. She said the tachycardia went away once she took the beta blocker this morning. She said she took the beta blocker because her heart rate was going higher, and higher. She said she didn't want to end up like last year after her major surgery with a heart rate in the 170s. She said the tachycardia she was experiencing after receiving the COVID-19 Vaccine was not normal for her. She said once she got over the major surgery last year, her heart rate was fine. Reported her employer was making employees wait around for 15 minutes after the employees received the COVID-19 Vaccine to make sure no one had a major reaction to the COVID-19 Vaccine. She said after she received the COVID-19 Vaccine, she waited around longer than the 15 minutes. She said she felt weird after she received the COVID-19 Vaccine and thought maybe she was experiencing anxiety. She said she was lightheaded on 29Dec2020 after she received the COVID-19 Vaccine and completed a report right then on the website. She said the website is for reporting adverse events, and she was sent a website link to complete the adverse event reporting. She said she signed into the website link while she was still at the hospital. She said one of the website's first questions asked was how she was feeling. She said the question made her wonder if her lightheadedness was due to her heart rate being up because she becomes lightheaded when that happens. She clarified she reported only the lightheadedness on the website, and not the tachycardia. She said her lightheadedness got better and she was fine, and then at 11:00PM the tachycardia hit her like a switch. Reported this morning she felt fine, and then all of sudden she wasn't fine. Tachycardia Treatment: Reported she took a 8.5mg dose, or one quarter of a 25mg tablet (as provided by the reporter) of the beta blocker Metoprolol Tartrate 25mg tablet this morning and called her cardiologist to let him know. She said she split the Metoprolol Tartrate 25mg tablet this morning, and only took a quarter of the 25mg tablet (reported as a 8.5mg dose by the reporter).

Reported she believes 100% that her tachycardia was caused by the COVID-19 Vaccine, saying she has been fine up until receiving the COVID-19 Vaccine. She said she got the COVID-19 Vaccine because she was afraid of getting the COVID-19 Virus with her asthma. She said she has no other preexisting conditions besides the asthma. Reported she is not going to get the second COVID-19 Vaccine dose. She said it was scary when her heart rate shot up out of nowhere. She said the COVID-19 Vaccine is the only thing different she has done. She said before the COVID-19 Vaccine, she was completely fine. Patient asked if the Pfizer DSU agent had heard of anyone else who has experienced tachycardia after receiving the COVID-19 Vaccine. The outcome of the event tachycardia was recovered in Dec2020, event lightheadedness was recovering and unknown for the other events. The reporter assessed the event 'tachycardia' as Serious (Medically Significant).; Sender's Comments: Based on the close temporal relationship, the association between the event tachycardia with BNT162b2 can not be fully excluded. The medical history of tachycardia and asthma medication may be contributory as well. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

swelling and joint pain in the little finger on left arm; swelling and joint pain in the little finger on left arm; She got a bruise at the injection site; It bled a little bit when she put it in; This is a spontaneous report from a contactable nurse (patient). A 62-years-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EK9231), via an unspecified route of administration on the left arm, on 28Dec2020 at 14:15 at a single dose for Covid-19 immunization. Medical history included environmental allergies, she has allergies and can have an asthmatic attack from cat dander and perfume, blood pressure (abnormal) and sleep (disorder). Concomitant medications included ongoing lisinopril for blood pressure, colecalciferol (VITAMIN D), acetylsalicylic acid (BABY ASPIRIN), paracetamol (TYLENOL). The patient previously took novocaine but was allergic. She got all this information when she got the vaccine on Monday at (place name) in (state name). It tells all the side effects from the first injection. She wanted to report that it is the same arm that she got the vaccine in. She has swelling and joint pain in the little finger on left arm. It says you can have joint pain, but nothing about swelling. She thought she better report it. This was her first shot. She is supposed to get the second one on 18Jan2021. She wanted to make sure she can take it. She received the vaccine on 28Dec2020. She laid around that day. Today is the first day she doesn't have arm pain and swelling at the injection site. It was the first time she has had arm pain. She has never had that with flu shot. The arm pain started within the 15 minutes she was observed. It hurt like hell until that day. She got a bruise at the injection site. It bled a little bit when she put it in. Swelling and joint pain in the little finger on left arm: she doesn't know if it was later that day. She can't remember. She really noticed it yesterday. She has never had joint pain or swelling. She doesn't have any problems with arthritis. Now her little finger is bigger than the rest of her fingers. It hurts because of the swelling. She doesn't want to take anything. It might be fluid. She has a high pain tolerance. She keeps bending it thinking it will get better. It isn't as bad, but its still swelled up. At first she thought it was better, but it is still pretty swollen. To her this is a reaction. She was thinking if she took paracetamol before, it wouldn't hurt as bad, but she can't remember if she took it that morning. She takes 500mg before bed for the heck of it at night. It helps

her sleep better. She has allergies and can have an asthmatic attack from cat dander and perfume. They think she was allergic to the preservative in the flu shot, but she has never had any trouble with the flu shot since. She has environmental allergies. They thought she was allergic to Novocaine once at the dentist office. Who knows, it only happened once. She's been to the dentist many times and who knows what they injected and why she reacted that way. She felt like she was going to pass out. They don't give it to her anymore. She doesn't know what was in it. She is worried since this vaccine is emergency authorization. She doesn't want to get the next one and have a worse reaction. She is not sure if she should be worried. The events of swelling and joint pain in the little finger on left arm were assessed as medically significant. Outcome of the event of 'swelling of fingers' was not recovered, the other events were unknown.; Sender's Comments: There is a reasonable possibility that the event joint pain was related to BNT162b2 based on known drug safety profile. Based on the temporal relationship, the association between the event swelling with BNT162b2 can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Covid 19 test: Nasal Swab Result: Positive; Covid 19 test: Nasal Swab Result: Positive; Severe joint swelling oral viral sores left lung fluid exhaustion; Severe joint swelling oral viral sores left lung fluid exhaustion; Severe joint swelling oral viral sores left lung fluid exhaustion; This is a spontaneous report from a contactable Other HCP (patient). A 56-year-old non-pregnant female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular in the left arm on 24Dec2020 12:00 at a single dose for COVID-19 immunization at the hospital. Medical history included juvenile idiopathic arthritis (JRA). The patient was not diagnosed with COVID-19 prior vaccination. Concomitant medications included imipramine, nebivolol hydrochloride (BYSTOLIC), and topiramate (TOPAMAX). The patient received other vaccine within 4 weeks prior to the COVID vaccine which is J&J cv trial. The patient experienced severe joint swelling, oral viral sores, and left lung fluid exhaustion on 25Dec2020 06:00; it was reported that no treatment was given for these. The patient tested for COVID-19 post vaccination. The COVID-19 test post vaccination was a Nasal Swab (Abbott Binax) on 27Dec2020. The COVID-19 test result was positive. Outcome of the events severe joint swelling, oral viral sores, and left lung fluid exhaustion was recovering; for the other events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The association between the event lack of effect (COVID-19 test positive) with BNT162b2 can not be fully excluded. Based on the close temporal relationship, the association between the event left lung fluid exhaustion with BNT162b2 can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

"blood pressure went up to 150/101; feeling like fainting; feeling really tired; Weakness; irregular heart beat; sob; feeling like flushing in the body; chills; This is a spontaneous report from a contactable

healthcare professional. A 39-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL1284), intramuscular on the left arm on 30Dec2020 07:15 at single dose for COVID-19 immunisation. Medical history included hypothyroidism, depression, cardiac murmur and pvc. The patient hadno known drug allergies and had not tested for COVID-19 prior and after vaccination. Concomitant medication included levothyroxine sodium (SYNTHROID), ergocalciferol (VITAMIN D), tocopherol (VITAMIN E) and sertraline hydrochloride (ZOLOFT). The patient experienced weakness, irregular heart beat, feeling like fainting, sob, blood pressure went up to 150/101, feeling like flushing in the body, chills, feeling really tired, all on 30Dec2020 07:15. The patient received treatment. The outcome of the events was recovering.; Sender's Comments: Based on the close temporal relationship, the association between the event ""blood pressure went up to 150/101"" with BNT162b2 can not fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."

Got the first Pfizer COVID Vaccine and today I tested positive for COVID; Got the first Pfizer COVID Vaccine and today I tested positive for COVID; Congestion; Sore throat; This is a spontaneous report from a contactable consumer reporting for herself. A 26-years-old female patient received bnt162b2 (BNT162B2; Lot # EL0140) vaccine , via an unspecified route of administration on an unknown date in Dec2020 at single dose for Covid-19 immunisation . The patient medical history was not reported. There were no concomitant medications. The patient stated she got the first Pfizer Covid vaccine and on an unknown date in Dec2020 she tested positive for Covid 19, she also experienced nasal congestion and sore throat. The outcome of the events is unknown.

anaphylaxis; throat swelling; This is a spontaneous report from a contactable physician. A 50-year-old female patient (non-pregnant) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 29Dec2020 at single dose for COVID-19 immunization. Medical history included hypertension, lipids (as reported) and asthma. The patient was known allergies: codeine, iodine, shellfish, latex, and cefatrizine propyleneglycolate (CEFTIN). Prior to vaccination, the patient was diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The most recent COVID-19 vaccine was administered in hospital. The patient experienced anaphylaxis and throat swelling on 22Dec2020 with outcome of recovered in Dec2020. The events were reported as non-serious. The events resulted in Emergency room/department or urgent care. Treatment of epinephrine, steroids, antihistamines, observation was received for the events. Information on lot/batch number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylaxis and throat swelling cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The underlying predisposing condition of allergies to multiple materials may put the patient at high risk of anaphylactic reactions. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of

aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

she got tunnel vision; almost passed out; Blood pressure dropped to 70/50; heart rate went up to 140; whole body got cold and tingly; whole body got cold and tingly; This is a spontaneous report from a contactable pharmacist (patient) reported for herself. A 25-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; brand: Pfizer Biotech; lot number: EL0142) via an unspecified route of administration at left arm on 30Dec2020 at 12:45 PM at a single dose (dose number: 1) for COVID-19 immunization. Facility where the most recent COVID-19 vaccine was administered was workplace clinic. Medical history included premature ventricular contractions (PVCs). No known allergies (no allergies to medications, food, or other products). The patient was not pregnant. No other vaccine in four weeks and no other medications in two weeks. The patient experienced adverse events included blood pressure dropped to 70/50, heart rate went up to 140, whole body got cold and tingly and she got tunnel vision and almost passed out. The events all started on 30Dec2020 at 12:45 PM. The events were reported as non-serious. No treatment received for events. The outcome of events was resolving. Prior to vaccination, the patient was not diagnosed with COVID-19, and since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible. No further information is expected.; Sender's Comments: Based on the close temporal relationship, the association between the event tunnel vision with BNT162b2 can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

"The body aches started in his shoulder and now are all over his neck, back and whole body aches; The body aches started in his shoulder and now are all over his neck, back and whole body aches/ feeling like he has 1,000 pounds on his back; The body aches started in his shoulder and now are all over his neck, back and whole body aches; Body aches/The body aches started in his shoulder and now are all over his neck, back and whole body aches; Headache; Chills; Feel like crap; Low grade temperature; This is a spontaneous report from a contactable Nurse (patient). A 49-year-old male patient received BNT162B2 (Pfizer-BioNTech Covid-19 vaccine, lot number EL0142) intramuscularly at right shoulder approximately at 17:30 on 29Dec2020 for Covid-19 immunization. The patient's medical history included diagnosed allergies, compromised immune status, respiratory illness, genetic / chromosomal abnormalities, endocrine abnormalities (including diabetes) and obesity (a little over weight but he is fit). The patient had COVID in the end of Apr2020. The patient had no family medical history and had no prior vaccinations within four weeks. The patient had no concomitant medication. The second day of the vaccination, the patient called to report body aches, headache, chills, low grade temperature. As he reported, he just woke up and was walking around feeling like he had 1000 pounds on his back and felt like crap. The body aches started in his shoulder and currently all over his neck, back and whole body aches. Chills started last night (vaccination night). He was just trying to get to sleep and had to put an extra sweatshirt on last night. He did not check his temperature until he got up and it was 99.2 degrees

Fahrenheit. He was not able to provide a start date for the temperature. ""Body aches, headache between, chills between, low grade temperature (unspecified start date), feels like crap"" were considered developing between 24:00-01:00. He stated that they were all medically significant and he needs a day to recover hopefully. He just felt like he was hit by a truck. The patient had not visited physician or went to ER yet. The outcome of low grade temperature was unknown, chills was resolving and all other events did not resolve at the time of reporting.; Sender's Comments: There is a reasonable possibility that the events vaccination site pain, headache, chills, and pyrexia were related to BNT162b2 based on known drug safety profile. The association between the other reported events with BNT162b2 can not be completely excluded based on temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."

"A nurse got Bell's Palsy after the vaccine; heart attack; This is a spontaneous report from a contactable consumer. A female patient (nurse) of an unspecified age received single dose of BNT162B2 (batch/lot number and exp date not reported), via an unspecified route of administration on an unspecified date for immunization. The patient's medical history and concomitant medications were not reported. The consumer asked if Pfizer have more information if so then what's the ingredients. States that ""injury lawyers know how many deaths because of the vaccine. Bell's palsy, a nurse got Bell Palsy after the vaccine, she is all distorted, and 30 days later, that's the 2nd one to have a heart attack."" The outcome of the events was unknown. Information on the Lot/Batch number has been requested."

2nd one to have a heart attack; This is a spontaneous report from a contactable consumer. A female patient of an unspecified age received BNT162B2 via an unspecified route of administration on an unspecified date at a single dose as Covid vaccine. Medical history and concomitant medications were not reported. After stating Pfizer has submitted a request for Emergency Use Authorization for potential COVID-19 vaccine and it was now in the FDA's hands, the reporter inquired if Pfizer had more information if so then what's the ingredients. It was then reported that the patient's the 2nd one to have a heart attack on an unspecified date. The outcome of the event was unknown. Information on the Batch/Lot number has been requested.; Sender's Comments: The association between the event heart attack with BNT162b2 can not be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

"right mouth drop; right face numbness from eyebrow to below chin with right mouth drop; pins and needles feeling at injection site; then ears itching; This is a spontaneous report from a contactable nurse, the patient. A 63-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE Lot number: EK9231), via an unspecified route of administration, on 30Dec2020 at 03:45 AM (at the age of 63-years-old) as a single dose for COVID-19 vaccination. The facility where COVID-19 vaccine was administered was at a workplace clinic and anatomically located on

the right arm. Medical history included: History of Guillain Barre in 1970's with Swine Flu Vaccine. Concomitant medications included: clonidine (MANUFACTURER UNKNOWN), hydralazine ((MANUFACTURER UNKNOWN), spironolactone (MANUFACTURER UNKNOWN), pantoprazole (MANUFACTURER UNKNOWN); all for unknown indications from unknown dates and unknown if ongoing. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient previously took unspecified medications (MANUFACTURER UNKNOWN), from unknown dates to unknown dates for unknown indications and experienced sensitivity to some medications, and unknown if ongoing. On 31Dec2020 04:15 PM, the patient reported ""'Within 30 minutes of vaccine, I had pins & needle feeling at injection site. Then ears itching followed by right face numbness from eyebrow to below chin with right mouth drop.'"" The patient did not receive any treatment for the events. The clinical outcome of the events pins & needle feeling at injection site, ears itching followed by right face numbness from eyebrow to below chin with right mouth drop, was not recovered. It was also reported that since the vaccination, the patient had not been tested for COVID-19.; Sender's Comments: A possible contributory role of the suspect products cannot be excluded for the reported events based on the temporal association."

Bell's Palsy; This is a spontaneous report from a contactable physician. A 37-year-old female patient (nurse) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot EK9231) via an unspecified route of administration on 29Dec2020 17:50 (5:50 pm) at a single dose as Covid vaccine. Medical history included hypertension and depression. Concomitant medications included venlafaxine hydrochloride (EFFEXOR); olmesartan medoxomil (BENICAR); and unspecified medications for depression and blood pressure medication (hypertension). It was reported that the reporter's nurse got her vaccine last night, about 6'o clock at night, and woke up with Bell's Palsy on Dec2020. She woke up in midnight to go to the bathroom and when she looked in the mirror, she noticed that there was discrepancy. The physician examined her this morning, so it was in several hours getting the vaccine that she noticed it. She got the vaccination last night at 5:50 pm. When she went to bed it wasn't a problem. She woke up at midnight and noticed it. The patient was started on Medrol dose pack but she hasn't taken it yet because she's at work so she would start it today (unknown if the treatment was already received); it's steroid, Methylprednisolone, at 24 mg on day one and then decreases 4 mg a day over the next five days until it's done. The doctor inquired what should the patient do about her second dose and also asked if she should not get her second dose. The outcome of the event was unknown.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the event facial paralysis cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

edema started in her feet and ankles and then moved 3 quarter way to her shin; 4+ pitting edema; This is a spontaneous report from a contactable nurse (patient). A 47-year-old female patient received the

first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 17Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient reported she received the Covid vaccine on 17Dec2020 and on 25Dec2020 she noticed her shoes were snug and on 26Dec2020 she noticed 4+ pitting edema lasting 3 days. She went and brought some compression stockings and this has helped the edema improve but was still mild. The edema started in her feet and ankles and then moved 3 quarter way to her shin. She would like to know if she should receive second dose of Pfizer vaccine. Outcome of the event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Having trouble clearing my throat, felt like it was closing up; Having trouble clearing my throat, felt like it was closing up; Uncontrollable rigors; High heart rate; Numb lips and hands; Numb lips and hands; Nausea; Shortness of breath, difficulty catching my breath; This is a spontaneous report from a contactable healthcare professional (reporting for herself). A 38-year-old female received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number EJ1685, expiry date 30Dec2020) intramuscular (Arm Left), on 30Dec2020 09:15, single dose, for COVID-19 immunization. Relevant medical history included bariatric surgery, had anterior vaginal repair and bladder sling, had gall bladder removed, and had tonsils removed. It was reported that the patient cannot take NSAIDS, patient was not allergic to them. No allergies to food or other products. Concomitant medications included rizatriptan and paracetamol (TYLENOL). On 30Dec2020, within about 10 minutes of the injection of the vaccine, the patient had trouble clearing her throat, felt like it was closing up, had uncontrollable rigors, high heart rate, numb lips and hands, and nausea. The patient was discharged from the ED, went home and took a nap. Later that evening, the patient began to have a rapid heart rate again, began to had shortness of breath, difficulty catching her breath, and was admitted to the ED again and given more IV medications. Therapeutic measures given in response to the event included administration of IV medications, epinephrine injection and breathing treatment. Prior to the COVID vaccine, the patient did not receive any other vaccines within 4 weeks, was not tested or diagnosed with COVID-19. Facility where the most recent COVID-19 vaccine was administered was in the workplace clinic. Outcome of the events was recovering at the time of the report.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events oropharyngeal discomfort, throat tightness, chills, heart rate increased, hypoaesthesia oral, hypoaesthesia, nausea and dyspnoea cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

patient was noted to be flushed by residential home staff on 12/30/2020, approximately 2.5hrs after vaccination, fever present at that time. Prior to COVID19 vaccine administration, this patient did have exposure and was close contact with a known case of COVID19 in a residential care employee. Patient was taken to hospital for evaluation of febrile status, had positive COVID19 test at that time, and reported hypotension per residential care staff.

PATIENT SPOUSE REPORTS THAT PATIENT RECEIVED VACCINE ON 1/4/2021 AND ON 1/5/2021 PATIENT'S ARM BEGAN TO TURN RED AND SWELL AT THE INJECTION SITE. THE SWELLING AND REDNESS BEGAN TO GO DOWN HIS ARM AND HE BROKE OUT INTO A RASH. PATIENT THEN BECAME SHORT OF BREATH. EMS WAS CALLED AND PATIENT WAS TRANSPORTED TO HOSPITAL, WHERE HE WAS TREATED FOR ANAPHYLACTIC SHOCK TO THE COVID MODERNA VACCINE.

Anaphylaxis Narrative: 12/22 received COVID-19 vaccine at 1209 and developed SOB at 12:15. Took her own albuterol inhaler without relief. Transported to ED. PE: red hands with swelling, throat and lip swelling with difficulty swallowing. Later developed headache and dizziness then tachypnea and stridor. Meds given - See section 5 PLUS epinephrine IM and infusion @ 0.05 mcg/kg/min, Alb and ipratropium negs, racemic epi nebs. Admitted to the hospital on 12/22 and still hospitalized at the time of this report on 12/23. She remains on an epinephrine drip and was given methylprednisolone 125 mg IV x 2. No previous history of anaphylaxis. History of Reye's syndrome as a child when given aspirin.

Agitation, Sedation, Anaphylaxis, Rash & HYPOtension

"covid; covid; This is a spontaneous report from a contactable physician. A male patient of an unspecified age received single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, batch/lot number and exp date not reported), via an unspecified route of administration on an unspecified date for immunization. The patient's medical history and concomitant medications were not reported. The physician inquired whether a person with previous history of COVID would experience more significant reaction to the COVID vaccine than a person without a previous diagnosis due to having already produced antibodies. Reporter's colleague (physician) had the vaccine 2 weeks ago, had a severe reaction (unspecified) wherein he got a shot of epi. Patient recovered and was okay. At the time of reporting, patient now had Covid or maybe he had Covid before, reporter was not sure. The outcome of the events was unknown. Information on the Batch/Lot number has been requested.; Sender's Comments: Based on available information, a possible contributory role of suspect BNT162B2 vaccine cannot be completely excluded for event ""Covid""."

positive COVID-19 test with symptoms; positive COVID-19 test with symptoms, tested for COVID (PCR); night sweats; Soreness at injection site; slight temp 99.5 degrees/her temperature was 101 degrees Fahrenheit/it was 102.5 degrees Fahrenheit/99 degrees Fahrenheit and then 98 degrees Fahrenheit; Tiredness she related to giving blood; This is a spontaneous report from a contactable nurse (patient). A 54-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140) via intramuscular on 19Dec2020 15:45 on left deltoid at a single dose for prevention as frontline health worker at hospital (COVID-19 immunisation). The patient donated blood on 18th and no antibodies were present then. The patient was a former smoker and quit 2 or 3 years

ago. Patient diagnosed Osteoporosis in 2015, benign heart arrhythmia in 2005. The patient took 70 mg alendronate sodium (FOSAMAX) once weekly and just a regular OTC daily multivitamin. Caller reported she was having the covid vaccine on 19Dec2020 and began having fever, night sweats, loss of taste and smell and then tested positive for covid. The patient received the Pfizer COVID 19 vaccine through work on 19Dec2020. She received it at 3:45 pm and should have taken temperature before, but she was afebrile the day before because she donated blood. At 7pm, she had slight temp 99.5 degrees Fahrenheit and by 10:30, her temperature was 101 degrees Fahrenheit and she still felt fine. She was surprised that it was that. She woke up at 2:30 am on 20Dec2020 and took her temperature and it was 102.5 degrees Fahrenheit. She took 2 Tylenol and went back to bed and felt fine. By morning it was 99 degrees Fahrenheit and then 98 degrees Fahrenheit a little later. She has been afebrile since then. She was a little tired because she gave blood and though it was related. She does not know if it was a side effect or not. It was not significant tiredness and was just not having energy in the evening of 19Dec2020. She also had soreness at injection site that night after 22:00 and the next day. It did not bother her until she woke up in the middle of night, and she noticed her left arm was sore. She received the vaccine at 3:45pm and started with low grade fever at 6:30 pm, earlier stated at 7:00 pm. There was no prescriber. She tested for COVID (PCR) on Saturday, 26Dec2020 at 14:50and it came back positive 28Dec2020 18:45. At 10pm on 19Dec2020, her temperature was 101 degrees Fahrenheit. If she had not been monitoring her temperature, she would not have known. She has been Afebrile since morning of 20Dec2020. Tiredness she related to giving blood and the holidays. She was a little stressed about the holidays and running around. It was very mild. Soreness at injection site was during the night after 10pm when she went to bed. On Wednesday, 23Dec2020, she woke up congested, sniffly, sneezy, with a runny nose. This persisted through Wednesday night. Her sense of taste was off. She had no problem with that on Tuesday. She had some horrible smell at work she recalled, so she knew her sense of smell was fine. On Thursday, 24Dec2020, she had no sense of taste or smell. She could not smell a pine candle. She was congested on Thursday and called employee health on 24Dec2020. This both improved and persisted. She is still congested but it has improved. She has never had a complete loss of sense of taste or smell before. Mild cough started yesterday morning. On the night of 20Dec2020, and 21Dec2020, she developed night sweats. She had not had any night sweats before this since menopause and she woke up really wet. The patient was not hospitalized and not admitted to an Intensive Care Unit. NO ER or physician's office required. She did not know if she was exposed on the day of the vaccine or if a couple of days later if the fever is from the vaccine. She stated what are the chances she goes 10 months and is super careful and then gets the vaccine and test positive. The patient did not display clinical signs at rest indicative of sever systemic illness. The patient did not require supplemental oxygen nor receive mechanical ventilation. No Multiorgan failure. The patient did not receive any additional therapies for COVID- 19. No initiation of new medication or other treatment or procedure. Not any preexisting diseases worsen during the SARS-CoV2 infection. She would like to know if there is a chance of false positive for this. It would just be her luck to be 10 months and not getting it. She has not gone anywhere without her N95 and then gets the vaccine and gets COVD. She wears mask and face shield at work always. She also wanted to know if she should get the second dose. The outcome of the event slight temperature was recovered on 20Dec2020 and the other event was recovering.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this patient cannot be completely excluded.

tested positive for Covid two days after getting vaccine; tested positive for Covid two days after getting vaccine/nasal swab/ NP PCR and result was positive; This is a spontaneous report from a contactable physician. A 39-years-old male patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiration date not reported), intramuscular on the left arm on 24Dec2020 at 08:30 at a single dose for Covid-19 immunization. There were no medical history and no concomitant medications. The patient has no known allergies to medications, food, or other products. On 25Dec2020 at 09:00 am, also reported as 26Dec2020, the patient was tested positive for Covid two days after getting vaccine. He was wondering if he should get the booster dose in 3 weeks or not since he will have natural immunity. The patient did not receive any treatment for the events. The patient had a nasal swab/ NP PCR and result was positive on 26Dec2020. The outcome of the events was not recovering. The events were assessed as non-serious. Information on the lot/batch number has been requested.; Sender's Comments: No effect of the suspect vaccine could be reasonably achieved to protect from the targeted infection/disease due to the very short time lag. Instead, the COVID-19 PCR test positive represents the pre-existing infection prior to vaccine use. Further information like confirmative COVID 19 nucleic acid/ PCR test together with any associated symptoms are needed for full medical assessment.

positive COVID-19 test with symptoms; positive COVID-19 test with symptoms; This is a spontaneous report from a contactable unspecified HCP reporting for herself. This 61-year-old female patient received on 22Dec2020 BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose for COVID-19 vaccination. Medical history and concomitant medications were not reported. On 24Dec2020, the patient had a bad reaction, coughing, headache, no taste, tiredness and body aches. The patient thought originally, she was having a reaction to the vaccine, and took some ibuprofen (ADVIL). The patient was still congested and was sent for testing. She was tested positive on 28Dec2020. The test was a nasal swab. Outcome was unknown. The patient was wondering if this was part of the side of effect of the vaccine. Information on the batch number has been requested.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Drug ineffective and COVID-19 cannot be totally excluded. The case will be reassessed if additional information becomes available.

got the COVID-19 vaccine last week and six days later tested positive for COVID-19; got the COVID-19 vaccine last week and six days later tested positive for COVID-19; This is a spontaneous report from a contactable pharmacist. A patient of unspecified age and gender received bnt162b2 (BNT162B2 also reported as PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date were not reported), via an unspecified route of administration on unspecified date in Dec2020 at single dose, for covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient got the covid-19 vaccine last week and six days later (Dec2020) tested positive for Covid-19. The outcome of event was unknown. Information about Lot/Batch number has been requested.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment hence, the events are conservatively assessed as related to the suspect drug BNT162B2 until further information becomes available.

anaphylaxis; ALOC/decreased level of consciousness; This is a spontaneous report from a contactable Pharmacist (patient). a 40-year-old female patient (no pregnant) received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number EL0140) via intramuscular at Left arm on 23Dec2020 at single dose for COVID-19 immunization. The patient's medical history included known allergies to egg, seafood, azithromycin, orange and seasonal allergies. The concomitant was reported as cetirizine hydrochloride (ALLERTEC) and PRN 1371. The patient with no known past medical history brought in by CODE Team to RUH ED with concern for ALOC after getting the COVID vaccination 30-40 minutes PTA. Patient was a nurse and experienced decreased level of consciousness following her COVID vaccination. Patient reports h/o anaphylaxis. She was given epinephrine PTA. Denies SOB, oral swelling, CP. Blood glucose (BGL) within normal limits. Patient denies any other complaints or symptoms at this time. Adverse event start date: 23Dec2020. Treatment was unknown for decreased level of consciousness. The outcome of the events was recovered in Dec2020.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylaxis /decreased level of consciousness cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The underlying predisposing condition of allergies to multiple materials may put the patient at high risk of anaphylactic reactions. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"caller couldn't hear properly; got the Covid vaccine last 18Dec2020/her second dose of COVID-19 Vaccine was scheduled on 06Jan2021; Caller got the Covid vaccine last 18Dec2020 and was tested positive, 29Dec2020; Caller got the Covid vaccine last 18Dec2020 and was tested positive, 29Dec2020; Nausea; Headache; Body aches; fatigue; Cold sweat; This is a spontaneous report from a contactable other health professional. A 51-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number reported as either EK5730, ER5730, or EX5730), via an unspecified route of administration on 18Dec2020 16:00 at single dose at left deltoid for COVID-19 immunisation. Medical history and concomitant medications were none. The patient previously had shingles shot in Sep2020, previous shingles shot either three months or six months prior to the one in Sep2020 (2020), both for immunization, and severe myalgia and fever that lasted for two days after the second shingles shot (adverse events followed prior vaccinations). It was reported that did a callback as caller couldn't hear properly. Caller got the Covid vaccine last 18Dec2020 and was tested positive, 29Dec2020. Want to know if it's safe for her to get the second dose. The patient received Pfizer COVID-19 Vaccine on 18Dec2020 at 16:00. Patient had a couple days worth of symptoms. Now patient had COVID. Patient believed most likely got COVID from her son who was home from college. She was in between dosages of COVID-19 Vaccine. Looked like from research her quarantine would be done on 05Jan2021 and her second dose of COVID-19 Vaccine was scheduled on 06Jan2021. Everything she had read stated if her symptoms were gone to go ahead and get the second COVID-19 Vaccine. Patient wanted to know if Pfizer was doing any studies regarding people who test positive for COVID after receiving the COVID-19 Vaccine. Not sure if Pfizer would be interested in doing antibody studies. Declined obtained COVID-19 Vaccine through work Clarified caller's days worth of symptoms as: Headache the same evening as

vaccination. Body Aches: began overnight on 18Dec2020. Fatigue that lasted all week, began overnight on 18Dec2020. Cold sweats: Lasted two days and began overnight on 18Dec2020. Nausea: began on 21Dec2020, not sure if it was related to COVID-19 Vaccine or not. The reporter considered the events weren't serious, but felt like she was having an immunological response. Diagnosed with COVID Seriousness: As of now, not serious. Is having a recurrence of all of those same symptoms as the COVID-19 Vaccine and then some. Lot number provided from patient card. Stated she was unable read it accurately. would take picture in case Pfizer wanted it. Stated lot number was either EK5730, ER5730, or EX5730. A sample of the product was not available to be returned. Vaccination facility type was Hospital, not administered at military site. No additional vaccines administered on same date of Pfizer suspect. No adverse events required a visit to. No prior vaccinations received within 4 weeks. The outcome of the event ""Cold sweat"" was recovered on 20Dec2020. The outcome of the other events was unknown. The reported considered the events Headache, Body aches, fatigue, Cold sweat, Nausea were related to the suspect drugs. Information on the lot/batch number has been requested.; Sender's Comments: The reported COVID test positive after COVID-19 immunization is considered ineffective of BNT162B2, and the Company cannot completely exclude the possible causality between the reported event and BNT162B2 administration."

had her shot of Covid vaccine last (22Dec2020) 7 days and was tested positive on Dec2020; had her shot of Covid vaccine last (22Dec2020) 7 days and was tested positive on Dec2020; This is a spontaneous report from a contactable consumer (patient). A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 22Dec2020 at a single dose as Covid vaccine. Medical history and concomitant medications were not reported. It was reported that the patient had her shot of Covid vaccine last (22Dec2020) 7 days and was tested positive on Dec2020. She wanted to know if this was normal to get false positive results after getting the vaccine. The outcome of the events was unknown. Information on the lot/batch number has been requested.

Positive for Covid after receiving the vaccine; Positive for Covid after receiving the vaccine; This is a spontaneous report from a Pfizer Sponsored Program. This consumer reported similar event for two patients. This is the 2nd of 2 reports. A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiration date not reported), via an unspecified route of administration on 22Dec2020 at a single dose for Covid-19 immunization. The patient medical history and concomitant medications were not reported. On an unspecified date, the patient was positive for Covid after receiving the vaccine. It was reported that patient was positive and they were all in the breakroom without a mask. The patient (person that is positive) got the vaccine and got worse, so co-workers are thinking that she (patient) had the virus before getting the vaccine and just didn't have any symptoms. Outcome of the events was unknown. Information on the batch/lot number has been requested.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020518090 same reporter/drug, similar event, different patient

Asymptotic positive rapid COVID test 12 days post vaccination. Close contact testing/Nasal Swab positive; Asymptotic positive rapid COVID test 12 days post vaccination. Close contact testing/Nasal Swab positive; This is a spontaneous report from a contactable Other HCP (patient). A 52-year-old

female (not pregnant) patient received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730), intramuscular in arm left on 17Dec2020 13:15 at single dose for COVID-19 immunisation. Medical history included seasonal allergies, depression and Allergies: Sulfa. Prior to vaccination, the patient was not diagnosed with COVID-19. Concomitant medications included sertraline hydrochloride (ZOLOFT), cefixime (FLEXERIL), fluticasone propionate, salmeterol xinafoate (ADVAIR), montelukast sodium (SINGULAIR), omeprazole (PRILOSEC). The patient previously took pethidine hydrochloride (DEMEROL) and experienced 'allergies: Demerol', codeine and experienced 'allergies: codeine'. The patient experienced asymptotic positive rapid COVID test 12 days post vaccination. Close contact testing on 29Dec2020. The patient underwent lab tests and procedures which included [{covid test type post vaccination= Nasal Swab, covid test date=29Dec2020, covid test result= Positive}]. Facility type vaccine was workplace clinic. No treatment received for the adverse event. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of the events was unknown.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this patient cannot be completely excluded.

"I got the Pfizer vaccine, the first shot; I tested positive for Covid; I got the Pfizer vaccine, the first shot; I tested positive for Covid; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age and gender received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization. The patient medical history and concomitant medications were not reported. Consumer stated, ""I had a question, I got the Pfizer vaccine, the first shot on the 18Dec but I tested positive for Covid on the 27Dec, so, my question is this and I asked my healthcare institution and they still haven't got back to me, so I just wanted to call you guys, what do I do about the second dose because I am scheduled to get the second dose net week?"" The outcome of event was unknown."

she received the COVID Vaccine on the evening of Christmas, and then she tested positive for COVID on Sunday; she received the COVID Vaccine on the evening of Christmas, and then she tested positive for COVID on Sunday; This is a spontaneous report from a contactable consumer, the patient. A 48-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE); in the left arm on 25Dec2020 as a single dose, for COVID-19 immunization. The patient had no known medical history. There were no concomitant medications. Caller confirmed the product was not specifically prescribed to her, but she received it via an options at her company and had received no other vaccines on the same day as the COVID vaccine. The patient received the COVID Vaccine on the evening of Christmas 25Dec2020, and then she tested positive for COVID on Sunday, 27Dec2020. The patient had a positive SARS-CoV-2 test on 27Dec2020. The clinical outcome of the event Drug ineffective and COVID-19 was unknown. Information regarding lot number has been requested.

tested positive for COVID; tested positive for COVID; This is a spontaneous report from a contactable consumer (patient). The consumer reported for self and husband. This is the first of two reports, and concerns the reporter (patient). A patient of an unspecified age and gender received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE) (lot number EJ1685/expiration date: 31Mar2021), via an unspecified route of administration, on 19Dec2020, as a single dose for COVID-19 immunization. Relevant medical history and concomitant medication were not provided. On an

unspecified date in Dec2020, the patient tested positive for COVID. The outcome of the event tested positive for COVID was unknown.

tested positive for COVID; tested positive for COVID; Flu; This is a spontaneous report from a contactable consumer. The consumer reported for self and husband. This is the second of two reports and concerns the reporter's husband. A male patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE) (lot number EH9899/expiration date: not provided), via an unspecified route of administration, on 18Dec2020, as a single dose for COVID-19 immunization. Relevant medical history and concomitant medication were not provided. On an unspecified date in Dec2020, the patient experienced the flu after receiving the vaccine. On an unspecified date in Dec2020, the flu symptoms went away and the patient tested positive for COVID. The outcome of the event flu was recovered in Dec2020 and the outcome of tested positive for COVID was unknown.

Caller received COVID vaccine on the 18th then tested positive on the 24th; Caller received COVID vaccine on the 18th then tested positive on the 24th; This is a spontaneous report from a contactable healthcare professional. A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date not reported), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunisation. Medical history and concomitant medications were not reported. It was reported that the patient received COVID 'vaccine on the 18th then tested positive on the 24th'. The reporter mentioned that a friend who works for Pfizer told her to call and report. Clinical outcome of the events was unknown. Information on batch/lot number was requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event of positive for corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the short duration of 6 days since the vaccine first dose is given.

Was diagnosed with the COVID-19 virus after receiving the COVID-19 Vaccine on 18Dec2020; Was diagnosed with the COVID-19 virus after receiving the COVID-19 Vaccine on 18Dec2020; This is a spontaneous report from a contactable Other Health Professional (patient) from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). A 38 years old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 18Dec2020 at single dose in Deltoid Right for COVID-19 immunization. Medical history and concomitant medications were none. After receiving the COVID-19 Vaccine, the patient was diagnosed with the COVID-19 virus on 28Dec2020. she saw Dr. at the clinic where she works to seek treatment. She stated she is supposed to receive the 2nd dose of the COVID-19 Vaccine on 08Jan2021. She asked now that she is COVID-19 positive, should she get the 2nd COVID-19 Vaccine dose. Reported she had a rapid nasal swab COVID-19 test performed. Reported she is taking Hydroxychloroquine and a bunch of vitamins for treating COVID-19. Caller stated she did not have the COVID-19 Vaccine card with her to provide the Lot Number. The patient underwent lab tests and procedures, which included COVID-19 rapid POC test with positive result. Outcome of event was unknown. Information on the Batch/Lot number has been requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect

BNT162B2 cannot be excluded for the reported COVID-19 based on the known safety profile. However the short duration of 10 days since the vaccine first dose is given it is unlikely patient would have fully developed immunity.

"Lost sense of taste; Lost sense of smell; Whole body is sore; Rapid test came back positive for COVID; Rapid test came back positive for COVID; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs) via a contactable consumer (patient). A 21-year-old male patient received his first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EK5730, expiration date: 31Mar2021), via intramuscular on 29Dec2020 07:40 at 0.3 mL, single dose on his left deltoid for covid-19 immunization. Medical history included allergic to wasp stings. There were no concomitant medications. The patient had no additional vaccines administrated on the same date and no prior vaccinations were received within 4 weeks. Caller on the line calling about the COVID Vaccine he received on 29Dec2020. The day after receiving it he woke up and had a loss of sense of smell on 30Dec2020 12:00. That afternoon he went to get tested and the rapid test came back positive for COIVD on 30Dec2020. He was now waiting on the other one, clarified to be the PCR test, the lab test. The next day he also lost his sense of taste on 31Dec2020 11:00 and his whole body feels sore on 30Dec2020 around noon. Transfer agent stated the caller needs to be transferred to Medical Information as he was scheduled to get the next shot on 19Jan2021 and he was calling to ask if he should proceed with that. It was reported that the patient works in a hospital (not an HCP). No emergency room was visited and no physician office was visited. The outcome of the event ""rapid test came back positive for covid"" was unknown, the outcome of the other events ""lost sense of smell"", ""lost sense of taste"", ""whole body is sore"" were not recovered."

Went to the ER on the 31st, my face swelled and chest was covered in hives. Lips swelled. I would get nauseated and I felt like there was acid in my stomach. I also had a headache. I have been taking Zyrtec, Benadryl as needed.

The day after the vaccine I had fatigue and body aches. Then on 12-23 fevers of 101.4, chills, body aches, diarrhea, vomiting, productive cough, and profuse sweating. Jan 1st I was in the shower and was dizzy with a headache. Loss of consciousness almost happened and that is when i got out of the shower and laid down. Went to the ED and was diagnosed with bilateral pneumonia

I did let the nurse know right after I got the vaccine It did feel like a huge water balloon was sitting on my arm and very heavy at the site. I went to the waiting area and the last 5 minutes and I started feeling weird, kind of getting dizzy and my heart started racing really fast. Am I can tell I was getting really hot and my face was flushed and my heart was racing and my hands started shaking, trembling almost like I couldn't control it. I've never experienced something like this. The part that really scared me was my heart racing like it was going to come out of my chest. They called a code, put me in a wheel chair and took me to the ER (where I work). They took my blood pressure which was really high, they did EKG, blood work and urine test. They kept me there for about five hours, while watching me. And the last weird thing that happened at one point I felt like liquid was running thru my body and my feet were really cold for several hours, It felt like someone was pouring liquid over me. I kept asking the nurse if this is normal and no one knew what to tell me. After everything started slowing back down and it had

been a couple hours and the next day i felt like I had a slight head ache and felt out of it, kind of like I had a hangover and of course my arm was really sore. The Doctor in the ER did advise me not to get the second dose as it will be worse than the first one.

LEFT SIDED CHEST PAIN, SHORTNESS OF BREATH, FELT WARM AND FLUSHED

I got my shot on the 19th and that evening it was like a light switch and I was so tired I went to sleep at 730pm I had severe chills and fever and had to go to bed. The next day I still wasn't feeling well and I was called in to get covid tested and I went to the ER on the 21st and took a rapid covid test that was positive. I was stable and had good oxygenation and was discharged. I have fever nausea vomiting I also had problems with O2 stat i was in the 80s and realized I was having respiratory failure so I was admitted on the 27th and I've been here ever since. I had kinetic storm and infusions my O2 stats were bad and I was sent to the covid unit and put on high flow oxygen and negative for a PE, I'm still on the covid unit but I feel much better today

Patient was vaccinated Dec 30, 2020. Prime dose of Moderna vaccine. Observed for full 15 minutes post-injection. No complaints when asked during observation. Released. Subsequently, vaccine clinic staff learned from the patient's supervisor that on Jan 4, 2021 that the patient had expired on Jan 2, 2021. By report from the supervisor, the patient was found dead at his home. The patient's primary care provider was unaware of his death when contacted by this reporter today (Jan 6, 2021). Electronic Medical Record without any information since the vaccination.

5 MIN POST ADMINISTRATION: SOB, DIZZINESS, CHANGE IN VISION - GAVE BENADRYL 25 MG AND 1 VIAL ALBUTEROL VIA NEB 1 HOUR POST ADMINISTRATION: SWOLLEN LIPS, RASH ON CHEST AND ARMS - GAVE 1 DOSE OF EPI PEN AND IM SOLU-MEDROL, CALLED EMS, LEFT TO GO TO ER BP, HR, OXYGEN STABLE THROUGHOUT

after 20-30 minutes my throat started to get tight, I could not swallow properly, I felt dizzy & my heart was beating fast.

anaphylaxis, dyspnea

"Client received vaccine at approximately 3:50pm, waited in observational area x30min. Left with husband, stated that she got a few miles down the road and starting experiencing tightness in her chest and flushing. She took 50 mg of Benadryl, 30mg of prednisone and two puffs on her inhaler. She returned to the clinic, upon assessment from nursing she looked extremely flushed and anxious, she stated that she still felt tightness and that she had a history of anaphylaxis once before and had used an epi pen in the past. She had an epi pen with her and questioned whether or not she should give it to herself. BP was 190/68, pulse was normal, respirations normal, she continued to experience tightness and ""not able to catch my breath"", encouraged to use epi pen. She administered epi pen to right thigh at approximately 4:45PM, 911 called. Within a few minutes, she stated she was feeling better, less tightness in the chest, flushing was subsiding. BP at 190/70 at 4:52. EMS on scene at 5:03pm. Vitals normal , EKG normal. Client decided not to transport with EMS."

resident expired 1/1/2021

I started having intermittent chest pain moderate in intensity and palpitations.

Resident expired 1/3/21

Migraines, right side of face swollen, nausea, tingling

Patient tolerated the vaccine well with no apparent side effects. Ten days later awoke 12:30 AM with severe chest and upper back pain, presented to Med Center where he was found to have an Acute Coronary Syndrome. Transferred to Medical Center where he underwent successful PCI with two drug eluting stents for a 99% mid-LAD stenosis

Shortness of breath, fever, fatigue

At around 11:40am resident was observed to be unresponsive. resident noted with pulse and respiration. Not in any distress. lung sounds clear. Vital Signs BP162/82 P86 R18 T97.1 O2 Sat 96%, fingerstick is 133mg/dl .Resident received COVID 19 vaccine at 11:25am. O2 via 2l NC initiated. Nurse Stat call, 911 initiated, MD at Bedside. Resident awake and responsive. EMT responded and resident left with EMT to be transferred to hospital, remains awake and not in any respiratory distress.

Adult failure to thrive; Chronic hypoxemic respiratory failure; Generalized weakness

Patient did not display any obvious signs or symptoms; the vaccination was administered at approximately 10:00 AM and the patient continued throughout her day without any complaints or signs of adverse reaction. Patient was helped to bed by the nursing assistant estimated at around 9:00 PM. The facility received notification from the lab around 11:00 PM that the patient's COVID-19 specimen collection from Sunday, 1/3/21, detected COVID-19. When the nursing staff went to the room to check on the resident and prepare her to move to a COVID-19 care area the patient was found unresponsive, no movement, no chest rises, noted regurgitated small amount of food to mouth left side, lying on left side. Pupils non reactive.

coughing up blood, significant hemoptysis -- > cardiac arrest. started day after vaccine but likely related to ongoing progression of lung cancer

PATIENT REPORTING ITCHING AT 30 MINUTES POST INJECTION. AT 1.5 HOURS POST INJECTION PATIENT REPORTED ITCHY THROAT AND NUMBESS OF LEFT SIDE OF FACE. AT THAT TIME ADVISED TO GO TO EMERGENCY ROOM. NEXT DAY WHEN I FOLLOWED UP WITH PATIENT, SHE REPORTED HER AIRWAY STARTED TO CLOSE AND SHE RECEIVED EPINEPHRINE, AFTER 5 HOURS HER STARTED TO CLOSE AGAIN AND RECEIVED ANOTHER DOSE OF EPINEPHERINE, WAS RELEASED FROM HOSPITAL ROUGHLY 15-16 HOURS AFTER GOING TO ER.

At 10:12 am, Client c/o of sore throat, tightness in throat that relieve quickly, nausea, dry heaves, flushed, light headed and dizziness. Called for EMT. They arrive at 10:25 am and transported her to the

local hospital for observation. 01/06/21-Treatment in hospital blood draw, medications given Zofran, Decadron, Benadryl, and Pepcid, and IV fluids. Discharged home at 1244.

5 minutes after injection, my feet and palms itched and I was lightheaded but I tried to shake it off and it faded over the next 10 minutes. I did report it and stayed longer and was ok. Then i went straight home and layed down because i did not sleep well night before (was on call) i awoke 1 hour post injection dry heaving, very nauseated, mild headache, achy, itchy over different parts of my body and weak. Sat up and my face was getting itchier, lips started to swell, tongue started to swell and itch, throat felt like someone was strangling me, had trouble swallowing and trouble breathing. took 2 benadryls immediately and went out into cold air, thought about calling 911 but got better in 10-15 minutes. never have had a reaction like this in my life. have had hives though in the past. If I would have had an epi pen I would have used it (never have had an epi pen) I was frightened but the benadryl worked and I slept due to the benadryl for 5 hours, when I woke up the benadryl wore off and it started again. took more benadryl, and it improved. before bedtime, the benadryl wore off and I had a hard time swallowing my night time meds like my throat was swollen. Took 2 more benadryls, today I am weak and nauseated and ate very little and feel like my face is still red and itchy. I told my sister and she said she is allergic to PEG which i later noted was in the vaccine. i am very disappointed that I had this reaction- I have desparately wanted this vaccine as a medical worker with a lot of covid patients- I onlu hopr this one shot will protect me enough because it is clear to me that i cannot take this vaccine again.

Severe Hypotension, Redness, Warmth and sensitivity all over skin surfaces, lack of responsiveness, low oxygen saturation.

At approximately, 1855, I was alerted by caregiver, resident was not responding. Per caregiver, she was doing her rounds and found resident in bed, unresponsive, mouth open, observed gurgling noises and tongue hanging out of mouth. This primary caregiver observed resident at baseline and ambulating after dinner at approximately, 1800 less than an hour prior to incident. This PCG called 911 for EMS and gave report of incident. Resident was taken to Medical Center Emergency Department. At ER, CT scan and X-ray was performed. Per report from ER RN, CT scan and x-ray revealed an intracranial aneurysm and fluid in the lungs. Per RN, resident was still unresponsive and was admitted to Medical Center for observation and comfort measures. This primary caregiver reported to RN, resident recently received the first dose of COVID-19 vaccine on 1/2/21. Primary caregiver received a call from Castle RN at 0700, resident expired at 0615.

Three to four hours after vaccine had bruising, major loss of range of motion, severe sharp pain, elevated temp and chills due to reaction of injection site Treatment given 24 hrs later- strong antibiotics, anti inflammatory, exercise, and three days out of work Due to loss of function of left arm due to inflammation

Severe shortness of breath, administered inhaler, hydralazine with no improvement. Dr. notified. Sent to ER

COUGH, RIGORS, NAUSEA, VOMITING, URINARY URGENCY/FREQUENCY, DYSURIA - FOUND TO HAVE LLL PNEUMONIA, CONCERNING FOR POSSIBLE CYRPTOGENIC ORGANIZING PNEUMONIA

PATIENT DEVELOPED PROGRESSIVE NEW DYSPNEA, DIFFERENT FROM HER BASELINE. SHE HAS BEEN HOSPITALIZED TWICE FOR PERSISTENT DYSPNEA AND CENTRALIZED CHEST PAIN, WHICH HAS OTHERWISE HAD NEGATIVE WORK UP.

103.5 Fever that wouldn?t come down with Tylenol, chills, sharp headache, tachycardia, site pain, dizziness, body aches, nausea All symptoms started 11 hours after first dose of vaccine (3AM), went to hospital 15 hours after symptoms started and was treated for 9 hours until all symptoms abruptly stopped

positive COVID test; positive COVID test; fever; chills; sore throat; cough; nasal congestion; runny nose; little diarrhea; tiny bit of shortness of breath; Caller received the COVID-19 vaccine on 17Dec2020 and is scheduled to take the second dose on 5Jan2021.; Caller received the COVID-19 vaccine on 17Dec2020 and is scheduled to take the second dose on 5Jan2021.; sore arm; This is a spontaneous report from a Pfizer-sponsored program Pfizer First Connect via a contactable physician (patient himself). A 56-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number: EH9899), via intramuscular route on 17Dec2020 at single dose (dose 1, left deltoid) for COVID-19 immunization. The patient medical history included non-smoker. Concomitant medications were reported as none. The patient was scheduled to take the second dose on 05Jan2021, also reported as 08Jan2021. The patient experienced sore arm for 24 hours afterwards on Dec2020. Patient experienced mild COVID symptoms such as fever, chills, sore throat, cough, nasal congestion, runny nose, little diarrhea, and tiny bit of shortness of breath on 24Dec2020, but stated he was better now. The patient was positive in the COVID test on 28Dec2020. He wanted to know if it was normal to get COVID after getting the vaccine and if he should get the booster shot if he gets better. He commented that testing positive for COVID was medically concerning. The patient did not require supplemental oxygen (including high flow ECMO) or receive a mechanical ventilation. Treatment included over the counter medication. No additional testing was done. The patient was not hospitalized. Outcome of the event sore arm was unknown; cough was not recovered; fever, chills, sore throat, nasal congestion, runny nose, little diarrhea, tiny bit of shortness of breath was recovering. No follow-up attempts are needed. Information about lot/batch number was already obtained. No further information is expected.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Drug ineffective and COVID-19 virus test positive cannot be totally excluded. The case will be reassessed if additional information becomes available.

2days after my 1st Covid vaccine I broke out into a rash with hives requiring me to go to the ER; 2days after my 1st Covid vaccine I broke out into a rash with hives requiring me to go to the ER; This is a spontaneous report from a contactable nurse (patient). A 58-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number: EH9899, expiry date was not provided) solution for injection, via an unspecified route of administration on left arm on 17Dec2020 08:00 at a single dose for Covid-19 immunization. Medical history included eczema, chronic kidney disease, thyroid disease. Patient had known allergies. The patient was not pregnant. Concomitant medications included apixaban (ELIQUIS), allopurinol (ALLOPURINOL), levothyroxine (LEVOTHYROXINE), iron (IRON), magnesium (MAGNESIUM). The patient reported that 2 days after her 1st Covid vaccine,

she broke out into a rash with hives requiring her to go to the ER on 19Dec2020 12:00. She also visited a physician. She was treated with steroids, Atarax, and Epi shot. The events were reported as non-serious. Outcome of the events was not recovered. No follow-up activities are needed. No further information is expected.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of urticaria and rash due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

tested positive within 2-4 days of the vaccine; tested positive within 2-4 days of the vaccine; This is a spontaneous report from a contactable nurse. This nurse reported similar events for two patients. This is the first of 2 reports. A patient of unspecified age and gender received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The nurse had questions about patients that received the first dose of the COVID 19 vaccine. One patient tested positive within 2-4 days of the vaccine and this patient had a known exposure to a COVID positive person. The nurse wanted to know if this patient should receive the second dose. The outcome of the events was unknown. Information about batch/lot number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of SARS-CoV-2 test positive and LOE due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.,Linked Report(s) : US-PFIZER INC-2020520414 Same reporter, drug, and events; different patients

Tested positive for COVID; Tested positive for COVID; This is a spontaneous report from a contactable healthcare professional (patient). A 40-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the first dose of the vaccine on 18Dec2020, and was tested positive for COVID yesterday, 29Dec2020. States that she knows she only has had the first dose and states her exposure level was high, states that she cannot believe she made it this far before testing positive. Second dose scheduled for 08Jan2021, wanting to know if she should get the second

dose since she was now positive. The outcome of the events was unknown.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Drug ineffective and COVID-19 virus test positive cannot be totally excluded. The case will be reassessed if additional information becomes available.

positive Covid results with symptoms; positive Covid results with symptoms; This is a spontaneous report from a contactable nurse (patient). A 56-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration on 20Dec2020 at single dose for COVID-19 immunization. Medical history included hypertension (diagnosed 3-4 years ago), hyperlipemia (diagnosed 3-4 years ago), supraventricular tachycardia since 2017, and asthma; all ongoing. Family history included hypertension. She has no history of adverse reactions or allergies to any vaccines received previously. The patient's concomitant medications were not reported. The patient explains that she got the COVID-19 vaccine on 20Dec2020. Afterward she had some coughing, so she went for a rapid test and found she tested positive after the vaccine. The patient was wondering if this has been reported previously, where someone tested positive after getting the vaccine. She has never tested positive before. She got the results on 28Dec2020 that she was positive. She was now in a hotel quarantining. She was looking trying to find information on this occurring. Since she was in the hotel, she would prefer to use email as communication for follow-up. The patient noticed the cough on 25Dec2020. She works nights so she stayed home on the 26Dec2020. Then on 27Dec2020 she had the test done and on 28Dec2020 the results were given to her and she was positive. Her second dose was due on 10Jan2020 and it was before the 14 days of quarantine will be up. She was checking to see is there anywhere else she can get the second dose. The patient explains that she has been researching and she wanted to get it because she was with elderly family members. She wanted to know how she was tested positive, what test was used as she had the rapid test. There were no treatments for the events. The caller patient was also experiencing a cough, sore throat, and nasal congestion. There was no shortness or anything else going on at this point. The outcome of the events was not recovered. Information on the lot/batch number has been requested.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Drug ineffective and COVID-19 virus test positive cannot be totally excluded. The case will be reassessed if additional information becomes available.

positive person for Covid after receiving the Covid vaccine; positive person for Covid after receiving the Covid vaccine; This is a spontaneous report from a contactable nurse. A patient of unspecified age and gender received bnt162b2 (BNT162B2 also reported as Pfizer-BioNTech COVID-19 Vaccine, lot/batch number and expiry date were unknown), via an unspecified route of administration on unknown date at single dose, for Covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient was a positive person for Covid after receiving the Covid vaccine on an unspecified date. The outcome of the event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the

development of events Drug ineffective and COVID-19 cannot be totally excluded. The case will be reassessed if additional information becomes available.

"Her measured blood pressure at 7:35 am was 180/80 but came down to 146/62 at 9:37 am; arms had some pain; chills; headache; a stiff neck pain at the back of her neck; a stiff neck pain at the back of her neck; a trembling pain; This is a spontaneous report from a contactable consumer. This is the 1st of two reports. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 29Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient stated on Dec2020, ""she reported that she herself felt fine but her arms had some pain. She was having chills, a headache, a stiff neck pain at the back of her neck, and a trembling pain. Her measured blood pressure at 7:35 am was 180/80 but came down to 146/62 at 9:37 am. Her pulse was at 62 bpm, Caller is asking for recommendations"". The outcome of ""her measured blood pressure at 7:35 am was 180/80 but came down to 146/62 at 9:37 am"" was recovering and other events was unknown. Information about Lot/batch no has been requested.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020520380 same reporter/drug, different patient/event"

"extremely lightheaded; like he was about to fall down; This is a spontaneous report from a contactable physician. This physician reported similar events for 2 patients. This is the 1st of 2 reports. An 89-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number; EL0140), intramuscular on the right arm on 30Dec2020 10:10 at single dose for vaccination. Medical history included covid-19 on Jul2020 and had it fairly severe and almost died and he mentions he was overweight. There were no concomitant medications. The patient previously took flu shot (INFLUENZA VACCINE), a couple of months ago. He mentions he was in the military so he had a lots of shots in his life but he has never had a reaction like this. The patient stated that on 30Dec2020 10:30, ""he became extremely lightheaded, like he was about to fall down. He sat down and is currently sitting down. This lightheadedness started about 20 minutes after the injection. When probed for the outcome, the caller explains it might be improving a little. The lightheadedness is not still not gone, but it has not worsened. When probed for seriousness criteria, the caller explains he is just resting and sitting. He would say its not serious but it could be medically significant. He states he isn't sure if this is something that happens to just people who have had COVID before. He states none of his friends or relatives have this type of reaction. He lives in a retirement home and everybody is getting the injection. This is the second day of injections. He doesn't know if anybody had a reaction to the COVID-19 vaccine here"". The outcome of the events were recovering.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of lightheadedness and pre-syncope due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics

Committees and Investigators, as appropriate.,Linked Report(s) : US-PFIZER INC-2020520862 same reporter/drug, similar event, different patient."

Vomiting/threw up; Headache; muscles got rigid and tight in her neck; muscles got rigid and tight in her neck; sick; She doesn't know if she had the flu bug or not; She also had very high blood pressure. It was through the roof/Blood pressure was high and she was concerned she would have a stroke; Muscle soreness; Arm soreness; This is a spontaneous report from a contactable healthcare professional (physical therapist). A 57-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date not reported), intramuscular on the left arm on 21Dec2020 08:15 at a single dose for COVID-19 immunisation; and sumatriptan from 25Dec2020 to an unspecified date at unknown dose and frequency (standard unknown dose/ She only gets 9 pills a month) for migraine. Medical history included ongoing migraine, obesity (She would say she was kind of obese), coeliac disease (She had Celiac disease and cannot eat gluten which was diagnosed since she was 4), chronic back pain (this was diagnosed a couple of years before she took the COVID vaccine), spinal stenosis (this was diagnosed a couple of years before she took the COVID vaccine), and pain (she took hydrocodone for pain but did not take any that day). Concomitant medication included hydrocodone for pain. Prior Vaccinations (within 4 weeks) and events following prior vaccinations were none. The patient had the vaccine on 21Dec2020, and she got sick on Christmas day. She was vomiting at 14:00 and did not know if it was a side effect or not. She did have arm soreness muscle soreness at 15:00, that evening and the next day too. She normally gets a migraine once a month. She does not normally throw up with a headache though. The vomiting started when she threw up twice on 25Dec2020, then once on morning of 26Dec2020. She also had very high blood pressure. It was through the roof. She did not know if that was related to drug for migraine or vaccine. She also had the headache at 14:00 the whole time. She believed she threw up before she took Sumatriptan. The muscles got rigid and tight in her neck and she doesn't think she took it. She threw up and then she took it. She did not have a lot or expiration. There was no ER nor physician's office required. She would have it if her car was not buried in snow. Her blood pressure was high and she was concerned she would have a stroke. It was usually around 110/70 and was always very low usually. She did not know if it was accurate, but it was 165/124 at one point and she did know her pulse was accurate. She did not provide her pulse rate. She did not know if she was throwing up because her blood pressure was high and did not know if blood pressure was high because of Sumatriptan. She only gets 9 pills a month. She did not know if high blood pressure was one of the side effects. It was not a real safe medication to take once a day. She only took it once a month and only once that day. She had never thrown up with migraines before and was just concerned. She doesn't usually take her blood pressure and doesn't know if the Sumatriptan always makes it go up or not. She doesn't know if she had the flu bug or not. The action taken in response to the events for bnt162b2 was not applicable, while for sumatriptan was unknown. Clinical outcome of sickness and influenza was unknown, for headache was recovered on 27Dec2020, while for the other events was recovering. Information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the elevated BP and other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case

will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

allergic reaction; This is a spontaneous report from a contactable other healthcare professional reported for herself. A 45-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EK 5730, expiry date unknown) via unspecified route of administration at left arm on 30Dec2020 08:30 at single dose for Covid-19 immunization in a hospital facility. The patient was not diagnosed with Covid-19 prior vaccination. Medical history was none. Concomitant medications was not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 30Dec2020 at 08:45, the patient experienced allergic reaction which resulted to patient visiting doctor or other healthcare professional office/clinic and emergency room/department or urgent care visit. The patient received treatment of epinephrine, decadron and Benadryl due to the event. The patient was not Covid tested post vaccination. The outcome of the event allergic reaction was recovering at this time of the report. The reporter considered the event non-serious; did not results in death, was not life threatening, did not cause/prolong hospitalization, was not disabling/incapacitating, and no congenital anomaly/birth defect.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of event Allergic reaction cannot be totally excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

peripheral neuropathy type symptoms; tingling of the feet, legs, hands, arms; This is a spontaneous report from a contactable Other Health Professional (patient). A 34-year-old non-pregnant female patient received first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration at Left arm on 22Dec2020 10:00 at single dose for covid-19 immunization. The COVID-19 vaccine was administered at Hospital. Medical history included hypothyroidism. The patient had no known allergies. Concomitant medication included levothyroxine and multivitamin. No other vaccine in four weeks. The patient was not sure if this was related to the vaccine or not. The patient didn't know if anyone else was having peripheral neuropathy type symptoms such as tingling of the feet, legs, hands, arms. The symptoms started a few days ago. The patient did not even sure if it related to the vaccine. Adverse event start date was 27Dec2020. Covid was not tested post vaccination. The outcome of the events was not recovered. No treatment received for the events. Information on the lot/batch number has been requested.; Sender's Comments: The temporal relationship between the onset of the event and administration of the vaccine does not support a causal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern

identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

tested positive for covid; tested positive for covid; fever; headache; runny nose; nasal congestion; This is a spontaneous report from a contactable consumer (patient). A 34-year-old female patient received the first single dose of BNT162B2 (Solution for injection, lot number: EK5730, exp date: Mar2021), intramuscular (injected in left upper arm) on 20Dec2020 12:30 to 20Dec2020 12:30 at 0.3 mL for immunisation. The vaccine was administered in a hospital and not in a military facility. Medical history included birth control. The patient had no other history. NO ER or physician's office required Prior Vaccinations (within 4 weeks). Patient had no relevant family history. Concomitant medication include unspecified birth control.There was no previous immunization. Patient, who was a Respiratory therapist, got the covid vaccine on 20Dec2020 (Sunday). She first stated she doesn't have any side effects and just had a question. Patient had COVID Symptoms on 26Dec2020 21:00 which was minimal like a runny nose. She further reports that on 26Dec2020 she started to have nasal congestion. On 27Dec2020 the nasal congestion worsened, and she started having a headache. She then experienced a 102.6 fever on 28Dec2020 (Monday). She has since tested positive for Covid on 28Dec2020 11:30. Patient asked if it was ok that she received the 2nd dose after testing positive for covid. Investigation assessment was not performed. There was no prescriber. She received at work because she was a front line healthcare worker. The patient does not have SARS-CoV2 antibodies at diagnosis but never tested for antibodies. The patient was not in the hospital, nor was admitted in ICU. The patient did not display clinical signs at rest indicative of severe systemic illness. The patient did not require supplemental oxygen (including high flow or ECMO) or receive mechanical ventilation. No Multiorgan failure. The patient did not receive any additional therapies for COVID-19. The patient did not require the initiation of new medication or other treatment or procedure. PCR on 28Dec2020 (Saturday) Results: just detected. No units available. No reference ranges provided. Standard range was not detected. It was just detected or not detected ranges. No other test or diagnostic imaging performed. The patient had not been treated with immune modulating or immunosuppressing medications or received any other vaccines around the time of COVID-19 vaccination. No pre-existing diseases worsened during the SARS-CoV2 infection. The patient was recovering from event positive for covid and runny nose; nasal congestion was not recovered and outcome of the other events was unknown.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event of positive for corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the number of days passed since the vaccine is given.

"had side effects of ""tongue feels swollen and globus sensation in my throat.""; had side effects of ""tongue feels swollen and globus sensation in my throat.""; she did not have a lot of injection site pain, it very minimal.; bruise or ecchymosis at the injection site; bruise or ecchymosis at the injection site; This is a spontaneous report from a contactable physician (patient) via a Pfizer sponsored program Pfizer First Connect. A 37-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot EH9899) via intramuscular on 19Dec2020 09:00 on left deltoid at a single dose for COVID-19 prophylaxis. The patient medical history, family history and relevant tests were reported

as none. Current concomitant medications included multivitamin took 2 chewable gummies sporadically for years as supplementation therapy. The patient previously took Flu shots she got a sore arm. It was not bad. Tetanus gives her a sore arm, but that was all. Caller wanted to know what she should do for preparation to safely get second dose of Covid vaccine and how to fix what she was feeling right now, making sure it doesn't get worse, considering she is still having symptoms. Caller stated that she had side effects of tongue felt swollen and globus sensation in her throat. The transferring agent stated that he has a caller on the line that was calling about the Covid-19 Vaccine and reported that the patient got the shot on the 19Dec2020 and was inquiring about to proceed with her weird side effects. Caller had not told her physician about her symptoms yet. Caller clarified that she said a half an hour after the dose on 19Dec2020 09:30 she said that she had a Globus sensation or like a lump in her throat. Caller also reported that the back of her tongue felt swollen. Caller said that the Globus sensation was intermittent and it was not as prominent now as it was. Caller said that it was medically significant, but she has not sought medical treatment yet. Caller said that she still had a bruise or ecchymosis at the injection site. She said that the injection was high but reported that she did not have a lot of injection site pain, it very minimal. No emergency room or physician office required. The outcome of the event tongue felt swollen and globus sensation in her throat was recovering and the outcome of the event a bruise or ecchymosis at the injection site was not recovered and the outcome of the event minimal injection site pain was unknown.; Sender's Comments: There is a plausible chronological association between vaccine administration and onset of the events. Causality cannot be completely excluded."

"had a reaction of bells palsy with mild symptoms 5 minutes of receiving covid vaccine; facial numbness right sided ear discomfort, difficulty closing right eye, only right side numbness and weakness of her face. It has gotten a lot better; facial numbness right sided ear discomfort, difficulty closing right eye, only right side numbness and weakness of her face. It has gotten a lot better; facial numbness right sided ear discomfort, difficulty closing right eye, only right side numbness and weakness of her face. It has gotten a lot better; This is a spontaneous report from a contactable Other Health Professional reported that a 35-year-old female patient receives first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot/Batch Number and Expiration Date unknown) via an unspecified route of administration on 21Dec2020 at single dose for covid-19 immunization. The patient's medical history and concomitant medications was not reported. The patient experienced a reaction of bells palsy with mild symptoms 5 minutes of receiving Covid vaccine. ""facial numbness right sided ear discomfort, difficulty closing right eye, only right side numbness and weakness of her face. It has gotten a lot better, patient was vaccinated 10 days ago on 21Dec2020. Patient was treated with 60mg of Prednisone for 5 days which was started today."" Question is regarding the 2nd dose of Covid vaccine, whether or not she should have it. The outcome of events was recovering. No follow-up attempts are possible; information about lot/batch number cannot be obtained. .; Sender's Comments: There is a positive chronological association between vaccine administration and onset of the events. Causality cannot be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."

now have a positive cov-19 test results; now have a positive cov-19 test results; This is a spontaneous report from a contactable nurse reporting for herself. A female patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number and expiry date not reported) via an unspecified route of administration, on an unspecified date, single dose for COVID-19 immunization. Relevant medical history and concomitant medications were not reported. The patient took first round of cov-19 shot and due to take 2nd one Saturday but now have a positive cov-19 test result. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event of positive for corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the number of days passed since the vaccine is given.

Contracted covid 19 virus after receiving first dose of vaccine; Contracted covid 19 virus after receiving first dose of vaccine; This is a spontaneous report from a contactable nurse. A 46-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number Eh9899), intramuscular in left arm on 17Dec2020 18:00 at a single dose for covid-19 vaccination. Vaccine was administered in the hospital. There were no relevant medical history. The patient had no known allergies. Concomitant medication included levothyroxine sodium (SYNTHROID). On 27Dec2020 20:00, the patient contracted covid 19 virus after receiving first dose of vaccine. The outcome of the event was recovering. The patient did not received any treatment. The event resulted in a doctor or other healthcare professional office/clinic visit. The patient did not have COVID prior to vaccination. The patient was tested for COVID post vaccination. The patient had nasal swab on 31Dec2020 and had a positive result.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event of positive for corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the number of days passed since the vaccine is given.

tested positive following the first dose of vaccine; tested positive following the first dose of vaccine; This is a spontaneous report from a contactable healthcare professional. A female patient of an unspecified age received BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine; lot/batch number and expiry date were unknown), via an unspecified route of administration on unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The reporter stated that she has a patient who tested positive following the first dose of vaccine and inquiring as to second dose recommendations. The outcome of the event was unknown. Information about lot/batch number has been requested.; Sender's Comments: There is scant information at this point. Case will be reevaluated based on additional information during the follow-up

"sore arm; aches and pains for a couple of days; a little headache; I received results yesterday and I am positive; I received results yesterday and I am positive; This is a spontaneous report from a non-contactable physician (patient). A male patient of an unspecified age started to receive bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number and expiry date was unknown, via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunization. The patient's medical

history and concomitant medications were not reported. The patient received his first covid vaccine dose on 19Dec2020, and due to get his second dose on 09Jan2021. The problem is he tested for the covid virus on Wednesday 26Dec2020 (was negative). He was tested again on the 30Dec2020, because his wife and son had tested positive on the 26Dec2020, he received the results yesterday and he is positive. He asked if he should proceed with the 2nd dose, another test on the 30th and tested positive. He reports that, other than initial side effects from the vaccine administration, sore arm, aches and pains for a couple of days, never had fever, a little headache for a day or two, he feels fine. The outcome of the events ""a little headache"" was recovered on an unspecified date while outcome of the other events was unknown. No follow-up attempts are possible. Information about lot/batch number cannot be obtained. No further information is expected.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event of positive for corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the number of days passed since the vaccine is given."

tested positive with COVID; tested positive with COVID; This is a spontaneous report from a contactable nurse. A male patient (Age:22 Units: unspecified) received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date were not reported), via an unspecified route of administration on 15Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient had the 1st dose last 15Dec2020 and tested positive with COVID on 25Dec2020. The outcome of the event was unknown. He will have the COVID result 04Jan2021 to check if he was still positive. Information on the Lot/Batch number has been requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event of positive for corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the number of days passed since the vaccine is given. Case will be reevaluated based on follow-up information

developing a left facial droop; Bell's palsy; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). A contactable physician reported that a female patient of an unspecified age received the first dose of bnt162b2 (COVID-19 Vaccine) via an unspecified route of administration on an unspecified date in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The physician reported that the patient received the COVID-19 vaccine roughly two weeks ago (Dec2020) and is developing a left facial droop, they are concerned if that is a sign of facial Bell's palsy. It's left side and it's a facial droop. The physician was concerned if patient is developing Bell's palsy and they are wondering if she should get the second dose or not. The physician further stated that her patient got the vaccine like about 2 weeks ago and developed Bell's palsy three days after the administration of the vaccine (Dec2020) and of course she won't be able to get to see because we are all booked up until yesterday and that is like about a week ago, after the onset of Bell's palsy. Outcome of the event was unknown. Information about lot and batch has been requested.; Sender's Comments: The event is considered possibly related to the suspect product based on the assumed positive temporal association. The information available in

this report is limited and does not allow a medically meaningful assessment of the case. In particular the following relevant information is not available: patient's medical history and concomitant medications, exact vaccination date, event outcome. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

nurse got Covid after getting the vaccine; nurse got Covid after getting the vaccine; This is a spontaneous report from a contactable nurse. A patient of unspecified age and gender received BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine; lot/batch number and expiry date were unknown), via an unspecified route of administration on unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was reported that a nurse got Covid after getting the vaccine. The reporter wanted to know if the chills were common. She wanted to know if it is okay to feel chills every now and then. She wanted to know how people would know if they are positive when getting the vaccine. The outcome of the event was unknown. Information about the lot/batch number has been requested.; Sender's Comments: Based on the limited information available, a possible contributory role of the suspect products cannot be excluded for the reported event of positive for corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the number of days passed since the vaccine is given. Case will be reevaluated based on follow-up information

a strong, whole body heat, and flushing; a strong, whole body heat; tachycardic; Palpitations; This is a spontaneous report from a contactable Nurse(patient). This Nurse reported for similar events for 6 patients. This is 1st of 6 reports. A 49-year-old female patient received BNT162B2(PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 28Dec2020 at the 49 years old at single dose for COVID-19 immunization. The medical history and concomitant medications were not reported. The registered nurse and 5 other registered nurses she worked with, had a serious reaction right after receiving the COVID-19 Vaccine. The patient had a weird reaction right after she was injected with the COVID-19 Vaccine. She had a strong, whole body heat, and flushing. She said she became tachycardic and had palpitations that lasted a few minutes. She said the tachycardia and palpitations then slowly resolved in less than 5 minutes. The patient said she had no other symptoms after receiving the COVID-19 Vaccine. The reporter said there were 5 other registered nurses that received the COVID-19 Vaccine at the same time and had the same exact symptoms she experienced. The reporter said stated the registered nurse who was monitoring the people who received the COVID-19 Vaccine indicated that the same feeling had occurred in many other workers who had received the COVID-19 vaccine. The reporter stated she did not know if the patient had received any other vaccines at the same time as the COVID-19 Vaccine, and if the patient had received any other vaccines within the last 4 weeks. The patient works at a hospital but didn't received any medical treatment. The patient just waited her symptoms out, and within 5 minutes her symptoms had gone away. The outcome of the events was recovered on 28Dec2020. Information on the lot/batch number has been requested.;

Sender's Comments: A possible contributory role of the suspect products cannot be excluded for the reported events based on the known safety profile and temporal association. Case will be reevaluated based on follow-up information ,Linked Report(s) : US-PFIZER INC-2021001363 same reporter/drug/event, different patient.;US-PFIZER INC-2021001364 same reporter/drug/event, different patient.;US-PFIZER INC-2021001195 same reporter/drug/event, different patient.;US-PFIZER INC-2021001204 same reporter/drug/event, different patient.;US-PFIZER INC-2021001329 same reporter/drug/event, different patient.

anaphylaxis; This is a spontaneous report from a contactable other healthcare professional (patient). A patient of unspecified age and gender received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for immunization. The patient's medical history and concomitant medications were not reported. Pfizer covid vaccine caused anaphylaxis on 30Dec2020 and landed patient in hospital. Patient was an anesthesiologist and had high IgG to thyroid with hashimotos. Patient thought he/she had IgG/neutrophil mediated anaphylaxis (not the typical IgE) as absolute neutrophil count elevated but everything else normal in labs. Had tachycardia into 140-150s and mild facial and throat edema. Still having sudden bouts of elevated heart rate in the morning of 31Dec2020. Heart tests all normal. Outcome of event elevated heart rate was not recovered, and outcome of other events was unknown. Information on the Lot/Batch number has been requested.; Sender's Comments: A possible contributory role of the suspect products cannot be excluded for the reported events based on the known safety profile and temporal association. Case will be reevaluated based on follow-up information

12/29/2020 2 hr after vaccination patient became hypotensive, decreased oxygen levels was transferred to Hospital currently inpatient at hospital - admitted for cardiac arrest

Deceased

Woke up Thursday am with hives on right lower abdomen and leg getting progressively worse throughout the day. By that afternoon had back pain in right back and continuing hives. Woke up Friday with numbness to right leg, hives, and back pain all on right side of body. Had numbness to foot, face but especially thigh, back and across upper buttocks. Saturday hives subsiding, numbness receding to face, upper thigh and foot only on right side of body. Sunday, back pain some improved, no hives or hives minimal, numbness persists upper thigh face and foot on right side of body. Monday, Tuesday and Wednesday the same. Woke up Thursday with shingles rash to upper thigh back, numbness to foot face and upper thigh persist only on right side of body. Darn!!!

I woke the next morning with flu like symptoms my arm was hurting, I was feelin tired and really couldn't get out of bed. As the day progressed I got chills, started running a fever, It went up to 104 and my heart rate went up and down from 120-165 so I went to the ER. They gave me fluids and ran a whole bunch of test, tested me for Covid and Sepsis and everything came back normal and negative for Covid. They monitored my heart rate and once it started getting back to normal, they ended up letting me go home, I was there from 8pm to about 3am. After that I felt tired and felt like when I had Covid back in

November. I started feeling better about Sunday, still a little tired but felt more back to normal. My heart rate is still getting back to normal so my Dr is following me on that.

PT was found deceased in his home on 1/5/2021

Expired 1/05/2021

"worry; frustration; regrets/wishing she would have never taken it; phlegm; can't talk; taking her voice, she felt like she was losing her voice; scary/""scaring"" her; coughing/cough; difficult for her to catch her breath/lost her breath, couldn't catch her breath/couldn't breath; allergic reaction to the vaccine; This is a spontaneous report from a contactable consumer (patient). A 61-year-old female patient received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EL1284, expiry date 30Apr2021) intramuscular on 29Dec2020 09:16 at 0.3 mL, single for Covid-19 immunization in a hospital. Medical history included diabetic, allergy reactions, blood pressure (abnormal), cholesterol (abnormal); all ongoing, and reaction to dust. Concomitant medications included ongoing amlodipine;hydrochlorothiazide;valsartan for blood pressure, ongoing potassium for unspecified indication, BP pills (unspecified) and has cholesterol medications. The patient informed that yesterday (29Dec2020), she got the COVID vaccine shot at work, received it at 9:16 am and was monitored for 30 minutes post administration. The patient went to work and was holding the babies. The patient worked in transport in the NICU at a hospital. Few hours after the injection, while working in the NICU, she experienced coughing to the point where it was difficult for her to catch her breath. The patient started coughing so bad, she had no control. She mentioned trying to drink water and continued coughing more. The patient lost her breath, couldn't catch her breath, she had to call for the charge nurse (manager), as she couldn't breath and they took her to the ER and consulted at the ER of her facility. The patient informed that she kept coughing and couldn't catch her breath. They made her drink water. The patient has allergies, so she always has an epi pen with her. The patient felt like she had an allergic reaction to the vaccine. The doctor there explained that her symptoms were not related the Covid-19 vaccine she received earlier. The patient specified that the last time she had a similar reaction was at work and was due to dust. The patient explained that she was perfectly fine before receiving the vaccine, laughing, and so what can her symptoms be related to, if it was not the vaccine. The patient was coughing all night, can't get rid of the cough. She has called her doctor. The nurse said just to watch herself for now. The patient informed that she was supposed to go back to work tomorrow and she was afraid to go around the babies. The patient informed that today (30Dec2020), she gargled apple cider vinegar and salt water, and phlegm came out. The patient continued saying that she has still been coughing, can't talk and that it was scary. The patient informed that she was taking her voice, she felt like she was losing her voice. It was ""scaring"" her. She was unsure if it was the Pfizer vaccine. The patient attempted to reach her HCP and that she cannot be seeing at her clinic due to her cough. The patient mentioned that she won't have access to a respiratory clinic until Tuesday. The patient expressed her concerned about returning to work with babies and asked if she should return to work tomorrow. The patient pursued verbalizing her worry and frustration. The patient asked if she can decide not to get the second dose. The patient voiced her regrets on receiving the first dose of the COVID-19 vaccine. She stated wishing she would have never taken it and that all who have an EpiPen should not receive it. The outcome of the event cough was not recovered, Dyspnoea, Allergy to vaccine,

Productive cough, Speech disorder, Aphonia, Nervousness, Anxiety, Frustration tolerance, Depressed mood was unknown."

her face started to go numb/felt like a dental block you would get with Lidocaine; She got on her left side, a cold spike feeling up her shoulder and neck and up to her face; upper esophageal sphincter got tight and felt funny like she was going to throw up; her whole body was shaking- her head, hands, and legs; feeling giddy; blood pressure was up; being stressed; was going to throw up/transient nausea; felt a little funny; This is a spontaneous report from a contactable Nurse(patient). A 54-year-old female patient received BNT162B2 (lot number EL0140), via an unspecified route of administration at left deltoid on 30Dec2020 14:28 at the 54 years old at 0.3 mL single for where she works she was exposed to patients who need rehab that were exposed and getting COVID. The patient medical history included Primary Essential Tremors and ongoing (had these for about 10-11 years. Her mother and grandmother also had them. Normally they were very fine, small tremors that people didn't notice. She can hold and turn her head and hide it) and Sulfa drug allergy (would get shortness of breath). The concomitant product was none. The patient previously took flu vaccine and experienced preservative made neck twitch and joint sores. Yesterday the patient got the COVID Vaccine and had a pretty significant adverse event. She was calling to report it and to see if she should get the second dose of the vaccine. The patient was also a licensed speech pathologist. She received the vaccine yesterday at 2:28 PM. She was allergic to Sulfa drugs and would get shortness of breath, so they wanted her to wait 30 minutes for monitoring. She was feeling giddy on 30Dec2020, but she ran into a friend that she had not seen before quarantine, so they were talking. It was exciting. After her 30 minutes she went to her car and felt a little funny. She thought she was hungry so she ate half a banana and had some water. She had an appointment to get to so she started to drive off, and by the time she got to the interstate she was feeling funny. She got on her left side, a cold spike feeling up her shoulder and neck and up to her face on 30Dec2020. This was like the precursor. Then on 30Dec2020 her face started to go numb. It felt like a dental block you would get with Lidocaine. It went from her temple area, below her eye all the way to her lips. It was midline on the left side. She was breathing fine. She was trying to figure out if she should pull over or call(Number), but her airway did not close up. Her upper esophageal sphincter got tight and felt funny like she was going to throw up. She drove to the hospital close to her house which is affiliated with where she got the vaccine. She normally had primary tremors, small to where people do not notice. But her whole body was shaking- her head, hands, and legs on 30Dec2020. She looked like a bobble head. But she could still breath. They took her right in and they did an EKG to make sure it was not her heart. Her blood pressure was up on 30Dec2020, she assumes for being stressed. They monitored her. They gave her Pepcid and Benadryl. She did not want any nausea medications. She stayed for about 2 hours and slept some from the Benadryl. Her face slowly became less numb. The numbness went away started from her lips and outward to her check and temple area. Then it just felt funny. When she touched it, which she never lost sensation, it was like, whose face is this? It was strange. She is not numb anymore. It took a while for it to go away, and it still felt weird. When she woke up this morning it was completely gone. She had recovered completely from all of these things. The only thing she has now was some transient nausea. It was very mild. It comes and goes. It had improved. She had not taken anything for it. The events Feeling funny, her face started to go numb, upper esophageal sphincter got tight, a cold spike feeling up her shoulder and neck and up to her face, Her whole body was shaking- her

head, hands, and legs, were all assessed as Medically significant. The outcome of the event Nausea was recovering, the events Felt giddy, blood pressure was up, Stress was recovered on 31Dec2020, the other events were recovered on 30Dec2020. The reporter considered there was a reasonable possibility that the events Feeling funny, a cold spike feeling up her shoulder and neck and up to her face, Face started to go numb from her temple area, below her eye all the way to her lips, upper esophageal sphincter got tight , whole body was shaking- her head, hands, and legs, Nausea, were related to the product BNT162B2.; Sender's Comments: Based on the compatible temporal association, the vaccination with BNT162B2 might play a contributory role in triggering the onset of the events. The impacts of this report on the benefit/risk profile of the product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"DVT; This is a spontaneous report from a contactable nurse. A patient of unspecified age and gender received BNT162B2, via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The nurse asked if there is any DVT cases reported following the administration of Pfizer-BioNTech COVID-19 Vaccine. E-transmitting duplicate AE caller already reported a DVT case post vaccination. Caller also asked ""Why is there's a statement indicating that individuals with a history of bleeding disorder or taking anti-coagulant should contact their vaccination provider? How did they prove 95 % efficacy? Why aren't antibodies produced after the 1st dose of Covid-19 vaccine?"" The outcome of the event DVT was unknown. Information on Lot/batch number has been requested.; Sender's Comments: Very limited information was provided for this individual patient, such as pre-existing medical history, suspect administration details, clinical course and relevant supportive lab data for the reported Deep vein thrombosis (DVT). Pending further details, the Company would handle this reported DVT related to the administration of BNT162B2, COVID-19 immunization, for reporting purpose. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate."

throat swelling; Initially had headache; dizziness; irritability; Throat tingling; difficulty swallowing; This is a spontaneous report from a contactable other healthcare professional (HCP) (patient). A 49-year-old female patient received a single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot#: EJ1685) as the first dose via an unspecified route of administration in the left arm on 29Dec2020 06:00 for COVID-19 immunization. Medical history included fibromyalgia, asthma, prediabetes, and carpal tunnel syndrome. There were no concomitant medications. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. There were not any other medications the patient received within 2 weeks of vaccination. The patient was not diagnosed with COVID-19 prior to vaccination. The patient had not been tested for COVID-19 since the vaccination. The patient had no previous allergies to vaccines. The patient allergies to medications which included: doxycycline, medroxyprogesterone acetate (DEPO-PROVERA), metoclopramide (REGLAN), gluten. The patient initially

had headache, dizziness and irritability, throat tingling, throat swelling, and difficulty swallowing started around 12 hours after injection, event onset date reported as 29Dec2020 18:00. The events resulted in emergency room/ department or urgent care. The events were reported as non-serious by HCP. Treatment received for the events included diphenhydramine and hydroxyzine embonate (HYDROXYZINE PAMOATE). The outcome of the events was recovering.; Sender's Comments: The reported pharyngeal swelling together with other symptoms was likely related to the single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) due to temporal relationship. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics committees and Investigators, as appropriate.

Moderate to severe headache 24-48 hours post injection. Complete sensorineural hearing loss in left ear 1 week after injection; Moderate to severe headache 24-48 hours post injection. Complete sensorineural hearing loss in left ear 1 week after injection; This is a spontaneous report from a contactable physician (patient). A 37-year-old female non-pregnant patient received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 22Dec2020 17:15 at single dose on her left arm for covid-19 immunization. Medical history included known allergies to penicillin. The patient had no other medical history. There were no concomitant medications. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine and the patient was not received list of any other medications within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient experienced moderate to severe headache 24-48 hours post injection. Complete sensorineural hearing loss in left ear 1 week after injection on 23Dec2020. These events resulted in doctor or other healthcare professional office/clinic visit, disability or permanent damage. The patient had received prednisone to treat the events. The outcome of the events was not recovered.; Sender's Comments: A possible contribution role of first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) to the onset of sensorineural hearing loss in left ear and headache cannot be excluded due to temporal relationship. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics committees and Investigators, as appropriate.

jaw tightening; muscle spasms; entire face and around her mouth went numb; entire face and around her mouth went numb; heart palpitations; I had hives on my chest; a wave of heat rush up her back; This is a spontaneous report from a contactable nurse (patient). A 46-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration in left arm on 22Dec2020 10:30 at first single dose for COVID-19 immunization. Medical history included ectopic pregnancy, hay fever. Concomitant medication received within 2 weeks

included: loratadine, colecalciferol (vitamin D), olly womens multivitamin. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No known allergies. About 15 minutes after the vaccine the patient experienced jaw tightening and muscle spasms. The patient was given oral Benadryl 50 mg. About 5 minutes after taking the Benadryl, her entire face and around her mouth went numb. The patient began having heart palpitations and felt a wave of heat rush up her back. She had hives on her chest. The patient received 1 dose of epinephrine from an Epi-Pen and transported to the emergency room for further treatment. Adverse event start date: 22Dec2020 11:00 AM. Events were considered as non-serious. Events resulted in: Doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. Treatment received for the adverse event included: Benadryl, Epinephrine, Solumedrol, Pepcid. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had been tested for COVID-19. Test Name: SARS-CoV-2 by PCR (Nasal Swab) on 30Dec2020: Negative. Outcome of the events was not recovered.; Sender's Comments: The temporal relationship is suggestive of an acute anaphylactic reaction. Based on the temporal relationship and the known pattern of response, the vaccination with BNT162B2 might play a contributory role in triggering the onset of the reported events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"Joint pain; loss of balance; increased drowsiness; Headaches induced by allergies; Limited neck mobility/lessened neck pain but still limited mobility; Scalp tenderness and sensitivity; Significant migraines/debilitating migraines (light & noise sensitivity, covers whole head, pulsating, sharp pain, loss of balance, increased drowsiness); Sharp pains in neck/Neck pain; Sharp pains in neck, ear, head pain (similar to an ear infection pain); head pain/sharp pains in lower head/covers whole head, pulsating, sharp pain/Increase in headaches but no longer centralized to back of head/ headaches induced by allergies; Nausea; Neck stiffness; This is a spontaneous report from a contactable Other Health Professional (patient). A 29-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Solution for injection, lot number was unknown, via an unspecified route of administration in the right arm on 22Dec2020 07:30 at a single dose for COVID-19 immunization. Medical history was none. There were no concomitant medications. The patient was not pregnant. The patient had not receive any other vaccines within 4 weeks prior to the COVID vaccine. It was reported that the patient received vaccine in Tuesday (22Dec2020). The following Sunday (27Dec2020) at 12:00, she had nausea and neck stiffness. On Monday (28Dec2020), she had sharp pains in neck, ear, head pain (similar to an ear infection pain), and nausea. She used teledmed appt and got antibiotics (unspecified). On Tuesday (29Dec2020), she had significant migraines, limited neck mobility, sharp pains in neck and lower head, scalp tenderness and sensitivity which felt like whiplash when she moved her head w/ her head feeling ""swimmy"". She tried to see urgent care but was to go to ER. On Wednesday (30Dec2020), there was lessened neck pain but still limited mobility, increased in headaches but no longer centralized to back of head. She went to ER and they said that she had headaches induced by allergies. She mentioned that she never had migraines or allergies in her life. They also reported no ear infection. She did complete CT Scan with no concerning results on 30Dec2020. On Thursday (31Dec2020) & Friday, she

no longer has neck pain but with continued nausea, joint pain, debilitating migraines (light & noise sensitivity, covers whole head, pulsating, sharp pain, loss of balance, increased drowsiness). The events were reported as non-serious. The treatment received for the adverse events included fluids, pain & nausea meds. The patient was not diagnosed with Covid prior to vaccination. She was tested for covid post vaccination on 30Dec2020 through a nasal swab with negative result. The outcome of the events neck stiffness, ear pain, scalp tenderness and sensitivity, and 'Headaches induced by allergies' was unknown; while neck pain was recovered on 31Dec2020. The outcome of the events 'significant migraines/debilitating migraines', nausea, limited neck mobility, head pain/Headache, joint pain, loss of balance, and increased drowsiness was not recovered. Information on the lot/batch number has been requested.; Sender's Comments: A causal association between BNT162B2 and the event migraine cannot be excluded based on a compatible temporal relation between vaccination and onset of event. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."

Miscarriage; patient was pregnant while taking BNT162B2; patient was pregnant while taking BNT162B2; This is a spontaneous report from a contactable Other Health Professional. A 34-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EL0140), intramuscularly on 22Dec2020 06:00 AM at single dose at Arm Right at Hospital for COVID. Medical history included ongoing sleep apnoea. There were no concomitant medications. There were no allergies to medications, food, or other products. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient did not receive any other medications the patient received within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient experienced miscarriage on 29Dec2020 13:00. The patient was pregnant while taking BNT162B2. The patient was 4 Weeks pregnant at the onset of the event. Patient last menstrual period date was 24Nov2020. The Pregnancy due to deliver was on 07Sep2021. The pregnancy resulted in spontaneous abortion. Since the vaccination, the patient has been tested for COVID-19 on an unknown date with unknown results. Nasal Swab on 28Dec2020 was Negative. There was no treatment received for the adverse event. The outcome of event was recovering.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment hence, the events are conservatively assessed as related to the suspect drug BNT162B2 until further information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to agency, Ethics Committees, and Investigators, as appropriate.

DVT left calf; This is a spontaneous report from a contactable Physician (patient). A 60-year-old male patient started to receive the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Intramuscular on 20Dec2020 08:00 at single dose on right arm for COVID-19 immunization. Medical history included Gastric reflux. The patient had no known allergies. The patient had no covid prior vaccination. The patient had no covid tested post vaccination. Concomitant medications included

omeprazole (PRILOSEC) and ergocalciferol (VIT D). The patient had not received other vaccine in four weeks. The patient experienced deep vein thrombosis (DVT) left calf on 27Dec2020 09:00 which resulted emergency room visit. Treatment received for the event included Xarelto. The outcome of the event was not resolved. Information on the lot/batch number has been requested.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment hence, the events are conservatively assessed as related to the suspect drug BNT162B2 until further information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

"reaction to excipient; kidneys tried to shut down; This is a spontaneous report from a contactable consumer from a Pfizer Sponsored Program. A female patient of an unspecified age received the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), and potassium (MANUFACTURER UNKNOWN); both via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunisation. The patient's medical history included ongoing kidney issues from an unknown date, allergic to antibiotics and pain pills from an unknown date and unknown if ongoing. Concomitant medications were not reported. On an unspecified date, the patient experienced: kidneys tried to shut down and reaction to excipient; which were assessed as medically significant. The consumer stated, ""I looked at the ingredient list: potassium is listed. I have kidney issues and potassium is really bad, my kidneys tried to shut down on me. I'm allergic to ""antibiotics and pain pills."" The clinical outcome of the events, renal failure and reaction to excipient, was unknown. The batch/lot numbers for the vaccine, PFIZER-BIONTECH COVID-19 MRNA VACCINE, were not provided and will be requested during follow up."

Mild difficulty with thought/speech/concentration; strong wave of burning sensation growing inside the body; Lightheadedness; Blood pressure went up; Heart rate went up; Hands freezing; Mild difficulty with thought/speech/concentration; Mild difficulty with thought/speech/concentration; Weakness; Mildly shaky; Anxiety; Feeling that may pass out; This is a spontaneous report from a contactable other healthcare professional (HCP) (patient). A 61-year-old female patient received 1 dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1686) via unspecified route on left arm single dose for COVID-19 immunization on 02Jan2021, 02:30 PM, at 61-year-old. Medical history: allergies to sulfa, paclitaxel (TAXOL); breast cancer in 2003 and 2007. Prior to vaccination, the patient did not be diagnosed with COVID-19. Concomitant medication in two weeks included: escitalopram oxalate (LEXAPRO, strength: 10m); omeprazole; multivitamin; ibuprofen. About 5 minutes after the vaccine (02Jan2021, 02:35 PM), the patient had a strong wave of burning sensation growing inside the body, lightheadedness, blood pressure went up, heart rate went up, hands freezing, mild difficulty with thought/speech/concentration, weakness, mildly shaky, anxiety, feeling that may pass out. Emergency room/department or urgent care visited. Treatment received for the adverse event included: heart rate H20 and BP monitor, water, observation. Since the vaccination, the patient did not have been tested for COVID-19. Action taken for BNT162B2 was not applicable. Outcome of the events was resolving. It was reported as non-serious per the reporter.; Sender's Comments: Based on the current available

information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of event Mental impairment cannot be totally excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"reported increased hand stiffness after vaccination; This is a spontaneous report from a contactable pharmacist via Pfizer sales representative. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for Covid-19 immunisation. Medical history included psoriasis and psoriatic arthritis. The patient's concomitant medications were not reported. The patient previously took adalimumab (HUMIRA) and non compliant with Humira. The patient had psoriasis and psoriatic arthritis, reported increased hand stiffness after vaccination on an unspecified date with outcome of unknown. Information on the lot/batch number has been requested.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported ""psoriasis and psoriatic arthritis with increased hand stiffness after vaccination"" and the administration of BNT162B2, based on the reasonable temporal association. The patient's pre-existing medical condition of psoriasis and psoriatic arthritis might have provided alternative explanations. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate."

"Confirmed DVT in the left leg; COVID test (PCR swab): positive on 26Dec2020; COVID test (PCR swab): positive on 26Dec2020; This is a spontaneous report from a contactable other healthcare professional. An 85-year-old female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# ELO140, expiration date: Mar2021), via an unspecified route of administration in arm (deltoid; unknown side) on 23Dec2020 at single dose for Covid-19 immunisation. Medical history included type 2 diabetes mellitus from 2017 and ongoing, high blood pressure from 2017 and ongoing, atrial fibrillation (A-Fib) from 2019 and ongoing. The patient's concomitant medications were not reported. The patient was administered first dose of the COVID vaccine on 23Dec2020 and then was swabbed for COVID on 26Dec2020, and then on 28Dec2020 her PCR swab was positive for COVID. She was asymptomatic until she started complaining of leg pain. She ordered an ultrasound for the patient on 30Dec2020, and it confirmed a deep vein thrombosis (DVT) in left leg. The patient was being treated with anticoagulant apixaban (ELIQUIS) currently. Caller stated that this could be that it (DVT) is from COVID, but her real question was, could it be from the vaccine? In Pfizer's information packet for patients, there is section on what to tell your provider prior to getting vaccinated. One of the things on there is if you have a bleeding disorder or are on an anticoagulant. There is no explanation as to why it was in the packet of information. Caller has looked everywhere and can not figure out why that is on the FAQ/packet information. The patient was due for the second dose on 13Jan2020, but she was worried and hesitant

to approve it. The patient underwent lab tests and procedures which included COVID test (PCR swab): positive on 26Dec2020, ultrasound of the left leg: confirmed DVT on 30Dec2020. The outcome of events was not recovered.; Sender's Comments: There is not a reasonable possibility that event ""COVID test (PCR swab): positive"" is related to BNT162B2 vaccine. The event occurred 3 days after vaccination, when vaccine was not expected to achieve the effect. The event DVT of legs is not considered related to BNT162B2 vaccine. The patient had underlying diabetes and cardiovascular disorders, which are considered as risk factors for DVT. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

Patient was poorly responsive to her inhalers that she used for asthma; Persistent shortness of breath and chest tightness starting within a few days after vaccine; Persistent shortness of breath and chest tightness starting within a few days after vaccine; This is a spontaneous report from a contactable physician (patient). A 40-year-old male patient received the first single dose of BNT162B2 (Solution for injection, lot number: EK5730, exp date not reported), via an unspecified route of administration (vaccine location: left arm) on 18Dec2020 04:15 for COVID-19 immunization. Medical history included allergy induced asthma, allergies to cats and dust, and occasional seasonal allergies. Concomitant medication included other vaccine/s received within 4 weeks prior to the COVID vaccine: first dose of diphtheria vaccine toxoid, pertussis vaccine acellular 3-component, tetanus vaccine toxoid (BOOSTRIX, GlaxoSmithKline) administered as single dose via unspecified route of administration (vaccine location: left arm) on 08Dec2020. There were no other medications the patient received within 2 weeks of vaccination. The patient experienced persistent shortness of breath and chest tightness starting within a few days after vaccine (24Dec2020). Patient was poorly responsive to her inhalers that she used for asthma (onset date not reported). She rarely needed the, used about once or twice a year). It was constant, but with periods of improvement followed regression. Will likely seek medical evaluation as it's been over a week now and rather concerning. The patient did not consider the events shortness of breath and chest tightness as serious. Treatment for the adverse events shortness of breath and chest tightness included fluticasone propionate, almeterol (ADVAIR), albuterol, and unspecified anti-allergy medications. Patient did not have covid prior vaccination. Patient was tested for COVID post vaccination wherein patient tested negative for COVID via Covid test rapid on 30Dec2020. The adverse event resulted in doctor or other healthcare professional office/clinic visit and emergency room/department or urgent care. The outcome of shortness of breath and chest tightness was not recovered and unknown for the other event.; Sender's Comments: Based on the time association, the possible contribution of BNT162B2 to the events shortness of breath , chest tightness and asthma aggravated cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"diabetes was high; seeing double vision; Headache on the right side; This is a spontaneous report from a contactable nurse. A patient of an unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number/expiration date unknown) dose number 1, via an unspecified route of administration on 18Dec2020 at a single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. The patient had the vaccine in a hospital on a Friday (18Dec2020). No side effect was noted over the weekend. On 21Dec2020, when the patient woke up, s/he was seeing double vision, so s/he went to the doctor; they ran some test (unknown result). Because the patient was having headache on the right side in Dec2020, s/he went back to the doctor on 23Dec2020; the patient was sent to the eye doctor and they ran all kind of test. On 24Dec2020, the only thing they could find was that the patient's diabetes was high, so they kind of felt that what that could have been was kind of coincidental. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The mentioned ""diabetes was high"" is likely an intercurrent disease, unlikely related to the administration of BNT162B2, the COVID-19 immunization. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate."

joint pain; it doesn't seem to be feeling well; sweating; Fever; chills; night sweats, that he will randomly start sweating; headache; muscle pain/mild muscle aches; gastric upset; Fatigue; he had mild arm soreness right after he got the vaccine; This is a spontaneous report from a contactable Other-HCP (patient). This 45-year-old male Other-HCP received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EJ1685, NDC number: 59267-1000-1) on 22Dec2020 at single dose in his right arm for COVID-19 immunization. Medical history and concomitant drug were not reported. It was reported that patient experienced Fever on 27Dec2020 with outcome was recovered on 29Dec2020, chills and night sweats on 27Dec2020 with outcome was not recovered, Headache on 27Dec2020 with outcome was not recovered, muscle pain 27Dec2020 with outcome was not recovered, gastric upset on 27Dec2020 with outcome was Recovering, Fatigue on 27Dec2020 with outcome was unknown, arm soreness on 22Dec2020 with outcome was not recovered, joint pain with outcome was unknown, it doesn't seem to be feeling well with outcome was unknown, sweating with outcome was unknown. All events were serious (medical significant). Caller stated that he thought having a reaction to the vaccination, spoken with Occupational Health at his job and with a doctor, stated everyone is a bit stumped. Caller stated he has had for over a week now, fever, chills, night sweats, that he will randomly start sweating, headache, joint pain, gastric upset, and it doesn't seem to be feeling well. Stated the joint pain is actually more muscle pain. Stated he got the vaccination on Tuesday 22Dec2020, stated he has been having these symptoms for over 5 days now. Stated he does not think this is something infectious, that no one in his family is getting sick, his wife or child are not catching it from him. Stated he tried to do research online for data about delayed side effects, would like to know if we have any information on delayed side effects. Stated he considers these events medically significant because he cannot be cleared to go back to work. Stated he had mild arm soreness right after he got the vaccine, states he had mild muscle aches Wednesday and Thursday, then they went away and came back all on Saturday night and Sunday. Stated he is worried about getting a second vaccine. Stated he tested

negative for the COVID on 29Dec2020. Stated he has a CBC and other blood work scheduled for today, results unknown at this time. No follow-up attempts are possible. No further information is expected.; Sender's Comments: Based on the compatible temporal association and the drug's known safety profile, the vaccination with BNT162B2 might play a contributory role in triggering the onset of the events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Tachycardia; Palpitations; had a strong, whole body heat, and flushing; had a strong, whole body heat, and flushing; This is a spontaneous report from a contactable nurse. This nurse reported similar events for 6 patients. This is the 4th of 6 reports. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch unknown) via an unspecified route of administration on 28Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The reporter said her friend is a registered nurse, and received the COVID-19 Vaccine on Monday, 28Dec2020. She said her friend stated she, and 5 other registered nurses she works with, had a serious reaction right after receiving the COVID-19 Vaccine. The patient had a strong, whole body heat, and flushing. The patient said she became tachycardic and had palpitations that lasted a few minutes. She said the tachycardia and palpitations then slowly resolved in less than 5 minutes. She had no other symptoms after receiving the COVID-19 Vaccine. There is unknown whether the patient received the treatment or not. The outcome of the events was recovered on 28Dec2020. Information on lot/batch number has been requested.; Sender's Comments: Based on the compatible temporal association, the vaccination with BNT162B2 might play a contributory role in triggering the onset of the events flushing, feeling hot, tachycardia and palpitations. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.,Linked Report(s) : US-PFIZER INC-2021001345 same reporter/drug/event, different patient.

It sounds like to be an allergic reaction; She passed out; Tachycardia; Nausea; Lightheadedness; This is a spontaneous report from a non-contactable physician. A 32-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) in Dec2020 at single dose to be vaccinated for her protection. Medical history was none. The patient's concomitant medications were not reported. Patient took the Pfizer COVID-19 vaccine and next day she had a very serious reaction. She did not know that if it was due to the vaccine. But she had tachycardia requiring her to go to the emergency room and she passed out and she had nausea and lightheadedness as well. It sounds like to be an allergic reaction. Given the seriousness of tachycardia and passing out as well as the lightheadedness and nausea it sounds too severe just to be a mild immune response. So, it was sort of rare immune response or it was unrelated it was unknown at this time. Outcome of event was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's Comments: Based on the compatible time association, the contribution of suspect BNT162B2 to the events cannot be excluded. The impact of

this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

strong, whole body heat, and flushing; strong, whole body heat, and flushing; Tachycardia; Palpitations; This is a spontaneous report from a contactable Nurse. This Nurse reported for similar events for 6 patients. This is 2nd of 6 reports. A 49-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch unknown), via an unspecified route of administration on 28Dec2020 at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The reporter said her friend was a registered nurse, and received the COVID-19 Vaccine on Monday, 28Dec2020. She said her friend stated she, and 5 other registered nurses she works with, had a serious reaction right after receiving the COVID-19 Vaccine. The patient had a strong, whole body heat, and flushing. The patient said she became tachycardia and had palpitations that lasted a few minutes. She said the tachycardia and palpitations then slowly resolved in less than 5 minutes. She had no other symptoms after receiving the COVID-19 Vaccine. It was unknown whether the patient received the treatment or not. The outcome of the events was recovered on 28Dec2020. Information on lot/batch number has been requested.; Sender's Comments: The reported transient events of whole body heat, flushing, tachycardia and palpitations were likely related to BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) due to temporal relationship and clinic course. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics committees and Investigators, as appropriate.,Linked Report(s) : US-PFIZER INC-2021001345 same reporter/drug/event, different patients.

Serious, weird reaction/had a strong, whole body heat, and flushing; Serious, weird reaction/had a strong, whole body heat, and flushing; Serious, weird reaction/tachycardic; Serious, weird reaction/had palpitations; This is a spontaneous report from a contactable nurse. This nurse reported similar events for 6 patients. This is 5th of 6 reports. A patient of unspecified gender and age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 28Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The reporter did not know if the patient had received any other vaccines at the same time as the COVID-19 Vaccine, and if the patient had received any other vaccines within the last 4 weeks. It was reporter that the reporter's friend texted her last night, on 30Dec2020, at around midnight. The reporter, and 5 other registered nurses she works with in a hospital, received the COVID-19 vaccine at the same time and had the same exact symptoms she experienced. They had a serious reaction right after receiving the COVID-19 Vaccine. The patient had a weird reaction right after being injected with the COVID-19 Vaccine. The patient had a strong, whole body heat, and flushing. The patient became tachycardic and had palpitations that lasted a few minutes. The tachycardia and palpitations then slowly resolved in less than 5 minutes. The patient had no other symptoms after

receiving the COVID-19 Vaccine. The registered nurse who was monitoring the people who received the COVID-19 Vaccine indicated that the same feeling had occurred in many other workers who had received the COVID-19 vaccine. For treatment information, the reporter didn't believe the patient received any medical attention. Reporter believed that the patient just waited symptoms out, and within 5 minutes the symptoms had gone away. The outcome of the events was recovered on 28Dec2020. Information on the lot/batch number has been requested.; Sender's Comments: Based on the compatible temporal association, the vaccination with BNT162B2 might play a contributory role in triggering the onset of the events flushing, feeling hot, tachycardia and palpitations. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.,Linked Report(s) : US-PFIZER INC-2021001345 same reporter/drug/event, different patient.

"Back of my right leg has a quarter size oblong shape lump it's little bit red but not warm to the touch; Back of my right leg has a quarter size oblong shape lump it's little bit red but not warm to the touch; Back of my right leg has a quarter size oblong shape lump it's little bit red but not warm to the touch, it may be a blood clot; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age and gender received single dose of BNT162B2 (Solution for injection, batch/lot number and exp date not reported), via an unspecified route of administration on 30Dec2020 18:30 SE for immunization. The patient's medical history and concomitant medications were not reported. Patient received the Pfizer Vaccine the day of reporting: 30Dec2020 at about 06:30 (tonight). Patient felt fine and still felt fine but when was going to rub some lotion on the back of right leg, has a quarter size oblong shaped lump (onset date not reported) which was little bit red but not warm to the touch. Patient didn't do anything to make it happen. Patient doesn't know if it may be a blood clot which was patient's question. ""The blood clot something may be concerned about."" Patient asked ""Is this a blood clot, it could go to my heart and I could die tomorrow? So I am going to call my family doctor but thank you."" The outcome of the events was unknown. Information about lot/batch number has been requested."

Fatigue and overall lethargic feeling/Sore throat; Dark colored urine despite pushing fluids; Frequent urination; Migraine; Swollen joints and could not move arm that received vaccine in; Swollen joints and could not move arm that received vaccine in; Stomach pains, nausea, diarrhea, swollen lymph nodes; Stomach pains, nausea, diarrhea, swollen lymph nodes; Stomach pains, nausea, diarrhea, swollen lymph nodes; Stomach pains, nausea, diarrhea, swollen lymph nodes; Chills, body aches, spiked fever of 102.; Chills, body aches, spiked fever of 102.; Chills, body aches, spiked fever of 102.; Fatigue and overall lethargic feeling; Fatigue and overall lethargic feeling; Sore throat; The initial case was missing the following minimum criteria: Invalid for no adverse effect. Upon receipt of follow-up information on (31Dec2020), this case now contains all required information to be considered valid. This is a spontaneous report from a contactable Nurse. A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/lot number EH9899, Expiry Date: Mar2021), intramuscular at Deltoid Left on 29Dec2020 07:20 at single dose for COVID-19 immunization. Medical

history included covid-19 from Nov2020 to an unknown date (had covid in the middle of November), surgeries from an unknown date and unknown if ongoing (She also had previous surgeries and has foreign objects in her body. Those areas were super hot. Those antibodies were like rejecting those foreign bodies because they were super hot.) There were no concomitant medications. Received call from RN calling about the Pfizer COVID vaccine. She got the vaccine on Tuesday and had a terrible reaction to it and she called a couple of different hotlines and spoke with the people who administered it. She confirmed that she did not report to Pfizer though. The people at her work that she spoke with told her to go to an Urgent care. They told her she should not get it within 90 days of having COVID. She had COVID in the middle of Nov2020. She went ahead and got it on Tuesday and had this terrible reaction. She would like to know if she should get the second dose or wait until 90 days after she had COVID and start again. There was no prescriber. She received it as part of the (hospital name withheld) front line health worker precaution. She thought that this was a normal reaction, but was told it was not. Fatigue and overall lethargic feeling happened exactly 12 hours after receiving. She works night shift and that is her base line. Pretty much everything hit after that within an hour. She was told low grade fever was normal, but not 102. She never spikes fevers, so it is medically significant. It persisted for 24 hours and is better today. She is on the 48 hour mark now. Stomach pains, nausea, diarrhea, lymph node swelling all over, including swelled armpits and groin area, Migraine, Frequent urination, were also listed as side effects. She was trying to push more fluids but her urine was dark color more than normal, despite pushing fluids. Swollen lymph nodes in her groin and armpits were concerning. Her head is lumpy. Meaning, she can feel swollen lymph nodes in back of neck area. Migraine was consistent through 24 hours and now has improved. Urine color remains dark and she will keep an eye on color. She had swollen joints, but really terrible swollen joints, and she could not move the arm that she got the vaccine in. She could not lift to above shoulder height. AE Details and time of onset: Sore Throat 12:00 on 29 Fatigue and overall lethargic feeling 20:00 Chills, body aches, spiked fever of 102: 21:00 Stomach pains, nausea, diarrhea, swollen lymph nodes- 21:00 Migraine- 21:00 Frequent Urination 23:00 Dark colored urine despite pushing fluids 23:00 Swollen joints and could not move arm that received vaccine in: 21:00. ER or physician's office required: Went to urgent care 36 hours after administration. No treatment given. She just wanted to make sure no additional infection was causing anything weird. All test were negative. Prior Vaccinations (within 4 weeks): none. Events Swollen joints and could not move arm that received vaccine in, Stomach pains, nausea, diarrhea, swollen lymph nodes, Chills, body aches, spiked fever of 102 were serious with criteria of medically significant, while the other events were non-serious. The outcome of the event Fatigue and overall lethargic feeling/Sore throat (Condition worsened) was unknown, the outcome of the events Swollen joints and could not move arm that received vaccine in, Chills, body aches, spiked fever of 102., Migraine, Dark colored urine despite pushing fluids, Frequent urination was recovering, while the outcome of the other events was not resolved.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported events due to temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators as appropriate.

anaphylactic reaction; neuropathy in fingers, toes, roof of mouth/lips; This is a spontaneous report from a contactable nurse (patient). This 48-year-old female patient (not pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot#: EL0140) at single dose on left arm on 30Dec2020 at 09:00 for COVID-19 immunization. Medical history included asthma (controlled); hypertension diagnosis 1 year ago; allergies to medications, food and environmental. Concomitant medications in two weeks included antihypertensives - amlodipine and losartan. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. On 30Dec2020 at 9:15 AM, the patient experienced anaphylactic reaction within 10 minutes of administration, neuropathy in fingers, toes, roof of mouth/lips. Neuropathy continued to date. The adverse events resulted in emergency room/department or urgent care. The patient received treatment Epinephrine IM (intramuscular) and IV (intravenous) steroids. The outcome of events was recovering.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of anaphylactic reaction and neuropathy peripheral due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including serum tryptase and nerve conduction studies, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"brain felt swollen; glands were also swollen; bad headache; minimal arm pain; fatigue; This is a spontaneous report from a contactable nurse (patient). A female patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration on 30Dec2020 at single dose for COVID-19 immunization. Medical history included lupus-like history and chronic Lyme disease. The patient's concomitant medications were not reported. The patient stated she received the first vaccine dose on 30Dec2020 and had minimal arm pain, fatigue that went to a very bad headache on Thursday (31Dec2020). By Friday headache and fatigue were terrible until this morning. Her brain felt swollen and her glands were also swollen on 03Jan2021. The patient stated that she called healthcare professional (HCP) and was told that her body was ""having an auto immune response"", ""due to a lupus like history and a history of chronic Lyme disease and to hydrate well"". It was so hard to talk, she was so fatigued. Her doctor compared it to like an encephalopathy. The patient was feeling better today but was concerned about taking the second dose. She works in a facility with a lot of Covid-19 patients. The outcome of the events was recovering. Information on the lot/batch number has been requested.; Sender's Comments: Based on the current available information, a possible contributory role of the suspect product to the development of event brain felt swollen cannot be totally excluded. Medical history of lupus-like history and chronic Lyme disease may provide plausible alternative explanations for the event. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part

of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

numbness and weakness in left arm; numbness and weakness in left arm; had a brachial plexus pathology; her grip and fine motor are affected in her left arm/she could not do her job; This is a spontaneous report from a contactable physician (patient). A 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EH9899), via an unspecified route of administration in right arm on 21Dec2020 at single dose for Covid-19 immunisation. Medical history included ongoing birth control. No other medical history. Concomitant drug included other medication she took for birth control. On 29Dec2020, the patient experienced numbness and weakness in left arm, had a brachial plexus pathology, went to the emergency department on 30Dec2020 and was seen by one of the facility doctors and stated this doctor had her on steroids for treatment. She got the vaccine in her right arm, stated her grip and fine motor are affected in her left arm. States this was disabling since she could not do her job. She was following up with neurology on Monday (unspecified), that she had a CT scan of her neck and it was normal. Only other medication she was taking was for birth control, but she did not feel like it was relevant. The outcome of events numbness and weakness in left arm was recovering, while outcome of other events was unknown. This case was reported as serious, seriousness criteria was disabling.; Sender's Comments: Based on the information currently provided, the vaccination with BNT162B2 might play a contributory role in triggering the onset of the reported events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

it hits a nerve; perceived it along the face still and the arm; Bell's Palsy; numbness in a small area of her tongue; right eye was irritated a little dry; right eye was irritated a little dry; right sided ear pain; fluid in the ear but no infection; This is a spontaneous report from a contactable health care professional (nurse practitioner). A 35-year-old female patient received her 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose via an unknown route on the right side on 21Dec2020 for Covid-19 immunization. Medical history included intermittent hives. Concomitant drug included ongoing cetirizine hydrochloride (ZYRTEC) 5 mg for intermittent hives. The reporting nurse practitioner saw a patient on 31Dec2020 who was vaccinated on 21Dec2020 and had a Bell's Palsy reaction (reported as not serious). She did some research and saw no more incidents in the general population but she wanted to report this. She also wanted to get more information on if the patient should proceed with dose number 2 of the vaccine. The patient developed the Bell's Palsy within 5 minutes after getting the vaccine. She thought it was because she was anxious to get the vaccine, so she brushed it off. The Bell's Palsy was still occurring but per the patient it had improved. On exam she did not have any weakness, facial droop or dumbness with sharp or dull testing. The patient perceived it along the face still and the arm. The reporting nurse practitioner said that the arm was probably not Bell's Palsy, but more related to getting the vaccine in the arm and it hits a nerve. Patient stated that her smile was also unequal and it

was difficult for her to close her right eye, although now (as of 31Dec2020) she can. Her right eye was irritated a little dry. Regarding treatment, the patient was started on steroids on 31Dec2020. She did not start her on an anti-viral as she did not want it to impact her immunity to the vaccine. The patient also complained of right sided ear pain. She was unsure if that was related to the Bell's Palsy, but it was also on the right side. There was fluid in the ear but no infection. The pain was still ongoing. The patient also mentioned numbness in a small area of her tongue when she first got the vaccine. This was still ongoing. Outcome of Bell's Palsy was resolving. Outcome of the event numbness in a small area of her tongue, right sided ear pain was not resolved. Outcome of the other events was unknown. The reporting nurse practitioner stated that this was not serious as this was a mild case and was thankfully resolving. The reporting nurse practitioner comment that nothing of history was relevant besides for the last several months (as of 31Dec2020) the patient had been taking 5mg of cetirizine hydrochloride for intermittent hives. She wondered if she had not been taking it how she would have reacted or if the reaction would have been more severe. Information on the lot/Batch number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of Bell's Palsy cannot be excluded, considering the plausible temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Pitting edema/Edema: It was her feet, ankles, and 3/4 way up her shins.; This is a spontaneous report from a contactable nurse (patient). A 47-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EK5730, expiry date: Mar2021), intramuscular in the left deltoid on 17Dec2020 at 07:15 at single dose for COVID-19 immunization. Medical history included ongoing neuralgia since 2003 (has nerve pain in her face and neck. It has never caused swelling and that she has had it for a long time. Symptoms started 17 years ago, became apparent in 2009), ongoing hypothyroidism since 2003 (Diagnosed about 17 years ago. Nothing has changed medication wise). The patient's concomitant medications were not reported. The patient reported that she got the vaccine on 17Dec2020. On 25Dec2020, her shoes felt snug and by the next day she had 4 plus pitting edema. She could not fit in the shoes. She had the pitting edema for several days. She said that she went and bought compression stockings to help with the edema. It was her feet, ankles, and 3/4 way up her shins. It was more of the pedal area that was pitting. The patient further reported that she never had pitting edema before and the only thing new she had was the vaccine. Therapeutic measures were taken as a result of the event which included compression stockings. The patient was recovering from the event.; Sender's Comments: Based on temporal association, a possible contributory role of BNT162B2 cannot be excluded for reported event pitting edema. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

a strong, whole body heat, and flushing; a strong, whole body heat, and flushing; Tachycardia; Palpitations; This is a spontaneous report from a contactable Nurse. This Nurse reported similar event for 6 patients. This is 3rd of 6 reports. A 24-Year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 28Dec2020 at single dose for COVID-19 immunisation. Medical history and concomitant medications were not reported. Pfizer employee reporting on behalf of a friend, reported her friend texted her last night, 30Dec2020, at around midnight. The nurse and 5 other registered nurses she works with, had a serious reaction right after receiving the COVID-19 Vaccine. Caller said she had a strong, whole body heat, and flushing. She said she became tachycardic and had palpitations that lasted a few minutes. Caller said there were 5 other registered nurses that received the COVID-19 Vaccine at the same time and had the same exact symptoms she experienced. Outcome of events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on temporal association, a possible contributory role of BNT162B2 vaccine cannot be excluded for events flushing, feeling hot, tachycardia and palpitations. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate. ,Linked Report(s) : US-PFIZER INC-2021001345 same reporter/drug/event, different patient.

she had a strong, whole body heat, and flushing; she had a strong, whole body heat, and flushing; Tachycardia; Palpitations; This is a spontaneous report from a contactable nurse. This nurse reported similar events for 6 patients. This is the 6th of 6 reports. A 49-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch unknown) via an unspecified route of administration on 28Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The reporter said her friend is a registered nurse, and received the COVID-19 Vaccine on Monday, 28Dec2020. She said her friend stated she, and 5 other registered nurses she works with, had a serious reaction right after receiving the COVID-19 Vaccine. The patient had a strong, whole body heat, and flushing. The patient said she became tachycardic and had palpitations that lasted a few minutes. She said the tachycardia and palpitations then slowly resolved in less than 5 minutes. She had no other symptoms after receiving the COVID-19 Vaccine. The registered nurse who was monitoring the people who received the COVID-19 Vaccine indicated that the same feeling had occurred in many other workers who had received the COVID-19 vaccine. The reporter did not know if the patient received any other vaccines at the same time as the COVID-19 Vaccine, and if had received any other vaccines within the last 4 weeks. The patient works at a hospital but doesn't believe that she received any medical attention. she believed just waited her symptoms out, and within 5 minutes her symptoms had gone away. The outcome of the events was recovered on 28Dec2020. Information on lot/batch number has been requested.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported whole body heat, flushing, tachycardia and palpitations, and the administration of BNT162B2, based on the reasonable temporal association and lacking alternative explanations. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any

appropriate action in response, will be promptly notified to RA, IEC, as appropriate.,Linked Report(s) : US-PFIZER INC-2021001345 same reporter/drug/event, different patient.

Rash; Welts; she had a very sore arm; This is a spontaneous report from a contactable nurse (patient herself). A 65-year-old female patient received her first dose of bnt162b2 (BNT162B2 also reported as Pfizer Covid Vaccine, lot EH9099 or EH9899), via an unspecified route of administration in her left deltoid on 22Dec2020 09:32 at single dose for Covid-19 immunisation. Medical history included broken toe for 3 weeks. This was from her taekwondo and doesn't complain. No history of all previous immunization with the Pfizer vaccine considered as suspect drug. There were no additional vaccines administered on same date with Covid-19 vaccine. There were no concomitant medications. On 24Dec2020, she broke out in a rash on different parts of her body. She said the rash would come and go. She said she then had welts appear on different parts of her body and the welts would come and go. She said on the 3rd day, she had rash and welts together only on her trunk. She said on days 4, 5, and 6, she would have either a rash or welts come and go on different parts of her body. She clarified she had the rash and welts on her hands, wrists, ankles, and body. She reported that the rash and welts were serious-medically significant. On 22Dec2020, she had arm soreness and was just inconvenient and uncomfortable. She said she was not saying that what she was experiencing was related to receiving the COVID-19 Vaccine, but she doesn't know what else can be causing the rash and welts. She said she hasn't changed anything she has been eating or doing. She said she was worried about taking the 2nd COVID-19 Vaccine dose. She used Hydrocortisone 1% cream, Equate brand (reported to be expired) and took an oatmeal bath. She also took Benadryl and brand of Zyrtec called Wal-Zyr. Her height was 175cm, weight was 63kg. The rash and welts recovered on 30Dec2020; arm soreness recovered on 23Dec2020. Information about lot/batch number has been requested.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events rash and urticaria cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

Saturation down to 84%; Temperature of 101.3; Rapid pulse having some difficulty; This is a spontaneous report from a contactable consumer. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number and expiry date not reported) via an unspecified route of administration, on 30Dec2020, single dose for COVID-19 immunization. Relevant medical history and concomitant medications were not reported. The reporter is working in long term in Nursing care facility. It was reported that they have a resident who recovered from COVID. They are having some questions following the guidelines stuff, just kind of asking some more questions. Just one of their resident had temperature of 101.3, saturation down to 84%, 'frustration' at 24% and rapid pulse having some difficulty. The patient was put in her bed. The reporter contacted the doctor in house. 'The reporter wanted to see if any of the recommendation were for (incomplete sentence). The long term care facilities recovered COVID, the reporter wanted to know any of the lasting short term and any guideline for treating. They were all recovered COVID, all of two of the resident two weeks or more out

and we (Further clarification was unknown) just had the vaccine yesterday' (as reported, pending clarification). Outcome of the events was unknown. Information on the batch number has been requested.

Fainting; Red Palms; blotching; sweating profusely; heart palpitations; Chest pain; Elevated BP; This is a spontaneous report from a contactable consumer (patient). A 46-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 28Dec2020 09:15 at single dose on left arm (Lot number: ek9231) for COVID-19 immunisation. Medical history included asthma, bronchitis, mitral valve regurgitation, herpes, depression, ADHD. COVID prior vaccination: Yes. Known allergies: tramadol, milk products. No other vaccine in four weeks. Concomitant medication included amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL), bupropion, and, losartan/hydrochlorothiazide. The patient experienced red palms/blotching, sweating profusely, heart palpitations, chest pain and fainting, elevated BP, all on 28Dec2020 09:15. All these events required Emergency room visit. Therapeutic measures were taken as a result of the events included 50 mg of Benadryl, 60 mg of Prednisone, omepresol. No COVID tested post vaccination. Outcome of events was recovered with sequelae.

I have a sleep problem almost eight hours; I was so tired; Headache; My arm was sore for 24 hours; so stiff; This is a spontaneous report from a contactable physician. A 69-year-old patient of an unspecified gender received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date were not reported), via an unspecified route of administration on an unspecified date at a single dose for COVD-19 immunization. The patient's medical history and concomitant medications were not reported. The patient had the first dose of the vaccine and had a pretty significant reaction, one say serious to moderate reaction. The patient's question was do they know yet if you take a second shot was your reaction get even worse because the patient had a sleep problem almost eight hours. The patient was so tired, had headache and so stiff, arm was sore for 24 hours. The patient was a little afraid to take a second shot. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: A causal association between BNT162B2 and the reported events cannot be excluded based on a compatible temporal relation between vaccination and onset of events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to agencys, Ethics Committees, and Investigators, as appropriate.

feeling close to loss of consciousness; intense chest pressure/tightness; shortness of breath; chills while driving home; This is a spontaneous report from a contactable healthcare professional (patient). A 50-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number: EL0142), via an unspecified route of administration in the left arm, on 02Jan2021 at 11:30 (at the age of 50-years-old) as a single dose for COVID-19 immunization. The patient's medical history was not reported. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications, taken within two weeks of vaccination, included ibuprofen (MANUFACTURER UNKNOWN). The patient previously took amoxicillin (MANUFACTURER UNKNOWN) and experienced allergy. The patient did not receive any other vaccines

within four weeks prior to the vaccination. The patient experienced feeling close to loss of consciousness, intense chest pressure/tightness, shortness of breath, and chills while driving home on 02Jan2021 at 12:00. The patient did not receive any treatment for the events. The clinical outcome of feeling close to loss of consciousness, intense chest pressure/tightness, shortness of breath, and chills while driving home was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of feeling close to loss of consciousness, intense chest pressure/tightness, shortness of breath cannot be excluded, considering the plausible temporal relationship. The underlying predisposing condition of penicillin allergy may put the patient at high risk of anaphylactic reactions. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Right sided facial & top lip Numbness & recurring pain; Right sided facial & top lip Numbness & recurring pain; Right sided facial & top lip Numbness & recurring pain; This is a spontaneous report from a contactable consumer reporting for herself. A 66-year-old female patient (not pregnant at the time of vaccination) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number EK9231), via unspecified route of administration on 29Dec2020 13:30 on left arm at single dose for COVID-19 immunization. Facility where the most recent COVID-19 vaccine was administered in Hospital. Medical history included Hypertension, Reflux and low back pain. Concomitant medications included ibuprofen, dicycloverine hydrochloride (BENTYL), Valsartan and omeprazole. The patient previously took codeine, Bactrim, Zyrtec and experienced allergies. The patient experienced Right sided facial and top lip Numbness, recurring pain on 31Dec2020 16:00. All events resulted in emergency room visit and Hospitalization on 31Dec2020 for 1 day. The patient underwent lab tests and procedures, which included Cat scan, MRI, ultrasound of heart and labs on unspecified dates, Nasal Swab/Covid 19 test on 01Jan2021 with negative result. The outcome of the events were not resolved.

hives on her legs; a slight rash on abdomen (started morning on the next day when she woke up) and it spread to her legs (leg rash started 2 days later in the morning); This is a spontaneous report from a contactable nurse (patient). A 58-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) intramuscularly at left arm on 29Dec2020 10:30 at single dose for COVID-19 Immunization. No medical history. No family medical history. There were no concomitant medications. Patient received first dose last Tuesday, 29Dec2020, at the hospital. The next day, she had a slight rash on abdomen (started morning on the next day when she woke up) and it spread to her legs (leg rash started 2 days later in the morning). It was a pretty severe case of hives on her legs now (31Dec2020). Spread to legs and now has hives on legs was reported as worsened. Physician's office visit involved. She had a question. Her doctor prescribed a dosing pack of prednisone to get rid of the hives and her question was, will it affect the effectiveness of the vaccine if she takes it, also, is it ok to get 2nd dose in 2 weeks. She confirmed she had not taken the prednisone yet. There was no prescriber. She received it because she is a healthcare worker. Patient asked if there is any recommendation on getting pre medicated with ex: Benadryl before getting the vaccine. No previous history of all previous

immunization with the Pfizer vaccine considered as suspect. No additional vaccines administered on same date of the Pfizer suspect product. No medications prior vaccinations (within 4 weeks). No test done. This is a serious report. The slight rash on abdomen, spread to legs and now has hives on legs was considered medically significant per reporter. The outcome of the events was not recovered. Information about lot/batch number has been requested.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events rash and urticaria cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

experienced eye puffiness; light headed ness; scratchy throat; This is a spontaneous report from a non-contactable consumer via Pfizer Sales Representative. A male patient (Health care worker) of an unspecified age and gender received BNT162B2(Pfizer BioNTech COVID-19 vaccine) via an unspecified route of administration in Dec2020 at single dose for COVID-19 immunization. The medical history and concomitant medications were not reported. The patient experienced eye puffiness, light headed ness and scratchy throat 10 minutes after vaccination in Dec2020. Reaction was not considered anaphylaxis. Patient received epinephrine, Pepcid and Benadryl in the ED, felt completely back to normal within an hour and was released. Event took place after use of product. The outcome of events was recovered in Dec2020. No follow-up attempts are possible; information about batch number cannot be obtained.

Felt sharp pain under jaw, then facial numbness. Then quickly developed facial swelling, left eye swelling and tongue swelling. Then felt like throat closing up within 7 minutes of receiving vaccine. Received vaccine in the clinic, was transported to Emergency Room. In ER received Epinephrine, steroids, Benadryl and Pepcid.

1 day after the vaccine he had a low grade fever... 1 week later he had a seizure and then multiple ones in the ER...

Developed shortness of breath, swelling of tongue, persistent cough within 5 minutes of vaccination. Was treated with EpiPen and kept in ER for observation overnight. Symptoms resolved.

Patient contacted provider 12/26 with following symptoms: Dry cough, diarrhea, fatigue for 7 days. Covid test ordered and positive. presented to ED on 12/31 and admitted into hospital. Still inpatient as of 1/7/2021.

Patient experienced an episode of SVT and then sinus tachycardia for approximately 6 hours after injection

"Pt last seen at 1200 by nurse for ID band check. No visible signs of distress noted. Pt states ""I just want to be left alone"". 1230 nurse was called to pt room. Pt was noted unresponsive, no pulse and respiration noted. CPR started immediately, at 1239 first shock given. 1245 EMT took over, at 1319 EMT called time of death"

Hemmoragic Stroke. Began with vision difficulty in the morning. Then I noticed she had left sided neglect. Went to ER. Treated with Andresxa (to counteract Elaquis). In SICU for 2 nights then telemetry unit for 3 nights. CUrrently in Rehab.

"Following vaccination the patient had progressively worsening abdominal pain over the next 24 hours. Presented to the ER and was initially thought to have appendicitis. However, it was then discovered during surgery that the appendix was surgically absent. The surgeon did not that the patient did have a ""Round, infarcted ligamentous tissue was wrapped around ascending colon. """

Patient developed hypoxia on 1/4/2021 and did not respond to maximal treatment and passed way on 1/5/2021

When vaccine was administered, seemed high on my arm. I had immediate soreness and shoulder discomfort, I was told this was normal. It continued to progress and I eventually had decreased ROM, weakness and sharp shooting pain in my shoulder. Working at OI, I consulted provider, xrays were obtained and I was evaluated. He strongly suggested an MRI be obtained as well. That was completed the same day as my evaluation on 12/31/2020 (1 week and 2 days after the vaccine was administered). The provider informed me that they have had patients with similar situations that were evaluated for frozen shoulder after having a vaccine d/t administration site and vaccine going into subacromial space. He does report that this was my case/situation, upon my exam, I had severe inflammation with this as well-he is now having me follow up for a surgical consultation for my shoulder to be repaired. Today's date is 1/7/2021, I have these same ongoing symptoms that have continued since day of administration, without diminishing in severity. He is unable to provide an injection d/t my upcoming second dose of the COVID vaccine this next week, 1/12/2021. He strongly suggests that my 2nd vaccine be administered elsewhere-advised NOT be administered in the same shoulder OR in opposite to cause these symptoms to flare. He advised in gluteus if possible to avoid any further issues if at all possible.

patient declined 12/30/2020 and was transferred to hospital where he did not respond to treatment and passed away 1/4/2020

Patient did not report any signs or symptoms of adverse reaction to vaccine. Patient suffered from several comorbidities (diabetes and renal insufficiency). Patient reported not feeling well 01/06/2021 and passed away that day.

Guillain Barre syndrome/AIDP event. Paresthesia and nerve pain developed in bilateral legs 4 hours after shot and progressed slowly for 4 days in intensity and area involved. Symptoms progressed distally to superior. On the 5th day symptoms progressed rapidly and involved bilateral legs up to the groin, left arm up to lateral shoulder, and right hand. I went to the hospital and was admitted to start IVIG treatment for Guillain Barre Syndrome/AIDP.

Vaccine Candidate received vaccine approxat 2:30pm, was monitored for 15 min no complications at the time, went home. Around 5:30pm while walking into her home she became unresponsive, was assisted in a siting position, became incoherent, mumbling and started to convulse to the right side of her r upper extremity. Foaming at the mouth and stopped breathing, CPR was initiated for 1-2 min, EMS

arrived was transported to Medical Center. She was admitted and is currently hospitalized. MD reports this event is highly unlikely related to the vaccine given her medical history but suggested to report being its a new vaccine. Current status: stable.

Person had a fever of 102.4, pulse rate of 118, he was non-responsive with edema of the right calf & ankle this morning when he was assessed.

Resident had the COVID vaccine 12/30/2020. 12/31/20, resident has been in bed all shift. Staff became concerned when resident was not easily aroused. Resident displayed signs of tremors, twitching, confusion, in and out of consciousness, low O2 sats, elevated pulse and fever, fatigue and weakness. Writer called NP. NP stated this is most likely a reaction d/t the COVID vaccine. She gave orders for Benadryl 25mg IM x1 now and Tylenol 1000 mg now. NP also stated resident will not be getting the second dose of vaccine. Will continue to monitor and update NP if worsening symptoms. After receiving Benadryl and Tylenol at 145pm, resident began to appear as though she was feeling better and was talking to talk, fever had gone down. Tonight resident is not easily aroused, lethargic, continues to have tremors and twitches, almost appearing as convulsions. When asked if she knows where she is or what day it is, resident can properly answer. Resident denies SOB but staff has noted loud squeals while breathing. NP was updated and gave new orders to give Benadryl 25 mg IM x1 if needed and Ok to send resident to ED. Resident currently refuses to go to the hospital. Will continue to monitor. BP 152/112, P 116, T 99.1, O2 87-91. Resident's O2 at 1205am was 80% on 3LPM. Resident unable to be aroused from sleep by writer. NAR called to assist. NAR could not arouse resident. Writer and NAR attempted to reposition resident and resident's breathing became more labored. Resident turned back to previous position and writer called on call MD at approx. 1220am. MD returned call approx. 1235am with orders to send resident to ED. 911 called and ambulance arrived about 1245am. History of present condition given to EMTs and they stated resident would be going to Hospital. Writer has attempted to contact Hospital ED x3 but have been unable to get through. An EMT did just call to clarify when vaccine was given, what symptoms have been present and when they started. She said she has everything she should need and she will let Hospital ED staff know to call if they need anything else. Writer will again attempt to contact them though. Resident's temp was 97.5 and BG 128. When EMTs arrived they got an O2 reading of 60%. Resident did open her eyes a couple times during transfer from bed to stretcher and while stretcher was going outside but no responses from resident were made.

had a vaccination on 12/31/2020 late morning passed away early morning 01/01/2020. This is a 93 year old with significant heart issues. EF of 20% among other comorbidities. He died suddenly approximately 0430, it is unlikely it was related to receiving the vaccine.

Immediate pain and loss of range of movement of left shoulder. Physical examination today demonstrates a healing injection site which is fairly superior on the left shoulder, and abduction of the left shoulder which is limited secondary to pain. Patient's physician's impression is that he has a subdeltoid bursitis which was temporally associated to the COVID-19 vaccination. (SIRVA)

RED CIRCULAR RASH AND LUMP UNDER SKIN. SKIN IS VERY ITCHY

Diffuse polyarthropathy starting the day after vaccination and continuing for 7+ days. Currently treating with abx for concern of possible cellulitis, and prednisone 60mg for polyarthropathy. Currently admitted.

woke up with fever and sore throat on 22nd; went to job and got tested and tested positive; on the 23rd developed right upper lobe pneumonia; on 27th was hospitalized with three lobe pneumonia; On 22nd received got zpack - azithromycin and sudafed; received at hospital doxicycleln IV ; ivermectin and went home with them, as well. Hospital

Day 2 (12/29/20): Fever (<100 degrees), Mild muscle aches, Fatigue Day 3 (12/30/20): Fatigue, Muscle aches Day 4 (12/31/20): Alternating chills and profuse sweating starting at 8am, Full body flushing, Grand Mal Seizure at 4:30pm

Patient was vaccinated at 11am and was found at the facility in his room deceased at approximately 3:00pm. Nurse did not have cause of death

Nausea, hives, anaphylactic shock, throat swelling, hypotension, headache, dizziness, weakness . The symptoms returned at 1:25pm the best day as well. I?ve now had two anaphylactic reactions

No adverse effects noted after vaccination. Patient with cardiac history was found unresponsive at 16:45 on 1/6/21. Abnormal breathing patterns, eyes partially closed SPO2 was 41%, pulseless with no cardiac sounds upon auscultation. CPR and pulse was regained and patient was breathing. Patient sent to Hospital ER were she remained in an unstable condition had multiple cardiac arrest and severe bradycardia and in the end the hospital was unable to bring her back.

Hives-like appearance on both arms within 10 minutes of administering vaccine. Resolved by itself in 30-40 minutes.

45 min later after receiving the vaccine I felt a lump in my throat. No other symptoms of an allergic reaction. Took benadryl with improvement of symptoms. Had intermittent difficulties swallowing seven hours afterwards. Went to the ED and was prescribed prednisone/ pepcid/benadryl. Symptoms improved but next day felt intermittent difficulty swallowing again. Returned to the ED and was given IV solumedrol and, IV pepdcid, IV benadryl.

Patient alerted pharmacist to feeling light headed at 12:10pm. Patient was instructed to sit down on the floor. She stated she felt hot and hadn't eaten all day. She was given a few bites of apple sauce and some Dr. Pepper to drink in case of low blood sugar. She was also given 25mg of diphenhydramine in case of an allergic reaction after the vaccine adminstration at 12:15pm. A few minutes later, she began shaking and stated she thought she was having an anxiety attack. At this time, the patient requested we call 911 because that would make her feel better and so we did.

Symptoms started during bedtime and woke me up. Began with severe full body chills and full body muscle shaking and weakness during the night of 1/5 and early morning of 1/6, around 1000 to 0200. Slight headache began during that time as well. Upon waking at 0900 on 1/6, chills and shaking decreased to mild severity, muscles still felt moderately weak and shaky, headache had increased in

severity to a severe throbbing pain that worsened upon standing and walking, and moderate visual photosensitivity began. The headache persisted until I took 2 tablets of ibuprofen 200 mg, which is when the severity decreased to moderate after a few hours and then mild by bedtime. The photosensitivity persisted through the day and did not decrease much by bedtime. Upon waking 1/7, there was only a mild headache and mild photosensitivity that faded completely within a few hours, no medication required. No more symptoms in the afternoon.

Moderna covid 19 vaccine EAU

2 hrs after vaccine felt sweating, clammy. Gas pains and cramps began. Loose stool once. 7 pm arm was sore and throbbing 6 of 10, injection site flushed and warm to the touch 9pm pain worsened to 8of 10. Unable to grab toothbrush with left arm sharp pain 10 of 10. Unable to sleep on left side due to pain and pressure . 6:00 am Thursday pain worse and unable to lift arm above the shoulder. Was unable to drive with left hand. All day today bad gas and abdominal cramps.by the end of the work day I was unable to hold anything in my left hand, body aches started, legs tight and achy. Frontal headache. Took Tylenol extra strength q 6 hrs, nsaid 800mg bid. And aleve, no relief

Had chills fever and body ache starting 01/07/21 Temperature went as high as 102.0 took ibuprofen and came down 97.9

On day 7, a red rash appeared just below the injection site and is indurated, hot, and tender. It spread in size within the next day.

Morning 8 days after injection, emergence of rash above injection site and redness and swelling at injection site. Morning 9 days after injection rash became a larger hive and doubled regular Zyrtec dosage. Morning 10 days after injection symptoms gone.

"Tire on day one-slept for 18 hours. Day 2: Woke up and was mildly achy, not wanting to do anything and red large swelling in my right deltoid. Very tender. Also, edema starting in my right axilla extending down my lateral chest about 7"". Day 3 to 7: Achiness is gone. Edema and swelling continue. Eventually the red swollen area became itchy. The edema under my arm (not a lymph node) was tender when my arm was close to my body. Woke me up during the night frequently. Very hard to sleep."

4 days later after the vaccine my left eye turned really red with crust and mucus coming out. I went to walk in clinic and was being treated for pink eye. I was started on an antibiotic eye drop. A day later my right eye started to have the same problem. I scheduled an appt with a eye specialist where he examined both eyes and said I had a major infection. I was started on steroid eye drops which I am still taking but seems my eyes are not getting better. I have a follow up with another specialist next week for further testing. I have been out of work due to this matter.

"Severe allergic reaction; anaphylactic reaction; A spontaneous report was received from a physician, who was also a male patient who received Moderna's COVID-19 Vaccine and developed a severe/anaphylactic allergic reaction. The patient's medical history, as provided by the reporter, included a shellfish allergy and elevated Immunoglobulin E. He reported no history of adverse events

following other immunizations, that all his immunizations were up to date, and that he gets the flu shot annually. Products known to have been used by the patient, within two weeks prior to the event, included pantoprazole, vitamin D, and vitamin B12. On 24 Dec 2020, minutes prior to the onset of the event, the patient received the first of two planned doses of mRNA-1273 intramuscularly for COVID-19 infection prophylaxis. Within minutes, the patient felt dizzy and his heart was racing. His throat felt swollen and he experienced shortness of breath (""heavy breathing"") with no wheezing or stridor, but with chest tightness that he felt was possibly related to anxiety about receiving the vaccine and the potential for allergic reaction. No supplemental oxygen was required. Vital signs showed a heart rate of 145, with normal blood pressure (BP) and oxygen saturation. After a few more minutes, he started to feel numbness and tingling in his mouth and tongue. He experienced diaphoresis (""drenched in a cold sweat""), skin pallor (""skin was severely pale""), felt faint, and reported that his blood pressure was undetectable by a monitor. He did not lose consciousness and denied any skin rash. The patient felt he was developing an allergic reaction and self-administered his personal epinephrine auto-injector. He felt better within five to six minutes after self-administration of epinephrine and was taken by stretcher to the Emergency Department for further evaluation and treatment of shortness of breath, dizziness, palpitations, and numbness. The patient was evaluated, treated, observed, and discharged four hours later. Treatment provided for the events while in the Emergency Department included diphenhydramine hydrochloride, intravenous (IV) fluids, IV steroids, and famotidine. On 25 Dec 2020, the patient felt fully recovered. On 26 Dec 2020, the patient felt dizzy and reported experiencing a ""rapid heart rate"" of 70-120 with a systolic BP that was abnormal for him at 150 mmHg. He also reported that he felt premature atrial contractions, for which he took his wife's propranolol. His heart rate came down, but he still felt flushing and dizziness for a few more hours. Action taken with mRNA-1273 in response to the event was not reported. The outcome of the event, severe/anaphylactic allergic reaction, was considered resolved on 26 Dec 2020. The reporter assessed the event of severe/anaphylactic allergic reaction as related to Moderna's COVID-19 Vaccine due to the temporal association and the similarity of symptoms previously experienced with severe/anaphylactic allergic reactions to shellfish.; Reporter's Comments: Company Comment: This case concerns a male patient with medical history of shellfish allergy , who experienced an unexpected events of severe allergic reaction; anaphylactic reaction, dizzy, faint, heart racing, tongue prickled and went numb, cold sweat, blood pressure plummeted, shortness of breath, numbness and skin was pale..The onset of event occurred 15 hrs the first dose of vaccine administration . The events are assessed as possibly related to vaccine."

throwing up; fever; body aches; her whole intestines hurt; it was horrible; thought she had contracted COVID-19; thought she had contracted COVID-19; tired; This is a spontaneous report from a contactable consumer. A 54-years-old female patient received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EL0140), via an unspecified route of administration on left arm on 17Dec2020 at 19:15, at a single dose for vaccination. Medical history included ongoing ulcerative colitis, onset date was unknown, but when she was about 25 years of age. Concomitant medication included ongoing azathioprine for ulcerative colitis, started probably 5-10 years ago and taken daily since. In the past, she took different products for ulcerative colitis off and on when she had an episode. This patient reported she was administered her first Pfizer COVID-19 Vaccine injection on 17Dec2020 and was just kind of tired on 17Dec2020; but she had onset of serious reactions to the

COVID-19 Vaccine starting 18Dec2020 for 2 days straight and then as suddenly as the events started they suddenly stopped after 2 days with no lasting effects. She called to ask if there is any data about if the second dose of the COVID-19 Vaccine will be just like the first shot or if the events are just hit or miss; she is really hoping not to be that sick again with the second dose. Serious reactions to the COVID-19 Vaccine further described as sick for like 2 days straight. Afternoon of 18Dec2020 she was throwing up; had fever; body aches; thought she had contracted COVID-19 in between injection and onset of symptoms; she had no lung issues; her whole body hurt; she could not stop throwing up; her whole intestines hurt; it was horrible; she could not hold anything down for like 2 straight days and then just left on 20Dec2020. Scheduled date for second dose was on 06Jan2021, she has no plan to change dose schedule. The outcome of the event of tired recovered in Dec2020, while other events recovered on 20Dec2020.

positive COVID-19 test with symptoms; positive COVID-19 test; gastritis; diarrhea; This is a spontaneous report from a contactable other hcp (patient). A 50-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EJ1685; expiry date was not reported), via an unspecified route of administration on the upper right arm on 21Dec2020 at single dose for COVID-19 immunization. Medical history included blood pressure high, attention deficit hyperactivity disorder (ADHD), hypertension all from an unknown date and unknown if ongoing, and was a former smoker. Concomitant medication included lisinopril and methylphenidate. The patient reported that after he received the vaccine, he tested positive for Covid on 30Dec2020. The patient further reported that he ended up getting significant gastritis on Christmas Eve, which he didn't think about acquiring COVID, he had had the vaccine, he ate a bunch of holiday fare, so he thought he had got a stomach bug or something like that. He says he had considerable diarrhea on Christmas morning, but no fever or chills, then those symptoms resolved by Saturday, and he didn't think about it, he didn't have any issues. He says that he went to get tested, which they do frequently, and his temperature was checked frequently at the places he goes and he had no fever, and is still not febrile now. He says that he gets a weekly COVID test which allows for him to enter different facilities, and this was the first time in 9 months that he tested positive since this all came out. He says he has worked in some heavy duty places, but he wears his PPE, his respirator, his shield, and still did this stuff after he got the vaccine, he didn't let his guard down since it might take a while for immunity to kick in, but he still didn't think that it could be possible to have COVID on Christmas Eve, he was rather surprised he was positive. The patient confirms that he hasn't had the second dose of the vaccine yet. He says that his diarrhea improved on day or two starting after he had been having bloating on Christmas Eve and Christmas morning. He says his diarrhea resolved, he took no medication for it, and had no change in his heart rate or breathing, no problems anywhere else, he didn't feel that bad, except for the going to the bathroom. The patient underwent lab tests and procedures which included sars-cov-2 test: positive on 30Dec2020. The outcome of the events was unknown.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this subject cannot be completely excluded. Further information like confirmative virus genome /nucleic acid detection needed for meaningful medical assessment.

Reported to get the vaccine, and within a couple of hours or days, test positive for COVID; Reported to get the vaccine, and within a couple of hours or days, test positive for COVID; This is a spontaneous

report from a contactable other HCP received from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). A patient of unspecified age and gender received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date were not reported), via an unspecified route of administration on an unspecified date at a single dose for covid-19 vaccination. The patient's medical history and concomitant medications were not reported. The patient reported to get the vaccine, and within a couple of hours or days, test positive for covid. The outcome of the event was unknown Information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of SARS-CoV-2 test positive and LOE due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. positive for COVID-19 after 1st dose; positive for COVID-19 after 1st dose; This is a spontaneous report from a contactable nurse. A female patient of an unspecified age received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The nurse was inquiring about receiving the second dose of vaccine

after testing positive for COVID-19 after 1st dose. Outcome of the event was unknown. Information on Lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this patient cannot be completely excluded. Further information like confirmative virus genome /nucleic acid detection needed for meaningful medical assessment.

came out positive for Covid-19; came out positive for Covid-19; This is a spontaneous report from a contactable pharmacist. A male patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in 29Dec2020 at a single dose for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient came out positive for covid-19 on 30Dec2020 and inquired if he should still get the 2nd dose. Information on the lot/batch number has been requested.

"testing positive for covid/ they have had a patient have a positive COVID test after vaccine was given; testing positive for covid/ they have had a patient have a positive COVID test after vaccine was given; This is a spontaneous report from a contactable pharmacist via medical information team and a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). A 43-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EK5730, expiration date 31Mar2021), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient's medical history included ongoing asthma. The reporter was not aware of any allergies, adverse reactions to previous vaccines, significant medical history or any relevant family medical history of the patients. Concomitant medications were reported as none. It was reported that that they had a patient who had a positive COVID test after vaccine was given. The patient who received the vaccine on 18Dec2020 now testing positive for COVID. The patient received the first vaccine dose on 18Dec2020. She tested positive 30Dec2020. They wanted to give her monoclonal antibodies (Bamlanivimab) but they don't know how that would interact with the vaccine. Also, they didn't know how the product and the positive test would play into her already having the first dose and getting the second dose. The second shot would be due on 08Jan2020. The patient was not at the facility at the point of reporting, they had been talking to her by phone. The type of test done was unknown. No treatments known. The outcome of the event ""positive COVID test after vaccine was given"" was not recovered. The event was assessed as medically significant, and unrelated to vaccine by reporter. The seriousness assessment option was made due to her history of asthma.; Sender's Comments: Based on available information, a possible contributory role of suspect BNT162B2 cannot be completely excluded for reported ""positive COVID test after vaccine was given""."

Contracted Covid; Contracted Covid; This is a spontaneous report from a contactable Other Health Professional (patient). A 59-year-old female patient received the first dose of BNT162b2 (Lot/batch number and Expiration date were not provided), via an unspecified route of administration at left arm on 21Dec2020 18:00 at single dose for COVID-19 immunization. Medical history included chronic obstructive pulmonary disease (COPD). The patient received the unspecified concomitant medications within 2 weeks of vaccination; patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was contracted COVID on 29Dec2020 20:00. The event resulted in Doctor or other healthcare professional office/clinic visit. Patient received the treatment Monochrome antibiotic

for event. The patient received the COVID test post vaccination on 29Dec2020. The COVID test type post vaccination was Nasal Swab, COVID test name post vaccination was RNA, COVID test result was Positive. The patient was not COVID prior vaccination. The patient was not pregnant at the time of vaccination. The outcome of the events was not recovered. Information on the Lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the vaccination with BNT162B2 in this patient cannot be completely excluded.

He lost the sense of smell on 28Dec2020 and later tested positive; He lost the sense of smell on 28Dec2020 and later tested positive; He lost the sense of smell on 28Dec2020 and later tested positive; This is a spontaneous report from a contactable other healthcare professional (HCP). A male patient (respiratory therapist) of an unspecified age received a single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) as the first dose via an unspecified route of administration on 16Dec2020 for COVID-19 immunization. The patient medical history and concomitant medications were not reported. He lost the sense of smell on 28Dec2020 and later tested positive in Dec2020. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this patient cannot be completely excluded. Further information like confirmative virus genome /nucleic acid detection is needed for meaningful medical assessment.

"I came down with a COVID infection; I came down with a COVID infection; This is a spontaneous report from a contactable healthcare professional (HCP) reporting for herself. A female patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number not reported) via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient came down with a COVID infection on 23Dec2020 with outcome of unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported event ""came down with a COVID infection"" based on the known safety profile. However the short duration of 5 days since the vaccine first dose is given it is unlikely patient would have fully developed immunity."

Anaphylactic reaction; hives in the first 10 minutes of the vaccine; This is a spontaneous report from a contactable Other Health Professional (Physician Assistant). A 29-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 29Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The reporter stated that she is treating a patient in ICU that got the COVID-19 vaccine on 29Dec2020. The patient developed hives in the first 10 minutes of the vaccine and had an anaphylactic reaction 1 hour later. Seriousness of events was reported to be hospitalization. Outcome of the events was unknown. The reporter also mentioned that it was not a mild reaction and patient was still in the ICU, 48 hours later. Information about lot/batch number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylactic reaction and hives cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation,

including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"She tested positive PCR; She tested positive PCR; This is a spontaneous report from a contactable Nurse. A female patient of unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. The relevant medical history and concomitant medications were not reported. Resident inoculated on 17Dec. She tested positive PCR on 29Dec2020. Currently in quarantine and asymptomatic. She was scheduled for dose 2 on 06Jan2021. This still fell in quarantine period. The nurse wanted to know if the patient could get the second dose on 06Jan, if not when should she get second dose. The outcome of the events was unknown. Information about lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of suspect BNT162B2 vaccine cannot be completely excluded for reported event ""test positive PCR""."

I tested positive for COVID 9 days after receiving the vaccine; I tested positive for COVID 9 days after receiving the vaccine; Rhinorrhea; aches; fatigue; cough; This is a spontaneous report from a contactable physician. This physician reported similar events for two patients. This is the first of the two reports. A 68-years-old female patient (not pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number and expiry date not reported), via an unspecified route of administration on the left arm on 21Dec2020 at 09:30 at a single dose for COVID-19 immunization. Medical history included hypertension. The patient had no known allergies. Concomitant medications included losartan (LOSARTAN), amlodipine (AMLODIPINE), and atorvastatin (ATORVASTATIN). On 28Dec2020, the patient had rhinorrhea, aches, fatigue, and cough. The patient had no COVID prior vaccination, and when tested post vaccination showed a positive result. It was reported that the patient was tested via nasal swab (PCR SARS) and showed positive for COVID on 30Dec2020, 9 days after receiving the vaccine. The patient had no other vaccines in four weeks. No treatment was administered for the events. The events had not resolved. Information on the lot/ batch number has been requested.; Sender's Comments: A causal association between BNT162B2 and the events drug ineffective and SARS-COV-2 test positive cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.,Linked Report(s) : US-PFIZER INC-2021001246 Same reporter, same drug, similar events, different patients.

She also complained of all the COVID signs and symptoms; She also complained of all the COVID signs and symptoms; left cervical, axillary, clavicular and periscapular lymphadenopathy; left arm and shoulder pain; left arm and shoulder pain; This is a spontaneous report from a contactable physician. An adult female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Solution for injection, lot number was unknown, intramuscular in the left arm on 28Dec2020 at a single dose for COVID-19 immunization. Medical history included covid-19 from an unknown date and unknown if ongoing. The patient's concomitant medications were not reported. The patient is not pregnant. It was

unknown if the patient received any other vaccines within 4 weeks prior to the COVID vaccine. It was reported that after receiving the Pfizer COVID-19 vaccine in the left deltoid, the patient experienced left cervical, axillary, clavicular and periscapular lymphadenopathy in Dec2020 with outcome of not recovered. She also complained of left arm and shoulder pain and all the COVID signs and symptoms in Dec2020 with outcome of not recovered. The onset was within a day of immunization. She has a history of COVID-19, she had Covid prior vaccination. It was unknown if the patient tested for Covid post vaccination. The onset date of the events was reported as Dec2020. The events was reported as non-serious and it was unknown if the patient received treatment for the events. Information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the suspected LOE, COVID 19 and other reported events due to temporal relationship. Of note, it is reported that the patient had a history of COVID-19, and she was diagnosed with COVID 19 infection prior to the vaccination. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics , counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

tested positive for Covid test; tested positive for Covid test; difficulty breathing; chills; fluctuating fever; nausea; weakness; weakness/extreme fatigue; loss of taste and smell; loss of taste and smell; muscle pain; cough; sore throat; nasal drip; dizziness; fast heartbeat; injection site pain; anxiety; crying; This is a spontaneous report from a contactable healthcare professional. This 21-year-old female patient reported for herself that she received BNT162B2 1st dose on 31Dec2020 10:00 AM intramuscular at left arm for COVID-19 immunisation. Medical history included known allergies: Penicillin and Covid-19. Concomitant therapy included BC as reported. The patient experienced difficulty breathing, chills, fluctuating fever, nausea, dizziness, weakness, fast heartbeat, tiredness, loss of taste and smell, muscle pain, injection site pain, anxiety, cough, sore throat, nasal drip, crying, extreme fatigue, Etc on 31Dec2020 at 06:00 PM. The events resulted in doctor or other healthcare professional office/clinic visit, emergency. The patient was hospitalized for 1 day and received treatment included blood thinner rivaroxaban (XARELTO) and had 2 weeks quarantine. The patient had Covid prior to vaccination and tested positive for Covid test post vaccination on 01Jan2021. The outcome of the events was not resolved. Information on Lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the suspected LOE, SARS-CoV-2 test positive and the other reported events due to temporal relationship. Of note, it is reported that the patient had history of COVID 19 infection prior to the vaccination. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part

of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

polyneuropathy; facet joint diagnosis/new left forefoot paresthesia; This is a spontaneous report from a contactable physician (patient). A 45-years-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot EJ1685) at the first dose in left arm on 17Dec2020 12:45 at single dose for COVID-19 immunisation. Facility where the most recent COVID-19 vaccine was administered at Doctor's office/urgent care. Medical history included ongoing back pain (thinking it was due to running/physical therapy overuse injury). No allergies to medications, food, or other products. There were no concomitant medications. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No any other medications the patient received within 2 weeks of vaccination. It was reported that 20Dec2020 morning: new left forefoot paresthesia. no weakness. Patient thought this might be due to the back pain he had been watching for 3 months, thinking it was due to running/physical therapy overuse injury. On 21Dec2020 sports medicine physician evaluation. numbness was gone, facet joint diagnosis, MRI lumbar ordered (still pending). On 24Dec2020 9 pm, paresthesia both hands and feet, no weakness nor other symptoms those continued and were slightly worse on 27Dec2020 morning, including face/teeth. no other symptoms; 27Dec2020 afternoon: internal medicine physician evaluation, working diagnosis polyneuropathy. Neurologist appointment will be 07Jan2021, 2 hours before 2nd shot was scheduled. The patient had been tested for COVID-19 test type post vaccination: negative on 22Dec2020. No treatment for event. Prior to vaccination, the patient was not diagnosed with COVID-19. Outcome of events was not resolved.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of polyneuropathy and facet joint diagnosis/new left forefoot paresthesia due to temporal relationship. However, the reported events may possibly represent intercurrent medical conditions in this patient. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including nerve conduction tests, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

got COVID-19 from his son and tested positive; got COVID-19 from his son and tested positive; This is a spontaneous report from a contactable physician. A 51-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient got COVID-19 from his son and he tested positive 31Dec2020. The patient's son got the COVID-19 virus on 20Dec202020. The patient is due to have 2nd vaccine on 07Jan2021. Outcome of the events was unknown. Information on batch number has been requested.;

Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Drug ineffective and COVID-19 virus test positive cannot be totally excluded. The case will be reassessed if additional information becomes available.

was diagnosis with COVID-19 through nasopharyngeal swab today, 02Jan2021; was diagnosis with COVID-19 through nasopharyngeal swab today, 02Jan2021; This is a spontaneous report from a contactable pharmacist (patient himself). A 34-year-old male patient received his first dose of bnt162b2 (BNT162B2 also reported as COVID 19 brand Pfizer, lot EJ1685, expiry date not reported), via an unspecified route of administration in his right arm on 23Dec2020 15:30 at single dose, for Covid-19 vaccination. The patient's medical history was not reported. Prior to vaccination the patient was not diagnosed with COVID-19. He did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Concomitant medication included bupropion. The patient informed that he was diagnosed with Covid-19 through nasopharyngeal swab (COVID-19 Nucleic Acid Amplification test) on 02Jan2021 01:00 and Influenza virus test was unknown results (02Jan2021). It was unknown if there was a treatment used. The outcome of event was not recovered.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event of positive for corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the number of days passed since the vaccine is given. Case will be reevaluated based on follow-up information

she received the Pfizer vaccine on 29Dec2020. She tested positive for coronavirus on 01Jan2021. Is the efficacy of the vaccine after the second dose?; tested positive for coronavirus; This is a spontaneous report from a contactable nurse reported for herself. A female patient of an unspecified age received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine; lot/batch number and expiry date were unknown), via an unspecified route of administration on 29Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. VA nurse calling stating that she received the Pfizer vaccine on 29Dec2020. She tested positive for coronavirus on 01Jan2021. She wanted to know how to proceed with getting her second vaccine, and if the efficacy of the vaccine is after the second dose. The outcome of the event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Drug ineffective and Coronavirus test positive cannot be totally excluded. The case will be reassessed if additional information becomes available.

received vaccine on 17Dec2020, then tested positive for coronavirus on 25Dec2020; received vaccine on 17Dec2020, then tested positive for coronavirus on 25Dec2020; This is a spontaneous report from a contactable nurse (patient). A female patient of an unspecified age received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 17Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received vaccine on 17Dec2020, then tested positive for coronavirus on 25Dec2020. The patient was calling to inquire if she can get second vaccine. Outcome of the event was

unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Drug ineffective and COVID-19 cannot be totally excluded. The case will be reassessed if additional information becomes available.

became positive for covid 19; became positive for covid 19; This is a spontaneous report from a contactable other healthcare professional (patient). A female patient of an unspecified age received the first dose of bnt162b2 (Pfizer-Biontech Covid-19 Vaccine) via an unspecified route of administration on 22Dec2020 at a single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient she received covid vaccine on 22Dec2020 and on 30Dec2020 became positive for covid 19. The patient wanted to know when she can schedule her 2nd dose. Outcome of the event was unknown. Information about Batch/Lot number has been requested.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Drug ineffective and COVID-19 cannot be totally excluded. The case will be reassessed if additional information becomes available.

slight cough; diarrhea; shortness of breath; no sense of smell; positive for covid 19 virus; positive for covid 19 virus; feel tired; sore arm; This is a spontaneous report from a non-contactable consumer (patient). A 44-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) first dose on 20Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient was Diagnosed with covid 19 virus on the 31Dec2020, she was set to have the second vaccine on the 10Jan2021. She wanted to know if she can get the second dose and if so, when. Also asked if she should get tested before taking the 2nd dose of the covid 19 vaccine. Her Adverse effects are sore arm on vaccination day (20Dec2020), and she began to feel tired on 27Dec2020 and thought that was normal. She went to a Christmas eve party 24Dec2020 and no one was masked, friend had several people from work tested positive. was tested and was positive for covid 19 virus on 31Dec2020. She also was experiencing slight cough, diarrhea (which is normal for her), shortness of breath is improving and she had no sense of smell but she was able to taste. The outcome of event shortness of breath is recovering. The outcome of other events was unknown. No follow-up attempts are possible. information about lot/batch number cannot be obtained.

Tested Positive for COVID-19/nausea, occasional dry cough, neck and lower back soreness, and sore throat; Tested Positive for COVID-19/nausea, occasional dry cough, neck and lower back soreness, and sore throat; Weakness/generalized weakness; This is a spontaneous report from a contactable nurse (patient). A 62-year-old female patient received first dose of BNT162b2 (Pfizer, Lot number: 5730), via an unspecified route of administration at right arm at 22Dec2020 21:00 at single dose for covid-19 immunization. Medical history included Mayonaise allergies. The patient's concomitant medications were not reported. The patient previously took codeine and experienced allergies. At 31Dec2020 06:00, the patient experienced Weakness, nausea, occasional dry cough, generalized weakness, neck and lower back soreness, and sore throat which has now dissipated. Tested Positive for COVID-19 on 02Jan2021 (also reported as 01Jan2021, pending clarification). The covid test type post vaccination was Nasal Swab, Covid test name post vaccination was COVID-19 PCR ROCHE c6800(NTX), RNA SARS CoV2 TGT1, PAN

SARS RNA TGT2. No treatment received for events. The events result in Emergency room/department or urgent care. The patient was not pregnant. The outcome of the events were nor recovered.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Drug ineffective and COVID-19 cannot be totally excluded. The case will be reassessed if additional information becomes available.

Took the COVID vaccine; Rapid Antigen Test turned out positive, PCR test came out negative; Took the COVID vaccine; Rapid Antigen Test turned out positive, PCR test came out negative; This is a spontaneous report from a non-contactable consumer. A patient of unspecified age and gender received BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on an unspecified date at single dose for covid-19 immunization. The patient medical history and concomitant medications were not reported. The patient took the COVID vaccine, and a few days later they took the Rapid Antigen Test, the COVID test. And it turned out positive. The person took other tests as well, PCR test which came out negative. The reporter didn't know if there was any research or data if that was done maybe during clinical trials of whether it is possible to come out positive on an antigen test which tests for bio-protein. The reporter believe that was what in the vaccine. The reporter guess the vaccine causes the reaction in the body to make that protein in the body. The reporter wonder if it was possible it could be false positive on one of those tests because of the vaccine, because of the way that rapid test works. The outcome of the events was unknown. No follow-up attempts are possible. Information about lot/batch number cannot be obtained. No further information is expected.

"Got tested positive; Got tested positive; This is a spontaneous report from a contactable nurse from a Pfizer-sponsored program Pfizer First Connect. A male patient of an unspecified age received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EJ1685, Expiry Date: 31Mar2021), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. Transferring agent stated, ""I have a nurse (reporter) on the other line. She is currently on hold. She is reporting an adverse event about COVID Vaccine because she is saying that their doctor (Incomplete sentence). I mean, the nurse on the other line is working at the vaccine clinic. One of their doctors in the clinic had COVID Vaccine on 17Dec2020. I mean, the Doctor got positive or tested positive on 23Dec2020. Should that mean that the COVID Vaccine or the first dose of COVID Vaccine did not take effect for the Doctor itself because the Doctor got positive? They would like to know if they should still need to take second dose of COVID Vaccine."" When paraphrased the concern, reporter stated, ""Correct. And the question is would he need to get his second dose. It is said that it's two doses."" The outcome of the events was unknown.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported event test positive based on the known safety profile. However the short duration of 6 days since the vaccine first dose is given it is unlikely patient would have fully developed immunity."

Anaphylactic reaction; This is a spontaneous report from a contactable nurse. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on deltoid (unknown which) on 31Dec2020 at 0.3 mL, single for

COVID-19 immunization. There were no medical history and concomitant medications. The patient experienced anaphylactic reaction on 31Dec2020. The event required emergency room visit for observation and treatment.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylactic reaction cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"Tested positive for COVID after having received the vaccine; Tested positive for COVID after having received the vaccine; This is a spontaneous report from a contactable nurse. This nurse reported similar events for 2 patients. This is second of 2 reports. A 7-decade-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EJ1685, expiration date Mar2021), via an unspecified route of administration on 19Dec2020 at 0.3 mL, single in the left deltoid for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. It was reported that on 30Dec2020, the patient tested positive for COVID after having received the vaccine. The reporter said that they had been vaccinating people at their work. The reporter had vaccinated two people now who within about a week after, they tested positive for COVID. The patient was exposed to COVID outside of work. This patient was a healthcare worker (Doctor) in his 60's, weight within normal limits. He seemed healthy. He was fit. He showed up for work everyday. He was vaccinated on 19Dec2020, then tested positive for COVID yesterday, on 30Dec2020. The reporter was wondering if the patient should still get the second dose in 3 weeks, or wait 90 days after tested positive. The reporter needed to know whether to stick with the 21 day time period for the second dose, or wait 90 days. They had been telling people who were already positive, or who had COVID in the past, to wait 90 days to get the vaccine. The reporter had read all of the literature and looked online and could not find any information on this. The outcome of the event ""tested positive for COVID after having received the vaccine"" was not recovered. The event was assessed as non-serious, and unrelated to vaccine by reporter. She did not think, with either of these patients that them getting COVID had anything to do with the vaccine. She thought it was a coincidence and they were obviously exposed prior to receiving the vaccine.; Sender's Comments: Based on the information currently available, the reported event ""tested positive for COVID"" which was further reported as getting COVID by the nurse, was likely related to patient's exposure to SARS-CoV-2 virus prior to vaccination, and unlikely causally related to BNT162B2 vaccine. Further information like confirmative virus genome /nucleic acid detection needed for more meaningful medical assessment.,Linked Report(s) : US-PFIZER INC-2021001215 Same drug and events, different patient"

"Got the vaccine and developed COVID; Got the vaccine and developed COVID; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs) from a contactable physician. This pharmacist reported similar events for two patients. This is the second of two reports for Infection Control Nurse's daughter. A female patient of an unspecified age received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an

unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient got the vaccine and 10 days later, got COVID, so, she got swabbed on unknown date. The patient was wondering if she needed to start over or if she was okay to get the second dose. The outcome of events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported ""got COVID"", based on the known safety profile. However the short duration of 10 days since the vaccine first dose is given it is unlikely patient would have fully developed immunity.,Linked Report(s) : US-PFIZER INC-2021001217 same reporter/product, similar events, different patients."

"Tested positive for COVID after having received the vaccine; Tested positive for COVID after having received the vaccine; This is a spontaneous report from a contactable nurse. This nurse reported similar events for 2 patients. This is 1st of 2 reports. A 7-decade-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/lot number: EJ1685, expiration date: Mar2021), via an unspecified route of administration on 18Dec2020 at left deltoid, at 0.3 mL, single for covid-19 immunization. Medical history included ongoing diabetic. Concomitant medication included insulin for diabetic; pioglitazone hydrochloride (ACTOS) for diabetic and all ongoing. The patient received the vaccine on 18Dec2020 and then less than a week later, on 23Dec2020 was positive for COVID. The reporter said that they had been vaccinating people at their work. The reporter had vaccinated two people now who within about a week after, they tested positive for COVID. The patient was exposed to COVID outside of work. This patient was a healthcare worker (Doctor) in his 60's, weight within normal limits. The reported stated that obviously this person was exposed prior to getting the vaccine and was not symptomatic. But she needed to know, should she stick with the 21 day time period for the second dose or wait 90 days. The patient described COVID as the flu with an attitude. He was staying home and resting. The reporter did not think, with either of these patients that them getting COVID had anything to do with the vaccine. She thought it was a coincidence and they were obviously exposed prior to receiving the vaccine. The event was assessed as non-serious, and unrelated to vaccine by reporter. The outcome of the events was not recovered.; Sender's Comments: There is not a reasonable possibility that event ""tested positive for COVID"" is related to BNT162B2 vaccine. Patient most likely was exposed to SARS-CoV-2 virus prior vaccination.,Linked Report(s) : US-PFIZER INC-2021001199 Same drug and events, different patient"

Patient got the vaccine and 10 days later got Covid; Patient got the vaccine and 10 days later got Covid; Sinus drainage; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs) from a contactable physician. This pharmacist reported similar events for two patients. This is the first of two reports for Infection Control Nurse. A female patient of an unspecified age received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient got the vaccine and 10 days later, got COVID. So, the patient got swabbed because of the sinus draining but she was not ill. The patient was not sick she got some sinus drainage. The outcome of event was unknown. The patients were wondering if they need to start over or if they were okay to get the

second dose. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this patient cannot be completely excluded. However, the duration of 10 days since the vaccine first dose is short, and it is unlikely patient would have fully developed immunity. Further information like confirmative virus genome /nucleic acid detection needed for meaningful medical assessment.,Linked Report(s) : US-PFIZER INC-2021001212 same reporter/product, similar events, different patients.

patient tested positive for COVID 1 week after vaccination; patient tested positive for COVID 1 week after vaccination; This is a spontaneous report from a contactable physician (patient's wife). This physician reported similar events for two patients. This is the second of two reports. A male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number and expiry date not reported) via an unspecified route of administration, on 21Dec2020, single dose, for COVID-19 immunization. Relevant medical history and concomitant medications were not reported. The patient tested positive for COVID on 28Dec2020 (1 week after vaccination). Outcome of the events was unknown. Information about lot/batch number has been requested.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Drug ineffective and COVID-19 virus test positive cannot be totally excluded. The case will be reassessed if additional information becomes available.

chills and not feeling very good; chills and not feeling very good; rapid COVID test positive; rapid COVID test positive; This is a spontaneous report from a contactable consumer. This consumer reported similar events for two patients. This is the first of two reports. This case is serious, the other one is non-serious. A 22-year-old female patient received first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/Lot Number: EH9899) intramuscular at left deltoid on 22Dec2020 19:00 at single dose for covid-19 immunization. The patient medical history and concomitant medications were not reported. No other vaccines given at the same time. The patient received a flu shot back between 27th or 28th Nov2020 in her left deltoid. Caller reported getting the COVID vaccine on the 22Dec2020 and feeling fine before that. On the 28Dec2020 she started feeling chills and not feeling very good and that hasn't gone away. The patient went and got a rapid COVID test and it came back positive, not sure if it was because of the vaccine having antigens in it or she came into contact with it or if she just weakened immune system from the shot. The patient wanted to know if that was true. Then stated she and her mom got the COVID vaccine and her mom received it on the 23Dec. On the 29Dec her whole family started to get sick and experiencing the same things she experienced. The patient was not feeling well at the time of the call. The outcome of the events was not recovered.; Sender's Comments: Linked Report(s) : 2021001266 same reporter/ drug, different patient/event

PCR was positive last night; PCR was positive last night; This is a spontaneous report from a contactable Other Health Professional (Patient) reported that a 39-year-old female patient receives first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot/Batch Number: EH9899 and Expiration Date unknown) via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization. The patient's medical history was unknown. The concomitant medications were reported as none. The patient experienced received the Pfizer's COVID Vaccine on 18Dec2020 (later clarified) at

work, at (Institution name) and she just wanted to report that on 23Dec2020, her husband developed symptoms, he was positive on the 26Dec2020 and then she was just converted and her PCR was positive last night on 30Dec2020 (later clarified). Patient think her husband exposed then she was exposed. Treatment included Advair is twice a day and albuterol is three times a day. The outcome of events was unknown.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported COVID-19 PCR test positive based on the known safety profile. However the short duration of 12 days since the vaccine first dose is given it is unlikely patient would have fully developed immunity. Of note, the patient was exposure to COVID-19 (her husband developed COVID-19).

tested positive for the Covid antigen with no signs or symptoms; tested positive for the Covid antigen with no signs or symptoms; This is a spontaneous report from a contactable consumer(an administrator of skilled nursing facility). A patient of unspecified age and gender received BNT162B2 (Covid vaccine) , via an unspecified route of administration on an unspecified date at single dose for covid-19 immunisation. The patient medical history and concomitant medications were not reported. The reporter stated the pharmacy did a Pfizer vaccine clinic at his facility, stated that after looking at the FAQs he would like to know if they should not expect a positive antigen test after the vaccine, states the reason he was asking was because the patient they tested today(31Dec2020) that got the vaccine tested positive for the Covid antigen with no signs or symptoms. Outcome of event was unknown. Information on the lot/batch number has been requested.

given the Covid 19 vaccine and subsequently tested positive for SARS CoV2 a day or so later; given the Covid 19 vaccine and subsequently tested positive for SARS CoV2 a day or so later; This is a spontaneous report from a non-contactable healthcare professional via Pfizer sales representative. A patient of an unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number and expiry date not reported) via an unspecified route of administration, from an unspecified date, single dose for COVID-19 immunization. Relevant medical history and concomitant medications were not reported. The patient was given the COVID 19 vaccine and subsequently tested + for SARS CoV2 a day or so later on an unspecified date. Outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event of positive for corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the number of days passed since the vaccine is given. Case will be reevaluated based on follow-up information

Allergic reaction; Hives on back; Flushed; Chills; Swollen tongue; Burning tongue; This is a spontaneous report from a contactable consumer (patient). This 47-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 29Dec2020 07:00 at single dose on left arm for COVID-19 vaccination. There were no medical history and concomitant medications. The patient previously took flu shot. Vaccination Facility Type was hospital. Patient did not receive any other vaccines at time COVID-19 vaccine given and no vaccines given 4 weeks prior. Patient got the Pfizer COVID-19 vaccine on 29Dec2020 and had an allergic reaction

to it. Had hives on her back, was flushed, had chills, and swollen tongue on 29Dec2020. There was swelling on either side of tongue not in the center. Swelling seemed to bounce around sides of tongue. Patient mentioned she also had burning sensation of tongue first on 29Dec2020 and then the swelling was after that. Adverse events hives, flushed, chills, burning sensation of tongue and swelling of tongue required a visit to emergency room. Patient was seen in the emergency room and given diphenhydramine hydrochloride (BENADRYL) and an Epi-pen to take home. This all happened after receiving the vaccine on 29Dec2020. Patient wasn't getting any better/feeling better and went back to the emergency room on 30Dec2020. Patient was treated with dexamethasone and told her to take diphenhydramine hydrochloride every 4 hours, her last dose was at 2pm 31Dec2020. Patient said all events still persisting, but there maybe a little more swelling of the tongue, but not much. Patient had had a flu shot before, but never had anything to happen like this. Outcome of allergic reaction, hives, flushed, chills and burning tongue was not recovered, outcome of swollen tongue was unknown. Information on the lot/batch number has been requested.

tested positive for Covid; tested positive for Covid; This is a spontaneous report from a contactable Nurse reported for self. This 42-year-old patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on an 22Dec2020 08:00 on Left arm at single dose (Lot # EH9899) for covid-19 immunisation. Medical history, concomitant medications were none. The patient tested positive for Covid in 25Dec2020. The patient was scheduled to receive the second dose in 08Jan2021 so should the patient get it. (Further clarified the dates and years). Outcome of the events were unknown.; Sender's Comments: A possible contributory effect of suspect BNT162B2 on reported event cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

"Left axillary, supraclavicual, and cervical chain lymphadenopathy > 1-week post-injection.; since the vaccination, has the patient been tested for COVID-19?: Yes; since the vaccination, has the patient been tested for COVID-19?: Yes; This is a spontaneous report from a contactable healthcare professional. A 26-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), intramuscular on the left arm on 21Dec2020 20:00 at single dose for COVID-19 immunisation. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient experienced left axillary, supraclavicual, and cervical chain lymphadenopathy > 1-week post-injection on 22Dec2020 16:00. in which the patient received no treatment. It was also reported on Dec2020, ""since the vaccination, has the patient been tested for COVID-19?: Yes"". The patient has other pending test. The outcome of left axillary, supraclavicual, and cervical chain lymphadenopathy > 1-week post-injection was not recovered and other events was unknown.; Sender's Comments: Based on the information provided, the COVID-19 test positive are possibly related to drug ineffective of BNT162B2 vaccine."

One of my partners was the same way, tested positive after getting the vaccine; One of my partners was the same way, tested positive after getting the vaccine; This is a spontaneous report from a contactable nurse. This nurse reported similar events for 2 patient. This is the second of 2 reports. A patient of

unspecified age and gender received bnt162b2 (BNT162B2, Pfizer biontech Covid-19 Vaccine, solution for injection, lot number and expiation date unknown), via an unspecified route of administration on an unspecified date at a single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. On an unknown date, the patient was tested positive after getting the vaccine. The outcome of the event was unknown. Information on Lot/batch number has been requested.; Sender's Comments: The association between the event lack of effect (SARS CoV2 test positive) with BNT162b2 can not be fully excluded.,Linked Report(s) : US-PFIZER INC-2020510419 same reporter/ drug/similar events, different patient

positive COVID-19 test with symptoms; her arm ached; positive COVID-19 test with symptoms; This is a spontaneous report from a non-contactable nurse (patient) and two consumers. A 45-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number and expiry date not reported), via an unspecified route of administration on Dec2020 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient who is a nurse got the disease after getting coronavirus vaccine. This nurse reported that her arm ached after the vaccination and that she did not experience any other side effects. This nurse who worked in the coronavirus unit after the vaccine, fell ill 6 days after the vaccine. Stating that she was cold, the nurse later reported that she was experiencing muscle pain and feeling weak. The nurse, who applied to the hospital after becoming increasingly sluggish, performed a coronavirus test. The nurse's corona test was positive on an unspecified date in Dec2020. The patient underwent lab tests and procedures which included sars-cov-2 test: positive on Dec2020. The outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained. No further information is expected.; Sender's Comments: The association between lack of effect (SARS CoV test positive) with BNT162b2 can not be fully excluded based on the temporal relationship. Occupational exposure may have played a contributory role as well.

she woke up sick and was having the same symptoms as her husband so she was positive; she woke up sick and was having the same symptoms as her husband so she was positive; This is a spontaneous report from a contactable pharmacist reported for herself. A 31-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in Dec2020 at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. Caller stated that she was a pharmacist and on Tuesday last week that she received the Pfizer BioNTech Vaccine. Stated that her husband tested positive yesterday (on 29Dec2020). Stated that she was positive that she was positive because that was her husband. Stated that she woke up sick and was having the same symptoms as her husband so she was positive. Stated that she was due for second dose in 2 weeks. Stated that she received the vaccine last week and was negative. The patient underwent lab tests and procedures which included covid test: negative in Dec2020. The outcome of the events was unknown. Information about Batch/Lot number has been requested.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment hence, the events are conservatively assessed as related to the suspect drug BNT162B2 until further information becomes available.

symptomatic of Covid; symptomatic of Covid; inoculated on 15Dec2020; patient was scheduled on 04Jan2021 for 2nd dose; inoculated on 15Dec2020; patient was scheduled on 04Jan2021 for 2nd dose; This is a spontaneous report from a contactable nurse. A patient of unspecified age and gender received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiry date unknown) via an unspecified route of administration on 15Dec2020 at single dose for Covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was inoculated on 15Dec2020 and currently on 28Dec2020 the patient was symptomatic of Covid. The patient was scheduled on 04Jan2021 for 2nd dose. The outcome of the events symptomatic of Covid was unknown. Follow-up activities are possible, information on the batch number has been requested.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment hence, the events are conservatively assessed as related to the suspect drug BNT162B2 until further information becomes available.

got the vaccine within the past 24 hours and resulted positive for the test; got the vaccine within the past 24 hours and resulted positive for the test; This is a spontaneous report from a contactable consumer (patient). A 24-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL1284), via an unspecified route of administration on an unspecified date in 2020 at a single dose for COVID-19 immunization. There were no medical history or concomitant medications. The patient got the vaccine within the past 24 hours and resulted positive for the test, the patient took 48 hours ago like was that going to some adverse reaction like patient had the positive results before knowing the result patient got the vaccine so at present patient was just kind of anxious about what going to happen. Next shot will be due on 20Jan2021. The outcome of events was unknown.

tested positive for Covid a week after receiving the vaccine; tested positive for Covid a week after receiving the vaccine; patient stated that she was pregnant; patient stated that she was pregnant; patient stated that she was pregnant; This is a spontaneous report from a contactable nurse (patient) from a Pfizer sponsored program. A 37-year-old female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EH9899), via an unspecified route of administration on 18Dec2020 at left deltoid for Covid-19 immunisation. The patient medical history was not reported. There were no concomitant medications. The patient experienced tested positive for Covid a week after receiving the vaccine on 28Dec2020 (as reported), the patient stated that she was pregnant. The patient underwent lab tests and procedures which included Covid test: positive on 28Dec2020. The outcome of events was unknown.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this patient cannot be completely excluded. Further information like confirmative virus genome /nucleic acid detection is needed for meaningful medical assessment.

had the vaccine and later tested positive for COVID-19; had the vaccine and later tested positive for COVID-19; This is a spontaneous report from a non-contactable consumer. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on Dec2020 at single dose for COVID-19 immunisation. Medical history included that the patient previously was positive from the virus COVID-19. The patient's concomitant medications were not reported. The patient that had the vaccine and later tested positive for COVID-19. The outcome of

the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Severe anaphylaxis; This is a spontaneous report from a non-contactable consumer. This consumer reported similar events for six patients. This is the second of six reports. tested positive for COVID after receiving the COVID Vaccine; tested positive for COVID after receiving the COVID Vaccine; This is a spontaneous report from a contactable other HCP from a Pfizer-sponsored Program Pfizer First Connect. A female patient (sister) of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date were not provided), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. Caller stated that her sister tested positive for COVID after receiving the COVID Vaccine. Caller stated that her sister is a respiratory therapist and she has it (COVID) at the same time as the caller. Caller's sister tested positive at the same time as the caller on 01Jan2021. Caller's sister received the COVID Vaccine from a different facility from the caller. The outcome of the events was unknown. Information on the Batch/Lot number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the

suspected vaccine BNT162B2 in this patient cannot be completely excluded. Further information like confirmative virus genome /nucleic acid detection is needed for meaningful medical assessment.

He received his first dose on 22Dec2020, then on 29Dec2020, he tested positive COVID.; He received his first dose on 22Dec2020, then on 29Dec2020, he tested positive COVID.; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). A contactable healthcare professional (patient) reported for himself that a 30-year-old male patient received his first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), via an unspecified route of administration on 22Dec2020, at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. The healthcare professional is physician assistant. He received his first dose on 22Dec2020, then on 29Dec2020, his COVID 19 test revealed positive. He is supposed to get a second dose on 14Jan2021. He wondered if he is going to be able to take second dose or not. He doesn't have a prescribing doctor. He got it (vaccine) at work/at the hospital he works at. Outcome of the events was not recovered.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this patient cannot be completely excluded. Further information like confirmative virus genome /nucleic acid detection is needed for meaningful medical assessment.

Abdominal pain, chills, n/v, dark urine, elevated LFT's, Bilirubin in urine. Patient currently admitted to hospital

Received Moderna vaccine on 12/29/2020. 12/30/2020 fever of 100.4 Tylenol given and monitored and fever went down. 12/31/2020 Chest x-ray completed and sent to the hospital and admitted with pneumonia. 1/3/2021 reported by the hospital that Covid-19 results were positive. He had had Covid-19 positive results back on 11/4/2020 prior to vaccine.

"Pt experiencing and c/o left nasal burning, left upper lip tingling progressing to numbness with slight swelling noted, scattered patchy hives to upper front chest, sharp HA above right eye, denies SOB, no acute respiratory distress noted or reported, slurring of words shortly after onset of other symptoms. Pt repeating ""something ain't right"". Pt received Moderna COVID vaccine at 4:35pm with no reactions or side effect noted within the post 15 and 30 minutes. EMS notified at 5:49pm. MD notifed and ordered Benadryl 50mg IM (given at 5:53pm), EpiPen and DepoMedrol 40mg IM if needed. No respiratory distess noted, pt denies SOB. EMS arrived and transported pt to ER."

Developed SOB and fatigue 1 day after vaccine, went to urgent care and tested positive for COVID at urgent care. Returned to our ED after going to urgent care again on 1/7/21, had o2 sat of 84% on room air, impoved to 98 on 3 liters. Was transferred to another facility for admission.

vomiting later on 01/05/21. Lethargy and hypoxia in pm of 01/06/21. Hypotension am of 01/07/21. Hospitalized, intubated, cardiac arrest, died 01/07/21.

Swollen lips/tongue, shortness of breath, cough, hives, nausea, headache Epi shot, Benadryl, Pepcid, prednisone

Less than 5 minutes after vaccine, nose drained, weird taste in mouth, tingle in nose and on tongue. Throat and tongue swelled, couldn?t speak. Dizzy and slurring speech. Was taken to ambulance outside, BP was 191/101. Given beta blockade. Confused and dizzy for next 2 hours in ER. Evaluated for stroke and given a 12-lead ECG. Given benedryl and prednisone. Felt better after 3 1/2 hours. Continued steroids for 5 days and had to take benedryl every 4 hours for 3 days or swelling/itching/bad taste in mouth would return. Sore arm on day 3.

symptoms:chest and stomach pain Has markedly elevated liver function tests that were normal 2 weeks prior to immunization Is being admitted the hospital to monitor liver function test.

headache, sore throat, runny nose, arm pain that migrated to the axilla and down the side of the body, joint pain (hands, wrist, feet, hips, knees, spine, neck), insomnia, general malaise, fatigue, and lower grade fever. Most symptoms lasted about 7 -10 days. However, it is now day 20 after the initial vaccine and I still have joint pain that has not gone away. esp in hands, wrists, and feet. When I sleep I still wake up with all my joints hurting it gets better as I start moving but the wrist, hands, and feet pain has not gone away. This pain will wake me in the night when I change positions. I called my doctor today to inquire if it is a good idea if I should take the second dose because the first dose made me so dibiliated. Awaiting for a response. I am due to take the second vaccine on 2/9/21.

Fever, coughing, drowsiness, generalized weakness. Was found to be hypercalcemic (corrected calcium 14) and admitted 1/2-4. No prior history of hypercalcemia.

Congestion Shortness of breath Tachycardia Transferred out 911. Per hospital, patient had a myocardial infarction, is unresponsive, and on hospice services.

Anaphylactic reaction, Severe edema and raised red rash entire body, Severe itching ,Soft tissue edema of throat. Swelling of, eyes, lips, face. Multiple trips to ER, treated with steroids, Benadryl, prevacid. , CURRENTLY IN ICU ON EPINEPHRINE DRIP, STEROIDS, MULTIPLE MEDS

Resident passed away in her sleep

Patient c/o fatigue and cough on 1.4.2021 and was encouraged to be tested for COVID. We were notified that the patient was hospitalized on 1.7.2021 with COVID symptoms and positive test results. She is currently on a ventilator and dialysis.

On December 25th I had mild chest pain and then on January 1st, 2021 I had severe chest pain that persisted and on January 3rd I was admitted into the hospital. My Ddimer was elevated and my Troponin levels were elevated. An angiogram was performed and Dr. injected nitro into my arteries because they were constricted from Coronary Spasms.

Sxs started 3-5 minutes post vax. Dizziness, hypotension, throat fullness, CODE called, given IM Epi at vax site. Taken to ED from vax site. Started on epi drip. Admitted to SHC.

Nausea/ dizzy, Syncope 12 hours later.

Patient felt warm with palpitations 5 minutes after vaccine administered. was monitored for 30 mins & then returned to work. on 12/30/2020 patient was at work in Presurgical testing dept & experienced near syncope, dizziness & elevated BP. reported to ED & was admitted to telemetry unit.

Dr. called this morning and reported that an employee that works in billing had her vaccine on Wednesday and developed and anaphylactic reaction to Moderna. This was 24 hours later with rash, SVT heart rate above 140, low grade fever, redness at site. Admitted and treated with steroids and Benadryl.

Came to ER on 12/20/20 with chills, heart palpitations, body aches and increased SOB. Had ST elevation on EKG in ER, taken to Cath Lab- no intervention done. D/C home 12/22/20. Previous Hx of COVID per patient

Initial event was soreness at site which resolved on its own within a few days. 2 days after receiving vaccine, I began having an allergy reaction to the same brand N95 that I had been utilizing since the beginning of the pandemic. Symptoms are swollen cheeks and welts , sudden itchiness at the site of my mask placement. The reason for this report is a sudden onset of excruciating and debilitating pain throughout my body specifically pain of my right shoulder radiating down my sprightly arm. I have been receiving testing and treatment for ongoing neuropathy due to Longhauler syndrome, however This recent pain is so debilitating, I spend most of my time in bed. I have been experiencing chills then profuse sweating. I also so fatigued, I sleep much of the day. I have been having episodes of tachycardia with chest tightness which has increased since after having the vaccine. I also become short winded on exertion. I?ve been waking up in a panic and sweating.

Patient received first dose of Pfizer COVID-19 vaccine on December 26. On the next day, December 27, patient started having pressure in her head and sinuses, weakness. Then she developed nonproductive cough and progressive shortness of breath. She was seen at urgent care and tested positive for COVID-19 on December 29. She had low oxygen saturation on home oximeter and severe shortness of breath. Patient's husband is also ill with COVID-19 at home. Patient was sent to the ED and admitted to the hospital.

Patient had been diagnosed with COVID-19 on Dec. 11th, 2020. Symptoms were thought to have started on 12/5/2020. Received Moderna vaccine on 12/23. Unexpected death on 1/8/2021. Resuscitation attempts unsuccessful

infection of SARS-COV-2; infection of SARS-COV-2; This is a spontaneous report from a contactable healthcare professional. A 31-year-old male patient started to receive received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot number EL0140), intramuscular into the left arm on 18Dec2020, at 10:30 as single dose for covid-19 immunization. There was no medical history and no concomitant medications. The patient experienced infection of SARS-COV-2 on 25Dec2020. Details were as follows: The patient received the first dose of the two dose series. On 20Dec2020, he was exposed to COVID-19. Official positive diagnosis of COVID-19 was made on 25Dec2020. Patient had symptoms of fatigue, joint pain and a small fever on an unspecified date, and had been exposed to SARS-COV-2 on 20Dec2020, and the infection on 25Dec2020. The patient underwent lab tests and procedures which

included sars-cov-2 test which was positive on 25Dec2020. The patient was scheduled to receive second dose of the vaccine; he will be out of quarantine around five to six days before that dose. The outcome of infection of SARS-COV-2 was recovering.; Sender's Comments: The efficacy of a drug varies from one patient to another and can be affected by different factors; however, a contributory role of the suspect drug BNT162B2 to the reported events drug ineffective and COVID-19 cannot be ruled out.

recipient of the covid 19 vaccine received a positive antigen test within 10 days of getting the vaccine; recipient of the covid 19 vaccine received a positive antigen test within 10 days of getting the vaccine; This is a spontaneous report from a contactable nurse. This nurse reported similar events for two patients. This is the second of 2 reports. A female patient of an unspecified age (Age: 30, Unit: Unknown) received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiration date were not reported), via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received a positive antigen test within 10 days of the vaccine and wanted to know if the vaccine could cause a positive antigen test. There was no mention of exposure to a positive person. Outcome of the events was unknown. Information on lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of COVID-19 antigen test positive and LOE due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.,Linked Report(s) : US-PFIZER INC-2020519946 same reporter, drug, and events; different patients

"neuropathy/ started acutely in feet bilaterally / persist intermittently in left extremities; One-time episode of upper extremity (UE) numbness; This is a spontaneous report from a contactable health care professional (patient). A 40-year-old female patient (not pregnant) received her 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/lot unknown) at single dose via an unknown route at left arm on 26Dec2020 for Covid-19 immunization. COVID-19 vaccine was administered in Pharmacy or Drug Store. Medical history was reported as ""none"". Patient had no COVID prior vaccination, further reported as patient was not diagnosed with COVID-19 prior to vaccination. No known medications, food, or other products allergies. Concomitant drugs (Other-medications-in-two weeks) included levocabastine hydrochloride (ZYRTEC), diphenhydramine hydrochloride (BENADRYL) as needed, ibuprofen (MOTRIN), and multivitamin. No other-vaccine-in-four weeks received. Patient experienced adverse-event of neuropathy, which started acutely in feet bilaterally and now (as of 02Jan2021) persist intermittently in left extremities (LEs). One-time episode of upper extremity (UE) numbness. No weakness. Patient inquired if 2nd dose should be held. Adverse-event-start-date was 26Dec2020. The adverse event result in doctor or other healthcare professional office/clinic visit. No treatment received.

The event was reported as non-serious. Since the vaccination, patient had not been tested for COVID-19. Outcome of the event was not resolved. Information about lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of peripheral neuropathy and upper extremity (UE) numbness due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including head CT/MRI and nerve conduction tests, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

Became extremely flushed; tingling in hands and feet; disorientation; This is a spontaneous report from a non-contactable nurse (patient). A 34-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE) (lot number: EL0140/expiration date unknown), via intramuscular route of administration, on 28Dec2020 (at the age of 34 years old) as a single dose in the left arm for COVID-19 immunization at hospital facility. Relevant medical history included Gastrooesophageal reflux disease (GERD), Attention deficit hyperactivity disorder (ADD), Generalised anxiety disorder (GAD). The patient did not have any known allergies to medications, food, or other products. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications included esomeprazole sodium (NEXIUM), venlafaxine hydrochloride (EFFEXOR), amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 28Dec2020, at 09:00 PM, the patient became extremely flushed, tingling in hands and feet, disorientation. Treatment was received for the events became extremely flushed, tingling in hands and feet, disorientation included Diphenhydramine 50mg @2200 and again at 0200. The outcome of the events became extremely flushed, tingling in hands and feet, disorientation was recovered on unknown date. Since the vaccination, the patient had not been tested for COVID-19.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of extremely flushed, tingling in hands and feet and disorientation due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including chemistry panel and Head CT/MRI, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Around 10:30pm I felt like my throat was closing and I was choking; Around 10:30pm I felt like my throat was closing and I was choking; I had chest pain, chest tightness; I had chest pain, chest tightness; Very

SOB at rest; Throughout the day I was cough and my face started flushing so I tool Benadryl/severe facial flushing; On 23Dec I got nerve blocks for my migraines.; Throughout the day I was cough and my face started flushing so I tool Benadryl.; This is a spontaneous report from a contactable nurse who reported for herself. A 36-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot: EK5730) dose number 1, via an unspecified route of administration on 19Dec2020 11:30 at single dose for COVID-19 immunization. Medical history included von willebrand's disease, narcolepsy with cataplexy, IIH (Idiopathic intracranial hypertension), HTN (hypertension), GERD (gastrooesophageal reflux disease), migraines. Patient also had known allergies: PCN (penicillin), shellfish, IV contrast, cefdinir and bees. On 23Dec2020, patient got nerve blocks for her migraines. Throughout the day patient was cough and her face started flushing so she tooled diphenhydramine hydrochloride (BENADRYL). Around 22:30, patient felt like her throat was closing and she was choking. She had chest pain, chest tightness. EMS (emergency medical services) was called and patient was brought to the hospital. On 25Dec2020, patient felt like her throat was closing, like someone was sitting on her chest and chest tightness still with chest pain. Very SOB (shortness of breath) at rest. Patient went to the ER (emergency room) and received IV dexamethasone (DECADRON) and diphenhydramine hydrochloride. On 26Dec2020, patient had the same symptoms but with severe facial flushing and patient went back to the ER and was given IV dexamethasone. Patient was sent home on a maximum amount of medications. I had seen her primary care, ENT (ear nose throat centre), Allergy, ID (infectious disease), and pulmonology. Her CT (computerised tomogram) of chest on 25Dec2020 was negative along with her COVID test. Patient SOB on rest and exertion still. Onset date of the adverse events was reported as 23Dec2020, 22:30. Patient received treatment for the events included multiple medications and high dose prednisone. Lab data on 25Dec2020 included CT of chest: negative, influenza type A/B combo: negative, Covid 19: negative and nasal swab: negative. Action taken in response to the events for bnt162b2 was not applicable. Outcome of the events was not resolved.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events due to temporal relationship. The clinical presentation of the events is suggestive of possible allergic reactions. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

I tested positive for COVID today; I tested positive for COVID today; This is a spontaneous report from a contactable other Health Care Professional (HCP). A female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, lot number and expiration date unknown) via an unspecified route of administration on 24Dec2020 (at an unknown age) at an unknown dose for COVID-19 vaccination. The patient's medical history was not reported. The patient's concomitant medications were not reported. The patient tested positive for COVID on 01Jan2021. The patient was inquiring as to if she can still get the second dose since she has tested positive in between. The patient underwent lab

tests and procedures which included SARS-COV-2 test: positive on 01Jan2021. The clinical outcome of COVID-19 virus test positive was unknown. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment hence, the events are conservatively assessed as related to the suspect drug BNT162B2 until further information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

experienced loss of smell, taste and a headache/she came down with signs and symptoms/she got tested and got the results on Thursday that she was positive for covid 19 virus; experienced loss of smell, taste and a headache/she came down with signs and symptoms/she got tested and got the results on Thursday that she was positive for covid 19 virus; This is a spontaneous report from a contactable Other Health Professional (patient). A 45-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Solution for injection, lot number, via an unspecified route of administration from 14Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient had the first dose of COVID vaccine on 14Dec2020. Eleven days following first dose, she experienced loss of smell, taste and a headache. She stated that she came down with signs and symptoms on 25Dec2020 and she got tested and got the results on Thursday that she was positive for Covid 19 virus. She was due for the 2nd dose of the COVID vaccine on the 6th of January. She asked what she should do about the second dose. She mentioned that her symptoms and positive test results were reported where she works in (State name). She wanted to know information as to whether she should get the second dose. Her second dose's scheduled was 6Jan2021. The event outcome was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of suspected LOE and COVID 19 infection due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

had a positive covid test results; had a positive covid test results; This is a spontaneous report from a contactable physician. A male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at a single dose for COVID-19 immunization.On 22Dec2020 he started to experience COVID like symptoms. On 26Dec2020, he had a positive COVID test results. On 28Dec2020, he received the Regeneron antibody infusion. Patient wants to know more about receiving the 2nd dose based on his positive diagnosis/antibody

treatment. Outcome of the event was unknown. Information on batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of SARS-CoV-2 test positive and suspected LOE due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

diarrhea; headache; lower back pain; Fatigue; arrhythmia; Tachycardia; High Blood pressure; Redness on chest; Chest tightness; Lightheaded; possible tongue swelling; possible tongue swelling (felt heavy after vaccine); dry mouth; sore throat; This is a spontaneous report from a contactable nurse (patient) who reported for herself that a 31-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899) via an unspecified route of administration, on 20Dec2020 14:15 at left arm/arm right (pending clarification), single dose for COVID-19 immunization. Medical history included factor II, history of melanoma. She has no known allergies. She was not pregnant at the time of the vaccination. Concomitant medications included bupropion hydrochloride (WELLBUTRIN), ibuprofen (MOTRIN), multivitamin. Nurse reported administering COVID-19 vaccine at hospital, experiencing tachycardia, high blood pressure, redness on chest, chest tightness, lightheaded, possible tongue swelling (felt heavy after vaccine), arrhythmia, dry mouth, sore throat (after leaving emergency department) at 14:30 on 20Dec2020; After one day, she experienced diarrhea, headache, lower back pain and fatigue since 21Dec2020. Fatigue lasting for several days. Adverse events resulted in emergency room/department or urgent care (pending clarification). Nurse received intravenous diphenhydramine hydrochloride (BENADRYL) and fluids as treatments. Nurse assessed the events as non-serious. Nurse also reported that, prior to vaccination, she was not diagnosed with COVID-19; since the vaccination, she has not been tested for COVID-19. She did not receive other vaccine in four weeks. Outcome of fatigue was not recovered, outcome of the rest of the events was recovered.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the tachycardia, high blood pressure, arrhythmia and the other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including EKG at baseline and during subject drug therapy, echocardiogram, cardiac enzymes, electrolytes, chemistry panel and serum toxicology screen, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

"Chills; Soreness at the injection site; generalized body aches/Body aches; Shortness of breath; Asthma attack; Difficulty sleeping; Light headed and dizzy; Nausea; high BP 140's; HR 110's to 120s; Nasal congestion; Swelling of the face; Sore throat; This is a spontaneous report from a contactable nurse. A 42-years-old female patient received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EK5730, expiration date not reported), intramuscular on the right arm on 31Dec2020 at 10:15 AM, at a single dose for Covid-19 immunization. Medical history included asthma, allergy, hypothyroidism, and some fish allergy. There were no concomitant medications (no other vaccine in four weeks and no other medications in two weeks). Patient previously took ibuprofen and experienced allergy. The patient is not pregnant. On 31Dec2020, after ten-15 minutes (10:30 AM) of receiving the vaccine, she was light headed and dizzy with some nausea. Monitored in the emergency room (ER) with high BP 140's and heart rate (HR) 110s to 120s. After an hour of saline bolus, she was better but she got nasal congestion and swelling of the face with sore throat. On 01Jan2021, after 24 hours, she got some soreness at the injection site with generalized body aches. Also she got some shortness of breath which lead to her asthma attack and difficulty sleeping. On 02Jan2021, after 48hours, she was feeling still light headed with some sore throat, chills, body aches and severe headache which lead her to go to the ER and got herself tested for flu, covid and strep, which came back all negative but her signs and symptoms (s/sx)still after discharge was getting worst especially the headache and generalized body aches. As well as congestion and sore throat. The patient had given ""Ivf"" for the events. The patient was not diagnosed with Covid prior to vaccination and was not Covid tested post vaccination. The outcome of the events was not recovered. The reporter assessed the events as non-serious.; Sender's Comments: A causal association between BNT162B2 and the reported events cannot be excluded based on a compatible temporal relation between vaccination and onset of events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."

becoming incoherent and talking nonsense; This is a spontaneous report from a contactable physician (patient). A female patient of an unspecified age received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date not reported), via an unspecified route of administration on 23Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. Physician calling about whether or not she should receive the second dose of vaccine. She received dose on 23Dec2020. On 26Dec2020 she started experiencing several side effects including becoming incoherent and talking nonsense. Her daughter who is an EMT suggested that she go to the ER. While in the ER she received TPA but it was later decided she did not have a stroke. Her EKG, bloodwork and other testing came back negative. She otherwise healthy and has no comorbidities. She already spoke with agency. She has also already spoken with an infectious disease doctor and her neurologist. The outcome of the event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment hence, the event incoherent is conservatively assessed as related to the suspect drug BNT162B2 until further information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety

evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to agencys, Ethics Committees, and Investigators, as appropriate.

tingly feeling to my lips; some lip swelling; tightness in my throat.; This is a spontaneous report from a contactable Other HCP. A 35-years-old female patient started to receive BNT162B2, via an unspecified route of administration from 30Dec2020 12:00 to 30Dec2020 12:00 at SINGLE DOSE for covid-19 immunisation. Medical history included hypersensitivity from an unknown date and unknown if ongoing, gastritis from an unknown date and unknown if ongoing, anxiety from an unknown date and unknown if ongoing, depression from an unknown date and unknown if ongoing. Concomitant medication included lorazepam (ATIVAN), ivermectin (IVERMECTIN), escitalopram oxalate (LEXAPRO), esomeprazole magnesium (NEXIUM [ESOMEPRAZOLE MAGNESIUM]), levocetirizine dihydrochloride (XYZAL). The patient previously took tamiflu and experienced drug hypersensitivity. The patient experienced tingly feeling to my lips (paraesthesia oral) (non-serious) on 30Dec2020 15:30 with outcome of recovered, some lip swelling (lip swelling) (non-serious) on 30Dec2020 15:30 with outcome of recovered, tightness in my throat. (throat tightness) (non-serious) on 30Dec2020 15:30 with outcome of recovered. The action taken in response to the event(s) for BNT162B2 was not applicable. Therapeutic measures were taken as a result of tingly feeling to my lips (paraesthesia oral), some lip swelling (lip swelling), tightness in my throat. (throat tightness). This is a spontaneous report from a contactable other HCP. This 35-year-old female other HCP reported that: Report about covid vaccine: Yes Reporter type: Patient Age group: Adult (18-64 Years) Is pregnant: No Race: (race provided) Ethnicity: (ethnicity provided) Patient occupation: Other Health Professional Covid vaccine details: product-COVID 19, Lot number-EL1284, Lot unknown-False, Administration date-30Dec2020, Administration time-12:00 PM, Vaccine location-Left arm, Dose number-1 Facility type vaccine: Hospital If other vaccine in four weeks: Yes Other vaccine 4weeks details: other vaccine 4weeks product -Allergy Immunotherapy injections , Other vaccine 4weeks vaccine date -07Dec2020, Other vaccine 4weeks dose number -2 , Other vaccine 4weeks vaccine location-Left and right arm. Other medications in two weeks: Nexium, xyzal, Ativan, Lexapro, Ivermectin Adverse event: At about almost 4 hrs after receiving the injection I started to experience a tingly feeling to my lips, some lip swelling and tightness in my throat. I had my epi pen on hand incase I needed it but I ended up taking 25mg of Benadryl, then 50 mg of Benadryl 5 hrs later. The following morning my lips where feeling tingly again so I took 25mg of Benadryl again and continued for the next 48 hrs at the advice of my doctor. I had my epi pen on hand incase I needed it but I ended up taking 25mg of Benadryl, then 50 mg of Benadryl 5 hrs later. The following morning my lips where feeling tingly again so I took 25mg of Benadryl again and continued for the next 48 hrs at the advice of my doctor. Was treatment received for the adverse event?: Yes: Benadryl for 48 hrs Prior to vaccination, was the patient diagnosed with COVID-19?:No Since the vaccination, has the patient been tested for COVID-19?:No Allergies to medications, food, or other products: Tamiflu Vaccine Facility information available. Ethnicity information is available. Race information is available. Location of injection information is available for other vaccines within 4 weeks PRIOR.; Sender's Comments: A causal association between BNT162B2 and the reported events cannot be excluded based on a compatible temporal relation between vaccination and onset of events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

About 15 minutes after receiving the vaccine she felt palpitations. She was monitored for another 15 minutes and while she was walking to her car se started noticing sore throat associated with inability to talk, unable to swallow secretions, and swelling the lips. Patient presented to the emergency room where she received EpiPen dose. Received diphenhydramine, famotidine, and prednisone. Lip swelling and sore throat began improving in ED.

I was given a vaccine on Dec17th, on Dec21st I tested positive for Covid; I was given a vaccine on Dec17th, on Dec21st I tested positive for Covid; This is a spontaneous report from a contactable nurse. A 46-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EK5730), via an unspecified route of administration on 17Dec2020 at a single dose for COVID-19 immunization. There was no relevant medical history. The patient's concomitant medications were not reported. The patient was given a vaccine on 17Dec2020, the on 21Dec2020, the patient tested positive for COVID. The outcome of the event was unknown.; Sender's Comments: Based on the information

available, a possible contributory role of the suspect products cannot be excluded for the reported event of positive for corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the number of days passed since the vaccine is given. Case will be reevaluated based on follow-up information

TSH level has been borderline hypothyroidism; Almost feel like somebody is gently holding my throat, so I could still breathe, talk, eat but I had the feeling that my throat was being kind of squished; This is a spontaneous report from a contactable nurse. A 64-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EK5730), via an unspecified route of administration in right deltoid on an unspecified date at a single dose for covid-19 immunization. Medical history included hypertension and high cholesterol. Concomitant medication included evolocumab (REPATHA) for high cholesterol and two unspecified medications for hypertension. The got the first dose of Pfizer Vaccine for COVID, and for about 3 or 4 almost 5 days afterwards, she felt like somebody, it almost feel like somebody was gently holding her throat, so she could still breathe, talk, eat but had the feeling that throat was being kind of squished. The patient had her lipid panel liver and TSH level done because of the Repatha and TSH level has been borderline hypothyroidism, so she haven't really been on medicine for it but it might be. The patient added that the events had certainly correlated with the vaccine. She didn't have the events until she got the vaccine, so she feel like it was and then her concern was it wouldn't be safe to take the second one. The patient did not visit emergency room and physician office because of the issue 'feel like somebody was gently holding her throat' and all she did was take Benadryl at night. The outcome of the events was unknown.; Sender's Comments: The causal relationship between bnt162b2 and the event hypothyroidism cannot be excluded as the information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

test positive for COVID-19/fever, chills, body aches, joint pain; test positive for COVID-19/fever, chills, body aches, joint pain; This is a spontaneous report from a contactable other HCP. A 35-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5703), via an unspecified route of administration in left arm on 15Dec2020 17:30 at a single dose for covid-19 immunization. Administration was done in the hospital. Medical history included seronegative rheumatoid arthritis and allergies to latex and actemra. Concomitant medication included tofacitinib citrate (XELJANZ), and ibuprofen. Eight days after vaccination, on 23Dec2020 at 13:30, the patient came down with fever, chills, body aches, joint pain. The patient was initially tested negative for COVID (nasal swab) and influenza on 27Dec2020 but did test positive for COVID-19 on 29Dec2020 (nasal swab). The patient stated that she knew that the vaccine did not cause COVID however as she was on immunosuppressants (Xeljanz), she wanted to record this information. There was no treatment included for the events. The outcome of the events was recovering. Prior to vaccination, the patient was not

diagnosed with COVID-19.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Drug ineffective and COVID-19 cannot be totally excluded. The case will be reassessed if additional information becomes available.

COVID-19 rapid POC test positive; COVID-19 rapid POC test positive; the amount of vaccine given as 1 cc; This is a spontaneous report from a Pfizer-sponsored program, IBCC (Inbound Call Center for HCPs). A contactable nurse (patient) reported that a 52-year-old female patient received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine; lot number: EH9899), via an unspecified route of administration on 17Dec2020 at 1 mL, single dose for COVID-19 immunization. Medical history included ongoing hypertension diagnosed when she was 33 years old. There were no concomitant medications. The patient got the vaccine on 17Dec2020. The patient stated that the amount of vaccine given was 1 cc. She took a COVID-19 rapid POC test on the 28Dec2020 and tested positive. She wanted to know if she should have the second dose of the vaccine. The outcome of the events was unknown.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment hence, the events are conservatively assessed as related to the suspect drug BNT162B2 until further information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

"When she went back to work on 25Dec2020 it was positive/On the weekend she had to come back to do a PCR test on28Dec2020 and it was positive.; When she went back to work on 25Dec2020 it was positive/On the weekend she had to come back to do a PCR test on28Dec2020 and it was positive.; This is a spontaneous report from a contactable nurse. A 43-year-old female patient receive bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), via an unspecified route of administration given in the left arm on 22Dec2020 at a single dose for covid-19 immunization. The patient medical history included ""patient's a blood donor"" reported as, she donated blood on 12Sep2020 and it was negative for covid. The patient's concomitant medications were not reported. The patient experienced ""when she went back to work on 25Dec2020 it was positive/on the weekend she had to come back to do a pcr test on28dec2020 and it was positive"" on 25Dec2020 with an unknown outcome. It was further reported that the patient was a registered nurse that works night shift. She clarified that the rapid test was taken each time she goes to work. When she went to work on the night of 21Dec2020 the rapid test was negative.Then she got the Covid vaccine in the morning of 22Dec2020. When she went back to work the night of 22Dec2020 the rapid test was negative. When she went back to work on 25Dec2020 it was positive. On the weekend she had to come back to do a PCR test on28Dec2020 and it was positive. Caller clarifies that the rapid tests were Nasal Swabs. The patient's latest test was on 28Dec2020, she was told that when she comes back, they do not have to do the rapid test daily anymore, it will now be every 90 days. The patient did not have a test before the vaccine. She has had no issues with Vaccines in the past.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported event positive

for corona virus infection based on the known safety profile. However given the short duration of 3 days since the vaccine first dose, it is unlikely patient would have fully developed immunity."

positive COVID-19 test with symptoms/had like a head cold and cold like symptoms/he tested positive for COVID.; positive COVID-19 test with symptoms/had like a head cold and cold like symptoms/he tested positive for COVID.; This is a spontaneous report from a contactable nurse. A 67-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), intramuscular on left deltoid on 18Dec2020 at single dose for COVID prevention. The patient had no medical history. There were no concomitant medications. The patient got his first dose of the COVID Vaccine on 18Dec2020, and he states that he did fine and had no problems. But on 28Dec2020, when he was going to work, he noticed that he had like a head cold and cold like symptoms. He was swabbed and tested for COVID PCR on that day, and he tested positive for COVID. After his positive COVID test, he was tested for monoclonal antibodies, and at first, he was told that test came back positive, but then about 12 hours later, he was told that the staff had misread it, and he was actually negative for monoclonal antibodies, so the caller was given monoclonal antibody therapy and he did fine with that, and he is recovered now. He is scheduled to go back to work this Thursday, and he is supposed to receive the second dose of the vaccine, on Friday. He checked the schedule for getting the second dose, and he was not on the list, so he called the infection control nurse, and she told the caller that because he received the monoclonal antibody therapy, he now has to wait 90 days to receive the second dose of the vaccine. Caller states that he looked for that information, and he did not see that anywhere, so he is wondering if that is correct, because it almost seems to him that if he waits 90 days, he would have to start the series again. The outcome of the event was recovered on an unspecified date.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Drug ineffective and COVID-19 cannot be totally excluded. The case will be reassessed if additional information becomes available.

low grade fever/low grade fever of 103; chills; dry cough; lethargy; This is a spontaneous report from a contactable nurse. A 62-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EJ1685 with expiry date Mar2021), via an unspecified route of administration in left deltoid on 30Dec2020 14:30 at a single dose for COVID-19 immunization. The administration was one in a local pharmacy. There were no relevant medical history and concomitant medications. On Saturday night, 02Jan2021, the patient started getting a low grade fever of 103, had chills, lethargy and an intermittent dry cough. The outcome of the events was not recovered. The events were considered medically significant events.; Sender's Comments: A possible contributory effect of suspect BNT162B2 on reported events cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

a left sided nystagmus; urgent MRI showing multiple brain lesions consistent with Acute disseminated encephalomyelitis; Patient developed paresthesias on entire right side of body / The paresthesias continued, not progressing; a brief headache; episode of dizziness / developed severe dizziness; This is a

spontaneous report from a contactable physician (patient). A 34-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730) intramuscularly at right arm on 21Dec2020 07:00 at single dose for COVID-19 immunization. Medical history included known allergies to sulfa meds. The patient's concomitant medications included multivitamins [vitamins nos] within 2 weeks of vaccination. Patient developed paresthesias on entire right side of body after a brief headache and episode of dizziness, all since 29Dec2020 15: 00. The paresthesias continued, not progressing, but patient was advised to obtain an MRI Brain and C spine as an outpatient. On 02Jan2021, the patient developed severe dizziness and a left sided nystagmus. She went to the ER and underwent urgent MRI showing multiple brain lesions consistent with acute disseminated encephalomyelitis. Lumbar puncture (LP) was performed, awaiting final results. Patient was admitted and was receiving IV steroids (solumedrol). Duration of hospitalization was 5 days since Dec2020. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient underwent lab tests and procedures, which included Nasal Swab and Rapid covid swab, both on 02Jan2020 with result of negative. The outcome of the events was recovering.; Sender's Comments: Based on temporal association and lack of other provided etiology, a possible contributory role of suspect BNT162B2 vaccine cannot be excluded for reported acute disseminated encephalomyelitis, paraesthesia, headache, dizziness and nystagmus. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
